COURSE_DESCRIPTION: Presentations are the most popular way of communication. This Specialization has 4 courses and covers fundamentals of three major presentation skills: 1) Storytelling- the art of crafting an interesting, convincing and evidence-based script of your presentation, 2) Slide design - a merge of graphical and information design to make clean and clear slides that help you deliver your ideas 3) Delivery - the art of interacting with the audience during presentation and a tough Q&A. The 4th and final course of the Specialization is the Capstone project, where you will prepare a presentation «from scratch» with a topic that matters to you and then deliver it to your peers. Our courses are designed for anyone from a rookie speaker to an established presenter. Whether you're presenting an idea or a product or a complicated issue, this Specialization gives you tools to make it right. We suggest you take these courses in ascending order. But feel free to choose only the courses you need. The specialization trailer

COURSE_DESCRIPTION: Von all den Fähigkeiten und Kompetenzen, die ein Projektleiter einsetzt, sind die sozialen Kompetenzen am wichtigsten. Die Fähigkeit, effektiv mit Teammitgliedern zu kommunizieren und bei Widersprüchen zu verhandeln, um Stakeholder positiv zu stimmen, kann für den Erfolg oder das Scheitern eines Projekts maßgeblich sein. Dieser Kurs vermittelt, wie Sie mit Projektänderungsanfragen umgehen, einen Plan für die Kommunikation mit Stakeholdern erstellen und an entstehende Konflikte herangehen können.

COURSE_DESCRIPTION: This course will introduce the learner to information visualization basics, with a focus on reporting and charting using the matplotlib library. The course will start with a design and information literacy perspective, touching on what makes a good and bad visualization, and what statistical measures translate into in terms of visualizations. The second week will focus on the technology used to make visualizations in python, matplotlib, and introduce users to best practices when creating basic charts and how to realize design decisions in the framework. The third week will be a tutorial of functionality available in matplotlib, and demonstrate a variety of basic statistical charts helping learners to identify when a particular method is good for a particular problem. The course will end with a discussion of other forms of structuring and visualizing data. This course should be taken after Introduction to Data Science in Python and before the remainder of the Applied Data Science with Python courses: Applied Machine Learning in Python, Applied Text Mining in Python, and Applied Social Network Analysis in Python.

COURSE_DESCRIPTION: Alle Organisationen müssen Veränderungen durchlaufen, um sich neuen Kräften auf dem Markt anzupassen. Die Anpassung an Veränderungen - egal ob neue Prozesse, Strategien oder Mitarbeiter involviert sind - ist nie einfach, aber ein wesentlicher Aspekt für den langfristigen Erfolg und die Resilienz eines Unternehmens. In diesem Kurs lernen Sie die wichtigsten Ergebnisse einer Change-Initiative kennen, z. B. Erfolgsfaktoren, die die Flexibilität eines Unternehmens verbessern und es widerstandsfähiger machen. Sie erfahren, wie Sie Stakeholder-Gruppen identifizieren, die für die Anpassung an neue Prozesse benötigt werden, und welche Rolle sie bei der Änderung von betrieblichen Abläufen spielen. Außerdem lernen Sie, wie Sie die drei Schlüsselfaktoren für einen nachhaltigen Wandel bewerten: Unbehagen, Vision und angemessener Kenntnisstand.

COURSE_DESCRIPTION: In this course, developed at the Darden School of Business at the University of Virginia and taught by top-ranked faculty, we will be discussing the emergence of a new story about business. This new story locates business within a societal framework. Almost every business creates or destroys value for customers, suppliers, employees, communities and society, in addition to shareholders and other financiers. A number of new models of business can be built on this idea such as corporate responsibility, philanthropy, shared value and sustainability. Profits and stakeholder value go together, and this course explains how. The final session explores the idea of how to become a stakeholder entrepreneur and create a business that makes money and makes the world a better place.

COURSE_DESCRIPTION: The term "analysis of variance" might sound like a sophisticated data science technique and while that may be true some of the time, for the most part analysis of variance is a basic descriptive statistical tool to understand differences between groups in a data set and to learn whether a sample pulled from a larger population is statistically valid because it fairly represents the entire data set. Interpreting variance statistics accurately can mean the difference between finding actions in your data and not finding any. In your Interpret Population and Sample Variances in Google Sheets project, you will gain hands-on experience generating variance statistics, interpreting them, and you will perform a t-test to approach understanding differences in two samples when the variance is unknown. To do this you will work in the free-to-use spreadsheet software Google Sheets. By the end of this project, you will be able to further your business intelligence goals by confidently analyzing and interpreting variance in a data set using any spreadsheet software. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: This course focuses on communities and organizations in transition, and using the skills and new knowledge you have to lead change. In this course, we will discuss fundamentals of sustainability and resilience. We then go over the essentials of being a change maker. This course will provide further opportunity for skill building. We will go over asset mapping and needs assessments, two important skills that will be used for you to work with your clients so understand community and organizational needs, and have broad engagement, and use a systems-based approach to so that that the community can define its own needs and identify its own assets. This course will have three modules. Sustainability & Resilience will provide the basic principles of sustainability and resilience so that you will know the difference of these concepts and potential means of implementing them in your workplace and place of practice. In Needs Assessment & Asset Mapping, I will go over two important techniques that provide the community and organization needs front and center and allow you to engage stakeholders so that they have a voice and are involved throughout the process. Systems Thinking for Change will focus on using systems thinking principles as a changemaker, and provides tips and motivation for making change. Whether you work in a Fortune 500 company or a small non-profit, are a community organizer, it is time for you to step up and step out and put your new knowledge into practice. The road won't always be easy and often non-linear. But real change requires radical change and true and genuine engagement with the people who will see and experience that change every day.

COURSE_DESCRIPTION: Course 4 focuses on using git for open source software distributed development. Git is a revision control system which arose out of the Linux kernel development community. Git was designed to help developers spread across the globe working on complicated projects coordinate their work in a rational way and keep track of everything they were doing. Overtime, Git has grown to be used by millions of projects today. This course gives you the opportunity to learn how to use git efficiently and make contributions in a relatively short amount of time. It will cover: How to install git How to initialize a repository How to make changes in a repository How to make changes in repositories available to others How to acquire changes made by other individuals How to find errors in your work and go back to earlier states of your projects How to make commits, diffs, merges, rebases. The course will help you get the skills to have a good understanding on how to use git. You will have a good knowledge about git workflows, identifying problems in your workflows, and finding solutions to solve these problems.

COURSE_DESCRIPTION: Azure storage accounts provide the basis for cloud storage, while key vaults serve as centralized storage for secrets. In this course, you'll explore how to deploy and manage storage accounts. Next, you'll learn how to enable storage account redundancy and configure a custom DNS domain name. You'll then examine how to configure a storage queue. Lastly, you'll learn how to create and configure an Azure key vault using GUI and command line tools. This course is one of a collection of courses that prepares learners for the AZ-304: Microsoft Azure Architect Design certification exam.

COURSE_DESCRIPTION: DevOps skills are in demand! DevOps skills are expected to be one of the fastest-growing skills in the workforce. This course can be a first step in obtaining those skills. Introduction to DevOps explores DevOps as a cultural movement, including building a business case for DevOps, the essentials of DevOps, and a brief history of DevOps. You will learn new ways of thinking, working, organizing, and measuring to fully gain the benefits of DevOps. You will learn how breaking down silos and organizing developers and operators into single cross-functional teams is necessary for truly adopting DevOps. Having everyone contributing and everyone being responsible for success is at the heart of DevOps. By thinking from a DevOps perspective, you will be able to build better products for your customer. You will view DevOps from a business perspective as well as for becoming a DevOps practitioner. You will see how building a culture of shared responsibility and transparency is the foundation of every high-performing DevOps teams. You will have an opportunity to explore the concepts of infrastructure for Continuous Integration and Continuous Delivery. You will be able to use actionable measures that apply directly to decision-making and will ultimately result in continuous improvement. This course is designed for those new to DevOps as well as those looking to increase their current knowledge of DevOps.

COURSE_DESCRIPTION: With Excel 365's sharing and collaboration tools, working as a team has never been easier. To facilitate efficient collaboration, see how to keep track of workbook versions, track changes, and comments. Excel 365 also enables one to easily share workbooks via email or upload them to OneDrive and SharePoint. In this course, you will explore how to collaborate with other users on an Excel workbook; how to edit a workbook's

properties; track any changes made to your workbook data; and learn how to manage a workbook's version history. You will also discover how to protect Excel workbooks from unwanted edits, and manage a workbook's comments. Furthermore, you will discover how to manage your Excel 365 account and the services you have connected to it and how to save your workbooks to OneDrive. Explore how to use the integrated email function to send your Excel workbook to other users via email. You will discover how to share workbooks via a link. And manage link access and permissions, so you can change link editing permissions to be more restrictive or open. Finally, you can choose the format for the workbook, send it as a PDF, and view a workbook's statistics. In order to practice what you have learned, you will find practice exercises and samples in the Resources section.

COURSE_DESCRIPTION: Command line interfaces were first introduced over 50 years ago, but they are still relevant and commonly used because they work and you'll quite frequently find that you need to work with text in some form. In this course, you'll learn how work with and compile a command line interface and examine the characteristics of a console application and the .NET Console class. You'll learn how to build a console application, as well as how to use the Console class WriteLine, Write, and ReadLine methods. You'll explore how to adjust the development environment in Visual Studio and how to run a C# console application. In C#, working with text involves the String class, so you'll also learn how to perform some basic operations with text. You'll examine the String class, how to define and initialize string variables, and how to manipulate strings. You'll learn the differences between a string and a String object, how to recognize null strings and empty strings, and how to work with composite strings. This course was originally created by Global Knowledge (GK).

COURSE_DESCRIPTION: Entrepreneurial spirit, entrepreneurial culture, are terms that are heard and read repeatedly. These have emerged with renewed strength in an economy in which new and great business opportunities appear. For this reason, entrepreneurial skills are valued in companies and organizations that base their growth and competitive advantage on innovation. It is increasingly common for entrepreneurial projects to be deployed within an established organization, which is known as intra-entrepreneurship or corporate entrepreneurship. Expand your knowledge on this topic with

this online course. The purpose of this administration course is to explain to participants the main concepts of corporate entrepreneurship and introduce topics of "Entrepreneurial Culture" aimed at developing competencies for the organic growth of the company or the development of the organization.

COURSE_DESCRIPTION: Microsoft Cognitive Toolkit (CNTK) is an open source framework for distributed deep learning suitable for commercial applications. It's primarily used to develop neural networks but can also be used for machine learning and cognitive computing. It supports multiple languages and can easily be used in the cloud. These factors make CNTK a good fit for various AI projects. In this course, you'll explore the basic concepts required to work with Microsoft CNTK. You'll compare other frameworks with CNTK, examine the process of creating machine learning and deep learning models with CNTK, and learn how it can be used with several cloud services. You'll move on to learn where to access CNTK documentation, community, and installation guidelines. Finally, you'll use CNTK to predict diabetes using retina scans.

COURSE_DESCRIPTION: This project is for curious minds interested in understanding popular Ethereum-based application vulnerabilities that are particularly effective in decentralized financial (DeFi) markets. In this project, we will execute a few exploits within a few example smart contracts on a blockchain we will deploy. By the end of this project, you should have hands-on experience and a firmer understanding of race conditions and other types of ecosystem manipulation measures that can occur in Ethereum-based decentralized financial (DeFi) markets. Ideal participants have a basic understanding of how Ethereum works and some experience executing Ethereum transactions.

COURSE_DESCRIPTION: As organizations become more reliant on IT systems to store all kinds of information, facilitate communication among colleagues and customers, and track business-related statistics, information is becoming more precious and its security increasingly crucial and challenging. In this course, you'll explore standard information security concepts and the security-related roles within an organization. You'll examine where various security-related responsibilities fall throughout the organization and the importance of solid strategic planning and decision-making when implementing proper information security. You will also investigate the concept of security governance and the activities involved. Finally, you'll delve into the relationship between an organization's overall business objectives and how information security can promote these.

COURSE_DESCRIPTION: Explore basic JavaScript concepts and Full Stack Development while you learn how to get started using JavaScript, and code formatting basics. During this course, you will start by exploring the fundamentals and synergy of FSD, Full Stack Development, and JavaScript Front End Development. Next, you will discover the JavaScript and ECMAScript relationship, and go on to review recent updates 2016, 2017, and ES.Next. As you progress, you will learn how to set up a JavaScript Development Environment, how to discover the features and functionality of the developer console, and how to learn best practices for JavaScript code spacing and formatting. Other topics include how to consider three methods for adding JavaScript to an HTML document, and how to explore the various ways to declare and use variables, use Arithmetic, Logic, and assignment Operators. Finally, conclude by learning how to work with bitwise, increment, and decrement operators.

COURSE_DESCRIPTION: To survive in today's constantly changing business landscape requires being comfortable in uncertainty. Adaptability is what allows people and businesses to solve problems, overcome challenges and move back from the edge of attrition to the more stable ground of relevance. Adaptability is everything. - Jeff Boss, Forbes Adaptability refers to your ability change your actions, course, or approach in order to suit different conditions or environments. Adaptability implies a sense of personal choice, of purposefully navigating-rather than being driven by-changing circumstances. Resilience is the capacity to recover quickly from difficulties. Resilience gives you the ability to bounce forward with new insights and learning you can carry into the future. Both adaptability and resilience include the ability to assess an evolving situation from multiple perspectives, to shift thinking and viewpoint, and to choose the best response. Adaptable people flourish amidst chaos while inflexible people flounder. Adapters find openings in situations where others only see closure. This 4-module course will give you knowledge and tools to become more adaptable and resilient in your workplace and in your life.

 COURSE_DESCRIPTION: Data visualization is a critical skill for anyone that routinely using quantitative data in his or her work - which is to say that data visualization is a tool that almost every worker needs today. One of the critical tools for data visualization today is the R statistical programming language. Especially in conjunction with the tidyverse software packages, R has become an extremely powerful and flexible platform for making figures, tables, and reproducible reports. However, R can be intimidating for first time users, and there are so many resources online that it can be difficult to sort through without guidance. This course is the second in a specialization in Data Visualization offered by Johns Hopkins. It is intended for learners who have either have some experience with R and data wrangling in the tidyverse or have taken the previous course in the specialization. The focus in this course learning to use ggplot2 to make a variety of visualizations and to polish those visualizations using tools within ggplot as well as vector graphics editing software. The course will not go into detail about how the data management works behind the scenes.

COURSE_DESCRIPTION: Six Sigma measurement systems are vital to improving an organization's processes. Measurement systems encompass the conditions, devices, and the human element of measurement, which together must produce correct measurements and comply with appropriate standards. Measurement error, or measurement variability, is a problem whose components must be thoroughly understood and kept in check to maintain the effectiveness of any measurement system. Measurement variability contributes to the overall variability in the process and it is important to understand its sources and minimize it. Black Belts can calculate correlation, bias, linearity, stability, reproducibility, and repeatability to analyze and further improve measurement systems. This course examines how to analyze a measurement system to help it produce correct measurements and minimize its proportion of variability in the overall variability. It introduces key elements of metrology and international systems of measurement, explores the many sources of measurement error, and surveys a broad range of items that can be measured in various functional areas of the enterprise. The course also presents some of the considerations influencing the use of measurement systems in service industries. This course is aligned with the ASQ Certified Six Sigma Black Belt certification exam and is designed to assist learners as part of their exam preparation. It builds on foundational knowledge that is taught in SkillSoft's ASQ-aligned Green Belt curriculum.

COURSE_DESCRIPTION: Once you've learned how to set up a basic project in Infogram, there are several ways you can ensure the information in your infographic stands out. In this course, you'll work with Infogram's many advanced data visualization features. You'll start by using the bar race plot feature to animate bar charts that change over time. You'll then create candlestick charts to visualize variations in data over set periods and waterfall charts to convey the cumulative effect of positive and negative values. Next, you'll create dashboards to convey information using various visual elements, including a treemap, a series of line charts, a streamgraph, and a forecast line chart. Moving on, you'll use an infographic project type to convey several fun bits of information related to James Bond films. To do this, you'll use a Gantt chart, a line chart, and some animated components.

COURSE_DESCRIPTION: Ticketing systems are a great way to collect user and device information, descriptions of problems, and problem resolutions. This course will explore ticketing and asset management systems and how these systems capture information about events and resources. Explore document types such as acceptable use policies, compliance, and network topology diagrams. Discover components of a typical standard operating procedure, including procedures for custom installation of software packages. Next, consider the importance of knowledge base articles and explore best practices for documenting business processes, including rollback plans, sandbox testing, and responsible staff members. Lastly, explore considerations when explaining basic change management best practices. This course is part of a series that will help you prepare for the CompTIA A+ Core 2 (220-1102) certification exam.

COURSE_DESCRIPTION: In this Challenge Lab, you will create uplink segments. First, you will confirm that there is no connectivity between the East-West and North-South networks. Next, you will create two uplink segments for traffic to flow between the Tier-1 and Tier-0 gateways, and then you will create a Tier-0 gateway and connect it to the existing Tier-1 Gateway. Finally, you will test connectivity to confirm the functionality of the Tier-0 Gateway. Note: Once you begin the Challenge Lab, you will not be able to pause, save, or exit and then return to your Challenge Lab. Please ensure that you have set aside enough time to complete the Challenge Lab before you start.

COURSE_DESCRIPTION: Welcome to Systems and Application Security Course! In the Systems and Application Security Course, you will gain an understanding of computer code that can be described as harmful or malicious. Both technical and non-technical attacks will be discussed. You will learn how an organization can protect itself from these attacks. You will learn concepts in endpoint device security, cloud infrastructure security, securing big data systems, and securing virtual environments. Objectives 1. Identify malicious code activity 2. Describe malicious code and the various countermeasures 3. Describe the processes for operating endpoint device security 4. Define mobile device management processes 5. Describe the process for configuring cloud security 6. Explain the process for securing big data systems 7. Summarize the process for securing virtual environments

COURSE_DESCRIPTION: Welcome to this 2-hour long project-based course Calculating Descriptive Statistics in R. In this project, you will learn how to perform extensive descriptive statistics on both quantitative and qualitative variables in R. You will also learn how to calculate the frequency and percentage of categorical variables and check the distribution of quantitative variables. By extension, you will learn how to perform univariate and bivariate statistics for univariate and bivariate variables in R. Note: You do not need to be a Data Scientist to be successful in this guided project, just a familiarity with basic statistics and using R suffice for this project. If you are not familiar with R and want to learn the basics, start with my previous guided project titled "Getting Started with R".

COURSE_DESCRIPTION: In this course you'll focus on how technology-enabled communication is changing geopolitics and, more broadly, how technology is connecting our world and changing lives. This will be done through a series of paired teaching sections, exploring a specific "Impact of Computing" in your typical day and the "Technologies and Computing Concepts" that enable that impact, all at a K12-appropriate level. This course is part of a larger Specialization through which you'll learn impacts of computing concepts you need to know, organized into 5 distinct digital "worlds", as well as learn pedagogical techniques and evaluate lesson plans and resources to utilize in your classroom. By the end, you'll be prepared to teach pre-college learners to be both savvy and effective participants in their digital world. In this particular digital world (global society), you'll explore the following Impacts & Technology pairs -- Impacts (Freedom of Speech): Internet in third world countries, censorship, and social media Technology and Computing Concepts: VPN, how Internet censorship works, metadata, tor Impacts (Life Made Easy): Internet changing the way we live, travel, autonomous vehicles Technology and Computing Concepts: Internet of things, how self-driving cars work Impacts (Keeping Your Information Secure): two-factor authentication, PINs, Patterns, fingerprints, apple ID Technology and Computing Concepts: DDoS attacks and Botnets, man-in-the-middle attacks, dangers of public Wifi, phishing, ransomware, bitcoin In the pedagogy section for this course, in which best practices for teaching computing concepts are explored, you'll learn about the principles of the computer science advanced placement exam, how it assesses students, and how to prepare your students for this critical exam. In terms of CSTA K-12 computer science standards, we'll primarily cover learning objectives within the "impacts of computing" concept, while also including some within the "networks and the Internet" concepts and the "data and analysis" concept. Practices we cover include "fostering and inclusive computing culture", "recognizing and defining computational problems", and "communicating about computing".

COURSE_DESCRIPTION: In this challenge, you will perform a file recovery. First, you will create folders on a server computer, and then you will configure sharing options. Next, you will run file history, and then you will configure a backup. Finally, you will restore a file by using the previous version tab in the file's properties, and then you will restore a file by using File History. Note: Once you begin a challenge you will not be able to pause, save, or return to your progress. Please ensure you have set aside enough time to complete the challenge before you start.

COURSE_DESCRIPTION: To become proficient in automated testing using Selenium as your primary software product, you'll need to be able to manage databases and logs. In this course, you'll explore the role of database and log management in functional test automation, the use of EventListener and EventFiringWebDriver, the various log levels that can be used in Selenium Python, and the exceptions that can be raised when automating functional test cases. Next, you'll learn how to use Listeners to track before and after statuses of click events, databases to define and store test data, and Python Imaging Library to crop elements out of web pages. Next, you'll manage nested iframes in Selenium Python and cookies storing session-specific data. Finally, you'll explore the concept of logging and learn to manage logs and prepare audit trails.

COURSE_DESCRIPTION: DeFi and the Future of Finance is a set of four courses that focus on decentralized finance. The second course is called DeFi Primitives. It is recommended that you take the first course, DeFi Infrastructure, before this course. In this course, we talk about transaction mechanics and introduce both fungible and non-fungible tokens - or NFTs. The course explores the important issue of custody (holding private keys). The course then explores supply adjustment which includes the minting and burning of tokens. The mechanics of bonding curves are introduced. The course then explores the role of direct as well as indirect incentives in the DeFi system. We then analyze swaps or decentralized exchange. We begin by contrasting DEX with centralized exchange (e.g., Coinbase or Binance). The course details the mechanics of Automated Market Makers and provides a number of detailed examples. There is a discussion of impermanent loss as well as (legal) front-running. We end the course by exploring both collateralized and flash loans.

COURSE_DESCRIPTION: Die digitale Technologie bietet die Möglichkeit, die Interaktionen innerhalb eines Unternehmens zu verändern. Dazu müssen Unternehmen jedoch agil genug sind, um in einer sich ständig verändernden digitalen Landschaft zu reagieren. Digitaltechnik ermöglicht auch eine einfachere Überprüfung digitaler Metriken: Durch die einheitliche Messung wichtiger Messgrößen und Leistungskennzahlen hilft die Digitaltechnik Unternehmen, aus jedem Zyklus des Prozesses zu lernen und die nächste Iteration mit fundierten Informationen zu gestalten. In diesem Kurs lernen Sie, dass eine digitale Denkweise bedeutet, die Möglichkeiten der digitalen Technologie zu verstehen, um die Interaktionen innerhalb des Unternehmens zu verändern. Sie erhalten zudem einen umfassenden Einblick in Ihre Kunden, indem Sie die Art und Weise analysieren, wie diese über Ihre digitalen Ressourcen mit Ihrem Unternehmen interagieren. Dies wiederum kann Ihnen dabei helfen, die Customer Journey zu verstehen und die Erfahrung für Ihre Kunden zu verbessern, was das Engagement und die Conversion weiter erhöht. Sie werden auch die Kunden- und Unternehmensvorteile untersuchen, die sich aus der Einführung einer digitalen Denkweise ergeben, und erfahren, dass ein agiler Ansatz mit häufigen Überprüfungen verbunden ist, wodurch Unternehmen ihre Kosten senken und ihre Marktreichweite effizienter steigern können. Schließlich zeigt Ihnen dieser Kurs, wie Sie Probleme dank der Digitaltechnik anders lösen können und inwieweit die Einführung einer digitalen Kultur und Denkweise einen Mehrwert für Ihr Unternehmen, Ihre Abteilung und Ihre eigene Rolle schaffen kann. Dieser Kurs wurde in Zusammenarbeit mit dem Digital Marketing Institute entwickelt. (www.digitalmarketinginstitute.com) Sollten Sie an einer Zertifizierung interessiert sein, wenden Sie sich bitte über die angegebene Website direkt an das Digital Marketing Institute: <https://digitalmarketinginstitute.com/lp/skillsoft> Diese Zertifizierung ist nur in englischer Sprache verfügbar.

COURSE_DESCRIPTION: Social and emotional learning, or SEL, programs have flourished in schools during the last decade. These programs vary widely but most share a concern for five individual, student competencies: self awareness; self-management; social awareness; relationship skills; and finally responsible decision making. It is important for teachers and parents to know about and understand these programs. While lots of SEL programs emphasize K-12 student social and emotional learning, only a very few programs exist to promote, and help teachers explore their own emotional well-being. In this Specialization our central premise is this: To facilitate students' social and emotional learning, a teacher must know the student as a person. This means that the teacher must strive to know her or him self. In order to help students achieve a degree of well-being, teachers need to be aware of their own well-being. In our Specialization, "The Teacher and SEL" the instructors (Randy Testa and Dan Liston, as well as Emily Price and Ben Kirshner) examine kindergarten through high school SEL programs, looking at both established programs and less well-known community-based and youth empowerment approaches. Along with this examination of K-12 SEL programs, we bring a much needed emphasis on the teachers' well being.

COURSE_DESCRIPTION: While remote work has become commonplace for employees around the world over the past year and half, this has not been the story for all - what about those organizations who didn't have the luxury of closing their doors if they wished to keep their businesses up and running? For SUEZ North America, a leader in water and wastewater management, this was exactly the case. Martin Falkenberg, CHRO of SUEZ North America, shares how their organization stepped into action to develop a plan and protocols that ensured they could continue to provide essential services while protecting the health and safety of their employees. And as other organizations begin to think about return to work in a post-COVID world, there are many lessons to be learned from those like SUEZ North America, who have already done so. Please note that this course material includes content gathered from external websites which may fall outside your company network. CATEGORY:
COURSE_DESCRIPTION: In this 10-video course, you will learn about securing cloud data-at-rest and data-in-transit by using various cryptographic mechanisms and security controls offered by the cloud service provider. To begin, you will take a look at cryptographic mechanisms, and then move on to common cryptography protocols. In the next tutorial, you will compare client-side encryption (CSE) and server-side encryption (SSE), and then examine file and database security. You will explore object storage security, examples of which would be Google Cloud Storage and Amazon's S3, before taking a look at using key management services from the cloud service provider. Observe how to define public key infrastructure (PKI), which is based on asymmetric key cryptosystems. In the final tutorial in this course, you will be examining hardware security modules, or HSM. A module is a device or a modular component or a piece of hardware that protects and manages digital keys, which can be session keys, private keys, part of a PKI. The concluding exercise entails describing cloud data security.

COURSE_DESCRIPTION: The post-truth world is a divided and partisan environment in which factual information has been displaced by subjective and biased viewpoints. Facts and expertise no longer matter when isolated communities deny truth and scientific reasoning in favor of whatever information suits their needs or aligns with their beliefs. Social media and emerging technologies have the power to connect global participants in a meaningful way; yet, they have also led to disconnected communities that fail to communicate past their own self-imposed boundaries. In this course, you will gain insights to recognize your own biases and identify preconceptions in today's dynamic social information environment. Through metaliteracy, you will practice self-reflective, metacognitive processes and reexamine fixed mindsets. Together, we will consider the importance of facts and expertise in reinventing a truthful world based on inclusive communities of trust. This course will empower you to be a reflective consumer and a creative, responsible producer of information, and to raise and share your voice in this post-truth milieu.

COURSE_DESCRIPTION: This is Course 4 in the Salesforce Sales Development Representative Professional Certificate. In order to successfully complete the course, please ensure you have taken Course 1: Groundwork for Success in Sales Development, Course 2: Foundations for Interviewing with Confidence, and 3: Conversational Selling Playbook for SDRs. This course demonstrates how to enhance productivity by implementing tech tools that streamline your SDR workflow. You'll be introduced to a variety of best-in-class sales software that will help you achieve the most optimal results - every time. By the end of the course, you'll feel confident in formulating bulletproof outreach strategies in order to engage with prospective customers. Course 4 in the Sales Development Representative (SDR) Professional Certificate will give you the necessary skills to launch a career in the non-technical side of the tech industry. By the end of the course, you will be able to: - Examine and navigate the tech stack and stay up-to-date

on the latest tech tools used in the tech sales workforce - Understand the basic principles of customer relation management (CRM) tools and how to use them effectively as part of your workflow - Use sales intelligence tools to find prospects and optimize your workflow - Formulate bulletproof outreach strategies to engage with prospective customers - Apply the power of social media and video to find and connect with prospects To be successful in this course, you should have: - An ability to communicate in verbal and written form in a way that is accessible and understandable by a general audience (you don't need to be formal or refined) - Baseline computer literacy (you must be able to use a word processor, web search, and email) - Familiarity with social media, including LinkedIn - Ability and willingness to learn new technology tools - Motivation to grow personally and professionally - Hunger for feedback and coaching - Successfully completed the previous courses in this training

COURSE_DESCRIPTION: In this course you'll focus on the fundamentals of teaching the impacts of technology, starting by exploring how you interact with and benefit from technology in a typical 24 hour period, such as the desire for instant food and entertainment. This will be done through a series of paired teaching sections, exploring a specific "Impact of Computing" in your typical day and the "Technologies and Computing Concepts" that enable that impact, all at a K12-appropriate level. This course is part of a larger Specialization through which you'll learn impacts of computing concepts you need to know, organized into 5 distinct digital "worlds", as well as learn pedagogical techniques and evaluate lesson plans and resources to utilize in your classroom. By the end, you'll be prepared to teach pre-college learners to be both savvy and effective participants in their digital world. In this particular digital world (daily life), you'll explore the following Impacts & Technology pairs -- Impacts (Food Delivery): Apps that bring you food, drivers, and find and recommend businesses Technologies and Computing Concepts: Geolocation, Push Notifications, Near Field Communications, HTML5, GPS, Graph representations, Minimal Spanning Trees, Shortest Path Algorithms Impacts (Entertainment): Streaming for entertainment and education, Environmental impact of Internet, YouTube culture Technologies and Computing Concepts: Data Centers, Downloading vs Streaming, Digital vs. Analog image representation, basic compression algorithms, Internet metrics (latency, bandwidth) In the pedagogy section for this course, in which best practices for teaching computing concepts are explored, you'll learn to employ constructivist activities useful in teaching impacts of computing and to evaluate and contribute to an unplugged lesson plan. In terms of CSTA K-12 computer science standards, we'll primarily cover learning objectives within the "impacts of computing" concept, while also including some within the "networks and the Internet" concepts and the "data and analysis" concept. Practices we cover include "fostering and inclusive computing culture", "recognizing and defining computational problems", and "communicating about computing".

COURSE_DESCRIPTION: Because open-source platforms provide access to IT innovations, many developers utilize them. There are several open-source projects for working with the Serverless Framework (Apache OpenWhisk, Fn from Oracle, Kubeless, Knative, Project Riff, etc.). This course helps developers and project managers choose from and work with these different open-source frameworks. Start by exploring the core features of prominent open-source serverless frameworks. Then, compare open-source and cloud-based serverless frameworks before learning how to create and invoke actions and develop Functions as a Service using Apache OpenWhisk. Moving along, set up Fn Project to create, deploy, and invoke functions. Install and configure Fission on Kubernetes clusters. Write short-lived functions in Node.js, map them to HTTP requests, and deploy them on Fission. And use

Kubeless for several essential tasks. When you're done, you'll be able to choose and use the best open-source serverless framework platform for your projects.

COURSE_DESCRIPTION: This 8-video course continues preparations for the Amazon Web Services (AWS) Certified Solutions Architect-Associate (SAA-C02) certification exam. In this course, participants discover how to improve application and Elastic Compute Cloud (EC2) instance performance through the use of Auto Scaling, Load Balancing, and placement groups. The course opens with an examination of how Auto Scaling can adjust EC2 instances, on the basis of workloads, and how to configure an Auto Scaling group, which depends upon your launch configuration. Learn about the Amazon Machine Image (AMI) used to launch new virtual machines in the cloud. Then explore the benefits of utilizing placement groups, why they are needed, and the AWS Management Console, which is used to create them. Next, watch a demonstration of using the graphical user interface (GUI) efficiently to configure a placement group. As the course concludes, participants examine the effects of Load Balancing on improving application performance and fault tolerance, before learning how to configure Elastic Load Balancing to improve app performance.

COURSE_DESCRIPTION: Discover the concepts of pushdown automata, Turing machines, and finite transducers in this 12-video course, in which learners can examine how to identify limitations and complexities in computation and how to apply P and NP classes to manage them. Begin by recalling the machine learning analytical capabilities of grammar, then look at context-free grammar normal forms, using Chomsky normal forms and Greibach normal forms to manage context-free grammars. Describe pushdown automata and features of nondeterministic pushdown automata. This leads on to Turing machines, their capabilities, and the prominent variations in the building themes of Turing machines. Learners explore the concept of finite transducers, and the types of finite transducers. Recall the underlying limitations of computations and the limitations of computational theory, and the complexities of computation, computational theory complexities, and how it can impact Turing machine models and language families. Learn about handling computation complexities with P class and handling computation complexities with NP class. The concluding exercise involves describing properties and variations of Turing machines, types of finite transducers, and properties of recursively enumerable languages.

COURSE_DESCRIPTION: Welcome to this project-based course Hypothesis Testing in R. In this project, you will learn how to perform extensive hypothesis tests for one and two samples in R. By the end of this 2-hour long project, you will understand the rationale behind performing hypothesis testing. Also, you will learn how to perform hypothesis tests for proportions and means. By extension, you will learn how to perform a hypothesis test for means of matched or paired samples in R. Note, you do not need to be a statistical analyst or data scientist to be successful in this guided project, just a familiarity with basic statistics and using R suffice for this project. If you are not familiar with R and want to learn the basics, start with my previous guided project titled "Getting Started with R", and "Calculating Descriptive Statistics in R". A fundamental prerequisite is having a good understanding of the theory of hypothesis test.

COURSE_DESCRIPTION: This online course is an introduction into formal concept analysis (FCA), a mathematical theory oriented at applications in knowledge representation, knowledge acquisition, data analysis and visualization. It provides tools for understanding the data by representing it as a hierarchy of concepts or, more exactly, a concept lattice. FCA can help in processing a wide class of data types providing a framework in which various data analysis and knowledge acquisition techniques can be formulated. In this course, we focus on some of these techniques, as well as cover the theoretical foundations and algorithmic issues of FCA. Upon completion of the course, the students will be able to use the mathematical techniques and computational tools of formal concept analysis in their own research projects involving data processing. Among other things, the students will learn about FCA-based approaches to clustering and dependency mining. The course is self-contained, although basic knowledge of elementary set theory, propositional logic, and probability theory would help. End-of-the-week quizzes include easy questions aimed at checking basic understanding of the topic, as well as more advanced problems that may require some effort to be solved. Do you have technical problems? Write to us: coursera@hse.ru.

COURSE_DESCRIPTION: Welcome to Course Two of Photography Basics and Beyond: From Smartphone to DSLR! Now that you have a broad understanding of the various types of cameras, the importance of setting up Menus and Functions to gain control in your photography, and the difference between Auto and Program exposure modes, you are ready to move into even greater Camera Control! In these 4 Modules we will concentrate on gaining the knowledge necessary to make use of Exposure Modes, Light Metering, Effects of various ISO settings, Lens options, using Shutter Speeds to convey aspects of Time in both documentary and creative ways, and exploring the controlled focus effects that Depth of Field Principles make possible. You will also continue to make new photographs and, if you are a subscriber to the specialization, continue interacting with your fellow learners as you share photographs for Peer Review. You will also confirm your knowledge through completion of quizzes and written responses. Let's get started with Module One!

COURSE_DESCRIPTION: Various laws, regulations, and security best practices require network traffic coming in and out of IT services to be controlled. In this course, you'll learn how to implement techniques to ensure the precious IT assets within your organization's network are secure. You'll begin by exploring what the IPsec network security protocol does and how it's employed. You'll then examine various types of firewalls and decipher when they should be used. Next, you'll work with correctly setting up Windows Defender Firewall, Linux firewall settings, and cloud-based packet filtering rules. Lastly, you'll practice hardening a Wi-Fi network and forging network traffic. This course is one of a collection of courses that prepares learners for the Certified Information Security Manager (CISM) certification.

COURSE_DESCRIPTION: The modern day business is a dynamic enterprise, and leading it now needs a conglomerate of essential skills, ranging from design thinking and digital transformation, to product management and IT. This specialization covers these essential skills and concepts, and what they mean for companies and businesses. It starts with digital transformation, developed at the Darden School of Business at the University of Virginia, and led by top-ranked Darden faculty and Boston Consulting Group global management experts. It then introduces design thinking, which provides you with the tools to become an innovative thinker and uncover creative opportunities at every level in every kind of organization. The specialization then switches gears into what it takes to become a product person in today's digital age, which is a different game relative to what product management used to be. Finally, since now more than ever, companies are investing heavily in IT, the last part of this specialization will cover major challenges within corporate IT, and how to address them with the disciplined use of design thinking.

COURSE_DESCRIPTION: In this course, you will discover how numbers, like statistics, and visual representations like charts and infographics can be used to help us better understand the world or profoundly deceive. Data is a really powerful form of evidence because it can be absorbed quickly and easily, but neither data, nor interpretations of it, are neutral. You will see how to think critically about the statistics we encounter in everyday life. Please note that this course material includes content gathered from external websites which may fall outside your company network. Please consult with your IT department policies with respect to any restrictions in viewing content from external websites.

COURSE_DESCRIPTION: For developers building and deploying serverless RESTful APIs, Azure has several tools for an enhanced and successful development and deployment experience. Use this course to build your knowledge of the serverless architectures implemented using Azure, the orchestration and integration processes in Azure, and how triggers and bindings are used in Azure Functions. Learn how to build Azure API Management service instances and serverless application workflows. Practice using prominent Azure services to implement serverless workflow orchestration. Then, work with Azure SignalR, real-time chatrooms, and serverless workflows in Azure Logic Apps. Next, create serverless workflows to automate app and data integration, basic serverless workflows to consume Azure services, and conditional statements to control workflow actions in Azure Logic Apps. You'll also build Logic apps to orchestrate workflows running on defined recurring schedules. Upon completion of this course, you'll be confident in orchestrating serverless tasks using Azure.

COURSE_DESCRIPTION: This course offers a unique perspective into the differentiating aspects of business to business (B2B) marketing that can be contrasted to traditional business to consumer (B2C) marketing that is the subject of most other marketing curricula. Moreover, as one of the courses in the Specialization: International Marketing & Cross Industry Growth, here too there is an emphasis on how companies can expand by cross-country and cross-industry innovation. By taking this course learners will obtain the following outcomes: (1) understand the differences between B2C and B2B marketing. (2) approach marketing problems from an inter-organizational perspective, in particular, learn about decision making at buying centers. (3) innovate B2B marketing via a CCCI, i.e. Cross Country & Cross Industry Innovation approach. (4) gain insights about CCCI Innovation and best practices via interviews with top B2B industry experts.

COURSE_DESCRIPTION: "Action-Driven Business Plan: From the 'Classroom' to the World" is a capstone project, that requires you, our learner, to pull together all you will have learned in the three courses that comprise the "Startup Entrepreneurship" Specialization. This course is in fact the culmination of the process designed to provide you with the opportunity to demonstrate what you have learned on a real-world project of your choice. During the following six weeks you will gradually create, improve and refine your business plan, moving from one milestone to another. Each week will begin with a short note from Prof. Maital, explaining what the current phase is about and providing you with points to consider while working on the assignments. We encourage you to practice what you have learned using the self-assessment practice quizzes and brainstorm with your peers in the weekly forums. During the first week you will create a non-business plan as an initial step towards creating your business plan. In weeks two, three and five, you will be required to submit three assignments for peer evaluation, which will help you to prepare your final business plan. At the end of the course you will prepare and submit your completed business plan and an effective two-minute video describing your idea. Your business plan will include the following sections: The Need, the Product, Unique Features, The Market and Future Developments, a Gantt chart and a project budget.

COURSE_DESCRIPTION: Explore how to use React components and learn about the capabilities of Redux, including features such as validation and lifecycle management. In this course, you will begin by exploring the usage of PropTypes that help detect bugs and facilitate data type checking and accuracy. Next, you will learn how to manage the lifecycle of React components along with the various states of React applications. As you progress, you will learn about event handling concepts in React, such as how to describe them. Other key subject areas include the following: See how to use forms in React; learn how to identify the various capabilities of Redux that enhance React applications; identify Redux components and demonstrate the various stages and state management of Redux. Examine the Redux-devtools-extension. Define, create, and integrate Redux actions and reducers. Store Redux application features. Finally, you will step through the Redux data flow life cycle.

COURSE_DESCRIPTION: The field of analytics is typically built on four pillars: Descriptive Analytics, Predictive Analytics, Causal Analytics, and Prescriptive Analytics. Descriptive analytics (e.g., visualization, BI) deal with the exploration of data for patterns, predictive analytics (e.g., data mining, time-series forecasting) identifies what can happen next, causal modeling establishes causation, and prescriptive analytics help with formulating decisions. This specialization focuses on the Prescriptive Analytics (the final pillar). This specialization will review basic predictive modeling techniques that can be used to estimate values of relevant parameters, and then use optimization and simulation techniques to formulate decisions based on these parameter values and situational constraints. The specialization will teach how to model and solve decision-making problems using predictive models, linear optimization, and simulation methods.

COURSE_DESCRIPTION: We make thousands of decisions every day. Do I cross the road now, or wait for the oncoming truck to pass? Should I eat fries or a salad for lunch? How much should I tip the cab driver? We usually make these decisions with almost no thought, using what psychologists call "heuristics" - rules of thumb that enable us to navigate our lives. Without these mental shortcuts, we would be paralyzed by the multitude of daily choices. But in certain circumstances, these shortcuts lead to predictable errors - predictable, that is, if we know what to watch out for. Did you know, for example, that we are naturally biased towards selling investments that are doing well for us, but holding on to those that are doing poorly? Or that we often select sub-optimal insurance payment plans, and routinely purchase insurance that we don't even need? And why do so many of us fail to enroll in our employer's corporate retirement plans, even when the employer offers to match our contributions? Behavioral finance is the study of these and dozens of other financial decision-making errors that can be avoided, if we are familiar with the biases that cause them. In this course, we examine these predictable errors, and discover where we are most susceptible to them. This course is intended to guide participants towards better financial choices. Learn how to improve your spending, saving, and investing decisions for the future.

COURSE_DESCRIPTION: This specialization is aimed at learners who are interested in exploring the Russian language, and provides everything you need to start this journey. This specialization contains four courses, and begins with an introduction to the basics of the Russian alphabet and phonetics, which will be vital for you as you progress in your studies. All four courses provide extensive theoretical and practical materials, and supply listening, reading, and vocabulary exercises to enhance the learning process. Grammar materials will cover parts of speech, case system, verb conjugation, and sentence structure. Upon completion of the specialization, learners will be well-versed in the basic theories and rules of Russian phonetics and grammar; will acquire basic conversation vocabulary; be able to read simple texts; and hold conversation on everyday topics such as family, travel, hobbies, personal activities, and holidays. Our team is going to further improve and enrich the course materials to provide learners with up-to-date information, and to help them progress and achieve the best results.

COURSE_DESCRIPTION: Refine your data's appearance with Excel 2019 for Windows. In this course, you will discover how you can align data, use colors and themes, resize rows and columns, and insert tables and borders in Excel 2019 to change data presentation. Learners will begin by observing how to set a data type, and then format and align their data. Next, observe how to use colors, which can help data stand out for the reader and make the table easier to read. Discover how to change the cell style; use document themes, and use formulas to modify the text case. Explore how to create clean, professional looking titles, and format titles to make them presentable. Create tables to ease organization; resize columns and rows; insert borders, and columns and rows. Conclude the course by observing how to transfer format styles. In order to practice what you have learned, you will find the Word document named Excel 2019 for Windows: Formatting Data Exercise as well as the associated materials in the Resources section.

COURSE_DESCRIPTION: The binary heap, the data structure used to implement a priority queue, is an interesting data structure. Recognizing how best to work with the binary heap is part of creating sturdy and fast software programs. In this course, you'll explore the binary heap data structure used to implement a priority queue in a performant and efficient manner. You'll recognize how the binary heap is essentially a binary tree that satisfies two additional constraints: the heap property and the shape property. You'll examine how the binary heap can be represented using an array and how it allows us to implement add, remove, and access operations on a priority queue in an extremely high-performing manner. Finally, you'll learn how the binary heap helps us implement an efficient sort algorithm: the heap sort.

COURSE_DESCRIPTION: In Geschäftsdokumenten verständlich und prägnant zu sein, ist nicht immer einfach. Es ist aber am Arbeitsplatz entscheidend, wenn Sie wollen, dass Ihre Texte wirklich gelesen werden. In diesem Kurs lernen Sie Techniken, mit denen Sie Ihre Texte verständlicher machen können. Insbesondere lernen Sie, wie wichtig es ist, kurze geläufige Begriffe, adäquate Konnotationen, anschauliche und eindeutige Formulierungen sowie Überleitungen und geeignete Phrasen zu verwenden. Sie bekommen auch Tipps, um beim Schreiben prägnanter zu sein, und erfahren etwas über die besten Methoden, um Inhalte zu strukturieren.

COURSE_DESCRIPTION: As a security professional, you'll likely have been exposed to the concept of origin authentication. However, in today's modern environment of mobile devices, the Internet of Things, and embedded systems, more robust authentication, authorization, and identity management methods are imperative. Use this course to comprehend how single and multi-factor authentication, single sign-on (SSO), device authentication, and federated access work. Examine the use of trust relationships between domains and what's meant by Zero Trust. And distinguish between various internetwork connections such as the Internet, intranets, and extranets. Upon course completion, you'll be able to detail how and why these authentication mechanisms and trust architectures are used. You'll also be one step closer to being prepared to take the (ISC)² Systems Security Certified Practitioner (SSCP) 2021 exam.

COURSE_DESCRIPTION: Die Geschäftswelt verändert sich wie nie zuvor und das Tempo des Wandels erfordert eine solide, umsichtige Führung. Wie entschleunigen und fokussieren sich achtsame Führungskräfte in einer 24/7-Welt, wenn sie größeren Verantwortlichkeiten und Druck ausgesetzt sind? In diesem Kurs erfahren Sie, wie Achtsamkeit Ihre Fähigkeit stärken kann, auf das Wesentliche zu achten. Sie lernen, wie Achtsamkeitstechniken Ihre Effektivität als Führungskraft verbessern können und wie Sie Klarheit und Fokussierung entwickeln. Außerdem lernen Sie Folgendes: • Wie Sie im Moment vollständig präsent werden • Wie Sie sinnlose Verhaltensweisen erkennen, die die Effektivität schwächen • Wie Achtsamkeit effektive Geschäftsbeziehungen zu Ihren Kollegen und direkt Unterstellten aufbaut

COURSE_DESCRIPTION: In this project, we are going to see how to "Implement Real Time Analytics using Azure Stream Analytics" Data processing is broadly categorized into two main categories: Batch processing & Real time processing. We are going to focus on real time data processing and Azure Stream Analytics is a popular service which is used to process and perform analytics on real time data stream. Hence , in this project we are going to see with an example how to implement a solution using Azure Stream Analytics and process real time stream of data. Pre requisites: 1. Azure subscription account(its preferred to have owner level access on the subscription account) Here is a brief description of the tasks we are going to perform in this project: Task1: Understand the Project Scenario In this task, we are going to see an overview of the project to be implemented and also the different components involved in this project and how they are linked to each other Task2: Setup the project environment In this task, we are going to create Azure Event Hub, Azure SQL Database, download and install Real Time Data Generator App. Task3: Configure the different components created in previous task In this task, we are going to connect the live data generator app with the event hub and also create the output and reference tables in Azure SQL Database Task4: Configure Azure Stream Analytics Job In this task, we are going to configure the input, reference input and output in Azure Stream Analytics Job Task5: Configure Query in Stream Analytics job In this task, we are going to write the query in Stream Analytics job which is used to process, analyze and transform the source data which will be received from event hub. Also, we will run the Stream Analytics job to see a demo of how it processes the input data from event hub and loads the data in output table in SQL database. Task6: Configure reference input in Stream Analytics job In this task, we are going to see how to use the reference input in the query of Azure Stream Analytics job. Also, we will run the Stream Analytics job to see a demo of how it processes reference input and loads data in output table in SQL database

COURSE_DESCRIPTION: Benutzerfreundliche Apps sind mehr als nur eine ansprechende Benutzeroberfläche (UI). Sie stellen sicher, dass die Benutzereinfahrung (UX) angenehm ist. Die Menschen erwarten, dass die Interaktion mit einem digitalen Produkt, sei es Smartphone, Laptop oder Tablet, eine reibungslose, angenehme Erfahrung ist. Wenn Sie die Beziehung zwischen Benutzeroberfläche und Benutzereinfahrung verstehen, kann Ihr Unternehmen genau eine solche Erfahrung bereitstellen. In diesem Kurs lernen Sie das Design von Benutzeroberfläche/-erfahrung kennen und wie sie zusammen

benutzerfreundliche Apps mit effektivem Benutzeroberflächendesign ergeben. Sie lernen die wichtigsten Trends für Designs und Prinzipien der Benutzenerfahrung und -oberfläche kennen. Schließlich erfahren Sie, wie Sie die emotionalen Auswirkungen der Benutzenerfahrung bewerten können.

COURSE_DESCRIPTION: Organizations should regularly evaluate existing processes to make sure that they meet targets and specifications. This capability measurement in turn leads to business process improvement. By measuring and analyzing process capability and performance, organizations are able to report those Lean and Lean Six Sigma levels. This data can drive process improvement, process control, and process design. This course will present some methods you can use to measure and interpret common performance indices. It will also cover ways to verify the stability and normality of a process, as well as key considerations to measure process capability. It is aligned with ASQ's 2015 Six Sigma Green Belt Body of Knowledge.

COURSE_DESCRIPTION: Jeder im Team hat bestimmte Stärken. Um ein Team dazu zu bringen, Bestleistungen zu erbringen, müssen diese Stärken erkannt und sich in den Rollen und Verantwortlichkeiten wiederfinden, die den Teammitgliedern zugewiesen werden. So können alle auf das Erreichen geeigneter Ziele ausgerichtet werden. In diesem Kurs lernen Sie, wie man ein Team aufbaut, einschließlich dessen, wie man effektive Teamziele setzt, Rollen identifiziert, die Kompetenzen der Teammitglieder beurteilt und die Rollen basierend auf ihren Kompetenzen zuweist. Außerdem erlernen Sie, wie man wirksam Feedback gibt und annimmt, sodass es Ihre Rolle und die Leistung des Teams stärkt.

COURSE_DESCRIPTION: In this Challenge Lab, you will create a scalable website that has a backend database and a dashboard for monitoring. First, you will create security groups and Network Access Control Lists (ACLs) to secure the network environment, and then you will create an Amazon RDS DB instance running MySQL. Next, you will create a launch template that you will use to create Amazon Elastic Cloud Compute (Amazon EC2) instances, and then you will create an Auto Scaling group and an Application Load Balancer. Next, you will configure the website to use the database, and then you will connect to the website through the load balancer. Finally, you will create a CloudWatch dashboard to monitor the load balancer and the RDS instance. Note: Once you begin the Challenge Lab, you will not be able to pause, save, or exit and then return to your Challenge Lab. Please ensure that you have set aside enough time to complete the challenge lab before you start.

COURSE_DESCRIPTION: Network field technicians need to look at a Cisco network and recognize what each device does, the physical characteristics of those devices, how they interact with other components on the network, and what to consider before troubleshooting them. In this course, you'll nail down how to ID networking equipment by function alone and grasp its role in both the context of the operational network and in troubleshooting. You'll start by categorizing network equipment by function before identifying how they operate in context and how they facilitate troubleshooting. You'll then examine how Cisco devices work with different networking media and the potential requirements for their use. Finally, you'll investigate the physical and functional characteristics of the ports on Cisco devices. This course can be used in preparation for the 100-490: Supporting Cisco Routing and Switching Network Devices (RSTECH) exam and to attain the Cisco Certified Technician (CTT) Routing & Switching certification.

COURSE_DESCRIPTION: Organizations store data in various ways. The R programming language offers a straightforward interface to work with data in relational databases and transform it to the format you need for analysis. In this course, you'll learn how to connect to relational databases using the APIs provided in the Database Interface package (DBI) in R. You'll connect to SQLite data and perform create, read, update, and delete (CRUD) operations on your database tables. You'll also use R functions to mutate and transform data. You'll practice renaming columns, changing variable types, and creating new columns from derived data. You'll examine the tidyverse universe of data science packages and work with data in the wide and long formats. Once you've completed this course, you'll have a strong foundation in basic data manipulation and transformation using the R programming language.

COURSE_DESCRIPTION: This Innovation and Entrepreneurship course focuses on the interconnection between entrepreneurial thinking and innovation. Specifically, we look at models used in Silicon Valley to grow both start-up companies as well as innovation inside large organizations. Bringing together top Haas School of Business, UC Berkeley faculty, this course addresses critical areas for successful growth, including design thinking, open innovation, business models, product-market fit, and financing. This course will teach you how to think like an entrepreneur and provides the models, tools and frameworks to further develop your business or idea. An emphasis will be placed on the IT space. In this second part, From Design Thinking to Funding, the following areas are included: design thinking; innovation cycle process; business modeling; and funding.

COURSE DESCRIPTION: By the end of this project, you will learn how to create a company vision and mission statement from scratch using the free version of Canva. Mission and vision statements are important foundational elements of any organization. A Mission Statement defines the company's business, its objectives and its approach to reach those objectives. A Vision Statement describes the desired future position of the company. You will be able to incorporate a color scheme, different charts, and other design elements for aesthetically pleasing and value added business marketing collateral. We can use Canva to complete this project because it provides all the tools you need to create an organized and visually appealing product while offering a variety of options for sharing and collaboration. You will learn how to plan and organize your ideas and utilize graphic design tools as you create a vision and mission statement from scratch that will serve as a template for future projects. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE DESCRIPTION: In this course, you'll explore the basic structure of a web application, and how a web browser interacts with a web server. You'll be introduced to the Hypertext Transfer Protocol (HTTP) request/response cycle, including GET/POST/Redirect. You'll also gain an introductory understanding of Hypertext Markup Language (HTML), as well as the overall structure of a Django application. We will explore the Model-View-Controller (MVC) pattern for web applications and how it relates to Django. You will learn how to deploy a Django application using a service like PythonAnywhere so that it is available over the Internet. This is the first course in the Django for Everybody specialization. It is recommended that you complete the Python for Everybody specialization or an equivalent learning experience before beginning this series.

COURSE DESCRIPTION: This 12-video course explores developing a product, and how to use Scrum, an Agile framework for developing, delivering, and sustaining complex products. Learners will examine how a product idea is initiated through conversations with stakeholders and analyzing the market. First, learn how to identify the product's purpose, and how to develop a product strategy and design plan. You will learn how to develop a product strategy in Scrum. Then examine how the product strategy is affected by the Scrum master product owner and Scrum team. You will examine how different groups of stakeholders have different requirements for the product, and how to use customer research as input for defining the product. Next, you

will explore the three roles on every Scrum team, and how the team builds, refines, and owns product backlog; learn to set priorities; and determine the team's direction. You will examine how to create effective user stories. Finally, this course examines empathy maps, how they help understand customers, and product discovery techniques that deliver a successful product.

COURSE_DESCRIPTION: This course takes a deep dive into paid advertising on social media. Learn how to start advertising on platforms like Facebook and Instagram by developing effective ads. Learn how to work with design teams by capturing the essence of your ad campaign in a creative brief, and understand how privacy policies may affect your ads. Complete the course with a project where you will produce a creative brief with assets you would deliver to a design team for your ad campaign. You'll also create your first social media ad. By the end of this course you will be able to: • Determine why and when to invest in paid advertising on social media • Understand the anatomy of a social media ad and how they differ from organic posts • Evaluate on which platforms to run social media ad campaigns and what makes an ad effective • Craft compelling and effective visuals and copy for social media ads • Learn how to collaborate effectively with others through creative briefs • Build foundational understanding for data, data-based advertising and privacy protection • Build an ad directly from your Facebook Business Page and your Instagram Business Account • Use Instagram Stories Ads effectively to connect with customers • Write a creative brief and create a social media ad This course is intended for people who want to learn how to create and manage ads on social media. Learners don't need marketing experience, but they have basic internet navigation skills and

are eager to participate and connect in social media. Having a Facebook or Instagram account helps and ideally learners have already completed course 1 (Introduction to Social Media Marketing) and 2 (Social Media Management) in this program.

COURSE_DESCRIPTION: Monitoring Microsoft Azure services is crucial for optimizing their performance and security. In this course, you will explore Azure solutions that allow the monitoring of Azure services. First, you will create an Azure Monitor action group to be used for Monitor alert notifications. Next, you will configure application insights for a web app. Lastly, you will add data sources for monitoring to an Azure Log Analytics Workspace. This course can be used to prepare for exam AZ-500, Microsoft Azure Security Technologies.

COURSE_DESCRIPTION: Networks in the cloud are configured through software-defined networking (SDN), which hides the underlying complexities of configuring devices such as network switches and routers. Use this course to gain a deeper understanding of how to manage the AWS network. You'll begin by examining IPv4 and IPv6 addressing, elastic IP (EIP) address resources, and virtual private clouds (VPCs). You will then work with DHCP settings, VPC peering and transit gateways, NAT and Internet gateways, and egress-only internet gateways. This course will also help you determine the use of AWS Direct Connect. After completing this course, you'll be able to provision and manage various AWS network components, further preparing you for the AWS Certified SysOps Administrator - Associate exam, SOA-C02.

COURSE_DESCRIPTION: In this 2-hour long project-based course, you will learn to create AWS CodePipeline using AWS services like AWS CodeCommit, AWS CodeBuild and AWS CodeDeploy. AWS CodePipeline allows you to automate the release process for your application or service. AWS CodeCommit is a source control storage and version code service provided by Amazon. AWS CodeBuild is a fully managed build service that compiles source code, runs tests, and produces software packages that are ready to deploy. With CodeBuild, you don't need to provision, manage, and scale your own build servers. AWS CodeDeploy is a deployment service that automates application deployments to Amazon EC2 instances, on-premises instances running in your own facility, Serverless AWS Lambda functions, or applications in an Amazon ECS service. In this Project you will create AWS Pipelines which will deploy sample react application on S3 bucket and EC2 instances. By the end of this project, you will create AWS pipeline which will use AWS CodeCommit, AWS CodeBuild and AWS CodeDeploy to automate the release process for a sample react application. After completing this training, you will have good understanding AWS CodePipeline, AWS CodeCommit, AWS CodeBuild and AWS CodeDeploy. Prerequisite - Basic Knowledge of AWS services (EC2, S3 and IAM) and GIT Please note: You will need an AWS account to complete this project. All the resources used in this project come under AWS free-tier.

COURSE_DESCRIPTION: Amazon Simple Storage Service (S3) is a cloud storage solution frequently used by systems administrators in systems operations roles. In this course, you'll explore the purpose and features of S3 before learning how to create S3 buckets using the GUI, CLI, and PowerShell. Next, you'll configure various S3 bucket settings, such as versioning, lifecycle policies, and data storage tiers. You'll learn how to work with S3 Transfer Acceleration, Glacier storage, public access, object locking, and the Storage Gateway. You'll then learn to manage Elastic Block Store (EBS) volumes using the GUI, CLI, and PowerShell. Finally, you'll learn how to manage the Elastic File System (EFS). This course is one of a collection of courses that prepares learners for the AWS Certified SysOps Administrator - Associate (SOA-C01) exam.

COURSE DESCRIPTION: This is the first course of a six part specialization. You are STRONGLY encouraged to complete these courses in order as they are not individual independent courses, but part of a workflow where each course builds on the previous ones. This first course in the IBM AI Enterprise Workflow Certification specialization introduces you to the scope of the specialization and prerequisites. Specifically, the courses in this specialization are meant for practicing data scientists who are knowledgeable about probability, statistics, linear algebra, and Python tooling for data science and machine learning. A hypothetical streaming media company will be introduced as your new client. You will be introduced to the concept of design thinking, IBMs framework for organizing large enterprise AI projects. You will also be introduced to the basics of scientific thinking, because the quality that distinguishes a seasoned data scientist from a beginner is creative, scientific thinking. Finally you will start your work for the hypothetical media company by understanding the data they have, and by building a data ingestion pipeline using Python and Jupyter notebooks. By the end of this course you should be able to: 1. Know the advantages of carrying out data science using a structured process 2. Describe how the stages of design thinking correspond to the AI enterprise workflow 3. Discuss several strategies used to prioritize business opportunities 4. Explain where data science and data engineering have the most overlap in the AI workflow 5. Explain the purpose of testing in data ingestion 6. Describe the use case for sparse matrices as a target destination for data ingestion 7. Know the initial steps that can be taken towards

automation of data ingestion pipelines Who should take this course? This course targets existing data science practitioners that have expertise building machine learning models, who want to deepen their skills on building and deploying AI in large enterprises. If you are an aspiring Data Scientist, this course is NOT for you as you need real world expertise to benefit from the content of these courses. What skills should you have? It is assumed you have a solid understanding of the following topics prior to starting this course: Fundamental understanding of Linear Algebra; Understand sampling, probability theory, and probability distributions; Knowledge of descriptive and inferential statistical concepts; General understanding of machine learning techniques and best practices; Practiced understanding of Python and the packages commonly used in data science: NumPy, Pandas, matplotlib, scikit-learn; Familiarity with IBM Watson Studio; Familiarity with the design thinking process.

COURSE_DESCRIPTION: In diesem Vertiefungskurs werden die umfassenden und flexiblen Infrastruktur- und Plattformdienste der Google Cloud Platform vorgestellt. In Präsentationen, Demos und praxisorientierten Labs lernen die Teilnehmer Lösungselemente kennen und stellen diese bereit. Dazu gehören Infrastrukturkomponenten wie Netzwerke, Systeme und Anwendungsdienste. Außerdem gehen wir auf praktische Lösungen ein, beispielsweise für sichere Verbindungen zwischen Netzwerken, für von Kunden bereitgestellte Verschlüsselungsschlüssel, die Sicherheits- und Zugriffsverwaltung, Kontingente und Abrechnung sowie das Ressourcenmonitoring. Dieser Kurs richtet sich an folgende Zielgruppen: ● Architekten für Cloudlösungen, DevOps-Entwickler ● Nutzer der Google Cloud Platform, die neue Lösungen entwickeln oder vorhandene Systeme, Anwendungsumgebungen und Infrastrukturen in die Google Cloud Platform integrieren >>> Mit Ihrer Teilnahme an dieser Spezialisierung stimmen Sie den Nutzungsbedingungen von Qwiklabs zu, die Sie in den FAQs und unter folgendem Link finden: [<< https://qwiklabs.com/terms_of_service <<](https://qwiklabs.com/terms_of_service)

COURSE_DESCRIPTION: QlikView, a guided data analytics solution from Qlik, allows you to develop and deliver interactive guided analytics applications and dashboards rapidly. In this course, you'll set up QlikView Personal on your Microsoft Windows machine and build some standard visualizations. You'll first demonstrate and explore in detail the associative data model in QlikView, which allows you to probe and highlight all associations in your data. You'll then import custom data using Excel and CSV files into QlikView before visualizing and exploring your data using bar charts, pie charts, and grid charts. Furthermore, you'll also use special sheet objects, such as the table box, which, when every row's content is logically connected, displays several fields in your data simultaneously. Moreover, you'll use the multi box to represent values from multiple fields as drop-down values.

COURSE_DESCRIPTION: In the era of abstract service communication via API, implementing error handling using best practices is essential. In this course, you'll learn some of the best methods for handling and identifying REST API error response messages. You'll also explore the sub-elements of SOAP fault blocks. Next, you'll learn about standards for HTTP response codes, REST API JSON response standards, and standard API error messages. You'll explore how Facebook uses the Graph API web service and methods for dealing with debugging and error handling. Lastly, you'll learn how to use .NET Core to create a REST API web service, and handle error handling and custom errors.

COURSE_DESCRIPTION: Exceptions are the most popular form of error handling and the try-catch block is superior to all other error handling mechanisms because it forces the invoking function to manage the errors. In this course, learn how exceptions are thrown and caught. Next, practice creating and using custom exception objects and discover why exceptions must be caught by reference. Finally, explore object slicing results, the semantics and limitations of the noexcept keyword, and the pitfalls of exceptions that occur within constructors. Upon completion, you'll be able to correctly throw and handle exceptions using try/catch blocks, enumerate semantics and limitations of the noexcept keyword, and mitigate problems related to exceptions thrown during the construction of an object.

COURSE_DESCRIPTION: When transitioning to a CloudOps Engineer role, you're required to recognize where your responsibilities lie and how to embrace proper CloudOps practices. In this course, you'll distinguish the roles of DevOps and CloudOps engineers and explore a CloudOps engineer's role in designing, deploying, and managing end-to-end IT processes and in project management. You'll examine the fundamental factors in setting up a robust CloudOps practice, the primary cloud infrastructure components and technologies, and how to implement DevOps principles to ensure continuous operations in public and private clouds. You'll also investigate the most prominent cloud architectures, automation techniques for composing agile and automated end-to-end IT processes, and software re-architecting and re-engineering approaches. Lastly, you'll identify the significant CloudOps security and compliance challenges you need to mitigate when transitioning from a traditional IT to a CloudOps environment.

COURSE DESCRIPTION: In this 14-video course, learners can explore best practices for anomaly detection for network forensics with topics such as network behavior anomaly detection (NBAD), frequency analysis, identifying beaconing activity, and recognizing signs of brute force attacks. Also discover protocol and population analysis, HTTPS and SSH (Secure Shell) attacks, as well as triage methods. Begin with a look at concepts and applications of NBAD, then discover how to implement frequency analysis. Learn how to identify beaconing activity, and how to recognize the signs of a brute force attack. Next, learners examine protocol analysis approaches and techniques, and learn about HTTPS attacks, deducing the activity of encrypted web traffic. Analyze SSH authentication behavior; take an overview of population analysis; explore techniques used to reveal hidden connections with behavioral analysis; and learn how to differentiate between different NBAD triage methods. In the final tutorials, discover methods and techniques for performing network anomaly analysis and the benefits of anomaly detection, and examine how network forensics can be used to protect mission critical areas of business.

COURSE DESCRIPTION: This UX course will provide an overview of survey methodology from the perspective of UX research. UX surveys typically focus on uncovering user needs, connecting needs to user characteristics, and gaining insight into user attitudes towards systems they use. In this course, learners will learn the basics of UX survey research and conduct a survey of their own design! Learners will be introduced to techniques for gaining UX insights from large numbers of users, including web analytics, A/B testing, and remote unmoderated studies. We will discuss how these techniques work, when they can be applied, and what can be learned by using them. What You'll Learn: -Learn how web analytics works and how to analyze analytics data -Understand how to develop A-B tests, before/after, and multivariate experiments -Learn how to set up and analyze remote unmoderated testing studies -Analyze and report on large scale user experience studies Learn about the different types and uses of surveys in UX research -Understand the survey population: when to sample, when to recruit -Develop a survey instrument that meets your requirements -Analyze and report on surveys -Learn to critique user surveys

COURSE_DESCRIPTION: Welcome to Creating Cutscenes in Unity, the fifth course in the Unity Certified 3D Artist Specialization from Unity Technologies. The courses in this series will help you prepare for the Unity Certified 3D Artist exam, the professional certification for entry- to mid-level Unity artists. 3D artists are critical to the Unity development pipeline. They are a bridge between the programmers writing the application code and the designers or art directors who define the application's aesthetics and style. In these courses, you will be challenged to complete realistic art implementation tasks in Unity that are aligned to the topics covered on the exam. In course 5, you will continue your work on the sci-fi themed 3D adventure game and create an animated cutscene for the game. You'll construct an environment for the cutscene from the game's assets, manage LOD groups for optimal graphics performance, add particle effects, block out the cameras that will capture the action, and finally animate the cameras and objects to generate the scene. Oh, and for those players that just can't sit through cutscenes, you'll wire up a "skip" button so that they can jump into the action. This is an intermediate course, intended for people who are ready for their first paying roles as Unity 3D artists, or enthusiasts who would like to verify their skills against a professional standard. To succeed, you should have at least 1-2 years of experience implementing 3D art in Unity. You should be proficient at importing assets into Unity from Digital Content Creation (DCC) tools, prototyping scenes, working with lighting, and adding particles and effects. You should also have a basic understanding of 2D asset management, animation, and working with scripts. You should have experience in the full product development lifecycle, and understand multi-platform development, including for XR (AR and VR) platforms.

COURSE_DESCRIPTION: During product development, there are some important principles and methods that Scrum product owners can use to improve the chances for a successful product launch. In this 12-video course, learners will discover the importance of transparency in setting goals and monitoring progress, how release burnup charts are used to track progress, and how Sprint Reviews are used to collect feedback and make better product decisions. Key concepts covered here include the importance of providing transparency on goals and progress during product development; examining the release burnup charts used in product development, and how they can be used to provide effective progress tracking; and how the Sprint Review helps with collecting feedback and making better product decisions. Then learn about guidelines and best practices used to conduct effective Sprint Reviews; describe tools and methods commonly used to validate assumptions during the product development process; and learn the purpose of a Minimal Viable Product and how it is used to test assumptions during product planning. Finally, learn the purpose of testing assumptions during product development.

COURSE_DESCRIPTION: The first course of the specialization ANALYZING COMPLEXITY will teach you what unifying patterns lie at the core of all complex problems. It advances your knowledge of your own field by teaching you to look at it in new ways. ANALYZING COMPLEXITY is constructed in the following way: Week I. "What is Complexity?" - What is at the core of all complex problems Week II. "Complex Physical Systems" - What complex problems all have in common in the inanimate world Week III. "Complex Adaptive Systems" - What complex problems all have in common in nature Week IV. "Complex Cultural Systems" - What complex problems all have in common in human society Week V. "Complexity, Fragility, and Breakdown" - Why complex problems arise Week VI. "Complexity in the Anthropocene" - What complex problems face us today

COURSE_DESCRIPTION: In Java, bounded type parameters and wildcards offer certain flexibility and disadvantages. Recognizing these will help you decide when and how to use these tools to your advantage when writing code. Use this course to get to grips with what's meant by unbounded and bounded type parameters, explore the use of wildcards in Java, and recognize the applications of unbounded, upper-bounded, and lower-bounded wildcards. As you advance, investigate what's meant by 'wildcard capture' and 'type erasure.' When you're finished, you'll be able to correctly identify scenarios for using bounded type parameters and wildcards and implement them correctly.

COURSE_DESCRIPTION: Building good working relationships with any colleague takes time and effort, but when colleagues are from different cultures, creating productive relationships may be more challenging. Cultural differences can impact communication and even steer it away from the intended purpose. When you compound cultural differences with the need to communicate virtually, achieving effective communication becomes even more formidable. In this course, you will learn communication strategies that will help you to effectively build and maintain relationships with culturally diverse colleagues around the globe. From building initial rapport to sharing information, brainstorming, and preventing conflicts, you'll be able to recognize behaviors that will enable you to communicate effectively and achieve your business goals.

COURSE_DESCRIPTION: This course provides an analytical framework to help you evaluate key problems in a structured fashion and will equip you with tools to better manage the uncertainties that pervade and complicate business processes. To this end, the course aims to cover statistical ideas that apply to managers by discussing two basic themes: first, is recognizing and describing variations present in everything around us, and then modeling and making decisions in the presence of these variations. The fundamental concepts studied in this course will reappear in many other classes and business settings. Our focus will be on interpreting the meaning of the results in a business and managerial setting. While you will be introduced to some of the science of what is being taught, the focus will be on applying the methodologies. This will be accomplished through use of Excel and using data sets from many different disciplines, allowing you to see the use of statistics in very diverse settings. The course will focus not only on explaining these concepts but also understanding the meaning of the results obtained. You will be able to: • Test for beliefs about a population • Compare differences between populations • Use linear regression model for prediction • Use Excel for statistical analysis This course is part of Gies College of Business' suite of online programs, including the iMBA and iMSM. Learn more about admission into these programs and explore how your Coursera work can be leveraged if accepted into a degree program at <https://degrees.giesbusiness.illinois.edu/idegrees/>.

COURSE_DESCRIPTION: Digital technologies are changing business, government and society worldwide. Clearly, they're opening up new risks and opportunities for every sector of the world economy. Such "futurology" may offer you the big picture, but what does a digital world mean for you, personally? Will you be ready for an automated, AI-assisted, big-data-driven employment future? This course provides you an answer to these

questions, and it does so from a unique perspective: by introducing you to the world of intelligence analysis. First, this course explains some of the skills that will command a premium in the digital age, and why. Then, it offers you mental models and practical frameworks developed by the US intelligence community to give you a cognitive edge understanding the digital world. This edge is not about spying or secrets. It's about better thinking. This analytic toolkit has nothing to do with tired, static MBA-style strategy frameworks. Instead, these tools to help you come to grips with the volatility, uncertainty, ambiguity and deception of the digital age. Ultimately, this course makes the case that as the world becomes more digital, your future success depends most of all on asking better questions of both yourself and others. Therefore, it teaches you how to adopt an intelligence analyst's question-asking mindset. In short, take this course to acquire a sustainable business advantage through clearer, more structured thinking.

COURSE_DESCRIPTION: In this course, we dive into the topic of child development. You will learn that child development is complex and is influenced by a surprisingly rich number of factors at many different levels of organization. You will see that development can be studied in various domains and at various levels of understanding, from different angles and disciplines. Importantly, you will come to understand that processes within and between the various domains and levels of organization continuously interact to shape development. This implies that understanding development requires taking an interdisciplinary approach. In order to help you organize your thinking about this complexity you will learn more about the developmental systems approach and theories related to that. We will look, amongst other things, at the brain and motor development, cognitive, language and social-emotional development and all the factors that have an influence on development. To illustrate how an interdisciplinary approach helps to understand child development you will see how researchers from various disciplines and backgrounds study child development at Utrecht University. These scientists will give a look in their field of knowledge and their collaboration with colleagues, to illustrate how the theory you will learn translates to practice. In sum, we invite you to follow us on a journey to understand child development from synapse to society!

COURSE_DESCRIPTION: Knowing how to use Quality of Service (QoS) for network traffic type prioritization is a vital part of a collaboration engineer's skill set. It also plays a crucial role in managing drop-sensitive and delay-sensitive IP network traffic. This course walks through the common problems related to a unified communications (UC) network, such as delay, packet loss, jitter, and bandwidth issues, examining how QoS not only addresses these challenges but ensures seamless transmission of voice and video traffic. Additionally, you'll explore different QoS implementation models and mechanisms, collaboration network DSCP values, and traffic classification and marking techniques. When you've completed this course, you'll be able to use QoS to ensure optimal bandwidth usage based on traffic type and network importance. You'll also be better prepared for the 350-801: Implementing and Operating Cisco Collaboration Core Technologies (CLCOR) certification exam.

COURSE_DESCRIPTION: What is Supply Chain Finance? How does Blockchain apply? In this course, you'll learn about an emerging set of solutions within trade finance implemented by financial institutions, leading corporate buyers and their trading partners all over the world known as Supply Chain Finance. You'll learn about the key enablers in Supply Chain Finance and recognize the key challenges in the current market that are responsible for the growing interest in Supply Chain Finance. You'll cover the concept, attributes, and metrics of working capital in great detail and review the four main products and solutions in Supply Chain Finance. The course will wrap up with a brief introduction to Blockchain and the basic concepts of Blockchain Technology. By the end of this course, you'll have learned about the options to enter into the Supply Chain Finance market and how to identify the best solutions for your organization. There is no prerequisite knowledge required to participate in this course, but general business and financial acumen are helpful in understanding the full details of Supply Chain Finance solutions.

COURSE_DESCRIPTION: In this data-driven world, companies are often interested in knowing what is the "best" course of action, given the data. For example, manufacturers need to decide how many units of a product to produce given the estimated demand and raw material availability? Should they make all the products in-house or buy some from a third-party to meet the demand? Prescriptive Analytics is the branch of analytics that can provide answers to these questions. It is used for prescribing data-based decisions. The most important method in the prescriptive analytics toolbox is optimization. This course will introduce students to the basic principles of linear optimization for decision-making. Using practical examples, this course teaches how to convert a problem scenario into a mathematical model that can be solved to get the best business outcome. We will learn to identify decision variables, objective function, and constraints of a problem, and use them to formulate and solve an optimization problem using Excel solver and spreadsheet.

COURSE_DESCRIPTION: By the end of this project, you will create a Sport Club Management System using JavaFX. This project will give you a great push towards mastering one of the most used programming languages in the world which is Java. In this project, you will be able to identify and apply many functions and features in JavaFX using SceneBuilder, which is a third-party application used to create a JavaFX GUI easily. You will also learn how to create controller classes in Eclipse that consist of methods that control the JavaFX windows. This will help you create a functional, presentable and fully customizable GUI to your preferences. Learning and understanding JavaFX will help you progress in the programming field by creating simple Java applications.

COURSE_DESCRIPTION: In this 8-video course, explore the fundamentals of regression and clustering and discover how to use a confusion matrix to evaluate classification models. Begin by examining application of a confusion matrix and how it can be used to measure the accuracy, precision, and recall of a classification model. Then study an introduction to regression and how it works. Next, take a look at the characteristics of regression such as simplicity and versatility, which have led to widespread adoption of this technique in a number of different fields. Learn to distinguish between supervised learning techniques such as regression and classifications, and unsupervised learning methods such as clustering. You will look at how clustering algorithms are able to find data points containing common attributes and thus create logical groupings of data. Recognize the need to reduce large data sets with many features into a handful of principal components with the PCA (Principal Component Analysis) technique. Finally, conclude the course with an exercise recalling concepts such as precision and recall, and use cases for unsupervised learning.

COURSE_DESCRIPTION: Have you ever wondered how goods get delivered to us so quickly as soon as we order them? One word: Logistics! In this introductory Supply Chain Logistics course, I will take you on a journey to this fascinating backbone of global trade. We cover the three major building blocks of logistics networks: transportation, warehousing, and inventory. After completing this course, you will be able to differentiate the advantages and disadvantages of different modes of transportation. You will understand what goes into designing and setting up a warehousing facility. Finally, you will be able to select the options that enable you to develop logistics networks, that minimize costs and deliver top customer service. This is an introductory course designed to provide you with a start on your learning journey in logistics. You do not need to have any background in logistics, but it would be beneficial if you had a basic understanding of business concepts. Join me and we will learn together about logistics! Interested in learning advanced supply chain topics? Check out the Supply Chain Excellence MasterTrack(tm) Certificate: <https://www.coursera.org/mastertrack/supply-chain-excellence-rutgers>

COURSE_DESCRIPTION: This is the third course in a Specialization titled Java as a Second Language. This course presents instruction to IT professionals for developing Java applications. The material targets professional that are familiar with application programming, but do not have strong Java skills. The type of Java applications focus on: Console based Java applications, Java windows applications, and Java web and mobile applications. This course presents material on developing real applications, and includes hands-on application development labs. Learners will gain strong Java application development skills. The courses in this specialization are cumulative, so you should take courses 1 and 2 prior to this one. This course contains Coursera labs so students can practice their new Java skills. The instructor also provides offline instructions in case you prefer to use your own local Java environment. It is recommended that you take the courses in this Specialization in order because the knowledge is cumulative.

COURSE_DESCRIPTION: An obvious goal of any cloud engineer is to ensure as little loss of service and downtime as possible. In this course, you'll explore the concept of high availability and outline the most common IT considerations, necessary components, architectures, and recommended strategies for implementing high availability. You'll examine the different types of outages addressed using high-availability solutions and the implementation approaches for primary and secondary distribution servers in high-availability environments. You'll then classify the benefits and pitfalls of implementing high-availability deployments and compare traditional and virtualized high-availability and failover solutions. Furthermore, you'll investigate the system availability metrics, key cloud architecture patterns, and critical cloud service management guidelines for designing and architecting high-availability solutions. Lastly, you'll differentiate between traditional and cloud high-availability solutions and define the process of migrating from traditional to cloud high-availability deployments.

COURSE_DESCRIPTION: Data analytics is used across various industries to help companies make better-informed business decisions. Data analysts capture, process, and organize data in addition to establishing the best way to present that data. Through this course, learn about the uses and benefits of data analytics and the tools to leverage it. Examine the data analytics maturity model and compare the descriptive, diagnostic, predictive, and AI types of data analytics. Next, discover how data analytics can be used across teams and the benefits it offers. Finally, discover the different types of tools designed for data storage, cleaning, visualization, analysis, and collaboration. Upon completion, you'll be able to outline what data analytics is and list common data science tools.

COURSE_DESCRIPTION: In this Challenge Lab, you will monitor a virtual machine by using extensions and Azure Monitor. First, you will create a virtual machine by using a custom deployment Azure Resource Manager (ARM) template, and then you will deploy a Desired State Configuration (DSC) script extension to the virtual machine. Next, you will create an alert rule to notify you when the average CPU threshold on the virtual machine exceeds 90 percent. Finally, you will delete the existing DSC extension, and then you will create a custom script extension to configure a new web app on the virtual machine. Note: Once you begin the Challenge Lab, you will not be able to pause, save, or return to your Challenge Lab. Please ensure that you have set aside enough time to complete the Challenge Lab before you start.

COURSE_DESCRIPTION: By the end of this project, you will be able to create a simple interactive game of rock, paper, or scissors. Throughout this guided project, you will be introduced to the basic skills needed for every programming language such as different data types, loops, and if conditions. Each part of the project will prepare you to code on your own in Python language, whether to create a game or simple coding. Python programming is one of the easiest programming languages since its syntax is English-like. It is used in many applications and mastering it will definitely pave a way for you to start a career in any programming-based field. Python is also the base for the machine learning and deep learning field. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: The three main types of looping control structures in C are for loops, while loops, and do-while loops. This course provides demos for how to work with looping and unconditional control structures in C. You will begin by creating a for loop which iterates over a block of code for as long as a certain condition is true. You will then experiment with the loop condition, the value of the loop variable, and the update expression for the loop variable, before moving on to iterating over arrays using for loops. You will also create nested for loops. Next, you will use while loops to execute some code while a condition is satisfied. You will explore the loop variable and iterate over arrays, then move on to do-while loops. Finally, you will learn about the unconditional control structures such as break, continue, goto, and return keywords. These are typically used with other control structures. After completing this course, you'll be able to implement while loops, for loops, do-while loops, break statements, and continue operators.

COURSE_DESCRIPTION: Dispatchers and schedulers need to easily identify and schedule resources to work on jobs. They should be able to identify which scheduling method will best be used based on the scenario that they are trying to schedule. When scenarios arise that require assistance, dispatchers can leverage the schedule assistant to provide recommendations based on requirements that are defined for the job. Many times, items that are scheduled will need to be rescheduled or assigned to a different resource. With Dynamics 365s schedule board dispatchers can easily identify which items need to be rescheduled and either reschedule them or rebook them to a completely different resource.

COURSE_DESCRIPTION: Um ein Mehrgenerationenteam zu leiten, müssen Sie die Vielfaltigkeit Ihrer Mitarbeiter verstehen und verschiedene Strategien anwenden, um Konflikte zwischen ihnen zu verhindern. Wenn Sie das Potenzial dieser Vielfaltigkeit erschließen, erzeugen Sie eine produktivere, kooperativere und innovativere Arbeitsumgebung. In diesem Kurs lernen Sie die Unterschiede der Generationen in ihren Ansätzen im Hinblick auf Arbeit und Kommunikation kennen. Sie lernen auch Strategien kennen, um Ihr Team auf eine Art und Weise zu führen, die sicherstellt, dass sich Ihre Teammitglieder einbezogen, respektiert und unterstützt fühlen. Darüber hinaus lernen Sie, wie Sie ein Mentoring-Programm implementieren, das die unterschiedlichen Erfahrungen und Perspektiven mehrerer Generationen zum Vorteil nutzt.

COURSE_DESCRIPTION: Build Wireframes and Low-Fidelity Prototypes is the third course in a certificate program that will equip you with the skills you need to apply to entry-level jobs in user experience (UX) design. In this course, you'll continue to design a mobile app for your professional UX portfolio. You'll start by creating storyboards and getting familiar with the basics of drawing. Then, you'll create paper wireframes and digital wireframes using the design tool Figma. You'll also create a paper prototype and a digital low-fidelity prototype in Figma. Current UX designers and researchers at Google will serve as your instructors, and you will complete hands-on activities that simulate real-world UX design scenarios. Learners who complete the seven courses in this certificate program should be equipped to apply for entry-level jobs as UX designers. By the end of this course, you will be able to: - Develop a goal statement. - Create two types of storyboards: big picture and close-up. - Understand the difference between low-fidelity and high-fidelity design. - Apply the basics of drawing. - Apply the principles of information architecture to organize a mobile app. - Create paper wireframes for a mobile app design. - Develop digital wireframes in the design tool Figma. - Build a paper prototype to add interactivity to designs. - Design a low-fidelity prototype in Figma. - Recognize implicit bias and deceptive patterns in design. - Continue to design a mobile app to include in your professional portfolio. To be successful in this course, you should complete the previous two courses in this certificate program, or have an ability to conduct user research to inform the creation of empathy maps, personas, user stories, user journey maps, problem statements, and value propositions. You will also need paper and a pen or pencil.

COURSE_DESCRIPTION: An effective storage structure is critical to big data implementation success. In this course, you'll explore data compression in databases and file storage. Then, you'll discover how partitioning and sharding are implemented in the database. Next, you'll explore designing tables in an Azure Synapse Analytics dedicated SQL pool, and implement geo-replication for redundancy in both databases and Azure Blob storage. You'll also discover implementing distribution schemes in Azure Synapse Analytics. Finally, you'll discover data archiving and long-term retention policies for Azure Blob storage and Azure SQL Databases. This course is one in a collection that prepares learners for the Microsoft Data Engineering on Microsoft Azure (DP-203) exam.

COURSE_DESCRIPTION: Once you've created your Google Slides 2022 presentation, you'll then need to know how to present it. In this course, see how to better present your slides, by learning to apply transitions to slides and add animations to elements. See how to present your slides, so they show on a full screen using Slideshow mode. Learn how to present your slides while also viewing your speaker notes and the audience tools from Presenter view. See how to start a live Q&A session from Presenter view, so the audience can ask questions which you can interact with and even present. And finally, explore how to add speaker notes, view them in Presenter view, and print a hard copy of your presentation with the speaker notes included. Would you like hands-on practice? Download the sample files from the Course Contents pane or from the Resources section. Then upload the files to your Google Drive to follow along with select videos.

COURSE_DESCRIPTION: Tableau Prep Builder is all about preparing your data source and getting it ready for deeper analysis. In this 10-video course, learners will discover how to perform a variety of different operations, including clean-up steps, data aggregation, and split, group, and replacement actions. You will begin by exploring steps involved in applying cleaning operations by using Tableau Prep Builder, then learning how to use the Split tools to separate values into new fields. Discover how to perform manual group and replace operations by editing individual data values and selecting multiple similar values; how to use the group and replace fuzzy match tools; and how to create and apply custom data roles to clean data quickly. Explore how to insert Aggregate steps to aggregate, group, or summarize data; insert an Aggregate step to remove exact data set

duplicates, and insert calculated fields into a flow. The course concludes by demonstrating how to create calculated fields with regular expressions, then showing steps involved in extending the functionality of Tableau Prep Builder via Python or R scripts.

COURSE_DESCRIPTION: This course aims to help you to ask better statistical questions when performing empirical research. We will discuss how to design informative studies, both when your predictions are correct, as when your predictions are wrong. We will question norms, and reflect on how we can improve research practices to ask more interesting questions. In practical hands on assignments you will learn techniques and tools that can be immediately implemented in your own research, such as thinking about the smallest effect size you are interested in, justifying your sample size, evaluate findings in the literature while keeping publication bias into account, performing a meta-analysis, and making your analyses computationally reproducible. If you have the time, it is recommended that you complete my course 'Improving Your Statistical Inferences' before enrolling in this course, although this course is completely self-contained.

COURSE_DESCRIPTION: Code and run your first python program in minutes without installing anything! This course is designed for learners with limited coding experience, providing a solid foundation of not just python, but core Computer Science topics that can be transferred to other languages. The modules in this course cover functions, recursion, objects, and mutability. Completion of the prior 2 courses in this specialization are recommended. To allow for a truly hands-on, self-paced learning experience, this course is video-free. Assignments contain short explanations with images and runnable code examples with suggested edits to explore code examples further, building a deeper understanding by doing. You'll benefit from instant feedback from a variety of assessment items along the way, gently progressing from quick understanding checks (multiple choice, fill in the blank, and un-scrambling code blocks) to small, approachable coding exercises that take minutes instead of hours.

COURSE_DESCRIPTION: Die Computerprogrammierung ist mittlerweile so ausgereift, dass wir die meisten Geschäftsanwendungen mit drei unterschiedlichen Technologien innerhalb des Client-Server-Frameworks entwickeln können. Die drei Schichten (Präsentations-, Logik- und Datenbank-/Speicherschicht) führen in größeren Unternehmen zu separaten Entwicklungsteams. Diese dreischichtige Entwicklung bedeutet, dass der Code vor der Produktion getestet und synchronisiert werden muss. Aus diesem Grund ist eine Versionskontrolle des gesamten Codes als Programm Teil des Prozesses. Erfahren Sie mehr über die Entwicklung der Versionskontrollsoftware und die beliebtesten Versionsverwaltungssysteme, einschließlich Git. Tauchen Sie tief in Git ein, und lernen Sie die wichtigsten Funktionen kennen. Installieren und konfigurieren Sie Git auf Ihrem lokalen System, bevor Sie mithilfe von Git ein Projekt konfigurieren und einen Workflow erstellen. Erfahren Sie schließlich mehr über die Funktionen von GitHub und verschiedene Versionskontrollaktivitäten. Nach diesem Kurs sind Sie in der Lage, Git als Tool zu implementieren, um Änderungen in Ihrem Programm nachzuverfolgen.

COURSE_DESCRIPTION: PowerPoint 2019 presentations contain two key elements: graphics and text. Discover how to manipulate text and images like a pro in this 10-video course. Key concepts covered in this course include how to insert text into your presentation by creating and formatting text boxes to position your text; how to insert special characters from the symbols library by using the symbols menu on your tool ribbon; and how to insert icons by using the tool ribbon. Begin by learning about keyboard shortcuts to make quick changes; how to adjust the language settings to select your spellcheck options; and how to adjust the AutoCorrect options to catch typing and spelling errors as they happen. Next, you will learn how to use the Find tool if looking for a particular word or section in your presentation; you can use the Find function to scan through different matches throughout your presentation one by one. Finally, learn how to use the Replace tool to replace instances of a word or phrase.

COURSE_DESCRIPTION: It's not all about who you know, but some of it is. Just as having a strong team is key to leadership success, so is proper networking. As a leader, it's important to develop and maintain your own effective networks. It's also in your best interest to mentor and encourage your team as they develop their own. In this course, you'll learn how professional networking can improve your effectiveness as a leader. You'll also learn how to assess your business networking efforts and utilize them to ensure they're working for you. Finally, you'll learn about the types of social skills needed for executive networking and how to establish a network identity and ensure its authenticity.

COURSE_DESCRIPTION: Explore preemptive troubleshooting for your organization's cyber security in this 14-video course, which examines available strategies, tools, best practices, and security policies to keep your system secure. First, you will examine how preemptive troubleshooting applies to security in SecOps and how it is different from intrusion detection systems and intrusion prevention systems. This course then demonstrates several scenarios that a SOC (security operations center) can use when troubleshooting network issues and system compromise. Learn best practices, including spotting weak passwords, hardware and software vulnerabilities, and security policies and procedures to keep systems secure. You will also learn how to use password policies, auditing, and how to prevent security compromises. This course demonstrates how threat hunters can help spot threats before they occur. Learners will study the policies and tools for troubleshooting hardware. Finally, you will learn how software and hardware update policies can aid in keeping system secure, and how preemptive resolution and training can help an organization to better secure its systems.

COURSE_DESCRIPTION: Explore the various services and components provided by Amazon Web Services (AWS) and Azure that can be used to implement hybrid cloud machine learning solution in this 13-video course. You will discover how to implement hybrid cloud environments by using AWS and Azure Stack. Learners begin by examining the critical use cases of implementing hybrid cloud using AWS, and the prominent AWS services that can be used to implement hybrid cloud solutions. Explore the cloudbursting application hosting model from the perspective of AWS, and recall the essential AWS services that provide integrated resource deployment management capabilities for hybrid cloud solutions. Implement a hybrid cloud environment that integrates on-premises Hadoop clusters with data lakes on AWS; recall the recommended principles and best practices of AWS hybrid cloud implementation, and essential Azure components for hybrid solutions. Explore Azure tooling for hybrid cloud; hybrid cloud implementation with Azure Stack; Azure DevOps for hybrid cloud; implementing hybrid cloud with Azure; and Azure services for hybrid cloud. The concluding exercise involves implementing a hybrid cloud with Azure.

COURSE_DESCRIPTION: In this course we will introduce you to Google Sheets, Google's cloud-based spreadsheet software, included with Google Workspace. With Google Sheets, you can create and edit spreadsheets directly in your web browser-no special software is required. Multiple people can work simultaneously, you can see people's changes as they make them, and every change is saved automatically. You will learn how to open Google Sheets, create a blank spreadsheet, and create a spreadsheet from a template. You will add, import, sort, filter and format your data using Google Sheets and learn how to work across different file types. Formulas and functions allow you to make quick calculations and better use your data. We will look at creating a basic formula, using functions, and referencing data. You will also learn how to add a chart to your spreadsheet. Google Sheets spreadsheets are easy to share. We will look at the different ways you can share with others. We will also discuss how to track changes and manage versions of your Google Sheets spreadsheets. Google Workspace makes it easy to collaborate with your team, clients, and others wherever they are. We will look at some of the collaboration options available to you in Google Sheets. Examples include commenting, action items, and notifications.

COURSE_DESCRIPTION: In this 1-hour long project-based course, you will learn how to implement the basics of C++ and OOP program design, discover pointers and memory management in C++, and find optimal situations for using C++ in the real world. By the end of the project, you will create an application that can process basic calculator functions from the user, and stores the previous results. With this project we will create a basic first application in C++, and highlight the differences between C++ and other popular programming languages. C++ has been around since the mid 80s, yet despite its age, it is still an essential part of application development today. C++ is the third most popular language for development, and its balance of low level access and high level concepts ensures that it still holds an essential role, especially in large-scale enterprise development. Students looking to re-skill for another job will find this course gives them a great introduction to C++, and more advanced students looking to refresh their memory will also be at home. Join the course, and get a powerful crash course into C++. This course works on the Rhyme platform, which allows you to have a custom Windows VM that ensures you don't have to worry about any of the setup work that normally causes beginners trouble with C++ or any new language. Students will be able to code along on their desktop and learn by coding with the instructor. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Based on an understanding of architectural styles, you will review architectures for web applications, then explore the basics of Service-Oriented Architecture (SOA) in two approaches: Web Services (WS*) and Representational State Transfer (REST) architecture. In the Capstone Project you will connect a Java-based Android application with Elasticsearch, a web service with a REST application programmer interface (API). After completing this course, you will be able to: • Describe SOA (Service-Oriented Architecture) to structure web-based systems. • Explain WS* services (i.e., SOAP over HTTP, WSDL, UDDI, BPML). • Apply REST architecture (i.e., JSON over HTTP, URI). • Identify REST design principles. • Create a system using REST interfaces. • Apply microservice architecture.

COURSE_DESCRIPTION: This Specialization is part of HSE University Master of Data and Network Analytics degree program. Learn more about admission into the program here and how your Coursera work can be leveraged if accepted into the program. The specialization is intended for a general audience of business analysts, seeking to augment their toolkit with the newest analytical methods. Specifically, they will get introduced to the analysis of networks and unstructured data (texts) - the two areas that are currently hailed as the "methods of the future." The connections that people build and the words they use can potentially tell us much more about the organizational processes than the traditional analytics on numbers. It is also for anyone who wants to learn practical analytics. "Business" is a very broad domain. Learners will know about the application of the newest methods to the analysis of business and will be able to extend the knowledge to other areas. To immerse the newly learned methods into the broader analytical context, specialization offers two additional overview courses. One is dedicated to the field of analytics, helping form a solid understanding of the role that different methods play in generating insights. The second one is an overview of business analytics specifically, with practical tools and tips for a more successful analytic outcome.

COURSE_DESCRIPTION: Do the words "performance appraisals" stir fear in your mind? Do you think they are, at best, of little consequence and, at worst, a trial to get through? You're probably not alone. However, when approached as a year-round conversation between employee and employer, the performance appraisal process can be a catalyst that leads to higher performance, better relationships, and improvement in key business results. In this course, you'll explore the significance of opening a dialogue through the appraisal process rather than having an annual one-way lane of feedback. You'll learn how the performance appraisal process can be optimized to benefit both employees and employers. You'll also discover how clear feedback affects performance and explore some of the best practices for recognizing and rewarding employees.

COURSE_DESCRIPTION: The depth and breadth of electromagnetism, the foundation for many fields including materials science, electrical engineering, and physical chemistry, requires a long, steep, and steady learning curve. This course aims to bridge the gap between the fundamental principles taught in electromagnetism and its practical application to specific fields such as materials, physics, and chemistry related to energy storage and harvesting. The goal of Electrodynamics: An Introduction is to not only teach electromagnetism but also introduce some mathematical tools which can be used to solve problems in the subject. Within these lecture notes, we review vector calculus and explain how to use fields to visualize the topics we cover. This course is dynamic, as the lectures continuously build on previous notes and a variety of explanations are presented for each solution. Since this is a lower level course, we will focus on the simple concept of electrostatics. This has applications in exploring intermolecular forces, and qualities of capacitors. Through this, we relate electromagnetism to more conventionally studied topics and its application to specific research topics related to energy storage and harvesting.

COURSE_DESCRIPTION: This course explores Exception Handling in Java and provides users with a strong conceptual and theoretical foundation and examines practical code-based scenarios. Begin by examining what exceptions are in Java and how Java's class hierarchy addresses errors, runtime exceptions, and checked exceptions. An exception is an event that disrupts the normal flow when executing a program, and you will learn here how to differentiate between exceptions and errors. Participants will learn to use Java's catch-or-specify requirement on code that throws specific types of exceptions. You will also learn that an exception handler is code which deals with a particular exception, both its type and location, in the program. Next, learn the sequence of method calls or function calls which culminated in the exception being thrown. The course will then explore the common runtime exceptions, and see how input-output (IO)-related code often poses special challenges in exception handling. Finally, you will be shown how exception handling is tied to the try-catch keywords.

 COURSE_DESCRIPTION: By the end of this project, you will create a dashboard for better data visualization using Google data studio. In this project, You will be able to summarize a large sheet of data and organize it in a visually appealing report. Google Data Studio provides a blank canvas where users can create single or multiple-page reports. You can easily drag and drop everything from bar, line, pie, and area charts, scatterplots, bullet graphs, and Geo maps. It allows you to customize the design of the page, to match your organization's branding and colors. You will save time each month pulling reports which means you get to focus on actionable insights. Throughout the project, you will be able to acquire the basics of using Google Data Studio to build your dashboard, you will be able to connect Google sheets, apply dimensions, metrics and aggregation formulas. Moreover, you will be able to apply filters and ranges. Finally, you will be able to add appealing graphs and scorecards. This dashboard will help you advance in your job and stand out in your company with eye catching reports. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Learners can explore identity management, also known as IAM (identity and access management), in this 14-video course helping prepare for the Systems Security Certified Practitioner (SSCP) certification exam. You will learn how to configure identities to have strong authentication for users and devices, such as smart phones. Next, examine single-factor authentication, in which one category is used to authenticate, such as a username and a password. You will examine multifactor authentication where there is a username and a password, and having an additional private key. Learners continue by examining how to use an identity federation, and SSO (single sign-on) a centralized trusted set of logon credentials. This course demonstrates the multiple phases of the IAM lifecycle, including account request, how accounts are provisioned, how the user access is enforced and reported, and how it is de-provisioned. You will learn the concepts and terminology, including IDP (identity provider) and RP

(resource provider), and how to use MS Active Directory for authentication. Finally, learners will examine Amazon Web Services CLI (command-line interface) authentication.

COURSE_DESCRIPTION: Vivimos rodeados de proyectos. Prácticamente todas las organizaciones dirigen proyectos, ya sea de manera formal o informal. Los tenemos en casa y en el trabajo. A través de determinados parámetros, principios de planificación y metodologías de ejecución, los proyectos se pueden gestionar de forma eficiente y efectiva. La gestión de proyectos ofrece a las organizaciones (y las personas) el lenguaje y los marcos para organizar proyectos, programar actividades, utilizar recursos y minimizar riesgos. Este es un curso de introducción a los conceptos básicos de la planificación y ejecución de proyectos. Identificaremos los factores que llevan al éxito en este ámbito y aprenderemos a planificar, analizar y gestionar proyectos. Los alumnos repasarán metodologías de vanguardia y evaluarán los desafíos de varios tipos de proyectos.

COURSE_DESCRIPTION: In a world that's quickly becoming dominated by mobile technology, flexible working opportunities and a post-pandemic economy, online learning is here to stay. This course introduces you to the basics of reimagining, redesigning and optimising face-to-face offerings for the online environment so that learners feel connected, engaged and motivated to learn. Educators from around the world who are facing these issues in schools, universities and the vocational education sector are finding they need to adapt by upskilling to meet these changing times. This course will introduce you to the key foundational concepts required for teaching online and will explore how technology has fundamentally changed the way education can be delivered and consumed by learners. The course will cover questions such as: What is online learning and how does it differ from learning in traditional classroom settings? Do the needs of online learners differ from their face-to-face counterparts? How can I design online

learning so that it reflects and meets the needs of my learners? Which tools and resources are readily available and easy to master for facilitating engaging and interactive online learning? These questions and many more will be answered in this course, which is designed for teachers and educators who are new to online learning, or those who are preparing to adapt existing learning resources to an online learning environment. Learning outcomes By the end of this course, you'll: 1. Demonstrate an understanding of the trajectory of online learning, from a historical perspective to contemporary experience and future possibilities 2. Explain how the needs of learners in blended and fully online learning environments differ from traditional face-to-face learning environments 3. Select and use a range of techniques, tools and resources to improve the digital learning skills of learner

COURSE_DESCRIPTION: When multi-cloud or hybrid deployment scenarios are at play in distributed environments, technical support engineers need to switch from a data center to a CloudOps mindset. In this course, you'll investigate several deployment strategies for setting up multi-cloud or hybrid infrastructures. You'll examine multi-cloud architecture patterns, use cases, and business continuity reference architecture, as well as how to approach secure multi-cloud peering. You'll also identify the services provided by multi-cloud management systems for simplifying next-gen firewall insertion and operations and the CI/CD processes for managing multi-cloud. You'll recognize the challenges of federated multi-cloud PaaS and hybrid and multi-cloud environment monitoring, design consideration for setting up multi-cloud disaster recovery processes, and the differences between cloud orchestration and automation. Finally, you'll create and configure a virtual network, gateway subnet, VPN gateway, and virtual private cloud Elastic IP VPN device in Azure and AWS.

COURSE_DESCRIPTION: This course can also be taken for academic credit as ECEA 5340, part of CU Boulder's Master of Science in Electrical Engineering degree. After taking this course, you will be able to: • Understand how to specify the proper thermal, flow, or rotary sensor for taking real-time process data. • Implement thermal sensors into an embedded system in both hardware and software. • Add the sensor and sensor interface into a microprocessor based development kit. • Create hardware and firmware to process sensor signals and feed data to a microprocessor for further evaluation. • Study sensor signal noise and apply proper hardware techniques to reduce it to acceptable levels. You will need to buy the following components to do the two course projects based on the videos in this module. Note that if you have already purchased the PSOC 5LP

PROTOTYPING KIT, you do not need to buy it again. These parts may be purchased off the Digikey web site, www.digikey.com. Or, you may obtain the specs from the site, and purchase them elsewhere. These are the part numbers typed out, so you can copy and paste them into the Digikey web site. You will need one of each part. 428-3390-ND NHD-0216BZ-RN-YBW-ND 570-1229-ND A105970CT-ND Additional equipment needed: • Wire - various gauges and lengths • Breadboard • Oscilloscope - suggested models are: o PICOSCOPE 2204A-D2 available on www.digikey.com or o Digilent 410-324 -

OpenScope M2 available on www.newark.com Depending on your budget, you can also investigate these models: o Hantek HT6022BE20MHz - <https://www.amazon.com/dp/B009H4AYII> o SainSmart DSO212 - <https://www.amazon.com/dp/B074QBQNB7> o PoScope Mega50 USB - <https://www.robotshop.com/en/poscope-mega50-usb-mso-oscilloscope.html> o ADALM2000 - <https://www.digikey.com/en/products/detail/analog-devices-inc./ADALM2000/7019661>

COURSE_DESCRIPTION: In this 1-hour long project-based course, you will learn the basics of using Keras with TensorFlow as its backend and use it to solve an image classification problem. The data we are going to use consists of 2D spectrograms of deep space radio signals collected by the Allen Telescope Array at the SETI Institute. We will treat the spectrograms as images to train an image classification model to classify the signals into one of four classes. By the end of the project, you will have built and trained a convolutional neural network from scratch using Keras to classify signals from space. This course runs on Coursera's hands-on project platform called Rhyme. On Rhyme, you do projects in a hands-on manner in your browser. You will get instant access to pre-configured cloud desktops containing all of the software and data you need for the project. Everything is already set up directly in your internet browser so you can just focus on learning. For this project, you'll get instant access to a cloud desktop with Python, Jupyter, and Tensorflow pre-installed. Notes: - You will be able to access the cloud desktop 5 times. However, you will be able to access instructions videos as many times as you want. - This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Excel 365 contains several features to aid in data formatting and manipulation. In this course, you will explore various ways to format your data by type, which serves as a way of classifying the data. Learn how to create drop-down menus, fill cells using the Flash Fill feature, and how to create an automatic data series. Next, you will discover how to create an automatic data series using the advanced Fill Series options and how to format data, including options to configure its size or apply font effects such as bold, italic, and underline. Then you'll also see how to apply cell styles; how to format cells with the Format Painter tool; how to create customized number formats; how to apply custom cell formats; and how to clear all formatting from cells. In order to practice what you have learned, you will find practice exercises and samples in the Resources section.

COURSE_DESCRIPTION: IT and business trends can have a serious impact on an organization's growth and direction. Key areas that could be impacted include business models, employee experience, business processes, and customer experience. In this course, you'll learn how IT Trends can impact organizations, and how they can gauge if they are ready for change. You'll also explore key questions organizations can ask when determining big data analytics capabilities, and discover the value of data in decision making, performance, and growth. You'll also learn about the possible impact of application development in an organization, and learn how organizations can leverage it. Lastly, discover how application development is the process and practice of designing, developing, deploying, and operating highly available and cost-effective software or applications. This course was originally created by Global Knowledge (GK).

COURSE_DESCRIPTION: Explore practical migration scenarios involving MongoDB to Cosmos DB, and SQL Server Integration Services (SSIS) and network workloads to Microsoft Azure. In this cloud migration course, discover how to work with Azure Migrate, and how to troubleshoot, secure, and manage cloud migration logs. Key concepts covered in this course include: practical migration scenarios of MongoDB to Azure Cosmos DB using DMS and the types of migration that can be configured; security recommendations that should be applied when working with Azure Security Center, a unified infrastructure security management system; and best practices used for setting up virtual networks and to help migrate business elements to the cloud. You will learn how to use Azure Migrate features and common issues of Azure Migration and approaches for troubleshooting them, including bandwidth issues, compatibility, portability or unsupported boot types or operating systems. Finally, study the types of Azure logs and their relevance in cloud migration, and the Azure Migrate features: migrate MongoDB to Azure Cosmos DB, and migrate SSIS to Azure.

COURSE DESCRIPTION: Six Sigma Black Belts must possess specific qualities to succeed throughout the deployment cycle. Some of these qualities include effective leadership, motivation, team building, and communication. As team leaders, Six Sigma Black Belts need to know how to facilitate teams and apply motivational techniques to achieve assigned goals. Black Belt leaders adopt appropriate leadership approaches to help develop, strengthen, and integrate all elements necessary for the effective team facilitation. They need to recognize the stages of team development and choose targeted approaches for managing performance at every stage. Finally, they need to develop a communication plan that outlines the why, what, who, where, and how of team communication. This course offers strategies for effective team facilitation, which involves leadership, motivation, team building and communication. This course is aligned with the ASQ Certified Six Sigma Black Belt certification exam and is designed to assist learners as part of their exam preparation. It builds on foundational knowledge that is taught in Skillsoft's ASQ-aligned Green Belt curriculum.

COURSE DESCRIPTION: This course will teach you about one of the most important aspects of VR, how you interact with a VR world. Virtual Reality is completely different from an on screen app or game. You are completely immersed in a VR world, so it doesn't make sense to interact only through buttons or menus. You will get the most out of VR if you can interact with the world just as you would with the real world: with your natural body movements. You will learn about the basic concepts and technologies of VR Interaction. You will then get hands on, learning about how to move around in VR and how to interact with the objects in your world. The course will finish with some advice from experts on VR interaction design and you will do a project where you will get real experience of developing VR Interaction.

COURSE_DESCRIPTION: Who is this course for ? This course is RESTRICTED TO LEARNERS ENROLLED IN Strategic Business Analytics SPECIALIZATION as a preparation to the capstone project. During the first two MOOCs, we focused on specific techniques for specific applications. Instead, with this third MOOC, we provide you with different examples to open your mind to different applications from different industries and sectors. The objective is to give you an helicopter overview on what's happening in this field. You will see how the tools presented in the two previous courses of the Specialization are used in real life projects. We want to ignite your reflection process. Hence, you will best make use of the Accenture cases by watching first the MOOC and then investigate by yourself on the different concepts, industries, or challenges that are introduced during the videos. At the end of this course learners will be able to: - identify the possible applications of business analytics, - hence, reflect on the possible solutions and added-value applications that could be proposed for their capstone project. The cases will be presented by senior practitioners from Accenture with different backgrounds in term of industry, function, and country. Special attention will be paid to the "value case" of the issue raised to prepare you for the capstone project of the specialization. About Accenture Accenture is a leading global professional services company, providing a broad range of services and solutions in strategy, consulting, digital, technology and operations. Combining unmatched experience and specialized skills across more than 40 industries and all business functions-underpinned by the world's largest delivery network-Accenture works at the intersection of business and technology to help clients improve their performance and create sustainable value for their stakeholders. With more

than 358,000 people serving clients in more than 120 countries, Accenture drives innovation to improve the way the world works and lives. Visit us at www.accenture.com.

COURSE_DESCRIPTION: In this MOOC, we will learn Cloud Computing basics using AWS as an example, We will guide you to create AWS account, planning AWS resources for your cloud systems, create AWS EC2 instances, access them and configure the popular LAMP web services with MySQL database. We will guide you to create user accounts for your programmer or operators using AWS Identify and Access management GUI, Register your domain name and setup DNS entry for your servers using AWS Route 53 in 22 mintues! and show you how to use AWS Command Line interface to create and managing instances and services programmatically. We then introduce AWS Load balancing feature, create load balancing cluster for scalability and reliability. We also demonstrate how to diagnose the problem introduced by the health check and firewall restriction conflicts. By the end of this course, you should be able to create your own web cluster with mysql databases, setup your users with credentials to manage your AWS resources/virtual machines either through their management control interface or using AWS CLI API using scripts. You will also learn the best practice in cloud security and debugging service interaction issues may arise in the cloud systems.

COURSE_DESCRIPTION: The COVID-19 pandemic forced elective surgeries to be delayed while hospitals prepared for the potential influx of COVID-19 patients. Thanks to effective efforts to flatten the curve and the lifting of executive stay-at-home orders, Mayo Clinic is again able to see patients for elective surgeries. What's different for patients when having surgery during the coronavirus era? And what extra steps is Mayo Clinic taking to keep patients and staff safe? (Published 05/14/2020)

COURSE DESCRIPTION: In this challenge, you will implement an end-to-end encryption solution by using Azure SQL Database. First, you will access an Azure SQL database by using the Azure portal. Next, you will access an Azure SQL database by using a virtual network service endpoint, and then you will encrypt a column that contains sensitive data by using Always Encrypted. Finally, you will configure Azure Disk Encryption on an Azure virtual machine. Note: Once you begin the challenge, you will not be able to pause, save, or exit and then return to your challenge. Please ensure that you have set aside enough time to complete the challenge before you start.

 COURSE_DESCRIPTION: For an increasing number of established companies, creating new business opportunities within the company is an imperative for success. Maturing technologies and aging product portfolios are requiring companies to create, develop, and sustain innovative new businesses. The Corporate Entrepreneurship Specialization is designed for those interested in learning how to innovate and apply entrepreneurship principles in the corporate setting. Learners will develop knowledge on how to navigate the barriers to creating, developing, and sustaining innovative new businesses or initiatives within existing companies. These new activities rarely fit neatly within well-established systems, processes, and cultures. Learners will develop the skills, and learn the tools and best practices, for identifying and developing the entrepreneurial opportunities, building business models, creating strategies for leading innovation, and financing innovation. These four topics comprise the four courses of the Corporate Entrepreneurship Specialization, along with a final project. The Corporate Entrepreneurship Specialization is for individuals who are charged and/or inspired to develop and lead new businesses within established companies. It's specifically designed for junior- and middle-managers with the the opportunity, or responsibility, to start new businesses or initiatives within their company or division, in any industry, and in any country.

 COURSE_DESCRIPTION: Entdecken Sie die vielen Möglichkeiten, Ihre Dokumente in Word 365 zu prüfen. In diesem Kurs lernen Sie, wie Sie Ihr Dokument mithilfe des Editors prüfen und korrigieren können. Als Nächstes erfahren Sie, wie Sie die Optionen für die Rechtschreibprüfung und die AutoKorrektur-Einstellungen konfigurieren, die beide für die Korrektur Ihres Dokuments nützlich sind. Anschließend werden Sie in der Lage sein, Änderungen an einem Dokument nachzuverfolgen und zu verwalten, was besonders praktisch ist, wenn mehrere Benutzer das Dokument bearbeiten. Außerdem

erfahren Sie, wie Sie Ihr Dokument auf der Registerkarte Zeichnen mit Anmerkungen versehen können. Wenn Sie an mehreren Versionen eines Dokuments arbeiten, erfahren Sie, wie Sie zwei Dokumente vergleichen und mehrere Dokumente kombinieren können. Schließlich erfahren Sie, wie Sie die Schutzeinstellungen Ihres Dokuments anpassen können, um zusätzliche Sicherheitsmaßnahmen anzuwenden.

COURSE_DESCRIPTION: Explore the concept of fail fast in DevOps and software development, how to prevent failure, and the scenarios of adopting fail fast systems in this 13-video course. Discover how to set up fail fast development and operations environment, set up Jenkins pipelines for fail fast management, and enforce fail fast in Maven. Key concepts covered here include adoption approaches for failure prevention and the fail fast approach; fail fast as a DevOps principle and the role of feedback cycle; the essential principles driving the Agile manifesto and Agile fail fast; and implementation of the fail fast principle from the perspective of test-driven development and continuous integration. Then learn about implementing Jenkins to enforce fail fast in Maven; how to set up Jenkins pipelines for fail fast management; and study design methodology and enable continuous improvement. Finally, examine scenarios and circumstances leading to adoption of the fail fast approach; specify software development techniques that can be used to build software to fail fast; and set up Jenkins pipeline for fail fast management.

COURSE_DESCRIPTION: Moving to the cloud is often an important step toward future stability, but it requires significant risk. The migration to cloud services takes planning and effort to ensure it goes smoothly. In this course, you will learn how take a migration in stages and perform key steps in each stage. You will see that you must keep in mind critical elements of a migration, such as integration with existing systems, mapping of licensing to a new ecosystem, and planning for the creation of a network environment that supports business needs and includes authentication services that allow for seamless transfer of access. Examine the tools used to migrate both systems and data and then how to perform testing and proof-of-concept deployment. Finally, you will consider how the content in this course relates to the use cases you can expect to encounter in an exam environment. This course is one of a collection that prepares learners for the Google Professional Cloud Architect exam.

COURSE_DESCRIPTION: In this project-centered course*, you will create a content-rich infographic on a topic of your choice using Adobe Illustrator (which you can download for a free, 30-day trial). You might choose to create a visual representation of data from the world of sports, entertainment, politics, or science, to explain a business trend or environmental issue, or even to present a theme or development from your personal life. Your finished infographic will engage your target audience and convey information clearly through effective use of design elements such as typography, color, and structure. Whether you're a graphic designer, a writer or the intern in the department, you'll learn: • what an infographic is and what makes a good one • how to work within your limits • how to work with a team (if you have one) • why infographics are effective • techniques for spotting data in stories • six valuable steps for planning an effective infographic • how to use and make some of the building blocks of infographics: maps, charts and flow charts • ways data can be visualized to clarify it and give it meaning • how to effectively design a good infographic by effectively using elements like type, color and an underlying grid structure • some free or cheap, online tools for making various kinds of infographics As you work on your project, you'll learn more about why infographics are effective, what makes a good infographic, and how to plan and design an infographic for maximum impact. You'll explore various approaches to data visualization, and you'll practice creating visualizations like maps, charts, flow charts, and simple drawings in your free version of Adobe Illustrator. Please note that if you are new to learning graphics software, making these graphics could take much longer than estimated as you learn and grow. What you'll need to get started: This project-based course is aimed at anyone interested in understanding, designing, and using infographics - from students and hobbyists to professional graphic designers. We'll use Adobe Illustrator for some components of the project. If you don't have access to the full version of Illustrator, you can download a free version at www.Adobe.com/Illustrator. If the free 30-day trial runs out, you can "purchase" it for a month for about \$20. *About Project-Centered Courses: Project centered courses are designed specifically to help you complete a personally meaningful real-world project, with your instructor and a community of like-minded learners providing guidance and suggestions along the way. By actively applying new concepts as you learn, you'll master the course content more efficiently; you'll also get a head start on using the skills you gain to make positive changes in your life and career. When you complete the course, you'll have a finished project that you'll be proud to use and share. When you enroll in certain courses, you'll be asked to pay a small fee to share your work with others for peer review.

COURSE_DESCRIPTION: The iOS 16 interface is made up of a variety of tools and menus, many of which can be customized in different ways. This course aims to help you understand how to access, customize, and configure basic aspects of the interface and display, so you can use your device more proficiently. First, you will learn how to set up basic elements of your display. In particular, find out how to set the date and time, preferred languages, and regional formats such as temperature and other measurements. See also how to adjust your display's brightness and enable features such

as Dark Mode and Night Shift, designed to limit exposure to bright, blue light. Next, the course introduces you to a number of ways in which to use and personalize the fundamental parts of the interface. See how to customize the Home Screen and Lock Screen by editing apps, wallpapers, and more. Discover Today View, where you can see widgets for select apps at a glance, and the Control Center, where you will find the most basic controls and tools including wireless connection, brightness, and volume options. Finally, learn all about the onscreen keyboard. This essential feature allows you to input text and emojis by typing, swiping, and selecting suggested or predicted text. Discover how to use this feature effectively, as well as how to set up its layout and other aspects according to your preferences.

COURSE_DESCRIPTION: Learners explore how to manage mobile devices, including configuring mobile device mailbox policies and managing mobile device access, in this 16-video course preparing for the MS-200 Planning and Configuring a Messaging Platform certification exam. Begin by examining mobile device support for ActiveSync and device security settings. After reviewing Exchange ActiveSync features, learn how to manage ActiveSync configuration; enable or disable access to mailboxes using Exchange ActiveSync; and configure default access and quarantine notification settings for Exchange ActiveSync. Next, learn how to block use of Outlook for iOS and Android, and watch a demonstration of configuring a device access rule to enable it. See how to allow or block devices quarantined based on the ActiveSync configuration, and use the Exchange admin center (EAC) to remotely wipe a device. After an overview of mobile device mailbox policies, learn to use the EAC to configure a mobile device mailbox policy, and assign a policy to specific mailboxes. Finally, learn how security and authentication work with Outlook for iOS and Android, and examine PIN lock and encryption features.

COURSE_DESCRIPTION: If you're ready to enter the world of Information Technology (IT), you need job-ready skills. This course provides the core hardware and operating system knowledge needed by anyone new to IT and computer hardware who wants to start a new career in technology, including IT Support, Networking, Cybersecurity, and Software Development. Learn about the software brain of a computer-its operating system software-and explore Microsoft Windows. Become knowledgeable of internal computer components, including motherboards, central processing units (CPUs), memory, hard drives, expansion slots, and others. Learn to identify interfaces, ports, connectors, and peripherals such as mice, keyboards, and others. Explore workstation setup processes, commonly used operating system settings, screen capture commands, computer acquisition practices, and job-essential troubleshooting processes. You will also learn about mobile operating systems, Linux, and macOS, and complete a final project. Throughout the course

you will practice what you learn using interactive exercises and hands-on labs. This course is also part of the series to help you prepare for CompTIA ITF+ and A+ certification exams.

COURSE_DESCRIPTION: In this course, you'll first review EIGRP theory and configuration basics that you should already be familiar with. Then, you'll move on to learn how the metric is calculated in EIGRP configuration and how the DUAL algorithm is used. Next, you'll explore EIGRP feasibility and unequal cost load balancing. You'll examine EIGRP named and classic modes with IPv4 and IPv6 configuration examples. Finally, you'll learn how to manipulate EIGRP path decisions and industry EIGRP DUAL best practices. This course is one of a series that prepares you for the 300-410: Implementing Cisco Enterprise Advanced Routing and Services (ENARSI) certification exam.

COURSE DESCRIPTION: Reinventing your career path is no easy feat. It requires time, dedication and skill development. But with the right support from your organization, businesses can help motivate their employees to meet their career goals and aspirations, all while upskilling the workforce with diverse perspectives and talent. Now more than ever, the opportunity is there for companies to reinvent the hiring process to include a wide array of individuals, including stay-at-home moms. We explore this topic deeper in this episode of The Edge with Nesha Pai, an award-winning author, a popular speaker, a determined mentor, and a passionate advocate for small businesses and stay-at-home moms. Together, Nesha and host Michelle Boockoff-Bajdek chat about the career and financial effects of familial obligations on women and how to reinvent their careers and the workforce with the inclusion of unique and diverse talent. Please note that this course material includes content gathered from external websites which may fall outside your company network. COURSE DESCRIPTION: This course gives you an easy introduction to interest rates and related contracts. These include the LIBOR, bonds, forward rate agreements, swaps, interest rate futures, caps, floors, and swaptions. We will learn how to apply the basic tools duration and convexity for managing the interest rate risk of a bond portfolio. We will gain practice in estimating the term structure from market data. We will learn the basic facts from stochastic calculus that will enable you to engineer a large variety of stochastic interest rate models. In this context, we will also review the arbitrage pricing theorem that provides the foundation for pricing financial derivatives. We will also cover the industry standard Black and Scholes formulas for pricing caps, floors, and swaptions. At the end of this course you will know how to calibrate an interest rate model to market data and how to price interest rate derivatives.

COURSE_DESCRIPTION: This course is intended as a first step for learners who seek to become producers of social science research. It is organized as an introduction to the design and execution of a research study. It introduces the key elements of a proposal for a research study, and explains the role of each. It reviews the major types of qualitative and quantitative data used in social science research, and then introduces some of the most important sources of existing data available freely or by application, worldwide and for China. The course offers an overview of basic principles in the design of surveys, including a brief introduction to sampling. Basic techniques for quantitative analysis are also introduced, along with a review of common challenges that arise in the interpretation of results. Professional and ethical issues that often arise in the conduct of research

are also discussed. The course concludes with an introduction to the options for further study available to the interested student, and an overview of the key steps involved in selecting postgraduate programs and applying for admission. Learners who complete the course will be able to make an informed decision about whether to pursue advanced studies, and should be adequately prepared to write an application for postgraduate study that exhibits basic understanding of key aspects of social science research paradigms and methodologies. Explore the big questions in social science and learn how you can be a producer of social science research. Course Overview video: <https://youtu.be/QuMOAlwhpvU> Part 1 should be completed before taking this course: <https://www.coursera.org/learn/social-science-study-chinese-society>

COURSE_DESCRIPTION: This course explores how to select the appropriate algorithm for machine learning (ML), the principles of designing machine learning algorithms, and how to refactor machine ML code. In 11 videos, you will learn the steps involved in designing ML algorithms. The complexity in the algorithm is huge, and learners will observe how to write iterative and incremental code, and how to apply refactoring to it. This course next examines the types of ML problems, and classifies it into four categories, and how to classify machine learning algorithms. You will learn how to refactor existing ML code written in Python, and to launch and use PyCharm IDE. This course also demonstrates how to use PyCharm IDE on a specific project learners will create. You will examine the problems associated with technical debt in ML implementation, and how to manage it. Then you will learn to use SonarQube to build code coverage for machine learning code that are written in Python. Finally, this course examines automatic clone recommendations for refactoring, based on the present and the past.

COURSE_DESCRIPTION: What determines the value of the services you provide? How does a customer come to understand who you are and what you stand for? The answer is branding. But that leads to more questions: How do you establish your brand? How do your customers relate to your brand? How do you influence how your customers feel when they see your brand? In this Expert Insight course, branding expert Bruce Turkel will walk you through the answers to these questions, providing his expert insight and advice. He'll show you how you can create, develop, and control your brand and how a world full of potential customers views your company and its products.

COURSE DESCRIPTION: Learn how to create and manage Azure AD groups, as well as how to join both Windows 10 and Android devices to Azure AD, in this 18-video course, one of a collection of courses that prepares learners for the AZ-104 Microsoft Azure Administrator certification exam. Key concepts covered in this course include how to use the portal, the CLI, and PowerShell to manage Azure AD groups; how to restore deleted Azure AD groups; and how to join a Windows 10 computer to an Azure AD domain. Next, learn how to manage Azure AD device settings; learn to disable a domain-joined Azure AD device; and learn to create a group with dynamic membership; enable dynamic group membership. Learn to assign licenses to a group; specify group owners; enable self-service group membership; and use bulk options for group add and remove. Learners will use the multifactor authentication (MFA) app to register an Android device with Azure AD; create a dynamic device group; and create a conditional access policy.

COURSE_DESCRIPTION: The news about COVID-19 vaccines being approved, distributed and administered so quickly is causing concern for some people - what is often referred to as vaccine hesitancy. "We have always struggled with vaccine hesitancy and a sense of uncertainty," says Dr. Robert Jacobson, a Mayo Clinic pediatric infectious diseases expert and director of Mayo Clinic's Primary Care Immunization program. "But what we have available through this emergency use authorization is worth taking now. I would not delay doing what I could to protect my patients and myself." In this Mayo Clinic Q&A podcast, Dr. Jacobson dives into the data, detailing how the randomized controlled trials worked. He also answers questions about COVID-19 vaccines for children and pregnant women, explains why the vaccine doesn't change your genetic makeup and much more. (Published 12/17/2020)

COURSE_DESCRIPTION: Cybersecurity is often defined as the protection of computer systems and networks from unauthorized or unwanted information disclosure, theft or damage. In this course, explore the potential impacts of a personal or business security breach, and discover the fundamentals of the confidentiality, integrity, and availability triad. Explore how baselining can be used to better understand an IT environment and learn to differentiate between natural, malicious human, chemical, and non-malicious threats. Explore security concerns as they relate to internal and external human activity, and discover how to identify drivers for security controls. Explore common functions and purposes of security controls and discover the importance of testing corrective controls in place. Lastly, explore how to differentiate between quantitative and qualitative risk analysis, as well as between data in motion and data at rest. This course was originally created by Global Knowledge (GK).

COURSE_DESCRIPTION: In this challenge, you will create and work with Azure storage accounts. First, you will create a storage account by using the Azure portal, and then you will create a container that is configured for public access. Next, you will upload a document to the container, and then you will create a storage account and a container by using Windows PowerShell(r). Finally, you will install Azure Storage Explorer, and then you will use it to upload a document to Azure Storage. Note: Once you begin a challenge you will not be able to pause, save, or return to your progress. Please ensure you have set aside enough time to complete the challenge before you start.

COURSE_DESCRIPTION: In the final capstone project you will apply the skills you learned by building a large data-intensive application using real-world data. You will implement a complete application processing several gigabytes of data. This application will show interactive visualizations of the evolution of temperatures over time all over the world. The development of such an application will involve: - transforming data provided by weather stations into meaningful information like, for instance, the average temperature of each point of the globe over the last ten years ; - then, making images from this information by using spatial and linear interpolation techniques ; - finally, implementing how the user interface will react to users' actions.

COURSE_DESCRIPTION: Welcome to Course 2 - Sales Strategy - This course is designed to discuss the application of intelligence analysis in the sales planning process. And this approach contributes to integrating the sales planning process into the corporate strategy of the company because, in the strategy analysis and formulation process, we apply models, frameworks, tools, and techniques that also apply to the sales planning and management process. Therefore, the expected outcomes of this course focus on the transition from traditional to strategic sales planning, by discussing and applying the concepts recommended to support the development of the strategic guidelines. The concepts, models, tools, and techniques discussed and practiced during the course focus on the improvement of value creation from the sales function empowered by intelligence analysis, a process which typically applies in the strategy analysis front. The discussions go through how intelligence analysis can support the sales function, by providing methods to connect strategy to marketing and sales planning processes. In this course, the primary learning outcome is the ability to apply intelligence analysis to support sales planning process, and by being able to do this, you'll improve your competencies and skills to support sales planning with a strategic approach. You'll develop a final assignment at the end of the course, and it is designed from an adapted real-life business case. The challenges of the case comprise the business context, through which you'll apply the conceptual framework discussed during Course 2. The outcomes of your analysis on the assignment case will be evaluated through a peer-review process.

COURSE_DESCRIPTION: In this course, we will create our account & user profile and explore four of the key features of Basecamp Personal. Once you complete this project, you will be able to continue using Basecamp for personal and professional project management. "Basecamp is the premier project management + internal communication tool for remote WFH teams worldwide." Basecamp allows its users to seamlessly collaborate in real-time on a virtual platform. Professional teams that use Basecamp report increased productivity, better organization, and streamlined communication. It offers a wide variety of project management tools including: To-Do lists, automatic check-ins, scheduling, document hosting, and so much more. The platform centralizes work-related notifications which allows its users to stay focused on the task at hand. From executive leadership to individuals, Basecamp gives its users the tools to stay in touch without extra emails, phone calls, and meetings. Basecamp takes your data privacy and protection seriously. If you have questions or concerns regarding how Basecamp handles your data, their full security policy can be accessed here: <https://basecamp.com/about/policies/security>

 COURSE_DESCRIPTION: Welcome to this project-based course, SQL Mathematical Functions. In this project, you will learn how to use SQL Mathematical Functions to manipulate tables in a database. By the end of this 2-hour-long project, you will be able to use different Mathematical Functions to retrieve the desired result from a database. In this project, you will learn how to use SQL Mathematical Functions like CEIL(), FLOOR(), RANDOM(), SETSEED(), ROUND(), TRUNC(), SQRT(), CBRT(), and POWER() to manipulate data in the employees database. In this project, we will move systematically by first introducing the functions using a simple example. Then, we will write slightly complex queries using the Mathematical Functions in real-life applications. Also, for this hands-on project, we will use PostgreSQL as our preferred database management system (DBMS). Therefore, to complete this project, it is required that you have prior experience with using PostgreSQL. Similarly, this project is an intermediate SQL concept; so, a good foundation for writing SQL queries is vital to complete this project. If you are not familiar with writing queries in SQL and want to learn these concepts, start with my previous guided projects titled "Querying Databases using SQL SELECT statement," and "Performing Data Aggregation using SQL Aggregate Functions." I taught these guided projects using PostgreSQL. So, taking these projects will give the needed requisite to complete this SQL Mathematical Functions project. However, if you are comfortable writing queries in PostgreSQL, please join me on this wonderful ride! Let's get our hands dirty!

COURSE_DESCRIPTION: Google Cloud Platform (GCP) offers several tools for serverless application development and deployment. Use this course to learn how to take advantage of GCP serverless compute, storage, and app services. Investigate the GCP tools for hosting applications and examine how Google Cloud Functions and App Engine work. Explore the pros and cons of Firebase, the benefits of using Cloud Run, the use cases of Cloud Datastore, and the GCP serverless products for building apps for analytics. Moving along, explore GCP serverless microservices and how serverless deployments can improve DevOps productivity. Finally, learn how to deploy Node.js Cloud Functions, applications to App Engine, and containers from a Container Registry repository to Cloud Run. Store and query data in Firestore in Datastore mode and create streaming pipelines. When you're done, you'll be able to use GCP tools to develop scalable serverless applications efficiently and successfully.

COURSE_DESCRIPTION: Successful decision making is based on three key pillars: strategy, law and ethics. After taking this course you will be able to use a practical framework based on these three elements to make successful business, personal and leadership decisions. This course opens with an example of a leadership decision: President Barack Obama's strategic decision to capture or kill Osama bin Laden. The course then shows how the three elements can be used to prevent a tragedy when making a personal decision. The rest of the course focuses on making successful business decisions. In essence, to achieve business and career success, you must create value (strategy) and manage risk (law) in a responsible manner (ethics). Because the Law Pillar plays a central role in the three pillar model, the course includes practical legal briefings (with many examples) on the key elements of business success. Specifically, the course shows you how to: • attract the best employees, • develop successful products, • create new business models, • protect intellectual property, • create contracts that achieve business goals, and • use dispute resolution processes that improve business relationships. Using a global perspective, the course also provides an introduction to international business culture for learners from the United States, and an introduction to the U.S. business culture for learners from outside the U.S.

COURSE_DESCRIPTION: In the Data Infrastructure with Apache Cassandra journey, you will explore Apache Cassandra, create Cassandra Clusters, and the Cassandra Query Language. You will explore installing Cassandra and making it available with Docker, creating Cassandra clusters and inspecting them using nodetool utility, and leveraging the data center in Cassandra. You will also learn Cassandra Query Language to organize tables into keyspaces, specify replication strategy, and configurations, create tables, and insert and update data. You will also learn to work with CSV and JSON data, table partitioning and clustering key columns, and also performing aggregations on the data, and leveraging user-defined functions.

COURSE_DESCRIPTION: Today's web applications combine software code and resultant data, with the trustworthiness of both resulting in a secure and trusted application. There are many planning strategies and tools that can ensure software and data integrity. In this course, learn about IT supply chain security, deploying Linux updates, and configuring a Windows Server Update Services (WSUS) host. Next, explore object-oriented programming (OOP) and how it is related to insecure deserialization attacks. Finally, practice ensuring file integrity using file hashing in Windows and Linux and using the OWASP Dependency-Check tool to verify that publicly disclosed vulnerabilities are not present in a project's dependencies. Upon completion, you'll be able to ensure the integrity of software code, dependencies, and resultant data.

COURSE_DESCRIPTION: In the Capstone project for the Internet of Things specialization, you will design and build your own system that uses at least 2 sensors, at least 1 communication protocol and at least 1 actuator. You will have a chance to revisit and apply what you have learned in our courses to achieve a robust, practical and/or fun-filled project. We absolutely encourage you to design whatever you can think up! This is your chance to be creative or to explore an idea that you have had. But if you don't have your own idea, we provide the description of a surveillance system, for you to build. We will participate in the Capstone with you by building a surveillance system that features an off-grid solar powered workstation that will serve as a hub to multiple surveillance sensors. You will be able to demonstrate the knowledge and skills you have gained in this course through delivery of industry-appropriate documents such as System Design documents and Unit Test reports. Additionally, you will be asked to describe and show case your project as a short video presentation - appropriate for demonstrating your knowledge and technical communication skills. Learning Goals: After completing this Capstone, you will be able to: 1. Design systems using mobile platforms. You will gain experience in documenting and presenting designs. 2. Develop systems that interface multiple sensors and actuators to the DragonBoard(tm) 410c system and develop the necessary software to create a fully functional system. 3. Specify unit tests and system tests, run tests and prepare Test Reports as are commonly done by those working in this industry. 4. Gain experience (and feedback!) in making technical presentations.

COURSE_DESCRIPTION: Microsoft Azure provides numerous methods for ensuring business continuity during disruptions. In this course, you'll learn how Azure solutions can provide business continuity in the event of disruptions. You'll start by learning how to plan and deploy a Recovery Services vault using the portal and PowerShell. You'll then examine how to configure Azure VM and on-premises file server backup. Next, you'll learn how to enable Azure VM failover. Lastly, you'll see how to configure update management. This course is one of a collection of courses that prepares learners for the AZ-303: Microsoft Azure Architect Technologies certification exam.

COURSE_DESCRIPTION: This 11-video course delves into machine learning reinforcement learning concepts, including terms used to formulate problems and workflows, prominent use cases and implementation examples, and algorithms. Learners begin the course by examining what reinforcement learning is and the terms used to formulate reinforcement learning problems. Next, look at the differences between machine learning and reinforcement learning by using supervised and unsupervised learning. Explore the capabilities of reinforcement learning, by looking at use cases and implementation examples.

Then learners will examine reinforcement learning workflow and reinforcement learning terms; reinforcement learning algorithms and their features; and the Markov Decision Process, its variants, and the steps involved in the algorithm. Take a look at the Markov Reward Process, focusing on value functions for implementing the Markov Reward Process, and also the capabilities of the Markov Decision Process toolbox and the algorithms that are implemented within it. The concluding exercise involves recalling reinforcement learning terms, describing implementation approaches, and listing the Markov Decision Process algorithms.

COURSE_DESCRIPTION: Once you have data in storage, you'll need to have some mechanism for transforming the data into a usable format. Azure Data Factory is a data integration service that is used to create automated data pipelines that can be used to copy and transform data. In this course, you'll learn about the Azure Data Factory and the Integration Runtime. Next, you'll explore the features of the Azure Data Factory, such as linked services and datasets, pipelines and activities, and triggers. Finally, you'll learn how to create an Azure Data Factory using the Azure portal, Azure Data Factory Linked services and datasets, and Azure Data Factory pipelines and activities, as well as how to trigger a pipeline manually or using a schedule. This course is one in a collection that prepares learners for the Designing and Implementing a Data Science Solution on Azure (DP-100) exam.

COURSE_DESCRIPTION: Decision-makers and leaders shoulder numerous responsibilities on a daily work life basis. Among them is a crucial one to ensure that their organization and its assets remain secure. In a digital era, information has become the new power source. However, for decision-makers and leaders across the globe, protecting the organization's information from abuse, misuse, or unauthorized access can be challenging. New security threats emerge every day and decision-makers and leaders need to be armed with the right skills to make well-informed security decisions. In this Skillsoft Aspire journey, you will begin by becoming aware of common security threats, exposure to them, and their impact on businesses and assets. You will continue your discovery of what you need to do by learning how to identify, evaluate, and plan for security risks. Finally, you will learn how to adopt best practices and guidelines to mitigate security risks.

COURSE_DESCRIPTION: To build serverless applications, developers and project managers must know how to transition to an API-driven development environment. Use this course to learn how to leverage APIs within AWS's serverless platform. Distinguish between REST and SOAP APIs. Examine the

purpose of the REST architecture style and the benefits of using REST APIs. Explore AWS API Gateway and the process of designing, building, and optimizing API Gateway to create REST APIs. Create HTTP APIs and API Gateway APIs. Implement AWS Lambda using Node.js. Then create Lambda functions to consume events from Amazon DynamoDB streams. Outline how to set up authentication and authorization in AWS serverless implementations. Work with Lambda authorizers and functions. Lastly, customize content delivered by CloudFront. Upon completing this course, you'll be able to build RESTful APIs and leverage them within the AWS serverless environment.

COURSE_DESCRIPTION: Working with Google Cloud SQL is a comprehensive journey that teaches participants how to use Google Cloud's fully managed relational database service. Throughout the journey, participants will learn how to set up and manage a Google Cloud SQL instance, Google Cloud SQL architecture, creating and configuring Cloud SQL with MySQL, PostgreSQL, and with SQL Server. They will also gain experience with performing basic CRUD operation, understanding and creating replicas and backups. In addition, participants will learn advanced features such as Cloud SQL integrations, migration to Cloud SQL from MySQL and PostgreSQL using Database Migration service. They will also learn integrating Cloud SQL with Google App Engine and Google Big Query. Whether you're a developer, administrator, or architect, this journey will provide you with the hands-on experience and knowledge needed to effectively use Google Cloud SQL.

COURSE_DESCRIPTION: Savvy business professionals know that communicating effectively is a powerful way to create connection, build trust, and deliver results. Yet, it can be difficult to identify which communication skills to build and how to get better at them. But it doesn't have to be. We communicate through words, tones, gestures, movement, and expressions. However, research suggests that a significant percentage of communication occurs nonverbally. Therefore, strengthening non-verbal communication capabilities may have a positive impact on your life, leadership, and career. Join Jennifer Nash-executive advisor, leadership expert, and Fortune 50 consultant-to learn the secret to decoding nonverbal facial expressions.

COURSE_DESCRIPTION: In this one-hour, project-based course, you will be introduced to Unity's Animator tool for connecting multiple animations and transitioning between them. This project covers creating animations, transitions and parameters that can be used to trigger behavior. The guided project will introduce you to the following Unity concepts: - Animator - Animator Parameters - Animation Transitions - Animation Events This is Part 2 of a two-part series introducing Unity's Animation and Animator. Part 1 covers making the basic (but cool!) animation for your pickup GameObject. This guided project and series also serves as an optional but recommended foundation for the "FPS Weapon" series. This project makes use of the project created in Make Your Pick-Ups Look Cool in Unity (Intro to Animation 1). This compliments this guided project and, although not a prerequisite, is recommended for a more well-rounded understanding of the concepts presented herein.

COURSE_DESCRIPTION: By the end of this project, you will learn how to create an animated social media post using the free version of Canva. Animated social media posts are great tools for drawing the attention of your followers and customers to the information you are aiming to share. We can use Canva to complete this project because it provides all the tools you need to create an organized and visually appealing product while offering a variety of options for sharing and collaboration. You will learn how to plan and organize your ideas and utilize graphic design tools as you create an animated social media post. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Artificial intelligence (AI) can play a part in many marketing tasks, and if used skillfully, can have a significant impact on revenues and profits. Every action on social media is recorded and AI is well-suited to process this large volume of data. AI can also be used to help with demand forecasting, product recommendations, and fraud detection. In this course, you will investigate significant ways to apply AI in marketing and in retail. Explore the Weibo case study, which focuses on data from marketing and advertising posts on social media and the attempts to predict likes, comments, and shares of each post before it is sent out. Then, analyze the applications of market basket analysis (MBA) via case study to determine how to perform customer segmentation using clustering and MBA through association rules mining. Finally, discover how to predict out-of-stock events in a store.

COURSE_DESCRIPTION: This course prepares learners for the MS-201 Implementing a Hybrid and Secure Messaging Platform certification exam, which tests abilities of messaging administrators to plan and implement a hybrid configuration, manage migration, secure the messaging environment, and manage organizational settings. In this 16-video course, learners can examine information sharing in Exchange Online, including how to create and manage organizational relationships, and policies to share calendar information with external users. You will examine organizational relationships in Exchange Online; learn to use the EAC (Exchange administrator center) to create an organizational relationship; and learn to add a domain to a relationship. Next, observe how to use the EAC to disable and change free/busy access levels for an organizational relationship, as well as how to remove a relationship. You will learn how to create sharing policies, and how to use the EAC to apply the sharing policy to single or multiple mailboxes. Finally, this course explores how to set the policy as a default, and to disable a sharing policy.

COURSE_DESCRIPTION: Google Virtual Private Cloud provides virtualized network functionality to Google Compute Engine virtual machine instances, Google Kubernetes Engine clusters, and the Google App Engine flexible environment. You'll begin by learning about Virtual Private Cloud and the creation of VPC networks and subnets. You'll learn how to launch Google Compute Engine instances with custom network configurations and configure Private Google Access. Next, you'll discover how to assign tags to VMs, create and manage routes, create ingress and egress firewalls, and use Cloud VPN to create a VPN between Google VPC and external networks. Finally, you'll learn how to create and launch Deployment Manager templates, add subnets to existing VPCs, use gcloud to expand subnets, and reserve new static IP addresses. This course is one of a collection of courses that prepares learners for the Google Cloud Associate Cloud Engineer certification.

COURSE_DESCRIPTION: All organisations must grapple with fundamental issues at the heart of governance: who are our stakeholders? What are their objectives? How can we ensure these objectives are met as effectively as possible? How can we ensure all legitimate stakeholders are treated fairly? Via structured learning activities (video lectures, quizzes, discussion prompts and written assessments) this course will teach you how to address these questions and how a sound governance structure and comprehensive risk management framework can support you and your organisation in achieving its objectives. You will consider contemporary ethical issues and devise practical responses to them, and finally, you'll discover that your future 'influencing' challenge will be to encourage all members of your organisation to understand their role in serving your organisation's stakeholders.

COURSE_DESCRIPTION: If you're feeling anxious right now, you're not alone. The world is scary, and new ways of working bring tremendous uncertainty. Left unchecked, anxiety creates burnout and drives poor decision-making. But here's the good news: Understanding your anxiety is a leadership strength! If you know how to manage it, anxiety can motivate us to be better colleagues and leaders. We will be more productive, creative, and able to work through challenges. Anxious person, business owner, author of Hiding in the Bathroom and host of HBR's The Anxious Achiever podcast Morra Aarons-Mele will help you stop avoiding your anxiety--- and learn to thrive because of it.

COURSE_DESCRIPTION: Rukovoditeljima započinjanje teškog razgovora - bilo sa zaposlenikom koji im je izravno odgovoran, s kolegom ili rukovoditeljem - može biti iznimno stresno. Ako se pogrešno obavi, takav razgovor može i naštetiti vašim poslovnim odnosima te vas ostaviti nesigurnima u svoje sposobnosti. Uz odgovarajuću pripremu i mentalni sklop možete se pobrinuti da se to ne dogodi. Na ovom ćete tečaju naučiti nekoliko osnovnih smjernica o tome kad i gdje započeti težak razgovor i korisne korake za nošenje sa stresom koji je s time povezan. Naučit ćete se pripremiti za težak razgovor u četiri koraka kako biste bili samopouzdana i sposobni voditi konstruktivan razgovor. Na kraju ćete naučiti kako tijekom razgovora pokazati da imate odgovarajući mentalni sklop kako bi razgovor imao najbolji mogući ishod.

COURSE_DESCRIPTION: How far does a security test need to go? This course shows you how to set the scope of a security penetration test. Begin by identifying security assessment types, how to select security targets, and how to determine the testing scope strategy. Next, you will determine who tests the security and learn how to confirm their test methods. Discover how to review the test outcome to determine the level of acceptable risks, risk impacts, and risk treatments. Learn how to avoid scope creep with clients, and identify threat actors and agents. Conclude by aligning tests to regulations and standards, such as PCI DSS, FISMA, MARS-E, HIPAA, SOX, and ISO.

 COURSE_DESCRIPTION: Welcome to Introduction to Back-End Development, the first course in the Meta Back-End Developer program. This course is a good place to start if you want to become a web developer. You will learn about the day-to-day responsibilities of a web developer and get a general understanding of the core and underlying technologies that power the internet. You will learn how front-end developers create websites and applications that work well and are easy to maintain. You'll be introduced to the core web development technologies like HTML and CSS and get opportunities to practice using them. You will also be introduced to modern UI frameworks such as Bootstrap and React that make it easy to create interactive user experiences. By the end of the course, you will be able to: - Describe the front-end developer role - Explain the core and underlying technologies that power the internet - Use HTML to create a simple webpage - Use CSS to control the appearance of a simple webpage - Explain what React is - Describe the applications and characteristics of the most popular UI frameworks For the final project in this course, you will create and edit a webpage using HTML and the Bootstrap CSS framework. Using a responsive layout grid, you will construct a responsive webpage containing text and images that looks great on any size screen. This is a beginner course intended for learners eager to learn the fundamentals of web development. To succeed in this course, you do not need prior web development experience, only basic internet navigation skills and an eagerness to get started with coding.

COURSE_DESCRIPTION: Few kinds of communication can have the effect of a powerful presentation. Even a short speech can motivate people to change long-held beliefs or to take action, and a wonderfully delivered speech can transform a normal person into a leader. In this course, Prof. William Kusklin provides a series of pragmatic videos and exercises for successful public speaking and presentations. The course develops through four themes: mastering fear, developing a creative formula, using verbal and body language, and anticipating the room-so that you can discover your personal power as a speaker and give excellent presentations. Successful presentations do not rely on perfect teeth, a deep voice, or an army of scriptwriters. They depend largely on the same skills as successful Business Writing and Graphic Design: clarity, structure, and revision. The goal of the course, therefore, is to enable you to discover your own internal power as a speaker and express it to the world. After this course, with some practice, you will be able to go into any situation and command the room for as long as you like. This course can be taken for academic credit as part of CU Boulder's Master of Science in Data Science (MS-DS) degree offered on the Coursera platform. The MS-DS is an interdisciplinary degree that brings together faculty from CU Boulder's departments of Applied Mathematics, Computer Science, Information Science, and others. With performance-based admissions and no application process, the MS-DS is ideal for individuals with a broad range of undergraduate education and/or professional experience in computer science, information science, mathematics, and statistics. Learn more about the MS-DS program at <https://www.coursera.org/degrees/master-of-science-data-science-boulder>.

COURSE_DESCRIPTION: This course will help those new to shells and shell scripting to build a foundation with the Bash shell. We'll learn several Bash shell commands that will allow you to navigate and use the shell for everyday tasks. We will also write a Bash shell script that will back up a directory and email the compressed file, a culmination of all the commands we'll cover. We will cover: Not only will you gain the knowledge to customize your system, you will have a solid foundation to expand what you can do with Bash on the command line and in scripts. This beginner-level guided project is perfect for those who have an interest in learning to use a Linux or Unix operating system, whether to gain new skills in IT or software development, or to use an alternative to commercial, proprietary software. Those with no experience in IT, software development, cybersecurity, and more can start here and build on necessary skills for future training and employment. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In this challenge, you will provision a new Azure data factory that supports a data pipeline that will transform data. First, you will design a batch processing solution, and then you will add directories to a storage account that uses a Data Lake Storage hierarchical namespace. Next, you will deploy an Azure data factory, and then you will create a data pipeline. Finally, you will author a copy data activity that will transform data into a blob data file, and then you will test and publish the data pipeline. Note: Once you begin the challenge lab, you will not be able to pause, save, or exit and then return to your challenge lab. Please ensure that you have set aside enough time to complete the challenge lab before you start.

COURSE_DESCRIPTION: Translating from one language to another is a common task in Natural Language Processing (NLP). The transformer model works by passing multiple words through a neural network simultaneously and is one of the newest models propelling a surge of progression, sometimes referred to as transformer AI. In this course, you will solve real-world machine translation problems, translating from English to French. Explore machine translation problem formulation, notebook setup, and data pre-processing. Then, learn to tokenize and vectorize data into a sequence of integers, where each integer represents the index of a word in a vocabulary. Discover transformer encoder-decoder and see how to produce input and output sequences. Finally, define the attention layer and assemble, train, and evaluate the translation model end to end. Upon completing this course, you will be able to solve industry-level problems using deep learning methodology in the TensorFlow ecosystem.

COURSE_DESCRIPTION: Continue developing your skills in TensorFlow as you learn to navigate through a wide range of deployment scenarios and discover new ways to use data more effectively when training your machine learning models. In this four-course Specialization, you'll learn how to get your machine learning models into the hands of real people on all kinds of devices. Start by understanding how to train and run machine learning models in browsers and in mobile applications. Learn how to leverage built-in datasets with just a few lines of code, learn about data pipelines with TensorFlow data services, use APIs to control data splitting, process all types of unstructured data, and retrain deployed models with user data while maintaining data privacy. Apply your knowledge in various deployment scenarios and get introduced to TensorFlow Serving, TensorFlow, Hub, TensorBoard, and more. Industries all around the world are adopting Artificial Intelligence. This Specialization from Laurence Moroney and Andrew Ng will help you develop and deploy machine learning models across any device or platform faster and more accurately than ever. Looking for a place to start? Master the foundational basics of TensorFlow with the DeepLearning.AI TensorFlow Developer Professional Certificate. Looking to customize and build powerful real-world models for complex scenarios? Check out the TensorFlow: Advanced Techniques Specialization.

COURSE_DESCRIPTION: Azure Pipelines comprises various components to enable better code delivery. In this course, you'll outline the various Azure Pipelines stages and define the role of approvals and gates. You'll describe deployment conditions and triggers and the concept of queuing policies to control deployment. You'll identify the types of resources that can be used by Azure Pipelines and recognize the role of agents. You'll also outline how to translate Jenkins and Travis pipeline configurations to Azure pipelines. Next, you'll create pipelines to build a GitHub repository, configure and execute Azure Pipelines jobs, organize deployment jobs in release pipelines into stages, and configure resource triggers from different branches. You'll then change the default branch for a pipeline and create new resource groups and virtual machine scale sets. Finally, you'll install extensions to organizations and create a custom extension for Azure DevOps to place in the marketplace.

COURSE DESCRIPTION: If there is a shortcut to becoming a Data Scientist, then learning to think and work like a successful Data Scientist is it. Most of the established data scientists follow a similar methodology for solving Data Science problems. In this course you will learn and then apply this methodology that can be used to tackle any Data Science scenario. The purpose of this course is to share a methodology that can be used within data science, to ensure that the data used in problem solving is relevant and properly manipulated to address the question at hand. Accordingly, in this course, you will learn: - The major steps involved in practicing data science - Forming a business/research problem, collecting, preparing & analyzing data, building a model, deploying a model and understanding the importance of feedback - Apply the 6 stages of the CRISP-DM methodology, the most popular methodology for Data Science and Data Mining problems - How data scientists think! To apply the methodology, you will work on a real-world inspired scenario and work with Jupyter Notebooks using Python to develop hands-on experience.

COURSE_DESCRIPTION: In this course, you will discover how to monitor your Amazon Web Services (AWS) resources through virtual private cloud (VPC) flow logs, CloudWatch, and CloudTrail, and examine how to improve app performance. This course can be used in preparation for the AWS Certified Solutions Architect-Professional SAPC01 certification exam. Begin by learning how to enable CloudWatch alarms, monitor EC2 instance activity, and retrieve an EC2 instance system log. Then view S3 bucket metrics, configure inventory for S3, enable S3 bucket access, logging, and configure S3 bucket event monitoring. Next, learners use VPC flow logs for analyzing network traffic, undertake an examination of CloudTrail auditing services, and become familiar with using the graphical user interface (GUI) to view CloudTrail events. Explore how auto scaling increases application availability and performance and how to create an EC2 launch configuration auto scaling group. Examine the benefits of database caching with the ElastiCache, specifically, how to deploy a Memcached and a Redis ElastiCache cluster, and finally, the use of a CloudFront content delivery network and how to deploy a CloudFront configuration.

COURSE_DESCRIPTION: In this course, you'll explore the software requirements engineering process and how it applies to API software development, including gathering and validating requirements, and prioritizing features. You'll start by examining the key elements of the requirements engineering process, and how to work with stakeholders, including stakeholder identification, methods for turning stakeholder demands into requirements, and coaching stakeholders with regards to their requirement selection. You'll then learn techniques for identifying requirements, best practices for turning requirements into software specifications, and techniques for prioritizing features. Next, you'll discover tips for identifying hidden requirements and creating a requirements traceability matrix. Lastly, you'll explore planning requirements for API development, how to apply requirements engineering to software development lifecycles, and how to validate software requirements.

COURSE_DESCRIPTION: Azure governance begins with applying policies and RBAC roles to control resource access and check resource compliance with security standards. In this course, you'll begin by learning how to create an Azure management group to organize Azure subscriptions. Next, you'll learn how to work with Azure policy assignments to control resource access and check resource compliance. You'll then explore how to create an Azure environment using Azure Blueprints, as well as how to control Azure resource management through RBAC. Lastly, you'll learn how to tag resources and enable resource locking. This course is one of a collection of courses that prepares learners for the AZ-900 Microsoft Azure Fundamentals certification.

COURSE_DESCRIPTION: Organizations rely on various kinds of data, including big data, to fully understand their customers and business operations. Modeling data systems can help businesses better organize and access data. To do so, they need that data to be easy to access and understand. Data modeling plays a critical role in both. In this course, you'll learn about data modeling, the benefits it can bring to an organization, and the various levels at which data modeling can be applied. You'll explore the different types of data models and learn about the data modeling process.

COURSE_DESCRIPTION: Time series forecasting uses data collected over periodic intervals to analyze how the variable changes over time. Time series analysis is often used for forecasting problems such as demand forecasting and revenue forecasting. In this course, discover how time series analysis works and how time series models such as the autoregressive integrated moving average (ARIMA) model can help forecast future values of time-varying data using historical values. Next, visualize and explore time series data using windowing, differencing, moving averages, and time series decomposition. Then fit a function, a seasonal component model, and an ARIMA model on this data for forecasting future values. Finally, use association rule learning for market basket analysis to analyze transaction data from a grocery store and perform association rule learning on this

data to figure out what items are frequently bought together. When you are finished with this course you will have the skills to use RapidMiner for time-series forecasting and market basket analysis.

COURSE_DESCRIPTION: In this one-hour, project-based course, we will recreate the first ever "Easter Egg" in game development history! Easter Eggs in video games are hidden features that can be revealed by pressing a combination of buttons, completing a task in a certain way or exploring remote or obscure areas of a game. They can be hidden messages from the programmers, hidden music tracks or art, even a complete hidden level. In this guided project, we will recreate the Easter egg secretly created by developer Warren Robinett in Atari's 1980 game, Adventure! You'll learn how to set up a simple 2D environment similar to rooms from the original game; how to make the player move with the keyboard and enable the player to pick up and drop objects in the same way as Adventure!; and how to write a C# script that will reveal the Easter egg once all the requirements are met. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Business continuity planning (BCP) ensures an organization functions smoothly during an unplanned incident or disaster. In this course, you'll explore what comprises BCP and how you can employ its methods before, during, and after a disaster. You'll learn about the importance of a business continuity plan and what's needed to create an effective one. You'll differentiate a business continuity plan from disaster recovery and emergency action plans. You'll then investigate some of the individual BCP steps in more detail, including the business impact analysis (BIA), risk management plan, and incident response plan phases. Moving on, you'll study what's involved in post-disaster recovery planning. Finally, you'll explore how to achieve business resiliency and excellence in the face of a disaster and during a pandemic, examining not only how to get back to normal but also how to exploit new opportunities and grow.

CATEGORY:
COURSE_DESCRIPTION: In this course you will learn how to use survey weights to estimate descriptive statistics, like means and totals, and more complicated quantities like model parameters for linear and logistic regressions. Software capabilities will be covered with R(r) receiving particular emphasis. The course will also cover the basics of record linkage and statistical matching-both of which are becoming more important as ways of combining data from different sources. Combining of datasets raises ethical issues which the course reviews. Informed consent may have to be obtained from persons to allow their data to be linked. You will learn about differences in the legal requirements in different countries.

COURSE_DESCRIPTION: Die Identifizierung von Arten ist ein wichtiger Schritt in vielen landwirtschaftlichen Prozessen. Mit der Globalisierung der Lieferketten und den strengen Sortiervorschriften, die von den Importländern bezüglich der Zusammensetzung von Sendungen festgelegt wurden, werden Techniken des maschinellen Lernens (ML), die auf die Klassifizierung ausgerichtet sind, in der Landwirtschaft immer wichtiger. In diesem Kurs erfahren Sie, wie Sie eine explorative Datenanalyse von Daten über Bohnen durchführen können. Als Nächstes erfahren Sie, wie Sie die Daten visualisieren, um ein Gefühl für die Beziehungen zwischen den Attributen zu bekommen, die Bohnen anhand einer logistischen Regression klassifizieren und die Ergebnismetriken des Modells untersuchen. Schließlich üben Sie die Auswahl von Features und die Verwendung anderer Arten von Machine-Learning-Modellen. Nach Abschluss des Kurses werden Sie wissen, wie Sie landwirtschaftliche Daten analysieren, Beziehungen zwischen Attributen erkennen und Daten nach ihrer Art klassifizieren.

COURSE_DESCRIPTION: Logging and monitoring should be a central part of any good DevOps process, including those associated with cloud-native application development and scaling. While traditional logging and monitoring tools aren't designed for cloud-native environments, there are other solutions. Use this course to comprehend how cloud platforms have changed the nature of logging and monitoring. Learn how Google Cloud Operations for Google Kubernetes Engine (GKE), Amazon Elastic Kubernetes Services (EKS), Microsoft Azure Kubernetes Services (AKS), and Kubernetes handle logging and monitoring. On a practical front, use klog to generate log messages, debug issues with Kubernetes audit logs, pull events using kubectl, use Fluentd to log information, Elasticsearch to monitor your Kubernetes applications, and Kibana to log and collect time series analytics. When you're done, you'll be able to implement logging and monitoring into your Kubernetes application development processes.

COURSE_DESCRIPTION: Arrays in C are important data structures that provide a convenient way to access multiple elements of the same data. C arrays are indexed using integers starting from 0 and reside in a contiguous chunk of memory. Arrays are also closely related to pointers, another important building block in the C language. Start this course by learning how to create, populate, and access elements of arrays. Discover how to declare variables of array types, initialize those arrays with data, and get and set the values of elements of arrays. Create multidimensional arrays and work with strings as arrays of characters. Next, learn how to print values using output functions such as printf, putchar, puts, and fprintf. Explore the different format specifiers used to represent data types in printf and how to enumerate the strengths and weaknesses of these different output functions. Finally, learn about accepting user input using library functions such as scanf, gets, fgets, and getchar.

COURSE_DESCRIPTION: This 8-video course explores how to use animation to create a visually interesting presentation by using PowerPoint for Office 365. Learners can observe how to add animations to objects in slides, including shapes, images, and text boxes. You will also learn how to customize

animations, to change how animation is activated, and to modify it. This course demonstrates how to use the Animations tab to add sounds, color, and text effects to your animations. You will learn to use the Create Animation tool to create a custom path animation or to insert a motion path animation from the Animation gallery. This course continues by demonstrating how the Master View can add animations to most or all of your presentation, without having to re-create the same animation multiple times, and how to use the Animation Painter to apply the same animation to multiple objects. You will learn to create transitions between slides. Finally, observe how to add smoother, more dynamic video-like transitions to your presentations by adding a Morph transition to your slides.

COURSE_DESCRIPTION: Beyond the scope of the actual code is the overarching architecture. Discover clean coding as it relates to application layers, domain architecture, and testable code. In this course, you will learn about multi-tier development architecture, layers, the Model-view-presenter (MVP), the Model-view-controller (MVC), MVP versus MVC, and domain-centric architecture. Then, weigh the pros and cons of domain architecture. Consider why you need to test your code and learn how to create automated unit testing in .NET projects. Finally, as a review exercise, you will describe software architecture and testable code and how they are related to clean coding

COURSE_DESCRIPTION: Identity and access management encompasses the management of on-premises and cloud-based users, groups, and roles. In this course, you'll learn how to assign only the required permissions to IAM security principles. You'll explore topics such as role creation, deploying Simple Active Directory in AWS, joining a cloud VM to a cloud-based directory service, and multifactor authentication. You'll also learn about identity federation and Windows and Linux file system permissions. This course can be used in preparation for the CompTIA Cybersecurity Analyst (CySA+) certification exam CS0-002.

COURSE_DESCRIPTION: Controlling access to network resources is a vital security concern. Resource access is controlled first by authentication, then by specific permissions for authorized resource use. Physical security strategies allow controlled access to IT computing equipment at the user and server levels. In this course, you will first list physical security strategies then determine how to harden specific systems and limit the use of USB removable media through Group Policy. Next, you will manage users and groups in Active Directory, Linux, and the AWS and Azure clouds. You'll then configure multi-factor authentication (MFA) in AWS and Azure. Finally, you'll define how identity federation works and enable access control through cloud-based RBAC roles and attribute-based access control. This course is part of a collection that prepares you for the CompTIA Server+ SK0-005 certification exam.

COURSE_DESCRIPTION: Power BI does the heavy lifting when it comes to analyzing data. One way it does this is through the DAX formula language. By learning how to use this language, you can vastly improve the insights you get from data. Use this course to learn how to conduct several data analysis operations using the DAX formula language. Begin by performing aggregation operations, such as sum and average. Learn how to generate and work with blank data in DAX. Explore a variety of counting functions, ranging from simple counts of values to conditional counts based on filters. Lastly, practice using the IF and SWITCH functions. Upon course completion, you'll know how to use DAX to calculate values and reference table data in Power BI. You'll also be further prepared for the DA-100: Analyzing Data with Microsoft Power BI certification exam.

COURSE_DESCRIPTION: Discover how to build advanced charts by using Python and Jupyter Notebook for data science in this course, which explores R and ggplot2 visualization capabilities and how to build charts and graphs with these tools. Key concepts in this course include different types of charts that can be implemented and their relevance in data visualization; how to create a stacked bar plot; how to create Matplotlib animations; and how to use NumPy and Plotly to create interactive 3D plots in Jupyter Notebook. Learners are shown the graphical capabilities of R from the perspective of data visualization; how to build heat maps and scatter plots using R; and how to implement correlogram and build area charts using R. Next, you will explore ggplot2 capabilities from the perspective of data visualization; learn how to build and customize graphs by using ggplot2 in R; and how to create heat maps, a representation of data in form of a map or diagram. Finally, learn to create scatter plots and create area charts with R.

COURSE_DESCRIPTION: Your organization's transition to Agile isn't just about changing how work gets done. People roles also shift, sometimes dramatically, in an Agile organization. As a tech leader, you need a sound understanding of the roles in an Agile team. In this course, you will learn about the characteristics of effective Agile team members. Then, you will explore the responsibilities of various Agile team roles, including the Team Lead, Product Owner, Stakeholder, and Team Member. Finally, you will learn about other roles you may need on your Agile teams, such as testers and subject matter experts. After completing this course, you'll be able to recognize Agile team roles and responsibilities.

COURSE_DESCRIPTION: This course has been designed to help you apply knowledge, skills, and know-how you have developed in negotiation and in mediation, both as a result of your own practice and the follow up of the previous Courses of the ESSEC "Negotiation, Mediation, and Conflict Resolution" specialization. Before you enroll this course, we strongly recommend that you acquire the necessary pre-requisites. A number of tools, concepts, and methods are outlined in 3 MOOCs: Negotiation Fundamentals, Cross-cultural Negotiations, and Mediation & Conflict Resolution. To be more specific, the following subjects must be mastered: - Get prepared for any negotiation; - Avoid traps; - Know how to prompt value-creating partnerships; - Structure an effective negotiation sequence; - Bargain in an efficient and respectful manner; - Overcome deadlocks; - Manager cultural differences in a negotiation; - Define what a mediation is and choose when to use it; - List different types of mediation; - Identify typical challenges and difficulties that most mediators face; - Choose the adequate strategies within a repertoire of options; - Identify the do's and don'ts in mediation. The purpose of this course is to help you to put everything together, sharpen your skills and enhance your command of negotiation techniques and behaviors. We've designed this MOOC in a highly interactive way. You will be engaged in a negotiation with peers. You will demonstrate your improved capacity to analyze, and therefore conduct, negotiations and mediation. This capstone project will comprise three exercises. Here is an overview. In the first exercise, you will analyse a real-life negotiation of your own choice. As an expert of negotiation dynamics, you will provide your reader with a detailed analysis of this real negotiation. Indeed as a professional, your task might not always be to conduct a negotiation - but to analyse what is going on in a given negotiation, or to help others (your boss, for instance) get ready for a high-stake negotiation. Guidelines will be provided in a separate document, to help you structure your assignment. For the second exercise, you will negotiate directly with a peer. We've prepared a business case inspired from a true story. The third exercise is linked to the previous one. Imagine that this negotiation is not successful, and that the relationship between the two negotiators becomes too tense. You will be asked to step into the shoes of a mediator - and to structure a mediation process. Each of these three exercises will be peer-evaluated. As a result, it is really worth your engagement! Go ahead, engage fully into the exercises - you will have fun, and you will make further progress for real-life negotiation, mediation, and conflict management.

COURSE_DESCRIPTION: A network directory service is a centralized or replicated database containing users, groups, computers, application configuration settings, and potentially much more. Many organizations use Microsoft Active Directory on-premises to store these types of network objects. Use this course to explore network directory services in the AWS cloud. Get started by investigating how to work with Active Directory (AD) and managing AD users and groups. You'll also learn about the steps involved in deploying simple AD and the AWS AD Connector to link an on-premises AD system to the AWS cloud. Having completed this course, you'll be able to manage directory services objects in the AWS cloud and be further in your journey of preparing for the AWS Certified SysOps Administrator - Associate exam, SOA-C02.

COURSE_DESCRIPTION: In this course, you'll learn about code organization, design patterns, and version control. First, you'll examine common practices for code organization, including examples in GitHub, Python, Go, and C++. Next, you'll move on to explore common design patterns, such as the Model-View-Controller and Observer patterns. Finally, you'll delve into how you can use version control to record the state of software elements at certain points in time. This course can be used in preparation for the 200-901: DevNet Associate certification exam.

COURSE_DESCRIPTION: The most effective data visualizations are the ones that clearly communicate their findings. A key part of this communication is formatting. In this 10-video course, learners discover how Tableau Desktop provides a wide range of formatting tools that can be used to change a view's style, and ultimately increase its interpretability. Begin by learning how to use the formatting tools in Tableau Desktop to control formatting at a workbook level, and then use them to customize formatting options in worksheets, dashboards, stories, and individual objects. You can

also use the tools to customize the appearance of tables and graphic lines. Discover how to add reference bands to continuous axes in a view; create distribution bands to add reference distributions with two or more values; and examine how to create bullet graphs. You will then learn how to add box plots to continuous axes in a view; use nested table calculations in a view, and explore the process of creating clusters with sample data. Finally, take a look at working with forecasts and prediction intervals.

COURSE_DESCRIPTION: There are a number of mechanisms in Amazon Web Services (AWS) for securing data-at-rest and data-in-transit. In this 8-video course, learners explore topics including the basics of cryptography, access keys and pairs, client-side versus server-side encryption, AWS Key Management Service (KMS), Certificate Manager, and CloudHSM (hardware security module). The course begins with an introduction to fundamentals of cryptography and some of the cryptographic mechanisms you need to be aware of for AWS. You will then take a look at how to use access keys and key pairs, followed by another tutorial comparing client-side encryption and server-side encryption. The next topic is AWS Key Management Service, which lets you manage cryptographic keys for your cloud services, followed by a look at AWS Certificate Manager. The final tutorial in this course explores CloudHSM. In the concluding exercise, learners are asked to list the attributes of cryptographic hashing, the options for encrypting an S3 bucket object, and the security services provided by digital signatures.

COURSE DESCRIPTION: Design by contract (DbC) involves two parties, a client and a supplier, collaborating based on mutual obligations and benefits. DbC was intended to be released as a part of the C++ language in C++20, but will now be part of the C++23 release. Use this course to examine the technical specifications of design by contract and the role of its key components - preconditions, invariants, and postconditions. You'll explore the most important features released in C++20, including the ranges library, coroutines, concepts, and modules. You'll also discover the weaknesses in defensive programming and when to implement offensive programming techniques in your code. When you are finished with this course, you will be able to tackle complex projects built using C++ and write code for them using software engineering principles and defensive programming techniques.

COURSE_DESCRIPTION: The ability to think strategically in today's global, high-tech business environment is critical to ensuring your organisation survives - and grows - into the future. By breaking down business strategy and value creation to its essential elements, you'll develop your strategic thinking skills. And through structured learning activities including video lectures, quizzes, discussion prompts and written assessments you'll discover how to improve your organisation's competitiveness. This course focuses on the key principles behind the latest thinking in value co-creation, strategy and marketing, and teaches you how to apply them. By learning how to continuously plan, monitor, analyse and assess all that is necessary for an organisation to meet its goals and objectives, you will be better prepared to take your organisation forward in a viable strategic direction.

 COURSE_DESCRIPTION: In this course, the instructor will discuss the fundamental analysis of investment using R programming. The course will cover investment analysis topics, but at the same time, make you practice it using R programming. This course's focus is to train you to do the elemental analysis for investment management that you might need to do in your job every day. Additionally, the study note to do using Python programming will be provided. The course is designed with the assumption that most students already have a little bit of knowledge in financial economics. Students are expected to have heard about stocks and bonds and balance sheets, earnings, etc., and know the introductory statistics level, such as mean, median, distribution, regression, etc. The instructor will explain the detail of R programming for beginners. It will be an excellent course for you to improve your programming skills. If you are very good at R programming, it will provide you an excellent opportunity to practice again with finance and investment examples. Professor Youngju Nielsen creates the course with the assistants of Keonwoo Lim and Jeeun Yuen.

COURSE_DESCRIPTION: When an organization uses systems that are no longer serviced and supported and therefore, do not receive security updates, they expose themselves to serious security attacks. To ensure a healthy network ecosystem, security operations personnel must be aware of the vulnerabilities these systems are exposed to. In this course, you'll explore how to conduct offensive security operations against legacy Windows-based systems. You'll learn to recognize older versions of Windows, identify common exploits for these older versions, and scan Server 2008 for vulnerabilities. You'll then learn how to enumerate Server 2008, exploit legacy systems, and gain a reverse shell on a legacy system. You'll then learn how to recognize common third-party applications and vulnerabilities and how to exploit them. Finally, you'll learn how to identify and avoid a honeypot.

COURSE_DESCRIPTION: Excel 365 enthält mehrere Methoden zum Auffinden und Anordnen von Dateneinträgen in Gruppierungen. In diesem Kurs lernen Sie, wie Sie die Werkzeuge Suchen und Ersetzen verwenden, wenn Sie mit bestimmten Daten arbeiten, und wie Sie die Werkzeuge Gruppieren und Gliedern verwenden, um Daten zu bearbeiten. Zu Beginn lernen Sie, wie Sie mit den Werkzeugen Suchen und Ersetzen zu bestimmten Stellen in einem Arbeitsblatt springen und Elemente mit einfachen Suchabfragen finden können. Anschließend lernen Sie, wie Sie die erweiterten Suchwerkzeuge verwenden, um Suchabfragen anzupassen und zu verfeinern, einschließlich der Verwendung der Werkzeuge Suchen und Ersetzen, wenn Sie speziell mit Formeln arbeiten. Schließlich lernen Sie, wie Sie mit den Ersetzen-Werkzeugen Zellinhalte und Formate ersetzen, wie Sie Zeilen und Spalten in einem Arbeitsblatt gruppieren und deren Anzeige steuern und wie Sie mit den Gruppierungs-Werkzeugen Gliederungen erstellen.

COURSE_DESCRIPTION: In this 7-video course, learners discover key differences between Python 2 and Python 3, as well as learn how to perform a Python 2 migration to Python 3. Several other topics are also covered. Begin by observing how to set up the Jupyter Notebook integrated developer environment (IDE) to run and develop Python 2 code by installing a kernel for it. The next two tutorials will examine the differences between Python 2 and Python 3-part 1 will recall the variations in syntax and output for various operations such as print, division, and round for Python 2 versus Python 3; and part 2 explores differences in the round function behavior and different ways to accept user input in Python versions 2 and 3. Next, use the 2to3 conversion tool to identify the lines in your Python 2 scripts that need to be altered for Python 3 compatibility, and finally, explore how to convert a Python 2 script to be Python 3 compatible by using the 2to3 conversion tool.

COURSE_DESCRIPTION: There are several architectural design principles that you must become familiar with to achieve certification as an AWS Cloud Practitioner. In this course, you'll explore the core aspects of AWS architectural design principles and work with some associated tools. You'll begin by recognizing what's meant by virtualization in AWS and how a hypervisor is used. You'll then investigate the AWS Shared Responsibility Model's principles, examining the responsibilities of both the AWS provider and the customer. You'll then explore best practices for managing the first root account and making identity and access decisions. Moving on, you'll work with Virtual Private Clouds (VPCs), Amazon Machine Images (AMIs), and both AWS networking and connectivity design principles. This course is one of a collection that prepares learners for the AWS Certified Cloud Practitioner 2020 certification.

In this 10-video course, learners will use Jupyter notebooks to execute all programs demonstrated. First, you will learn how to create initialized threads, and how to do the same with processes in Python. Then you will examine different thread-safe data structures in Python to implement queues, stacks, and priority queues. Next, you will learn how to use Python for synchronization mechanisms and inter-process communication, and will see a comparison of processes to threads. You will learn to use Python's built-in queue data structure for multithreaded applications, and how to implement multiprocessing. Continue by learning how processes are created and executed and how they differ from threads when one is using shared resources. You will explore how to use a manager class, or service process manager to share any Python types. Finally, you will examine the available mechanisms in Python for communication and synchronization between processes.

COURSE_DESCRIPTION: In this 10-video course, learners can explore Google Cloud Platform (GCP) DevOps capabilities that can be used to adopt CI/CD (continuous integration and continuous distribution) processes when automating application lifecycle, as well as Google's reference pipeline for automatically building, testing, and deploying code changes across different platforms. Discover how to enable CI/CD, the benefits and tools of Google Cloud Platform for configuration management. Examine how to set up Cloud Source Repositories provided by GCP and implement Pub/Sub notifications to store, manage, and track code. Other key concepts covered in this course include Google Cloud Platform DevOps capabilities that can

be used to adopt CI/CD processes when automating application lifecycle; Google's reference pipeline, which helps with automatically building, testing, and deploying code changes across different platforms; and how to use CodeBuild to build workflows for building, testing, and deploying applications. Finally, learn how to automatically deploy applications stored in Cloud Source Repositories to the App Engine after new commits; and how to deploy cloud functions from Cloud Source Repositories.

COURSE_DESCRIPTION: About this Course This six-week course titled Competing in Europe is the third in a series of three exploring some of the main business aspects of European Union law. Besides providing learners with a sound knowledge base of European laws and regulations, the series explores business considerations within a broader perspective by including inputs from leading law practitioners in the field. More specifically, the third course discusses how to compete on the internal market and protect your brand, product or invention. It includes legal disciplines such as Intellectual Property law (IP law), Competition law and specific branches within Public law, such as public procurement and state aid. At the end of this course, you will have a basic understanding of how to: • Find and understand relevant laws and regulations governing the internal European Union market • Protect and defend a company's products, brands and inventions by obtaining and licensing trademarks and patents • Create a competitive edge for a company and apply the basic principles of EU competition law • Construct and present a persuasive legal argument About the Series The Lund series in European Business Law ranges from considering the basic structures and principles of the European Union to focusing on specialized areas of European Union law. The first course, Understanding the Fundamentals, examines the core structures and principles of the European Union. The second course, Doing Business in Europe, examines legal areas such as Company law, Labour law, Tax law, Environmental law and Private International law, and how they tie in to doing business in Europe. All three courses can be taken independently or in sequence depending on your needs and preferences. To keep up to speed on the course series, visit our Facebook page at: <https://www.facebook.com/ebmooc/> Syllabus and Format Each course consists of a number of modules where one module represents about one week of work. A module includes a number of lectures and readings, and finishes with an assessment - a quiz or a peer graded assignment. The assessments are intended to encourage learning and ensure that you understand the material of the course. Participating in forum discussions is voluntary. Course I - Understanding the Fundamentals Module 1. Introduction Module 2. Legal Method and Sources Module 3. Constitutional Freedoms and Fundamental principles Module 4. Enforcement of EU Law and Judicial Review Module 5. Freedom of Movement Module 6. The External Dimension Course II - Doing Business in Europe Module 1. Making Business Transactions Module 2. Establishing a Company Module 3. Employing and Working in Europe Module 4. Paying Taxes and Complying with Environmental Standards Module 5. Resolving Cross-border Disputes Module 6. Case Clinic Course III - Competing in Europe Module 1. Obtaining Trademarks Module 2. Defending Patents Module 3. Competition: Illegal Agreements Module 4. Competition: Abuse of Dominance and Mergers...

COURSE_DESCRIPTION: Diagramme sind leistungsstarke Werkzeuge zur visuellen Darstellung von Daten, Mustern und Trends. Dieser Kurs behandelt die Grundlagen der Erstellung, Formatierung und Gestaltung von Diagrammen in PowerPoint. In diesem Kurs erfahren Sie, wie Sie Diagramme in PowerPoint erstellen und aus Excel einfügen können. Sie lernen, wie Sie Daten bearbeiten und die Darstellung formatieren können, indem Sie den Diagrammtyp und das Layout ändern. Der Kurs stellt auch eine Reihe von Werkzeugen vor, mit denen Sie die Darstellung Ihrer Daten verbessern können, von Titeln und Beschriftungen bis hin zu Gitternetzlinien und Legenden. Sie erfahren nicht nur, wie Sie das allgemeine Erscheinungsbild Ihrer Diagramme formatieren, sondern auch, wie Sie diese verschiedenen Diagrammelemente verwalten und anpassen können. Schließlich lernen Sie, wie Sie Ihr Diagramm mit Farben, Effekten und WordArt gestalten können. Möchten Sie das Gelernte praktisch üben? Gehen Sie zum Bereich Kursinhalt oder zum Abschnitt Ressourcen und laden Sie die Beispieldateien herunter, die Sie zusammen mit ausgewählten Videos verwenden können.

COURSE_DESCRIPTION: By the end of this project, you will be able to draw and style customized letters in Inkscape-a free, open-source vector program. You'll build complex shapes that can be expanded and resized without losing image quality, making them a reliable foundation for website images, logos, and other digital uses. You will practice working with vector graphics, including node and path editing, and you will feel comfortable using tools like the Bezier pen, path commands, and commands like clip to form complex vector graphics. To build these skills, you'll build an entire custom word, add serifs to a letter, and create a stylized 3D cut block letter. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Part of being an effective leader is learning how to play to your strengths and overcome characteristics that don't lend to good leadership practices. During the course, you will examine your own strengths and learn ways to use them in a leadership role. Learn to manage stress and solve problems creatively. Throughout the course, you will also build a tool kit of useful techniques that you can begin using right away in your engineering career. This course is designed for engineers who are interested in and have the desire to advance into leadership and management roles. You don't need any leadership experience to do well in this course. We ask you to reflect on your personal experiences pretty often, so some work experience will help you in that aspect, but we hope that most of what you learn here will be applicable to many areas of your life. Looking to advance even further as an engineering manager & leader for Industry 4.0? Rice University's top-ranked School of Engineering now offers a Master of Engineering Management & Leadership, 100% online for your convenience. Visit www.rice.edu/engineeringleaders to learn more.

COURSE_DESCRIPTION: This two-part course introduces the basic mathematical and programming principles that underlie much of Computer Science. Understanding these principles is crucial to the process of creating efficient and well-structured solutions for computational problems. To get hands-on experience working with these concepts, we will use the Python programming language. The main focus of the class will be weekly mini-projects that build upon the mathematical and programming principles that are taught in the class. To keep the class fun and engaging, many of the projects will involve working with strategy-based games. In part 2 of this course, the programming portion of the class will focus on concepts such as recursion, assertions, and invariants. The mathematical portion of the class will focus on searching, sorting, and recursive data structures. Upon completing this course, you will have a solid foundation in the principles of computation and programming. This will prepare you for the next course in the specialization, which will begin to introduce a structured approach to developing and analyzing algorithms. Developing such algorithmic thinking skills will be critical to writing large scale software and solving real world computational problems.

COURSE_DESCRIPTION: Consumers are constantly overloaded with information and images in social media. Part of social media marketing is learning creative ways to draw attention to products and services, oftentimes on a lean budget. In this follow-on to Introduction to PicsArt for Social Media Marketing project, learners will create another edited photo project for social media using the free version of PicsArt. New tools and options for editing will be introduced throughout the project. PicsArt is a web-based photo and video editing program. Learners can easily create and implement creative edits with online design tools to use when marketing their business. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Explore Seaborn, a Python library used in data science that provides an interface for drawing graphs that convey a lot of information, and are also visually appealing. To take this course, learners should be comfortable programming in Python, have some experience using Seaborn for basic plots and visualizations, and should be familiar with plotting distributions, as well as simple regression plots. You will work with continuous variables to modify plots, and to put it into a context that can be shared. Next, learn how to plot categorical variables by using box plots, violin plots, swarm plots, and FacetGrids (lattice or trellis plotting). You will learn to plot a grid of graphs for each category of your data. Learners will explore Seaborn standard aesthetic configurations, including the color palette, and style elements. Finally, this course teaches learners how to tweak displayed data to convey more information from the graphs.

COURSE_DESCRIPTION: In this 18-video course, learners continue preparations for the MS-201 Implementing a Hybrid and Secure Messaging Platform certification exam, which tests abilities of messaging administrators to plan and implement a hybrid configuration, manage migration, secure the messaging environment, and manage organizational settings. Learners will observe how to restrict access in Exchange Server to authorized users with RBAC (role-based access control). Explore role-based permissions, how to manage both the RBAC and the discovery management role group. Moving on to the role of group layers, you will learn how to plan RBAC roles for eDiscovery; how to add users to the discovery management role group; how to assign a role group delegate; and how to verify membership details. Learners observe how to use the EAC (Exchange administrator center) to create, copy, view and remove a role group, add a management role to a role group, and change the scope. Finally, you will learn how to use the EAC to create a new assignment policy and how to change the assignment policy on a mailbox.

COURSE_DESCRIPTION: Discover Terraform variables and their applications! Variables are a great way to define centrally controlled reusable values. This course explores variable configuration and parameters, as well as input and output. Among the topics explored in this course, you will learn about how to tie characters together through string variables and how to get decisive with Booleans. Then learn what input variables are and how to use them in Terraform. Next, see how to assign variables, define lists, use and assign maps, and define output variables that you can then use. As a review exercise, you will configure a variable, define a list and a map, create a map, view an output variable, and finally, assign an input variable.

COURSE_DESCRIPTION: By the end of this project, you will create and execute a customer satisfaction survey using Google Forms, and then analyze the form responses. Creating your survey will depend on what your company wants to analyze. Are customers satisfied with the products offered? Or, are customers satisfied with the services offered? You have the option of deciding the specifics of the survey based on your company's needs. In this course, you will create a survey to determine if customers are satisfied with the services of an appliance repair company. Once you have created and collected your survey responses, you will analyze the results using graphs provided by the Google form. Graphs are a great visual tool that allows you to quickly see different trends occurring within your business, instead of having to shuffle through pages of a report. In this project, your graph will visually show you customer satisfaction ratings. Creating a survey gives you the ability to review customer feedback, and allows you to more accurately adjust your business practices to fit the needs of your customers. Doing so will help your company improve products and/or services for increased customer satisfaction, and in the long run, increase your business's bottom line. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Some of the biggest challenges in AI implementation can arise when a tool is ready to roll out to end users - and those users resist adoption. That's typically because the project's business sponsors are not the people expected to use the tool - and they have failed to address the needs and priorities of end users. However, research by Kate Kellogg, Mark Sendak, and Suresh Balu finds that when developers make sure to address end users' concerns about workflow and autonomy, they can reconcile conflicting stakeholder interests and ensure ready adoption of AI tools.

COURSE_DESCRIPTION: The strength of finance is that it takes a structured approach to decision making, with one key building block underlying all decisions - understanding the value of time, or the Time Value of Money (TVM). In this course, we will develop this building block using introductory, and simple, applications. We will learn about the Time Value of Money (TVM), Simple Future Value (FV), Simple Present Value (PV), Future Value of Annuity, Loans, compounding, and Valuing Perpetuities. We will introduce the framework in a carefully structured and replicable way to prepare you to explore more advanced applications in the rest of the specialization. In the follow-on courses, we will expand the applications to more complex real-world decisions. After completing this course, you will have an understanding of how the value of money changes over time. You will understand the implications of all your financial decisions, including saving for the future through different channels and borrowing for future needs. You will leave with the practical knowledge needed to make informed decisions on a wide range of financial decisions. This course is part of the four-course Foundational Finance for Strategic Decision Making Specialization.

COURSE_DESCRIPTION: In Object-Oriented Programming in a language such as Java, Classes and Objects are often used interchangeably but there is a distinction between the two. A class is a blueprint for objects. In this project you will create an application that defines a Car class and create one to many Car objects. A Car class contains the common attributes all cars have; color, make and model. When a Car Object is made from the Car class, it is then assigned a specific color, such as a red Nissan Sentra or a blue Toyota Camry. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: This MOOC identifies and explores a number of challenges to the finance professional arising from the ever changing business environment. Increasingly, financial decisions must take account of strategic consequences. The first module, Exploring Strategic Position, Choice and Action helps in doing that - setting a strategic context for planning for, monitoring and controlling projects and activities. An on-going set of challenges is found in the evolution of International Reporting Standards. The second module focuses on some recent changes in Standards, identifying the drivers for changes, and examining evolution in controversial areas such as leasing and goodwill. The third and final module, Corporate Governance, examines issues which are causing people to re-assess the nature, purpose and scope of corporate governance, and challenges to making governance function effectively. Key issues here are the move to include a broader range of stakeholders, the perennial challenge of agency theory issues, shareholder activism, changing Board structures, and challenges to internal control to better manage risk. This MOOC will be right for you if you are interested in engaging with some of the challenges facing finance professionals, even if you are not one yourself. If you are thinking about returning to study this will provide a taster of academic endeavours through reading articles, critiquing ideas, and blending theory with reality.

COURSE_DESCRIPTION: In this 18-video course, examine Azure Storage including Azure Storage Explorer, Storage Redundancy, Blob Storage, File Share, File Sync, Sync Group, Access Keys, and Shared Access Signature in preparation for Microsoft Azure Administrator (AZ-103) exam. Begin by exploring Azure Storage and the three available services: Blobs, Files, and Queues. Learn how to create and use a storage account in the Azure portal, and configure and use Azure Blob Storage. Discover how to create Azure file shares using the portal, and install and use Azure File Sync Agent. Troubleshoot issues with Azure File Sync, and create an Azure Sync group. Upgrade and configure a storage account; install and connect Azure Storage Explorer, and identify redundancy options to use with the storage account. Learn about changing storage account replication strategy using Portal, PowerShell, and command-line interface (CLI). Manage your Azure storage account using access keys and configure network access. Explore shared access signature (SAS), create a SAS, and use it with Azure Blob Storage. The concluding exercise involves configuring an Azure storage account.

COURSE_DESCRIPTION: Explore how to identify and assess security vulnerabilities in this 20-video course, in which you will encounter essential secure coding techniques such as versioning, peer-based code reviews, code analysis, and anti-tampering techniques. First, become familiar with malicious practices and the threats outlined in the Open Web Application Security Project (OWASP) Top 10 list and the Common Weakness Enumeration (CWE) list of software weaknesses. You will soon be able to differentiate between CWE and Common Vulnerabilities and Exposure (CVE) lists. Next, learn to describe the characteristics of injection attacks, before watching demonstrations of input validation failures such as buffer overflows, canonical form, missing defense functions, and general programming failures. You will examine how to analyze reuse code for security vulnerabilities, identify malicious code, securely reuse third-party code, and securely integrate components. Finally, learners will hear discussions of defensive coding, side channels, social engineering attacks, source code and versioning. The course prepares learners for the (ISC)2 CSSLP: Certified Secure Software Lifecycle Professional certification exam.

COURSE_DESCRIPTION: This course will prepare you for teaching science in higher education. In this MOOC you will learn to make your knowledge as an excellent researcher accessible to your students. We will show you how to communicate science to novices as well as advanced students in science. You will experience the value of teaching with analogies and you will be guided to train your students' competences. Based on up-to-date findings from

research into teaching and learning science you will be able to - implement evidence-based strategies into your own teaching, - use students everyday-conceptions for the development of courses, - prepare analogies and models to teach in your field, - implement problem-based teaching, - set up for experiments and teach the nature of science. This course enables you to teach abstract science topics to your students and make them become active and successful learners. The course is based on lectures (videos), handouts (knowledge-to practice briefs), which supplement the knowledge taught in the lectures and assignments to implement the teaching strategies into your own practice.

COURSE_DESCRIPTION: Object-relational mapping (ORM) allows Java objects to be mapped to database tables and vice versa. Use this course to learn more about the Java Persistence API (JPA), which defines how Java objects and relational data should be mapped, and Hibernate, an object-relational mapping solution for Java environments. Start by exploring how to create an application that uses Hibernate APIs directly to interact with a database and examining hibernate configuration files in greater detail. You'll also investigate how Java objects can be created in an app and then persisted in a database and discover how the same operations can be implemented by applying JPA configurations, which then use Hibernate under the hood. Once you've completed this course, you'll be able to distinguish between JPA and Hibernate while also recognizing how they are connected.

COURSE_DESCRIPTION: The most memorable speeches inspire, entertain, and praise. By blending stories and eloquence, great speeches highlight the core values motivating an audience. You might need to do this in a keynote address, a eulogy, or simply a business meeting. Inspiring audiences is a common, but difficult writing challenge. You want a speech that elevates the topic and the audience. This course gives you a method for preparing and delivering speeches that inspire and entertain. By the end of this course, you should be able to compose and deliver moving speeches that praise core audience values through evidence, storytelling, and humor. You should be able to write eloquent passages in tones appropriate to the audience and occasion and speak fluidly from either a well-prepared manuscript or from memory. Learners will record speeches, providing and receiving peer feedback.

COURSE_DESCRIPTION: Microsoft Project is the gold standard for managing projects from the small to the very large. In this 6-video course, "Finding and Opening the Application," discover the Project 2019 and Project Online Desktop interface, including zoom, navigation, copying, pasting, as well as finding items. This course has been recorded in a Project Online Desktop Client environment. Learners will begin by observing how to find, open, and close the Project application, and then explore the interface to understand how it is organized, looking at the different ribbons and accessing various tools and information. You will discover how to use the zoom tool, which is an important function in a project; learn how to move between multiple documents; and learn how to copy and paste text, images, shapes, tasks, pages, or reports into a project. The course concludes by focusing on the find and replace function, useful if you need to find an item or task within a project quickly.

COURSE_DESCRIPTION: This 5-video course explores how to use and reuse forms in Word for Office 365. Word has thousands of pre-formatted forms available for download, and learners will observe how to use them to create forms for their specific requirements. You will learn how to use the Navigation Pane to create a form, for instance, for a quotation, by using Word's built-in templates. Continue by learning how to save a form you have customized as a template to use at a future date. You will then learn how to create drop-down menus within a word document, for example, if you are creating a survey. The document with the drop-down menu will be available to anyone who has been sent the document. The course demonstrates how to use multiple choice lists in a form, and how to customize appearance of the list. Finally, if you are sharing a form or survey, you will learn how to protect it from unauthorized changes, which will allow users to add answers, but not to modify questions or other elements.

COURSE_DESCRIPTION: Snowflake can load data from the Google Cloud Platform (GCP), Microsoft Azure, and Amazon Simple Storage Service (S3) using external stages. Each cloud platform has one or more techniques for integrating with Snowflake. One method of integration that is supported across all three of the major cloud platforms is storage integration objects. Begin this course by loading data from Google Cloud Storage buckets. Create a Snowflake storage integration object and a GCP cloud storage service account for your Snowflake account. Then, load data from Azure Blob Storage using both the storage integration method and the SAS token method. Finally, integrate with Amazon S3 via storage integrations and using an access key and access key ID credentials. When you have completed this course, you will be able to easily integrate Snowflake with Google Cloud Storage, Azure Blob Storage, and Amazon S3.

COURSE_DESCRIPTION: In this 1-hour long project, you will be introduced to the Variational Autoencoder. We will discuss some basic theory behind this model, and move on to creating a machine learning project based on this architecture. Our data comprises 60.000 characters from a dataset of fonts. We will train a variational autoencoder that will be capable of compressing this character font data from 2500 dimensions down to 32 dimensions. This same model will be able to then reconstruct its original input with high fidelity. The true advantage of the variational autoencoder is its ability to create new outputs that come from distributions that closely follow its training data: we can output characters in brand new fonts. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE DESCRIPTION: This guided project course is part of the "Tensorflow for Convolutional Neural Networks" series, and this series presents material that builds on the second course of DeepLearning.AI TensorFlow Developer Professional Certificate, which will help learners reinforce their skills and build more projects with Tensorflow. In this 2-hour long project-based course, you will learn the fundamentals of CNNs, structure, components, and how they work, and you will learn practically how to solve an image classification deep learning task in the real world and create, train, and test a neural network with Tensorflow using real-world images, and you will get a bonus deep learning exercise implemented with Tensorflow. By the end of this project, you will have learned the fundamentals of convolutional neural networks and created a deep learning model with TensorFlow on a real-world dataset. This class is for learners who want to learn how to work with convolutional neural networks and use Python for building convolutional neural networks with TensorFlow, and for learners who are currently taking a basic deep learning course or have already finished a deep learning course and are searching for a practical deep learning project with TensorFlow. Also, this project provides learners with further knowledge about creating and training convolutional neural networks and improves their skills in Tensorflow which helps them in fulfilling their career goals by adding this project to their portfolios.

COURSE_DESCRIPTION: In this challenge, you will back up the Windows Server 2019 system state by using Microsoft Azure Backup and Windows Server Backup. First, you will install Windows Server Backup, and then you will perform an interactive backup. Next, you will create an Azure Recovery Services vault, and then you will deploy the Microsoft Azure Recovery Services (MARS) agent. Finally, you will schedule a backup job by using Microsoft Azure Backup. Note: Once you begin a challenge you will not be able to pause, save, or return to your progress. Please ensure you have set aside enough time to complete the challenge before you start.

COURSE_DESCRIPTION: Google App Engine is a Platform as a Service and a cloud computing platform that provides web app developers and enterprises with scalable hosting services. In this course, you'll learn about the different Google App Engine environments that are available, as well as Google App Engine feature deprecations and how to install SDKs. Next, you'll explore how to setup a Cloud Run environment and Cloud Functions. You'll then examine how to deploy App Engine using gcloud, deploy a container image to Cloud Run, and deploy Cloud Functions from your local machine, GitHub, and Bitbucket. Finally, you'll learn how to deploy an app that receives Google Cloud events and setup Pub/Sub notifications for Cloud Storage. This course is one of a collection of courses that prepares learners for the Google Cloud Associate Cloud Engineer certification.

COURSE_DESCRIPTION: Organizations have a lot of data. When an organization grows, its ability to provide context for all that data becomes increasingly crucial. Reports can organize data in a meaningful way. Finance and Operations apps include reporting tools to help you create reports for your organizations, SQL Server Reporting Services (SSRS), Microsoft Power BI, and Microsoft Excel reports. You can use these reporting tools to visualize a data set in many ways, including as a tabular layout with collapsible tables and by using dashboards. Throughout this module, you will build a foundation to design, create, and modify reports.

COURSE_DESCRIPTION: In this course you will learn to write the SQL code to manipulate the data in a relational database table. You'll begin by populating the table with data. Since a database and its tables are designed and built to be repositories of data, getting the data into the tables is a critical activity in the building of a working database. When building a new home, the real test of your design comes when the furniture and family move in. It's much the same with designing and building database tables-the real test comes when you load data into the tables and begin to use it. As you work through and complete hands-on tasks, you'll become familiar with SQLiteStudio, the database management system used in the course. You'll experience first-hand the impact data types and constraints have on manipulating table data. For example, as you enter new data into a table, you'll appreciate the extra protection provided by the primary key constraint. It will not let you insert two rows into a table that are exactly alike. In addition to adding data to the tables, you'll write the SQL code used to modify existing data values and to delete rows of data. Managing and manipulating data are SQL's primary purposes, and SQL coding will be a powerful addition to your tool set. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Welcome to Access Controls! The Access Controls Course provides information pertaining to specify what users are permitted to do, the resources they are allowed to access, and what operations they are able to perform on a system. Access Controls help managers limit and monitor systems use at a user level or group membership. You will understand the different access control systems and how they should be implemented to protect the system and data using the different levels of confidentiality, integrity, and availability. The Access Controls course provides information pertaining to specifying what users are permitted to do, the resources they are allowed to access, and what operations they are able to perform on a system. Access Controls help managers limit and monitor systems use at a user level, and is usually predefined based on authority level or group membership. You will understand the different access control systems and how they should be implemented to protect the system and data using the different levels of confidentiality, integrity, and availability. Objectives 1. Describe how to implement Authentication mechanisms 2. Identify and operate internetwork trust architectures 3. Describe the process of administering identity management life cycle 4. Implement the different types of access controls (Subject/Object based)

COURSE_DESCRIPTION: Load balancers are a fundamental component in any distributed application architecture. In this course, you'll explore what load balancers do and where they are used. Then, you'll discover how they have evolved into modern day application delivery controllers. You'll learn about the different types and features available in modern load balancing solutions. You'll then move on to explore standard network topologies that incorporate load balancing, as well as how to effectively introduce Layer 4 and Layer 7 load balancers. You'll learn how a load balancer in the cloud can vary from on-prem and examine load balancing across different cloud platforms. Finally, you'll learn how to deploy both a Layer 4 and a Layer 7 cloud-native load balancing solution on the Microsoft Azure platform.

COURSE DESCRIPTION: In this beginning-level project you will work with JavaScript variables and assignment operators by writing and testing JavaScript code using the Notepad++ text editor and the Chrome browser. Since variables are used as containers to hold values in JavaScript, knowing how to use them is an essential skill for a JavaScript programmer. You will learn how to create a variable, name it correctly, and use it to store a data value using an assignment operator. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Welcome to the AWS Fundamentals Practice Labs. Amazon Web Services (AWS) is one of the world's most popular Cloud Service Providers (CSPs). The AWS Cloud Service Provider provides cloud services such as Infrastructure as a Service (IaaS), Platform as a Service (PaaS) and Software as a Service (SaaS). In this Practice Labs title, the fundamentals of specific cloud services will be explored using practical exercises. To complete the modules, an AWS cloud subscription will be provided without signing up using a credit card. This title consists of five modules starting with fundamental cloud concepts, building each module's skills level to further the knowledge of cloud concepts using practical application concepts.

COURSE_DESCRIPTION: This course offers a rigorous mathematical survey of causal inference at the Master's level. Inferences about causation are of great importance in science, medicine, policy, and business. This course provides an introduction to the statistical literature on causal inference that has emerged in the last 35-40 years and that has revolutionized the way in which statisticians and applied researchers in many disciplines use data to make inferences about causal relationships. We will study methods for collecting data to estimate causal relationships. Students will learn how to distinguish between relationships that are causal and non-causal; this is not always obvious. We shall then study and evaluate the various methods students can use - such as matching, sub-classification on the propensity score, inverse probability of treatment weighting, and machine learning - to estimate a variety of effects - such as the average treatment effect and the effect of treatment on the treated. At the end, we discuss methods for evaluating some of the assumptions we have made, and we offer a look forward to the extensions we take up in the sequel to this course.

COURSE DESCRIPTION: In Excel 2019 you can use the Visual Basic Editor to create and manage your macros. It's important to identify the key objects in your macro in order to start writing code for your Excel document. In this course you will see how to insert procedures and start writing code. You will also see how to use objects and even create events to interact with those objects. Once you start writing code it's important to know how to identify and correct errors found in your code. In order to practice what you have learned, you will find the Word document named Excel 2019 for Windows: Creating & Editing Macros Exercise as well as the associated materials in the Resources section.

COURSE DESCRIPTION: In a world characterized by volatility, uncertainty, complexity, and ambiguity, leaders require robust innovation skills.

Thinking flexibly and developing an entrepreneurial mindset are critical to thriving in uncertain business environments. This specialization addresses how to recognize and question assumptions and constraints to identify and capitalize on opportunities. Learning to change the rules of the game by creating innovative value propositions and discovering new market positions for sustained competitive advantage are some of the actionable lessons in this specialization. This specialization will be of value to both aspiring and practicing entrepreneurs as well as employees in established firms who are interested in becoming innovative leaders in an interconnected world. This specialization is part of Gies College of Business' suite of online programs, including the iMBA and iMSM. Learn more about admissions into the programs and explore how your Coursera work can be leveraged if accepted into a degree program here.

 COURSE_DESCRIPTION: Elastic compute cloud (EC2) instances are the names of virtual machine instances in AWS. Learning to manage EC2 instances using different platforms, tools, and features is essential in becoming a certified AWS SysOps Administrator. In this course, you'll begin by identifying when to use EC2 virtual machine instances, before deploying Windows and Linux EC2 instances using the GUI, CLI, and PowerShell. You'll then work with EC2 instance sizing, launch scripts, and remote management and create custom Amazon machine images (AMIs) using the GUI, CLI, and PowerShell. Finally, you'll learn when and how to use AWS Config and AWS Systems Manager for various tasks. This course is one of a collection of courses that prepares learners for the AWS Certified SysOps Administrator - Associate (SOA-C01) exam.

COURSE_DESCRIPTION: Six Sigma is a data-driven improvement strategy that views all activities within an organization as processes. Process inputs can be controlled and adjusted to effect significant improvements in process outputs. Six Sigma uses a rigorous and systematic methodology known as DMAIC (define, measure, analyze, improve, and control) and a number of qualitative and quantitative tools. Its goal is to drive process, product, and service improvements for reducing variation and defects. Lean is also an improvement methodology, but with a different focus. It aims to enhance process flow, reduce cycle time, and eliminate waste. This course introduces Six Sigma and Lean methodologies and looks at the relationship between them. It also explores relationships among business systems and processes using some practical examples of Lean Six Sigma applications in both manufacturing and service industries. This course is aligned with the ASQ Certified Six Sigma Black Belt certification exam and is designed to assist learners as part of their exam preparation. It builds on foundational knowledge that is taught in SkillSoft's ASQ-aligned Green Belt curriculum.

COURSE_DESCRIPTION: Application containers provide a logical boundary for application files and settings and provide portability and faster startup time than virtual machines. In this course, you will discover how containerized applications work, including which items exist in a container along with how containers are treated within a hosting operating system. Next, you will download, install, and manage Docker on both Linux and Windows

hosts. You will then create a custom docker container image from the instructions in a dockerfile, as well as an Azure container registry to store container images. Lastly, you will deploy managed cloud containers, or Azure Container Instances, in the Azure cloud. This course can be used to prepare for exam AZ-900, Microsoft Azure Fundamentals.

COURSE_DESCRIPTION: In this 2-hour long project-based course, you will learn how to create a mobile app from a Google Sheet using Glide, a web application built by former Microsoft engineers to simplify app development. You will learn how to create the data structure for the app to rely on Google Sheets, how to test the app, distribute it and install it, with no need of coding experience or skills. You will build a book-sharing mobile app with user sign-in functionalities, adding items, marking as favorites, creating personalized list, sharing book reviews and more. The tool can be used as an easy development and marketing tool in order to create functional apps for personal and business use, for your client, as promotion tools or company internal applications, and more. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Gute kollegiale Beziehungen aufzubauen ist eine zeit- und arbeitsintensive Aufgabe. Gerade in Teams mit multikulturellem Hintergrund kann der Aufbau arbeitsförderlicher Beziehungen zur Herausforderung werden. Kommunikation wird durch kulturelle Unterschiede häufig beeinflusst und mitunter sogar in ihrem Zweck beeinträchtigt. Treffen kulturelle Unterschiede und virtuelle Zusammenarbeit aufeinander, wird effektive Kommunikation zu einer nicht zu unterschätzenden Aufgabe. In diesem Kurs lernen Sie Kommunikationsstrategien kennen, die Sie im Aufbau und der Pflege von Beziehungen zu Kollegen aus einem kulturell vielfältigen Umfeld unterstützen. Sie lernen, Verhaltensweisen für eine effektive Kommunikation zu erkennen - sei es beim ersten Kontakt, im Informationsaustausch, beim Brainstorming oder dem Vermeiden von Konflikten -, die Sie Ihren Geschäftszielen näherbringen.

COURSE_DESCRIPTION: Organizations continuously look for ways to maximize their cloud footprint, and containerization has become a focal point in this evolution. Google Cloud Build is a managed service that enables developers to build, test, and deploy containers quickly across all languages. In this course, learn about Google Cloud Build and how to use it to automate builds. Next, discover how to use community-contributed and custom builders, create a code repository, store build artifacts, and automate App Engine deployments. Finally, practice using Container Registry to store container images, set up Jenkins on Google Kubernetes Engine (GKE), and improve CI/CD. This course is one of a collection that prepares learners for the Google Professional Cloud Developer exam.

COURSE_DESCRIPTION: Welcome to the Building Advanced Docker Skills Aspire Journey. For this journey, we assume that the learner is familiar with Docker and has either been through some beginning and intermediate training or has some experience configuring and deploying Docker solutions. After completing this journey, learners will advance their skills in various Docker technologies, including Docker Compose, multi-Docker deployments within and outside the cloud, advanced security and administration topics, performance enhancement, and advanced debugging techniques. The Building Advanced Docker Skills Proficiency Aspire Journey will focus primarily on developer resources, including front and back end developers, full stack developers, and product/project managers. The latter primarily providing resourcing and project guidance.

COURSE DESCRIPTION: Site reliability engineers (SREs) are responsible for many administrative tasks, often splitting their time between reactive ops work and special projects. To ensure teams do not become overloaded, SREs may be transferred to a team in order to prevent or help mitigate overload. In this course, you will learn how to deal with operational overload. You'll start by examining ops mode, which is an approach used to ensure services are properly maintained and optimized. You'll discover factors that contribute to team morale and stress. In addition, you will outline emergency planning strategies and best practices, as well as learn how to categorize emergencies and prepare detailed emergency plans. Next, you'll explore how knowledge sharing relates to emergency preparedness, the key to writing successful postmortems, the importance of service level objectives, and how an appropriate level of detail is required to properly explain your findings. Lastly, you'll discover the key factors and attributes of successful teams. You'll examine a team-first approach and differentiate between questioning techniques such as open/closed, funnel, probing, and leading.

COURSE DESCRIPTION: Aus gespeicherten Daten lassen sich alle Arten von Informationen ableiten. Die richtige Speicherung und Nutzung von Daten kann zu besseren Geschäftsentscheidungen beitragen. In diesem Kurs lernen Sie, wie Sie ein relationales Datenbankmanagementsystem (RDBMS) verwenden, um wichtige Informationen abzurufen. Erkunden Sie den Zweck eines RDBS. Untersuchen Sie die verschiedenen Datenbanken auf dem Markt und werfen Sie einen detaillierten Blick auf die Geschichte und die Funktionen der beliebtesten Datenbanken, wie Oracle und SQL Server. Arbeiten Sie mit der MySQL Workbench und sehen Sie sich an, wie Datensätze mit Tabellen zusammenhängen und wie Tabellen miteinander verbunden sind. Lernen Sie die wichtigsten Terminologien für Datenbanken kennen. Erfahren Sie mehr über die Organisation von Daten und den Einsatz von Normalisierung, um das Abrufen von Daten zu erleichtern. Und erfahren Sie mehr über den Beitrag von E.F. Codd zur Entwicklung von Datenbanken. Nach Abschluss des Kurses wissen Sie, wie Sie neue Informationen aus den in einem RDBMS gespeicherten Daten gewinnen können.

COURSE_DESCRIPTION: AI is transforming the practice of medicine. It's helping doctors diagnose patients more accurately, make predictions about patients' future health, and recommend better treatments. This Specialization will give you practical experience in applying machine learning to concrete problems in medicine. Medical treatment may impact patients differently based on their existing health conditions. In this third course, you'll recommend treatments more suited to individual patients using data from randomized control trials. In the second week, you'll apply machine learning interpretation methods to explain the decision-making of complex machine learning models. Finally, you'll use natural language entity extraction and question-answering methods to automate the task of labeling medical datasets. These courses go beyond the foundations of deep learning to teach you the nuances in applying AI to medical use cases. If you are new to deep learning or want to get a deeper foundation of how neural networks work, we recommend that you take the Deep Learning Specialization.

COURSE_DESCRIPTION: Azure Synapse Analytics is an analytics service that provides functionality for data integration, enterprise data warehousing, and big data analytics. Services provided include ingesting, exploring, preparing, managing, and serving data for BI and machine learning needs. In this course, you'll learn about the Azure Synapse Analytics platform and how it is used for data warehousing and big data analytics. Next, you'll learn how to create a Synapse Workspace, a dedicated SQL pool, and a serverless Apache Spark pool. You'll move on to explore how to analyze data using a dedicated SQL pool, Apache Spark for Azure Synapse, Serverless SQL Pools, and a Spark database, as well as how to analyze data that is in a storage account. You'll learn how to integrate pipelines using Synapse Studio, visualize data using a Power BI workspace, and monitor a Synapse Workspace. Finally, you'll learn about the Synapse Knowledge Center and the features of Azure Synapse Analytics and PolyBase. This course is one in a collection that prepares learners for the Microsoft Data Engineering on Microsoft Azure (DP-203) exam.

COURSE_DESCRIPTION: Creating websites and REST APIs is simplified through Django's built-in features. In this course, you'll learn how to use some of these features to build highly-performant websites and apps. You'll begin by examining how Django models are defined, migrated to a linked database, and registered with the built-in admin app. You'll then move on to using the Django ModelForm base class, which allows you to create a web page to create instances of your Django model. You'll then explore how to create a sign-in page for your Django website users and present signed-in users with a different view of the site. Finally, you'll cover how users can be allowed to sign out of your website.

COURSE_DESCRIPTION: Education is in a state of flux - transitioning from traditional architectures and practices to new ecologies of teaching and learning influenced by the tremendous social and technological changes of our times. What changes are afoot today in workplaces, civic life and everyday community life? What are their implications for education? What are the possible impacts of contemporary social transformations on teaching and learning - including in the areas of technology, media, globalization, diversity, changing forms of work in the "knowledge society", and, in these contexts, changing learner needs and sensibilities? This course explores three pedagogical paradigms: "didactic", "authentic" and "transformative" learning. It takes an historical perspective in order to define the contemporary dimensions of what we term "new learning". It prepares participants to make purposeful choices and link particular theories/instructional approaches to individual and group learning goals. -----
Recommended Background ----- This course is designed for people interested in the future of education and the "learning society," including people who may wish to join education as a profession, practicing teachers interested in exploring future directions for a vocation that is currently undergoing transformation, and community and workplace leaders who regard their mission to be in part "educative." ----- Related Resources ----- Online resources are available here:
<https://newlearningonline.com> ----- Join our Online Communities! ----- CGScholar (Create an account and join the New Learning community) https://cgscholar.com/community/community_profiles/new-learning/community_updates Facebook
<https://www.facebook.com/newlearningonline> Twitter <https://twitter.com/neolearning> ----- Take this Course for Credit at the University of Illinois ----- This course has the same content and anticipates the same level of contribution by students in the Assessment for Learning course offered to graduate certificate, masters, and doctoral level students in the Learning Design and Leadership Program in the College of Education at the University of Illinois. Of course, in the nature of MOOCs many people will just want to view the videos and casually join some of the discussions. Some people say that these limited kinds of participation offer evidence that MOOCs suffer from low retention rates. Far from it - we say that any level of engagement is good engagement. On the other hand, if you would like to take this course for credit at the University of Illinois, you will find more information about our program here: <https://ldlprogram.web.illinois.edu/overview/> And you can apply here: <https://education.illinois.edu/epol/programs-degrees/ldl> ----- The...

COURSE_DESCRIPTION: Although cryptography isn't covered until domain 5 of the SSCP CBK, potential exam candidates and security professionals will benefit from foundational knowledge of cryptosystems early in their training. Use this course to grasp the reasons and requirements for cryptography in safe-guarding information, including regulations and governance. Investigate cryptographic techniques, such as hashing and salting, symmetric and asymmetric encryption, and elliptic curve cryptography. Discover what's involved in digital signatures and certificates. Explore cryptographic attacks, cryptanalysis, and countermeasures. And delve into advanced cryptosystems, such as quantum computing and blockchain. Upon course completion, you'll be aware of the various traditional and modern cryptology techniques used to protect data and communications. This course will help you in the lead-up to taking the (ISC)² Systems Security Certified Practitioner (SSCP) 2021 exam.

COURSE_DESCRIPTION: This 13-video course explores how to delegate limited Microsoft Azure administrative tasks to others, in preparation for the AZ-300: Microsoft Azure Architect Technologies certification exam. Learners will observe how to use RBAC (role-based access control) to limit tasks, and to audit Azure configurations. You will learn that RBAC roles are a collection of permissions which can be associated with a user or group at different levels in the Azure. This course examines built-in RBAC roles available in Azure, and how to create a custom role to suit your Azure administrative needs. You will learn how to use PowerShell to delegate custom role definitions, and to delete role assignments. Then learners will examine how Azure policies provide a mechanism to control deployment, usage, and configuration of cloud resources. You will learn to assign policies using the Azure portal, and using PowerShell. Next, learn to use Azure policies to audit your existing configurations. Finally, you will examine how to create custom Azure policy definitions to fit specific business needs.

COURSE_DESCRIPTION: The Neo4j AuraDB cloud database service enables developers creating graph applications to focus on the same and not bother about database administration. Take this course to create and load an AuraDB database and integrate it with various tools in the Neo4j ecosystem. Practice setting up a free AuraDB account and provisioning an empty Neo4j cloud database. Learn how to migrate data to the database. Then, analyze data in an AuraDB database with the web-based Neo4j Bloom application. Moving along, practice writing a Python application to query an AuraDB database. Work on connecting with and running queries on the database using Cypher Shell. Upon completion, you'll be able to work with the Neo4j AuraDB cloud tool in order to simplify database administration for graph applications.

COURSE_DESCRIPTION: Javascript web development requires a supporting architecture, and Node provides the back-end support that most front-end development code needs. In this 12-video course, learners will explore Node Package Manager (NPM), a tool that installs supporting software for most front-end development for full stack development. To begin, NodeJSJSON package configuration will be downloaded and installed and the command NPM init will be used to create a package .json file; then a simple NodeJS server will be built. You will learn about the importance of the HTTP module and how to use Node's NPM to install a package, Express, then add routes and accept parameters with Express. Next, learn how to modularize the application with JS Files by decomposing the app with Node modules, and then implement controllers to handle the logic. In a further tutorial, you will continue working with Node.js by learning how to work with the host file system. Finally, you will discover how to work with MySQL database using Node and retrieve records. In the closing exercise, learners will build a simple NodeJS server.

COURSE_DESCRIPTION: Docker is a very powerful tool that can be used for containerizing applications. This course will focus on advanced Docker administration concepts, with demonstrations of some of these advanced concepts. In this course, you'll learn about continuous integration and how it relates to Docker, Docker Hub, Docker Compose, and Docker's lifecycle. Next, you'll examine Docker security challenges and how to configure security and Transport Layer Security options. You'll explore the Docker Hub and the process of building, managing, and distributing Docker images. You'll also learn about the Docker architecture and the Docker daemon. You'll move on to cover the Docker content trust, trust delegation, how to deploy a notary, and trust key management. Finally, you'll learn about storage management in Docker, including volumes, bind mounts, and tmpfs mounts, as well as how to administer Docker networking components, services, and containers.

COURSE_DESCRIPTION: Data can come our way in multiple forms and from multiple file types. It's likely that at some point you will work with queries and data where multiple conditions must be applied in order to pull out accurate information. VLOOKUP is a function that can quickly search for matching conditions and calculate values such as totals and profit margin. Applying multiple conditions can seem like a time-consuming task, so it's critical to leverage VLOOKUP to quickly extract business intelligence. The function does this by treating a section of a spreadsheet as a lookup table. In this course you will gain experience calculating and evaluating profit margins with VLOOKUP. You will do this in your hands-on project as we work side-by-side in the free-to-use software Google Sheets. By the end of this course, you will understand use cases for using vertical lookup functions to extract data and you will be able to confidently apply VLOOKUP formulas to calculate data with specific conditions in any spreadsheet software. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Learners can explore several tools available on Azure to create infrastructure code, to manage security, and configuration drift of infrastructure in this 13-video course, used in preparation for AZ-400 Microsoft Azure DevOps Solutions certification exam. First, learners will examine infrastructure configuration management, and ARM (Azure Resource Manager) to deploy and manage resources within the Azure subscription. You will then learn to use SonarCloud and the Azure activity log to monitor drift. You will explore Microsoft's Azure Policy to create, assign, manage policies, and to enforce rules and resources in the subscription; and explore AzSK (Secure DevOps Kit for Azure) to enhance your Azure investment. Learners will observe how to use Chef, which automates how infrastructure is configured, deployed, and managed across a network. Next, learn to use PowerShell DSC to programmatically configure, deploy, and manage across your network. You will learn to manage technical debt on templates, and how to use custom script extensions to maintain configuration management. Finally, you will learn how to inspect security and compliance issues.

COURSE_DESCRIPTION: Dieser Kurs mit 13 Videos untersucht, wie künstliche Intelligenz (KI) genutzt werden kann, wie eine KI-Implementierung von der Einrichtung bis zur Architektur geplant wird und welche Probleme bei der Integration von maschinellem Lernen in ein Unternehmen auftreten können. Die Kursteilnehmer werden die drei Säulen der KI erforschen: die Anwendung von intelligenzähnlichem Verhalten auf Maschinen. Sie werden dann untersuchen, wie maschinelles Lernen zu diesem intelligenzähnlichen Verhalten beiträgt, und die nächste Generation mit Deep Learning kennenlernen. In diesem Kurs werden Strategien für die Implementierung von KI, organisatorische Herausforderungen im Zusammenhang mit der Einführung von KI und die Notwendigkeit der Schulung von Mitarbeitern und des Trainings von Maschinen erörtert. Als Nächstes lernen Sie die Rolle von Daten und Algorithmen bei der Implementierung von KI kennen. Im weiteren Verlauf des Kurses werden verschiedene Möglichkeiten untersucht, wie ein Unternehmen KI-Fähigkeiten planen und entwickeln kann; welche Elemente Unternehmen verstehen müssen, um die KI-Anforderungen und Tools zu bewerten; und welche Herausforderungen für das Management und Auswirkungen auf das Personal bestehen. Sie erfahren, welche Fallstricke beim Einsatz von KI lauern und was zu vermeiden ist. Schließlich erfahren Sie mehr über Datenprobleme, Datenqualität, Trainingskonzepte, Overfitting und Verzerrungen.

COURSE_DESCRIPTION: In this Challenge Lab, you will manage updates on servers that run Linux and Windows. First, you will check for available Linux software package updates, and then you will apply software package updates on a Linux server. Next, you will configure a Linux server to install updates automatically. Finally, you will start the Windows Update service, and then you will configure Windows Update settings on a Windows server. Note: Once you begin the Challenge Lab, you will not be able to pause, save, or return to your Challenge Lab. Please ensure that you have set aside enough time to complete the Challenge Lab before you start.

COURSE_DESCRIPTION: Welcome to this project-based course on Evaluating Machine Learning Models with Yellowbrick. In this course, we are going to use visualizations to steer our machine learning workflow. The problem we will tackle is to predict whether rooms in apartments are occupied or unoccupied based on passive sensor data such as temperature, humidity, light and CO2 levels. We will build a logistic regression model for binary classification. This is a continuation of the course on Room Occupancy Detection. With an emphasis on visual steering of our analysis, we will cover the following topics in our machine learning workflow: model evaluation with ROC/AUC plots, confusion matrices, cross-validation scores, and setting discrimination thresholds for logistic regression models. This course runs on Coursera's hands-on project platform called Rhyme. On Rhyme, you do projects in a hands-on manner in your browser. You will get instant access to pre-configured cloud desktops containing all of the software and data you need for the project. Everything is already set up directly in your internet browser so you can just focus on learning. For this project, you'll get instant access to a cloud desktop with Python, Jupyter, Yellowbrick, and scikit-learn pre-installed. Notes: - You will be able to access the cloud desktop 5 times. However, you will be able to access instructions videos as many times as you want. - This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In this 7-video course, you will explore how recommendations from the Azure Security Center, which automatically collects resource security metrics, can be used to improve Azure resource security. You will also examine how playbooks can remediate security issues and can be triggered by alerts. This course can be used in preparation for the AZ-500 Microsoft Azure Security Technologies certification exam. Begin the course by navigating the Azure Security Center, which has a wealth of security-related information that is specific to the Azure computing environment. Next, examine how to view Azure Security Center security alerts. Then, learners will take a look at Azure Security Center playbooks and learn how to manage both Security Center policies and regulatory compliance, which is an important aspect of cloud computing. You will also discover how to configure just-in-time virtual machine access. In the final tutorial in the course, learners will explore file integrity monitoring and how to enable it.

COURSE_DESCRIPTION: In this 1-hour long project-based course, you will learn how to load a dataset into a pandas dataframe, you will learn how to tidy a messy dataset (Data Tidying), you will get to also visualize the dataset using Matplotlib and seaborn, you will learn how to engineer new features, you will also get to learn how to merge datasets (Data Integration) By the end of this project, you will be able to fully analyze a FIFA dataset using python's Pandas library. Throughout the tasks you will be able to identify and apply the key aspects about data analysis such as Data Cleaning, Data transformation, Data Visualization , Data tidying and feature engineering. All these skills are crucial to the world of data engineering and are very beneficial in today's job market that is leaning more and more towards utilizing data in every way Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: The cloud brings many opportunities, but it also brings challenges to network design and operational workload placements. In this course, you'll learn about the private, public, hybrid, and multi-cloud models. You'll explore the challenges and opportunities of adopting the cloud and how to plan for a migration. Next, you'll examine design patterns, architectures, and topologies of cloud deployments, as well as best practices to use when selecting a topology. You'll explore options available for DNS routed load balancing across data centers. Finally, you'll learn how to design a cloud architecture and how to incorporate load balancers for various stages of data flow.

COURSE_DESCRIPTION: The Developer Fundamentals Aspire Journey focuses on the prerequisites for every software development-related Journey or learning path. This Journey is primarily designed for those who are new to programming and will help you acquire a stronger and better understanding of software development before getting deeply into learning any core programming language. Among the topics covered in this Journey are key programming fundamental concepts such as Object-Oriented Programming (OOP), databases, and Software Development Life Cycle (SDLC) phases and models. In addition, the Developer Fundamentals Aspire Journey introduces concepts related to software design and development principles.

COURSE_DESCRIPTION: Virtualization is one of the most important innovations in modern computing that offers unlimited possibilities for software development, networking, application management, and cloud computing. Microsoft's hypervisor, Hyper-V, is a free-to-use solution for implementing virtual machines in Windows environments. With this course, learn the key features of Hyper-V. Explore Hyper-V, including its features, how to install it, and the benefits of virtualization. Next, discover how to manage Hyper-V with Windows PowerShell, share devices in virtual machines (VMs), manage VMs, and work with checkpoints. Finally, learn how to manage a virtual network and use Windows Sandbox to create isolated environments. This course is part of a series preparing learners for the MD-100: Windows Client exam.

COURSE_DESCRIPTION: You live a hands-on life, and you intend to continue doing so! That is why I guess you already have checked where the QR-code (the logo) for this course leads to, right? And it is in this kind of setting that you prefer hands-on learning. Things you can do, already today are something you value. You actually did not start this course when enrolling in it. You started it long ago, either as a customer somewhere, or just maybe thinking about marketing for some time. Or maybe you are already working in marketing for yourself or maybe your own company. In all these situations what matters is action. Action that contributes to your marketing journey. This is the reason why we will start of with a situation "as if" you were starting up the sales process in a company where no previous customers existed. Gradually your sales efforts give results, you get customers, and handling the market expansion becomes important. If somewhat lucky, in practice that is the way it goes. The course begins with the art of cold calling (attacking the ones that did not know you exist - the most tricky ones) and analyzing the potential customers, then gradually moves over to segmentation, positioning, closing the deal, competition, marketing strategy, and market expansion. It is normally in that order it develops in practice. The curriculum includes general basic marketing theories as well modern digital marketing issues like onboarding, conversion, and retention, experimental marketing, and pivoting. The course includes a number of assignments to facilitate your learning - some of them compulsory. All of them are hopefully practically useful for you already today. On one hand, this is a basic course. There is far more in this than we are able to cover here. But the Marketing Strategy for Entrepreneurs course will prepare you for some of the most common marketing and sales efforts needed for technology-based companies. Later on, you will learn more. Maybe here or somewhere else. Hope you enjoy it. Good learning has to be fun! So if the course is not fun enough for you: Please let us know!

 COURSE_DESCRIPTION: Linear functions change at a constant rate, and that in turn, makes the rate of change of a linear function a constant. This and other related insights into linear and other mathematical functions can be quantified using calculus. Through this course, you'll examine the steps involved in applying the differentiation operation to study a moving particle. You'll then understand how the partial derivative of a function that depends on multiple independent variables is computed with respect to one of those independent variables by holding all other independent variables constant. This course will also allow you to investigate how partial derivatives play a crucial role in the training phase of building a machine learning (ML) model. Upon completion of this course, you will be able to compute the partial derivative of a function that depends on multiple independent variables and better understand the training process of a machine learning model.

 COURSE_DESCRIPTION: This six course specialization is designed to prepare you to take the certification examination for IBM AI Enterprise Workflow V1 Data Science Specialist. IBM AI Enterprise Workflow is a comprehensive, end-to-end process that enables data scientists to build AI solutions, starting with business priorities and working through to taking AI into production. The learning aims to elevate the skills of practicing data scientists by explicitly connecting business priorities to technical implementations, connecting machine learning to specialized AI use cases such as visual recognition and NLP, and connecting Python to IBM Cloud technologies. The videos, readings, and case studies in these courses are designed to guide you through your work as a data scientist at a hypothetical streaming media company. Throughout this specialization, the focus will be on the practice of data science in large, modern enterprises. You will be guided through the use of enterprise-class tools on the IBM Cloud, tools that you will use to create, deploy and test machine learning models. Your favorite open source tools, such as Jupyter notebooks and Python libraries will be used extensively for data preparation and building models. Models will be deployed on the IBM Cloud using IBM Watson tooling that works seamlessly with open source tools. After successfully completing this specialization, you will be ready to take the official IBM certification examination for the IBM AI Enterprise Workflow.

COURSE_DESCRIPTION: In today's business landscape, we're giving more of ourselves each day. We're working longer hours and are hesitant to take personal time off. We aren't preserving our mental and emotional wellbeing. And we aren't setting appropriate boundaries. Setting boundaries can be challenging, especially professional boundaries. But the consequences of not doing so can lead to burnout and loss of self-esteem, and impact mental health. In this Leadercamp replay, cofounder of eWOW and DEI evangelist Shweta Mogha focuses on the importance of establishing clear lines between our personal and professional lives as a means of protecting our mental health and wellness.

COURSE_DESCRIPTION: Explore how to personalize a document by using Word 365's formatting options. In this course, learn how to change the font type and size, as well as to apply effects as bold, underline or italics. Word also features options to improve the display of your text. Learn an effortless way to change the case and the alignment options. WordArt is another useful tool to insert preformatted text. If you prefer to apply WordArt options to regular text, then you will learn how to use Word's text effects, including how to add shadows, reflections, and glow effects. This course also covers other practical features as to creating bulleted and numbered lists. Learn how to insert preformatted lists or how to customize their style. You will also discover how to combine both types of lists to create a multilevel list. In order to practice, you will find the video samples in the Resources section.

COURSE_DESCRIPTION: Not so long ago, the job of product manager was about assessing market data, creating requirements, and managing the hand-off to sales/marketing. Maybe you'd talk to a customer somewhere in there and they'd tell you what features they wanted. But companies that manage product that way are dying. Being a product person today is a new game, and product managers are at the center of it. Today, particularly if your product is mostly digital, you might update it several times a day. Massive troves of data are available for making decisions and, at the same time, deep insights into customer motivation and experience are more important than ever. The job of the modern product manager is to charter a direction and create a successful working environment for all the actors involved in product success. It's not a simple job or an easy job, but it is a meaningful job where you'll be learning all the time. This course will help you along your learning journey and prepare you with the skills and perspective you need to: Create the actionable focus to successfully manage your product (week 1) Focus your work using modern product management methods (week 2) Manage new products and explore new product ideas (week 3) Manage and amplify existing products (week 4) This course is ideal for current product or general managers interested in today's modern product management methods. Please note that there are new additions to this course and subtitles for these videos will soon be available. This course was developed with the generous support of the Batten Institute at UVA's Darden School of Business. The Batten Institute's mission is to improve the world through entrepreneurship and innovation: www.batteninstitute.org.

COURSE_DESCRIPTION: In Google Analytics, you can track information about your website's audience and their behavior. During this course, you will discover how to track what users are doing on your website, and how to analyze user location, language, and behavior. Begin by learning how to interpret Home View analytics, browse real-time website activity analytics, and query Intelligent insights about visitor interests. Then get to know your audience better through Audience Analytics Overview data, to understand who visits your site. This information combines useful analytics such as the number of users, bounce rates as well as the numbers of sessions and their durations. Other topics include how to analyze user behaviour and how to view the All Pages report to estimate page revenues.

COURSE_DESCRIPTION: In this 6-video course, you will discover the basic issues involved in how to perform design security reviews, design secure assembly architecture for component-based systems, and use architecture and design tools that enhance security. First, learn to pay attention to the type of operational environment the software will be running under: is the software intended for public use via the Web, or is it only available within a stable, controlled network? Who will be the end users? Will you need to collaborate and coordinate testing, timing, and integration? Learn security patterns, and consider what security-enhancing architecture is available. Next, learn to distinguish between software appropriate for centralized and decentralized system; identify budgetary constraints, and consider available resources. Will new technologies need to be incorporated into the design at a later date? Your emphasis should be on the future-learning to build a flexible, modular system that can scale up and grow may be imperative. The course prepares learners for the (ISC)2 CSSLP: Certified Secure Software Lifecycle Professional certification exam.

COURSE_DESCRIPTION: This Bootcamp builds on foundational data skills to teach students how to effectively manipulate data in SQL. SQL is one of the most popular database management languages available and is critical in storing and retrieving data. By the end of this program, students will be able to describe database structures, import and combine multiple data types, and manipulate data to discover new insights. This program is best suited to students who are comfortable working with data in Excel. Prior to attending the live sessions, if you wish to follow along, please ensure you have a functioning MySQL setup. Directions are available under Resources.

COURSE_DESCRIPTION: In this course, we'll give you the tools to quickly identify and solve real-world problems that you might come across in your IT role. We'll look at a bunch of different strategies and approaches for tackling the most common pitfalls of your code and IT infrastructure. You'll learn strategies for approaching almost any technical problem and then see how those apply to solving different real-world scenarios. We picked examples that include general system issues, issues with software that someone else wrote, and issues with programs that we wrote. We'll talk about problems that can affect any operating system, and we'll also look at challenges specific to certain platforms and scripting languages. We strongly recommend that you've taken the prior courses in this program, or already have knowledge of Python and Linux so that you can follow along with our troubleshooting examples.

COURSE_DESCRIPTION: Factorial experiments are often used in factor screening.; that is, identify the subset of factors in a process or system that are of primary important to the response. Once the set of important factors are identified interest then usually turns to optimization; that is, what levels of the important factors produce the best values of the response. This course provides design and optimization tools to answer that questions using the response surface framework. Other related topics include design and analysis of computer experiments, experiments with mixtures, and experimental strategies to reduce the effect of uncontrollable factors on unwanted variability in the response.

COURSE_DESCRIPTION: Surveys and evaluations can be used to reflect on your training or customer experiences. The data you collect can help to adjust your training and you can find out directly from your employees if they are satisfied. Customers can let you know what they are thinking and what they actually want. In this project you will learn about Survey Monkey as an evaluation tool throughout the cycle of developing an event. By the end of your time in this project you will have multiple evaluation surveys to take you through the phases of an event. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Explore how to plan the use of various Azure DevOps related resources and ensure efficient creation, testing, and continuous delivery of custom software in Azure, in this 7-video course, preparing learners for AZ-301: Microsoft Azure Architect Design certification exam. Key concepts covered in this course include learning the convergence of software development and IT administration; learning how stand-alone functions are defined in Azure; and learning how to use the portal to deploy an Azure Function app. Next, you will learn the purpose of an API gateway, a resource that can be deployed in the Azure cloud; learn how Azure Service Fabric frees developers to focus on the app because it is a managed service; and examine microservices which allows for code modification and testing of just the modules while the other parts of the app remain intact. Finally, learn when the cloud resource Azure API Gateway should be used and its popular benefits, and the purpose of Azure Function apps.

COURSE_DESCRIPTION: Disaster recovery and high availability are areas of security planning that involve tools, policies, and procedures that ensure the availability and recovery of critical services and infrastructure in the event of a human-induced or natural disaster. In this course, you'll explore high availability and disaster recovery concepts such as load balancing, multipathing, and network interface card teaming. You'll learn about facilities and infrastructure support concepts including uninterruptible power supply, power distribution units, generators, HVAC, and fire suppression. Lastly, you'll explore redundancy and high availability concepts including cold, warm, and hot sites, as well as network device backup and restore states and configurations. This course is one of a collection of courses that prepares learners for the N10-008: CompTIA Network+ certification exam.

COURSE_DESCRIPTION: Six Sigma improvement begins with assessing the current performance of an organization's processes and products, and comparing it with the desired performance. An important part of this assessment is choosing a set of measures that will provide a comprehensive picture of how the company is achieving its goals of customer satisfaction, organizational learning and improvement, internal process performance, and bottom-line financial growth. This course examines two categories of key measures: business performance measures and purely financial measures, exploring how

these measures reveal the current state of the business and point to gains achievable through Six Sigma. This course explores how business performance measures such as balanced scorecard, key performance indicators (KPIs), and lagging and leading indicators can be used to align Lean Six Sigma initiatives toward organizational goals. It also explores the critical role of customer loyalty in business success. Turning to purely financial measures of success, this course explores how these financial measures are crucial in determining whether the potential returns of Six Sigma projects will outweigh the required investment. It provides practice in using the formulas associated with these measures, including market share, cost-benefit analysis, return on investment (ROI), net present value (NPV), and hard and soft costs and benefits of Six Sigma projects. This course is aligned with the ASQ Certified Six Sigma Black Belt certification exam and is designed to assist learners as part of their exam preparation. It builds on foundational knowledge that is taught in SkillSoft's ASQ-aligned Green Belt curriculum.

COURSE_DESCRIPTION: The more you master DAX in Power BI, the better the insights and reports you'll get from data. The filter context is a need-to-know DAX concept. Use this course to get hands-on experience working with this aspect of Power BI. Start by exploring the relationships between tables in Power BI. Move on to using the CALCULATE function. Then, see how a filter context can be defined so that it only points to a subset of the overall data and how you can continue to perform operations within this filter context. Moving on, examine a breadth of options for ignoring the filter context for specific use cases, including how to bypass filters using various DAX functions. When you're done, you'll be able to use DAX functions to perform operations on a subset of data. You'll also be further prepared for the PL-300: Analyzing Data with Microsoft Power BI certification exam.

COURSE_DESCRIPTION: Joins, triggers, and stored procedures are useful tools to take advantage of when working with MariaDB. In this course, you'll begin by using several types of joins, such as cross joins, inner joins, and outer joins, to combine data from multiple tables. Next, you'll use aggregate functions, such as SUM, MIN, MAX, AVERAGE, and COUNT, with the GROUP BY clause to group data in rows based on a specified column. You'll then use the HAVING clause as a way to filter the output of the GROUP BY clause. You'll move on to use the two types of generated columns - virtual and persistent, computing them on-the-fly from a function expression. Finally, you'll use triggers to perform operations whenever a condition is satisfied and stored procedures for code re-use and parameterization.

COURSE_DESCRIPTION: Aspiring cloud engineers need to move beyond working with single platform deployments, such as on-prem and cloud, to more complicated scenarios, such as hybrid and multi-cloud deployments. In this course, you'll explore the benefits of multi-cloud and hybrid cloud, common scenarios involving hybrid and multi-cloud deployment, and the multi-cloud DevOps framework for managing multi-cloud distributed environments. You'll examine best practices for achieving multi-platform deployment and the driving hybrid and multi-cloud design principles to set up multi-cloud environments. You'll also outline hybrid and multi-cloud deployment and architectural patterns, network topologies used to set up hybrid and multi-cloud environments, and approaches to adopting multi-cloud management. Lastly, you'll identify a multi-cloud operating model and outline techniques to transition to cloud and multi-cloud environments and troubleshoot application distribution issues in multi-cloud environments.

COURSE_DESCRIPTION: In this 1-hour long project-based course, you will be able to formulate your corporate strategy with the Boston Consulting Group (BCG) Matrix. BCG matrix is a strategic decision-making framework that helps in resource allocation among different strategic business units (SBUs) by categorizing them based on their ability to generate cash inflows against cash outflows. The matrix classifies business portfolio into four categories based on industry attractiveness (growth rate of that industry), and competitive position (relative market share). The growth vs share model provides an indication of which products an organization should invest in, those they should develop, and the ones they should get rid of. The framework is a simple but powerful tool for maximizing corporate competitiveness, and sustainability by allowing them to strike the right balance between exploitation and exploration. To demonstrate the application of the BCG matrix, we will use a spreadsheet to analyze an energy services company that has five Strategic Business Units (SBUs). The example of the case study would empower you to use the model to analyze your company or any other company of your choice. The project is for business leaders who want formulate their corporate strategy with the goal of effective resource allocation. Also, for strategist who are interested in helping organization in making informed strategic decisions. At the end of the project, you will be able to use the BCG Matrix for long-term corporate strategic planning, and make effective investment decisions with your resources

COURSE_DESCRIPTION: Severe lung damage has been a serious outcome for COVID-19 patients who survive and face recovery from the disease. "As we know, lungs are one of the major organs that are involved with COVID infection," says Dr. Sadia Shah, a Mayo Clinic transplant pulmonologist and critical care physician. "In severe cases, the patient's lungs can be significantly inflamed from the disease, leading to pneumonia and scarring of the lungs, also known as pulmonary fibrosis." She says that, in the future, these are the patients who may need a lung transplant. (Published 10/16/2020)

COURSE_DESCRIPTION: Apply your GIS knowledge in this course on geospatial analysis, focusing on analysis tools, 3D data, working with rasters, projections, and environment variables. Through all four weeks of this course, we'll work through a project together - something unique to this course - from project conception, through data retrieval, initial data management and processing, and finally to our analysis products. In this class you will learn the fundamentals of geospatial and environmental analysis during four week-long modules: Week 1: Tour ArcToolbox and learn how to use common geospatial analysis tools built into ArcGIS Week 2: Gain a working understanding of raster data models: symbolize, reproject, overlay, and assess rasters. Take a detour into 3D data models, and interpolation of observations into 3D surfaces and rasters Week 3: Go in-depth on projections and coordinate systems, which are foundational to all GIS. Learn how to use environment variables to constrain your analyses and get better quality data products. Week 4: Expand your knowledge of symbology. Learn how to visually display your data by classifying it in logical groupings and then symbolizing it on your map. Take Geospatial and Environmental Analysis as a standalone course or as part of the Geographic Information Systems (GIS) Specialization. You should have equivalent experience to completing the first and second courses in this specialization, "Fundamentals of GIS" and "GIS Data Formats, Design, and Quality", before taking this course. By completing this third class in the Specialization you will gain the skills needed to succeed in the full program.

COURSE_DESCRIPTION: Learners can explore the concept of DevOps and the DevOps principles and practices that can help eliminate the problems associated with traditional software development approaches in this 15-video course. You will examine different approaches for embracing the DevOps mindset, the key elements of the DevOps mindset, and the differences and similarities between DevOps and CloudOps. Then learn the essential principles and practices of DevOps that can be adopted in software development projects to eliminate the shortcomings of traditional software development approaches. Next, learn key elements of the DevOps mindset, and the roles of design thinking, Lean, and Agile in enabling and facilitating the DevOps mindset in the enterprise. Take a look at tools that can be used to set up and implement end-to-end DevOps and CloudOps practices and learn how to configure Bitbucket to implement code collaboration by using code repository, build, and automated deployment. Finally, you will explore the use of configuration management tools to manage deployments on diversified targets, including on-premises and in the cloud.

COURSE_DESCRIPTION: The main aim of your organization's product or service is to help your customers achieve a specific goal or overcome a problem. This is where the concept of design thinking comes in. Design thinking is a customer-centric approach to determining how best to meet customer needs. In this course, you'll explore ways to develop customer focus to help you define problems. You'll explore design thinking strategies, including how to reframe problems, how to brainstorm solutions, and when to use prototypes. You'll also identify best practices for user testing, as well as for and gathering and reviewing feedback for effective problem solving.

COURSE_DESCRIPTION: Along with images and text, adding shapes and other graphic elements to your slides can help you create a complete, well-rounded presentation. This course explores the fundamentals of using and formatting graphic elements in PowerPoint 365. In particular, you will learn how to insert and resize text boxes and shapes. You will see how to format these objects by modifying fill, outline, and effects, and discover tools that will help you position different elements precisely on the slide. You will also see how these different elements relate to one another by learning how to align them with other objects, group them together as one element, and rearrange the stacking order. Would you like hands-on practice? Go to the Resources section of the course and download the sample files to follow along with select videos.

 COURSE_DESCRIPTION: Learners can explore bulk mail tools available in Word for Office 365 in this 9-video course. Learn how to use the envelope creation tool to insert addresses, format the style, and how to place addresses on envelopes. You will also learn how to create address labels, and how to change the margins and dimensions. Next, observe how to use the Mail Merge function, which allows data from a mailing list to be incorporated into a document when you send bulk e-mails or letters. You will learn how to create a list of addresses and contact information in Word for a mail merge document, and to import a mailing list from an Excel spreadsheet or MS Access file to use in a mail merge. You will learn to edit, sort data, filter, and search your data in a contact list. You will learn to create bulk e-mails or letters with multiple recipients. Finally, the course demonstrates how to create simple rules to change elements, for example, a greeting in a letter.

COURSE_DESCRIPTION: System Validation is the field that studies the fundamentals of system communication and information processing. It allows automated analysis based on behavioural models of a system to see if a system works correctly. We want to guarantee that the systems does exactly what it is supposed to do. The techniques put forward in system validation allow to prove the absence of errors. It allows to design embedded system behaviour that is structurally sound and as a side effect enforces you to make the behaviour simple and insightful. This means that the systems are not only behaving correctly, but are also much easier to maintain and adapt. 'Modeling Software Protocols, and other behaviour' demonstrates the power of formal methods in software modelling, communication protocols, and other examples. Reading material. J.F. Groote and M.R. Mousavi. Modeling and analysis of communicating systems. The MIT Press, 2014.

 COURSE_DESCRIPTION: One of the many capabilities of Excel's VBA is building complex user interfaces within Excel. Part of this is the creation of complex forms for gathering input data. In this course, you'll learn how to create user forms using VBA in Excel and, in doing so, achieve user interfaces with complex controls like combo boxes and spinners. You'll also learn how to send emails from VBA while being mindful of security risks and the configuration required if the email provider is Gmail. You'll learn how to validate form input data, insert it into an Excel spreadsheet, and illustrate how such user input can be accepted using complex controls, such as radio buttons and checkboxes, and buttons that, when clicked, trigger the invocation of VBA subroutines.

COURSE_DESCRIPTION: Learners can explore Smart Lookup, a suite of tools in available in Word for Office 365 to organize your information in a document, in this 10-video course. You will learn how to use Smart Lookup to research a word, automatically have Bing provide you with the definition, find more information, and extra content about that word. Next, you will learn how to create a bibliography, and insert citations by using the Citations and Bibliography toolset. The course then demonstrates how to create a database of articles, books, and journals which can then be used to insert sources quickly and efficiently. Learn how to use the built-in translator tool, which will translate individual words, full sections, and even whole documents. You will learn how to insert and format line numbers. Then learn how to use the footnotes tool, and the footnote style outbox launcher to format, customize, and manage footnotes that will be included in a document. Finally, the course demonstrates how to insert endnotes, and how to convert endnotes into footnotes.

COURSE_DESCRIPTION: Introduction to Google Workspace Administration is the first course in the Google Workspace Administration series of courses. This series will serve as the starting place for any new Google Workspace admin as they begin their journey of managing and establishing Google Workspace best practices for their organization. These courses together will leave you feeling confident to utilize the basic functions of the admin console to manage users, control access to services, configure security settings, and much more. Through a series of readings and step-by-step hands-on exercises, and knowledge checks, learners can expect to leave this training with all of the skills they need to get started as Google Workspace administrators. In this course you will sign up for a Google Workspace account and configure your DNS records for Google Workspace. You will learn how to provision and manage your users, and will create groups and calendar resources for your organization. You will be introduced to your Cloud Directory and will learn how to split your organization into organizational units to simplify user and service management. Finally you will learn how to delegate admin privileges to other users in your organization. IMPORTANT - To get the most out of this training course, learners should be prepared to: - Purchase a new domain through a registrar such as enom or GoDaddy. Note: If you already have a domain that you would like to use for the trial you can do this but this course does not provide detailed steps on how to associate an existing domain with a Google Workspace trial account. For detailed instructions on how to do that, please refer to this Help Center article: <https://support.google.com/a/topic/9196> - Provide credit card details as part of the Google Workspace account setup. You will be using a 14 day trial Google Workspace account during this course. As part of the sign up flow you will be required to provide credit card details. No charges for Google Workspace are made to your credit card until the trial period has ended. You must ensure that you CANCEL YOUR SUBSCRIPTION before the trial period ends to avoid any charges. This is very IMPORTANT so don't forget! - Install and be ready to use the latest version of Chrome web browser available at <https://www.google.com/chrome/>

COURSE DESCRIPTION: Leadership is everywhere. It is involved in nearly every social action, in some form. Many people who have the potential to be leaders do not realize it. Many who become leaders do not know how to manage those responsibilities. Great leaders can inspire change; bad leaders can cripple their followers with stress and frustration. What differentiates these two is a clear vision, an effective plan, and knowledge of how people work. In this class, you will learn the foundations of psychology at work, so that you can better understand others and guide them to shared goals. Along the way, you will answer these questions: Why do you want to be a leader? What kind of leader can you be? How can you persuade and influence people? How can you motivate and inspire people? Whether you are a formal or informal leader.

COURSE DESCRIPTION: While developing software, being able to use repeatable solutions to commonly occurring problems greatly reduces development time. In this course, you will learn how design patterns can be used to provide repeatable solutions to the common design problems. First, you will learn the importance of design patterns and discuss the types of design patterns such as Behavioral, Creational and Structural. Next, you will write code to demonstrate how to implement the Iterator, Singleton and Adapter design patterns. Finally, you will learn some advanced features of software development, including design anti-patterns, software refactoring techniques, API pattern principles, and API patterns. This course is one of a collection of courses that prepares learners for Oracle's 1Z0-811: Java Certified Foundations Associate certification.

COURSE DESCRIPTION: A Power BI az egyik leggyakrabban használt eszköz a különböző forrásadatokon alapuló adatjelentések elkészítéséhez. Ezt a tanfolyamot a Power BI Desktop telepítésével és az adatok több különböző forrásból történő importálásával kezdjük, beleértve a relációs adatbázisokat, a MySQL-t és a PostgreSQL-t, a felhőalapú adattárházakat, valamint az Excel, CSV, JSON és XML fájlokat. Ezt követően a Power BI segítségével olyan egyszerű műveleteket végezhet, mint az adattípusok módosítása, oszlopok átnevezése vagy nagybetűs szöveg használata. Ezenkívül megnyitja és futtatja majd a Power Query alkalmazást is. A továbbiakban pedig a Power BI segítségével létrehozhat és formázhat egyszerű

adatvizualizációkat, például oszlopdiagramokat, vonaldiagramokat és halmazott oszlopdiagramokat. Végül pedig numerikus és karakterláncos (kategorikus) adatok diagramokon történő összesítését fogja gyakorolni a megfelelő területhez tartozó aggregációs operátorokkal dolgozva.

COURSE_DESCRIPTION: Being able to monitor data storage system to ensure they are operational and working correctly is a crucial part of running your business. Azure provides the Azure Monitor service and the Azure Log Analytics service to perform this function. In this course, you will learn about the features Azure Log Analytics and the Azure Monitor service and how it can be used to monitor storage data and monitor Azure Blob storage. Next, you'll learn how to access diagnostic logs to monitor Data Lake Storage Gen2, how to monitor the Azure Synapse Analytics jobs and the adaptive cache and how to monitor the Azure Cosmos DB using the portal and resource logs. Finally, you'll learn how to configure, manage, and view metric alerts using the Azure Monitor and how to configure, manage, and view activity log alerts using the Azure Monitor. This course is one in a collection that prepares learners for the Designing and Implementing a Data Science Solution on Azure (DP-100) exam.

COURSE_DESCRIPTION: Eine Vielzahl von Excel 365-Tools kann verwendet werden, um Daten abzurufen, auszugeben und zu berechnen. In diesem Kurs erfahren Sie, wie Sie Formeln verwenden können, um bestimmte Arten von Informationen abzurufen, und wie Sie Berechnungen mit Nachschlagewerkzeugen automatisieren und vereinfachen können. Zu den wichtigsten Konzepten gehören die Automatisierung von Formeln mit dem Ausfüllwerkzeug, die Verwendung von Formeln zum Extrahieren von Datumswerten und die Durchführung von Berechnungen mit Hilfe von Daten. Als nächstes lernen Sie, wie Sie SVERWEIS- und WVERWEIS-Formeln verwenden, um Datenlisten zu vergleichen und auf fehlende Werte zu prüfen; wie Sie einen Wert in einer Tabelle mit doppelter Buchführung finden; und wie Sie automatische Berichte erstellen, die eine Datentabelle mit der SUMMENPRODUKT-Formel zusammenfassen.

COURSE_DESCRIPTION: By the end of this project, you'll be able to create an isometric vector graphic of a house. You'll build an image with Inkscape, a free vector graphics program, which allows you to build graphics with clear lines and vivid colors. Since the images are vector-based, you'll also have the flexibility to edit and resize them again and again-all while keeping the best image quality. During this project, you'll learn how to create an axonometric grid, then use that grid to draw the walls, roof, and windows of the house. Once you've drawn the basic shapes, you'll add details and accessories (like a front door). Next, you'll use color and shading to add depth and dimension to the graphic. Last, you'll learn how to export your work in vector and raster formats. By the end of the project, you'll be comfortable planning and creating isometric designs with Inkscape. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Data breaches occur nearly every day. From very large retailers, down to your fantasy football website, and anywhere in between, they have been compromised in some way. How did the attackers get in? What did they do with the data they compromised? What should I be concerned with in my own business or my systems? This course is the second course in the Practical Computer Security. It will discuss types of threats and attack vectors commonly seen in today's environment. I hate to be the bearer of bad news, but threats are all over the place! This course isn't designed to instill fear that there is no hope for keeping systems and business secure, but rather educate you on how attacks are carried out so that you have a better sense of what to look out for in your business or with your systems.

COURSE_DESCRIPTION: In the capstone project, you will combine the skills you've learned in the prior four courses of the specialization to polish your elevator speeches, complete your resumes - including multiple versions for different targets - complete your story file, identify possible jobs or careers, perform the research you have learned to do, write suitable cover letters, and ideally land a job! You will: 1. Develop a personal marketing plan and campaign for getting interviews. 2. Identify at least three organizations with open positions for which you want to apply. 3. Research those organizations and positions. 4. Prepare pitch sheets and J.I.S.T. cards (mini-resumes) targeting those positions. 5. Complete your resume, and if necessary complete multiple versions to target each position. 6. Write appropriate cover letters for the positions. 7. Record and evaluate responses to a set of standard interview questions. 8. Record and evaluate responses to a set of predictable behavioral interview questions. 9. Record and evaluate a response to one situational interview question. 10. Record and evaluate a response to one wild-card question. As the specialization has focused throughout on the real-world skills you need to research yourself, the market, and a company and has given you strategies and tools to prepare for and succeed in an interview, the capstone project should align with what you have been trained for and position you to land the job you want!

COURSE_DESCRIPTION: Learn how to create data visualizations and dashboards using spreadsheets and analytics tools. This course covers some of the first steps for telling a compelling story with your data using various types of charts and graphs. You'll learn the basics of visualizing data with Excel and IBM Cognos Analytics without having to write any code. You'll start by creating simple charts in Excel such as line, pie and bar charts. You will then create more advanced visualizations with Treemaps, Scatter Charts, Histograms, Filled Map Charts, and Sparklines. Next you'll also work with the Excel PivotChart feature as well as assemble several visualizations in an Excel dashboard. This course also teaches you how to use business intelligence (BI) tools like Cognos Analytics to create interactive dashboards. By the end of the course you will have an appreciation for the key role that data visualizations play in communicating your data analysis findings, and the ability to effectively create them. Throughout this course there will be numerous hands-on labs to help you develop practical experience for working with Excel and Cognos. There is also a final project in which you'll create a set of data visualizations and an interactive dashboard to add to your portfolio, which you can share with peers, professional communities or prospective employers.

COURSE_DESCRIPTION: The main purpose of this course is to focus on good questions and how to answer them. This is essential to making considered decisions as a leader in any organization or in your life overall. Topics will include the basis of human curiosity, development of questions, connections between questions and approaches to information gathering design , variable measurement, sampling, the differences between experimental and non-experimental designs, data analysis, reporting and the ethics of inquiry projects. Emphasis will be placed on approaches used in the social sciences (i.e., sociology, psychology, anthropology), but we will also discuss how others (i.e., natural scientists, business analysts) might approach the inquiry process. No prior knowledge of statistics is required for this course.

COURSE_DESCRIPTION: This 8-video course helps learners master the art of shaping a Word 2019 document by using sections, headers, and footers to set off ideas more clearly, and how to insert page numbers in a document. First, learn how to use page breaks skillfully-by moving titles for a new chapter onto the page where the chapter text begins, for instance-and how to use a keyboard shortcut to accomplish this. Key topics covered in this course include how to create and insert custom information in Word's headers and footers; how to save and reuse a header, and insert it into other documents; and how to customize paragraph outlines and the color, style, thickness, and locations of borders. Observe how to use the border and fill tools to apply colors to your document and design interesting borders to make your document more attractive. Next, learn the various ways you can change the page color and surrounded text with a border-with the paragraph tool set or the Design tab. In order to practice what you have learned, you will find the Word document named Word 2019 for Windows: Structuring Documents Exercise as well as the associated materials in the Resources section.

COURSE_DESCRIPTION: According to recent research, over 90% of business-to-business customers carry out online research before they make a purchase decision. It's clear that it's important for every business to have an online presence. Today, when customers have a need or a problem to solve, the first step is to search for an answer online. In this course, you'll learn about how customers search for solutions to their needs and how businesses can match those searches with the right online presence. You'll also learn how an online presence can be designed to engage and connect with customers, building strong relationships to support your business, as well as how you can increase conversion by optimizing your website content for searches. Finally, you'll examine the role of email marketing, which continues to provide one of the highest returns on investment of any digital channel by examining the key elements of compelling email communications, including how they align to your customer's journey, and how they can help you to achieve your business objectives. This course was developed in partnership with the Digital Marketing Institute.

COURSE_DESCRIPTION: In this course, you will: • Compare Functional and Sequential APIs, discover new models you can build with the Functional API, and build a model that produces multiple outputs including a Siamese network. • Build custom loss functions (including the contrastive loss function used in a Siamese network) in order to measure how well a model is doing and help your neural network learn from training data. • Build off of

existing standard layers to create custom layers for your models, customize a network layer with a lambda layer, understand the differences between them, learn what makes up a custom layer, and explore activation functions. • Build off of existing models to add custom functionality, learn how to define your own custom class instead of using the Functional or Sequential APIs, build models that can be inherited from the TensorFlow Model class, and build a residual network (ResNet) through defining a custom model class. The DeepLearning.AI TensorFlow: Advanced Techniques Specialization introduces the features of TensorFlow that provide learners with more control over their model architecture and tools that help them create and train advanced ML models. This Specialization is for early and mid-career software and machine learning engineers with a foundational understanding of TensorFlow who are looking to expand their knowledge and skill set by learning advanced TensorFlow features to build powerful models.

COURSE_DESCRIPTION: This course is an introduction to the basic concepts of programming languages, with a strong emphasis on functional programming. The course uses the languages ML, Racket, and Ruby as vehicles for teaching the concepts, but the real intent is to teach enough about how any language "fits together" to make you more effective programming in any language -- and in learning new ones. This course is neither particularly theoretical nor just about programming specifics -- it will give you a framework for understanding how to use language constructs effectively and how to design correct and elegant programs. By using different languages, you will learn to think more deeply than in terms of the particular syntax of one language. The emphasis on functional programming is essential for learning how to write robust, reusable, composable, and elegant programs. Indeed, many of the most important ideas in modern languages have their roots in functional programming. Get ready to learn a fresh and beautiful way

to look at software and how to have fun building it. The course assumes some prior experience with programming, as described in more detail in the first module. The course is divided into three Coursera courses: Part A, Part B, and Part C. As explained in more detail in the first module of Part A, the overall course is a substantial amount of challenging material, so the three-part format provides two intermediate milestones and opportunities for a pause before continuing. The three parts are designed to be completed in order and set up to motivate you to continue through to the end of Part C. The three parts are not quite equal in length: Part A is almost as substantial as Part B and Part C combined. Week 1 of Part A has a more detailed list of topics for all three parts of the course, but it is expected that most course participants will not (yet!) know what all these topics mean.

COURSE_DESCRIPTION: In this 1-hour long project-based course, you will learn how to create interpretable machine learning applications on the example of two classification regression models, decision tree and random forest classifiers. You will also learn how to explain such prediction models by extracting the most important features and their values, which mostly impact these prediction models. In this sense, the project will boost your career as Machine Learning (ML) developer and modeler in that you will be able to get a deeper insight into the behaviour of your ML model. The project will also benefit your career as a decision maker in an executive position, or consultant, interested in deploying trusted and accountable ML applications.

COURSE_DESCRIPTION: Mindshift is designed to help boost your career and life in today's fast-paced learning environment. Whatever your age or stage, Mindshift teaches you essentials such as how to get the most out of online learning and MOOCs, how to seek out and work with mentors, the secrets to avoiding career ruts (and catastrophes) and general ruts in life, and insights such as the value of selective ignorance over general competence. We'll provide practical insights from science about how to learn and change effectively even in maturity, and we'll build on what you already know to take your life's learning in fantastic new directions. This course is designed to show you how to look at what you're learning, and your place in what's unfolding in the society around you, so you can be what you want to be, given the real world constraints that life puts on us all. You'll see that by using certain mental tools and insights, you can learn and do more-far more-than you might have ever dreamed! This course can be taken independent of, concurrent with, or subsequent to, its companion course, Learning How to Learn. (Mindshift is more career focused, and Learning How to Learn is more learning focused.)

COURSE_DESCRIPTION: This course sensitizes security in Big Data environments. You will discover cryptographic principles, mechanisms to manage access controls in your Big Data system. By the end of the course, you will be ready to plan your next Big Data project successfully, ensuring that all security-related issues are under control. You will look at decent-sized big data projects with security-skilled eyes, being able to recognize dangers. This will allow you to improve your systems to a grown and sustainable level. If you are an ICT professional or someone who designs and manages systems in big data environments, this course is for you! Knowledge about Big Data and IT is advantageous, but if you are e.g. a product manager just touching the surface of Big Data and security, this course will suit you as well.

COURSE_DESCRIPTION: Vrijednost koju poduzeće nudi korisnicima može doći u raznim oblicima - kvaliteta proizvoda, financijska stabilnost, ugled i kreativnost samo u neki od njih. Kako biste mogli odgovoriti na pitanje "Koju vrijednost moje poduzeće može ponuditi?", dobro morate poznavati poduzeće, to jest, morate poznavati njegove strategije, način rada, rješenja koja može ponuditi i ljude koji obavljaju posao. Ako povežete to znanje

s poznavanjem korisnika, moći ćete korisniku ponuditi smislenija i kreativnija rješenja. U ovom ćete tečaju naučiti kako prepoznati i izraziti vrijednost svoga poduzeća te kako procijeniti odgovara li ta vrijednost vašim potencijalnim korisnicima. Također ćete naučiti kako povećati svijest svojih korisnika o tome kako doživljavaju vrijednost te kako vaše poduzeće može ispuniti njihove potrebe.

COURSE_DESCRIPTION: Providing confidentiality for sensitive data is crucial for data at rest, in use, and in transit. Use this course to learn more about the different ways in which data can be secured. Begin by examining how to deploy a client-to-site and site-to-site VPN configuration to the AWS cloud. Next, you'll work with AWS Secrets Manager, investigate the steps involved in creating an encryption key, and discover how to encrypt an S3 bucket using the AWS Management Console, AWS CLI, and AWS Tools for PowerShell. You'll also explore the constituents of PII and learn to classify data using Amazon Macie. Once you have finished this course, you'll have a deeper understanding of VPNs and data privacy in the AWS cloud. Moreover, you'll be a step further in preparing for the AWS Certified SysOps Administrator - Associate exam, SOA-C02.

COURSE_DESCRIPTION: Learners will discover how to gather Agile requirements, implement Agile processes, create a secure Agile software development (SD) lifecycle, implement Disciplined Agile Delivery, and apply best practices for secure SD in this 9-video course. First, you will take a look at Agile requirements, specifically at how to perform requirements gathering and management in an Agile environment. Next, learners will follow two tutorials on Agile techniques: Part A on defining Agile techniques including iterative delivery and the use of user stories, and part B on defining Agile techniques including the daily standup meeting, pair programming, Scrum events, and planning poker. Following on from this, you will learn how to create a secure Agile SDLC (software development lifecycle), to ensure that the software development, even in a fast-paced Agile environment, is secure. Learners will also discover how to implement Disciplined Agile Delivery, ensuring that things are kept to a schedule. In the final tutorial in this course, you will observe how to apply best practices for secure SD.

COURSE_DESCRIPTION: Learn how advances in geospatial technology and analytical methods have changed how we do everything, and discover how to make maps and analyze geographic patterns using the latest tools. The past decade has seen an explosion of new mechanisms for understanding and using location information in widely-accessible technologies. This Geospatial Revolution has resulted in the development of consumer GPS tools, interactive web maps, and location-aware mobile devices. These radical advances are making it possible for people from all walks of life to use, collect, and understand spatial information like never before. This course brings together core concepts in cartography, geographic information systems, and

spatial thinking with real-world examples to provide the fundamentals necessary to engage with Geography beyond the surface-level. We will explore what makes spatial information special, how spatial data is created, how spatial analysis is conducted, and how to design maps so that they're effective at telling the stories we wish to share. To gain experience using this knowledge, we will work with the latest mapping and analysis software to explore geographic problems.

COURSE_DESCRIPTION: In this 1-hour long project-based course on Linux: Introduction to Shell Scripting for DevOps, you will be writing your own Bash/Shell scripts for scratch. You will be going through all of the key components that make up the bash script, from exit statuses, the test command, if/else statements, loops and file archiving. You will no longer be completely confused when looking at Bash scripts, and will have a working knowledge which allows you to start working with scripts yourself. This course is designed for any person working or who intends to work with Linux, from Linux system administrators to developers and DevOps practitioners. Or even if you are a student who is curious to get comfortable with Linux this course is for you also. This is an intermediate level course and is designed for an individual who has a beginner's knowledge of the Linux/Unix command line and Unix crud practices in computer science. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Intrusion prevention helps one to detect and stop various attacks that other security components may miss. In this 13-video course, learners explore objectives and tools of intrusion prevention, including kernel attack prevention, vulnerability discovery, remediation strategies, scan detection, and evasion techniques. Begin by examining approaches to intrusion prevention systems (IPS), and how it differs from intrusion detection systems (IDS). Then take a look at options and deployment strategies for IPS; discover the advantages and disadvantages of various approaches to IPS, and view the role of IPS in preventing kernel attacks. Explore the methods used to discover vulnerabilities, and the remediation strategies related to intrusions. Next, learn how to block an attacker after too many failed login attempts; how to describe methods used in IPS to evade intrusions; and how to use tools, including netstat, to scan for potential intrusions on a local system. In the final two tutorials in this course, you will scan a system for potential malware infections using nmap, and use Suricata to implement a packet diversion for intrusion prevention.

COURSE_DESCRIPTION: Simple systems and software are proven to be easier to develop, understand, maintain, and test. For site reliability engineers, simplicity should be an end-to-end goal and cover all aspects of the software life cycle. In this course, you'll explore the importance of simple systems and software code. You'll identify the different types of software complexity, such as structural complexity, organizational complexity, complexity of use, and theoretical complexity, and learn how to differentiate between complex and complicated code. You'll move on to recognize how to measure complexity using various metrics, such as cyclomatic complexity, the Halstead metric, and the maintainability index. Lastly, you'll examine class coupling, using NPATH to measure the complexity of a piece of code, and prioritizing the simplification of projects and resources.

COURSE_DESCRIPTION: This online course covers a wide range of tasks in Natural Language Processing from basic to advanced: sentiment analysis, summarization, dialogue state tracking, to name a few. Upon completing, you will be able to recognize NLP tasks in your day-to-day work, propose approaches, and judge what techniques are likely to work well. The final project is devoted to one of the most hot topics in today's NLP. You will build your own conversational chat-bot that will assist with search on StackOverflow website. The project will be based on practical assignments of the course, that will give you hands-on experience with such tasks as text classification, named entities recognition, and duplicates detection. Throughout the lectures, we will aim at finding a balance between traditional and deep learning techniques in NLP and cover them in parallel. For example, we will discuss word alignment models in machine translation and see how similar it is to the attention mechanism in encoder-decoder neural networks. Core techniques are not treated as black boxes. On the contrary, you will get in-depth understanding of what's happening inside. To succeed in that, we expect your familiarity with the basics of linear algebra and probability theory, machine learning setup, and deep neural networks. Some materials are based on one-month-old papers and introduce you to the very state-of-the-art in NLP research. Do you have technical problems? Write to us: coursera@hse.ru.

COURSE_DESCRIPTION: Voltaire once said, "Is there anyone so wise as to learn by the experience of others?" We can learn a great deal from the successes and mistakes of others that have taken the journey of DevOps before us. In this course, you will learn about the journey to DevOps maturity taken by various private companies and government institutions. You will see how different organizations used the principles and practices of DevOps and the continuous integration and continuous deployment (CI/CD) pipeline to create an automated method of managing their software needs. In addition, you will see how some companies, such as Netflix, created innovations in the world of DevOps in order to meet the demands of their industry.

COURSE_DESCRIPTION: Want to take the first steps to become a Web Developer? This course will help you discover the languages, frameworks, and tools that you will need to create interactive and engaging websites right from the beginning. You will begin by learning about the roles of front-end, back-end, and full-stack developers and how they work together on development projects. Through this, you will also become familiar with the terminology and skills needed in your career as a web developer. Next, you will explore the languages needed for developing websites or applications. You will gain a thorough understanding of HTML and CSS and learn how a combination of both technologies can help developers create the structure and style of their websites. Finally, you will learn how JavaScript can make your webpages dynamic with features that include interactive forms, dynamic content modification, and sophisticated menu systems. By learning the fundamentals of HTML5, CSS, and JavaScript you will be able to combine them to:
- create the basic structure of a website - create format and layout for web applications - enhance your website and create rich, interactive applications - increase user interactivity and enhance user experience - give your website a real wow factor! In this course you will practice what you learn with numerous hands-on labs. Lastly, you will complete a final project where you will create a webpage to showcase your skills and have a great addition to your portfolio!

COURSE_DESCRIPTION: The Capstone Project is a service learning experience designed to apply the knowledge and skills developed in the three Specialization courses to a real world leadership and governance situation. It is also intended to develop the participant's capability to act as an agent for positive change in nonprofit organizations. To this end, you will analyze the leadership and governance effectiveness of a real board of directors in an organization of your own choosing (or, if that is not possible, data gathered from a real board provided by the course instructors). By the end of the Capstone Project, you will have produced a professional consulting report detailing your analysis and recommendations to improve board leadership and governance effectiveness. You will then present it to the board and advise them on implementing change. To learn more about this course, please watch the overview video by copying and pasting the following link into your web browser: <https://goo.gl/GTWrN2> Keywords: Nonprofit; Nonprofit Sector; Voluntary Sector; Nonprofit Organizations, Non-Governmental Organizations, Volunteer Organizations, Leadership, Management, Governance, Board, Board of Directors, Performance, Effectiveness Capstone Project Overview: Weeks 1-3: This period will be spent choosing a board of a nonprofit organization and gathering information using two specially designed tools and resources: The SUNY Open textbook (to download the book copy and paste the following link into your browser: <http://tinyurl.com/peolnjb>), "Guidelines for Improving the Effectiveness of Boards of Directors of Nonprofit Organizations", and The Board Check-Up, online board performance self-assessment tool that can be accessed by copying and pasting this link into your browser: <https://www.boardcheckup.com>. Weeks 4-5: In this phase, the information gathered will be analyzed leading to an evaluation of the board's effectiveness in the different dimensions of board effectiveness examined in the Specialization courses. Weeks 6-8: In the final phase of the Project, the results of the analysis and recommendations for positive change will be brought together a specially prepared consulting report intended for the use of the board of the client organization.

COURSE DESCRIPTION: This course can also be taken for academic credit as ECEA 5341, part of CU Boulder's Master of Science in Electrical Engineering degree. This is our second course in our specialization on Embedding Sensor and Motors. To get the most out of this course, you should first take our first course entitled Sensors and Sensor Circuits. Our first course gives you a tutorial on how to use the hardware and software development kit we have chosen for the lab exercises. This second course assumes that you already know how to use the kit. After taking this course, you will be able to:

- Understand how to specify the proper AC or DC motor for a machine design.
- Integrate the motor to a machine, based on analysis of motor equations for voltage, current, torque and speed.
- Implement the motor and accompanying rotary sensor into a motor control circuit in both hardware and software.
- Add a motor and motor control circuit into a microprocessor based development kit.
- Create hardware and firmware to process motor feedback data to a microprocessor for further evaluation. You will need to buy the following components to do the two course projects based on the videos in this module. Note that if you have already purchased the PSOC 5LP PROTOTYPING KIT, you do not need to buy it again. These parts may be purchased off the Digikey web site, www.digikey.com. Or, you may obtain the specs from the site, and purchase them elsewhere. These are the part numbers for the above table, the lab on Motor Voltage and Current Measurement. You can copy and paste them into the search engine on the Digikey web site. You need one of each except for the AA batteries (N107-ND), which you would need 3. 428-3390-ND P14355-ND FQ13N10LTU-ND N107-ND IN5393-E3/54GICT-ND RN14FTD1K00CT-ND P0.62W-1BK-ND Additional equipment needed:

- Wire - various gauges and lengths
- Breadboard
- Oscilloscope - suggested models are: o PICOSCOPE 2204A-D2 available on www.digikey.com or o Digilent 410-324 - OpenScope M2 available on www.newark.com Depending on your budget, you can also investigate these models: o Hantek HT6022BE20MHz - <https://www.amazon.com/dp/B009H4AYII> o SainSmart DSO212 - <https://www.amazon.com/dp/B074QBQNB7> o PoScope Mega50 USB - <https://www.robotshop.com/en/poscope-mega50-usb-mso-oscilloscope.html> o ADALM2000 - <https://www.digikey.com/en/products/detail/analog-devices-inc./ADALM2000/7019661>

COURSE DESCRIPTION: Vue.js, a Javascript front-end framework that is lightweight, flexible, progressive, is easy to set up to quickly start creating apps. In this 15-video course on important aspects of Vue.js, learners see how to use the V-Model directive to set up two-way data binding between Form Inputs and locally managed data. Then you will learn to work with FormData in Vue to construct a set of key/value pairs. Next, the course demonstrates how to install the necessary tools for unit testing, and how to create and run teAPI. You will learn to use Jest, a JavaScript unit testing tool; how to stub certain Vue containers as part of setting up unit tests; and examine mixins (Cascading Style Sheet properties similar to functions) and global mixins to define and distribute reusable bits of logic among the app's components. You will learn to use built-in and custom directives in Vue to add to templates. Finally, learners will see that custom filters are a way to apply common formatting to text and return an output.

COURSE_DESCRIPTION: This 13-video course helps learners explore Agile tools and their role in software development, along with other topics. Begin with a look at how Agile tools such as initiatives, themes, epics, and stories help define and manage scope better than traditional scoping methods do. Learn to identify best practices of using modularity, coupling, and cohesion concepts in Agile software design, and how to overcome the challenges of integrating Agile with UX design. Examine how concepts of extreme programming help integrate Agile into software development based on examples, and how continuous integration helps Agile software development, also based on examples. Learn about the effectiveness of pair programming, and the benefits of using test-driven development. Delve into code refactoring; best practices for the Agile coach; and best practices for overcoming the challenges of working with distributed teams in an Agile environment. The final tutorial looks at the parameters used to assess an organization to determine its Agile maturity.

COURSE_DESCRIPTION: There are so many options when it comes to delivering user and management traffic over the WAN. In this course, you'll explore WAN design options and the key design decisions you must make. The overwhelming need for and popularity of the VPN in today's enterprises is marked by the fact that there is so many variations. You'll next examine the designs and motivations for many different VPN types. WANs typically are mission critical, so you'll also learn about designing high availability options. The SD-WAN is becoming increasing popularity, so you'll look at the traditional WAN challenges it can solve. Finally, you'll explore why SD-WAN is so important, architecture design elements, and design best practices. This course can be used in preparation for the 300-420: Designing Cisco Enterprise Networks (ENSLD) certification exam.

COURSE_DESCRIPTION: Hypothesis testing is the bedrock of inferential statistics, allowing us to draw inferences reliably about the population as a whole. Use this course to learn more about the distinction between descriptive and inferential statistics and how the latter seek to generalize from the sample to the population as a whole. Examine the components of a typical hypothesis test, such as the null and alternative hypothesis, the test statistic, and the p-value. You'll also explore type-I and type-II errors and the use cases and conceptual underpinnings of t-tests and ANOVA. By the time you finish this course, you will be able to identify use-cases for hypothesis testing and conceptually construct the appropriate null and alternative hypotheses for such tests.

COURSE_DESCRIPTION: This course introduces the broader discipline of computer science to people having basic familiarity with Java programming. It covers the second half of our book Computer Science: An Interdisciplinary Approach (the first half is covered in our Coursera course Computer Science: Programming with a Purpose, to be released in the fall of 2018). Our intent is to demystify computation and to build awareness about the substantial intellectual underpinnings and rich history of the field of computer science. First, we introduce classic algorithms along with scientific techniques for evaluating performance, in the context of modern applications. Next, we introduce classic theoretical models that allow us to address fundamental questions about computation, such as computability, universality, and intractability. We conclude with machine architecture (including machine-language programming and its relationship to coding in Java) and logic design (including a full CPU design built from the ground up). The course emphasizes the relationships between applications programming, the theory of computation, real computers, and the field's history and evolution, including the nature of the contributions of Boole, Shannon, Turing, von Neumann, and others. All the features of this course are available for free. No certificate will be offered upon completion.

COURSE_DESCRIPTION: A crucial part of deploying and managing physical and virtual servers is determining the proper licensing requirements. Factors to consider are the number of physical or virtual CPUs and concurrently connected users. Find out more about server roles and licensing in this theory and practice-based course. Explore various server roles and the licensing requirements for specific server use cases. Look at the ways servers can be installed. And see how scripting environments can not only automate server deployment but also help with ongoing server management. Moving on, practice creating a Linux BASH shell script, a Windows PowerShell script, and a Python script. Upon completion, you'll be able to plan server role deployments and licensing requirements and use scripting to automate server management. You'll also be more prepared for the CompTIA Server+ SK0-005 certification exam.

COURSE_DESCRIPTION: Support engineers commonly leverage cloud services like AWS, Azure, and GCP to manage resource configuration. In this course, you'll explore cloud infrastructure components, common cloud service models, and the technologies behind cloud computing. You'll learn about the logical architecture of AWS and critical services provided by Azure and Google Cloud Platform. Next, you'll examine a comparison of services provided by IBM, VMware, and Kamatera cloud. You'll then move on to look at tools that can be used to manage multi-cloud environments and the concepts of automation and configuration management in CloudOps. Next, you'll learn about the support levels provided by cloud service providers used to enable the shared responsibility support model. Finally, you'll learn to work with new EC2 runtime commands to manage remote EC2 instances, as well as common Azure and Google Cloud Platform commands to manage Azure and Google Cloud Platform resource configuration.

COURSE_DESCRIPTION: AWS offers a variety of application solutions to meet specific app requirements. AWS Lambda, API Gateway, and Simple Queue Service (SQS) provide methods of deploying and hosting in the AWS cloud. Web apps can be protected from common threats using specialized firewalls and app code can retrieve secrets used to connect to other resources. In this course, discover when to use key Amazon app services, like AWS Web

Application Firewall to mitigate common web application attacks, and AWS Secrets Manager to allow centralized code access to secrets. Next, deploy a message queue and work with Docker on Linux and various AWS container services. Finally, create a custom instance Amazon Machine Image, review AWS speech services, and work with launch templates to automate instance deployment. This course can be used to prepare for exam SAA-C03, AWS Certified Solutions Architect - Associate.

COURSE_DESCRIPTION: In this third course in the Social Marketing Specialization - "The Engagement & Nurture Marketing Strategies" - you will learn two of the most effective social strategies used by organizations today. You'll see real-world best practice examples and learn what metrics they use to gauge success. You will also learn the importance of infographics and the impact a well-designed landing page can have on your bottom line. All of the social skills you have learned thus far will be put into action with a multimedia filter and focus blog that you will create to demonstrate how social can enable real-time marketing results. After this MOOC, you will have developed a plan to reach your target consumer markets and know when it is best to either use or avoid specific social marketing strategies. Additional MOOC 3 faculty include: * Randy Krum (Data Visualization & Infographics Designer - Consultant - Author - Speaker - President, InfoNewt) * Stanford Smith (CEO, Pushing Social) * Andy Crestodina (Co-Founder & Strategic Director, Orbit Media Studios) * Ellen Valentine (Veteran Marketing Leader & Evangelist, Silverpop, IBM)

COURSE_DESCRIPTION: Explore the implementation of Infrastructure as Code (IaC) with Chef for DevOps, including core principles, benefits, and components of Chef that are involved in implementing IaC in this 11-video course. Examine features, components, and tools of Workstation and components of Cookbook, and the various types of nodes that can be managed by using Chef. Key concepts covered in this course include characteristics and importance of implementing IaC using Chef and DevOps; the essential features of Chef Workstation, the location where users interact with Chef; and the features of Cookbook, the fundamental unit that provides capability of specifying configuration and policy for distribution. Next, learn how to set up Git to create a Chef repository; how to install Chef to a server, set up a Workstation and work with the hosted Chef, and the tools of Chef Workstation; and steps involved in working with hosted Chef. Finally, study components of Chef used to implement IaC, and the types of nodes in Chef that need to be installed, depending on the existing node architecture.

COURSE_DESCRIPTION: This course explores the key concepts behind governance and its relationship with big data. Big data are large and complex, often being represented by massive amounts of very granular data that need to be protected from misuse. This 12-video course examines the five main requirements when an all-encompassing governance strategy is being planned and designed. You will first learn to build a data governance plan by first identifying the most important data domain. Then learn the importance of assembling a data governance body for an organization's big data activities; and how to identify the stakeholders that need to be part of a data governance program. Next, you will learn why the members' governance body should be fairly diverse, well trained, and informed of the policies surrounding the collection of data and the procedures for using the data; and should include compliance professionals who understand the rules and regulations applicable to your corporate structure. Finally, you will explore the issues involved in cloud storage of big data.

COURSE_DESCRIPTION: Extract, transform, load (ETL), is the main process in data warehousing solutions and helps transfer data from one source to another. During this course you will examine the ETL process and how it can be implemented. You will start by examining data flows and how to debug them. Next, you will learn how to use SQL Server Integration Services (SSIS), and perform a broad range of data migration tasks. These include how to create SSIS packages, transform data, and perform lookup tasks. Next you will employ ETL, the SSIS data warehousing tool, to facilitate the transfer of data from a source to a destination. Discover how to implement the ETL process, to extract, transform, and load data. Specify a data source and a destination. Finally, you will performance tune SSIS data flow and optimize data Integration Services.

COURSE_DESCRIPTION: In the traditional approach to data sharing, consumers receive a copy of the provider data, which can allow for the creation of multiple copies of data. Secure Data Sharing in Snowflake enables the secure sharing of specific database objects without data duplication between accounts. In this course, explore the motivations behind Secure Data Sharing and its implementation, as well as how to create and share a Snowflake share. Next, learn how to use Snowflake Marketplace data, the specific permissions required to create and manage shares, and how to set permissions using queries. Finally, practice implementing cross-region data replication to enable Secure Data Sharing across cloud and geographical boundaries. Upon completion, you'll be able to securely share Snowflake objects with other Snowflake users.

COURSE_DESCRIPTION: With its roots in ancient cultures as early as 6,000 BC, wine has long been part of the human experience. Today, increasing worldwide interest in wine and its complexities and varieties has created an international market valued at \$304 billion annually. For the learner who is just getting started in the study of wine, this course will help you take the first steps toward understanding the physiological process of wine tasting. The first module will explore types of wine and help you set up your own tasting. You'll also begin to build a sensory vocabulary. In module 2 you will review classic wine types of the world and set up flights of specific wines. Later we'll examine the various faults and defects that can appear in wine as well as techniques for spotting problems. In week 4 we'll delve into the complex world of wine and food pairings, and its "seven deadly sins." The course will culminate in a peer review project in which you will apply the knowledge and sensory techniques you have developed throughout the course to assess a specific wine.

COURSE_DESCRIPTION: Displaying data using a tree view is useful, but even more useful are interactive tree views which perform actions in response to user inputs, such the selection of an item or a double-click on an item. Financial data is usually sensitive, so login and sign-up pages are great ways to authenticate a user of an app. Begin this course by adding an item-selection event handler to a tree view and create a similar stub handler for the double click. Discover how to modularize your code into different code files. After the modularization, confirm that the app is still functional. Then, you will add login and sign-up pages to the app. Finally, you will make an important change to the app by equipping it to figure out the schema of the relevant database table on the fly by referencing schema and metadata information. After completing this course, you will know how the tree view reacts to user actions, make the tree view robust to changes in the database schema, and add register and sign-in functionality to support authenticated data access.

COURSE_DESCRIPTION: Learn to code in Java and improve your programming and problem-solving skills. You will learn to design algorithms as well as develop and debug programs. Using custom open-source classes, you will write programs that access and transform images, websites, and other types of data. At the end of the course you will build a program that determines the popularity of different baby names in the US over time by analyzing comma separated value (CSV) files. After completing this course you will be able to: 1. Edit, compile, and run a Java program; 2. Use conditionals and loops in a Java program; 3. Use Java API documentation in writing programs. 4. Debug a Java program using the scientific method; 5. Write a Java method to solve a specific problem; 6. Develop a set of test cases as part of developing a program; 7. Create a class with multiple methods that work together to solve a problem; and 8. Use divide-and-conquer design techniques for a program that uses multiple methods.

COURSE_DESCRIPTION: As a Six Sigma team moves into the Analyze phase of a project, team members begin analyzing the information and data collected in the earlier phases. During the Analyze phase, Six Sigma teams identify possible sources of variation, underlying root causes, and areas for improvement. It is here where assumptions or hypotheses about a process, product, or service are made and validated using tests based on sample data. This course aims to familiarize you with some of the advanced hypothesis tests used in Six Sigma. You are taken through the key steps in testing hypotheses for proportions, variances, and analysis of variance (ANOVA), and their underlying assumptions, with the help of examples and case studies. You will also learn how to use goodness-of-fit test statistics and contingency tables for validating hypotheses about various aspects of the variables being analyzed. This course is aligned with the ASQ Certified Six Sigma Black Belt certification exam and is designed to assist learners as part of their exam preparation. It builds on foundational knowledge that is taught in SkillSoft's ASQ-aligned Green Belt curriculum.

COURSE_DESCRIPTION: In this 9-video course, learners will examine end-user security from the security administrator point-of-view including threatscape, security policies, training and awareness, Layer 2 security, 802.1x, MACsec, endpoint detection and response (EDR), advanced endpoint protection, and vendor solutions. Begin by taking a look at the present threatscape, while keeping in mind that it is constantly evolving, stealthy, and complex. You will examine written security policies, which every organization must have, and which apply to the entire organization. The policies must be well-written, comprehensive in scope, concise, easy to understand, and well organized. Next, you will explore training and awareness, which must be implemented for your end-users within the first few months of employment. You will compare access switch and wireless application protocol (WAP) security; describe 802.1x and MACsec; EDR protection, and next-generation EDR. In the closing exercise, you will be asked to list characteristics of next-generation EDR solutions, actions you can take with 802.1x port-based Network Access Control (PNAC), and the attributes of an effective security policy.

COURSE_DESCRIPTION: One of the best technologies for a Java-based web app is Jakarta Server Faces (JSF). Use this course to get your head around the various components of a JSF app and how to join them together to build a powerful website. After a theoretical overview of the components and design patterns of the JSF framework, practice building a simple JSF app using the Apache MyFaces API. Through this process, recognize how JSF Facelets can be used to define the UI of your app, how these bind to data stored in a backing bean, and how they can be deployed to a Jakarta EE container, such as Apache TomEE. By the end of the course, you'll have the knowledge and skills to develop and deploy a basic web app using Jakarta Server Faces.

COURSE_TITLE: Building User Interfaces with JSF: Getting Started with Jakarta Server Faces

COURSE_DESCRIPTION: Wired and wireless networks are everywhere. Explore how to install and configure them. In this course, you will learn what is needed to configure a basic router and switch, set network access points, and work with your Network Interface Controller (NIC). See how to configure end user devices, including Internet of Things (IoT) equipment, such as thermostats, security systems, appliances, and vehicles. Compare DSL and cable modems. Perform basic configurations for your firewall, Quality of Service (QoS) data traffic prioritization, and communication frequency. Conclude by understanding the elements of an IP address and a subnet mask

COURSE_DESCRIPTION: Device profiles are used to push preconfigured settings to devices in an organization. In this 13-video course, learners discover how to create device profiles and configure settings for the numerous profile types in Windows 10. Begin with an introduction to device configuration profiles and some of the requirements, and then learn how to create a device configuration profile in the Azure portal. This leads into assigning a scope tag to a configuration profile. Next, take a look at refresh cycle times used by Intune to check for updates, and learn how to configure device restriction settings in Intune. Then explore how to add e-mail settings to devices with Intune; add and use Wi-Fi settings on your devices in Intune; upgrade Windows 10 editions on devices with Intune, and configure Endpoint Protection for devices in Intune. Continue by examining how to configure devices using Administrative Templates and finally, monitoring device profiles in Intune. The closing exercise involves creating a device restriction, Wi-Fi, and Edition Upgrade configuration profile, and assigning and monitoring a configuration profile. This is one course in a series to prepare for the MD-101: Managing Modern Desktops certification exam.

COURSE_DESCRIPTION: This course takes you from understanding the fundamentals of a machine learning project. Learners will understand and implement supervised learning techniques on real case studies to analyze business case scenarios where decision trees, k-nearest neighbours and support vector machines are optimally used. Learners will also gain skills to contrast the practical consequences of different data preparation steps and describe common production issues in applied ML. To be successful, you should have at least beginner-level background in Python programming (e.g., be able to read and code trace existing code, be comfortable with conditionals, loops, variables, lists, dictionaries and arrays). You should have a basic understanding of linear algebra (vector notation) and statistics (probability distributions and mean/median/mode). This is the second course of the Applied Machine Learning Specialization brought to you by Coursera and the Alberta Machine Intelligence Institute.

COURSE_DESCRIPTION: Das Projektmanagement erfordert das Verwalten Ihrer Beziehungen zu allen Stakeholdern innerhalb und außerhalb des Unternehmens. Die Planung eines effektiven Stakeholder-Engagements hilft Ihnen beim Aufbau und der Pflege dieser Beziehungen, um die Chancen auf den Projekterfolg zu erhöhen. Das CAPM(r) ist ein Asset, das Ihre Glaubwürdigkeit und Effektivität in diesem Bereich erhöht, da Sie durch CAPM-Schulungen beim Identifizieren von Stakeholdern und Planen des Stakeholder-Engagements unterstützt werden. In diesem Kurs lernen Sie die Projektmanagementprozesse "Stakeholder identifizieren" und "Engagement der Stakeholder planen" kennen.

COURSE_DESCRIPTION: Russian is considered to be one of the most difficult languages in the world, and many learners struggle to master its grammar and pronunciation. This course is aimed at those who wants to work in Russia, do business with Russian partners or study on business-related majors in Russian. In three units of this intensive course learners are going to find out how to discuss terms of cooperation and prices, describe market situation and make a successful presentation of their companies, goods or services. The course is the third part of Business Russian Communication series of courses offered by St Petersburg State University. This part introduces such grammar topics as numerals and nouns in the Genitive case, Genitive case with prepositions, verbs of motion with unpaired prefixes and declension of adjectives. Learners can practice their skills and test themselves in Grammar quiz section. The course provides extensive vocabulary with more than 100 new words and conversational phrases which learners can use in their everyday communication on professional or informal topics. Each unit of the course contains dialogues, which are extremely useful for those who wants to listen to original Russian speech and get used to the pace and intonations of Russian language. Scripts and exercises are provided for all dialogues of the course. In the end of the course learners will have a chance to use the material learnt and assess their progress while preparing the Final Assignment. This course is aimed at those who already achieved A2-A2+ level in Russian.

COURSE_DESCRIPTION: AWS offers many services for automating the deployment and management of various cloud resources, such as EC2 instance virtual machines and web applications. Use this course to learn more about instance management using the AWS Management Console, CLI, and PowerShell, as well as Amazon Machine Images (AMIs). Start by examining how CloudFormation templates can be used to deploy resources and explore ways to work with configuration and app management using OpsWorks, Elastic Beanstalk, and AWS Systems Manager. Finally, you'll investigate steps to create a simple Lambda function and schedule AWS management tasks. Once you have completed this course, you'll be able to automate cloud resource deployment and management and be closer to preparing for the AWS Certified SysOps Administrator - Associate exam, SOA-C02.

COURSE_DESCRIPTION: Power Onboarding provides practical, easy-to-use tools to guide an individual who is transitioning to a new job. Students will prepare an actionable personal onboarding plan that will set them up for success in their new role. Research has shown that an actively followed power onboarding plan will allow an individual to reach proficiency in a new position up to 30% faster than the typical transitioning manager. In this course, students will develop their own onboarding plan, allowing them to contribute sooner and be eligible for promotion earlier. In this newly revised format, learners can complete the course in no more than 7 hours, with approximately 2 hours dedicated to creating a personalized power onboarding plan. We have a suggested 4 week schedule to help you stay on track, but we recognize that everyone has different learning styles so we've added flexibility so you can complete the entire course in one or two sittings. This course has benefited tremendously from the feedback and advice we have received since the launch in the Fall of 2014. A recent survey shows: 1) 67% of participants are very likely to recommend the course to a friend, and the remaining 33% being somewhat likely 2) 80% of participants found the workload the same or lower than what they expected. We are enthusiastic about these findings and we know that you will find this course valuable and worthwhile as well!

COURSE_DESCRIPTION: Virtual network peering enables you to connect different virtual networks and allows resources of the different virtual networks to communicate. Use this course to learn how to interconnect Vnets within Azure and on-premise networks to the Azure cloud. Begin by exploring how VNet peering links networks together over a global backbone and allows communication using private IP addresses. Next, discover how to enable peering using GUI and command line tools. Review how VPNs provide a secure method for connecting to remote networks and configure a site-to-site and point-to-site VPN. Finally, discover how ExpressRoute offers an alternative network connection to the Azure cloud. This course can be used to prepare for Exam AZ-305: Designing Microsoft Azure Infrastructure Solutions.

COURSE_DESCRIPTION: For many people, the future comes as a surprise - or even a shock. But with strong forecasting skills, YOU can avoid future shock. You can adapt faster, and become better prepared to benefit from change. In this course, you'll build your future forecasting skills. You'll learn how to turn groups of "signals" (clues about the future) and "drivers" (global forces that influence the direction of change) into compelling future forecasts. Forecasts help you discover new possibilities and opportunities for yourself, your company, or any community you want to inspire to make a better future. You'll also learn how to write future scenarios. Scenarios take forecasts one step further. They spark imagination and tell a story about what might happen if a forecast comes true. Scenarios help you evaluate: Is this a future I'm ready for? Is this a future I want? Leading futurists from the Institute for the Future will show you exactly how it's done. They'll share with you the forecasts and scenarios they're most excited about right now, and walk you through the key steps they took to create them. Then, it's your turn! You'll create a forecast and a scenario on any future topic you choose. How will you benefit from taking this course? With strong forecasting skills, you'll get better at seeing the future before it happens. You'll be ready to consider possibilities that others never see coming or refuse to accept. You'll be able to help others prepare for and adapt to the future. You can decide which futures you want to make more likely, and which futures you want to prevent. Many thanks to the Enlight Foundation and the Enlight Collaborative, which provided a grant to support the creation of this course.

COURSE_DESCRIPTION: In this Challenge Lab, you will perform post-installation configuration tasks. First, you will disable autofill for a username and password in Microsoft Edge, and then you will configure the Windows desktop by locking and unlocking the Start menu. Next, you will access the Microsoft Store, and then you will block access to it. Finally, you will configure application control policies, and then you will create a custom view in Event Viewer. Note: Once you begin a challenge you will not be able to pause, save, or return to your progress. Please ensure you have set aside enough time to complete the challenge before you start.

COURSE_DESCRIPTION: In this course, explore Azure VPN Gateways and integrating on-premises networks with Azure Virtual Networks in preparation for the Microsoft Azure Administrator (AZ-103) exam. Begin this 9-video course by discovering how to configure multiple site-to-site (S2S) connections in Azure. Then learn to use Azure PowerShell commandlets to establish a site-to-site link between an on-premises VPN appliance and a cloud-based VPN appliance in the case of Azure. Next, you will learn to recognize when Azure ExpressRoute should be configured. You will then explore how to use the Azure portal to create an ExpressRoute circuit; use PowerShell to create an ExpressRoute circuit, and also by using the CLI (command-line interface). In the final tutorial in this course, you will learn how to create a Virtual Network Gateway linked to an ExpressRoute circuit. In the closing exercise, you will be asked to describe the purpose of Azure ExpressRoute; create multiple site-to-site VPN connections to an Azure Virtual Network Gateway; and create an ExpressRoute circuit by using both PowerShell and the CLI.

COURSE_DESCRIPTION: In this Challenge Lab, you will create a scalable and resilient website that contains a dashboard for monitoring. First, you will create security groups for a load balancer and an Auto Scaling group, and then you will create a launch template that you will use to create Amazon Elastic Cloud Compute (Amazon EC2) instances. Next, you will create an Auto Scaling group, and then you will attach the Auto Scaling group to a new Application Load Balancer. Finally, you will connect to the website through the load balancer, and then you will create a CloudWatch dashboard to monitor the load balancer. Note: Once you begin the Challenge Lab, you will not be able to pause, save, or exit and then return to your Challenge Lab. Please ensure that you have set aside enough time to complete the Challenge Lab before you start.

COURSE_DESCRIPTION: Excel offers a variety of different chart types and styles for presenting and analyzing data in attractive and interesting ways. Learn how to insert, format, and manipulate Pie, Radar, Scatter, Bubble, Map, and Combo charts. Key concepts covered in this 6-video course include how to insert and edit pie charts, helpful when working with percentages; how to create and edit scatter charts be used to cross-reference values and combine different data types; land how to create and edit a bubble chart used to cross-reference three different types of information in a single chart. Continue by learning how to create and edit radar charts, which can be used to plot five different data values, and how to combine two types of chart by using the combo chart which you can use to create a graphic that combines multiple data types. Finally, you will observe how to create and edit a map chart for situations when you have data relating to locations, so you can use the map chart to plot values on a geographic display. In order to practice what you have learned, you will find the Word document named Excel 2019 for Windows: Working with Different Chart Styles Exercise as well as the associated materials in the Resources section.

COURSE_DESCRIPTION: The Cybersecurity in Healthcare MOOC was developed as part the SecureHospitals.eu project. This project has received funding from the European Union's Horizon 2020 Coordination Research and Innovation Action under Grant Agreement No. 826497. The course "Cybersecurity in Healthcare" has been developed to raise awareness and understanding the role of cybersecurity in healthcare (e.g., hospitals, care centres, clinics, other medical or social care institutions and service organisations) and the challenges that surround it. In this course, we will cover both theoretical and practical aspects of cybersecurity. We look at both social aspects as technical aspects that come into play. Furthermore, we offer helpful resources that cover different aspects of cybersecurity. Even if you are not active in the healthcare domain, you will find helpful tips and insights to deal with cybersecurity challenges within any other organisation or in personal contexts as well. This course begins by introducing the opportunities and challenges that digitalisation of healthcare services has created. It explains how the rise of technologies and proliferation of (medical) data has become an attractive target to cybercriminals, which is essential in understanding why adequate cybersecurity measures are critical within the healthcare environment. In later modules, course contents cover the threats, both inside and outside of healthcare organisations like e.g. social engineering and hacking. Module 4 on Cyber Hygiene describes how to improve cybersecurity within healthcare organisations in practical ways. Module 5 looks deeper into how organisational culture affects cybersecurity, the cybersecurity culture, focusing on the interaction between human behaviour and technology and how organisational factors can boost or diminish the level and attention to cybersecurity in healthcare. Do you work for a hospital, clinic, medical practice, care centre, care provider, social care organisation, or nursing home? Do you want to improve your personal or your organisation's cybersecurity (cyber security, IT security, information security, network security, computer security, awareness)? Then please visit <https://www.securehospitals.eu> to gain access to a range of resources. You can also join the Security providers and Trainers platform (see: <https://www.securehospitals.eu/for-providers-and-trainers/>) or our Community of Practice (see: <https://www.securehospitals.eu/community/>).

COURSE_DESCRIPTION: Diagnosing problems within a network or a computer requires a special and versatile toolbox for the IT specialist. This 9-video series outlines many popular troubleshooting tools and practical strategies needed to quickly isolate all kinds of problems, regardless of platform, and resolve them, to help restore normal working conditions efficiently and quickly. Various process checklists are invaluable-the five-step system checklist, the six-step analyzing systems, the seven-step remediation of malware, all discussed here. Is the problem widespread or limited to one machine? Has anything significant been installed recently-hardware or software? Are users plagued by popups, spam, slow bootups, or slow performance? Do specific security issues need addressing? Is a Web-based email application (Hotmail, Yahoo, G-mail accounts) involved? If malware is suspected or discovered, the system is often infected; one machine or many may need to be rebooted, restarted, and cleaned-and antivirus or antimalware installed. Learn what to do and when to do it, from rolling back updates to restarting service. Course helps prepare for CompTIA+ certification exam 220-1002

COURSE_DESCRIPTION: By the end of this project, you will have an understanding of error and exception handling in java. Once you have a beginner's

knowledge of java programming and start coding you may find that something disrupts the normal flow of the program you have built. You may find

yourself with errors in your code. This course will provide students with the knowledge behind exception handling in java and show how to write high-

quality code to ensure that if your java program encounters a situation that it cannot cope with that the right procedures are in place to provide

meaningful information and deal with those errors. Thus, ensuring that your code is efficient and robust is an essential aspect of writing high-

quality code. This project will take students through a number of examples demonstrating several of the most useful java exceptions. You will gain an

understanding of exception handling in java from the in-depth examples provided. Note: This course works best for learners who are based in the North

America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Ultimately, ethical hacking is about hacking, so the ethical hacker must have some hands-on hacking skills. Explore fundamental hacking techniques in this 14-video course: SQL injection, cross-site scripting (XSS), malware, using viruses, DoS attacks, steganography, using

Metasploit, and Windows hacking. Key concepts covered here include how to use SQL injection and variations; how to execute basic SQL Injection; and

learning how to recognize XSS, an attack on the user via the website, as opposed to attacks on the website via the user. Next, learners examine malware threats and learn how to recognize and describe types of malware; learn to implement an innocuous virus in penetration testing; and learn the types of DoS and associated countermeasures. Continue by learning how steganography works, a technique important to ethical hacking because it is a favorite technique to exfiltrate data from malicious insiders; and the basics of Metasploit, a penetration-testing software that finds security issues, verifies vulnerability mitigations, and manages security assessments. Finally, learn to execute basic Metasploit commands; and learn to use common Windows hacking techniques.

COURSE_DESCRIPTION: Excel 365 includes powerful tools to summarize data. In this course, you will learn how to create, edit, and format PivotTables and PivotCharts; and how to use slicers. Key concepts covered in this course include how to use a PivotTable to find trends in data, and how to add extra levels of detail and multiple value fields in a single table. Because a PivotTable is highly customizable, you will observe how to configure and customize its display and control settings. Next, you will examine how to use label and value filters to analyze data, how to use a slicer to filter data, and how to customize the appearance of a slicer. Finally, you will explore how to use data from a PivotTable to create a PivotChart and then customize and format the PivotChart. In order to practice what you have learned, you will find practice exercises and samples in the Resources section.

COURSE_DESCRIPTION: This course presents how properties of acting systems and programs can be verified automatically. The basic notion is a transition system: any system that can be described by states and steps. We present how in CTL (computation tree logic) properties like reachability can be described. Typically, a state space may be very large. One way to deal with this is symbolic model checking: a way in which sets of states are represented symbolically. A fruitful way to do so is by representing sets of states by BDDs (binary decision diagrams). Definitions and basic properties of BDDs are presented in this course, and also algorithms to compute them, as they are needed for doing CTL model checking.

COURSE_DESCRIPTION: This course examines how new digital tools, such as the Internet, smartphones, and 3D printing, are revolutionizing the world of marketing by changing the roles and practices of both firms and consumers. Marketing in a Digital World is one of the most popular courses on Coursera with over 500,000 learners and is rated by Class Central as one of the Top 50 MOOCs of All Time (<https://www.class-central.com/report/top-moocs/>). You will be able to: • Understand how digital tools are changing the nature of marketing • Explain how digital tools allow consumers to take a more active role in product development, promotion, placement, and pricing activities • Obtain a new set of concepts, tools, and stories to enhance your digital marketing efforts This course is part of Gies College of Business' suite of online programs, including the iMBA and iMSM. Learn more about admission into these programs and explore how your Coursera work can be leveraged if accepted into a degree program at <https://degrees.giesbusiness.illinois.edu/idegrees/>.

COURSE_DESCRIPTION: This course is for anyone passionate in learning how to develop FPGA-accelerated applications with SDAccel! We are entering in an era in which technology progress induces paradigm shifts in computing! As a tradeoff between the two extreme characteristics of GPP and ASIC, we can find a new concept, a new idea of computing... the reconfigurable computing, which has combined the advantages of both the previous worlds. Within this context, we can say that reconfigurable computing will widely, pervasively, and gradually impact human lives. Hence, it is time that we focus on how reconfigurable computing and reconfigurable system design techniques are to be utilised for building applications. One one hand reconfigurable computing can have better performance with respect to a software implementation but paying this in terms of time to implement. On the other hand a reconfigurable device can be used to design a system without requiring the same design time and complexity compared to a full custom solution but being beaten in terms of performance. Within this context, the Xilinx SDx tools, including the SDAccel environment, the SDSoc environment, and Vivado HLS, provide an out-of-the-box experience for system programmers looking to partition elements of a software application to run in an FPGA-based hardware element, and having that hardware work seamlessly with the rest of the application running in a processor or embedded processor. The out-of-the-box experience will provide interesting and, let us say, "good enough" results for many applications. However, this may not be true for you, you may be looking for better performance, data throughput, reduced latency, or to reduce the resources usage... This course is focusing exactly on this. After introducing you to the FPGAs we are going to dig more into the details on how to use Xilinx SDAccel providing you also with working examples on how to optimize the hardware logic to obtain the best of of your hardware implementations. In this case, certain attributes, directives, or pragmas, can be used to direct the compilation and synthesis of the hardware kernel, or to optimise the function of the data mover operating between the processor and the hardware logic. Furthermore, In this course we are going to focus on distributed, heterogeneous infrastructures, presenting how to bring your solutions to life by using the Amazon EC2 F1 instances.

COURSE_DESCRIPTION: In this 1-hour long project-based course on Linux: Use Vim to Edit an HTML Document, you will be working entirely in the Bash shell and using powerful VIM commands to learn how we can fully work with files without the need of an IDE or text editor GUI. You will be going through a full workflow, from entering, and exiting VIM, saving and quit without save, to powerful copy, paste and search and replace commands which will allow us to work with single words, whole lines and even chunks of text. You will no longer be confused over the various modes in VIM, and you will be able to comfortably work with files of any size. This course is designed for any person working or who intends to work with Linux, from Linux system administrators to developers and DevOps practitioners. Or even if you are a student who is curious to get comfortable with Linux this course is for you also. This is an intermediate level course and is designed for an individual who has a beginner's knowledge of the Linux/Unix command line

and Unix crud practices in computer science. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Explore the numerous Windows 10 remote management tools that can be used by administrators to remotely connect to computers to troubleshoot or fix problems in this 13-video course. Key concepts covered in this course include an overview of Windows Remote Management (WinRM) and the components and features supplied by WinRM; how to use the winrm quickconfig command; and how to use WinRM to access and obtain data from a remote computer. Then you will learn how to use the enable-remoting cmdlet (lightweight command) to configure a computer to receive remote commands; configure a computer to accept incoming remote desktop requests; and grant remote desktop access to users on a PC. Next, learners are shown how to change the listening port for remote desktop on a computer; differentiate between supported and unsupported Windows versions and editions as they relate to remote desktop clients; and use the Windows Remote Assistance tool. Finally, learn to use the Quick Assist tool to provide remote assistance; and learn the Remote Desktop Connection, and Windows Remote Assistance tool. This is one course in a series to help learners prepare for the MD-100: Windows 10 certification exam.

COURSE_DESCRIPTION: Explore cloud computing concepts such as cloud model types, resource sharing, measure service, and virtual desktops. This course covers: the features of the Infrastructure as a service (IaaS), Software as a service (SaaS) and Platform as a service (PaaS); differentiating between public, private, hybrid, and community cloud infrastructures; the differences between internal and external shared resources; rapid elasticity as a feature through a cloud service provider; the benefits of on-demand computing and resource pooling; considerations and benefits of using a measured service or a metered service; the benefits of using off-site cloud-based e-mail; the benefits of using cloud file storage services; when to use cloud-based applications; the types of virtual desktops and their purposes; the technology characteristics of IaaS, SaaS, and PaaS cloud services, and the benefits of cloud file storage services. The course concludes with an exercise on working with cloud technologies, types of service, rapid elasticity, and using cloud file storage services. This course can be used to help prepare for the 220-1001: CompTIA A+ certification exam

COURSE_DESCRIPTION: With advances in technology and cloud computing, there are now numerous data sources available to guide decision-making and drive organizational success. Harvesting the right kind of data requires that HR teams possess strong analytical skills; high-performing HR teams know that their function is to leverage data as a "decision science" by identifying metrics and data sources that deliver organizational insights. In order to do so, HR must ensure that metrics and measures are used effectively to achieve strategic goals. This course focuses on identifying effective data sources, developing meaningful metrics, designing long-term measures, and applying results in support of organizational strategy and tactics.

COURSE_DESCRIPTION: We live in an uncertain and complex world, yet we continually have to make decisions in the present with uncertain future outcomes. Indeed, we should be on the look-out for "black swans" - low-probability high-impact events. To study, or not to study? To invest, or not to invest? To marry, or not to marry? While uncertainty makes decision-making difficult, it does at least make life exciting! If the entire future was known in advance, there would never be an element of surprise. Whether a good future or a bad future, it would be a known future. In this course we consider many useful tools to deal with uncertainty and help us to make informed (and hence better) decisions - essential skills for a lifetime of good decision-making. Key topics include quantifying uncertainty with probability, descriptive statistics, point and interval estimation of means and proportions, the basics of hypothesis testing, and a selection of multivariate applications of key terms and concepts seen throughout the course.

COURSE_DESCRIPTION: This course will give you a first look at using git to manage your code's version control, as well as offering an introduction to accessing the Github tools you'll need as a beginner. Developers need version control, and git is an industry standard. Github's ability to make a repository easily accessible to a distributed team, as well as its support for agile development, make it a valuable tool for every developer's toolbox. By the end of this project, you will create a Github-hosted repository forked from an open-source project and start a Github repository of your own. You'll learn about forking and cloning projects, creating branches to work on a repository in your development environment, pushing your changes, reverting changes, and keeping commits clean. With this introduction, you'll be one step closer to mastering the tools every developer needs to create a new app, a fork of a favorite tool, or the next big project. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: The IP SLA feature is another excellent built-in troubleshooting tool, but it can be a little daunting to configure. In this course, you'll learn how to configure and troubleshoot using IP SLA and how to easily access the data you collect. Next, you'll explore NetFlow and Flexible NetFlow, powerful and simple methods for carefully monitoring and tracking the data flows through your Cisco device. You'll learn the required configurations and how to troubleshoot what might be incorrect in your configurations. Finally, you'll examine another valuable troubleshooting tool - the Cisco DNA Center. You'll examine the features that can assist you in troubleshooting and the commands required to properly implement DNA Center itself. This course is one of a series that prepares you for the 300-410: Implementing Cisco Enterprise Advanced Routing and Services (ENARSI) certification exam.

COURSE_DESCRIPTION: Databases are the backbone of modern life, powering everything from online shopping to social media to memberships and countless other activities. They enable us to store, manage, and retrieve vast amounts of information quickly and efficiently. Understanding databases is the very first step in mastering data analytics. In this course, you will explore databases, beginning with the basic concepts of data analytics, databases, including relational and non-relational databases, and common roles in the field of data science. Then you will examine structured query language (SQL) including examples of SQL operations. Finally, you will investigate the purpose of databases in applications, database management systems (DBMS), how databases are implemented in everyday business environments, and common database tasks. This course can be used to prepare for CompTIA Data+ (DA0-001) exam.

COURSE_DESCRIPTION: Azure Active Directory (AD) uses roles to manage a variety of tasks. In this 12-video course, you will discover how to manage user roles, configure administrative accounts, and delegate administrative rights, in preparation for the MS-100 Microsoft 365 Identity and Services certification exam. Begin by exploring the administrator role permissions in Azure AD, and with a look at viewing and managing roles, or more specifically, how to find out which users have been assigned to which roles. Next, learn to delegate app administration roles in Azure AD and how to protect the Office 365 global administrator account. Then learn how to configure role-based access control (RBAC) using the Azure portal and how to invite users from other organizations to access your resources. Next, learners receive an overview on delegating Azure AD admin roles, followed by studying administrator role security and steps involved in role security planning. Discover how to assign security and compliance roles and permissions, and finally, how to restrict a user's administrative permissions by assigning least privileged roles in Azure AD.
