COURSE_DESCRIPTION: As an Azure Administrator, you will need the skills to manage Windows and Linux virtual machines (VMs), giving your organization the flexibility of multiple virtual operating systems without the cost and maintenance commitments that come with additional physical hardware. Discover virtual machine configuration settings in the Azure cloud. Deploy Windows and Linux virtual machines using the portal, the CLI, and PowerShell. Enable Secure Shell (SSH) public key authentication for Linux VMs and use Azure Bastion to manage VMs. Then, attach and encrypt VM disks, and deploy virtual machine extensions. Finally, create a virtual machine custom image and configure a virtual machine scale set. This course can be used to prepare for exam AZ-104: Microsoft Azure Administrator.

COURSE_DESCRIPTION: Cisco has demonstrated its commitment to securing the enterprise with many different solutions that focus on specific needs, such as the Email Security Appliance, Cisco Cloud Email Security, and the Web Security Appliance. In this course, you'll learn the key facts about all three of these solutions. You'll explore how the WSA and ESA are impressive appliances when it comes to securing your web and e-mail infrastructures and about the components that make up these solutions. Even if you're not currently planning on implementing a WSA in your enterprise, it can be beneficial to see what a typical configuration is like. So next you'll look at the options available with the WSA. Finally, you'll learn about the steps involved in a typical ESA configuration and verification and how the ESA can function for you in the enterprise. This course can be used in preparation for the 350-701: Implementing and Operating Cisco Security Core Technologies (SCOR) certification exam.

COURSE_DESCRIPTION: Developers need to be aware of Azure messaging and monitoring services to enhance the Serverless deployment experience that saves time and lowers overhead cost. Use this course to investigate Azure messaging and notification essentials to manage events in Serverless applications and Azure monitoring services to control the environments with simplified configurations in the Azure cloud platform. Explore the capabilities of Azure Event Grid, differences between messages and events, and prominent messaging services provided by Azure. This course will also help you examine the advantages offered by Azure Notification Hubs and how they differ from Amazon SNS, the characteristics of Azure Monitor, and how to work with Application Insights and Log Analytics. After finishing this course, you'll have the knowledge to manage serverless applications with Azure messaging and monitoring services.

COURSE_DESCRIPTION: The Business Statistics and Analysis Capstone is an opportunity to apply various skills developed across the four courses in the specialization to a real life data. The Capstone, in collaboration with an industry partner uses publicly available 'Housing Data' to pose various questions typically a client would pose to a data analyst. Your job is to do the relevant statistical analysis and report your findings in response to the questions in a way that anyone can understand. Please remember that this is a Capstone, and has a degree of difficulty/ambiguity higher than the previous four courses. The aim being to mimic a real life application as close as possible.

COURSE_DESCRIPTION: A Recommender System is a process that seeks to predict user preferences. This Specialization covers all the fundamental techniques in recommender systems, from non-personalized and project-association recommenders through content-based and collaborative filtering techniques, as well as advanced topics like matrix factorization, hybrid machine learning methods for recommender systems, and dimension reduction techniques for the user-product preference space. This Specialization is designed to serve both the data mining expert who would want to implement techniques like collaborative filtering in their job, as well as the data literate marketing professional, who would want to gain more familiarity with these topics. The courses offer interactive, spreadsheet-based exercises to master different algorithms, along with an honors track where you can go into greater depth using the LensKit open source toolkit. By the end of this Specialization, you'll be able to implement as well as evaluate recommender systems. The Capstone Project brings together the course material with a realistic recommender design and analysis project.

COURSE_DESCRIPTION: Heute, im Zeitalter des Kunden, ist Wettbewerbsvorteil ganz neu definiert. Kunden haben die Kontrolle. Sie haben mehr Auswahlmöglichkeiten als je zuvor, was zu gigantischen Erwartungen führt. Die einzige Quelle für Wettbewerbsvorteile ist die Besessenheit, Kunden zu verstehen, sie zu begeistern, eine Verbindung zu ihnen aufzubauen und ihnen zu assistieren. Unternehmen brauchen daher Menschen, die von Kunden "besessen" sind. Menschen, die sich so sehr für ihre Kunden interessieren und engagieren, für die sie etwas schaffen und gestalten, dass sie bereit sind, Zeit zu investieren, Risiken einzugehen und zuzugeben, wenn sie selbst vielleicht falsch liegen. Menschen, die so kundenbesessen sind, dass sie sich nie zufriedengeben, sondern ständig versuchen zu ergründen, was sie sonst noch für ihre Kunden tun könnten.

COURSE_DESCRIPTION: The Capstone is the culminating project in the Financial Reporting Specialization. You will have the opportunity to combine the concepts and techniques obtained through all the courses in this specialization (Accounting Analysis I: The Role of Accounting as an Information System, Accounting Analysis I: Measurement and Disclosure of Assets, Accounting Analysis II: Measurement and Disclosure of Liabilities, and Accounting Analysis II: Accounting for Liabilities and Equity) and apply them to a real world accounting project. The Capstone project will be 3 weeks long. You must take the Capstone project class after taking all the other courses in this Specialization.

 COURSE_DESCRIPTION: Today's software companies are looking for people who know how to do more than just work in an Agile teams. They desire employees who can design software to work with the quick, demanding iteration cycles of the Agile process. In other words, they are looking for someone with Agile software design experience. Agile software design is a valuable skill since it complements the Agile team approach by focusing on making software more maintainable and minimizing complexity as software changes and scales. In this course, you'll learn about the concepts of modularity, coupling, and cohesion. You'll examine the product vision and using product vision boards. Next, you'll learn the purpose of Agile scoping tools, the concept of minimal viable product, and the Definition of Done. Finally, you'll learn about UX design and Agile design best practices.

 COURSE_DESCRIPTION: In this challenge, you will write several Transact-SQL queries by using strings and string functions. First, you will launch Microsoft SQL Server Management Studio, and then you will develop queries that return string character counts and use UPPER and LOWER functions. Next, you will develop more specific queries which replace characters in a string and use string parsing to extract data. Finally, you will explore

queries that search for characters in a string by using the CHARINDEX function. Note: Once you begin a challenge you will not be able to pause, save, or return to your progress. Please ensure you have set aside enough time to complete the challenge before you start.

COURSE_DESCRIPTION: Tired of emailing documents back and forth with others to review and edit? Looking for a one-stop shop to store and share docs, spreadsheets, presentations, photos, .pdfs and more? Look no further...A Shared Google Drive is the solution to all your digital communication woes! Google Drive is a cloud-based tool ideal for sharing and collaborating on projects with your team, or even with those outside of your team or organization. A Shared Google Drive provides access to Docs, Sheets, Slides and more, allowing real-time edits by team members for easy collaboration. Even better, Microsoft Office products are compatible for use with Shared Google Drives. In this 2-hour long project-based course, you will learn how to create a Shared Google Drive, add members and manage member roles within your new Shared Google Drive, build content within new Shared Google Drive using Google tools, continue building content using sources outside of Google and review/adjust settings in your new Shared Google Drive. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: A kommunikáció napjainkban számos formát ölthet, és könnyű megfelekedezni róla, hogy milyen erőteljes hatást gyakorolhat a megfelelő üzenet. A rossz üzenet ugyanilyen káros lehet, és nagyon fontos, hogy megértsük a különböző jeleket - hogy hogyan kell figyelni, és mire kell figyelnie a hallgatónak. Ezért áll a hatékony kommunikáció első helyen a hét vezetői kompetencia között. Ez a tanfolyam bemutatja a személyes szükségletek és az aktív vezetői szerep legfontosabb szempontjait, a személyes szükségletek Önre és másokra gyakorolt hatását, valamint hogy hogyan tudjuk a kommunikációt személyre szabni. Ezután megtudhatja, hogyan mérheti fel a személyes szükségleteket, és hogyan határozhatja meg a kommunikáció tanulságait. Megtanulhatja, hogyan válhat jobb hallgatóvá, és hogyan használhatja jól az aktív hallgatás és kérdéses képességeit. Végezetül megismerkedhet tényekkel, epizódokkal és érzésekkel, valamint hogy hogyan készülhet fel beszélgetésekre. Ezt a tanfolyamot eredetileg a Global Knowledge (GK) állította össze.

COURSE_DESCRIPTION: URLs are endpoints for web services that can be accessed remotely. Server-Side Request Forgery (SSRF) attacks target servers and result from attackers leveraging URLs and vulnerable web applications to access sensitive data. Cross-Site Request Forgery (CSRF) attacks target client devices and perform unauthorized actions using authenticated user sessions with web services. In this course, learn about SSRFs. Next, discover how to scan a network for HTTP hosts using Nmap, execute a Cross-Site Request Forgery (CSRF) attack, and run a Denial of Service (DoS) attack against a web server. Finally, practice mitigating controls for SSRFs. Upon completion, you'll be able to mitigate Cross-Site Request Forgery and Server-Side Request Forgery attacks.

COURSE_DESCRIPTION: There are numerous security reporting and alerting features when discussing Microsoft 365. Learners will discover how to create and manage both security and Azure Identity Protection alerts, while preparing for the MS-101: Microsoft 365 Mobility and Security exam. The key

concepts covered in this 11-video course include the service assurance feature, which is available in the Security and Compliance center; features of the Service Assurance Dashboard and how to add users to access the information; and identity protection capabilities and the Azure AD Identity Protection directory roles. Next, you will learn the benefits of the Azure AD Identity Protection dashboard and investigate events by using the dashboard; create and manage alerts by using the dashboard; access and manage Microsoft 365 alerts and advanced alerts; and access and use the Service Assurance dashboard and Identity Protection dashboard. Finally, investigate Identity Protection events, view and manage alerts, and create and configure a new alert policy and learn about preset default alert policies.

COURSE_DESCRIPTION: Learners discover how to implement a working API (application programming interface) using Python and the Flask framework in this 13-video course. Explore RESTful APIs, practical applications for APIs, and API framework choices for full stack development. Learn more about API scaffolding, HTTP data processing, working with JSON payloads, handling unexpected errors, and testing APIs with Pytest. Begin by learning about benefits of using Python APIs for FSD (full stack development) and examine principles and methods behind RESTful APIs as well as practical applications and considerations for using APIs in FSD. Then compare popular API frameworks for Python and the advantages and disadvantages of each, and explore the benefits of TDD (test-driven development) for API development in Python. Next, learn how to configure and launch a simple endpoint in a Python Flask server application; implement GET and POST operations in a Python Flask API; and handle unexpected errors, implement logging, and learn how to use Pytest to run automated tests against API endpoints. The concluding exercise involves implementing a Python Flask API app with CRUD operations and validating endpoints.

COURSE_DESCRIPTION: Preparation for the Amazon Web Services (AWS) Certified Solutions Architect-Associate (SAA-C02) certification exam continues with this 12-video series. In this course, learners explore AWS cloud database solutions, including both SQL (structured query language) databases, for accessing relational database objects, and NoSQL databases, designed for high performance and availability. You will learn how to deploy and manage NoSQL databases such as DocumentDB and DynamoDB. Examine differences between SQL and NoSQL databases, learning to select the one you need to address specific business needs. Then watch detailed demonstrations of how to manage the Amazon RDS web service by using the graphical user interface, the command-line interface, and PowerShell. Next, learn how to enable RDS (relational database service) replication, how to view RDS performance metrics, and how to manage RDS snapshots. Finally, learn when to deploy DocumentDB and DynamoDB. After completing this course, you will be ready to explore AWS user and group management, including use of roles, policies, and multifactor authentication to secure accounts and the AWS Directory Service.

COURSE_DESCRIPTION: Create a new spreadsheet and workbook, with Excel 2019. During this course, you will begin by learning how to create and open a document, and then learn how to use document templates. This leads into how to manage worksheets, which are used in Excel to manage different sets of

data within a workbook. Next, observe how to save your worksheet or workbook as an Excel version or pdf; and recover unsaved documents. Learn how to insert headers and footers, useful if you have additional information to insert into a spreadsheet. Examine how to set your print area; adjust your print page layout, and then print your document. Discover how to check for compatibility issues; edit your document properties; and check for personal information in your document. The course concludes by showing how to create an accessible document, and how to protect your document or restrict all access with a password. In order to practice what you have learned, you will find the Word document named Excel 2019 for Windows: Creating & Saving Workbooks Exercise as well as the associated materials in the Resources section.

COURSE_DESCRIPTION: Creating a data pipeline is essential to making any data-related product. AWS Data Pipeline, AWS Batch, and AWS Workflow frameworks allow you to manage data using ETL data management across various AWS tools and services, making AWS a perfect platform for combining data from multiple sources. In this course, you'll learn how to automate data movement and transformation processes on AWS and define data-driven pipelines and workflows. Investigating how data pipelines enable seamless, scalable, and fault-tolerant data transfer between AWS storage and computational tools helps illuminate the full potential of AWS in machine learning. By the end of this course, you'll have a working knowledge of the most common use cases of AWS Data Pipeline, AWS Batch, and AWS Workflow, bringing you closer to being fully prepared for the AWS Certified Machine Learning - Specialty certification exam.

COURSE_DESCRIPTION: Corporate strategy is the strategy a firm uses to compete across multiple businesses. Many small firms want to grow by entering new businesses. Many large firms already are in multiple businesses, e.g. a photo camera producer selling also sunglasses. We developed this course to help you make good corporate strategy decisions. Of the many decisions a firm has to make, corporate strategy decisions are among the most consequential. We will look at these key corporate strategy decisions: - Diversification: How and which businesses should your firm enter? - Divestiture: How and from which businesses should your firm exit? - Corporate HQ: How should we organize corporate headquarters to create value across the different businesses?

COURSE_DESCRIPTION: Digital technology brings the power to transform interactions within business, but it's imperative that organizations are agile enough to respond in an ever-changing digital landscape. Digital also enables easier review of digital metrics. By consistently measuring key metrics and performance indicators, Digital helps businesses to learn from each cycle of the process to inform the next iteration. In this course, you'll learn that a digital mindset means understanding the power of digital technology to transform interactions within the business and you'll gain a richer set of customer insights by analyzing the way they interact with your organization through your digital assets. This in turn can help you to understand the customer journey and to improve the experience for your customers, which further increases engagement and conversion. You'll also explore the customer and company benefits of adopting a digital mindset and how an agile approach involves frequent reviews, allowing businesses to lower their costs and to increase their market reach more efficiently. Finally, this course shows you how to solve problems differently with Digital, and how adopting a digital culture and mindset can add value to your business, your organization, your department, and your own role. In this course, This course was developed in partnership with the Digital Marketing Institute. (www.digitalmarketinginstitute.com) For those who are interested in pursuing a certification, please contact the Digital Marketing Institute directly via this website: <https://digitalmarketinginstitute.com/lp/skillsoft>

COURSE_DESCRIPTION: Through this course you will start to critically examine your own ideas about education, teaching and learning. The critique will be developed through engagement with theories and ideas developed through educational research. You will be encouraged to use these ideas to challenge or support your own ideas about education. Each week we will focus on one key question, using video lectures, key readings and challenges to explore some commonplace notions about education. With the guidance of the course team, you will be asked to use these ideas to critically reflect on your own understandings and experience. By the end of the course, you will have developed a personal response to the main question: what is your preferred future for education?

COURSE_DESCRIPTION: Optimize your Unix network services! Network services are the system operations and protocols that govern the interaction of the Unix OS with network devices, computers and the internet. They are generally handled by daemons, which are background programs, accessed through the pkg command, and operate at specific system run levels. During this course, you will learn how to configure the IPV 4 and IPV 6 settings that route internet traffic, and install and configure the following servers: the DNS server, a DHCP (Dynamic Host Configuration Protocol), and the Apache web server.

COURSE_DESCRIPTION: Data analysis has replaced data acquisition as the bottleneck to evidence-based decision making --- we are drowning in it. Extracting knowledge from large, heterogeneous, and noisy datasets requires not only powerful computing resources, but the programming abstractions to use them effectively. The abstractions that emerged in the last decade blend ideas from parallel databases, distributed systems, and programming languages to create a new class of scalable data analytics platforms that form the foundation for data science at realistic scales. In this course, you will learn the landscape of relevant systems, the principles on which they rely, their tradeoffs, and how to evaluate their utility against your requirements. You will learn how practical systems were derived from the frontier of research in computer science and what systems are coming on the horizon. Cloud computing, SQL and NoSQL databases, MapReduce and the ecosystem it spawned, Spark and its contemporaries, and specialized systems for graphs and arrays will be covered. You will also learn the history and context of data science, the skills, challenges, and methodologies the term implies, and how to structure a data science project. At the end of this course, you will be able to: Learning Goals: 1. Describe common patterns, challenges, and approaches associated with data science projects, and what makes them different from projects in related fields. 2. Identify and use the programming models associated with scalable data manipulation, including relational algebra, mapreduce, and other data flow models. 3. Use database technology adapted for large-scale analytics, including the concepts driving parallel databases, parallel query processing, and in-database analytics 4. Evaluate key-value stores and NoSQL systems, describe their tradeoffs with comparable systems, the details of important examples in the space, and future trends. 5. "Think" in MapReduce to effectively write algorithms for systems including Hadoop and Spark. You will understand their limitations, design details, their relationship to databases, and their associated ecosystem of algorithms, extensions, and languages. write programs in Spark 6. Describe the landscape of specialized Big Data systems for graphs, arrays, and streams

COURSE_DESCRIPTION: Organization is a fundamental theme to understand the real functioning of each company or, more in general, of any institution, and it is part of the basic know-how of each manager. Organization design implies decisions on how work is subdivided and how coordination between the various activities and people who autonomously perform them is guaranteed. Moreover, organization design is willing to consider also the interdependences between people daily activities (namely processes): in fact, processes are the real lever to achieve organizational efficiency and effectiveness. Lastly, organization design should also consider how people and units take their decisions, given that organizing and deciding are two central and complementary activities of the managerial function. To achieve these goals, this course aims at explaining you the main concepts of organization, with a strong practical orientation: illustration of typical organizational problems through real corporate examples will be used. But a solid theoretical background is provided as well: the main theories behind organizational design will be used to dig into the main areas of investigation. The course investigates three main areas: the analysis and design of a proper organization, at the micro level (individual) and at the macro level (group of multiple individuals); the analysis of how to effectively manage processes, in terms of activities, performance and principles; the analysis of how to rapidly take decisions, in terms of process, constraints, models and game theory approach.

COURSE_DESCRIPTION: Welcome to this project-based course on Linear Regression with NumPy and Python. In this project, you will do all the machine learning without using any of the popular machine learning libraries such as scikit-learn and statsmodels. The aim of this project and is to implement all the machinery, including gradient descent and linear regression, of the various learning algorithms yourself, so you have a deeper understanding of the fundamentals. This course runs on Coursera's hands-on project platform called Rhyme. On Rhyme, you do projects in a hands-on manner in your browser. You will get instant access to pre-configured cloud desktops containing all of the software and data you need for the project. Everything is already set up directly in your internet browser so you can just focus on learning. For this project, you'll get instant access to a cloud desktop with Python, Jupyter, NumPy, and Seaborn pre-installed.

COURSE_DESCRIPTION: Vulnerabilities can be defined as a flaw or weakness that can be exploited. One method to identify vulnerabilities is to use a scanner to assess computers, networks, and applications for known weaknesses. By using a scanner, attackers can learn how to best exploit a target system. In this course, you will learn how port scanning works and recognize common ports with known protocols. Discover how to perform network discovery using Nmap, as well as how to perform vulnerability scanning using Nessus. Discover how to exploit a target system using Nessus and Metasploit, and explore how to take over a remote system. Lastly, you'll also explore vulnerability and system scanning countermeasures, and explore countermeasure techniques used to protect against system exploitation. This course was originally created by Global Knowledge (GK).

COURSE_DESCRIPTION: Der Sinn eines jeden Projekts ist der Nutzen, d. h. der Wert, den es bietet. Projektmanagement erfordert, dass man den Nutzen ständig im Auge behält. Egal, ob es sich dabei um erhöhte Einnahmen, Effizienz, Effektivität oder immaterielle Vorteile handelt, die Bereitstellung von Mehrwert ist das Herzstück eines jeden Projekts. In diesem Kurs werden Sie die Bereitstellung von Projektnutzen und -wert untersuchen und erfahren, dass Projekterfolg mehr bedeutet als die Bereitstellung von materiellen Werten. Sie lernen die Konzepte der immateriellen Werte kennen, einschließlich der Einbindung von Stakeholdern und der Sicherstellung, dass die Projektleistung als wertvoll und nützlich wahrgenommen wird. Außerdem lernen Sie Techniken zur Priorisierung von Anforderungen, zum Einholen von Feedback, zur Reduzierung von Ineffizienzen und Verschwendung sowie zur Steigerung des Durchsatzes kennen. Schließlich werden Sie die Konzepte des unternehmerischen Wertes und des wertorientierten Managements überprüfen.

COURSE_DESCRIPTION: In this course, you'll learn about the essential components involved in solutioning CloudOps projects, the layered approach of managing enterprise CloudOps applications, and the role-based and layer-based CloudOps solutioning architectures. You'll examine the role of different types of cloud engineers in providing logical and physical architectures for the CloudOps solutioning process. You'll also learn about the role of the Cloud Governance Framework in providing comprehensive cloud-centric governance for each phase of the cloud transformation life cycle used in CloudOps. Next, you'll explore the RACI Matrix of Roles for each CloudOps solutioning stakeholder, the Measures and Metrics involved in solutioning CloudOps strategy, and the anatomy of Cloud Service Agreements. Finally, you'll learn about the logical CloudOps architecture and prominent CloudOps solutioning tools for designing, planning, architecting, and implementing CloudOps solutioning.

COURSE_DESCRIPTION: In cybersecurity, it's important to determine whether a user interaction or action represents an attack, followed by discerning the specific attack type and signature. Machine learning (ML) models and managed ML solutions like Microsoft Azure Machine Learning can help with

this. In this course, learn how to create an Azure Machine Learning workspace, read in data, and categorize all of the different types of attacks. Next, discover how to train a random forest classification model using the scikit-learn library and test it on the in-sample validation data. Finally, practice performing multiclass classification to identify the specific type of attack. Upon completion, you'll be able to detect intrusions using data, train and evaluate classification models, and perform multiclass classification.

COURSE_DESCRIPTION: In this 1-hour long project-based course on Linux i/o redirection for DevOps you will be working entirely on the command line and using powerful Linux commands and redirection operators to learn how input and output redirection works in Linux. You will get experience of taking control of what happens to the stdin and stdout of all your commands and no longer be confused about the details on how piping and redirection works in Linux. This course is designed for any person working or who intends to work with Linux, from Linux system administrators to developers and DevOps practitioners. Or even if you are a student who is curious to get comfortable with Linux this course is for you also. By the end of this course, you will have used all of the redirection operators to redirect data and you will be comfortable to do so with ease going forward. This will also allow you to possess one of the important foundations of Bash scripting. This is an intermediate level course and is designed for an individual who has a beginner's knowledge of Linux command line and crud practices in computer science. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Web pages are a great way of sharing ideas and presenting information in an interactive way. SharePoint offers sophisticated web page functionality, and once you master that functionality, you can start building yours. In this 5-video course, "SharePoint Online: Building Web Pages," learners will discover how to format text, add bullet lists, and structure their web pages in SharePoint. This course has been recorded in a SharePoint Online environment. Begin by discovering how to format text to help highlight information using the formatting tools. Then learn how to create a bullet or number list to organize information; use the clipboard to store elements that you want to move around or copy, and format your paragraphs to better organize your ideas and make your text more readable. The course concludes by covering how to add structure to a web page by adding columns, headers, and headings with the text layout and styles tools.

COURSE_DESCRIPTION: This course has been designed to help leaders, like you, learn how to effectively navigate the challenges of significant organizational disruptions. As a participant in this course, you'll discover why an understanding of various stakeholder perspectives can inform and dramatically improve a leader's response to events that threaten an organization's very survival. This course is also about understanding and developing individual and organizational resilience-the ability to anticipate potential threats; to cope effectively with adverse events when they occur; and to adapt to changing conditions, ensuring a viable path forward for yourself, your team, and your organization. These topics are particularly relevant in the wake of the global COVID-19 pandemic. Many course examples will reference lessons leaders around the world have learned during this far-reaching healthcare crisis. During the eight course modules, which are distributed over four weeks, participants will explore topics such as: Why the VUCA world is making crises more common; Characteristics of resilient organizations and ways to increase resilience; Stakeholder value propositions and how these are threatened during a crisis; Organizing frameworks for estimating the types of crises an organization might encounter; the Unique and challenging nature of the crisis environment; the Fundamentals of crisis leadership; and Building a plan to prepare yourself, your team, and your organization for your next major crisis-which, in today's world, is not so much an "if", as a "when". Professor Mike

Barger, your faculty member for this course, has served as a TOPGUN instructor in the United States Navy and as a founder and executive at JetBlue Airways. His professional experience has helped him learn a great deal about crisis leadership and to gain a true sense of what it means to be resilient. Throughout the course, Professor Barger will draw upon many practical examples that will make the content of this course easy to appreciate, understand, and translate into practical lessons that you will be able to apply immediately at your organization. Crisis leadership is a topic that's exciting, daunting, and almost impossible to master. With some time and effort over the four weeks of the course, however, you can develop an exceptional set of crisis-leadership tools that will serve you well throughout your professional career.

COURSE_DESCRIPTION: The application layer is another prime target for Denial of Service attacks. In this course, you'll explore common application layer DoS attacks like SlowLoris, the Reddit Hug of Death, and UDP app-layer attacks. With botnet traffic making up about 25% of all Internet traffic, they are a real cause for concern. You'll also learn about bots and botnets, including their purpose and common ways they are proliferated. Since Denial of Service attacks can cause so much havoc, you need to do all you can to defend against them. Finally, you'll explore commonly deployed DoS and DDoS defensive countermeasures, tools, and strategies. This course is one in a series that helps to prepare you for the Certified Ethical Hacker v11 (312-50) exam.

COURSE_DESCRIPTION: You can use charts and tables to communicate complex data in a clear, straightforward manner. In this course, you will see how to incorporate these powerful communication tools into your documents. First, the course explores how to insert and format tables in Google Docs. You will see how to build tables, edit and modify rows and columns, and format your table properties. You will also learn about a new tool in Docs, table templates, which allow you to quickly create tables for managing projects and documentation. Next, the course covers the fundamentals of chart creation and formatting. You will see how to insert different types of charts and graphs and customize them to highlight your data and better fit your document style. Finally, you will see how to add tables and charts from Google Sheets and link them to your document. Would you like hands-on practice? Download the sample files from the Course Contents pane or from the Resources section. Then upload the files to your Google Drive to follow along with select videos.

COURSE_DESCRIPTION: This course is for you if you are interested in transitioning toward a managerial role in cybersecurity and mobility. Through interviews with industry experts in this area, you will be able to analyze innovations powering the rapid spread of information technology and how they present new challenges for protecting data. For example, mobile devices increase convenience but often bypass traditional security measures. After this course, you will be able to describe how the nature of the threat evolves, as culprits employ a burgeoning set of sophisticated tools to take advantage of our growing reliance on networks for critical-data exchange. If you want to pursue a career in the public sector, the stakes are high as well. The proliferation of hackers, inevitable human errors, bring-your-own-device (BYOD) initiatives, and the ever-broadening need to share information weigh heavily on government and education organizations, and consume substantial resources. The Pentagon, for example, has proposed to spend \$23 billion on network security initiatives through 2018. This sounds like a large sum, until you consider the scope and importance of the U.S. government information resources this investment must protect. After completing the course modules you will be able to explain how yesterday's prevention strategies are no longer adequate for stopping advanced, targeted attacks. Effective cybersecurity must be multi-dimensional and tiered, as threats can originate from virtually anywhere, target numerous levels of an organization, and sometimes persist for months or years before an information security staff is aware of an attack or breach. Therefore securing networks requires a holistic approach that incorporates several elements.

COURSE_DESCRIPTION: Wie vermitteln Unternehmen ihre Geschäftsdaten? Nur eine gemeinsame Sprache kann maximale Klarheit in der Kommunikation schaffen. Die Buchführung ist ein Aspekt dieser gemeinsamen Sprache. Sie ist eine interne Funktion, die Geschäftsvorfälle und finanzielle Ereignisse in einem Unternehmen identifiziert, erfasst, zusammenfasst und darstellt. Dieser Kurs beschäftigt sich mit den Grundkonzepten und Praktiken der Buchführung. Sie erfahren etwas über die Bilanzgleichung und ihre Komponenten und lernen, die Regel von Soll und Haben anzuwenden. Des Weiteren lernen Sie den Buchungszyklus sowie die Wirkungsweise der Einnahmen-Überschuss-Rechnung und der Periodenrechnung kennen.

COURSE_DESCRIPTION: Der Begriff "Wachstumsdenken" ist Ihnen wahrscheinlich im unternehmerischen oder wirtschaftlichen Kontext geläufig. Aber auch wenn die positiven Auswirkungen einer wachstumsorientierten Denkweise in Unternehmen weitläufig spürbar sind, beginnt doch alles beim Einzelnen - der Person, die wachstums- und lernfähig ist und sich weiterentwickeln kann. In diesem Kurs erfahren Sie, wodurch sich Wachstumsdenken auszeichnet und warum es Ihr Privat- und Arbeitsleben in vielfältiger Weise bereichern kann. Sie erfahren, wie Sie Ihr Wachstumsdenken stärken und einer starren, von Negativität geprägten Denkweise entgegenwirken können und mit welchen Strategien für mehr Resilienz Sie Ihren Blick auf das Mögliche, Erlernbare und Ausbaufähige gerichtet halten, selbst angesichts von Rückschlägen.

COURSE_DESCRIPTION: This capstone project has been designed as an opportunity to practice what you have learned in the first 3 courses of this specialisation. This capstone project consists of 4 assignments. You will have to develop an immersive Android app with the use 3D graphics, sensor control and VR. For the first assignment, you will have to develop a virtual art gallery using the Android Canvas drawing functions introduced in Course 1 "Introduction to Android graphics". The second assignment entails the design and development of a virtual 3D art gallery based on OpenGL ES applying the knowledge and skills acquired in Course 2 "Android Graphics with OpenGL ES". For the third assignment you will create a virtual reality app with your 3D art gallery, using advanced techniques like introducing sensor control, animations, binocular view for VR, lighting effects and texture mapping, based on the knowledge and skills you learned in Course 3 "3D Graphics in Android: Sensors and VR". For the final submission of the capstone project we give you the avenue to combine your creativity with all the knowledge and skills you gained in Android graphics programming from the three first courses. This capstone is intended for learners with basic knowledge in Android app development seeking to develop knowledge in computer graphics and virtual reality in Android. The learners should have completed the 3 courses in this specialisation (i.e. Course 1 "Introduction to Android graphics", Course 2 "Android Graphics with OpenGL ES", and Course 3 "3D Graphics in Android: Sensors and VR") before starting this capstone project.

 COURSE_DESCRIPTION: In this Skillsoft Aspire course, explore how MapReduce can be used to extract the five most expensive vehicles in a data set, then build an inverted index for the words appearing in a set of text files. Begin by defining a vehicle type that can be used to represent automobiles to be stored in a Java PriorityQueue, then configure a Mapper to use a PriorityQueue to store the five most expensive automobiles it has processed from the dataset. Learn how to use a PriorityQueue in the Reducer of the application to receive the five most expensive automobiles from each mapper and write the top five automobiles overall to the output, then execute the application to verify the results. Next, explore how you can utilize the MapReduce framework in order to generate an inverted index and configure the Reducer and Driver for the inverted index application. This leads on to running the application and examining the inverted index on HDFS (Hadoop Distributed File System). The concluding exercise involves advanced operations using MapReduce.

 COURSE_DESCRIPTION: How can companies act in the fight against global warming? This is a question that is being asked more and more urgently to all economic actors. To shed some light on your thoughts, we have met with four companies of various sizes and sectors of activity that are very committed to the subject. They will share with you their progress in aligning themselves with the objectives of the Paris Accord. Alain Grandjean and his colleagues from Carbone 4 will bring you the fundamentals of the subject, scientific bases to clarify the stakes, but also and above all, methodological elements to help you put your company on the path of the 2 degrees. With my fellow professors from ESSEC, we will bring you complementary views and a synthesis of all the contents. This MOOC will not be a technical MOOC, this MOOC will not be an advocacy MOOC either, this MOOC will be a pedagogical object that will help you have a better understanding of organizational issues and managerial concepts in relation to climate change - a complex scientific topic. It is therefore a question of knowing more about how a company can take climate change into account in its strategy and its operations. For those who wish to do so, we will provide you with tools and means to take action on these issues of climate change and energy transition.

COURSE_DESCRIPTION: Cloud computing has become increasingly common in the second and third decades of the 20th century, with no signs of cloud adoption slowing down. Therefore, as someone working in a server environment, you'll need to be confident in your understanding of cloud computing characteristics, tools, and service agreements. Use this course to bring your cloud computing acumen up to speed. Explore the benefits and characteristics of cloud computing. Examine various cloud types, including public, private, hybrid, and community clouds. Moving along, practice using GUI (graphical user interface) and CLI (command line interface) tools to manage cloud services. Then, examine various cloud service-level agreements. When you're done, you'll be able to distinguish cloud deployment types and SLAs for cloud services. You'll also be more prepared for the CompTIA Server+ SK0-005 certification exam.

COURSE_DESCRIPTION: This industry project is designed to allow you to apply the knowledge you have gained throughout the specialization for advising a real company. Our partner company will approach you with two specific questions the company is currently facing and that relate to the content of the specialization. You are asked to choose one of these questions and conduct an in-depth research on the topic. You need to collect relevant

information, analyze it and relate it to the content you have learned throughout the Specialization. Based on your findings you will write a final report summarizing your research and consult the company how to deal with the issues they are facing.

COURSE_DESCRIPTION: Today's business leaders face a dynamic business environment that requires continual transformation of products, processes, and people. As former U.S. Army Chief of Staff Eric Shinseki put it, "If you dislike change, you're going to dislike irrelevance even more." Advances in technology and the evolution of customers' and investors' values drive enterprises toward strategic change in order to remain relevant and profitable. Because the success of strategic change management largely depends on the behavior of the people within an organization, team leaders play a critical role. In this course, you will discover effective strategies for communicating about change with your team. You will learn how to adjust your team's activities to achieve broad company-wide goals for change. Organizational change is difficult, both to initiate and to maintain. This course will help you to overcome obstacles, including various types of employee resistance to change. You'll learn tools for sustaining change. Throughout, the emphasis is on honest, targeted communication, dialogue, and listening.

COURSE_DESCRIPTION: In this course, you will explore the concept of smart data and its associated lifecycle and benefits and the frameworks and algorithms that can help transition big data to smart data. Begin by comparing big data and smart data from the perspective of volume, variety, velocity, and veracity. Look at smart data capabilities for machine learning and artificial intelligence. Examine how to turn big data into smart data and how to use data volumes; list applications of smart data and smart process, and recall use cases for smart data application. Then explore the lifecycle of smart data and the associated impacts and benefits. Learn steps involved in transforming big data into smart data by using k-NN (K Nearest Neighbor algorithm), and look at various smart data solution implementation frameworks. Recall how to turn smart data into business by using data sharing and algorithms and how to implement clustering on smart data. Finally, learn about integrating smart data and its impact on optimization of data strategy. The exercise concerns transforming big data into smart data.

COURSE_DESCRIPTION: This 12-video course explores selective auditing, which provides valuable insights to activity on a network, and incident response plans, which are proactive measures used to deal with negative events. Key concepts covered here include best practices related to IT security auditing and their benefits, including assurance that IT systems, business processes, and data are protected properly and that privileges are not being abused; and how to use Group Policy to enable file system auditing. Continue by observing how to scan hosts for security weaknesses from Windows and how to scan hosts for security weaknesses from Linux; and learning the importance of securing mobile devices. Next, you will learn how to centrally apply security settings to mobile devices; how to configure Amazon Web Services to use multifactor authentication; and examine how security is applied to applications from design to use. Learn how to use file hashing to detect modifications; how to specify actions used when dealing with security incidents; and learn to view a packet capture to identify suspicious activity centrally apply security settings.

COURSE_DESCRIPTION: Your project may consist of tasks. Tasks are activities that are necessary to complete to finish a project. Discover how to insert a task into your project and then edit its associated information. Organize which tasks are displayed by learning how to group, sort, and apply filters to them. Explore how to add supplementary information to your tasks by inserting notes to a tasks' properties. And learn how to use the highlighting tool to quickly locate specific tasks. This course has been recorded in a Project Online Desktop Client environment.

COURSE_DESCRIPTION: This is a hands-on, guided project on Automatic Machine Learning with H2O AutoML and Python. By the end of this project, you will be able to describe what AutoML is and apply automatic machine learning to a business analytics problem with the H2O AutoML interface in Python. H2O's AutoML automates the process of training and tuning a large selection of models, allowing the user to focus on other aspects of the data science and machine learning pipeline such as data pre-processing, feature engineering and model deployment. To successfully complete the project, we recommend that you have prior experience in Python programming, basic machine learning theory, and have trained ML models with a library such as scikit-learn. We will not be exploring how any particular model works nor dive into the math behind them. Instead, we assume you have this foundational knowledge and want to learn to use H2O's AutoML interface for automatic machine learning. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In this course, you'll learn the commands used to configure the use of SPAN in its different implementations and how to verify that configuration. You'll then move on to examine the IP SLA feature found in most Cisco devices and the IP SLA Responder feature. Next, you'll explore software-defined networking and the Cisco controller approach for device life cycle management. Finally, you'll learn how NETCONF and RESTCONF were invented to make configuration of remote devices very simple and how RESTCONF is a great enhancement over NETCONF since it makes the configuration using a RESTful approach. This course can be used in preparation for the 350-401: Implementing and Operating Cisco Enterprise Network Core Technologies certification exam.

COURSE_DESCRIPTION: Infrastructure as Code is a concept that describes the automated provisioning and management of enterprise infrastructure. In this course, you'll learn about the Infrastructure as Code model for provisioning and managing enterprise infrastructure and how AWS CloudFormation is used to provide this ability. You'll start by examining the concept of the Infrastructure as Code model, how AWS CloudFormation helps model and configure AWS resources, and CloudFormation concepts such as stacks, permissions, and templates. You'll then learn how to create a CloudFormation stack, work with CloudFormation templates, and manage, update, and delete CloudFormation stacks. Next, you'll see how to work with CloudFormation resources and specify CloudFormation parameters and mappings for templates. You'll learn how to define conditions for CloudFormation templates and declare optional outputs for CloudFormation templates. Lastly, you'll learn about CloudFormation intrinsic functions and rollbacks. This course is one of a collection of courses that prepares learners for the AWS Certified Developer - Associate 2020 certification exam.

COURSE_DESCRIPTION: Learners can explore the concepts of Azure Virtual Network (VNet) connectivity, creating and managing VPN gateways, and configuring VNet-to-VNet connections in this 12-video course, helping prepare for the Microsoft Azure Administrator (AZ-103) exam. First of all, you will learn how to recognize when to peer networks, and when to configure a VPN gateway. Next, you will explore how to connect your virtual networks with virtual network peering by using the Azure portal. This leads to configuring VNet-to-VNet by using Azure PowerShell, and by using the Azure Cloud Shell CLI (command-line interface). You will discover how to generate PKI (public key infrastructure) certificates used for P25 VPN connections; how to configure a point-to-site VP; and how to configure a site-to-site VPN. Also, you will examine how to verify a VPN gateway connection using Azure portal and PowerShell, and how to reset a VPN Gateway. The concluding exercise involves describing point-to-site and site-to-site VPN configurations, generating a VPN client PKI certificate, and configuring a point-to-site VPN.

COURSE_DESCRIPTION: Visme is a visualization tool that facilitates data delivery by transforming content into visually appealing formats like infographics and presentations. In this course, you'll achieve a broad overview of Visme's capabilities and use cases. You'll begin by identifying how to create different types of visuals in Visme using templates for concise infographics, social media posts, as well as detailed reports. Moving on, you'll examine how to work with some of these visuals and start by building an infographic. You'll then recognize how to incorporate design elements such as icons, shapes, images, and text within visuals to enhance their appearance. Finally, you'll investigate how to include a video within a visual and make your project stand out by animating various elements of your visuals.

COURSE_DESCRIPTION: In this course, you will discover how to set up a Hyperledger Fabric modular blockchain network for a single organization by using Amazon Managed Blockchain. Course participants should already have set up an Amazon Web Services (AWS) account. A Hyperledger Fabric modular blockchain acts as a foundation for developing blockchain based products, solutions and applications. This course demonstration begins by provisioning and configuring users, policies, and security groups for the blockchain network. Next, learn how to provision the network, including an ordering service and certificate of authority. Learn how to set up a client to interact with the network and initialize a peer for the organization. As you progress, learn how to deploy a smart contract (chaincode) to the network. During this course, you will acquire the skills needed to record transaction information on a blockchain with a focus on the development of applications. By the end of this course, you will be able to set up your own Hyperledger Fabric network on AWS, using their Managed Blockchain service.

COURSE_DESCRIPTION: In this 1-hour long project-based course, you will learn how to connect to your computer's camera, open it, record yourself or something, save it, open the video file you have saved, draw on live video, interact on live video and at the end do Face Detection. This course runs on Coursera's hands-on project platform called Rhyme. On Rhyme, you do projects in a hands-on manner in your browser. You will get instant access to pre-configured cloud desktops containing all of the software and data you need for the project. Everything is already set up directly in your Internet browser so you can just focus on learning. For this project, you'll get instant access to a cloud desktop with (e.g. Python, Jupyter, and Tensorflow) pre-installed. Prerequisites: In order to be successful in this project, you should have a fundamental knowledge of Python. Notes: - You will be able to access the cloud desktop 5 times. However, you will be able to access instructions videos as many times as you want. - This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: With data now being one of the most valuable assets to tap into, the demand for data science skills increases by the day. Statistics and sampling are at the core of data science. Use this course as a theoretical introduction to using samples to reveal various statistics. Examine what exactly is meant by statistics and samples. Explore descriptive statistics, namely measures of central tendency and of dispersion. Study probability sampling techniques, including simple random sampling and cluster sampling. Investigate how undersampling and oversampling are used to generate more balanced datasets. Upon completion, you'll know the best way to use statistics and samples for your specific goals and needs.

COURSE_DESCRIPTION: In this challenge, you will manage Windows Server 2019 in an Azure virtual machine by using PowerShell remoting. First, you will verify the existence of a new inbound port rule assigned to the virtual machine. Next, you will configure PowerShell remoting on the virtual machine. Finally, you will use PowerShell remoting to display a filtered list of services running on the virtual machine. Note: Once you begin the challenge lab, you will not be able to pause, save, or exit and then return to your challenge lab. Please ensure that you have set aside enough time to complete the challenge lab before you start.

COURSE_DESCRIPTION: The 5 courses in this University of Michigan specialization introduce learners to data science through the python programming language. This skills-based specialization is intended for learners who have a basic python or programming background, and want to apply statistical, machine learning, information visualization, text analysis, and social network analysis techniques through popular python toolkits such as pandas, matplotlib, scikit-learn, nltk, and networkx to gain insight into their data. Introduction to Data Science in Python (course 1), Applied Plotting, Charting & Data Representation in Python (course 2), and Applied Machine Learning in Python (course 3) should be taken in order and prior to any other course in the specialization. After completing those, courses 4 and 5 can be taken in any order. All 5 are required to earn a certificate.

COURSE_DESCRIPTION: In the spirit of exploring the exciting possibilities of generative AI, this course was built using several AI technologies paired alongside Skillsoft's trusted design methodologies. Generative AI was used to draft the curriculum plan and on-screen text, while AI text-to-speech services were used for the narration. In addition, generative AI was used to produce the course assessment and AI assistive technologies helped translate the course captions into multiple languages. What is ChatGPT and what can it do? This groundbreaking technology has revolutionized natural language processing and its applications are far-reaching. In this course, you will discover ChatGPT, focusing on its purpose and key features. Then you will compare its abilities to other language models. Next, you will explore the history of language models and artificial intelligence (AI) and the different uses of ChatGPT, including how it can be used in real-world applications. Finally, you will examine the potential benefits and limitations of using ChatGPT, as well as the ethical considerations surrounding its use. By the end of this course, you will be able to describe the purpose of ChatGPT, outline its key features, and consider its potential impact on society and culture.

COURSE_DESCRIPTION: Amazon offers a wide range of services that help enhance AWS workflows, making it much easier to create automated data processing and machine learning pipelines. Use this course to get to grips with some of these services. Explore how Amazon Athena is used for querying data and how Amazon QuickSight integrates with Athena to help decision-makers analyze data and interpret information in an interactive visual environment. Then, get hands-on practice working with both tools. Moving along, learn how Amazon EMR is used to process large amounts of data and investigate its integrations with various Apache frameworks, such as Hadoop and Spark. When you're done, you'll know how to use Amazon services to automate machine learning processes, further preparing you for the AWS Certified Machine Learning - Specialty certification exam.

COURSE_DESCRIPTION: Microsoft Teams 2022 bietet verschiedene Tools zum Senden von Nachrichten und Anrufen. Zunächst erfahren Sie, wie Sie eine private Nachricht senden und eine Gruppendiskussion erstellen können, um einfach mit Ihren Kollegen zu kommunizieren. Als Nächstes lernen Sie, wie Sie Ihre Nachrichten und Unterhaltungen verwalten können, damit Sie leicht auf Ihre wichtigsten Chats zugreifen können. So können Sie beispielsweise eine Unterhaltung anheften, wenn Sie sie täglich benötigen. In diesem Kurs erfahren Sie auch, wie Sie einen Audio- und einen Videoanruf tätigen können. Dies ist nützlich, um direkt mit Ihren Kollegen oder Kunden zu sprechen oder Besprechungen abzuhalten. Darüber hinaus lernen Sie, wie Sie bei einem Videoanruf Hintergrundeffekte und Untertitel verwenden können. Mit Teams können Sie auch Gruppenanrufe tätigen, Inhalte freigeben und Anrufoptionen nutzen. Und wenn Sie jemanden nicht erreichen, können Sie ihm eine Voicemail hinterlassen.

COURSE_DESCRIPTION: A graphical user interface can be a nice alternative to using the command line for running programs, as there is no need to memorize how to execute a command with arguments. A label may be added to describe what is needed for the application, for example. There are many choices for building a graphical user interface in Python. Some of them require licensing for commercial use and each have their own sets of learning curves. Using Tkinter avoids the licensing issues and is quite simple to use as well. It is a GUI package that is the standard GUI toolkit for python applications and is widely available on multiple platforms including Windows, Mac, and Linux. In this course, you will implement a Tkinter GUI to read from a user-provided file containing data. The GUI will allow the user to plot columnar data as X and Y coordinates on a regression graph, and display statistics about the data from each of the selected columns. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In dem Maße, in dem sich die Welt und die Technologie verändern, suchen Unternehmen ständig nach Möglichkeiten der Transformation. Der Aufbau digitaler Geschicklichkeit schafft die Voraussetzungen für eine erfolgreiche und nachhaltige digitale Transformation. In diesem Kurs erfahren Sie, wie Sie die digitale Geschicklichkeit in Ihrem Unternehmen ausbauen und so sicherstellen können, dass es bereit ist, neue Chancen zu ergreifen. Sie erfahren, was digitale Geschicklichkeit ist und warum Sie sie in Ihrem Unternehmen erreichen sollten. Außerdem lernen Sie die vier Merkmale eines digitalen Unternehmens kennen und erfahren, wie diese zusammenwirken und sich gegenseitig unterstützen. Sie lernen weiterhin Strategien für den Aufbau einer Digital-First-Mentalität, die Digitalisierung von organisatorischen Verfahrensweisen, die menschlichen Fähigkeiten einer befähigten digitalen Belegschaft und die Ressourcen zur Unterstützung dieser Fähigkeiten kennen. Schließlich werden Sie verstehen, wie Sie die Phasen der digitalen Transformation mit Geschicklichkeit durchlaufen können.

COURSE_DESCRIPTION: In this 10-video course, discover how to manage Azure Virtual Machines (VMs) by adding data disks, adding and removing network interfaces, resizing and moving VMs, and redeploying Windows and Linux VMs in preparation for the Microsoft Azure Administrator (AZ-103) exam. Begin by adding a data disk to your Windows VM in the Azure portal; then add a data disk to a Linux VM in Azure PowerShell. Next, you will learn how to add and remove network interfaces from Azure VM, and how to resize your VM with the Azure portal. You will then look at moving your VM to another resource group, region, or availability zone; learn how to redeploy a Windows VM to a new Azure node, and redeploy a Linux VM to a new Azure node. Conclude the course by exploring how to use the Custom Script Extension for Windows and Linux. In the closing exercise, you will add and configure a data disk for a Windows and Linux VM, move a VM to a different resource group, and resize a VM.

COURSE_DESCRIPTION: As a security operations person, you'll need to tailor your methods to suit the operating system you're working with. This course covers some of the core competencies required to conduct offensive security operations against a Windows environment. Throughout this course, you'll learn how to recognize the differences between various Windows versions. You'll examine the role of intrusion detection systems (IDS) and intrusion prevention systems (IPS) in a Windows environment. You'll then learn about the MITRE ATT&CK framework and how it relates to Windows intrusions and identify the different Windows logging mechanisms. Next, you'll practice using event logging, basic PowerShell commands, and the Windows Registry. You'll then explore how the Windows hashing algorithm works and practice cracking an NTLM hash value. Lastly, you'll investigate different data artifacts within Windows and outline how best to work with Active Directory and Kerberos.

COURSE_DESCRIPTION: How do we develop tomorrow's leaders today? At Skillsoft, we recognize the critical function mentorship and coaching will play in the future of leadership development for the rising leader to the C-Suite. And so, to celebrate National Mentoring Day on October 27th, we're having conversations with two leaders who are expert mentors and coaches - Caroline Taylor, former CMO for IBM's Global Markets, and Beth Egan, an Executive Coach and Masterclass Speaker. They break down the difference between being a mentor and being a coach, when it's best to implement each, and the benefits that mentorship and coaching brings for both the recipients and providers. Please note that this course material includes content gathered from external websites which may fall outside your company network. Please consult with your IT department policies with respect to any restrictions in viewing content from external websites.

COURSE_DESCRIPTION: This course will continue the introduction to Python programming that started with Python Programming Essentials. We'll learn about different data representations, including strings, lists, and tuples, that form the core of all Python programs. We will also teach you how to access files, which will allow you to store and retrieve data within your programs. These concepts and skills will help you to manipulate data and write more complex Python programs. By the end of the course, you will be able to write Python programs that can manipulate data stored in files. This will extend your Python programming expertise, enabling you to write a wide range of scripts using Python. This course uses Python 3. While most Python programs continue to use Python 2, Python 3 is the future of the Python programming language. This course introduces basic desktop Python development environments, allowing you to run Python programs directly on your computer. This choice enables a smooth transition from online development environments.

COURSE_DESCRIPTION: COVID-19 vaccine eligibility is increasing across the U.S., as many states lower age requirements for those who can be vaccinated for COVID-19. By the end of March, the U.S. will have received 240 million doses of COVID-19 vaccine, and 173 million doses of those will have been distributed, according to Dr. Gregory Poland, an infectious diseases expert and head of Mayo Clinic's Vaccine Research Group. "Our way out of this (COVID-19 pandemic) is getting a vaccine," says Dr. Poland. "But when there's misinformation and disinformation circulating about the vaccines, it scares people." Dr. Poland emphasizes the importance of relying on credible, reliable medical resources for accurate information. He also has a message for young people, who think they are too healthy to get sick with COVID-19 and that they don't need a vaccine. "Even if you don't get seriously ill, that doesn't mean you won't have long-term complications," says Dr. Poland. "It also doesn't mean that you couldn't spread it to a member of your family or somebody else." (Published 03/31/2021)

COURSE_DESCRIPTION: By the end of this project, you will be able to leverage the S.M.A.R.T. goal framework to align teams with and project goals with enterprise-level strategic goals to maintain project relevance and ensure effective resource allocation. To do this, you will gain hands-on experience working in the Miro online visual collaboration platform for teamwork where you will build a S.M.A.R.T. goal framework. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: This is a recorded replay of the Talent Development and Transformation: Learning (and Leading) for Today and the Future LeaderCamp Live session that ran on January 21st at 2 PM ET led by Benny Ramos, Solution Principal, Leadership & Business Solutions at Skillsoft. With rapid changes in technology demands and uncertainties related to the global pandemic, organizational growth hinges on employees with the right behavioral and technical competencies. Though digital transformation creates tremendous opportunities to address many challenges in our current time, it requires people to leverage the investment in these technologies, and leadership development which is agile and innovative to maintain engagement and morale. Join this session to gain insights into: • A look at what is driving the need for upskilling and reskilling. • Why planning for new leadership and business mindsets now is so important • How to build a successful development program in the digital era

COURSE_DESCRIPTION: Google Cloud's operations suite, formerly Stackdriver, is used to monitor, log, diagnose, and improve application performance on your Google Cloud environment. In this course, you'll learn about Cloud Monitoring, including how to install the Cloud Monitoring agent on a VM, manage the agent on multiple VMs, and create custom metrics. Next, you'll explore how to create a resource group, use the dashboard to manage alert policies, create a workspace to organize, and manage the monitor information. You'll learn about Cloud Logging and logs-based metrics, as well as how to create charts and alerts using the Google Cloud Console, view and filter logs in Logs Explorer, and search logs with Legacy Logs Viewer. Finally, you'll examine how to create and manage log sinks, use the Cloud Error Reporting console, use Cloud Trace and Cloud Debugger, and view the Google Cloud status dashboard. This course is one of a collection of courses that prepares learners for the Google Cloud Associate Cloud Engineer certification.

COURSE_DESCRIPTION: Daten sind einer der wertvollsten Vermögenswerte eines Unternehmens, aber sie sind nur so wertvoll wie die Methoden, mit denen sie interpretiert werden. Der Schlüssel für die Interpretation von Daten liegt in der Datenwissenschaft, die im Kern Statistik und Stichproben umfasst. In diesem Kurs üben Sie die Verwendung der Pandas-Bibliothek in Python, um mit Statistiken und Stichproben zu arbeiten. Sie üben, Daten aus einer CSV-Datei in einen Pandas-Datenrahmen zu laden, und berechnen eine Vielzahl von Statistiken über Daten. Sie werden sehen, wie Sie die Beziehung zwischen Daten und berechneten Statistiken visualisieren können. Sie setzen verschiedene Stichprobenverfahren ein, wie z. B. geschichtete Stichproben und Cluster-Stichproben. Dann erkunden Sie, wie aus einem unausgewogenen Datensatz mithilfe des imblearn-Moduls in Python eine ausgewogene Stichprobe erstellt werden kann. Nach Abschluss des Kurses sind Sie in der Lage, Stichproben zu erstellen und Statistiken mit verschiedenen Tools und Methoden zu berechnen.

COURSE_DESCRIPTION: The Microsoft 365 subscription service proposes a set of tools that allow you to improve your collaboration with your colleagues. When switching from Office 2010, 2013 or 2016 to Microsoft 365 you'll see some interface changes that will be covered in this course. You'll discover the new interface features and see how the new Start screen works. This course will also show you how to add an account and connected services to work on your files online. You'll be able to save and manage your documents online as well as share them with you're colleagues. In order to improve collaboration Microsoft 365 allows you to comment on a file and see real-time changes made by other people. If you have documents saved in your computer you can easily transfer and sync them on Microsoft 365.

COURSE_DESCRIPTION: This course will introduce you to the linear regression model, which is a powerful tool that researchers can use to measure the relationship between multiple variables. We'll begin by exploring the components of a bivariate regression model, which estimates the relationship between an independent and dependent variable. Building on this foundation, we'll then discuss how to create and interpret a multivariate model, binary dependent variable model and interactive model. We'll also consider how different types of variables, such as categorical and dummy variables, can be appropriately incorporated into a model. Overall, we'll discuss some of the many different ways a regression model can be used for both descriptive and causal inference, as well as the limitations of this analytical tool. By the end of the course, you should be able to interpret and critically evaluate a multivariate regression analysis.

COURSE_DESCRIPTION: With an ever-increasing reliance on the productivity GSuite tools (like Google Docs and Google Sheets), there is a need more than ever to create efficiency where possible. By using Google Apps Script, users can create tools to automate tasks that could be monotonous and time-consuming. For example, a user can send emails from a Google Sheet or insert a Google Map into a Google Doc. Upon completing this project, learners will be able to create a custom Google Apps Script that will automate sending a weekly email update to a contact list. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: This 5-video course explores how to configure PowerPoint for Office 365 to meet your personal style when developing a presentation. In it, you will learn how to customize the view, interface, Quick Access Toolbar, and ribbon. You will then learn how to adjust the Presentation view while editing slides. This course examines the Office tool to browse, select, and install Add-ins. Learners will observe how to customize the PowerPoint interface by choosing a different Color Scheme, by changing the background design, and how activate and deactivate certain tools, for example, the Ruler. You will learn how to create shortcuts for tools that you frequently use by adding them to the Quick Access Toolbar. You will explore the PowerPoint ribbon, which is the location of most of the PowerPoint editing tools, how to edit the appearance of the ribbon, and how to change which Standard tabs are activated when you open PowerPoint. Finally, learners will observe how to use the Collapse tool to give more room to a slide and slide pane while editing.

COURSE_DESCRIPTION: Azure offers several fully managed database and storage solutions to help developers focus on building apps instead of infrastructure management. This course shows you how to avail of these services during serverless app development and deployment. Explore Azure SQL databases, the Azure services based on relational and non-relational data stores, and the different approaches to implementing non-relational databases using Azure Cosmos DB. Create different Azure storage types, serverless Azure SQL databases, and functions that get triggered based on Blob storage activity. Use Node.js to perform CRUD operations on Azure Cosmos DB resources and create, design, and connect to Azure databases using cloud-native apps. Manage Azure Cosmos DB resources and SQL API accounts using Node.js web apps and create Azure Cosmos DB accounts, databases, containers, and items. When you're done, you'll know how to select, set up, and use the best storage and database services for your serverless projects.

COURSE_DESCRIPTION: Machine Learning uses real data to train algorithms that can be used for anomaly detection, computer vision, and natural language processing. In this course, you'll learn about datasets and how to manipulate data for them. Next, you'll learn the difference between labeled and unlabeled data and why some AI models require labeled data. You'll examine the features that should be used for a selected dataset. Next, you'll learn about the types of machine learning algorithms that are available, including regression algorithms, classification algorithms, and clustering algorithms. Finally, you'll explore the difference between supervised and unsupervised machine learning models. This course is one in a collection that prepares learners for the Designing and Implementing a Data Science Solution on Azure (DP-100) exam.

COURSE_DESCRIPTION: In order to be successful in Data Science, you need to be skilled with using tools that Data Science professionals employ as part of their jobs. This course teaches you about the popular tools in Data Science and how to use them. You will become familiar with the Data Scientist's tool kit which includes: Libraries & Packages, Data Sets, Machine Learning Models, Kernels, as well as the various Open source, commercial, Big Data and Cloud-based tools. Work with Jupyter Notebooks, JupyterLab, RStudio IDE, Git, GitHub, and Watson Studio. You will understand what each tool is used for, what programming languages they can execute, their features and limitations. This course gives plenty of hands-on experience in order to develop skills for working with these Data Science Tools. With the tools hosted in the cloud on Skills Network Labs, you will

be able to test each tool and follow instructions to run simple code in Python, R, or Scala. Towards the end the course, you will create a final project with a Jupyter Notebook. You will demonstrate your proficiency preparing a notebook, writing Markdown, and sharing your work with your peers.

COURSE_DESCRIPTION: The courses in the Introduction to Project Management Principles and Practices Specialization are a recommended precursor to UCI's Applied Project Management Certificate. Successful projects require careful upfront planning. In this course, you'll learn the key roles and responsibilities of the project manager and project team. You'll also learn to answer some key questions upfront to help you meet project objectives: What will this project accomplish? Why is this project important? Who benefits from this project? How will we plan for successful outcomes? Upon completing this course, you will be able to: 1. Identify the key characteristics of a project 2. Identify primary project constraints 3. Define the role and responsibilities of the project manager 4. Identify Project Organizational Structures 5. Understand the definition of a Project Stakeholder

6. Identify project stakeholders 7. Identify information needs of the project stakeholders 8. Define responsibility for managing stakeholder and controlling stakeholder engagement 9. Define the purpose of using a project charter 10. Summarize the key elements of a project plan 11. Identify common sources of conflict within a project environment 12. Describe the difference between authority and influence

COURSE_DESCRIPTION: The Machine Learning Foundations with Python Explorer Journey is a 6-week learning journey for anyone who wants to get a deeper understanding how Artificial Intelligence works under the hood. Problem framing and algorithm selection is the most important part of any machine learning (ML) project. Use this course to learn more about the ML mindset, discover how goal-oriented business problems can be formulated as machine learning problems, and describe factors that drive the selection of the correct algorithm for a particular scenario. This course will help you get acquainted with important ML concepts and terminologies and differentiate between regression, classification and clustering as basic methods in machine learning. You will also learn why Python and data cleaning is important in machine learning models and you will have the chance to practice basic Python functions. Last but not least, you will have the chance to build, train and evaluate a linear regression model with Python programming via a simple problem and implement the concept of machine learning.

COURSE_DESCRIPTION: The medical imaging industry is set to see 9 and a half billion dollars in growth in just a few years, mostly due to advances in AI imaging technologies. AI integration with medical imaging is expected to gain traction as it enables increased productivity, improved accuracy, and reduced errors in the diagnosis performed by technicians and radiologists. The use of AI will also automate the labor-intensive manual segmentation and enable technicians to identify abnormalities, in turn, accelerating the treatment process. Furthermore, AI platforms are also being developed for hospitals and health systems to help clinicians in making quick decisions and improving patient outcomes. Ultimately, this field of research will benefit from more minds refining the technology. This project will get you started in using Python and Tensorflow/Keras for advanced medical imaging. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Ben Sieke, Director of Talent Development and Learning for Delta Dental of California and affiliates, has a vision for his customer service representative workforce: to help them develop critical power skills that are often overlooked and undermined, like empathy, personalization, and how to proactively problem solve. In part 1 of our conversation with Ben, he tells us about his L&D team's customized, blended learning program empowering Delta Dental's customer service representatives to go above and beyond in their roles to provide top-notch service and drive business outcomes. As a huge proponent of L&D measurement, Ben goes on to share not only his program's success metrics, but also how he puts data into action to better serve learners. And while the power skills he's advocating may be vital to ensuring superior service, they're just as valuable to any organization seeking to transform the customer experience - and win the hearts and minds of customers with authenticity and ease. Please note that this course material includes content gathered from external websites which may fall outside your company network. Please consult with your IT department policies with respect to any restrictions in viewing content from external websites.

COURSE_DESCRIPTION: The effective management of Microsoft Azure services requires knowledge of how Azure services are offered throughout the world as well as how to use management tools. You'll begin by exploring the relationship between Azure regions and availability zones and how this can be leveraged to provide service high availability. Next, you'll examine Azure management tools such as the portal, mobile app, CLI and PowerShell. Lastly, you'll explore the purpose of resource groups followed by creating resource groups to organize related Azure resources. This course is one of a collection of courses that prepares learners for the AZ-900 Microsoft Azure Fundamentals certification.

COURSE_DESCRIPTION: All of us are aware that cultural differences are significant and that they affect how we interact with others in business and in leisure activities. But what is culture exactly, and how does it impact on negotiation, in particular? This course will help you to be more precise about different dimensions of culture, from one region or country to another, while helping you to avoid simplifications, clichés and stereotypes. It will also lead you to a better overall awareness of your own culture. In addition the course modules will guide you to a better understanding of when and how cultural differences are likely to influence the different dimensions of a negotiation - the people, problems and processes. Armed with that understanding, your awareness, preparation and strategy will be enhanced when you are faced with negotiators from cultures and regions different from your own. Your ability to anticipate and react, your negotiation flexibility, will be improved and refined. The course also gives you a concrete look at quite different national and regional negotiation styles (we look at the French, Chinese, North American and Middle Eastern). In addition, an examination of negotiation in two multicultural settings (European Union institutions, on the one hand, and the recent COP 21 climate conference in Paris, on the other) highlights the importance of well-designed negotiation processes for getting both efficiency and fairness.

COURSE_DESCRIPTION: The COVID-19 pandemic left many parents without the critical infrastructure needed to manage their work and family demands. The physical and mental burden placed on parents forced many - particularly moms - to significantly reduce their work hours, seek alternative employment, or drop out of the workforce altogether. These impacts have severe ramifications for organizations and our overall economy. In this webinar, the speakers discuss findings from recent research efforts that highlight the challenges facing working parents and opportunities for employers to better support their workers, recasting child care as essential infrastructure. Join speakers Jamie Ladge (associate professor of management, Northeastern University) and Tim Allen (CEO, Care.com) and learn about: • New research findings from both the employer and worker perspective. • Ways organizations can amplify efforts to attract and retain working caregivers. • Creative solutions to solve the current working parent crisis.

COURSE_DESCRIPTION: Many image processing operations involve complex math, but when using OpenCV, much of that is abstracted from the developer. In this course, you'll gain a high-level understanding of advanced image operations in OpenCV. You'll begin by recognizing how to apply different blur operations to an image. These range from simple blurs to Gaussian and median blurs. While doing so, you'll examine their specific advantages and disadvantages and how to distinguish between them. Moving on, you'll outline how to highlight objects in an image using edge detection and augment images by adding shapes and objects to them. Finally, you'll discover how to work with pre-trained classifiers to detect people in an image and perform morphological transformations to emphasize or suppress specific parts of an image.

COURSE_DESCRIPTION: BigML includes various unsupervised learning models used to gain insights into your data. These insights can help make pivotal business decisions or act as a starting point to build supervised learning models. In this course, you'll build several unsupervised learning models and analyze the results they produce. You'll start by creating clusters from a dataset and examining how data points within a cluster share similarities. You'll move on to uncover associations in a dataset about items purchased on an e-commerce platform. Next, you'll apply topic modeling to extract the topics discussed in a collection of texts. Following this, you'll transform a dataset containing multiple fields into a handful of principal components using Principal Component Analysis, or PCA. Finally, you'll explore the detection of anomalies in your dataset.

COURSE_DESCRIPTION: This course provides insight into the key professional skills needed by managers at all levels of an organisation. You'll learn key skills such as how to make a positive first impression; how to become a role model at work; effective time and resource management; and networking. This course forms part of a specialisation from the University of London designed to help you develop and build the essential business, academic, and cultural skills necessary to succeed in international business, or in further study. If completed successfully, your certificate from this specialisation can also be used as part of the application process for the University of London Global MBA programme, particularly for early career applicants. If you would like more information about the Global MBA, please visit <https://mba.london.ac.uk/>. This course is endorsed by CMI

COURSE_DESCRIPTION: Explore how to create and optimize machine learning neural network models, scaling data, batch normalization, and internal covariate shift. Learners will discover the learning rate adaptation schedule, batch normalization, and using L1 and L2 regularization to manage overfitting problems. Key concepts covered in this 10-video course include the approach of creating deep learning network models, along with steps involved in optimizing networks, including deciding size and budget; how to implement the learning rate adaptation schedule in Keras by using SGD and specifying learning rate, epoch, and decay using Google Colab; and scaling data and the prominent data scaling methods, including data normalization and data standardization. Next, you will learn the concept of batch normalization and internal covariate shift; how to implement batch normalization using Python and TensorFlow; and the steps to implement L1 and L2 regularization to manage overfitting problems. Finally, observe how to implement gradient descent by using Python and the steps related to library import and data creation.

COURSE_DESCRIPTION: In this course, you will gain a thorough understanding of the blockchain and distributed ledger technologies, including an introduction to the necessary foundations in cryptography. The course will discuss blockchain as a distributed ledger and introduce distributed consensus as a mechanism to maintain the integrity of the blockchain. The other revolutionary technologies that are changing the world as we speak are artificial intelligence and machine learning. You will learn about the three major types of AI algorithms: supervised and unsupervised machine learning, as well as reinforcement learning. You will learn about the application of blockchain outside of finance. In particular, how blockchain fundamentally changes the way we deal with our personal data. You will see how the web 2.0 model--where big companies like facebook and google collect as much of your personal data as possible to sell it to third parties--is coming to an end. The new web 3.0 is decentralized and uses the power of the blockchain to put users in full control over their own data. Finally, we will look at the benefits and considerations of blockchain and whether blockchain is the right solution for your problem. #UCTFintech

COURSE_DESCRIPTION: With every smartphone and computer now boasting multiple processors, the use of functional ideas to facilitate parallel programming is becoming increasingly widespread. In this course, you'll learn the fundamentals of parallel programming, from task parallelism to data parallelism. In particular, you'll see how many familiar ideas from functional programming map perfectly to the data parallel paradigm. We'll start the nuts and bolts how to effectively parallelize familiar collections operations, and we'll build up to parallel collections, a production-ready data parallel collections library available in the Scala standard library. Throughout, we'll apply these concepts through several hands-on examples that analyze real-world data, such as popular algorithms like k-means clustering. Learning Outcomes. By the end of this course you will be able to: - reason about task and data parallel programs, - express common algorithms in a functional style and solve them in parallel, - competently microbenchmark parallel code, - write programs that effectively use parallel collections to achieve performance Recommended background: You should have at least one year programming experience. Proficiency with Java or C# is ideal, but experience with other languages such as C/C++, Python, Javascript or Ruby is also sufficient. You should have some familiarity using the command line. This course is intended to be taken after Functional Program Design in Scala: <https://www.coursera.org/learn/progfun2>.

COURSE_DESCRIPTION: Wenn auch Sie topaktuelle KI für sich nutzen möchten, sind Sie mit diesem Kurs auf dem richtigen Weg. Deep Learning-Pioniere sind vielgefragt und wenn Sie Deep Learning einmal gemeistert haben, stehen Ihnen zahlreiche Karrieremöglichkeiten offen. Deep Learning ist eine neue "Superkraft", mit der Sie KI-Systeme entwickeln können, die so vor ein paar Jahren gar nicht möglich gewesen wären. Mit diesem Kurs eignen Sie sich die grundlegenden Kenntnisse zu Deep Learning an. Am Ende des Kurses werden Sie die folgenden Fähigkeiten erlangt haben: - Verständnis der wesentlichen Technikertrends, die Deep Learning vorantreiben - Erstellen, Trainieren und Anwenden lückenloser, tiefer neuronaler Netze - Wissen, wie

Sie effiziente (vektorierte) neuronale Netze implementieren - Verständnis der wichtigsten Parameter in der Architektur eines neuronalen Netzes In diesem Kurs erfahren Sie zudem, wie Deep Learning eigentlich funktioniert, da das Konzept hier nicht nur flüchtig oder oberflächlich beschrieben wird Nach Abschluss des Kurses werden Sie in der Lage sein, Deep Learning für Ihre eigenen Anwendungen zu nutzen. Wenn Sie eine berufliche Laufbahn im Bereich KI anstreben, werden Sie nach diesem Kurs zudem grundlegende Fragen in einem Bewerbungsgespräch beantworten können. Dies ist der erste Kurs der Deep Learning-Spezialisierung

COURSE_DESCRIPTION: Treemaps ist eine beeindruckende hierarchische Datenvisualisierungsfunktion von Power BI. Zusammen mit QuickInfos, Matrizen, Datenschnitten und der Aufbereitung für mobile Geräte werden Ihre Berichte äußerst interaktiv und ansprechend. Sie beginnen diesen Kurs mit der Erstellung und Konfiguration einer Treemap in Power BI. Anschließend richten Sie eine QuickInfo für eine Treemap ein und konfigurieren sie so, dass sie ein Diagramm auf einer anderen Power BI-Seite verwendet. Danach erstellen Sie einen Power BI-Bericht, der die Treemap automatisch mit einer Matrixvisualisierung verknüpft. Diesen Bericht optimieren Sie dann für die Anzeige auf mobilen Geräten. Im Anschluss fügen Sie Datenschnitte zu einer Seite in Ihrem Power BI-Bericht hinzu. Abschließend arbeiten Sie mit verschiedenen Datenschnitt-Einstellungen für numerische und kategoriale Felder und implementieren horizontale und vertikale Datenschnitt-Layouts.

COURSE_DESCRIPTION: The third course in the specialization Introduction to Programming in C introduces the programming constructs pointers, arrays, and recursion. Pointers provide control and flexibility when programming in C by giving you a way to refer to the location of other data. Arrays provide a way to bundle data by guaranteeing sequences of data are grouped together. Finally, recursive functions-functions that call themselves-provide an alternative to iteration that are very useful for implementing certain algorithms.

COURSE_DESCRIPTION: File handling is an integral part of many medium-to-large-scale programs in C. Files are the most convenient way of managing data for the wide range of programs of this size. You will start this course by considering the advantages of using files in C and the most important functions for file handling, which are fopen() and fclose(). Explore the modes that fopen() can be used with and read and write data to text files. Begin by reading in individual characters with the fgetc() function, whole strings from a file using fgets(), and structured data with the fscanf() function. Discover how to use the r+, a+, and w+ modes, before turning to writing structured data using the fprintf() function. Next, learn how to read and write binary data by leveraging the fread and fwrite functions and the wb and rb modes. Finally, you will perform file seek operations using the functions fseek, ftell, and rewind to control the position your program is operating on in the file stream.

COURSE_DESCRIPTION: Internet of Things (IoT) is an emerging area of information and communications technology (ICT) involving many disciplines of computer science and engineering including sensors/actuators, communications networking, server platforms, data analytics and smart applications. IoT is considered to be an essential part of the 4th Industrial Revolution along with AI and Big Data. This course aims at introducing IoT Cloud platforms from Samsung, Microsoft, Amazon, IBM and Google and how they can be used in developing IoT applications. This course will be offered in English. Subtitles/captions in English and will be also provided. IoT (Internet of Things, 사물인터넷)는 최근 중요한 정보통신기술로 주목 받고 있으며 센서/제어기, 통신 네트워크, 서버 플랫폼, 데이터 분석, 스마트 앱 등의 컴퓨터공학 기술들이 융합된 기술입니다. IoT는 인공지능, 빅데이터와 함께, 4차산업혁명의 3대 핵심 기술 중 하나로 손꼽히고 있습니다. 글로벌 Cloud 서비스 제공자들이 IoT를 특별히 지원하기 위하여 개발한 IoT Cloud 플랫폼들을 소개합니다. 이것들을 활용하여 다양한 IoT 어플리케이션을 개발할 수 있습니다. 본 과목은 영어로 진행되며, 영문자막(일부 한글과 영문 모두)을 제공합니다.

COURSE_DESCRIPTION: Difficult conversations can be stressful, evoking strong negative emotions, even becoming unpredictable or unsafe as tensions rise. Handled the wrong way, they can damage your work relationships and leave you feeling unsure of yourself. The extent to which you view situations as potentially easy or difficult depends on being aware of, and managing, your emotions. Change your mindset to believing you have the skills to engage in a healthy conversation and you will be able to listen with empathy and communicate even difficult news with tact and diplomacy. In this course, you'll learn steps to prepare yourself for handling difficult conversations. You'll also learn the key elements of being aware of your emotions before a conversation goes out of control as well as strategies that will help you effectively tackle difficult conversations in almost any situation. Finally, you'll learn techniques to end difficult conversations on a positive note.

COURSE_DESCRIPTION: In this course, you will learn about the famous dichotomy between active and passive investing, how to appropriately measure and analyze investment performance and what the future trends in the investment management industry are. You will first learn about absolute and relative performance, risk-adjusted returns and how to decompose investment performance. The focus will then shift to the two main categories of investment vehicles, active and passive funds, and what they entail in terms of expected performance. Finally, you will explore the worlds of sustainable finance, neurofinance and fintech, three areas of research that will shape the future of the investment management industry. You will also benefit from the insights of experts from UBS, our corporate partner, on the practical implementation of the various concepts we will develop in this course.

COURSE_DESCRIPTION: Artificial Intelligence (AI) is no longer science fiction. It is rapidly permeating all industries and having a profound impact on virtually every aspect of our existence. Whether you are an executive, a leader, an industry professional, a researcher, or a student - understanding AI, its impact and transformative potential for your organization and our society is of paramount importance. This specialization is designed for those with little or no background in AI, whether you have technology background or not, and does not require any programming skills. It is designed to give you a firm understanding of what is AI, its applications and use cases across various industries. You will become acquainted with terms like Machine Learning, Deep Learning and Neural Networks. Furthermore, it will familiarize you with IBM Watson AI services that enable any business to quickly and easily employ pre-built AI smarts to their products and solutions. You will also learn about creating intelligent virtual assistants and how they can be leveraged in different scenarios. By the end of this specialization, learners will have had hands-on interactions with several AI environments and applications, and have built and deployed an AI enabled chatbot on a website - without any coding.

 COURSE_DESCRIPTION: Getting insights from data isn't always straightforward. However, using a tool like Power BI helps with heavy lifting. Through this hands-on course, learn to obtain insights from data using a combination of Power BI's visualization and analysis features. Explore how and why numeric data is summarized. Discover how the sum, mean, and median statistics, among others, give different views of the same data. Practice modeling data into customized groups to better represent it to end users. Use scatter charts to identify clusters and enable analysis of snapshots of data with a play axis. Finally, use the key influencers visual to identify how certain metrics are influenced by values in other fields. Upon completion, you'll know how to take advantage of the analytics features of Power BI visuals. You'll also be more prepared for the PL-300 certification exam.

COURSE_DESCRIPTION: JUnit, the Java unit testing framework, can be used with an IDE but also with a build system, such as Maven. Furthermore, JUnit ConsoleLauncher, a stand-alone application, can be used to launch the platform from the command line. This course will dive deep into the use of Maven as well as the JUnit ConsoleLauncher to run all and specific test cases in your application. Begin by running all test cases you have written for your app using Maven. Then run specific tests and define groups of tests using JUnit tags. Next, run the tests from the command line. Finally, execute such tests using the JUnit ConsoleLauncher, which can be run from a shell without other tools such as Maven. Upon completing the course, you'll be able to execute JUnit test cases from the command line using Apache Maven and the JUnit ConsoleLauncher.

COURSE_DESCRIPTION: Many organizations are moving toward the cloud to meet their availability, operations, and scalability objectives. Pay-as-you-go pricing has also become popular as many organizations choose to move beyond investing a large amount of money initially in a development track. Through this course, learn the value of cloud computing and services. Explore the differences between a physical data center and cloud-based services, as well as common cloud models and public cloud providers. Next, examine cloud case studies, customer success stories, and best practices and anti-patterns for cloud. Finally, learn about innovative cloud trends, cloud migration strategies, and trends in cloud deployment. After course completion, you'll be able to outline characteristics and strategies for cloud.

COURSE_DESCRIPTION: In this project, you will incorporate peer review activities into a hands-on, educational course, using Eduflow. Eduflow is a free, easy-to-use online course builder that allows you to develop an interactive learning experience. One of the many great features available in Eduflow is the peer review feedback option. Peer reviews allow learners to provide feedback to their classmates. This feedback exchange is an invaluable learning tool which is effective in any type of classroom both academic and professional. Peer feedback incorporates higher order thinking and promotes 21st Century Skills including collaboration, communication, creativity, and critical thinking. Peer review assignments are an exceptional learning strategy and can take any educational experience to the next level. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: By the end of this guided project, you'll be able to create a login system using python's popular library Tkinter. You'll learn how to create a Graphical User Interface (GUI) in Python from the scratch. You'll learn how to create windows, labels, entry boxes and buttons. You'll learn how to extract data from the entry boxes. You'll learn how to change color, size orientation of most of Tkinter's widgets. You'll learn how to add functionality to the buttons. You'll be capable of manipulating text files by writing, reading, appending and creating them. Out of all the GUI methods in Python, Tkinter is the most commonly used method. Python with Tkinter is the fastest and easiest way to create GUI applications. Tkinter widgets can be used to construct buttons, menus, data fields, etc. in a Python application. Once created, these graphical elements can be associated with or interact with features, functionality, methods, data or even other widgets. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: AWS Virtual Private Clouds (VPCs) provide virtual network infrastructure for AWS services. VPC subnets are configured with IP address ranges which are then assigned to deployed resources such as Elastic Cloud Compute (EC2) instances. VPC settings related to dynamic host configuration protocol (DHCP) and domain name system (DNS) control specific Transmission Control Protocol/Internet Protocol (TCP/IP) behavior. Elastic IP addresses can be assigned to EC2 instances to provide public IP addressing. In this course, discover how VPCs and subnets can address cloud networking needs. Then, create VPCs and subnets using the console, the CLI, and PowerShell. Next, configure VPC DHCP and DNS settings as well as subnet IP addressing. Lastly, create and assign Elastic IP addresses to provide public IP addressing. This course can be used to prepare for exam SAA-C03, AWS Certified Solutions Architect - Associate.

COURSE_DESCRIPTION: Computing applications involving large amounts of data - the domain of data science - impact the lives of most people in the U.S. and the world. These impacts include recommendations made to us by internet-based systems, information that is available about us online, techniques that are used for security and surveillance, data that is used in health care, and many more. In many cases, they are affected by techniques in artificial intelligence and machine learning. This course examines some of the ethical issues related to data science, with the fundamental objective of making data science professionals aware of and sensitive to ethical considerations that may arise in their careers. It does this through a combination of discussion of ethical frameworks, examination of a variety of data science applications that lead to ethical considerations, reading current media and scholarly articles, and drawing upon the perspectives and experiences of fellow students and computing professionals. Ethical Issues in Data Science can be taken for academic credit as part of CU Boulder's Master of Science in Data Science (MS-DS) degree offered on the Coursera platform. The MS-DS is an interdisciplinary degree that brings together faculty from CU Boulder's departments of Applied Mathematics, Computer Science, Information Science, and others. With performance-based admissions and no application process, the MS-DS is ideal for individuals with a broad range of undergraduate education and/or professional experience in computer science, information science, mathematics, and statistics. Learn more about the MS-DS program at <https://www.coursera.org/degrees/master-of-science-data-science-boulder>.

COURSE_DESCRIPTION: Because account management and access control are fundamental to security, it is vital to understand these technologies as an ethical hacker. In this 6-video course, learners can explore account creation concepts, standard access control models, attribute-based access control, and how to design account and access control. Key concepts covered in this course include learning about account creation, and why how an organization creates and manages accounts is fundamental to security; common attack methodologies; and how to test accounts in a network. Next, you will learn about three fundamental access models that are utilized by a wide range of systems and include mandatory access control (MAC), discretionary access control (DAC), and the most common one, role-based access control (RBAC). Then observe how to implement attributed-based access control (ABAC) and its advantages over standard access control; and learn to design your account and account management processes by selecting one of the three fundamental models to use for a test design for an organization.

COURSE_DESCRIPTION: In this 13-video course, learners will discover techniques used to perform software security assessments and testing, including components of a security assessment, test strategy approaches, security control and software testing, and the security management process. Key concepts covered in this course include the major components of a security assessment and test strategies approaches; security control review methods including log and code reviews; and how to recognize security control testing mechanisms such as code testing. Next, learn the importance of a security management process and its common functions; learn steps to take to properly test software to ensure that it is secure; and learn methods to detect potential software vulnerabilities. Then learn common software vulnerabilities such as buffer overflow and injection flaws; learn how to avoid common software vulnerabilities by using secure coding techniques; and explore steps and techniques to analyze risk. Finally, learn about penetration testing and its purpose; and learn microservices, a mini-application that focuses on a specific task, and application programming interfaces (APIs) and highlight security concerns associated with each.

COURSE_DESCRIPTION: In addition to formatting your presentation's slides, PowerPoint offers a wide variety of styles and options for formatting text. This course covers the essentials of font and paragraph formatting in PowerPoint. You will learn how to set and modify such essential elements as font type, size and style to help your text stand out. Discover how to format paragraph attributes, including indentation, text direction, alignment, and spacing, to improve the visual structure of your presentation and the legibility of your text. Would you like hands-on practice? Go to the Resources section of the course and download the sample files to follow along with select videos.

COURSE_DESCRIPTION: Welcome to the Advanced Linear Models for Data Science Class 1: Least Squares. This class is an introduction to least squares from a linear algebraic and mathematical perspective. Before beginning the class make sure that you have the following: - A basic understanding of linear algebra and multivariate calculus. - A basic understanding of statistics and regression models. - At least a little familiarity with proof based mathematics. - Basic knowledge of the R programming language. After taking this course, students will have a firm foundation in a linear algebraic treatment of regression modeling. This will greatly augment applied data scientists' general understanding of regression models.

COURSE_DESCRIPTION: The objectives of this MOOC are to enable you to learn from applying concepts, exercises and learning from the four other MOOCs in this specialization. Learners involved in our programs over the decades have repeatedly told us that going over the material several times helps them progressively delve into the meaning and application of the ideas and experiences. As a result, we have designed this capstone so that it would be the third iteration of working with the ideas and experiences about effective leadership and inspiring its development in others. The first iteration was during one of the other MOOCs in terms of the videos, readings, Forum chats and reflective exercises. The second iteration was doing one of the personal learning or action learning assignments in one of the MOOCs that involved talking to others and writing an essay about the experience. If you had not done the Action learning assignment, then one of the two projects for this MOOC would involve doing it. The third is reviewing and revising your analysis of the experience as the Capstone project to show evidence that you can Be a Leader and help another Develop as a Leader.

COURSE_DESCRIPTION: By its very nature, the workplace sometimes involves conflict and stress. Even mundane day-to-day work activities require negotiation and compromise. And these can often lead to negative emotional reactions or outbursts. But using emotional intelligence (EI) can help you notice, identify, understand, and manage your own feelings and the emotions of others. EI is a positive force that can have significant impact on you, your team, and your organization. In this course, you'll learn what EI is and how it drives personal excellence in the workplace. You will learn some best practices and strategies to become aware of your emotions and use that awareness to manage your behavior. You will also learn how to interpret other people's emotions and use that knowledge to enhance workplace relationships.

COURSE_DESCRIPTION: A network directory service uses a distributed database, which contains various objects, replicated among multiple servers. When working with servers, you need to know how to manage these directory services. Take this mostly hands-on course to learn how to achieve this. Discover how Microsoft Active Directory works. Then, try your hand at creating a new forest and domain in an on-premises virtualized environment. Join computers to the domain for centralized authentication and management purposes. And plan Group Policy settings for domain users and computers. Moving on, inventory servers before configuring a cloud-based directory service and joining devices to it. When you're done, you'll be able to plan, deploy, and manage on-premises and cloud-based directory services. You'll also be more prepared for the CompTIA Server+ SK0-005 certification exam.

COURSE_DESCRIPTION: Becoming adept at using R will form a valuable part of your statistical data analysis programming language toolkit. Achieving this involves learning how to utilize the functional programming structures of R. This course shows how to use conditional constructs, statements, looping, and functions effectively in R. You'll practice using if, else, and the ifelse functions and the switch construct. You'll work with for and while loops. Recognize the next and break statements in R. And examine the repeat loop, which does not have a condition at all and must be used with a break statement. You'll then move on to advanced looping using the vapply(), lapply(), and apply() functions in R. By the end of this course, you'll be able to use f R for control flow and looping.

COURSE_DESCRIPTION: Introduction to Neural Networks These state-of-the-art methods build powerful predictive systems and find latent patterns in large amounts of data. By the end of this course, students will learn the foundations of this complex topic and acquire practical skills to build neural networks in order to solve real-world problems. Objectives: Define powerful applications and use cases that incorporate deep learning. Build foundational neural network models. Implement best practices on deep learning models Any student in this program must have a strong foundation in Python and the common libraries: SciKit-Learn, Pandas, NumPy, and Matplotlib. Additionally, students should have a foundational knowledge of statistics, unsupervised machine learning algorithms, and classification algorithms.

COURSE DESCRIPTION: By the end of this project you will create an application that uses the C# List data structure and the C# Linq to process a collection of Employees in a file. Linq, when used with the List data structure, allows the programmer to compare and perform computations on objects without the need to access attributes directly. It simplifies the process of iterating through a list and obtaining data from user-defined objects. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: To truly demonstrate that you are an AWS practitioner, you must be familiar with the core security support services that Amazon offers. As you design your Virtual Private Cloud (VPC), you'll begin with subnet design and firewall configuration. This course will give you exposure to Network Access Control Lists (NACLs), Security Groups, and Web Application Firewalls (WAF) as TCP/IP layer 3 - 7 firewall solutions. You will further examine anti-denial-of-service mechanisms with AWS Shield Standard and Advanced. Other vital security services you'll explore will include Amazon Inspector, GuardDuty, and Key Management Service (KMS). This course is one of a collection of courses that prepares learners for the AWS Certified Cloud Practitioner 2020 certification.

COURSE_DESCRIPTION: In this 2-hour long project-based course, you will learn how to predict mRNA Vaccine Degradation Rates at various positions of the molecule. Our model will predict likely degradation rates at each base of an RNA molecule which will be useful to develop models and design rules for RNA degradation. We will look at how to build a Bidirectional Gated Recurrent Units Neural Network which can predict the degradation for multiple scenarios at each of the base. We will cover how to train the model and evaluate on a test set. We will then finally make predictions using the

trained model and compare it with the original degradation rates. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

 COURSE_DESCRIPTION: Whether you're new to a leadership role or a battle-tested veteran, there is always more to learn about leading people, leading teams, or leading your business. Learning is a life-long journey, and leadership development is an ongoing process. In this course, you'll be introduced to Skillsoft's Leadership Development Program. Comprised of thirty modern competency-based leadership channels, this program will help expand your knowledge about what it takes to be a leader and the necessary mindsets and behaviors that enable successful leaders to face and overcome the challenges they encounter every day. This course provides an introductory overview to the program and the rich array of courses, resources, tools, and expert advice available to help you grow your leadership career.

COURSE_DESCRIPTION: In this Specialization aimed for those who are preparing to enter the workplace, we will share with you some key cultural and linguistic features characterizing effective communication in this increasingly diverse and internationalised workplace. This is done through four courses, building from knowing the self to communicating with the inner circle of colleagues within the organisation and expanding this circle to include external partners and stakeholders. There is also a capstone project which requires you to apply what you have learned in the four courses in real-life contexts potentially with industry players.

COURSE_DESCRIPTION: In this course, you'll learn about options for the management of Cisco Firepower devices, including FMC, FDM, and ASDM. You'll explore how AAA can protect access through the device and to the device. Next, you'll learn about the RADIUS and TACACS+ security protocols, as well as commands you should use to ensure authentication to a Cisco device. Finally, you'll learn about critical best practices in secure network management for your enterprise and the syntax used with SNMP version 3. This course can be used in preparation for the 350-701: Implementing and Operating Cisco Security Core Technologies (SCOR) certification exam.

COURSE_DESCRIPTION: In this Skillsoft Aspire course, discover how to use Hadoop's MapReduce; provision a Hadoop cluster on the cloud; and build an application with MapReduce to calculate word frequencies in a text document. To start, create a Hadoop cluster on the Google Cloud Platform using its Cloud Dataproc service; then work with the YARN Cluster Manager and HDFS (Hadoop Distributed File System) NameNode web applications that come packaged with Hadoop. Use Maven to create a new Java project for the MapReduce application, and develop a mapper for word frequency application. Create a Reducer for the application that will collect Mapper output and calculate word frequencies in input text files, and identify configurations of MapReduce applications in the Driver program and the project's pom.xml file. Next, build the MapReduce word frequency application with Maven to produce a jar file and prepare for execution from the master node of the Hadoop cluster. Finally, run the application and examine outputs generated to get word frequencies in the input text document. The exercise involves developing a basic MapReduce application.

COURSE_DESCRIPTION: Welcome to this hands-on, guided introduction to Text Classification using 1D Convolutions with Keras. By the end of this project, you will be able to apply word embeddings for text classification, use 1D convolutions as feature extractors in natural language processing (NLP), and perform binary text classification using deep learning. As a case study, we will work on classifying a large number of Wikipedia comments as being either toxic or not (i.e. comments that are rude, disrespectful, or otherwise likely to make someone leave a discussion). This issue is especially important, given the conversations the global community and tech companies are having on content moderation, online harassment, and inclusivity. The data set we will use comes from the Toxic Comment Classification Challenge on Kaggle. To complete this guided project, we recommend that you have prior experience in Python programming, deep learning theory, and have used either Tensorflow or Keras to build deep learning models. We assume you have this foundational knowledge and want to learn how to use convolutions in NLP tasks such as classification. Note: This course works best for learners based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Haben Sie ein potentielltes Risiko für Ihr Unternehmen identifiziert und bewertet, kommt es im nächsten Schritt auf die richtige Vorbereitung zu dessen Bewältigung an. Die Wahrscheinlichkeit, dass eine Bedrohung zur Realität wird, kann variieren. Auch können manche Risiken statt negativen sogar positive Auswirkungen haben. Ob Sie diese Risiken erkennen können, ist ebenfalls von Fall zu Fall unterschiedlich. Es kommt darauf an, dass Sie sich entsprechend vorbereiten, um jedem dieser Risiken souverän begegnen zu können. In diesem Kurs lernen Sie Strategien und Methoden zur Risikobewältigung kennen, mit denen Sie unternehmerische Gefahren minimieren und Chancen für Ihr Unternehmen optimal aufgreifen können. Sie erfahren auch, welche Schritte das Verfassen eines Notfallplans umfasst.

COURSE_DESCRIPTION: In this 1-hour long project-based course, you will learn how to build and configure smart home devices using Packet Tracer. In this project, you will get an introduction to the Packet Tracer and the different components available in Packet Tracer. You will learn to configure a basic topology where you will write a simple python program on the single board computer to turn the led on and off using a switch. You will learn to build a complex topology where you will program the SBC board to connect and automate multiple home devices such as webcam, lamp, window, doors, and fans. You will also learn to simulate the topology to get the results of automation in Packet Tracer. Basics of Python programming are recommended. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Welcome to Performance Assessment in the Virtual Classroom! This course will help you effectively assess student performance virtually, including compliance issues, feedback models, online grade book functions, and data analysis. We will discuss why effective measures of performance and assessment are a crucial component of any virtual program, and the importance of teachers and administrators understanding both the myths and challenges of assessing performance virtually, administering standardized testing with geographical challenges, and complying with state and local requirements to make sure students are meeting requirements. Through the successful completion of this course, you will be able to: • Examine the importance of authentic performance and assessment in the virtual classroom. • Discuss academic integrity and remote assessments in the virtual classroom. • Apply best practices for data analysis and grade book management. • Consider performance and assessment for special populations: gifted, at-risk, and special needs students. • Discuss the importance of instructional feedback and monitoring progress and performance using technology.

COURSE_DESCRIPTION: In this Specialization we will delve into the marketing mix and the skill-set needed to implement successful marketing strategies. Join us and explore the four key concepts of the marketing mix model, also known as the 4Ps: Product (Brand and Product Management), Pricing, Place (Distribution Channel Strategy and Retail) and Promotion (Communication Strategies, PR and Advertising). This course primarily focuses on implementation so you can immediately apply the lessons learned to your work or to a business idea that you are thinking of taking to market. After completing the four courses, you will be able to take part in the Capstone Project where you will have the opportunity to put into practice what you have learned in this specialization by running a real product through the marketing mix.

COURSE_DESCRIPTION: How do you implement ideas? This course provides practical proven tools for transforming an idea into a product or service that creates value for others. As students acquire these tools, they learn how to tell bad ideas from good, how to build a winning strategy, how to shape a unique value proposition, prepare a business plan, compare their innovation to existing solutions, build flexibility into their plan and determine when best to quit. As a vital part of the course students conduct on-site interviews with entrepreneurs who have launched startups, and are eager to share their valuable insights with them. Upon completing this course successfully, graduates will be able to: 1. Transform ideas into real products, services and processes, by validating the idea, testing it, and turning it into a growing, profitable and sustainable business. 2. Identify the major steps and requirements in order to estimate the potential of an innovative idea as the basis of an innovative project. 3. Reach creative solutions via an iteration of a virtually endless stream of world-changing ideas and strategies, integrating feedback, and learning from failures along the way. 4. Apply the 10 entrepreneurial tools in creating a business plan for a new innovative venture. 5. Apply methods and strategies learned from interviews with startup entrepreneurs and innovators. 6. Communicate and sell innovative ideas successfully.

COURSE_DESCRIPTION: Dieser fünfwöchige Onlinevertiefungskurs bietet eine praktische Einführung zum Entwerfen und Erstellen von Datenverarbeitungssystemen auf der Google Cloud Plattform. In Präsentationen, Demos und praxisorientierten Labs entwickeln die Teilnehmer Datenverarbeitungssysteme, erstellen End-to-End-Datenpipelines, analysieren Daten und üben maschinelles Lernen. Dieser Kurs vermittelt den Teilnehmern die folgenden Kompetenzen: • Datenverarbeitungssysteme auf der Google Cloud Plattform entwickeln • Unstrukturierte Daten mit Spark und ML-APIs auf Cloud Dataproc verwenden • Batch- und Streaming-Daten durch die Implementierung von Autoscaling-Datenpipelines auf Cloud Dataflow verarbeiten • Mit Google BigQuery Geschäftsinformationen aus extrem großen Datensets ableiten • Modelle des maschinellen Lernens mit TensorFlow und Cloud ML trainieren, auswerten und damit Vorhersagen treffen • Sofortige Statistiken aus Streaming-Daten ermöglichen • Dieser Kurs richtet sich an erfahrene Entwickler, die für die Verwaltung von Big Data-Transformationen verantwortlich sind, zum Beispiel: • Daten extrahieren, laden, transformieren, bereinigen und validieren • Pipelines und Architekturen für die Datenverarbeitung entwerfen • Modelle des maschinellen Lernens und der Statistik erstellen und warten • Datensets abfragen, Abfrageergebnisse visualisieren und Berichte erstellen >>> Mit Ihrer Teilnahme an dieser Spezialisierung stimmen Sie den Nutzungsbedingungen von Qwiklabs zu, die Sie in den FAQs und unter folgendem Link finden:

COURSE_DESCRIPTION: In this 1-hour long project-based course, you will learn how to utilize MySQL joins in your queries. By the end of this project, you will create a number of examples that will develop your learning around joins in SQL. This course will enable you to take your beginner knowledge of SQL to the next level by enabling you to utilize joins. Thus, being able to develop more complex queries. This course will provide students with the knowledge behind different joins that are available in MySQL language such as inner join, outer join, and left join. This project will take students through a number of examples demonstrating SQL functions based on a database around a bookstore. You will gain an understanding of these concepts from the in-depth examples provided.

COURSE_DESCRIPTION: Power BI ist eines der am häufigsten genutzten Tools zum Erstellen von Datenberichten aus verschiedenen Datenquellen. In diesem Kurs beginnen Sie mit der Installation von Power BI Desktop und dem Import von Daten aus verschiedenen Quellen, darunter relationale Datenbanken, MySQL und PostgreSQL, cloudbasierten Data-Warehouses sowie Excel-, CSV-, JSON- und XML-Dateien. Anschließend verwenden Sie Power BI, um einfache Operationen durchzuführen, z. B. das Ändern von Datentypen, das Umbenennen von Spalten und die Verwendung von Text in Großbuchstaben. Sie werden auch die Power Query-Anwendung öffnen und ausführen. Danach werden Sie Power BI verwenden, um einfache Datenvisualisierungen zu erstellen und zu formatieren, darunter Balken- und Liniendiagramme sowie gestapelte Balkendiagramme. Schließlich üben Sie das Aggregieren von numerischen Daten und Kategoriedaten in Diagrammen und arbeiten mit den richtigen Aggregationsoperatoren für die jeweiligen Felder.

COURSE_DESCRIPTION: Welcome! Do you wish to know how to analyze and solve business and economic questions with data analysis tools? Then Econometrics by Erasmus University Rotterdam is the right course for you, as you learn how to translate data into models to make forecasts and to support decision making. * What do I learn? When you know econometrics, you are able to translate data into models to make forecasts and to support decision making in a wide variety of fields, ranging from macroeconomics to finance and marketing. Our course starts with introductory lectures on simple and multiple regression, followed by topics of special interest to deal with model specification, endogenous variables, binary choice data, and time series data. You learn these key topics in econometrics by watching the videos with in-video quizzes and by making post-video training exercises. * Do I need prior knowledge? The course is suitable for (advanced undergraduate) students in economics, finance, business, engineering, and data analysis, as well as for those who work in these fields. The course requires some basics of matrices, probability, and statistics, which are reviewed in the Building Blocks module. If you are searching for a MOOC on econometrics of a more introductory nature that needs less background in mathematics, you may be interested in the Coursera course "Enjoyable Econometrics" that is also from Erasmus University Rotterdam. * What literature can I consult to support my studies? You can follow the MOOC without studying additional sources. Further reading of the discussed topics (including the Building Blocks) is provided in the textbook that we wrote and on which the MOOC is based: Econometric Methods with Applications in Business and Economics, Oxford University Press. The connection between the MOOC modules and the book chapters is shown in the Course Guide - Further Information - How can I continue my studies. * Will there be teaching assistants active to guide me through the course? Staff and PhD students of our Econometric Institute will provide guidance in January and February of each year. In other periods, we provide only elementary guidance. We always advise you to connect with fellow learners of this course to discuss topics and exercises. * How will I get a certificate? To gain the certificate of this course, you are asked to make six Test Exercises (one per module) and a Case Project. Further, you perform peer-reviewing activities of the work of three of your fellow learners of this MOOC. You gain the certificate if you pass all seven assignments. Have a nice journey into the world of Econometrics! The Econometrics team

COURSE_DESCRIPTION: Mit dem Azure Machine Learning Designer können Sie Machine-Learning-Modelle ohne Code erstellen und Pipelines per Drag&Drop ablegen. In diesem Kurs erfahren Sie, wie Sie mit dem Azure Machine Learning Designer vortrainierte neuronale Netzwerkmodelle erstellen, die Krankheiten anhand von Bildscans erkennen. Sie lernen, wie Sie Daten für das Training, die Validierung und das Testen des Modells einrichten und diese Daten in eine Pipeline einspeisen, die ein DenseNet-Modell verwendet. Als Nächstes erfahren Sie, wie ein Modell konfiguriert werden kann und wie Sie das DenseNet-Modell einer Pipeline durch ein ResNet-Modell ersetzen. Schließlich entdecken Sie, wie die Trainingsmetriken eines Modells analysiert werden können, um zu verstehen, welche Optimierungen zur Erstellung eines zuverlässigen Modells vorgenommen werden müssen. Nach Abschluss des Kurses werden Sie wissen, wie man DenseNet- und ResNet-Modelle erstellt, die Tumore auf Thoraxaufnahmen erkennen können.

COURSE_DESCRIPTION: ThisSkillsoft Aspire course explores NumPy, a Python library used in data science and big data. NumPy provides a framework to express data in the form of arrays, and is the fundamental building block for several other Python libraries. For this course, you will need to know basics of programming in Python3, and should also have some familiarity in working with Jupyter notebooks. You will learn how to create NumPy arrays and perform basic mathematical operations on them. Next you will see how to modify, index, slice, and reshape the arrays; and examine the NumPy library's universal array functions that operate on an element-by-element basis. Conclude by learning how to iterate various options through NumPy arrays.

COURSE_DESCRIPTION: In this 1.5 hour long project-based course, you will learn how to create a program evaluation plan for your non-profit. By the end of the course, you will understand the importance of program evaluation, how to use Logic Models, how to write SMART goals for your program, and how to formulate good questions to gather the data you need. Learning Objectives: Task 1: Understand why evaluation is valuable for your program or organization. Task 2: Learn how to identify and define the typical components of a Logic Model. Task 3: Write SMART goals for a program outcome. Task 4: Identify different measurement tools and how they will be helpful in the evaluation process. Task 5: Understand what makes a good question, identify different types of questions, and practice writing good questions. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Many policies, products, services or processes that we think of as gender-neutral actually have gendered outcomes. Everything from snow plowing to car safety to investment advising to infrastructure investment has impacts that differ by gender. These outcomes can be even more biased if we look at important intersections with race, indigeneity, differences in ability, ethnicity, sexual orientation, and other identities. The question is, what can you do to change this? And, how can you avoid the risks of bias or create innovative new offerings using gender-based insights? Inclusive Analytics Techniques will provide you with the tools and analytical techniques to uncover these intersectional insights. The course covers both quantitative and qualitative data collection and analysis, including basic statistical techniques and practical instructions for working with customers, beneficiaries and other stakeholders. You will learn to incorporate multiple sources of rich evidence in order to develop innovative insights into how policies, products, services and processes can be made more equitable or serve unique communities. This is the second course of the Gender Analytics Specialization offered by the Institute for Gender and the Economy (GATE) at the University of Toronto's Rotman School of Management. It's great on its own, and you will get even more out of it if you take it as part of the Specialization.

COURSE_DESCRIPTION: When does an opportunity to increase the bottom line become a liability for long-term brand sustainability and profitability? That is the question that GAS GAS, an off-road motorcycle manufacturer, is confronting. In this culminating course, it's time to use the business tools you have learned throughout the specialization to solve this real business problem. To help you as you develop a solution to the GAS GAS dilemma, in the Capstone you will also learn a six-step analysis of business problems methodology. By the end of the course, you will understand how to weave together considerations from accounting, finance, marketing and organizational behavior in order to arrive at a sound decision that will positively impact the firm's future.

COURSE_DESCRIPTION: Die Anpassung des Erscheinungsbilds Ihres Windows 11-Systems könnte nicht einfacher sein. Mit Microsoft Windows 11 können Sie viele Systemeigenschaften an Ihren Arbeitsstil anpassen. In diesem Kurs lernen Sie zunächst, wie Sie den Hintergrund und die Anzeigeeoptionen Ihres Windows 11-Desktops anpassen können. Sie lernen, wie Sie Windows-Designs herunterladen, installieren und anpassen können, um das Aussehen der Desktop-Oberfläche weiter zu steuern. Ermöglichen Sie einen schnelleren Zugriff auf häufig verwendete Anwendungen, Ordner und Dateien, indem Sie sehen, wie Sie die Desktopsymbole von Windows 11 aktivieren und anpassen. Erfahren Sie, wie Sie Ihre Soundeinstellungen konfigurieren und bestimmte Sounds für bestimmte Aktionen auswählen können. Erfahren Sie, wie Sie Energie sparen können, wenn Ihr Computer im Leerlauf ist, indem Sie einen Bildschirmschoner aktivieren. Und schließlich erfahren Sie, wie Sie die Geschwindigkeit, den Bildlauf und das Aussehen Ihrer Maus konfigurieren.

COURSE_DESCRIPTION: In this course we're going to guide you through the fundamental building blocks of data science, one of the fastest-growing fields in the world! With the help of our industry-leading data scientists, we've designed this course to build ready-to-apply data science skills in just 15 hours of learning. First, we'll give you a quick introduction to data science - what it is and how it is used to solve real-world problems. For the rest of the course, we'll teach you the skills you need to apply foundational data science concepts and techniques to solve these real-world problems. By the end of this course, you'll be able to leverage your existing data analysis skills to design, execute, assess, and communicate the results of your very own data science projects.

COURSE_DESCRIPTION: An offline address book is a copy of a user address book that can be downloaded and used in an offline environment. In this course, you'll explore offline OABs in Exchange Server 2019 and Exchange Online, including how to create, use, and manage them. You'll start by examining the fundamentals of OABs, as well as OAB generation and the Mailbox Assistant. You'll then explore the OAB distribution process, planning a deployment, and moving OAB generation to another server. Next, you'll see how to download OABs using Outlook and how to use PowerShell to create an OAB. You'll continue on to see how to add and remove address lists from OABs and how to change the default OAB using Exchange Online PowerShell. You'll learn how to assign an OAB to users and how to remove an OAB using Exchange Online PowerShell. Lastly, you'll see address book policies, including how to create them using the Exchange Management Shell. These topics will help prepare you for the MS-201 Implementing a Hybrid and Secure Messaging Platform certification exam.

COURSE_DESCRIPTION: By the end of this project, you will be able to confidently identify when weighting of variables is warranted. You will also be able to apply statistical weighting to variables to produce a valid representation of the data so that it can be mined for insights using any spreadsheet software. To do this, you will work in the free-to-use spreadsheet software Google Sheets. The terms "weighting" and "weighted" are most-commonly used in reference to grading. You have probably heard them used in the context of a course you may have taken. When we hear that something like a grade will be weighted, we often feel a wave of relief because it implies that there will be a balancing of the scores within the class and the hope rises within us that the weighting might boost our personal letter grade. Statistical weighting in data sets-especially survey data sets-works in much the same way. It seeks to balance data variables or factors so that the values in the data set accurately represent the population. When data is weighted appropriately it enhances our confidence that the insights we pull from a data set are actionable. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: The Flu infects the body's respiratory system, including the nose, throat, airways, and lungs and is caused by the influenza virus. Influenza viruses are divided into three types - Influenza A, Influenza B, and Influenza C. Influenza needs the cells of a host, such as a human or animal, and to sustain itself, and the virus needs to keep moving from one host to another. Washing your hands frequently and thoroughly may help prevent this and many other types of illnesses and infections.

COURSE_DESCRIPTION: This two-part course builds upon the programming skills that you learned in our Introduction to Interactive Programming in Python course. We will augment those skills with both important programming practices and critical mathematical problem solving skills. These skills underlie larger scale computational problem solving and programming. The main focus of the class will be programming weekly mini-projects in Python that build upon the mathematical and programming principles that are taught in the class. To keep the class fun and engaging, many of the projects will involve working with strategy-based games. In part 1 of this course, the programming aspect of the class will focus on coding standards and testing. The mathematical portion of the class will focus on probability, combinatorics, and counting with an eye towards practical applications of these concepts in Computer Science. Recommended Background - Students should be comfortable writing small (100+ line) programs in Python using constructs such as lists, dictionaries and classes and also have a high-school math background that includes algebra and pre-calculus.

COURSE_DESCRIPTION: Welcome to the course standardisation and technology! Do you already know what standards are? Could you image a world without standards? It is certainly not easy to visualize a world without standards and the huge importance of standards is often underestimated in our society. That is because such a vast amount are common to us and have been for ages. We don't even realise they are standards anymore. We are excited to see you join and explore the world of standards that goes unnoticed by so many! First we visit historic examples of standards and see that even Before Christ standards were ever present. But since then standards have grown and evolved alongside societies and we need to discuss the fundamentals of standards and standard setting. Nowadays technology is rapidly advancing and standards play an ever increasing role. Have you ever wondered what happens under the hood of your mobile phone? How are we able to orchestrate something so huge as the internet without technical agreements and protocols, without standards? We take a look at the organisations that develop and maintain these standards and even take a brief glimpse in the future of this ever evolving field! Each week video lectures and reading material according to the bibliography in in the introduction will be provided. Practice tests will help you to prepare for the graded assessment at the end of each week. Good luck and we hope you enjoy the course!

COURSE_DESCRIPTION: This course will introduce you to several graph algorithms in Neo4j's Graph Data Science library and explore how you can apply these to different types of graphs. You begin by building a little social network of people connected as friends. Then you will cover the steps involved in modeling friendships as undirected relationships in an in-memory graph and applying algorithms to this social network. You will use measures of centrality to identify highly connected nodes in a network. Next, you dive into community detection algorithms to find clusters of friends in a social network. From there, you will model a network as a graph with weighted edges then apply traversal algorithms on this graph, from finding shortest paths between nodes to breadth-first and depth-first traversals. Finally, you get a glimpse into the FastRP algorithm to transform nodes in your graph to vectors with a specific number of dimensions. After completing this course, you will know how to apply various graphic algorithms to extract meaningful information from a graph.

COURSE_DESCRIPTION: Welcome to Introduction to Front-End Development, the first course in the Meta Front-End Developer program. This course is a good place to start if you want to become a web developer. You will learn about the day-to-day responsibilities of a web developer and get a general understanding of the core and underlying technologies that power the internet. You will learn how front-end developers create websites and applications that work well and are easy to maintain. You'll be introduced to the core web development technologies like HTML and CSS and get opportunities to practice using them. You will also be introduced to modern UI frameworks such as Bootstrap and React that make it easy to create interactive user experiences. By the end of the course, you will be able to: - Describe the front-end developer role - Explain the core and underlying technologies that power the internet - Use HTML to create a simple webpage - Use CSS to control the appearance of a simple webpage - Explain what React is - Describe the applications and characteristics of the most popular UI frameworks For the final project in this course, you will create and edit a webpage using HTML and the Bootstrap CSS framework. Using a responsive layout grid, you will construct a responsive webpage containing text and images that looks great on any size screen. This is a beginner course intended for learners eager to learn the fundamentals of web development. To succeed in this course, you do not need prior web development experience, only basic internet navigation skills and an eagerness to get started with coding.

COURSE_DESCRIPTION: Probability is all about estimating the likelihood of the occurrence of specific events. Use this course to learn more about defining and measuring joint, marginal, and conditional probabilities of events. Start by exploring the chain rule of probability and then use this rule to compute conditional probabilities of multiple events. You'll also investigate the steps involved in measuring the expected value of a random variable as the weighted sum of all outcomes, with each outcome weighted by its probability. By the time you finish this course, you will be able to compute joint, marginal, and conditional probabilities and the expected value of a random variable, as well as effectively utilize the chain rule of probability.

COURSE_DESCRIPTION: Zapier is the industry leader in task automation and gives users the ability to not only organize but to automate social media posting. By the end of this project, you will be able to set up an account with Zapier. You will learn how to connect your blog site to Zapier and then send out automated social media messages to your owned social media accounts. This is a great tool to use if you are blogging once a week or less and want to maximize your time spent on other tasks. Blogging is one of the most recognized ways of improving traffic to websites. However, for this to work a blog needs a reliable way to share new blogs with its audiences. Using Zapier to automate this task will save you time and allow you to share your content with your audience immediately - rather than when you remember too! Zapier is the industry leader in task automation and gives users the ability to not only organize but to automate social media posting. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Der Kundenservice ist und bleibt für die meisten Unternehmen heutzutage weiterhin ein strategisch wichtiger Bereich. Erfahrene CSRs weisen sowohl bei fachlichen als auch bei sozialen Fähigkeiten wertvolle Erfahrungen auf, die für eine erfolgreiche Karriere in der Geschäftswelt oder im privaten Sektor förderlich sein können. Dieser Kurs ermöglicht Ihnen, die effektivsten Weiterbildungsmethoden zu bestimmen. Sie erlernen Fähigkeiten, wie Sie spezifische Weiterbildungsmöglichkeiten für den Kundenservice, in Ihrem Unternehmen und Ihrer Branche finden und nutzen können und damit Ihre persönliche Leistung und Zufriedenheit tiefgehend stärken. In diesem Kurs wird erklärt, wie Sie Ihre Interessen zum Ausbau Ihrer Fähigkeiten nutzen. Sie erfahren außerdem, Lernressourcen zu finden und zu nutzen, die das berufliche Wachstum unterstützen. Darüber hinaus werden Strategien vorgestellt, die lebenslanges Lernen fördern, und Sie lernen, wie Sie dieses Wissen einsetzen können, um einen Karriereplan zu erstellen. Dieser Kurs wurde mit Inhalten entwickelt, die von NueBridge (www.nuebridge.com) bereitgestellt wurden. NueBridge verfügt über eine umfangreiche Expertise in den Bereichen Kundenerlebnis und Management in mehreren Branchen weltweit.

COURSE_DESCRIPTION: A Systems Mindset teaches learners how to interact effectively as service providers, consultants, researchers, developers, or other professionals providing a service or product to a person, group, or community. This course provides the basic foundations for policy makers, real estate developers, consultants, government agencies, engineers, and non-profit organizations the first steps in engaging complex problems where engagement with communities and stakeholders is necessary. Being a successful professional requires creative, innovative, and entrepreneurial thinking, and to continually have a problem-solving mindset. Yes, absolutely! But you also need to be a listener. You need to truly value the community and stakeholders - the ones who have the most to gain and lose from your actions. It is important for you to listen, learn what is important, and then act. This course will highlight the urgency for you to have a systems mindset to engage complex problems for a systems perspective, meaning that you have approach problems from different angles, scales and perspectives. This class is the first step in creating that mindset and for you to effectively engage - from receiving the "ask" for "assistance", to orienting yourself to the issue, understanding the community, and developing a project plan. Students will learn how to use a systems mindset to understand scaled systems, nested hierarchies, and the interactions between social and environmental systems. Students will also learn practical skills and techniques that build rapport, trust, and buy-in.

COURSE_DESCRIPTION: This 13-video course explores several new features in Windows Server 2019 that enhance a user's general experience. In it, learners will examine features that enhance the hybrid cloud, and new security features. You will explore a locally deployed browser-based tool in Windows Server 2019, the Windows Admin Center. Then examine how the Windows Admin Center centralizes several tools. You will examine the Desktop Experience in the 2019 version, and will explore the capabilities of the new System Insights feature, an analytics feature designed to give some predictive capabilities. You will examine the features of Server Core and Nano Server, and the Server Core App Compatibility Feature on Demand. This course examines Windows Defender Advanced Threat Protection capabilities, including the components of Windows Defender Exploit Guard, along with security enhancements to software-defined networking. You will explore improvements to shield virtual machines, a host of technologies, including Secure boot, BitLocker, a Virtual TPM (Trusted Platform Module), and the Host Guardian Service. Finally, this course explores the features of the HTTP/2 protocol.

COURSE_DESCRIPTION: By the end of this guided project, you will be fluent in creating wireframe prototypes for Agile projects based on previous project phases. This will enable you to map the product features and add value to how the customer/user will experience the product or service. You will learn how to encapsulate the needs and wants of the customer persona in the product. This is essential for generating positive results for your business venture. Furthermore, this guided project is designed to engage and harness your visionary and exploratory abilities. You will use proven models in Agile Project Management with Miro to shape the development roadmap of products and services. We will practice critically how Epics, User Stories, Personas, and Customer journey phases become valuable input for creating functionality for products and services. Please see the guide for creating a free account with Miro in the Resources section.

COURSE_DESCRIPTION: Das Projektmanagement erfordert ein gewisses finanzielles Gespür. Das Projektkostenmanagement umfasst Kostenschätzungen, die Analyse von Lieferantenangeboten sowie die Festlegung realistischer Budgets und deren Einhaltung. Während Begriffe wie Kostenzusammenfassung und Basisplan, Analyse von Reserven und Management des Fertigstellungswerts (Earned Value Management, EVM) zunächst herausfordernd erscheinen mögen, können diese Aufgaben und Werkzeuge mit etwas Hintergrundwissen und Arbeit verstanden und gemeistert werden. In diesem Kurs lernen Sie die Grundlagen der Budgeterstellung sowie der Kostenschätzung und -kontrolle kennen. Sie werden sich mit Kostenprognosen, der Schätzung mithilfe von Methoden wie den erwarteten Restkosten zur Fertigstellung (Estimate to Complete, ETC), den erwarteten Restkosten zum aktuellen Zeitpunkt (Estimate at Completion, EAC), dem Kostenentwicklungsindex sowie der Bottom-Up- und analogen Schätzung beschäftigen.

COURSE_DESCRIPTION: This course will teach you how to manage a startup's financing strategy, where you will learn how to build capitalization tables (or "cap tables") in Excel. Cap tables will help you explore different financing strategies for your startup company and determine which financing decisions are best for your entrepreneurial venture. You will also learn about innovations in the digital space that allow new ways to finance entrepreneurial ventures. These include different forms of crowdfunding, and alternative credit scoring mechanisms based on web-based data. This course concludes with a module featuring cutting edge research from Duke University's Fuqua School of Business on the financial technology industry. In this module, you will learn how financial technology companies are disrupting the credit scoring industry by developing new methods for credit scoring using consumers' digital footprints. In addition, you will explore how financial technology platforms have introduced new, experimental forms of financing, such as crowdfunding.

COURSE_DESCRIPTION: A vital part of programming is being able to reuse codes in an efficient and effective way. Using variable scopes, storage classes, different user-defined types like structs, unions and enums allow programmers to scale their programs and create meaningful structures. Begin by exploring variable scope and learn how to input argument scoping and redefine variables. Discover how to work with storage classes and access them in file scope, local scope, and across files. Finally, take a look at different user-defined types in C. Upon completion of this course, you will be able to confidently leverage variable scopes and storage classes to define values, scope, and visibility.

COURSE_DESCRIPTION: Enterprise IT monitoring is crucial in detecting potential security incidents. In this course, you'll explore various monitoring methods for hosts, devices, and networks. Next, you'll learn to configure log forwarding and work with logs through PowerShell. Moving on, you'll learn to recognize when to use honeyfiles, honeypots, and honeynets, as well as SIEM and SOAR solutions. You'll then examine intrusion detection and prevention and how they are used to secure a network. Lastly, you'll explore the use of tools such as Snort, tcpdump, nmap, and Wireshark for analyzing networks and network traffic. This course is one of a collection of courses that prepares learners for the CompTIA Advanced Security Practitioner (CASP+) CAS-004 exam.

COURSE_DESCRIPTION: Now more than ever, people need access to data to gain insights and make quick business decisions. Some of the world's top organizations choose Tableau to help teams organize, visualize, and analyze data to drive better results while saving time and reducing costs. Adding Tableau Public to your skillset will put you ahead of the curve in the current job market, aid in professional growth, and yield better business results. 'Tableau Public for project management and beyond' guided project is for anyone who wants to quickly get hands-on experience with the public version of Tableau business intelligence software. If you are preparing for Project Management certification, completing this project will be complementary to your knowledge. By the end of the project, you will have a foundational knowledge of Tableau Public and will learn how to build and analyze charts, create dashboards, and share your data insights online. There are no prerequisites to take this guided project.

COURSE_DESCRIPTION: Explore different features available in Javascript to manipulate elements of a web page by using its Document Object Model (DOM) structure and how Javascript interacts with a browser by using the Browser Object Model (BOM). In this 13-video course, key concepts covered include how to use the document object to retrieve individual elements of a web page and access their values and properties; how to alter web page contents by modifying a DOM; and how to retrieve children of elements of a web page as an array. Begin by observing how to write a function to generate an animation; how to define event listeners and handlers for clicks on web page buttons; and how to create handlers for events of users by clicking on buttons. Next, learners observe how to use handlers for mouse events on web page elements; how to use the screen, window, and navigator objects of BOM to get information about the end-user's environment; and how to use the window object to interact with the end-user's browser.

COURSE_DESCRIPTION: This 11-video course examines the use of loops in Java, where iterative control structures are named for-loops, while loops, and do-while loops. This course opens by studying simple for-loops and introduces the concepts of the check expression, the loop variable, and the UPDATE statement. You will learn how to use enhanced for-loops, popular for iterating over arrays and collections. Participants then explore how to short-circuit a loop by using the break statement, and how to short-circuit the current iteration by using continue. Once a break statement is encountered in a loop, it is automatically terminated and the program control resumes at the next statement following the loop. The course then demonstrates how to do this in the context of for-loops, while loops, and do-while loops. You will learn to identify situations where for-loops are preferable to while loops. Finally, examine the dangers of infinite looping in the context of while looping, and learn to identify common pitfalls that lead to infinite looping and how to avoid these pitfalls.

COURSE_DESCRIPTION: This 2-part eLearning course builds an understanding of modern cloud-network design and management techniques, crystalizing lofty ideas of "cloud" and "edge" so you can embrace the latest industry trends and best-practices. A successful modern network architect requires a keen understanding of business requirements, network components, and the challenges of architecting good solutions. In the 1-hour Aruba Modern Cloud Network Design course you'll get a high level overview of key network design topics trending in the Edge era. The devices we manage constantly evolve as new protocols, security mechanisms, and redundancy solutions emerge; and so the techniques we use to manage these dynamic systems must respond to and even anticipate this changing landscape. In the Modern Cloud Network Management Techniques 1-hour course you'll learn about key aspects of the network management journey and the newer technologies and techniques to help you embrace the Edge. Learn about the network management challenges that drive new technologies, get familiar with classic Network Management System (NMS) tools, and learn about the modern NMS tools like Aruba ESP developed to reduce overhead, speed diagnosis, and improve situational awareness. Typical candidates for this course are IT Professionals and/or Network Engineers who want to learn about Aruba's modern approach to network design.

COURSE_DESCRIPTION: Databases are essential in working with large amounts of data. Managers, leaders, and decision-makers need to choose the right approach when working on a large data project, distinguishing among multiple database types and their use cases. A relational database is a primary traditional data architecture commonly used by most businesses. Working with relational databases has some key advantages but also poses certain limitations. In this course, learn how critically evaluate and work with relational databases. Explore normalization and denormalization of datasets along with specific use cases of these opposite approaches. Examine two main online information processing systems, Online Transaction Processing (OLTP) and Online Analytical Processing (OLAP) systems. Finally, investigate the concepts of data warehousing, data marts, and data mining. Upon completion, you'll be able to identify when and how to use a relational database.

COURSE_DESCRIPTION: More than ever, people are using social media. They aren't just interacting with friends, but with businesses as well. Today, customers expect businesses to reach them on social media. As a result, social media not only gives businesses invaluable customer data, it provides an effective way to promote products and services to grow the business as well. In this course, you'll learn the key features and benefits of social media for businesses, and become familiar with its key concepts and terminology, essential to understanding the role it can play in engaging with customers, providing support, advertising, and generating business. You'll also learn about the most popular social media tools, and how personal branding and an active community can be a real differentiator for your organization, and how it can support your overall business objectives. This course was developed in partnership with the Digital Marketing Institute. COURSE_DESCRIPTION: This 16-video course helps learners examine the basics of events and event handling in React, including synthetic events, the React Component lifecycle, document object model (DOM) reconciliation, and preventing default event handling. Begin by observing use of event propagation in the capture and bubble phases, followed by an introduction to synthetic events and their advantages. Explore the phases in a React component's lifecycle; wire up event handlers to elements; prevent the browser's default event handling; and use synthetic events to access event properties. Discover how to build a component to toggle state, and what happens in the mounting phase of a component lifecycle. Learn how to execute

code once a component is mounted to the DOM; observe what happens in the unmounting phase of a component's lifecycle; and learn how to hook into the update phase of a component's lifecycle. Conclude the course by discovering how to optimize the rendering of a component, and how to apply error boundaries to catch errors.

COURSE_DESCRIPTION: Der Wechsel in eine höhere Führungsposition kann eine Herausforderung bedeuten. Der Ansatz, die Einstellung oder die Denkweise, die in einer mittleren Führungsposition funktioniert haben, sind in einer höher gestellten Position möglicherweise nicht ausreichend. Bei einem erfolgreichen Wechsel kommt es häufig darauf an, alte Handlungsweisen aufzugeben und einen neuen Ansatz und eine neue Denkweise zu entwickeln. Es geht darum, sich neue Fähigkeiten, neue Perspektiven und neue Schwerpunkte anzueignen. In diesem Kurs lernen Sie die erforderlichen Voraussetzungen für die Führungsreife kennen, die Qualitäten, die für ein erfolgreiches Funktionsbereichsmanagement erforderlich sind, sowie Strategien und bewährte Verfahren für die Delegation von Aufgaben auf höherer Ebene sowie den Wechsel in eine Führungsposition der Geschäftsleitung.

COURSE_DESCRIPTION: Azure Cosmos DB lets you run a distributed NoSQL database with high throughput and low latency. In this course, you'll be introduced to Azure Cosmos DB and the available APIs for developing solutions to meet the database requirements of your applications. You'll learn uses of Azure Cosmos DB, how to use the MongoDB API to interact with Cosmos DB, and how to query Cosmos DB using the SQL API. Next, you'll examine how to set up Cosmos DB global distribution and use the SQL API to query JSON documents. Lastly, you'll see the consistency levels available in Cosmos DB and how to create containers in Cosmos DB. This course is one of a collection of courses that prepares learners for the AZ-204: Developing Solutions for Microsoft Azure certification exam.

COURSE_DESCRIPTION: In this beginning-level course you will explore the use of CSS (Cascading Style Sheets) in web development. As HTML is used to add content to a website, CSS is used to make that content visually appealing to website visitors. This course focuses on improvements that can be made to the text on a website's pages, including color, font style, size, and alignment. CSS is a very powerful tool and learning to control textual data on a website is a great first step in harnessing that power. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: For several decades now, assessment has become an increasingly pressing educational priority. Teacher and school accountability systems have come to be based on analysis of large-scale, standardized summative assessments. As a consequence, assessment now dominates most conversations about reform, particularly as a measure of teacher and school accountability for learner performance. Behind the often heated and at times ideologically gridlocked debate is a genuine challenge to address gaps in achievement between different demographically identifiable groups of students. There is an urgent need to lift whole communities and cohorts of students out of cycles of underachievement. For better or for worse, testing and public reporting of achievement is seen to be one of the few tools capable of clearly informing public policy makers and communities alike about how their resources are being used to expand the life opportunities for their children. This course is an overview of current debates about testing, and analyses the strengths and weaknesses of a variety of approaches to assessment. The course also focuses on the use of assessment technologies in learning. It will explore recent advances in computer adaptive and diagnostic testing, the use of natural language processing technologies in assessments, and embedded formative assessments in digital and online curricula. Other topics include the use of data mining, learning analytics and artificial intelligence in learning management systems and educational technology platforms. Participants will be required to consider issues of data access, privacy and the challenges raised by 'big data' including data persistency and student profiling. -----
----- Recommended Background ----- This course is designed for people interested in the future of education and the "learning society," including people who may wish to join education as a profession, practicing teachers interested in exploring future directions for a vocation that is currently undergoing transformation, and community and workplace leaders who regard their mission to be in part "educative." ----- Related Resources ----- Online resources are available here:

COURSE_DESCRIPTION: As scalability becomes increasingly non-negotiable and more applications are built with containers, the open-source software Kubernetes has become an appreciated one-stop shop for developing and running applications. Kubernetes helps manage multiple containers across different systems, allowing you to scale them with ease. It provides access to plugins and extensions to improve management and security. And with the ability to use cloud-based solutions, increases the portability of your applications. Use this course to learn about application scaling and the benefits of containerized applications and cloud computing. Examine the key components within a Kubernetes deployment. As you progress, run and configure clusters; use kubectl, ConfigMaps, probes, taints, and tolerations; and finally, set up autoscaling and configure a Kubernetes multi-pod deployment. Upon completion, you'll be able to scale applications using Kubernetes.

COURSE_DESCRIPTION: By the end of this project, you will Build a Node Server backend with Express that will fetch data from a MongoDB database. Often, a dynamic web application is connected to a database on the server side. Node.js serves as the web server used to access the database. Express is a framework for Node.js and acts as middleware to connect the backend Node server to the Client-facing web application. The Client facing web application can then make API (Application Programming Interface) calls to Express to gather data for the dynamic web application. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Web applications rely on numerous underlying infrastructure components, including public key infrastructure (PKI). Discover the overall web application ecosystem with a focus on the OWASP Top 10 2017. Key concepts covered in this 13-video course include how to identify common web application security issues and their impacts; how tools such as Nmap, Metasploit, and Nessus can be used for benign and malicious purposes; and how the OWASP Top 10 helps to secure web applications. Next, you will learn the OWASP security tools; how to identify common web application architecture and development techniques and the role that clients and servers play; and how TLS supersedes SSL and tools such as SSL Labs can test PKI implementations. Learners then observe how PKI certificates can enhance web application security; how to configure HTTPS bindings for Microsoft IIS websites; and how to configure Microsoft IIS websites to require client certificates. Finally, learn how to configure HTTPS bindings for Linux Apache websites, and how to scan a public Internet site's PKI configuration to determine the site's security posture.

COURSE_DESCRIPTION: This course has a singular and clear aim, to empower you to do statistical tests, ready for incorporation into your dissertations, research papers, and presentations. The ability to summarize data, create plots and charts, and to do the tests that you commonly see in the literature is a powerful skill indeed. Not only will it further your career, but it will put you in the position to contribute to the advancement of humanity through scientific research. We live in a wonderful age with great tools at our disposal, ready to achieve this goal. None are quite as easy to learn, yet as powerful to use, as the Wolfram Language. Knowledge is literally built into the language. With its well-structured and consistent approach to creating code, you will become an expert in no time. This course follows the modern trend of learning statistical analysis through the use of a computer language. It requires no prior knowledge of coding. An exciting journey awaits. If you wanting even more, there are optional Honors lessons on machine learning that cover the support in the Wolfram Language for deep learning.

COURSE_DESCRIPTION: As a human being, we all consume products and/or services all the time. This morning you got up and ate your breakfast, e.g., eggs, milk, bread, fresh fruits, and the like. After the breakfast, you drove your car to work or school. At your office, you used your computer, perhaps equipped with 27" LCD monitor. During your break, you drank a cup of coffee and played with your iPhone. So on and so forth. You probably take it for granted that you can enjoy all of these products. But if you take a closer look at how each of these products can be made and eventually delivered to you, you will realize that each one of these is no short of miracle. For example, which fruit do you like? Consider fresh strawberries. In order for the strawberries to be on your breakfast table, there must be numerous functions, activities, transactions, and people involved in planting, cultivating, delivering, and consuming strawberries. Moreover, all of these functions, activities, transactions, and people are connected as an integral chain, through which physical products like strawberries themselves and virtual elements such as information and communication flow back and forth constantly. By grouping related functions or activities, we have a supply chain, comprised of four primary functions such as supplier, manufacturer, distributor, and finally consumer. A supply chain is essentially a value chain. For the society or economy as a whole, the goal is to maximize value, i.e., to create satisfactory value without spending too much. In order to create the maximum value for the strawberry supply chain, every participant in the chain must carry out its function efficiently. In addition, all of the members must coordinate with each other effectively in order to ensure value maximization. We have to face the same issues for almost all the products and services we take for granted in our everyday life, e.g., cars, hamburgers, haircuts, surgeries, movies, banks, restaurants, and you name it! In this course, we want to understand fundamental principles of value creation for the consumers or the market. We try to answer questions like how the product or service is made, how the value-creating activities or functions are coordinated, who should play what leadership roles in realizing all these, and so on. As our course title hints, we approach all of these issues from a learning perspective, which is dynamic in nature and emphasizes long-term capability building rather than short-term symptomatic problem solving.

COURSE_DESCRIPTION: Explore security aspects focusing on OWASP Top 10 2017 Item A6: Security Misconfiguration, Item A5: Broken Access Control, and Item A4: XML External Entities in this 11-video course. Key concepts covered in this course include details about OWASP Top 10 2017 Item A6, and how security misconfigurations can come in many different forms and on different levels of a web application ecosystem; and learning how security misconfigurations can be mitigated. Next, learn how to lock down anonymous cloud storage access; observe how to disable SSLv3 on web browsers and web servers; and learn details about OWASP Top 10 2017 Item A5 broken access control, and how broken access control can be mitigated. Learners will then observe how to use the Microsoft Azure Cloud computing environment to create a shared access signature to limit access to sensitive files. Finally, learn the details about OWASP Top 10 2017 Item A4 covering XML external entities and how XML external entity vulnerabilities can be mitigated.

COURSE_DESCRIPTION: In this course, participants explore the development of chatbots with one of the main chatbot development frameworks, Google's Dialogflow Developer Console. Start by creating an agent for a chatbot and exploring default intents in Dialogflow. Intents map what a user says to what the bot should do. You will then create custom intents in Dialogflow. Participants then examine the important differences between developer and system entities in Dialogflow. Next, you will generate developer entities to extract information from user conversations in Dialogflow. Learn how to generate training phrases, which are user expressions that a user might say when they want to invoke an intent. You will then work with the actions and parameters associated with each intent. Learn how to write static responses, which a bot can respond to a user with in Dialogflow. Enable the Small Talk feature for a chatbot and test its functionality in Dialogflow. Then learn how to write inline cloud functions to satisfy a fulfillment in Dialogflow. A concluding exercise deals with creating a chatbox in Dialogflow.

COURSE_DESCRIPTION: Easil is a free, user-friendly platform which allows you to create informative and eye catching designs to market your products, events, or services. Known for their "drag-and-drop" features, Easil gives you the ability to truly customize each of your ads to meet your marketing needs. Easil has a library of free templates available to use, which makes creating ads and marketing campaigns a breeze. With social media's heavy influence and presence in today's society, it is important to create a strong social media presence when advertising your company. This will help to ensure target market engagement and keep your customers up to date on your current sales, projects, and events. In this project, we will use Easil to create social media posts to help boost online presence and increase customer interaction. In addition, we will design a customer loyalty punch card which our customers can use to keep track of their purchases and rewards. This project will teach you about some of the many features of Easil while also giving you the freedom to explore your own creativity. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In this 1 hour long project-based course, you will learn to build a linear regression model using Pyspark ML to predict students' admission at the university. We will use the graduate admission 2 data set from Kaggle. Our goal is to use a Simple Linear Regression Machine Learning Algorithm from the Pyspark Machine learning library to predict the chances of getting admission. We will be carrying out the entire project on the Google Colab environment with the installation of Pyspark. You will need a free Gmail account to complete this project. Please be aware of the fact that the dataset and the model in this project, can not be used in the real-life. We are only using this data for the learning purposes. By the end of this project, you will be able to build the linear regression model using Pyspark ML to predict admission chances. You will also be able to setup and work with Pyspark on the Google Colab environment. Additionally, you will also be able to clean and prepare data for analysis. You should be familiar with the Python Programming language and you should have a theoretical understanding of Linear Regression algorithm. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Monitoring the current state of system components is one of the most efficient ways to identify problems and bottlenecks in a production environment. Administrators working with Kubernetes need to know how to monitor at multiple levels, including at the node, cluster, and Pod levels. In this course, you'll examine the vital Kubernetes performance metrics to monitor, what to measure in Kubernetes clusters, nodes, and Pods, and best practices for monitoring these. You'll also identify the differences between logging and monitoring. Moving on, you'll write configuration files to create and start node-problem-detector. You'll then specify Pod configuration files to ensure kubelet performs liveness probes, HTTP GET requests are sent to the server running in the container, and TCP liveness probe readiness is defined. This course is part of a series that aligns with the Certified Kubernetes Administrator exam's objectives and can be used in preparation for it.

COURSE_DESCRIPTION: Mit den Werkzeugen für die gemeinsame Nutzung und Zusammenarbeit in Excel 365 war die Arbeit im Team noch nie so einfach. Um eine effiziente Zusammenarbeit zu ermöglichen, erfahren Sie, wie Sie Arbeitsmappenversionen, Änderungen und Kommentare nachverfolgen können. Excel 365 ermöglicht es auch, Arbeitsmappen per E-Mail zu teilen oder sie auf OneDrive und SharePoint hochzuladen. In diesem Kurs erfahren Sie, wie Sie mit anderen Benutzern an einer Excel-Arbeitsmappe zusammenarbeiten, wie Sie die Eigenschaften einer Arbeitsmappe bearbeiten, wie Sie Änderungen an Ihren Arbeitsmappendaten verfolgen und wie Sie den Versionsverlauf einer Arbeitsmappe verwalten. Sie erfahren auch, wie Sie Excel-Arbeitsmappen vor unerwünschten Bearbeitungen schützen und die Kommentare einer Arbeitsmappe verwalten können. Darüber hinaus erfahren Sie, wie Sie Ihr Excel 365-Konto und die damit verbundenen Dienste verwalten und wie Sie Ihre Arbeitsmappen auf OneDrive speichern können. Sie erfahren, wie Sie die integrierte E-Mail-Funktion nutzen können, um Ihre Excel-Arbeitsmappe per E-Mail an andere Benutzer zu senden. Sie erfahren, wie Sie Arbeitsmappen über einen Link freigeben können. Außerdem können Sie den Link-Zugriff und die Berechtigungen verwalten, so dass Sie die Berechtigungen für die Link-Bearbeitung restriktiver oder offener gestalten können. Schließlich können Sie das Format für die Arbeitsmappe wählen, sie als PDF versenden und die Statistiken einer Arbeitsmappe einsehen.

COURSE_DESCRIPTION: Decisions are a critical responsibility in project management, but the process of making decisions can be difficult. In this 14-video course, learn to identify the key principles of decision making in a software environment, and explore what is needed to speed up the decision-making process. Discover skills to speed up the decision-making process; learn techniques to collect all necessary information for making informed decisions, and identify how to examine old information and compare it to current information to make informed decisions. Examine ways to obtain current information to make better decisions; learn techniques to anticipate future events based on information already collected; and view principles and approaches for embracing the fail-fast approach to decision making in Agile projects. Discover how to improve the decision-making process in an organization by flattening the decision-making structure; how decision making is different in an Agile environment versus traditional linear project management; and learn reasons why we tend to make poor decisions, particularly in environments where speed is imperative. Conclude the course by examining best practices for decision making.

COURSE_DESCRIPTION: Machine learning clustering models are used to group similar items based on their features and use unsupervised learning. In this course, you'll learn about using clustering models in the Azure Machine Learning Studio. First, you'll explore the available types of clustering models in Azure Machine Learning Studio and the steps required to train a clustering model. Next, you'll learn how to train and evaluate a clustering model. Next, you'll examine how to create a K-means clustering model in Azure Machine Learning Studio. Finally, you'll learn how to create and deploy a new inference pipeline to create a predictive service for a clustering model. This course is one in a collection that prepares learners for the Designing and Implementing a Data Science Solution on Azure (DP-100) exam.

COURSE_DESCRIPTION: In Unix, Cron is used to schedule either user or system jobs, like Windows Task Scheduler. During this course, you will learn how Cron can help to automate repetitive system maintenance and administrative tasks, through the command line or the Unix shell. You will begin by observing how to configure a regularly scheduled Cron job. Next, learn how to harden your Unix system, and identify and mitigate attack methods. Other topics include how to change default passwords, close open network ports, and remove unnecessary software, services, and usernames. You will also learn how to enhance host security with Public Key Infrastructure (PKI), the PKI hierarchy, and view network packets with the tcpdump command.

COURSE_DESCRIPTION: Multimedia applications require a number of different entities to come together - graphical entities, animations, views, audio, and networking. SFML's modules allow you to incorporate all of these in an easy and intuitive manner to build fully-fledged gaming applications. First, explore graphics entities such as textures and sprites to specify backgrounds and interact with different textures. Next, use vertex arrays to create and transform shapes by moving, rotating, and scaling entities. Then, create animations and play sounds using SFML. Finally, bring everything together to build a multimedia game of Tic-Tac-Toe, containing the logic for win-lose-draw. After completing this course, you will have the skills and ability to use SFML constructs to develop gaming applications.

COURSE_DESCRIPTION: In this 1-hour long project-based course, you will learn how to explore presidential concession speeches by US presidential candidates over time, looking specifically at speech length and top words and examining variation by Democrat and Republican candidates. You will learn how to import textual data stored in raw text files, turn these files into a corpus (a collection of textual documents) and tokenize the text all using the software package quanteda. You will also learn how to extract useful information from filenames and how to use this information to generate visualizations of textual data using the stringr and ggplot2 packages. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.
COURSE_TITLE: Exploratory Data Analysis with Textual Data in R / Quanteda

CATEGORY:
COURSE_DESCRIPTION: In this 12-video course, learners can explore machine learning problems that can be addressed with hyperparameters, and prominent hyperparameter tuning methods, along with problems associated with hyperparameter optimization. Key concepts covered here include the iterative workflow for machine learning problems, with a focus on essential measures and evaluation protocols; steps to improve performance of neural networks, along with impacts of data set sizes on neural network models and performance estimates; and impact of the size of training data sets on quality of mapping function and estimated performance of a fit neural network model. Next, you will learn the approaches of identifying overfitting scenarios and preventing overfitting by using regularization techniques; learn the impact of bias and variances on machine learning algorithms, and recall the approaches of fixing high bias and high variance in data sets; and see how to trade off bias variance by building and deriving an ideal learning curve by using Python. Finally, learners will observe how to test multiple models and select the right model by using Scikit-learn.

COURSE_DESCRIPTION: In this course, you will gain an understanding of the theory underlying optimal portfolio construction, the different ways portfolios are actually built in practice and how to measure and manage the risk of such portfolios. You will start by studying how imperfect correlation between assets leads to diversified and optimal portfolios as well as the consequences in terms of asset pricing. Then, you will learn how to shape an investor's profile and build an adequate portfolio by combining strategic and tactical asset allocations. Finally, you will have a more in-depth look at risk: its different facets and the appropriate tools and techniques to measure it, manage it and hedge it. Key speakers from UBS, our corporate partner, will regularly add a practical perspective on these different topics as you progress through the course.

COURSE_DESCRIPTION: The present course gives an overview of Bases of the Law of Obligations. The course is directed to students of general educational institutions, Russian and foreign lawyers, heads of legal entities, financial directors, chief accountants, auditors, practicing in English, and to any person, interested in the Law of Obligations. The course goals and objectives: The main goal of the course is to provide students with fundamental knowledge of the basis of the Russian Law of Obligations Course objectives are: 1. To introduce students to analyzing and evaluating situations from a legal perspective, identifying the essential elements of the Russian contractual system. 2. To orient students towards distinguishing between different types of forms of obligations and the ability of the main subjects of law (individuals and legal entities) to incur and fulfill legal obligations. Learning outcomes: By the end of this course students shall be able to: 1. Analyze and evaluate situations from a legal perspective. 2. Identify the essential elements of a contract. 3. Understand situations when contract shall have a particular form 4. Identify moment of conclusion of contract 5. Distinguish between offer and public offer 6. Explain due execution of obligations

COURSE_DESCRIPTION: Die meisten Unternehmen sind auf die Visualisierung von Daten angewiesen, um Geschäftsentscheidungen zu treffen. Die Verwendung der richtigen Diagramme und Grafiken hilft, die richtigen Informationen zu vermitteln und Muster und Trends in Ihren Daten zu erkennen. Zu Beginn dieses Kurses lernen Sie die Bedeutung der Datenvisualisierung und ihre Anwendung bei der Aufbereitung von Daten kennen, die leicht zu analysieren und zu interpretieren sind. Als Nächstes werden Sie bewährte Verfahren für die Visualisierung von Daten und die Bedeutung der Erstellung benutzerorientierter Visualisierungen kennenlernen. Anschließend lernen Sie verschiedene Darstellungsarten wie Vergleich, Zusammensetzung, Verteilung, Trends und Beziehungen kennen und erfahren, wie Sie Ihre Diagramme diesen Kategorien zuordnen können. Schließlich werden Sie die Anwendungsfälle für gängige Diagramme wie Liniendiagramme, Kreisdiagramme, Histogramme, Punktdiagramme und andere untersuchen. Sie werden auch erfahren, wann Sie spezielle Diagramme wie Gantt-Diagramme, Sunburst-Diagramme und Sankey-Diagramme verwenden sollten.

COURSE_DESCRIPTION: In this 1-hour long project-based course, you will learn how to: - Manage the file requirements to optimise and export a pattern, - Get started with GIMP 2.10 editing tools - Design customised patterns using GIMP 2.10 By the end of this project, you will learn how to use Gimp to create simple customised patterns. You'll discover how to create different types of patterns, either by drawing simple shapes directly on GIMP or starting from an existing image. In graphic design and visual arts, a pattern is a design in which the same shape is repeated at regular intervals over a surface. Patterns are used to customise fabrics, prints, wallpaper, gift papers, and any kind of surface your imagination can reach. GIMP version 2.10 is a cross-platform image editor available for many of the most popular operating systems. It is largely used by graphic designers, illustrators, artists, or photographers as an open-source alternative to image editing software. Its interface is user-friendly so it can be enjoyed by anyone interested or involved in jobs related to graphics and visual arts. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Today, the ability to work collaboratively on projects is more important than ever. Fortunately, Google Docs makes collaboration and sharing easy. In this course, you will discover a number of ways to share your document, including how to invite other users to edit, view, or comment on your document. The course also outlines several key tools to help you work together on your document with others. Find out how to chat with colleagues, leave comments, and respond to comment threads. See also how to use suggesting mode and the comparison tool to track changes in complex documents.

COURSE_DESCRIPTION: To ensure that Diversity, Equity, and Inclusion (DEI) programs are supported by inclusive mindsets, it's important to cultivate emotional intelligence amongst leaders. Emotional intelligence is a "power skill" that help leaders to identify and navigate their own emotions and become more self-aware, forcing them to become aware of their unconscious biases and lead with a sense of authenticity, purpose and trust. We explore this topic deeper in this episode of The Edge with Simone Sloan, the founder of Your Choice Coach, a DEI consulting and executive coaching firm. Together, Sloan and host Michelle Boockoff-Bajdek chat about DEI initiatives, how to transform the culture and policies of an organization, and the importance of leading with emotional intelligence. Please note that this course material includes content gathered from external websites which may fall outside your company network. Please consult with your IT department policies with respect to any restrictions in viewing content from external websites.

COURSE_DESCRIPTION: This is a recorded replay of the Leadercamp How to be Successful in your Digital Transformation: Practical Tips and Advice that took place on Wednesday, March 10th at 11am EST led by Tony Saldanha, author and digital transformation expert. We're in the midst of a global health and economic crisis. Should we be talking about Digital Transformation at all? And if so, how can you be better at this than others? The answer is that based on past data, times like the present crisis accelerate change and disproportionately reward transformation agents. Now is the time to figure out how to be better than the rest at digital transformation. Join Tony Saldanha, ex-VP at Procter & Gamble, highly sought-after speaker, thought leader and author as he shares his secrets on how to craft a winning transformation strategy. In this session, you will learn: 1. Why digital transformation in the midst of the pandemic 2. What you need to do to establish common alignment on goals with leadership 3. Pitfalls of transformation execution and how to avoid them 4. Organization change management and how to be good at it 5. How to reskill yourself and others for success

COURSE_DESCRIPTION: Projektmanager müssen dem Einsatzmittelmanagement große Aufmerksamkeit schenken. Sie müssen den Bedarf des Projekts sowohl in Bezug auf Material als auch auf Personal einschätzen, Organigramme und Positionsbeschreibungen erstellen und alle erforderlichen Einsatzmittel beschaffen. Darüber hinaus erfordert das Management von Personalressourcen auch soziale Kompetenzen, um Teams aufzubauen und zu führen. In diesem Kurs erfahren Sie mehr über die Planung, Schätzung, Beschaffung und Koordination von Projekteinsatzmitteln. Sie werden sich auch mit der Erfüllung von Schulungs- und Entwicklungsbedürfnissen, der Festlegung von Grundregeln und Strategien für die Mischung von virtuellen und kollozierten Teammitgliedern befassen. Schließlich lernen Sie, wie Sie Personal- und Teamleistungsbewertungen und Konfliktmanagementfähigkeiten anwenden.

COURSE_DESCRIPTION: Several factors usually influence an outcome, and users need to consider all of those by using regression. Regression models help us mathematically evaluate our hunches. This course explores machine learning techniques and the risks involved with multiple factor linear regression. Key concepts covered here include reasons to use multiple features in a regression, and how to configure, train, and evaluate the linear regression model. Next, learn to create a data set with multiple features in a form that can be fed to a neural network for training and validation. Review Keras sequential model architecture, its training parameters, and ways to test its predictions. Learn how to use Pandas and Seaborn to view correlations and enumerate risks. Conclude by applying parsimonious regression to rebuild linear regression models.

COURSE_DESCRIPTION: In every domain of artificial intelligence, there is one algorithm that transforms the entire field into an industry-matured tool to be used across a broad spectrum of use cases. BERT is that algorithm for natural language processing (NLP). In this course, explore the fundamentals of BERT architecture, including variations, transfer learning capabilities, and best practices. Examine the Hugging Face library and its role in sentiment analysis problems. Practice model setup, pre-processing, sentiment classification training, and evaluating models using BERT. Finally, take a critical look to recognize the challenges of using BERT. Upon completing this course, you'll be able to demonstrate how to solve simple sentiment analysis problems.

COURSE_DESCRIPTION: In a very competitive workplace, establishing, growing, and leveraging your professional community can make all the difference as you search for your initial work opportunity, improve satisfaction at your current job, or find your next work adventure. In this course, you will learn how to tap into your existing personal and professional networks to find your tribe and then leverage your professional community for your benefit (and sometimes the benefit of your employer!). Given that job satisfaction and job opportunities, are often integrally intertwined with "doing good," you will engage in an introspective exercise evaluating your interests and values so you can incorporate those ideals into your work. Finally, you will understand how service experiences can be extremely valuable in growing your professional community and contributing to company success. Please Note: This course is scheduled to close new learner enrollment on November 15th, 2021, and fully close on May 15th, 2022. All graded assignments, including peer reviews, must be completed by May 15th in order to be accepted for Certificate credit.

COURSE_DESCRIPTION: Getting data into your statistical analysis system can be one of the most challenging parts of any data science project. Data must be imported and harmonized into a coherent format before any insights can be obtained. You will learn how to get data into R from commonly used formats and harmonizing different kinds of datasets from different sources. If you work in an organization where different departments collect data using different systems and different storage formats, then this course will provide essential tools for bringing those datasets together and making sense of the wealth of information in your organization. This course introduces the Tidyverse tools for importing data into R so that it can be prepared for analysis, visualization, and modeling. Common data formats are introduced, including delimited files, spreadsheets and relational databases, and techniques for obtaining data from the web are demonstrated, such as web scraping and web APIs. In this specialization we assume familiarity with the R programming language. If you are not yet familiar with R, we suggest you first complete R Programming before returning to complete this course.

COURSE_DESCRIPTION: This 12-video course examines the concept of ethics as it relates to digital forensics, including reasonable expectation of privacy, legal authorization, and the primary function of attorney-client privilege and confidentiality. The legalities surrounding digital forensics investigative techniques and standards for analyzing digital evidence are also covered. Begin with a look at the definition of what is considered a reasonable expectation of privacy. You will then learn to differentiate between legal authorization forms such as consent forms and warrants. Next, explore the primary function of attorney-client privilege and confidentiality, and recognize the legalities surrounding digital forensics investigative techniques. Delve into the need for ethics in digital forensics, and the best practices for ethics and forensics. Discover steps for regulating ethical behavior; recognize possible conflicts of interest and how to avoid them; and examine the importance of ongoing training for both investigators and management on the importance of ethics. The final tutorial in this course looks at different standards for analyzing digital evidence.

COURSE_DESCRIPTION: This course is designed for application developers who wants to deploy computer vision inference workloads using the Intel(r) Distribution of OpenVINO™ toolkit. The course looks at computer vision neural network models from a variety of popular machine learning frameworks and covers writing a portable application capable of deploying inference on a range of compute devices. The course is targeted for application developers, and places focus on examples and discussion of the development workflow. As such, the discussions include not only the details about how to use the toolkit itself, but topics like how to take benchmarks to compare compute devices or what to do when you encounter issues. The course is made so that it serves as a how-to guide for developing a computer vision inference deployment with the toolkit. By the end of the course, students will have the skillset necessary to deploy their own computer vision application using the toolkit.

COURSE_DESCRIPTION: The Capstone Project for this Specialisation requires you to demonstrate your understanding of the courses and integrate the knowledge and skills learned in real workplace scenarios. In particular, you will be given a choice of a few projects based on scenarios and case studies drawn from different workplaces. The project outcome is a handbook or a practical guide, which could be a blend of text and multi-media. In completing the project, you will be required to use and/or collect relevant primary data from people in the workplace through emails, face-to-face chats, Skype discussions and incorporate the data into the handbook/guide as support. In addition, there will be a component on critical reflection on your learning journey. The Capstone Project is to be completed within six weeks. Evaluation will be done via a combination of peer and tutor assessment.

COURSE_DESCRIPTION: This 18-video course focuses on the React library for component-driven development and basic principles involved in creating React applications. Begin with an introduction to the React library and what is it used for, then discover how to design components with React. Identify features that make React powerful, and examine the concepts underlying important React features. Also explore the virtual document object model (DOM) and how it is used. Learn how to implement a simple web page by using React web application programming interfaces (APIs); recognize basic components of the web page built using React; and use minified productionized React libraries. A two-part tutorial focuses on creating nested elements: creating a DOM hierarchy with nested components, and using key attribute to identify unique sibling elements. Delve into JavaScript XML (JSX) and the functionality of the Babel compiler when used with JSX; then create elements using JSX and the Babel compiler, and render a DOM hierarchy using JSX. Conclude the course by focusing on evaluating simple expressions with JSX, and referring to JavaScript variables within JSX.

COURSE_DESCRIPTION: This two-part course is designed to help students with very little or no computing background learn the basics of building simple interactive applications. Our language of choice, Python, is an easy-to learn, high-level computer language that is used in many of the computational courses offered on Coursera. To make learning Python easy, we have developed a new browser-based programming environment that makes developing interactive applications in Python simple. These applications will involve windows whose contents are graphical and respond to buttons, the keyboard and the mouse. In part 2 of this course, we will introduce more elements of programming (such as list, dictionaries, and loops) and then use these elements to create games such as Blackjack. Part 1 of this class will culminate in building a version of the classic arcade game "Asteroids". Upon completing this course, you will be able to write small, but interesting Python programs. The next course in the specialization will begin to introduce a more principled approach to writing programs and solving computational problems that will allow you to write larger and more complex programs.

COURSE_DESCRIPTION: In today's world, business is global. No matter the industry or sector, the chances that you are working with people from another country or culture are high. Given that business is communication, the ability to communicate successfully across cultures is a mission critical skill. Communicating successfully with people from our own culture, in our own language is challenging enough. When we interact with people from other cultures, the barriers to effective communication are even more pronounced. In this course, you will learn about two principal dimensions of culture that underlie culturally different ways of communicating and learn vocabulary that will allow you to explain differences in communication styles. You will also explore barriers to communicating effectively across cultures and identify ways to overcome them.

COURSE_DESCRIPTION: This free online course is one of 10 courses available in the Goldman Sachs 10,000 Women collection, designed for entrepreneurs ready to take their business to the next level. In this course, you will understand leadership and its role in business growth. You will learn about leadership styles and reflect on your role as leader of your company. You will consider leadership qualities and identify the core values and assumptions that influence how you lead. You will hear Goldman Sachs 10,000 Women alumni explain how implementing a Leadership Development Plan helped them to grow their business, before completing your own Leadership Development Plan to consider the actions you can take to help you improve your leadership skills. You will also complete a Cultural Audit to consider and analyze your current organizational culture. By the end of the course, you will have created your Vision Statement, which describes your vision for the future of your business. The 10,000 Women course collection offers a truly flexible online learning experience. You have the freedom to approach the program in any way that works for you - take any course, or combination of courses, to tailor your learning journey to your individual business growth needs. If you choose to take all 10 courses, you will

explore all the key elements of your business and develop a thorough plan for your business's growth. You can find out more about the Goldman Sachs 10,000 Women collection in the FAQs.

COURSE_DESCRIPTION: While enterprise users can access, create, control, and share data across a wide range of platforms and services, many organizations lack the means to balance mitigating enterprise-wide risks with managing compliance and privacy standards. Microsoft 365 offers a series of solutions to help organizations recognize, prioritize, and remediate security risks while addressing compliance and privacy requirements. In this course, learn the capabilities of Microsoft 365's compliance solutions. Next, explore the responsibilities of Microsoft 365 solutions such as insider risk management, eDiscovery, and auditing. Finally, examine Microsoft 365 communication compliance, information barriers (IB), privileged access management, and Customer Lockbox. This is one of a collection of courses that fully prepare the learner for the SC-900 Microsoft Security, Compliance, and Identity Fundamentals certification exam.

COURSE_DESCRIPTION: Kubernetes uses Ingress to expose HTTP and HTTPS routes from outside the cluster to services within the cluster. It also facilitates DNS management by replacing Kube-DNS with CoreDNS, which is a flexible and extensible DNS server that can serve as the Kubernetes cluster DNS. In this course you'll recognize the role of Ingress in enabling routing, the prerequisites required to create and configure Ingress, the prominent Ingress controllers and when to implement them. You'll recall the prominent PathTypes and the use of HostName wildcards, the features of CoreDNS and Kube-DNS along with the features of prominent network and CNI plugins. Moving on, you'll create a simple Ingress resource, update the configuration file to update the Ingress resource backend, configure the Ingress resource to run a web application behind external HTTPS load balancer and install CoreDNS as the default DNS service while installing a fresh Kubernetes cluster. Finally, you'll upgrade the DNS service of existing Kubernetes clusters to CoreDNS, replace Kube-DNS and enforce network policies in Google Kubernetes Engine. This course is part of a series that aligns with the objectives for the Certified Kubernetes Administrator exam and can be used to prepare for this exam.

COURSE_DESCRIPTION: Learners can explore complex operations in Microsoft Excel workbooks, including the use of conditional formatting, named ranges, and merged cells, in this 17-video course. Microsoft Excel is the best prototyping tool for data analysis, an interactive functional programming environment, and a forerunner of Python. Begin by exploring how Python and its ecosystem of libraries are fast emerging as a popular choice for easy spreadsheet automation. Then observe the formatting, alignment, and other aesthetics in Python. You will work with the Python library openpyxl; examine data analysis, the use of pivot tables, and the locking of cell references by using the \$ operator; and learn how to perform complex data analysis operations using pivot tables, sorting and filtering, and formulae with both absolute and relative cell references to enable efficient copy paste. You will learn to control the workbook appearance using conditional formatting and styles. Finally, this course demonstrates how to leverage the Python Pandas library to read a spreadsheet, to group and analyze data.

COURSE_DESCRIPTION: This 12-video course explores Java, the general-purpose programming language, among the most popular languages used to create Web applications and platforms. Designed to allow developers to write code that would run on any machine, Java is an easy-to-use object-oriented model with platform independence and robustness. Course participants will learn how to install Java on both Windows and Macintosh-based systems and observe how developers use Java Development Kit (JDK) to build applications and components. The course examines Java bytecode and how it instructs the JVM (Java Virtual Machine). You will explore the Java sandbox environment and the JRE (Java Runtime Environment). The course also demonstrates how to configure two of the most popular Java IDEs (Integrated Development Environment): Eclipse, the most popular open-source IDE, which runs under Windows, Linux, and Mac OS; and IntelliJ which analyzes code and looks for connections between symbols across all project files and languages and provides intelligent coding assistance for a large variety of other languages such as SQL, JPQL, and Javascript.

COURSE_DESCRIPTION: Explore subscriptions and tenant roles, upgrading existing subscriptions, and monitoring license allocations in Microsoft 365 in this course, used to prepare for the MS-100 Microsoft 365 Identity and Services certification exam. Begin this 12-video course by learning how to set up your Microsoft 365 implementation, starting with an overview of subscriptions and tenancy in Microsoft 365. Then examine how to begin by evaluating Microsoft 365 services. Learn how to add new services or upgrade your subscriptions and how to assign roles using the admin center. Next, an overview of Microsoft 365 workloads such as Exchange, SharePoint, OneDrive, and Teams. Take a look at the billing section of the admin center and how to manage payments there. Learn how to assign licenses to users in the admin center and then how to monitor assigned licenses. This leads into learning how to manage the apps and services that go along with a license, and also how to unassign or remove a license. Conclude with an exercise on managing subscriptions using the admin center.

COURSE_DESCRIPTION: Explore features of primitive data types in Javascript such as numbers, strings, and booleans. Examine the methods, operators, and control structures available to work with them in this 11-video course. Key concepts covered here include multiple ways to declare and manipulate numerical data in Javascript; learning how to initialize and manipulate Javascript strings using different techniques; and learning how to use in-built string operations to analyze and modify string types. Begin by learning how to create and manage date types in Javascript, which allows you to work with dates in various forms and initialize date variables and manipulate them. Then learn how to use constants, methods, and random number generators available in the Javascript Math library; learn to apply basic operators on numbers and strings; and observe how to perform logical tests by using if statements and conditional operators. Finally, learn how to convert data from one primitive type to another; and learn how to create while, do-while, and for loops in Javascript.

COURSE_DESCRIPTION: The first decade of the 21st century saw an explosion in the use of various mobile devices and cloud service providers in the enterprise. With this came a new challenge for security professionals from which several techniques and tools were developed. Get to grips with the many terms and activities related to endpoint protection and mobile device management in this vocational course. Explore what's involved in host-based intrusion prevention systems (HIPS) and host-based intrusion detection systems (HIDS). Examine endpoint encryption, protection, detection, and response. And study mobile provisioning and mobile device and application management. Upon course completion, you'll be familiar with the best techniques for protecting various devices and systems. You'll also be further prepared for the (ISC)² Systems Security Certified Practitioner (SSCP) 2021 exam.

COURSE_DESCRIPTION: By the end of this project, you will be able to create a stock monitoring tracker using only Google sheets, which will help you track all your stock investments. The stock monitor list will automatically give you the live updated stock price as well as the percent change since a day ago. In addition to that it also provides the market capitalization of the stock as well as the 52-week high and low and the percentage that the current price is off of those 52-week high and lows. You can use a stock monitor like this for help categorizing your investment types as well as laying out potential buy or sell price thresholds that you might use to enter or exit out of a position. Based on these target buy or sell prices the monitor list will automatically calculate a stock rating for you determining whether the stock is a buy hold or sell and how far off each of those stocks is from the buy price. In addition to this you can use this information on the stock monitor list to create useful graphics and tools to get a quick visual sense of the information provided in the monitor list Along the way, you will be applying and practicing the basic features of spreadsheets such as formatting and calculations, as well as create tables and charts to use in your financial management that are efficient and versatile. This project will help you better manage your stock finances.

COURSE_DESCRIPTION: The Enterprise Security Architecture for Reliable ICT Services (ESARIS) is the collection of procedures, standards and aids for the protection of all ICT services which T-Systems provides to customers. ESARIS builds on existing IT service management processes as well as the internal organization of the company, and is customized to the needs of T-Systems as a large ICT service provider. This training is intended for all employees in the work area "Service Design and Implementation". The technical and procedural security measures stipulated in the ESARIS security standards are used as the basis for "Service Design and Implementation". ICT-Services are based upon pre-defined elements; new developments may lead to new pre-defined elements for re-use in future designs. The training shows how the ESARIS standards are used in solution design and implementation as well as in the design and implementation of processes. The integration of third-party products and services is also dealt with. Solutions shall reuse pre-defined elements; Consequently, the training explains the ESARIS approach to standardization and outlines how such information can be obtained from the ESARIS Library.

COURSE_DESCRIPTION: Visio allows you to analyze data in a diagram by inserting and formatting charts and PivotTables. Learners will discover how to create different types of reports for stronger and more complete analysis of their data, in this 7-video course, recorded in a Visio Online Plan 2 environment. Charts, for instance, reinforce the visual representation of one's data; observe how to insert simple charts into Visio and then modify the information by using the associated Excel style spreadsheet. Learners will then watch practical demonstrations of inserting an Excel chart, and observe how to edit the different information to correspond with the data that the chart should represent. The course continues by exploring how to export a diagram to a Word file, after choosing the elements needed in your document by modifying the different settings. Key topics covered in this course include how to use Shape Properties; Snippet Transparency settings; Apply Shape tools; and Pivot Diagrams.

COURSE_DESCRIPTION: This course is designed to introduce you to the skills required to deploy, configure, secure, manage, and monitor modern desktop devices and client applications in a Microsoft 365 enterprise environment. Administrators and IT technicians responsible for managing identity, access, policies, updates, and apps will benefit from this course particularly if you are designing and implementing a device management strategy, preparing for the MD-100 certification exam, or just looking to enhance your skills. This course covers many aspects of modern desktop administration including deploying, configuring, and maintaining Windows 10 as well as non-Windows devices and technologies. The content is spread out over four, 4-hour days. The course also includes live demonstrations. Before attending the course, if you don't already have one, please make sure you sign up for a free Microsoft 365 trial account at <https://www.microsoft.com/en-ca/microsoft-365/try>

COURSE_DESCRIPTION: In this course, participants discover how to complete the provisioning of a Hyperledger Fabric network and to develop, deploy, and work with a smart contract coded in Go for their Blockchain projects. First, learn how to use the configtxgen tool to create the Fabric network's first Genesis block and channel. Then in a two-part tutorial about the docker-compose file, you will define the certificate authority service for organization in the Fabric network and configure the network's ordering service, peer, and state database services. Next, learn how to provision the Fabric network by creating a Hyperledger Fabric network using the configuration files and initializing a channel. Another two-part tutorial on writing chaincode in Go examines the Init method and coding the Invoke method and the different operations that can be called in a Go smart contract for the Fabric network. Then learn to install and instantiate the Go chaincode and invoke the operations defined in the contract. A concluding exercise describes Docker services, accessing the contract state in a smart contract, and deploying chaincode on a channel.

COURSE_DESCRIPTION: Google Data Studio is a powerful tool that turns data into reports that ease decision-making and lead to better business outcomes. Google Data Studio is easy to use, free and works seamlessly with applications within and outside of the Google Marketing Suite. You can use Google Studio to connect and integrate data from 100's of applications including Facebook, Constant Contact, GoogleAds, and more. You do not need an advanced background in data, statistics, or graphic arts to create meaningful reports that tell data stories, improve understanding of complex situations, and allow users of all skill levels to analyze data. By the end of this project, you will learn how to create an account, how to navigate the platform, and will create your first report! Together we will explore the basics of business data and visualization and you will surprise yourself with how easy it is to understand and use data. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In this 12-video course, learners will explore the concept of computational theory and its models by discovering how to model and implement computational theory on formal language, automata theory, and context-free grammar. Begin by examining the computational theory fundamentals and the prominent branches of computation, and also the prominent models of computation for machine learning. Then look at the concept of automata theory and list the prominent automata classes. Next, explore the finite state machine principles, and recognize the essential principles driving formal language theory and the automata theory principles. Learners will recall the formal language elements; define the concept of regular expressions; and list the theorems used to manage the semantics. Examine the concept of regular grammar and list the essential grammars used to generate regular languages. Also, examine regular language closure properties, and defining and listing the prominent features of context-free grammar. The concluding exercise involves identifying practical usage, branches, and models of computational theory, specifying notations of formal language, and listing types of context-free grammar.

COURSE_DESCRIPTION: Cloud computing is widely used by individuals and enterprises to outsource IT solutions. In this course, you'll begin with learning how to identify cloud deployment and service models. Next, you'll review cloud service level agreements, cloud security solutions, and how to work with cloud VNets. Moving on, you'll learn how to configure cloud autoscaling to increase application availability. You'll also explore how to deploy a cloud-based firewall, configure firewall routing, and enable RDP through cloud firewalls. Lastly, you'll learn how to create a cloud key vault and enable cloud storage security. This course is one of a collection of courses that prepares learners for the CompTIA Advanced Security Practitioner (CASP+) CAS-004 exam.

COURSE_DESCRIPTION: Welcome to the Introduction to Intel(r) Distribution of OpenVINO(tm) toolkit for Computer Vision Applications course! This course provides easy access to the fundamental concepts of the Intel Distribution of OpenVINO toolkit. Throughout this course, you will be introduced to demos, showcasing the capabilities of this toolkit. With the skills you acquire from this course, you will be able to describe the value of tools and utilities provided in the Intel Distribution of OpenVINO toolkit, such as the model downloader, model optimizer and inference engine. Who this class is for: This course is intended for learners with no prior experience with computer vision, although previous knowledge is helpful. This course is ideal for anyone interested in learning more about core concepts of computer vision applications and the Intel Distribution of OpenVINO toolkit. Estimated Workload: You should expect to allocate about 3 hours to complete this course. Learner pre-requisites: No prior knowledge of computer vision is necessary, although previous experience is helpful.

COURSE_DESCRIPTION: The Cyber Incident Response Specialization will give students a high-level understanding of incident response processes. Students will learn about Incident Response from a practitioner perspective and they will walk away with valuable skills that they will be able to demonstrate, on demand. This Specialization begins with a high-level discussion of what happens at each phase of responding to an incident, followed by a technical deep dive into some of the more exciting parts of memory, network, and host analysis and forensics. This Specialization is for anyone wishing to apply learned forensics and offensive knowledge such as ethical hacking to the incident response process.

COURSE_DESCRIPTION: The most common way for anti-virus programs to detect a malware infection is by checking files against a database of known-malicious objects. In this course, you'll learn about fileless malware, which avoids detection by not writing any files with known malicious content. Next, you'll explore malware analysis techniques that allow you to configure stronger defenses. You'll also examine sheep dipping and how to build a test environment. There are many security controls to protect against malware infections, so you'll complete this course by learning about countermeasures like logging, anti-virus, and backups. This course is one in a series that helps to prepare you for the Certified Ethical Hacker v11 (312-50) exam.

COURSE DESCRIPTION: Continue exploring differences between cloud computing and traditional on-premises computing, and how Microsoft Azure Cloud Services are made available to cloud customers, in this 15-video course examining the Azure ecosystem. Here you will learn about Microsoft Azure data centers or physical facilities, which are currently located in 140 countries, and that when you deploy new resources, you must specify the geographical location or region. Then you will learn how ARM (Azure Resource Manager) can be used to deploy or manage a single virtual machine (VM), or related resources as a group. Next, learners see that the Microsoft Azure portal is a GUI (graphical user interface tool), in the form of a web application, and the GUI management tool supports RBAC (role-based access control). You will learn to use the Microsoft Azure CLI (command-line interface) tool to manage resources from a command-line environment. You will learn to use Azure Cloud Shell CLI to deploy a Linux VM. Finally, you will explore Azure Powershell to manage Azure resources at the command line. This is one of a series of courses to help learners prepare for the AZ-900: Azure Fundamentals certification exam.

COURSE_DESCRIPTION: This course is a general overview of a variety of personal finance topics - including budgeting, the importance of your credit score, cash flow, setting financial goals, and taxes. Taught by two CERTIFIED FINANCIAL PLANNER(tm) Professionals, the concepts are broken down through videos, readings, and activities so you can apply what you are learning in real time. The course provides the foundation to build on for the rest of The Fundamentals of Personal Finance Specialization or as a standalone survey course to improve your understanding of basic personal finance terminology, as well as how they apply to your own financial situation. Whether you are just starting college, nearing retirement, or somewhere in between, this course will provide you with the knowledge to understand your money and actionable steps to manage your finances in the future. This course is geared towards learners in the United States of America.

COURSE_DESCRIPTION: Der Aufbau von Beziehungen zu den Personen, mit denen Sie kommunizieren möchten, ist der Schlüssel zu einer effektiven Kommunikation. Der Aufbau von Vertrauen ist für die Entwicklung konstruktiver Arbeitsbeziehungen von entscheidender Bedeutung. In diesem Kurs untersuchen Sie die Notwendigkeit, Ihre Informationen und Absichten als Grundlage für eine effektive Kommunikation darzustellen. Sie werden sehen, wie durch das Verstehen Ihrer Zielgruppe sichergestellt wird, dass Ihre Botschaft mit maximaler Wirkung vermittelt wird, und wie Sie sich durch die Kontrolle Ihrer Emotionen an die emotionalen Bedürfnisse anderer anpassen können, um Vertrauen aufzubauen. Schließlich lernen Sie, wie Sie verbale Kommunikation mit Körpersprache und Stimmlage kombinieren, um Ihre Botschaft wirksamer zu vermitteln.

 COURSE_DESCRIPTION: How much should you charge for your products and services? Traditionally, businesses have answered this question based on the cost to produce or provide their goods and services. This course shows you the economic factors behind pricing based on cost and the pros and cons of a cost-based pricing approach. Developed at the Darden School of Business at the University of Virginia, and led by top-ranked Darden faculty and Boston Consulting Group global pricing experts, the course provides the practical and research-based models and methods you need to set prices that maximize your profits. By the end of this course, you'll be able to: --Apply knowledge of basic economics to make better pricing decisions --Recognize opportunities for price discrimination-selling the same product at different prices to different buyers-and recommend strategies to maximize sales and profits --Calculate three types of price elasticities to determine the impact of price on demand --Analyze and apply different pricing models --Cost-plus pricing --Marginal cost-plus pricing --Peak-load pricing --Index-based pricing --Evaluate the impact of channel intermediaries and customer lifetime value on pricing

 COURSE_DESCRIPTION: Python is a beneficial language for use in a lot of development projects, particularly Java/C++ development. In this course, you'll learn the basics of Python programming. You'll start by installing Python on your local machine and practice writing code using the Python shell. Next, you'll perform basic math and logical operations in Python. You'll create Python variables and see how you can assign and access values stored in these variables. You'll then use built-in functions, which are part of the core Python programming language, to perform simple calculations and operations. Finally, you'll explore strings in Python work, creating strings using single, double, and triple quotes depending on the use case. You'll then briefly examine the use of complex data types, such as lists, tuples, sets, and dictionaries. When you're finished with this course, you'll be able to execute simple Python commands on Jupiter notebooks.

 COURSE_DESCRIPTION: By nature, cyber conflicts are an international issue that span across nation-state borders. By the end of the course, you will be able to apply the knowledge gained for analysis and management of international cyber incidents and conflicts including for activities such as development of policy related to cybercrime and cyberwarfare. Management of cyber incidents and conflicts requires an interdisciplinary perspective including an understanding of: 1) characteristics of the cyber threats and conflicts themselves, 2) international efforts to reduce and improve cyber security, and 3) psychological and sociopolitical factors. The course is designed to reach an international audience and will encourage discussion on relevant current events among participants to enrich the experience with various personal and cultural perspectives on cutting-edge issues. In addition, assignments and other assessments will supplement video lectures and selected readings to ensure application of the material. After taking this course you will be able to: • Identify different types of actors involved in cyber threats (individuals, organizations & nation-states) • Distinguish between different types of threats and issues in cyber security including, data theft, political espionage, critical infrastructure protection, and propaganda • Detail the basic characteristics of the Internet infrastructure and international efforts to address Internet governance • List several international efforts to address cyber crime and espionage • Evaluate how principals that govern international conflicts might be applied in context of cyber security • Apply different psychological theories of human motivation and cooperation and communication and political theories in analysis of different international issues related to cyber security including censorship, media operations and role of social technologies. Grading: Your grade is assessed based on discussion posts and quizzes. Individual taking this course for credit (i.e. students at the University at Albany) will be required to engage in additional activities communicated to them directly). Recommended Background: No background knowledge or skills are necessary, but an understanding and familiarity of cyber security, Internet infrastructure and international law would be advantageous for anyone who participates in the course. ACKNOWLEDGEMENTS Ersin Dincelli and Nic DePaula were the instructional designers for the course who assisted in the recording of the videos, reviewing material, creating slides, assessments and some of the content. Without their tremendous effort this would not have been possible. We also acknowledge the financial support for the recordings from the University at Albany as well as the support from Media and Marketing. Finally, thanks to Lisa Stephens who is the SUNY liaison to Coursera for being a strong supporter of the MOOC.

COURSE_DESCRIPTION: By the end of this project you will implement a program using C that demonstrates the notion of scope and its effect on variables. The C programming language is the basis for many other programming languages. Its syntax has been used in languages such as C++, Java, and C# to name a few. All of these languages utilize scope to control access to variables, so it is an important concept to grasp. C is still the language of choice for writing operating systems, games, and many other applications where performance is critical. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In our 6 week Robotics Capstone, we will give you a chance to implement a solution for a real world problem based on the content you learnt from the courses in your robotics specialization. It will also give you a chance to use mathematical and programming methods that researchers use in robotics labs. You will choose from two tracks - In the simulation track, you will use Matlab to simulate a mobile inverted pendulum or MIP. The material required for this capstone track is based on courses in mobility, aerial robotics, and estimation. In the hardware track you will need to purchase and assemble a rover kit, a raspberry pi, a pi camera, and IMU to allow your rover to navigate autonomously through your own environment Hands-on programming experience will demonstrate that you have acquired the foundations of robot movement, planning, and perception, and that you are able to translate them to a variety of practical applications in real world problems. Completion of the capstone will better prepare you to enter the field of Robotics as well as an expansive and growing number of other career paths where robots are changing the landscape of nearly every industry. Please refer to the syllabus below for a week by week breakdown of each track. Week 1 Introduction MIP Track: Using MATLAB for Dynamic Simulations AR Track: Dijkstra's and Purchasing the Kit Quiz: A1.2 Integrating an ODE with MATLAB Programming Assignment: B1.3 Dijkstra's Algorithm in Python Week 2 MIP Track: PD Control for Second-Order Systems AR Track: Assembling the Rover Quiz: A2.2 PD Tracking Quiz: B2.10 Demonstrating your Completed Rover Week 3 MIP Track: Using an EKF to get scalar orientation from an IMU AR Track: Calibration Quiz: A3.2 EKF for Scalar Attitude Estimation Quiz: B3.8 Calibration Week 4 MIP Track: Modeling a Mobile Inverted Pendulum (MIP) AR Track: Designing a Controller for the Rover Quiz: A4.2 Dynamical simulation of a MIP Peer Graded Assignment: B4.2 Programming a Tag Following Algorithm Week 5 MIP Track: Local linearization of a MIP and linearized control AR Track: An Extended Kalman Filter for State Estimation Quiz: A5.2 Balancing Control of a MIP Peer Graded Assignment: B5.2 An Extended Kalman Filter for State Estimation Week 6 MIP Track: Feedback motion planning for the MIP AR Track: Integration Quiz: A6.2 Noise-Robust Control and Planning for the MIP Peer Graded Assignment: B6.2 Completing your Autonomous Rover

COURSE_DESCRIPTION: Die effektive Kommunikation kann eine Herausforderung darstellen, wenn die Botschaft schwierig ist. Da diese Herausforderungen in der Regel mit Gefühlen wie Verletzungen, Wut oder Verwirrung verbunden sind, ist es nicht ungewöhnlich, dass Personen einander meiden oder zumachen und somit einem produktiven Austausch auf vielen Ebenen aus dem Weg gehen. In diesem Kurs untersuchen Sie einige häufig auftretende Kommunikationshürden und wie sie erfolgreich umgangen werden können. Mit Geduld, Durchhaltevermögen und Verantwortungsgefühl können Sie die Kommunikation wieder auf Kurs bringen und ein gegenseitiges Verständnis und Einverständnis erzielen.

COURSE_DESCRIPTION: Im heutigen Geschäftsumfeld ist eine positive Social-Media-Präsenz entscheidend für den Erfolg. Einen Verantwortlichen für das Online-Community-Management abzustellen, kann dazu beitragen, dass Ihre Online-Communities das Beste aus Ihrem Social Media-Marketing herausholen. In diesem Kurs lernen Sie die Vorteile und Fähigkeiten des Community-Managements als Teil Ihrer gesamten Strategie für digitales Marketing kennen. Sie lernen die vier Säulen eines effektiven digitalen Community-Managements und die Elemente kennen, die in die Strategie Ihres Unternehmens für das digitale Community-Management einbezogen werden sollen. Außerdem lernen Sie Überlegungen und Best Practices für die Überwachung und Einbindung von Online-Communities kennen und untersuchen die Trends beim Management digitaler Communities.

COURSE_DESCRIPTION: This course introduces the programming language JavaScript and shows the websites that include the type of interactions students will eventually be able to develop. Learners will understand the importance of how JavaScript was developed and why such history impacts the way JavaScript is currently written and in future releases. Learners will write their first scripts, have their HTML and CSS skills assessed, create variables and arrays and assign values to them. If student's skills are lacking, resources and recommendations are provided to improve these skills. There is ample opportunity for students to practice these first, core skills.

COURSE_DESCRIPTION: In this practice lab, learners will be presented with a series of exercises to practice developing in Python. Exercises include tasks such as file handling, implementing polymorphism, implementing special method names, as well as implementing an abstract class and using static methods. Learners will also practice using a Python list as a stack, performing queue operations, implementing a graph as an adjacency matrix, and traversing a Binary Search Tree (BST). Learners can also use the environment as an open sandbox. No installation or configuration is required, so you can gain immediate hands-on experience. Create new files or upload your own from a storage location of your choice, such as GitHub, and you can practice coding right away! You can even download a copy of your work when you're done. Whether you're looking to dive into the code presented within our courses or you want to work on your own coding projects, this lab environment will provide you with everything you need. So, go ahead and start coding today! See below for a complete list of available software. • Tkinter GUI • ipython • Jupyter Notebook • Octave 4.2 • pip / pip3 Packages: • numpy • matplotlib • scipy • features • hmmlearn • nltk • chunking • sklearn • gensim • opencv - python • seaborn • pandas • jupyter • tensorflow • keras • Python 3 • Python 2 • Pip 3 • Pip 2 • Node.js • npm • Git • Vim editor • Standard Python libraries • Python 3 libraries: • beautifulsoup4 • selenium This lab is part of the Python Apprentice track of the Skillsoft Aspire Python Novice to Pythonista journey.

COURSE_DESCRIPTION: Microsoft Power BI is a powerful and versatile visualization technology widely used in data analytics, especially business data analysis. Business analysts can use this service to build and publish interactive reports for executive audiences as well as collaborators. Get your head around the specifics of data visualization in this introductory course. Explore different types of visualizations and their use-cases, covering standard charts and those for more specific cases. Learn about the structure of Power BI and how it helps with data visualization. Then, examine report creation in Power BI. When you've finished, you'll understand the theory behind data visualization in Power BI and be ready to move on to creating and formatting charts in Power BI. This is one of a series of four paths that can be used to prepare for the DA-100: Analyzing Data with Microsoft Power BI exam.

COURSE_DESCRIPTION: In this 1-hour long project-based course, you will learn how to create path models using Smartpls. We will take a project on changing behavior and check if attitudes or subjective norms impact behavior the most. We will learn how to launch this new software, create the model and run it. We will then show you how to interpret the same. We will also learn how to create models for different groups such as males and females and if there is a difference between them. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Microsoft was a pioneer in desktop applications. But when it adapted to the cloud, it had spectacular success. Similarly, Microsoft's Power BI service has a powerful desktop app in addition to a multifunctional web service. Learn to use the Power BI web service in this hands-on course. Start with publishing reports for other people to view. Then pin visualizations and reports to a dashboard, even live-pinning an entire report to the dashboard. Finally, learn how to use various dashboard features, including the Q&A, which uses natural language processing to answer queries about your data. When you're done, you'll be able to leverage the Power BI Software as a Service and be ready to move on to analyzing and sharing data through Power BI. This is one of a series of four paths that can be used to prepare for the PL-300: Analyzing Data with Microsoft Power BI exam.

COURSE_DESCRIPTION: The cloud has various deployment and service models that can help an organization design their very own cloud strategy based on their needs. In this course, you'll learn about components of cloud computing including storage, compute, data management, monitoring, code management, and process and deployment management. Investigate cloud deployment models (public, private, hybrid, and community) and serverless architectures such as Backend as a Service (BaaS) and Function as a Service (FaaS). Explore cloud service models such as Infrastructure as a Service, Platform as a Service, and Software as a Service and discover common use cases for each. Finally, learn about cloud deployment architectures and security considerations including lack of control, data breaches, and compliance. After course completion, you'll be able to recognize cloud deployment and service models and key cloud security considerations.

COURSE_DESCRIPTION: In this 1-hour long project-based course, you will create and utilize a branded email template customized to your business. This template is reusable for all future email campaigns using the free version of Mailchimp. You will create a personalized branding kit, set up your template with personalized branding, and send your first email with your new, branded template. This is one of multiple ways that Mailchimp can help business owners, like you, brand your company and make sending emails faster and more efficient. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: This course focuses on learning how to develop and manage a schedule. The first module provides an overview of the Construction Scheduling course. The second module introduces bar or Gantt charts and how they are used as scheduling tools. During the third module, learners will create activity precedence diagrams, also referred to as activity on node diagrams, which graphically represent the construction activities in a project and their relationships. The fourth module provides an overview of the types of construction activity relationships encountered in a construction project and how to represent them in an activity precedence diagram. Forward and backward pass calculations are covered in the fifth module, and during the sixth module, Professor Odeh discusses the importance of critical paths, including what it is and why it is important. By the end of this course, you will be able to: -Discover key project scheduling techniques and procedures -Learn how to develop and manage a schedule, and understand scheduling tools such as bar charts, activity on arrow, and activity on nodes -Explore the multiple relationships that connect all the construction activities in our project from start to finish -Learn about creating a network diagram, defining the importance of the critical path in a project network, and defining project activities float -Understand the fundamentals of bar charts, precedence diagrams, activity on arrow, Program -Evaluation and Review Technique (PERT), range estimating, linear project operations, and the line of balance (LOB)

COURSE_DESCRIPTION: In this first course of the AI Product Management Specialization offered by Duke University's Pratt School of Engineering, you will build a foundational understanding of what machine learning is, how it works and when and why it is applied. To successfully manage an AI team or product and work collaboratively with data scientists, software engineers, and customers you need to understand the basics of machine learning

technology. This course provides a non-coding introduction to machine learning, with focus on the process of developing models, ML model evaluation and interpretation, and the intuition behind common ML and deep learning algorithms. The course will conclude with a hands-on project in which you will have a chance to train and optimize a machine learning model on a simple real-world problem. At the conclusion of this course, you should be able to: 1) Explain how machine learning works and the types of machine learning 2) Describe the challenges of modeling and strategies to overcome them 3) Identify the primary algorithms used for common ML tasks and their use cases 4) Explain deep learning and its strengths and challenges relative to other forms of machine learning 5) Implement best practices in evaluating and interpreting ML models

COURSE_DESCRIPTION: Continue to explore the versatility of Apache Hive, among today's most popular data warehouses, in this 10-video Skillsoft Aspire course. Learners are shown ways to optimize query executions, including the powerful technique of partitioning data sets. The hands-on course assumes previous work with Hive tables using the Hive query language and in processing complex data types, along with theoretical understanding of improving query performance by partitioning very large data sets. Demonstrations focus on basics of partitioning and how to create partitions and load data into them. Learners work with both Hive-managed tables and external tables to see how partitioning works for each; then watch navigating to the shell of the Hadoop master node, and creating new directories in the Hadoop file system. Observe dynamic partitioning of tables and how this simplifies loading of data into partitions. Finally, you explore how using multiple columns in a table can partition data within it. During this course, learners will acquire a sound understanding of how exactly large data sets can be partitioned into smaller chunks, improving query performance.

COURSE_DESCRIPTION: Welcome to the Microsoft Azure Fundamentals Bootcamp channel! This Live Bootcamp is designed to introduce you to the Microsoft Azure cloud computing platform and its services offerings at a high level, and it will also prepare you for the AZ-900: Microsoft Azure Fundamentals exam which in turn can be used in preparation for other Microsoft Azure certification exams. You will benefit from this course if you're new to enterprise cloud computing or new to Microsoft Azure, whether you are planning a cloud adoption strategy, or whether you are an IT technician looking to enhance your skills. This course covers official AZ-900 exam objectives, from cloud concepts such as cloud deployment and service models to more detailed Azure topics such as cloud storage, compute, database, big data analytics, cloud DevOps, cost management and monitoring. All topics are discussed in the context of matching Azure services to business needs in a secure and compliant manner. The content is spread out over four 4-hour days. The Live Bootcamp sessions also include live demonstrations. Before attending, if you don't already have one, please make sure you sign up for a free Microsoft Azure trial account at <https://azure.microsoft.com/free>.

COURSE_DESCRIPTION: In this challenge lab, you will manage collections of related data. First, you will create a simple C# console application, and then you will create a single-dimensional array to manage string data. Next, you will assign data to the array, and then you will iterate through the array by using a for loop and incrementation. Finally, you will create a two-dimensional string array, and then you will iterate through the array by using a for loop. Note: Once you begin the challenge lab, you will not be able to pause, save, or exit and then return to your challenge lab. Please ensure that you have set aside enough time to complete the challenge lab before you start.

COURSE_DESCRIPTION: Creativity & Entrepreneurship will help you tap into your inner creativity and learn how to leverage it for career development or business innovation. Presented by Berklee Institute for Creative Entrepreneurship founder Panos Panay, this course features interviews with world renown entrepreneurs, innovators, songwriters, producers, creative directors, educators, performers, visual artists and chefs as they discuss parallels between the creative and entrepreneurial journeys. The course approaches entrepreneurship as a creative process, a fundamental human instinct that we all possess and can unlock. Creativity & Entrepreneurship applies concepts from the creative and musical creation process, such as observing, prototyping, iterating and embracing failure, as a means of guiding you through the concept of thinking like a startup. You will develop the basic mindset, knowledge, and insights required to pursue an entrepreneurial career, whether as the steward of your own career or as the founder of a new business in any field. Creativity & Entrepreneurship is about the side of entrepreneurship you won't learn at a business school but, instead, in the music studio. What you'll learn: How to approach your career or startup as if learning a musical instrument Why entrepreneurship, like creativity, is something we all possess How to apply "the musician mindset" as means to collaboration and creative problem solving Why songwriting is a perfect parallel to career and product development Why there's more to entrepreneurship than business plans and spreadsheets much like there's more to music than scales and lead sheets

COURSE_DESCRIPTION: Learners can explore code recognition of various programming languages used in security applications, and security exploits, including Python, C, C++, and SQL, in this 14-video course. You will examine common programming paradigms, and learn how to classify them based on their features. Then you will learn how to identify Bash and Python scripts. Next, learners will examine the similarities and differences of C# compared to the C and C++ languages, and regular expressions in typical regex engines. You will learn how to identify PowerShell scripts based on their features, and how to identify the elements of a SQL statement, and how to use SQLite, a tool to manage local databases in file form without servers. This course continues by examining common security vulnerabilities in code that can lead to exploits. You will learn how to identify the structure of common executable formats based on their binary signatures. Finally, this course demonstrates how to verify the integrity of a downloaded file based on its hash value.

COURSE_DESCRIPTION: Note: The rhyme platform currently does not support webcams, so this is not a live project. This guided project is about optical character recognition using Pythorch, a Python library. This comes under the computer vision domain. While you are watching me code, you will get a cloud desktop with all the required software pre-installed. This will allow you to code along with me. After all, we learn best with active, hands-on learning. Note: This project works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: This 10-video course explores how Microsoft Azure supports VPNs (virtual private networks) to provide remote network access through an encrypted tunnel. Prepare for the AZ-300: Microsoft Azure Architect Technologies certification exam by learning to use the Azure portal to create local and virtual network gateways. You will learn to configure S2S (site-to-site) VPN settings in Azure to link an on-premises network to Azure, and to access both a local a virtual and network gateway. This course demonstrates how to configure site-to-site IPSec (internet protocol security) tunnels by using the Azure portal, in PowerShell, and using Azure CLI (command-line interface). Learners will observe how to create a P2S (point-to-site) VPN gateway connection to create a secure connection to a virtual network from an individual client computer. Next, learn to use PKI (public key infrastructure), to obtain PKI certificates, and to generate them from PowerShell. Finally, this course demonstrates how to connect from a client device to Azure through a VPN link.

 COURSE_DESCRIPTION: The best way to avoid mysterious bugs while running your Java code is to be adept at working with static members, argument passing, and object base class methods. Use this course to master these subtleties: the difference between static and instance variables and methods, the hashCode contract, and how pass-by-value and pass-by-reference semantics play out with argument passing in Java. By the end of this course, you'll be able to model state in classes using both static and instance variables, write methods to avoid unexpected changes in input arguments, and adhere to the hashCode contract so that objects function as expected when placed in common Java containers.

COURSE_DESCRIPTION: Dieser Kurs vermittelt Ihnen die einfachen Prinzipien, mit denen Führungskräfte die Leistung ihrer Mitarbeiter verbessern und sie gleichzeitig motivieren. Von jetzt an müssen Sie Situationen, in denen Sie Ihren Mitarbeitern "unangenehme Nachrichten" überbringen, nicht mehr meiden. Wir zeigen Ihnen sieben Methoden, mit deren Hilfe Ihre Mitarbeiter weder eine Abwehrhaltung einnehmen noch Angst bekommen. Als Führungskraft oder jemand, der gerne eine sein möchte, lernen Sie auch speziell, was Feedback ist und warum negatives Feedback schwerer wiegt als positives Feedback. Außerdem erfahren Sie, wie positives Feedback Eigenschaften wie Kreativität und Teamwork fördert. Feedback zu geben, ist eine Fähigkeit, die sich im Laufe der Zeit entwickelt. Wir geben Ihnen einen Prozess an die Hand, mit dem Sie Ihre Fähigkeit, Feedback zu geben, verbessern und mit Zuversicht umsetzen können. Sie werden sehen, dass es für Ihre Beobachtungen und Ihr Gespür für Feedback eine wissenschaftliche Erklärung gibt. So zum Beispiel, dass es schwierig ist, nützliches Feedback zu geben, und dass Menschen nicht gerne Feedback erhalten usw. Dies hilft Ihnen dabei zu lernen, diese Schwierigkeiten zu überwinden. Wir hoffen, dass Sie Spaß daran haben, eine bessere Führungskraft zu werden.

COURSE_DESCRIPTION: By the end of this project, you will be able to add the data in the CSV file to Pandas data frame, plot the graph, and set marker type and color. You will also be able to apply labels, change font size, add grid lines and legends. Finally, you will be able to create the boxplot and save the graph as an image using the matplotlib and seaborn libraries, which are the most important libraries in python that are used for Data Visualization. You can create bar-plots, scatter-plots, histograms, and a lot more with them. This guided project is for people in the field of data

and data analysis. people who want to learn python and Pandas library. It provides you with the important steps to be a data analyst. Moreover, it equips you with the knowledge of python's native data structures

COURSE_DESCRIPTION: Azure AD supports linking an on-premises AD installation with Azure AD. In this course, you'll start by exploring how to use Azure AD Connect to link on-premises AD to Azure AD. Next, you'll examine Azure AD Connect health statistics. You'll then learn how to deploy Azure AD Domain Services, join a Windows VM to the domain, and enable Azure AD DS for Azure Files. Next, you'll move on to learn how to configure Azure AD security settings such as fraud alerts, conditional access, MFA, locations, trusted IPs. and banned passwords. You'll explore Azure AD identity protection and managed identities. Lastly, you'll learn how to create resource and management groups. This course is one of a collection of courses that prepares learners for the AZ-304: Microsoft Azure Architect Design certification exam.

COURSE_DESCRIPTION: Working with MongoDB Atlas is a comprehensive journey that teaches participants how to use MongoDB's fully managed cloud database service. Throughout the journey, participants will learn how to set up and manage a MongoDB Atlas cluster, perform basic CRUD operations, and work with complex data types such as arrays and subdocuments. They will also gain experience with advanced features such as indexing, aggregations, and data modeling. In addition, participants will learn how to analyse query performance and optimize queries. By the end of the journey, participants will have a strong understanding of best practices for working with MongoDB Atlas, and will be equipped with the skills necessary to build and deploy highly scalable and performant applications. Whether you're a developer, administrator, or architect, this journey will provide you with the hands-on experience and knowledge needed to effectively use MongoDB Atlas.

COURSE_DESCRIPTION: The Snowpipe feature allows Snowflake to input micro-batches of data as it becomes available, generally within minutes of the data being added to a stage and submitted for ingestion. In this course, you will implement the auto-ingestion of CSV files from external Snowflake stages located on the AWS and Azure cloud platforms. You will begin by setting up a continuous data ingestion pipeline where the data source is located in an Azure Storage Container. This pipeline will include several components, such as queues, enterprise applications, and storage integrations as well as the permissions required to get these pieces to talk to one another. You will then implement something similar with an Amazon S3 bucket as the source of data. This set-up will involve AWS services such as IAM roles, SNS topics, as well as Snowflake objects such as notification integrations and pipes.

COURSE_DESCRIPTION: In the fourth course of the Content Strategy Specialization - Ensuring Your Content's Impact - you will look at visual communication and the ways you can be more effective with your font choices, photography, and video. You'll also dive deeper into social communities to help you understand how these communities form and what you can do to build your role within them. The last module is pivotal for Content Strategists. It will help you to understand how best to measure your content to maximize its effectiveness relative to the time you commit to it.

While this MOOC does share the theoretical elements of Content Strategy, there is a much greater emphasis on its application. Creating trend-worthy headlines and blogs, social media plans, digital measurement templates, video and photography content are all skills you will have in your toolkit by the end of the MOOC, ready to apply at your organization. And speaking of toolkits, we have included one that you can download and take back to work which includes the practical tips from the learnings in this course as well as the previous one on Expanding Your Content's Reach. Guest lecturers in this course include: -- Zach Wise, Associate Professor, Medill Northwestern -- Rich Gordon, Professor & Director of Digital Innovation, Medill, Northwestern -- Randy Hlavac, Lecturer, Medill, Northwestern (and lead professor of the Social Media Marketing Specialization also on Coursera)

COURSE_DESCRIPTION: Das Hauptziel des Produkts oder der Dienstleistung Ihres Unternehmens besteht darin, Ihren Kunden zu helfen, ein bestimmtes Ziel zu erreichen oder ein Problem zu lösen. Hier kommt das Konzept des Design Thinking ins Spiel. Design Thinking ist ein kundenorientierter Ansatz, um zu bestimmen, wie die Kundenbedürfnisse am besten erfüllt werden können. In diesem Kurs lernen Sie Möglichkeiten zur Entwicklung der Kundenorientierung kennen, um Probleme zu definieren. Sie untersuchen Strategien für das Design Thinking, einschließlich Reframing von Problemen, Brainstorming von Lösungen und Einsatz von Prototypen. Außerdem identifizieren Sie Best Practices für Benutzertests sowie für das Sammeln und Überprüfen von Feedback zur effektiven Problemlösung.

 COURSE_DESCRIPTION: Successful project management requires strong stakeholder management skills. Stakeholder engagement requires you to identify stakeholders and establish the levels of engagement necessary for each. In this course, you'll explore the communication methods and management and interpersonal skills necessary to meet and manage stakeholder expectations and needs. You'll learn about performing stakeholder analysis and using power-interest grids to complete a stakeholder engagement assessment matrix to provide insight into who needs to be communicated with in which circumstances.

COURSE_DESCRIPTION: Begin this 14-video course with a look at the concept of automation testing, including its process, benefits, and tools. Learners will then move on to TestComplete, and explore its features and the different types of testing it supports. Next, you will examine the TestComplete Object Model and its relevance in automated testing. Delve into name mapping, its uses, and the object identification criteria. Then focus on data-driven testing in TestComplete, as well as TestComplete data storage types and common tasks. You will learn about configuring TestComplete for automation testing; how to use various options and features provided in the TestComplete IDE (integrated development environment); and learn about creating or initializing TestComplete projects. Next, observe how to record test cases for functional testing using TestComplete; implement web testing in TestComplete; and study the objectives of specifics involved in web testing. Conclude the course by discovering how to create checkpoints for testing web applications with TestComplete, and how to test web applications with the use of test suites in TestComplete.

COURSE_DESCRIPTION: In this 2-hour long project-based course, you will learn how to Design, Create and Configure Network topologies using Packet Tracer. You will learn to perform or configure Static Routing using Packet Tracer. You will get an introduction to packet tracer and different components available in packet tracer. You will create basic network topology and will identify the importance of the default gateway. Next, you will learn to perform static routing between 3 routers. You will learn to configure your devices both using the command line and GUI. You will also learn to trace the packets over different networks. And you will learn to stimulate your network topology in the simulation mode. Basic knowledge on IP addressing and networking is recommended. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In this final, capstone course of the Google Project Management Certificate, you will practice applying the project management knowledge and skills you have learned so far. We encourage learners to complete Courses 1-5 before beginning the final course, as they provide the foundation necessary to complete the activities in this course. As you progress through this course, you will "observe" a project manager in a real-world scenario and complete dozens of hands-on activities. You will: - analyze project documents to identify project requirements and evaluate stakeholders - complete a project charter and use it as a tool to align project scope and goals among stakeholders - identify tasks and milestones and document and prioritize them in a project plan - define quality management standards and explore how to effectively share qualitative data - demonstrate your project's impact through effective reporting By the end of this course, you will have developed a portfolio of project management artifacts that will demonstrate the skills you have learned throughout the entire program, such as your ability to manage stakeholders and teams, organize plans, and communicate project details. These artifacts can exhibit your career readiness when applying for jobs in the field. To further prepare you to interview for project management jobs, you will reflect on past projects, develop an "elevator pitch," and anticipate common interview questions. Current Google project managers will continue to instruct and provide you with the strategies, tools, and resources to meet your goals. After completing this program, you should be equipped to apply for introductory-level jobs as a project manager. You will also have the opportunity to claim a certification of completion badge that will be recognizable to employers.

COURSE_DESCRIPTION: In this project, you will create a digital product management plan framework in Trello using Kanban workflow processes. You will learn the basic functionality of Trello and apply the basics of Kanban to manage your workflow. The project will model how to translate the product management life cycle stages and key deliverables into a working plan in Trello. It will demonstrate how to use the Kanban workflow principles to plan and track the status of deliverables. Finally, you will learn how to share the plan with team members to organize and assign work, collaborate, and keep everyone up-to-date. Trello is a popular digital collaboration tool that organizes projects and people. For this project, we will only use the features and functionality included in the free version of Trello. Kanban is a workflow management method that aims to help you visualize your work, maximize efficiency, and improve continuously. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Discover how to protect your applications from attacks and bad data! During this course, you'll learn how to identify and defend your C# applications from potential risks and control user input to reduce the possibility of bad data entry. Topics include how to address potential UI application risks, such as buffer overflows, code injection attacks, formatted string attacks, and DLL hijacks. Next, specify how to handle bad data in your C# applications, and learn how to constrain user input to keep out malicious entries that can break your code. From there, you will learn how to validate user input through regular expressions, and write effective exception handlers. Finally, as a review exercise, you will create a C#/ASP.NET application that runs a contact page that applies defensive code and requires validated user input.

COURSE_DESCRIPTION: In this challenge lab, you will manage collections of related data. First, you will create a simple C# console application, and then you will create a single-dimensional array to manage string data. Next, you will assign data to the array, and then you will iterate through the array by using the a foreach loop. Finally, you will create a two-dimensional string array, and then you will iterate through the array by using a foreach loop. Note: Once you begin the challenge lab, you will not be able to pause, save, or exit and then return to your challenge lab. Please ensure that you have set aside enough time to complete the challenge lab before you start.

COURSE_DESCRIPTION: Networking devices are instrumental to the delivery of data over a network. In this course, you'll learn about comparing and contrasting various networking devices to determine when and where to use them on a network. You'll also explore common networking devices such as hubs, switches, and routers in addition to network appliances used for more specialized tasks such as the Intrusion prevention system, intrusion detection system, proxy servers, and supervisory control and data acquisition systems. You'll also examine different routing technologies, including dynamic routing concepts and protocols. And you'll explore how to recognize the key differences between the Routing Information Protocol and Open Shortest Path First routing protocols, and recognize how to differentiate between link state, distance vector, and hybrid routing protocols. Lastly, you'll learn about bandwidth management concepts including traffic shaping and quality of service. This course is one of a collection of courses that prepares learners for the N10-008: CompTIA Network+ certification exam

COURSE_DESCRIPTION: Go has a unique approach to error handling, treating errors as values that can be passed around and manipulated just like any other values. The language also provides several packages and built-ins in the standard library for working with file systems and performing I/O operations. In this course, you'll explore how errors are handled in Go using error values. You'll learn how to handle errors by importing and using package errors and work with custom error types. You'll examine how to implement Go's defer statement along with the built-in panic and recover functions to handle and recover from real-time errors. Finally, you'll learn about file input and output and how to perform basic I/O operations on files and directories.

COURSE_DESCRIPTION: Self-determination theory (SDT) is an empirically based theory of motivation and psychological development that is especially focused on the basic psychological needs that promote high quality motivation and wellness, and how they are supported in social contexts. SDT details how the styles and strategies of motivators such as parents, teachers, coaches, managers, and health-care professionals can promote or undermine engagement and the positive consequences that follow from it. In this course, Professor Richard Ryan, co-founder of the theory, will provide an overview of SDT with special emphasis on how autonomy, competence, and relatedness supports and facilitates behavioral persistence, quality of relationships, and healthy developmental processes, among other topics. He will also discuss the convergence of behavioral phenomenological and neuropsychological aspects of autonomy within SDT research. In addition, he will illustrate practical applications of SDT, with emphasis on educational, work, sport, healthcare and psychotherapy settings.

COURSE_DESCRIPTION: Being able to troubleshoot cloud and network issues is important when trying to resolve failures or operational difficulties. In this course, you'll learn to use troubleshooting methodologies to resolve common cloud issues. First, you'll examine how to resolve cloud related issues using the troubleshooting methodology. Next, you'll explore how to resolve network security group misconfigurations issues and network connectivity issues. You'll then move on to learn about resolving network routing and firewall connectivity issues. You'll learn about the tools that you can use to troubleshoot and resolve network issues. Finally, you'll learn resource utilization, application performance, and load balancing performance tuning. This course is one of a collection of courses that prepares learners for the CompTIA Cloud+ (CV0-003) certification.

COURSE_DESCRIPTION: This project provides a step-by-step approach in instruction and will equip you with fundamental concepts of Java programming from the ground up. Using jGRASP development environment, you will create a program that processes details that are a prerequisite for a course you would like to enroll in. These details are your name, year of birth, age, hobby, and the average score from three prerequisite courses. To be enrolled for the course, you have to be older than 21 and you should also have attained a mark of at least 50 in each of the three previous courses. By creating this project, you will master the concepts of using a class, comments, variables, input, output, operators, and control flow in Java programming. If you are a beginner and this is your first course in Java programming you will benefit from writing a program from a blank sheet to a fully functioning program. If you already have programming experience, this is an opportunity to refresh your skills in Java programming by going back to basics. No matter your level, you will be able to apply the skills obtained from this course in real-life programming exercises. To provide you with support outside the course, you will find a pool of additional notes and exercises that you can try at home. If you ever wanted to become better at computer programming using Java by building on your fundamental skills, this project is the right place to start!

COURSE_DESCRIPTION: Since BGP is so complex, there are many factors to consider when designing a BGP solution. In this course, you'll learn about address families in BGP, which are available since BGP is designed for multiple protocols. You'll then move on to explore popular options for route filtering, the types of attributes available with BGP, and attributes that can be used to manipulate path preference. BGP assumes a full mesh of iBGP peers, which can be a problem for many enterprises today. Next, you'll examine solutions to this problem, including the use of route reflectors in BGP. You'll learn about the default load sharing capabilities of BGP and options for changing these default settings. Finally, you'll explore migration techniques for IPv6 that interoperate seamlessly with IPv4, including dual stack, tunneling, and translation strategies. This course can be used in preparation for the 300-420: Designing Cisco Enterprise Networks (ENSLD) certification exam.

COURSE_DESCRIPTION: Customers rely on modern software systems to deliver performance in terms of non-functional metrics, such as usability, reliability, and robustness. Today's software professionals need to know how to use performance engineering strategies to meet the performance demands put on modern systems. In this course, learn what performance is as it relates to software development. Investigate the challenges that modern software faces in meeting performance metrics. Identify the impact on the business when performance issues occur. Study what performance engineering is, the history of performance engineering, and its benefits. Moving along, explore the non-functional metrics that go into measuring performance. Examine the specifics of the performance engineering approach. Finally, specify the roles and responsibilities of a performance engineer. Upon completion, you'll know how to improve software performance using performance engineering techniques.

COURSE_DESCRIPTION: Infrastructure as a Service (IaaS) concerns storage, networking, firewalls, virtual machines, and other cloud services. To be at the top of their game, server admins should know how to deploy various IaaS solutions. Learn how to deploy IaaS solutions related to storage, networking, and virtual machines in this wide-spanning course. First, get a theoretical overview of IaaS. Then, practice deploying AWS and Microsoft Azure cloud storage solutions, virtual networks, and Windows and Linux virtual machines (VMs). After that, create a custom cloud-based VM. Next, deploy cloud services using cloud automation templates. And finally, use role-based access control (RBAC) and cloud policies to limit the cloud administrative activities available to cloud technicians. When you're done, you'll be able to deploy several IaaS solutions and restrict cloud server access. You'll also be more prepared for the CompTIA Server+ SK0-005 certification exam.

COURSE_DESCRIPTION: This Professional Certificate is intended to provide the foundational skills required to launch a career in the enterprise platform that powers over 68% of worldwide transactions. Companies around the world are searching for these skills to run their critical system workloads. In this series of courses, the learner will be introduced to various operating systems, mainframe applications, and get real-time hands-on experience on an IBM Z server. The skills acquired on completion of this Professional Certificate allows the learner to pursue a career as a mainframe application developer, system programmer, system administrator, or a DBA Practitioner. There are three courses in this specialisation, please be sure to complete all three in order to maximise your time and effort. Course 1: Introduction to Enterprise Computing Course 2 : Getting Started on Mainframe with z/OS Commands and Panels Course 3 : Basic System Programming on IBM Z On successful completion of this professional certificate, the learners will be eligible to claim the IBM z/OS Mainframe Practitioner Professional Certificate badge. More information can be found [here](#)

COURSE_DESCRIPTION: This is the fourth course in the Google Project Management Certificate program. This course will delve into the execution and closing phases of the project life cycle. You will learn what aspects of a project to track and how to track them. You will also learn how to effectively manage and communicate changes, dependencies, and risks. As you explore quality management, you will learn how to measure customer satisfaction and implement continuous improvement and process improvement techniques. Next, you will examine how to prioritize data, how to use data to inform your decision-making, and how to effectively present that data. Then, you will strengthen your leadership skills as you study the stages of team development and how to manage team dynamics. After that, you will discover tools that provide effective project team communication, how to organize and facilitate meetings, and how to effectively communicate project status updates. Finally, you will examine the steps of the project closing process and how to create and share project closing documentation. Current Google project managers will continue to instruct and provide you with hands-on approaches for accomplishing these tasks while showing you the best project management tools and resources for the job at hand. Learners who complete this program should be equipped to apply for introductory-level jobs as project managers. No previous experience is necessary. By the end of this course, you will be able to: - Identify what aspects of a project to track and compare different tracking methods. - Discuss how to effectively manage and communicate changes, dependencies, and risks. - Explain the key quality management concepts of quality standards, quality planning, quality assurance, and quality control. - Describe how to create continuous improvement and process improvement and how to measure customer satisfaction. - Explain the purpose of a retrospective and describe how to conduct one. - Demonstrate how to prioritize and analyze data and how to communicate a project's data-informed story. - Identify tools that provide effective project team communication and explore best practices for communicating project status updates. - Describe the steps of the closing process for stakeholders, the project team, and project managers.

COURSE_DESCRIPTION: Explore how multifactor authentication (MFA) and role-based access control lessen risks of system compromise and privilege abuse, and how data classification uses tags to organize data, while preparing for the ISACA Certified Information Systems Auditor (CISA) exam in this 16-video course. Key concepts covered include: authentication categories and how authorization follows; how to create Active Directory (AD) users and groups on-premises; and how to create Azure AD users and groups. Learn how MFA enhances security; how to enable MFA for Azure AD users; how to assign built-in Azure roles to AD groups; and how to assign built-in Amazon Web Services (AWS) policies. Next, study the role of identity federation across organizations, including single sign-on (SSO), and learn how resource tagging aids in tracking and granting permissions. Learn to configure shared folder and New Technology File System (NTFS) Windows file system permission, as well as standard Linux file system permissions. Finally, learn to classify Windows Server files with metadata; to use resource and AD attributes to conditionally grant file system permissions; and to create and manage authentication accounts and data tags.

COURSE_DESCRIPTION: In this 7-video Skillsoft Aspire course, learners can explore optimizations allowing Apache Hive to handle parallel processing of data, while users can still contribute to improving query performance. For this course, learners should have previous experience with Hive and familiarity with querying big data for analysis purposes. The course focuses only on concepts; no queries are run. Learners begin to understand how to optimize query executions in Hive, beginning with exploring different options available in Hive to query data in an optimal manner. Discuss how to split data into smaller chunks, specifically, partitioning and bucketing, so that queries need not scan full data sets each time. Hive truly democratizes access to data stored in a Hadoop cluster, eliminating the need to know MapReduce to process cluster data, and makes data accessible using the Hive query language. All files in Hadoop are exposed in the form of tables. Watch demonstrations of structuring queries to reduce numbers of map reduce operations generated by Hive, and speeding up query executions. Other concepts covered include partitioning, bucketing, and joins.

COURSE DESCRIPTION: Explore the key penetration (pen) testing concepts such as vulnerability assessment, types of pen testing, and threat actors, in this 14-video course. Discover why pen testing is needed and investigate tools used for pen testing. Key concepts covered in this course include pen testing, a set of tasks that are performed by ethical hackers against an organization, but in a legal way; steps performed during the pen testing process; and reasons why an organization needs to perform pen testing and distinguish between pen testing and vulnerability assessments. Next, you will compare the different types of pen testing and learn the weaknesses of pen testing; learn the various types of tools used in pen testing and the target selection for pen testing; and learn the types of assets in an organization; compare the types of risk responses that an organization may adapt. Finally, learners observe how to use the Metasploit framework in Kali Linux; and how to create an exploit by using MSFvenom.

COURSE DESCRIPTION: Securing hardware includes applying firmware updates and configuring devices on isolated networks. In this course, you'll learn about mobile device security, IoT security, and vulnerable device lists. You'll explore physical security and the security risks presented by drones and vehicles. You'll move on to examine how SCADA is used for industrial device networks, how to recognize BIOS and UEFI security settings, how self encrypting drives can protect data at rest, and how hardware security modules are used for encryption offloading and cryptographic secret storage. This course can be used in preparation for the CompTIA Cybersecurity Analyst (CySA+) certification exam CS0-002.

COURSE_DESCRIPTION: By the end of this project, you'll be able to create system and application icons with Inkscape. Inkscape is a free and open-source program that creates vector graphics. Because they're vector based, images created in Inkscape are ideal for creating icons. They can be resized and edited quickly-and they'll stay clear and sharp even after the changes. During this project, you'll practice creating line-based icons and solid-fill icons. You'll practice researching icon requirements, you'll prepare the Inkscape workspace to create icons, and you'll create two different icons: a line-art lightbulb and a solid-fill envelope. Then you'll practice resizing and exporting those images to meet Apple and Android specifications. By the end of the project, you'll be comfortable planning and creating icons for iOS, Android, and other systems. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Please note: You will need an AWS account to complete this course. Your AWS account will be charged as per your usage. Please make sure that you are able to access Sagemaker within your AWS account. If your AWS account is new, you may need to ask AWS support for access to certain resources. You should be familiar with python programming, and AWS before starting this hands on project. We use a Sagemaker P type instance in this project, and if you don't have access to this instance type, please contact AWS support and request access. In this 2-hour long project-based course, you will learn how to train and deploy an image classifier created and trained with the TensorFlow framework within the Amazon Sagemaker ecosystem. Sagemaker provides a number of machine learning algorithms ready to be used for solving a number of tasks. However, it is possible to use Sagemaker for custom training scripts as well. We will use TensorFlow and Sagemaker's TensorFlow Estimator to create, train and deploy a model that will be able to classify images of dogs and cats from the popular Oxford IIIT Pet Dataset. Since this is a practical, project-based course, we will not dive in the theory behind deep learning based image classification, but will focus purely on training and deploying a model with Sagemaker and TensorFlow. You will also need to have some experience with Amazon Web Services (AWS). Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: This is the sixth course in the IBM AI Enterprise Workflow Certification specialization. You are STRONGLY encouraged to complete these courses in order as they are not individual independent courses, but part of a workflow where each course builds on the previous ones. This course focuses on models in production at a hypothetical streaming media company. There is an introduction to IBM Watson Machine Learning. You will build your own API in a Docker container and learn how to manage containers with Kubernetes. The course also introduces several other tools in the IBM ecosystem designed to help deploy or maintain models in production. The AI workflow is not a linear process so there is some time dedicated to the most important feedback loops in order to promote efficient iteration on the overall workflow. By the end of this course you will be able to: 1. Use Docker to deploy a flask application 2. Deploy a simple UI to integrate the ML model, Watson NLU, and Watson Visual Recognition 3. Discuss basic Kubernetes terminology 4. Deploy a scalable web application on Kubernetes 5. Discuss the different feedback loops in AI workflow 6. Discuss the use of unit testing in the context of model production 7. Use IBM Watson OpenScale to assess bias and performance of production machine learning models. Who should take this course? This course targets existing data science practitioners that have expertise building machine learning models, who want to deepen their skills on building and deploying AI in large enterprises. If you are an aspiring Data Scientist, this course is NOT for you as you need real world expertise to benefit from the content of these courses. What skills should you have? It is assumed that you have completed Courses 1 through 5 of the IBM AI Enterprise Workflow specialization and you have a solid understanding of the following topics prior to starting this course: Fundamental understanding of Linear Algebra; Understand sampling, probability theory, and probability distributions; Knowledge of descriptive and inferential statistical concepts; General understanding of machine learning techniques and best practices; Practiced understanding of Python and the packages commonly used in data science: NumPy, Pandas, matplotlib, scikit-learn; Familiarity with IBM Watson Studio; Familiarity with the design thinking process.

COURSE_DESCRIPTION: In this 13-video course, learners can explore Agile programming concepts such as iterative software approaches, differences between Agile and Waterfall, and creating a secure Agile culture. Examine Scrum, Lean software, extreme programming, and rapid application development, along with several other topics. Begin the course with a look at iterative software development. This leads on to differentiating between Agile, one of the most widely used iterative development approaches, and Waterfall, the still used, traditional method. Then learn about integrating security into Agile and creating a secure Agile culture. Next, you will examine Scrum, an iterative development process designed for small teams, usually with 10 or fewer members; and then take a look at Lean software, and how it works. You will explore extreme programming and rapid application development (RAD). Learn the best practices for secure Agile development, and how to facilitate a secure organizational culture. In the final tutorial, you will learn about integrating secure methods into the Scrum approach.

COURSE_DESCRIPTION: In this hands-on project, you will use Keras with TensorFlow as its backend to create a recurrent neural network model and train it to learn to perform addition of simple equations given in string format. You will learn to create synthetic data for this problem as well. By the end of this 2-hour long project, you will have created, trained, and evaluated a sequence to sequence RNN model in Keras. Computers are already pretty good at math, so this may seem like a trivial problem, but it's not! We will give the model string data rather than numeric data to work with. This means that the model needs to infer the meaning of various characters from a sequence of text input and then learn addition from the given data. This course runs on Coursera's hands-on project platform called Rhyme. On Rhyme, you do projects in a hands-on manner in your browser. You will get instant access to pre-configured cloud desktops containing all of the software and data you need for the project. Everything is already set up directly in your internet browser so you can just focus on learning. For this project, you'll get instant access to a cloud desktop with Python, Jupyter, and TensorFlow pre-installed. Please note that you will need some experience in Python programming, and a theoretical understanding of Neural Networks to be able to finish this project successfully. Notes: - You will be able to access the cloud desktop 5 times. However, you will be able to access instructions videos as many times as you want. - This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Regression analysis is used to predict continuous data values. The KNIME Analytics Platform allows you to load, explore, pre-process, and use data to train regression models with little to no code. Through this course, learn how to train and evaluate regression models in KNIME. Explore how regression models work and use KNIME nodes to build a workflow to load and comprehend data. Next, discover how to compute correlations and use bar charts, box plots, scatter plots, and pivot tables. Finally, learn how to pre-process flight prediction data using one-hot and label encoding, partition data, and train regression models. After course completion, you'll be able to build a complete workflow in KNIME for regression analysis.

COURSE_DESCRIPTION: In this intermediate-level project you will examine the need to make complex decisions in programming that require Nested If statements. Using the Notepad++ editor and JavaScript embedded in HTML, you will write the JavaScript code to test a condition and then take an action based on the test result. The catch is that the action may be to test another condition and take an action based on that test result. As you develop your programming skills, the logic required will become more complex. The Nested If statement will be a great tool for you as you tackle those logic challenges. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: This course is the third course in a series that aims to prepare you for a role working as a programmer. In this course, you will be introduced to the four main concepts in programming: Advanced String Operations and Dates, Modeling Classes, Development of Classes and Collections. Labs will allow the students to apply the material in the lectures in simple computer programs designed to re-enforce the material in the lesson. Learners will need to have a local machine with any one of the following operating systems; Windows 7 SP1 or higher, macOS 10.1.13 or higher, or almost any version of Linux from the last several years. The learner will either need to download the free community edition of Visual Studio or the open source .NET Core installation.

COURSE_DESCRIPTION: Die Kontrolle der eigenen Fortschritte bei der Weiterentwicklung Ihrer Fähigkeiten ist eine einfache und effektive Möglichkeit, Ihren beruflichen Erfolg sicherzustellen. Zu wissen, wie Sie Ihre eigenen Führungsqualitäten und -kompetenzen einschätzen können, ist wichtig, wenn Sie Ihre Entwicklung verfolgen und Ihren zukünftigen Werdegang als Führungskraft planen möchten. In diesem Kurs lernen Sie Methoden kennen, mit denen Führungskräfte eine Selbsteinschätzung vornehmen können. Dazu gehören unter anderem das Führen eines Reflexionstagebuchs, Abfragen und Checklisten sowie das 360-Grad-Feedback. Sie erfahren außerdem, wie Sie anhand eines Plans zur Entwicklung der Führungskompetenzen Ihre Motivation steigern und Ihre eigene Weiterbildung vorantreiben können.

COURSE_DESCRIPTION: This guided project course is part of the "Tensorflow for Convolutional Neural Networks" series, and this series presents material that builds on the second course of DeepLearning.AI TensorFlow Developer Professional Certificate, which will help learners reinforce their skills and build more projects with Tensorflow. In this 2-hour long project-based course, you will learn in this project, you will learn practically how to build an object recognition model in computer vision with real-world applications, and you will create your own object recognition algorithm with TensorFlow using real data, and you will get a bonus deep learning exercise implemented with Tensorflow. By the end of this project, you will have learned the fundamentals of object recognition and created a deep learning model with TensorFlow on a real-world dataset. This class is for learners who want to learn how to work with convolutional neural networks and use Python for solving object recognition tasks with TensorFlow, and for learners who are currently taking a basic deep learning course or have already finished a deep learning course and are searching for a practical deep learning project with TensorFlow. Also, this project provides learners with further knowledge about creating and training convolutional neural networks and improves their skills in Tensorflow which helps them in fulfilling their career goals by adding this project to their portfolios.

COURSE_DESCRIPTION: In this 2-hour long project-based course, you will create a Value versus Complexity Matrix in Google Sheets and learn how to interpret the outcomes to prioritize product features. In the process, you will review the basics of this prioritization framework as well as Google Sheets functionality such as lookup tables, data validation, and charts. Because time and resources are limited, prioritization is a critical skill that product managers must master in order to optimize product value and minimize development time and costs. There are several frameworks for prioritization which can be used individually or in combination. The Value versus Complexity/Cost Matrix is one commonly used framework that helps provide objectivity in the decision making process. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: The Ethical Hacker Practice Lab gives users the opportunity to gain hands-on experience of the skills required to perform key ethical hacking procedures. Ethical hacking (also known as penetration testing) is a simulated cyber attack designed to exploit security vulnerabilities within a network and systems. Individuals conducting ethical hacking locate those vulnerabilities and attempt to exploit them. For example, this might involve breaching web applications, protocols, Application Programming Interfaces (APIs), servers and firewalls, plus anything else on a network that could be open to potential exploitation. The objective is to identify vulnerabilities that could be targeted by a malicious agent and exploit those vulnerabilities to simulate the damage that might be caused. In the workplace, this intelligence is used to mitigate the effects of a cyber attack and to inform changes to security policies, procedures and infrastructure.

COURSE_DESCRIPTION: Explore the concepts of cloud, database, and server migration using various tools and services provided by Amazon Web Services (AWS). Examine concepts such as refactoring, replatforming, rehosting, and repurchasing. Key concepts covered in this course include: differences between replatforming and refactoring migration approaches using real-time scenarios; rehosting for cloud migration and rehosting tools; and the essential drivers of repurchasing and the benefits associated. Next, learn about services that make migrating servers and databases easier and faster; essential approaches of managing data migration in AWS using Amazon S3 Transfer Acceleration, AWS Snowball, and Amazon Kinesis Firehose; and how to import virtual machine (VM) images from existing on-premises environments to Amazon EC2 instances and export them back. Then study steps involved in migrating web applications to AWS and AWS featured services used during cloud migration processes. Learners will see how to migrate enterprise web applications to AWS; steps involved in migrating dockerized monolithic applications to containerized microservices on AWS; and using cloud migration tools provided by AWS to manage data migration, and specify benefits associated with repurchasing.

COURSE_DESCRIPTION: In this one-hour, project-based course, you will be introduced to Unity's User Interface (UI) Toolkit for creating user interface for your game world. This project covers creating and setting up each UI component and writing a script that will update the UI elements based on certain game events. The guided project will introduce you to the following Unity UI concepts: - World-space Canvas - Rect Transform - Text - Image - Tags - Scripting in C# to control UI content This is Part 2 of a four-part series on creating a good-looking user interface for your game or other Unity application. Part 1 covered creating a screen overlay canvas for typical player-feedback such as health and score. Part 3 will demonstrate how to create a settings menu and Part 4 will show you how to create a UI that will automatically adapt to the aspect ratio of any screen. This is a stand-alone guided project, but because this is a continuation of the previous part in the "User Interface" series, it is recommended that you complete the first part before commencing this guided project. This series makes use of the sci-fi-themed Unity project created in Create Power-Ups and Obstacles with C# in Unity. It compliments this guided project and, although not a prerequisite, is recommended for a more well-rounded understanding of the concepts presented herein.

 COURSE_DESCRIPTION: This course explores the international business environment in which organisations function. You'll learn about core analysis methods, including PESTLE, SWOT, and Boston Box Matrices, as well as the applications of Porter's Five Forces. You'll have the opportunity to participate in discussion forums and access case studies, as well as testing your understanding in quizzes. This course forms part of a specialization from the University of London designed to help you develop and build the essential business, academic, and cultural skills necessary to succeed in international business, or in further study. If completed successfully, your certificate from this specialization can also be used as part of the application process for the University of London Global MBA programme, particularly for early career applicants. If you would like more information about the Global MBA, please visit <https://mba.london.ac.uk/>. This course is endorsed by CMI

 COURSE_DESCRIPTION: As a leader-and we are all leaders-it is essential to get to know yourself better. Meditation is an excellent practice for anyone ready and willing to engage with themselves. Meditation is a powerful practice for everyone prepared to develop a more powerful way of presence in the moment and develop ways to deal with stress, distraction, a sense of being lost in the moment, and exhaustion from information overload. In this Leadercamp, certified executive coach Florian Brody explains how meditation practice can train us to give ourselves the permission to "just be." Meditation does not solve problems, but it provides a powerful foundation to realize how to deal with problems. Join Florian Brody for an insightful look at meditation, a deeper understanding of how to increase your self-awareness and manage stress, and a path to add meditation to your daily practice.

COURSE_DESCRIPTION: Although containerization technologies such as Docker and Kubernetes can function independently, they can also benefit significantly from one another. Furthermore, open source automation tools such as Jenkins can be used to increase resource utilization and efficiency through pipelines. In this course, you'll explore the many benefits of pipelines, and learn how to use them to build code. You'll outline the benefits of Git and GitHub for revision control and identify the distributed version control tools that can be used to manage source code history. You'll then work with Jenkinsfiles to write pipeline-as-a-code and code to use at the build stage, after the build and test stages, and for recording failures. Next, you'll use the Jenkins Pipeline to set the environment variables and outline the key steps and factors needed in your code review. Lastly, you'll learn how to use Kubernetes to deploy applications with high availability, scalability, and resilience.

COURSE_DESCRIPTION: This 19-video course prepares learners for the MS-201 Implementing a Hybrid and Secure Messaging Platform certification exam, which tests abilities of messaging administrators to plan and implement a hybrid configuration, manage migration, secure the messaging environment, and manage organizational settings. In this course, you will use the Hybrid Configuration Wizard, and learn how to deploy a hybrid Exchange environment while learning about OAuth authentication, transport options, and the OCT (Organization Configuration Transfer) utility. Next, learners will examine Edge transport servers, and how to use them with hybrid deployments, transport options, and transporting routing of inbound and outbound messages. You will examine how federation is implemented by the Hybrid Configuration Wizard, and learn how to use the Organization Configuration Transfer Wizard. You will install and set up the Hybrid Agent; install additional agents with the Hybrid Configuration Wizard; check their status, and test and validate by using the Performance Monitor. Finally, examine how to use the Hybrid Modern Authentication with Outlook for iOS, including connection flow, licensing requirements, and the implementation of Hybrid Modern Authentication.

COURSE_DESCRIPTION: This course provides an intensive conceptual and applied introduction to auditing in society. It focuses on concepts and applications related to financial-statement auditors' professional responsibilities as well as major facets of the audit process including risk assessment and audit reporting. In the U.S. financial-statement audits and related services generally are provided by Certified Public Accountants (CPAs). To succeed in this course, you should anticipate engaging in critical thinking and thoughtful communication about audit professionals' decision environments, decision processes, and deliverables. Additionally, you should understand the macro-level learning objectives in each of the course's weekly modules.

COURSE_DESCRIPTION: Software developers working as a team on the same codebase must share their changes in a way that is consistent and allows for rollback. This is why having a strategy for managing branches in your source control system is so important. In this course, learn how to deploy a trunk-based branching strategy with feature and release branches. Next, discover how pull requests can be used to enable writing, merging, and shipping code in the context of a secured versioning control system. Finally, explore how to enforce static code analysis for code quality consistency on pull requests. This course is one of a collection that prepares learners for the Designing and Implementing Microsoft DevOps Solutions (AZ-400) exam.

COURSE_DESCRIPTION: In this course, you'll learn about the cloud in general, including the NIST definition of cloud (NIST 800-145) and cloud deployment and service models. You'll discover that you don't have to sacrifice security when you move to the cloud and explore the types of security responsibilities that exist with the cloud and the parties that are responsible for them. Finally, you'll learn about various cloud security processes and solutions that you should be familiar with if the cloud is an important aspect of your IT infrastructure, including cloud logging, auditing, and the security of workloads. This course can be used in preparation for the 350-701: Implementing and Operating Cisco Security Core Technologies (SCOR) certification exam.

COURSE_DESCRIPTION: In this project you will create a guessing game application that pits the computer against the user. You will create variables, static methods, decision constructs, and loops in C++ to create the game. C++ is a language developed to provide an Object-Oriented version of the C language. Learning C++ then gives the programmer a wide variety of career paths to choose from. It is used in many applications, from text editors to games to device drivers to Web Server code such as SQL Server. There is no more efficient higher level language than C, and C can be used within C++ code, since the C++ compiler supports C as well. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Explore how to use the secure lifecycle management model in this 15-video course. First, learners will hear practical descriptions of secure configurations, inversion control, how to obtain security milestones, and secure software methodology. Then receive an overview of security standards and frameworks, and explore configuration management as it relates to source code version control. Next, the course discusses how to prepare proper security documentation, provides an overview of a security matrix, and describes end-of-life policies. Learners will then watch demonstrations of how to perform data destruction and how to perform credential removal. You will learn about concepts such as security metrics and governance, risk, and compliance (GRC). The course concludes with useful discussions of what acceptance is, including software qualification testing, planning hierarchy, what the characteristics of the pre-release testing process are, and the characteristics of a post-release plan; and how and when to report security status. The course prepares learners for the (ISC)2 CSSLP: Certified Secure Software Lifecycle Professional certification exam.

COURSE_DESCRIPTION: The robust websites and apps produced using Django suggest a much more complicated framework than is used. In this course, you'll build on your existing Django knowledge to perform some Django template language operations. You'll start this course by performing various query operations on your Django model instances from the Python shell. You'll also use the Django admin website to work with your models. You'll implement class-based views in Django, first using the ListView class to view multiple instances of a model before using the DetailView class to view individual records. Moving along, you'll use CreateView and UpdateView to generate and modify instances and implement a DeleteView for their easy removal. You'll round off this course by briefly exploring how to improve the aesthetics of your class-based views by incorporating HTML elements, such as tables, in their corresponding templates.

COURSE_DESCRIPTION: This Bootcamp is designed to introduce you to developing on the AWS cloud computing platform while simultaneously preparing you for the AWS Certified Solutions Architect Associate (SAA-C02) certification exam. From AWS beginners to AWS Architects looking to prepare for the exam, and IT professionals looking to migrate to the cloud, this course is for you. This course covers official SAA-C02 exam objectives; topics include Identity and Access Management (IAM); Storage solutions such as S3, and EBS; and advanced architectural concepts such as load balancing, auto scaling, and network design features such as Route 53 and NAT gateways. You can also count on learning about all other topics that you can expect to see on the exam. The content is spread out over four 4-hour days. The course also includes live demonstrations. Before attending the course, if you don't already have one, please make sure you sign up for a free Amazon Web Services account at <https://aws.amazon.com/>

COURSE_DESCRIPTION: An increasing volume of data is becoming available in biomedicine and healthcare, from genomic data, to electronic patient records and data collected by wearable devices. Recent advances in data science are transforming the life sciences, leading to precision medicine and stratified healthcare. In this course, you will learn about some of the different types of data and computational methods involved in stratified healthcare and precision medicine. You will have a hands-on experience of working with such data. And you will learn from leaders in the field about successful case studies. Topics include: (i) Sequence Processing, (ii) Image Analysis, (iii) Network Modelling, (iv) Probabilistic Modelling, (v) Machine Learning, (vi) Natural Language Processing, (vii) Process Modelling and (viii) Graph Data. COURSE_DESCRIPTION: Assertions, a collection of utility methods in JUnit, help assert the pass or fail status of test cases. The focus of this course is on assertions that allow you to set the conditions for the success and failure of test cases and assumptions to control the flow of execution in a test case. Begin with simple assert methods to compare the actual values of fields or return values of methods with their expected values. Then, use assertions that ensure your app's performance by failing a test if it takes too long to run, followed by assert methods that check an exception is thrown when invalid data is passed to a method. Next, use assumptions that check for conditions before executing a code block - effectively serving as control structures. When you're done, you'll have a working knowledge of using assertions in JUnit.

COURSE_DESCRIPTION: Using high-quality code in any programming language involves writing code that is clear, comprehensible, and maintainable. This means that your code needs to follow sound software engineering principles, and it is also important to know and deal with the different kinds of errors that might occur in code. Use this course to explore key principles of software engineering and learn how the preprocessor, compiler, and linker come together to build your C++ executable. You will also examine different kinds of errors in code, including compiler, linker, runtime, and logic errors. When you are finished with this course, you will have the skills and ability to implement software engineering principles to write clean and comprehensible code.

COURSE_DESCRIPTION: This course introduces you to two of the most sought-after disciplines in Machine Learning: Deep Learning and Reinforcement Learning. Deep Learning is a subset of Machine Learning that has applications in both Supervised and Unsupervised Learning, and is frequently used to power most of the AI applications that we use on a daily basis. First you will learn about the theory behind Neural Networks, which are the basis of Deep Learning, as well as several modern architectures of Deep Learning. Once you have developed a few Deep Learning models, the course will focus on Reinforcement Learning, a type of Machine Learning that has caught up more attention recently. Although currently Reinforcement Learning has only a few practical applications, it is a promising area of research in AI that might become relevant in the near future. After this course, if you have followed the courses of the IBM Specialization in order, you will have considerable practice and a solid understanding in the main types of Machine Learning which are: Supervised Learning, Unsupervised Learning, Deep Learning, and Reinforcement Learning. By the end of this course you should be able to: Explain the kinds of problems suitable for Unsupervised Learning approaches Explain the curse of dimensionality, and how it makes clustering difficult with many features Describe and use common clustering and dimensionality-reduction algorithms Try clustering points where appropriate, compare the performance of per-cluster models Understand metrics relevant for characterizing clusters Who should take this course? This course targets aspiring data scientists interested in acquiring hands-on experience with Deep Learning and Reinforcement Learning. What skills should you have? To make the most out of this course, you should have familiarity with programming on a Python development environment, as well as fundamental understanding of Data Cleaning, Exploratory Data Analysis, Unsupervised Learning, Supervised Learning, Calculus, Linear Algebra, Probability, and Statistics.

COURSE_DESCRIPTION: This 12-video course explores essential phases of machine learning (ML), deep learning workflows, and data workflows that can be used to develop ML models. You will learn the best practices to build robust ML systems, and examine the challenges of debugging models. Begin the course by learning the importance of the data structure for ML accuracy and feature extraction that is wanted from the data. Next, you will learn to use checklists to develop and implement end-to-end ML and deep learning workflows and models. Learners will explore what factors to consider when debugging, and how to use flip points to debug a trained machine model. You will learn to identify and fix issues associated with training, generalizing, and optimizing ML models. This course demonstrates how to use the various phases of machine learning and data workflows that can be used to achieve key milestones of machine learning projects. Finally, you will learn high level-deep learning strategies, and the common design choices for implementing deep learning projects.

COURSE_DESCRIPTION: With the use of artificial intelligence and smart devices on the rise, business networks are strained under the heavy load of data. Edge computing seeks to move data processing, collection, and delivery closer to the end user - to the so-called edge of the network. Edge data and local processing are fast becoming standard features in modern business networks. Edge computing can reduce costs and latency issues, improve data management and data warehousing, and enhance business continuity. In this course, you'll learn about the benefits and challenges of edge computing. You'll also learn how to properly utilize a data warehouse and plan for implementing it into your business operation. And you'll examine the considerations and best practices for implementing and utilizing edge computing in your organization.

COURSE_DESCRIPTION: This course explores how natural language processing (NLP) is used for machine learning, and examines the benefits and challenges of NLP when creating an application that can essentially understand human language. In its 13 videos, learners will be shown the essential components of NLP, including parsers, corpus, and corpus linguistic, as well as how to implement regular expressions. This course goes on to examine tokenization, a way to separate a piece of text into smaller units, and then illustrates different tokenization use cases with NLTK (Natural Language Toolkit). You will learn to use stop words using libraries and the NLTK. This course demonstrates how to implement regular expressions in Python to build NLP-powered applications. Learners will examine the list of Python NLP libraries along with their essential capabilities, including NLTK, Gensim, CoreNLP, spaCy and PyNLPl. You will learn to set up and configure an NLTK environment to illustrate how to process raw text. Finally, this course demonstrates the use of filtering stopwords in a tokenized sentence using NLTK.

COURSE DESCRIPTION: In this capstone project course, we revisit the strategy controversy at e-Types, introduced in the first course in this specialization, Strategic Management, and further analysed in each of the subsequent courses, Strategy Formulation and Strategy Implementation. After revealing, examining, and analyzing what happened at e-Types, we turn to a new set of strategy cases that range in terms of company size, geography, and focus. For your final project, we ask YOU to apply everything you have learned in this specialization to analyze your choice of one of these four situations.

COURSE_DESCRIPTION: Rapid Application Development can rapidly deliver software solutions that keep your customers engaged and provide the benefits that they are looking for. In this course, you'll learn about the RAD methodology, including its advantages and disadvantages, and the traditional Waterfall System Development Life Cycle methodology. You'll then examine comparisons of RAD with the traditional Waterfall SDLC methodology and with the Agile framework. Next, you'll learn about the considerations and characteristics of RAD and the best practices when performing rapid software delivery. You'll explore the customer-oriented RAD framework, including best practices, and available RAD tools and frameworks. Lastly, you'll learn about cross-platform RAD tools and frameworks and how to create an application using the Xamarin development tool.

COURSE_DESCRIPTION: This course expands the knowledge of a construction project manager to include an understanding of economics and the mathematics of money, an essential component of every construction project. Topics covered include the time value of money, the definition and calculation of the types of interest rates, and the importance of Cash Flow Diagrams. The course covers these topics in three sections. The first section focuses on the foundation of building the mathematics of money, often referred to as value of money. It also highlights the present value techniques and the internal rate of return from a construction manager point of view. The second section of the course focuses on vertical construction finance and the last part focuses on horizontal construction finance. Under the vertical construction finance, the instructor discusses real estate finance and how that has been done with more in-depth details and gives examples for students to solve with instructions. The last topic, horizontal finance, is divided into two parts. To begin, the instructor introduces vast details about public private partnership. This module highlights around three case studies about PPP projects, which would be an introduction to project financing in horizontal work. After introducing case studies, the instructor demonstrates the risks associated with construction finance. After that, similar to the previous three courses, the course finishes with emphasizing the importance of construction finance.

COURSE_DESCRIPTION: One of the primary purposes of using Excel is to analyze and present data in a focused, accessible, and accurate way. A great way to do this is with charts and sparklines. In this course, you'll create basic chart types, such as line, bar, and pie charts, as well as more advanced charts, like treemaps and sunburst charts. In doing this, you'll work with the different aspects of Excel's chart customization capabilities, from chart element transparency to the orientation and exploding out of slices in a pie chart. Next, you'll advance to use more statistically-oriented chart types, including histograms, scatter plots, and box-and-whisker plots. Finally, you'll learn to create, customize, and work with Excel's sparklines, which are lightweight visualizations usually contained within a single cell.

COURSE_DESCRIPTION: Discover how to properly perform and analyze vulnerability scans, in preparation for the PT0-001: CompTIA PenTest+ certification exam. During this course you will learn about scan types, their considerations, applications, and containers, such as the Docker software platform. Discover how to categorize assets for scans and how to adjudicate and prioritize scans. Review common scanning themes, such as the definition of vulnerability. See how to perform a vulnerability scan and analyze its results. As an exercise, you will list eight common examples of compliance scans, name three benefits of credentialed scans, and list three considerations about vulnerability scans.

COURSE_DESCRIPTION: Explore the concepts of analyzing large data sets in this 12-video Skillsoft Aspire course, which deals with Hadoop and its Hadoop Distributed File System (HDFS), which enables parallel processing of big data efficiently in a distributed cluster. The course assumes a conceptual understanding of Hadoop and its components; purely theoretical, it contains no labs, with just enough information provided to understand how Hadoop and HDFS allow processing big data in parallel. The course opens by explaining the ideas of vertical and horizontal scaling, then discusses functions served by Hadoop to horizontally scale data processing tasks. Learners explore functions of YARN, MapReduce, and HDFS, covering how HDFS keeps track of where all pieces of large files are distributed, replication of data, and how HDFS is used with Zookeeper: a tool maintained by the Apache Software Foundation and used to provide coordination and synchronization in distributed systems, along with other services related to distributed computing—a naming service, configuration management, and so on. Learn about Spark, a data analytics engine for distributed data processing.

COURSE DESCRIPTION: Consumers are constantly overloaded with information and images in social media. Part of social media marketing is learning creative ways to draw attention to products and services, oftentimes on a lean budget. In this follow-on to Introduction to PicsArt for Social Media Marketing project, learners will create another edited photo project for social media using the free version of PicsArt. New tools and options for editing will be introduced throughout the project. PicsArt is a web-based photo and video editing program. Learners can easily create and implement creative edits with online design tools to use when marketing their business. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: One way to achieve overall governance and regulatory compliance with Microsoft Azure is through the use of Azure Policy. In this course, you will work with Azure Policy to control Azure functionality and to check for compliance. First, you will explore how Azure Policy can be used for compliance. Then you will create policy assignments to check for Azure resource compliance with specific settings. Next, you will create and assign a custom policy to the Azure hierarchy. Finally, you will assign policy groups (policy initiatives) to the Azure hierarchy. This course can be used to prepare for exam AZ-500, Microsoft Azure Security Technologies.

COURSE_DESCRIPTION: With a fixed capacity, a highly disposable product and high fixed costs, hotels are a natural candidate for the application of revenue management. Originally developed by the airlines in the 1970s, these analytics-based techniques help predict consumer behavior at the hotel's market level so that the hotel can sell each room each night at the optimum price. With modern-day rising acquisition costs and distribution complexities, revenue management techniques have increasingly been adopted by both small and large hotel companies, making a comprehensive understanding of segmentation, forecasting and pricing an essential requirement for today's hospitality professionals. The purpose of this course is to provide a core understanding of the fundamentals of revenue management, which ties into the larger picture of revenue strategy. The course is structured to provide an insightful look into Revenue Management. Created in conjunction with Duetto, this course is hosted by a group of revenue management leaders in both theory and with hands-on experience at properties around the world. Upon completion of the course students should be empowered with industry best practices, which can be applied across the vast diversification the hotel industry to empower those to optimize profits. Duetto delivers powerful revenue strategy solutions to the world's leading hotels and casinos, combining unparalleled expertise with world-class cloud-based technology. COURSE_DESCRIPTION: This is the fifth course in the IBM AI Enterprise Workflow Certification specialization. You are STRONGLY encouraged to complete these courses in order as they are not individual independent courses, but part of a workflow where each course builds on the previous ones. This course introduces you to an area that few data scientists are able to experience: Deploying models for use in large enterprises. Apache Spark is a

very commonly used framework for running machine learning models. Best practices for using Spark will be covered in this course. Best practices for data manipulation, model training, and model tuning will also be covered. The use case will call for the creation and deployment of a recommender system. The course wraps up with an introduction to model deployment technologies. By the end of this course you will be able to: 1. Use Apache Spark's RDDs, dataframes, and a pipeline 2. Employ spark-submit scripts to interface with Spark environments 3. Explain how collaborative filtering and content-based filtering work 4. Build a data ingestion pipeline using Apache Spark and Apache Spark streaming 5. Analyze hyperparameters in machine learning models on Apache Spark 6. Deploy machine learning algorithms using the Apache Spark machine learning interface 7. Deploy a machine learning model from Watson Studio to Watson Machine Learning Who should take this course? This course targets existing data science practitioners that have expertise building machine learning models, who want to deepen their skills on building and deploying AI in large enterprises. If you are an aspiring Data Scientist, this course is NOT for you as you need real world expertise to benefit from the content of these courses. What skills should you have? It is assumed that you have completed Courses 1 through 4 of the IBM AI Enterprise Workflow specialization and you have a solid understanding of the following topics prior to starting this course: Fundamental understanding of Linear Algebra; Understand sampling, probability theory, and probability distributions; Knowledge of descriptive and inferential statistical concepts; General understanding of machine learning techniques and best practices; Practiced understanding of Python and the packages commonly used in data science: NumPy, Pandas, matplotlib, scikit-learn; Familiarity with IBM Watson Studio; Familiarity with the design thinking process.

COURSE_DESCRIPTION: If you need guidance in the area of cryptographic hashing and how it ensures immutability of transaction data, this multiple-video series is an invaluable tool. Inspecting hash values of downloaded files checks whether a file has been tampered with during the download process, and in blockchains, checks for alterations in the blockchain. This 8-video course helps you learn to recognize the role played by hashing and the practical benefits-faster consistency checks and lookups-gained by storing transaction data as chains of blocks. Learn to describe the Merkle tree data structure and its unique storage method, how it preserves ordering and facilitates searches, and how to outline steps related to verifying transactions in the Ethereum blockchain network, such as identifying the role of digital signatures in authenticating transactions and ensuring their integrity. Review Ethereum's balance verification procedures for senders, to make certain the sender possesses the funds being transferred. Learn how to prevent replay attacks by implementing the transaction nonce.

COURSE_DESCRIPTION: This course gives you context and first-hand experience with the two major catalyzers of the computational science revolution: big data and artificial intelligence. With more than 99% of all mediated information in digital format and with 98% of the world population using digital technology, humanity produces an impressive digital footprint. In theory, this provides unprecedented opportunities to understand and shape society. In practice, the only way this information deluge can be processed is through using the same digital technologies that produced it. Data is the fuel, but machine learning is the motor to extract remarkable new knowledge from vast amounts of data. Since an important part of this data is about ourselves, using algorithms in order to learn more about ourselves naturally leads to ethical questions. Therefore, we cannot finish this course without also talking about research ethics and about some of the old and new lines computational social scientists have to keep in mind. As hands-on labs, you will use IBM Watson's artificial intelligence to extract the personality of people from their digital text traces, and you will experience the power and limitations of machine learning by teaching two teachable machines from Google yourself.

COURSE_DESCRIPTION: "C and C++ are two of the most widely-used compiled languages for infrastructure and performance-critical applications. Mistakes and careless use of these tools can often lead to system and application crashes and security breaches through remote code execution. In this course, you'll learn and construct the essential elements of C and C++ code and generate binary files suitable for Linux and Windows operating systems. You'll work with variables and arrays in C/C++, and learn how to use vectors and standard containers in C++. Next, you'll learn how to use C/C++ conditional statements and loops, as well as how to perform string manipulation in both C and C++. Lastly, you'll learn how to define and call C/C++ functions, and how to work with pointers in a C program."

COURSE_DESCRIPTION: Wenn Ihr Unternehmen eine positive Lernkultur entwickelt, wird es nicht nur schwierige Zeiten besser meistern, sondern auch auf dem wettbewerbsintensiven globalen Markt florieren. Eine positive Lernkultur motiviert und mobilisiert Ihre Mitarbeiter, sich auf die strategischen Unternehmensziele zu konzentrieren. Wenn Sie eine Lernkultur schaffen, müssen Sie als Führungskraft auf allen Ebenen eine positive Lerneinstellung sicherstellen. Dieser Kurs macht Sie mit dem Lernen auf Unternehmensebene und dessen Vorteilen für Ihr Unternehmen vertraut. Er befasst sich mit der Rolle, die Schulungen, Knowledge Management und die Technologie bei der Förderung des Lernens auf Unternehmensebene spielen, und unterstreicht die maßgebliche Rolle der Lernkultur. Anhand der wichtigen Elemente und Indikatoren einer aktiven Lernkultur wird der Kurs Sie befähigen, Ihren Arbeitsplatz zu beurteilen und zu bestimmen, ob er dem Lernen zuträglich ist. Die Entwicklung des positiven Lernens auf Unternehmensebene erhöht Ihre Wettbewerbsfähigkeit sowie die Zufriedenheit und Zielorientierung der Mitarbeiter und folglich die Rentabilität Ihres Unternehmens.

COURSE_DESCRIPTION: Learners can explore the basics of controlled components and uncontrolled components in this 12-video course, which begins with a look at working with forms in React. Forms are used to input data on a web page; you will discover how controlled components work in forms, and then move on to a two-part tutorial on controlled components for multi-input forms: part 1 on wiring up event handlers for form mutations, and part 2 on synchronizing component state by using event handlers. Next, discover how to wire up a single event handler for multiple inputs, and how to design

form elements to be individual components. This leads into testing form setup, and testing the form on a web browser. Discover the need for client-side validation, and how to validate data passed into forms. Compare controlled components and uncontrolled components for form data, and in the final tutorial, learn how to use uncontrolled components to handle file inputs in forms.

COURSE_DESCRIPTION: This course is the eighth course in the Google Data Analytics Certificate. You'll have the opportunity to complete an optional case study, which will help prepare you for the data analytics job hunt. Case studies are commonly used by employers to assess analytical skills. For your case study, you'll choose an analytics-based scenario. You'll then ask questions, prepare, process, analyze, visualize and act on the data from the scenario. You'll also learn other useful job hunt skills through videos with common interview questions and responses, helpful materials to build a portfolio online, and more. Current Google data analysts will continue to instruct and provide you with hands-on ways to accomplish common data analyst tasks with the best tools and resources. Learners who complete this certificate program will be equipped to apply for introductory-level jobs as data analysts. No previous experience is necessary. By the end of this course, you will: - Learn the benefits and uses of case studies and portfolios in the job search. - Explore real world job interview scenarios and common interview questions. - Discover how case studies can be a part of the job interview process. - Examine and consider different case study scenarios. - Have the chance to complete your own case study for your portfolio.

COURSE_DESCRIPTION: Discover how to work with Pyboard and explore the security concerns and approaches for implementing security in IoT devices. During this course, you will learn how to examine Pyboard components and set up network connectivity. Next, study how to program with MicroPython and identify critical MicroPython libraries, such as Array, Ucollection, uhashlib, and more. You will then explore IoT security challenges, security architecture, and the framework for authentication, authorization, and accounting (AAA). From there, other topics include how to assess IoT cloud security concerns, such as data compromises, unsecure application programming interfaces (APIs), and denial of service attacks. Then finally, as a review exercise, you will work with several MicroPython libraries.

 COURSE_DESCRIPTION: In this 2-hour long project based course, we will look at how to handle and divert website traffic to multiple servers using Routing Policies in AWS Route 53. We will look at how you can configure different types of Routing Policies. We will start off with Simple Routing Policy which can be used to divert traffic to multiple servers / IP's randomly. Then we will look at Weight Routing Policy which allows you to split your traffic based on different weights assigned. We will then move on to Latency-based Routing which allows you to route your traffic based on the lowest network latency for your end user (fastest response time). Then we will learn to create an active/passive set up using Failover Routing Policy where you can have a primary website and a secondary Disaster Recovery site.. We will then look at Geolocation Routing Policy which will send your traffic to various servers based on the Geographic location of your users which can for example allow for custom sites based on user location. Finally, we will see Multi-Value Answer Policy which lets you configure Route53 to return multiple values along with health checks. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

 COURSE_DESCRIPTION: Consumers search for virtually everything. This includes the things that small businesses do, from restaurants to bespoke products. When consumers search they get organic results along with paid results. Paid search ads are systematically designed to be relevant. As a result, they're often useful at getting consumers where they want to go. Consumers don't tune out paid search like other types of digital ads. Search ads can be a small business opportunity. While larger advertisers pay massive amounts to place their ads via search, we highlight smart ways small businesses can create their own tailored search campaigns on small budgets. This course shows small businesses how to create and execute search campaigns on Google Ads Search (formally AdWords). Through an introductory overview, students are guided through the official Google Ads Search training materials where they will ultimately earn an official Google Ads Search Certification. Beyond Google materials, practical campaign creation and optimization best practices and exercises are provided by real experts.

 COURSE_DESCRIPTION: In this course you will learn how organizations create, capture, and maintain value. In doing so, you'll develop an understanding of how and why this process is fundamental for sustainable competitive advantage. You will be able to better understand value creation, and capture and learn the tools to analyze both competition and cooperation from a variety of perspectives, including the industry-level (e.g., five forces analysis) and the firm-level (e.g., business models and strategic positioning). You will be able to: - Understand how managers coordinate different functional areas, resources, and systems inside a company and align them with the external environment to enhance overall performance - Recognize strategic management tools and frameworks and apply them to real business contexts - Process diverse business and industry information to diagnose strategic issues, evaluate strategic alternatives, and formulate a coherent and actionable strategic plan This course is part of Gies College of Business' suite of online programs, including the IMBA and iMSM. Learn more about admission into these programs and explore how your Coursera work can be leveraged if accepted into a degree program at <https://degrees.giesbusiness.illinois.edu/idegrees/>.

 COURSE_DESCRIPTION: Organizations must ensure that their products and services are extremely consistent to desired specifications, as variations can lead to rejected orders, reworks, and eventually, customer dissatisfaction and financial losses. Statistics can provide Black Belts with the tools to summarize and assess collected data in a meaningful way for identifying sources of variation and controlling them. Black Belts can use descriptive (enumerative) statistics to tabulate and graphically represent sample data through a number of informative charts and diagrams. Using analytical (inferential) statistics, supported by the central limit theorem, Black Belts can confidently make inferences, test the statistical validity of their inferences, and optimize and control processes. This course provides Black Belts with basic statistical tools for describing, presenting, and analyzing data. It explores the process of preparing and presenting sample data using graphical methods and then making valid inferences about the population represented by the sample. This course is aligned with the ASQ Certified Six Sigma Black Belt certification exam and is designed to assist learners as part of their exam preparation. It builds on foundational knowledge that is taught in SkillSoft's ASQ-aligned Green Belt curriculum.

COURSE_DESCRIPTION: The web today is almost unrecognizable from the early days of white pages with lists of blue links. Now, sites are designed with complex layouts, unique fonts, and customized color schemes. This course will show you the basics of Cascading Style Sheets (CSS3). The emphasis will be on learning how to write CSS rules, how to test code, and how to establish good programming habits. When done correctly, the styling of a webpage can take enhance your page. When done incorrectly the result can be worse than no styling at all. To ensure that your sites do not put up barriers for people with cognitive and/or physical disabilities, you will learn how to evaluate pages using the standardized POUR accessibility guidelines. Upon completion of the course, learners will be able to sketch a design for a given HTML page. Using that design they will use CSS to implement the design by adding fonts, colors, and layouts. This is the second course in the Web Design For Everybody specialization. Subsequent courses focus on adding interaction with JavaScript and enhancing the styling with responsive design. It will be difficult to complete this course if you do not have access to a laptop or desktop computer for the homework.

COURSE_DESCRIPTION: This 5 week course will guide learners through the essential steps in planning an individualized weight loss program. There is no guarantee of weight loss through completing the course; learners will have the framework and essential components for an evidence-based weight loss program. This course is intended for healthy adults who do not have any chronic disease such as diabetes, high blood pressure, heart disease, lung disease or any others. In addition, this course does not provide information for people who have food allergies or intolerances. Losing weight and keeping it off requires planning and goal-setting. Crash diets or fad diets are ineffective and can be dangerous. This course provides evidence-based information for planning a weight loss program that is safe and effective in producing a one to two pound loss per week. This course will help learners establish the following: 1. A realistic goal weight with a specific plan for rate of weight loss and time frame for achieving goal weight. 2. A realistic goal for the frequency, duration, and intensity of exercise that will enable the learner to achieve and maintain the goal weight. 3. A specific set of strategies for grocery shopping, eating in restaurants, eating at social occasions, and dealing with hunger and emotional eating. 4. A plan for monitoring food intake, exercise and weight loss. 5. A plan for continued evaluation of progress to goals and strategies for adjusting goals for continued weight loss for the next 6 months or longer. 6. A thorough understanding of the difficulty of maintaining weight loss and a plan for maximizing the chances of keeping off the weight lost.

COURSE_DESCRIPTION: Learners will explore variations of generative adversarial network (GAN) and the challenges associated with its models, as well as the concept of deep reinforcement learning, its application for machine learning, and how it differs from deep learning, in this 11-video course. Begin by implementing autoencoders with Keras and Python; implement GAN and the role of Generator and Discriminator; and implement GAN Discriminator and Generator with Python and Keras and build Discriminator for training models. Discover the challenges of working with GAN models and explore the concept of deep reinforcement learning and its application in the areas of robotics, finance, and health care. Compare deep reinforcement learning with deep learning, and examine challenges associated with their implementations. Learn about the basic concepts of reinforcement learning, as well as the concept of deep Q-learning and implementing deep Q-learning. Then implement deep Q-learning in Python by using Keras and OpenAI Gym. The concluding exercise involves recalling variations of GAN, implementing GAN Discriminator and Generator using Python, and implementing deep Q-learning in Python by using Keras and OpenAI Gym.

COURSE_DESCRIPTION: In this capstone project course, you will learn to support your students in successfully completing the Advanced Placement Principles Create Task -- however this task can be useful for any course as a culminating, student-designed final programming project. You will learn to interpret and practice applying to real sample student work the Create Task rubric and have the option to modify it for your own setting. You'll prepare resources to help students through the challenges that come with doing an open-ended project that still needs to meet certain specifications. Finally, you'll complete your own Create Task assignment including writing about the ways in which you designed algorithms, used abstraction, and struggled with a challenge while completing the task. You'll be prepared to help students do well on the Advanced Placement Computer Science Principles Create Task!

COURSE_DESCRIPTION: Monitoring Azure resources is crucial for optimizing resource utilization, reducing costs, and enhancing the organizational security posture. In this course, you'll learn about monitoring individual resources as well as working with centralized monitoring. You'll start by examining the metrics for an individual Azure virtual machine. You'll then learn how to work with a Log Analytics workspace and its data sources to centralize log and performance metric data. Next, you'll examine how to work with Azure Monitor and dashboards, view performance metrics, and enable diagnostic logging. You'll see how to view web app metrics through Application Insights and view and manage Azure costs. Lastly, you'll learn how to configure action groups for alert notification, view Security Center recommendations, and work with Azure Sentinel. This course is one of a collection of courses that prepares learners for the AZ-303: Microsoft Azure Architect Technologies certification exam.

COURSE_DESCRIPTION: Working with the full breadth of cloud services in AWS requires access to tools outside of those housed in the AWS Management Console. Use this course to learn how to interact with the many cloud services in AWS. Learn to install, configure, and use the AWS Command Line Interface (CLI) to connect and interact with AWS services and resources. Explore why and how to use Amazon API Gateway. Create an EC2 environment and write a sample application using AWS Cloud9. Then, create and test a simple HTTP API using a Lambda function and the API Gateway. When you're done, you'll be able to make API calls to AWS services using the AWS CLI and SDKs. This course is part of a collection that prepares you for the AWS Certified Developer - Associate 2021 certification exam.

COURSE_DESCRIPTION: Protecting Business Innovations Via Trademark Watch Course Overview: <https://youtu.be/mUja4iwbrTE> Intellectual property rights (IPR) has a great impact on innovation development and society. In Science, Engineering, and Business, we seek to create wealth through innovation in products, designs, manufacturing processes, and business systems or models. However, innovation leaders often FAIL to benefit from their discoveries and inventions when they are unable to adequately protect those innovations. This course provides learners with an understanding of how trademark laws can be used to protect business innovation using a combination of lectures and case examples for discussion. The course focus on protecting innovations with Trademark as one of several tools that can be used by companies to protect their brands and products. In addition to learning about how trademark law works in theory, we will also discuss situations in which trademark might not be effective in protecting innovations, and will focus on the legal issues involved from a practical business perspective rather than from a purely legal viewpoint. This course is one part of a four course series focusing on protection of business innovations using copyright, patent, trademark and strategy, and these four courses may be taken in any order that is most beneficial to students interested in learning about protecting innovation.

COURSE_DESCRIPTION: Welcome to this project-based course Google Trends Analysis using R. In this project, you will learn how to perform extensive exploratory data analysis on Google trends data using different R packages. By the end of this 2-hour long project, you will understand how to get data from Google trends into your RStudio workspace. Also, you will learn how to use different dplyr verbs such as the select verb, filter verb, arrange verb, and mutate verb to manipulate the Google trends data about the word "Covid." By extension, you will learn how to use the ggplot2 package and other advanced R plotting libraries to render beautiful plots and maps from the data returned from using the dplyr verbs. You will learn how to use the R markdown file to organize your work and how to knit your code into an HTML document for publishing. Although you do not need to be a data analyst expert or data scientist to succeed in this guided project, it requires an intermediate knowledge of using R, especially working with the dplyr and ggplot2 packages. Therefore, to complete this project, it is required that you have prior experience with using R dplyr and ggplot2 packages. Please don't get discouraged; I've got you covered. If you are not familiar with working with these packages I have mentioned, then you have to take my projects on "Data Manipulation with dplyr in R" and "Data Visualization using dplyr and ggplot2 in R". So, taking these projects will give the needed requisite to go ahead with this project on Google Trends Analysis using R. However, if you are comfortable with working with the dplyr and ggplot2 packages, please join me on this wonderful ride! Let's get our hands dirty!

COURSE_DESCRIPTION: Entdecken Sie die vielen Möglichkeiten, wie Benutzer mit Word 365 an einem Dokument zusammenarbeiten können. In diesem Kurs lernen Sie, wie Sie die E-Mail-Funktion in Word nutzen können, um Ihre Dokumente automatisch über einen Link oder eine Anlage zu teilen. Als nächstes erfahren Sie, wie Sie direkt auf OneDrive zugreifen können, den Cloud-Dienst von Microsoft, mit dem Sie ein Dokument online speichern können. Anschließend können Sie Ihr Dokument innerhalb Ihrer Organisation oder für bestimmte Benutzer freigeben, indem Sie die Link-Einstellungen anpassen. Sobald Sie Ihr Dokument freigeben haben, erfahren Sie, wie Sie Kommentare hinzufügen, andere Benutzer erwähnen oder in Echtzeit mitverfassen können. Sie erfahren auch, wie Sie Ihre Dokumente schützen können, indem Sie Passwörter festlegen oder Autoren blockieren. Schließlich erfahren Sie, wie Sie die Versionen eines Online-Dokuments verwalten und wie Sie nicht gespeicherte Versionen wiederherstellen können.

COURSE_DESCRIPTION: This course takes Java beginners to the next level by covering object-oriented analysis and design. You will discover how to create modular, flexible, and reusable software, by applying object-oriented design principles and guidelines. And, you will be able to communicate these designs in a visual notation known as Unified Modelling Language (UML). You will be challenged in the Capstone Project to apply your knowledge of object-oriented design by evolving and documenting the Java codebase for an Android application with corresponding UML documentation. After completing this course, you will be able to: • Apply the Class Responsibility Collaborator (CRC) technique to analyze and design the object-oriented model for a problem. • Explain and apply object-oriented modeling principles and their purpose (e.g., abstraction, encapsulation, decomposition, generalization). • Explain and apply different types of inheritance • Explain the difference between association, aggregation, and composition dependencies. • Express object-oriented models as Unified Modeling Language (UML) class diagrams. • Translate between UML class diagrams and equivalent Java code. • Apply design guidelines for modularity, separation of concerns, information hiding, and conceptual integrity to create a flexible, reusable, maintainable design. • Explain the tradeoff between cohesion and coupling.

COURSE_DESCRIPTION: For early career and aspiring consultants who want to jump start their careers, the "Art of Great Consulting" Leadercamp provides a primer on the consulting profession. In addition to a deep and practical understanding of the consulting profession, attendees will learn what differentiates good consultants from great ones, from strategies and habits to project and client management, to digital etiquette and personal branding. The interactive Leadercamp will include a combination of lecture, self-directed video-based learning, and group work across four, three-hour sessions. The "Art of Great Consulting" curriculum is adapted from the book The MECE Muse by your facilitator, Christie Lindor.

COURSE_DESCRIPTION: In the Effective Communication Capstone learners apply the lessons of Business Writing, Graphic Design, and Successful Presentation to create a portfolio of work that represents their mastery of writing, design, and speaking and that expresses their personal brand. The portfolio includes three individual elements—a written memo, a slide deck, and a presentation—integrated around a single topic. We provide the elements for a basic capstone, but we also invite our learners to create their own project if they so choose. This self-designed "Challenge Capstone" allows learners to engage meaningfully in their world by choosing a project relevant to their current job or by volunteering to write, design, and speak for a social organization of their choice. By successfully undertaking the Capstone, learners will accomplish three main goals: 1. They will hone their writing, design, and speaking skills and build a portfolio for a job search and/or professional application; 2. They will shape these skills into a unique brand identity; and, if they choose, 3. They will undertake a transformative effect in the world around them. Ultimately, the importance of Capstone portfolio is greater than the sum of its individual parts. Its true goal lies in each student's personal transformation and expression of their best selves. We invite you to unleash your skills and we can't wait to see the results! This course can be taken for academic credit as part of CU Boulder's Master of Science in Data Science (MS-DS) degree offered on the Coursera platform. The MS-DS is an interdisciplinary degree that brings together faculty from CU Boulder's departments of Applied Mathematics, Computer Science, Information Science, and others. With performance-based admissions and no application process, the MS-DS is ideal for individuals with a broad range of undergraduate education and/or professional experience in computer science, information science, mathematics, and statistics. Learn more about the MS-DS program at <https://www.coursera.org/degrees/master-of-science-data-science-boulder>.

COURSE_DESCRIPTION: Learn front-end and hybrid mobile development, with server-side support, for implementing a multi-platform solution. The first two courses in this Specialization cover front-end frameworks: Bootstrap 4 and Angular. You'll also learn to create hybrid mobile applications, using

the Ionic framework, Cordova and NativeScript. On the server side, you'll learn to implement NoSQL databases using MongoDB, work within a Node.js environment and Express framework, and communicate to the client side through a RESTful API. Learners enrolling in this Specialization are expected to have prior working knowledge of HTML, CSS and JavaScript. Ideally learners should complete the courses in the specified sequence. It is strongly recommended that the Angular course be completed before proceeding with the Ionic and Cordova and/or the NativeScript course.

COURSE_DESCRIPTION: There are many times when having a crystal ball might be useful and it's natural to leverage trusted predictions of future outcomes to prepare for the future and make strategic decisions. Predicting Performance is especially key to decision-making and risk management. In this project, you will build prediction skills with Moving Averages or MA. MA is classic method of time series decomposition most often used with financial predictions. As you work with MA you will also learn how to evaluate and choose the highest performing model to make the most accurate predictions. You will build your skill as we work side-by-side in the free-to-use software Google Sheets. By the end of this project, you will understand use cases for conducting MA trend forecasts in your workplace, be able to conduct MA forecasting in any spreadsheet software, and be able to confidently select the best performing forecast model to enable decision-making. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: This 11-video Skillsoft Aspire course explores the numerous types of data architecture that can be used when working with big data; how to implement strategies by using NoSQL (not only structured query language); CAP theorem (consistency, availability, and partition tolerance); and partitioning to improve performance. Learners examine the core activities essential for data architectures: data security, privacy, integrity, quality, regulatory compliances, and governance. You will learn different methods of partitioning, and the criteria for implementing data partitioning. Next, you will install and explore MongoDB, a cross-platform document-oriented database system, and learn to read and write optimizations in MongoDB. You will learn to identify various important components of hybrid data architecture, and adapting it to your data needs. You will learn how to implement DAG (Directed Acyclic Graph) by using the Elasticsearch search engine. You evaluate your needs to determine whether to implement batch processing or stream processing. This course also covers process implementation by using serverless and Lambda architecture. Finally, you will examine types of data risk when implementing data modeling and design.

COURSE_DESCRIPTION: Bidirectional Encoder Representations from Transformers (BERT) can be implemented in various ways, and it is up to AI practitioners to decide which one is the best for a particular product. It is also essential to recognize all of BERT's capabilities and its full potential in NLP. In this course, you'll outline the theoretical approaches to several BERT use cases before illustrating how to implement each of them. In full, you'll learn how to use BERT for search engine optimization, sentence prediction, sentence classification, token classification, and question answering, implementing a simple example for each use case discussed. Lastly, you'll examine some fundamental guidelines for using BERT for content optimization.

COURSE_DESCRIPTION: After successfully completing this course, you will be able to embrace the Agile concepts of adaptive planning, iterative development, and continuous improvement - resulting in early deliveries and value to customers. This course will benefit anyone who wants to get started with working the Agile way. It is particularly suitable for IT practitioners such as software developers, development managers, project managers, product managers, and executives. You will learn to apply Agile practices derived from lean manufacturing concepts, like test-driven development. Learn how a scrum team functions. Learn how to write good user stories and track your team's progress using a kanban board. Create and refine a product backlog collaboratively with the team and the customer, in a flexible and blameless culture. This approach will lead you to higher levels of efficiency, with the ability to plan and execute sprints with your development team, measuring success with actionable metrics. This course is about more than facts and processes. It is about working collaboratively on a self-organizing team, coached by a scrum master, and building what is needed, rather than simply following a plan. Developed and taught by an experienced Agile practitioner, the course includes hands-on practice through realistic scenario-based labs using GitHub and ZenHub.

COURSE_DESCRIPTION: Writing good, robust, and maintainable C++ code involves understanding the intricacies of the language and avoiding common pitfalls. Use this course to learn more about avoiding fatal coding errors, adopting defensive coding techniques, and following best practices and other code niceties. Examine some common coding errors, the correct way to set up constructors in code, and the pitfalls of overriding non-virtual functions. You will also explore object slicing errors, how to cast objects to other types, and the use of smart pointers to manage resources in C++. Finally, you will understand the implications of the static initialization order fiasco in C++ and how you can avoid it. At the end of this course, you will have the knowledge and skills to write robust, defensive C++ code.

COURSE_DESCRIPTION: Pricing is one of the most important but least understood marketing decisions. Learn and practice concepts, techniques, and get to grips with the latest thinking on assessing and formulating pricing strategies. Analyze how firms attempt to capture value, as well as profits, in the revenues they earn. After this course, you will be able to contribute to the process of formulating pricing strategies for your own products and services, or those of your firm. This course has an additional focus on pricing dynamics and the reaction to and by competitors, taking a highly pragmatic approach and one that is directly applicable to your day-to-day professional life. Martin Boehm - IE Professor and Dean of the Business School with over 10 years experience - will guide you through four modules. We begin with the importance of pricing and how it ultimately can affect the bottom line. Then, we move on to methods to help you decide what is the optimal price for your product; and then price discrimination - should all your products follow the same pricing strategy or should you differentiate depending on the customer segment? Finally, we look at pricing psychology and how you can manipulate customers in order to drive the highest possible price for your product.

COURSE_DESCRIPTION: Top of mind for most recruits is "What benefits are offered?" This is usually generalized to mean "group healthcare," but there are so many more options to explore. In this course, you'll learn about which benefits are mandatory, optional, and not required to be offered, and which rules must be followed. It's a relatively straightforward topic, but heavily backed with legislation that can easily jeopardize an organization's entire plan. This course can be used in preparation for the HR Certification Institute(r) (HRCI(r)) SPHR(r) certification exam.

COURSE_DESCRIPTION: In this Challenge Lab, you will perform header analysis of a suspicious email. First, you will perform an email address verification check by using centralops.net. Next, you will attempt to discover an association between the email address discovered by the header analysis of the suspicious email by using four tools and services on the OSINT Framework web site, including That'sThem, VerifyEmail, Email Reputation, and Have I Been Pwned. Next, you will analyze the suspicious email by using MX Toolbox, and then you will determine who the domain name of the suspicious email address is registered to by using WHOIS. Finally, you will perform a number registration lookup of the suspicious email by using the American Registry for Internet Numbers, and then you will perform a location lookup of the email address by using IP2LOCATION. Note: Once you begin the Challenge Lab, you will not be able to pause, save, or exit and then return to your Challenge Lab. Please ensure that you have set aside enough time to complete the Challenge Lab before you start.

COURSE_DESCRIPTION: Automation expedites the execution of repeatable tasks while minimizing human error. AWS offers a variety of automation solutions. In this course, discover how CloudFormation templates can be used to automate the deployment of related resources. Manage CloudFormation StackSets and deploy resources using existing and custom templates. Use EventBridge to connect applications for notifications, data sharing, and scheduling tasks. Next, enable cloud elasticity with Auto Scaling and manage subnet sizing. Finally, work with AWS Config to view resource compliance. This course can be used to prepare for exam SOA-C02, AWS Certified SysOps Administrator - Associate.

COURSE_DESCRIPTION: Securing data at rest and in transit over a network is accomplished through the use of cryptography. In this course, you'll explore the concepts of hashing and encryption. You'll start by studying how cryptography addresses IT security before gaining hands-on experience generating file hashes and encrypting data at rest. Some of the methods you'll practice will be using Microsoft EFS and AxCrypt to protect files, Microsoft BitLocker to protect disk volumes, PuTTYgen to generate key pairs, and wiping disk data. Moving along, you'll examine and work with PKI certificate authorities, deploying and requesting both Microsoft and AWS certificate authorities. This course is part of a collection of courses that prepares learners for the Certified Information Security Manager (CISM) certification.

COURSE_DESCRIPTION: Das digitale Zeitalter verändert die Regeln für den Erfolg von Unternehmen dramatisch. Der neue Kontext erfordert die Erneuerung Ihrer Fähigkeiten und die Entwicklung anderer Einstellungen. In diesem Kurs lernen Sie die verschiedenen Komponenten der emotionalen Intelligenz bei der Arbeit. Sie lernen beispielsweise, wie Sie effektiv in Teams arbeiten, kooperative Beziehungen zu Ihren wichtigsten Stakeholdern aufbauen, effektiv Einfluss ausüben, schwierige Gespräche führen und Energie und Begeisterung erzeugen, um bedeutende Veränderungen zu fördern. Unsere Module beginnen mit aussagekräftigen Geschichten, die typische Herausforderungen veranschaulichen, denen sich Führungskräfte an vorderster Front gegenübersehen. Wir werden die Falldarstellung anhand der Ideen aus der Theorie der emotionalen Intelligenz analysieren und die wichtigsten Erkenntnisse hervorheben, die Sie in Bezug auf Einstellungen und Fähigkeiten mitnehmen sollten, um sich als Führungskraft zu profilieren.

COURSE_DESCRIPTION: Die Projektressourcen müssen mit großer Sorgfalt verwaltet werden, um das bestmögliche Endergebnis zu erzielen. Das Verwalten von Projekten bedeutet, die richtige Mischung aus Fähigkeiten und Fachwissen zusammenzustellen, um ein leistungsstarkes Team zu bilden. Das CAPM(r) ist ein Asset, das Ihre Effektivität im Ressourcenmanagement verbessert. Mithilfe der CAPM-Schulung können Sie alle benötigten Ressourcen identifizieren und planen, wie Sie diese Ressourcen für den Projekterfolg einsetzen können. In diesem Kurs lernen Sie, wie Sie das Ressourcenmanagement planen. Außerdem lernen Sie Best Practices für die Schätzung und Beschaffung von nötigen Ressourcen sowie die Entwicklung und das Management des Projektteams kennen.

COURSE_DESCRIPTION: In this project you will create an Android app that that uses four activities . You will begin with an Android Studio project that has an ActivityMain.java file (with nothing added to it) and an activity_main.xml file (with nothing added to it). You will create three new activities in this project, onTouch (onTouch.java & activity_on_touch.xml), ReadReview (ReadReview.java & activity_read_review.xml), and WriteReview (WriteReview.java & activity_write_review.xml). You will have access to all of the relevant content (code and comments) needed for those files in text files so that you can copy and paste into the appropriate java and xml files in the project. You will make adjustments to the AndroidManifest.xml file in the project which will allow your app to switch between activities when instructed to do so by the actions of the user. Once we have created our activities, inserted all of the relevant code to our java and xml files, and updated our Manifest file, we will build an APK of your app. You will then upload the APK of the app to a website called Appetize.io where you will test the app. Projects in Series 1: 1. Build a Simple App in Android Studio with Java 2. Build a Persistent Storage App in Android Studio 3. Build a Linear Layout App in Android Studio 4. Build a Relative Layout App in Android Studio 5. Build a Table Layout App in Android Studio Projects in Series 2: 1. Build an App in Android Studio using Resources 2. Build an App in Android Studio using Static Files 3. Build an App in Android Studio using Read - Write 4. Build an App in Android Studio using onTouch 5. Build an App in Android Studio using Activities

COURSE_DESCRIPTION: Data is rarely received in perfect form and often requires some sort of manipulation to make it sing. That is why the world needs data analysts. They can squeeze every bit of usefulness from datasets, and they also know how to prep datasets to extract meaning from them. In this course, you will explore key concepts of data manipulation, beginning with data manipulation tools. Then you will learn organization techniques like filtering and sorting data to make it easier to interpret. Next, you will focus on date functions, logical functions, aggregate functions, and system functions. Finally, you will investigate the best practices associated with data manipulation. This course can be used to prepare for CompTIA Data+ (DAO-001) exam.

COURSE_DESCRIPTION: Pravilno procenjivanje i pripisivanje prioriteta projektnim zahtjevima presudno je za uspjeh planiranja projekta prema metodi Agile. Trebate biti u stanju mapirati rad koji vam je potreban za predstavljanje proizvoda. Na ovom ćete tečaju naučiti o presudnim aktivnostima planiranja prema metodi Agile uključujući stvaranje persona i izradu skica mrežnih mjesta. Tečaj obuhvaća i najčešće tehnike procjene metode Agile, primjerice procjenu potrebnog truda za određenu priču (story points), širokopojasni Delphi i procjenu velikog broja korisničkih priča. Tečaj obuhvaća i metode pripisivanja prioriteta zahtjevima i aktivnosti koje obavljate kada dovršavate plan predstavljanja. Ovaj je tečaj jedan u nizu putanje učenja poduzeća Skillsoft kojom se obuhvaćaju ciljevi za ispit PMI Agile Certified Practitioner (PMI-ACP) (r). PMI-ACP registrirani je žig poduzeća Project Management Institute, Inc.

COURSE_DESCRIPTION: In this hands-on project, we will train a Bidirectional Neural Network and LSTM based deep learning model to detect fake news from a given news corpus. This project could be practically used by any media company to automatically predict whether the circulating news is fake or not. The process could be done automatically without having humans manually review thousands of news related articles. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Cloud assessment helps derive business service models facilitating robust and cost-effective business and IT cloud service consumption and delivery. You'll start this course by examining the steps in a cloud readiness assessment before exploring the cloud transformation maturity model's stages and some potential transformation challenges. You'll then outline how to assess your current technology stack to determine cloud readiness and feasibility. Next, you'll investigate the business value of cloud adoption and of incorporating cloud into enterprise architectures. You'll then examine the cloud capability maturity model, the primary cloud considerations for business, and the technology and infrastructure architecture to achieve an appropriate cloud transformation strategy. Finally, you'll explore some gap analysis activities, the transition planning phase of cloud adoption, diagrams that depict various cloud architectures, and the cloud adoption framework's value. You can use this course in preparation for the CompTIA Cloud Essentials+ (CLO-002) certification exam.

COURSE_DESCRIPTION: This free online course is one of 10 courses available in the Goldman Sachs 10,000 Women collection, designed for entrepreneurs ready to take their business to the next level. In this course, you will learn how to finance business opportunities that lead to growth, by exploring different types of funding. You will learn how acquisition financing and funding applications for grants or loans can support and expand your business opportunity. You will evaluate your business's financial profile and plan actions to improve it. The exercises will guide you through discovering potential types of funding for your business and help you to identify the information you may need for future funding requirements. By the end of the course, you will understand the importance of having a financial strategy and approaching funding strategically - applying the skills you have developed to make a good funding application to facilitate your business growth. If you are unsure of your future cash flow needs, you may wish to complete one of the other Goldman Sachs 10,000 Women courses, 'Fundamentals of Financial Planning', to predict financial challenges, so that you can make strategic choices for your business. The 10,000 Women course collection offers a truly flexible online learning experience. You have the freedom to approach the program in any way that works for you - take any course, or combination of courses, to tailor your learning journey to your individual business growth needs. If you choose to take all 10 courses, you will explore all the key elements of your business and develop a thorough plan for your business's growth. You can find out more about the Goldman Sachs 10,000 Women collection in the FAQs.

COURSE_DESCRIPTION: Adding images is an effective way to visually enhance your presentations and present information. This course explores the different ways in which images can be inserted, manipulated, and adjusted directly in PowerPoint. You will see how to add pictures from different sources, whether from a file, stock images, for the web. Once you have got images onto your slide, you will be able to reposition, reorder, resize, and crop them. Discover how to enhance your images by applying visual effects, styles, and borders, as well as how to correct brightness, sharpness, color, and contrast. This course will also teach you how to use screenshots and how to create a digital photo album directly in PowerPoint. Would you like hands-on practice? Go to the Resources section of the course and download the sample files to follow along with select videos.

COURSE_DESCRIPTION: Want to understand your data network structure and how it changes under different conditions? Curious to know how to identify closely interacting clusters within a graph? Have you heard of the fast-growing area of graph analytics and want to learn more? This course gives you a broad overview of the field of graph analytics so you can learn new ways to model, store, retrieve and analyze graph-structured data. After completing this course, you will be able to model a problem into a graph database and perform analytical tasks over the graph in a scalable manner. Better yet, you will be able to apply these techniques to understand the significance of your data sets for your own projects.

COURSE_DESCRIPTION: With the amount of available online content ever-increasing and all the platforms trying to grab your attention by giving you personalized recommendations, recommendation engines are more important than ever. In this project-based course, you will create a recommendation system using Collaborative Filtering with help of Scikit-surprise library, which learns from past user behavior. We will be working with a movie lense dataset and by the end of this project, you will be able to give unique movie recommendations for every user based on their past ratings. This project is best suited for anyone who is venturing into data science and is curious as to how recommendation engines work. This project will be a great addition to your portfolio to showcase your real-world hands-on experience with recommendation systems as we would be working with a real-world dataset.

COURSE_DESCRIPTION: Web applications are typically the face of most organizations today. It's how customers interact with an organization's services, which makes for an inviting target for attackers. In this course, you'll examine the details of web applications, including their commonly used technologies, associated risks, and defenses. Next, you'll explore the OWASP Top 10 Web Application Attacks document, one of the best resources for understanding web application security vulnerabilities, and learn how to use common attacks as ethical hackers and protect against them as defenders. Finally, you'll learn about unvalidated redirects and forwards and how they can be used to access protected data. This course is one in a series that helps to prepare you for the Certified Ethical Hacker v11 (312-50) exam.

COURSE_DESCRIPTION: In this course, you'll explore the Map interface and the different Map implementations available in Java. You'll learn how the Map is not a collection at all, but how it can be used to associate keys and values, and obtain collection objects that represent those keys and values. You'll see how no duplicates are allowed in keys, which effectively constitute a Set. You'll explore three implementations of the Map interface - HashMap, LinkedHashMap, and TreeMap. Next, you'll learn the finer points of how these map implementations check for duplicates. Finally, you'll examine the correct implementations of the .equals, .hashCode, and .compareTo methods in objects that are to be stored in maps.

COURSE_DESCRIPTION: Application project management has largely left the monolithic Waterfall methodology behind in favor of the more lightweight and flexible Agile approach. Application hosting has also been overhauled where the compute environment is not an entire dedicated VM and OS, and instead, containerized applications provide a scalable, modular, and flexible approach. In this course, learn the ways Google Cloud provides containers that can be cloud-hosted and the business cases that drive each method. Next, practice deploying containers to Google Compute Engine (GCE), Google Kubernetes Engine (GKE), and Google Cloud Run. Finally, explore how the course content relates to the use cases commonly encountered in an exam environment. This course is one of a collection that prepares learners for the Google Professional Cloud Architect exam.

COURSE_DESCRIPTION: When a member function is invoked on a particular object, that object is known as the receiver. Within the body of the member function, you can access the member variables of the receiver using the "this" pointer. In this course, discover how the this pointer works and practice using it to access states. Next, learn about constness in object-oriented programming and the restrictions for what such methods can do. Finally, learn how to use the mutable keyword to mitigate constness. After completion of the course, you'll be able to access member variables from within member functions, create const and non-const objects and functions, and use the mutable specification to identify states that can be changed without changing the meaning of the object.

COURSE_DESCRIPTION: Augmented Reality, or AR, will transform how we see and interact with the world. And the hardware that makes AR possible is the smartphone that you may already have in your pocket. In this course, you'll learn how to develop your own mobile AR applications in Unity for iOS and Android devices. You'll learn about the features offered by Unity's AR Foundation, and about additional features in ARKit and ARCore. Using the very latest techniques recommended by Unity engineers, you'll build a complete AR environment that you can continue to use after the course, while learning to apply best practices in user experience and interaction. This is the last of three courses in Unity's XR Specialization, which includes an Introduction to XR course as well as a course focused on developing VR applications with Unity. Note that, to complete this course, you will need a smartphone capable of running ARKit or ARCore. Compatible devices are listed in the links below:
<https://developers.google.com/ar/discover/supported-devices>
<https://developer.apple.com/library/archive/documentation/DeviceInformation/Reference/iOSDeviceCompatibility/DeviceCompatibilityMatrix/DeviceCompatibilityMatrix.html> The course also assumes that you already have experience developing applications with Unity and that you are comfortable with basic C# programming. It will also be helpful if you are familiar with building other types of apps to run on mobile devices.

COURSE_DESCRIPTION: In this 90-minute, project-based course, you will be introduced to Unity's User Interface (UI) Toolkit for building a Heads Up Display (HUD) for your game. This project covers creating and setting up each UI component and writing simple scripts that will update the UI for player-feedback. The guided project will introduce you to the following Unity UI concepts: - Canvas - Rect Transform - Text - Image - Animation - Coding techniques including the Time Class, String Formatting, Inheritance and Polymorphism This is Part 1 of a four-part series on creating a user interface for your game or other Unity application. Part 2 covers creating a world-space canvas, part 3 will demonstrate how to create a settings menu and part 4 will show you how to design the UI to automatically adapt to the aspect ratio of any screen. This is a stand-alone guided project, and also serves as an optional but recommended foundation for the "User Interface" series. This series makes use of the sci-fi-themed Unity project created in Create Power-Ups and Obstacles with C# in Unity. It compliments this guided project and, although not a prerequisite, is recommended for a more well-rounded understanding of the concepts presented herein.

COURSE_DESCRIPTION: This 15-video course explores Spring Boot with Java, and demonstrates how to use Spring Initializr, Spring Boot Dashboard, projects in STS (Spring Tool Suite), and RESTTemplate for common scenarios by HTTP. Learners will observe unit testing with Spring Boot, auto-configuration, and Spring Boot Developer Tools. You will learn how to use Spring Boot to create standalone Spring-based applications; learn to use the Spring Boot dashboard group functionality in RESTful applications, and learn to use Spring JPA (Java Persistent API) with Apache Derby. Next, you will see an overview of the Spring Boot RestTemplate class, and how to call Rest services from your local spring application. Create an example of a Spring Boot RESTful web service, along with a Spring Boot project with STS animated, with controller annotation; and run your Boot Project in STS with browser verification. Learners will create unit tests with JUnit. You will examine Spring autoconfiguration, and Spring Boot Actuators which contain the actuator endpoints (the places where the resources live). Finally, the course introduces learners to Spring dev tools.

COURSE_DESCRIPTION: In this practice lab, learners will be presented with a series of exercises to practice developing with Spring. Exercises include tasks such as writing a simple Java program using Spring, implementing dependency injection, autowiring and aspect-oriented program using annotation. Learners will also be tasked with implementing an aspect-oriented program using annotation with exceptions, setting up JPA and Hibernate to use with MySQL database, and integrating MySQL database with JPA and Hibernate. Learners can also use the environment as an open sandbox. No installation or configuration is required, so you can gain immediate hands-on experience. Create new files or upload your own from a storage location of your choice, such as GitHub, and you can practice coding right away! You can even download a copy of your work when you're done. Whether you're looking to dive into the code presented within our courses or you want to work on your own coding projects, this lab environment will provide you with everything you need. So, go ahead and start coding today! See below for a complete list of available software. - Java 11 - Ant 1.10 - Apache Maven 3.6.0 - Gradle 6.8.3 - Spring Boot 2.4.3 - JUnit test framework - Mockito: Mock objects library - Python 2 & 3 - Pip 2 & 3 - Node.js - npm - Git - Vim editor - Standard Python libraries - Python 3 libraries: - BeautifulSoup4 - selenium This lab is part of the Java Apprentice track of the Skillsoft Aspire Java Novice to Javanista Journey.

COURSE_DESCRIPTION: Jeste li ikada prisustvovali sastanku nakon kojeg ste se osjećali frustriranim? Možda je sastanak bio predug, nefokusiran ili su prevladavale prepirke i neslaganja. Ne moraju svi sastanci biti takvi. Sastanci mogu biti vrlo produktivni; mnogi problemi mogu se riješiti, a sudionici se mogu osjećati zahvalnima što su prisustvovali. Bez obzira na to radi li se o uobičajenom sastanku ili sastanku radne skupine, predvodnik sastanka morao bi sastanak otvoriti prikladnim informacijama i u pravom tonu. Učinkovit voditelj sastanka potiče potpuno sudjelovanje grupe kako bi osigurao doseganje ciljeva u predviđenom vremenu. Kako bi zaključio sastanak, voditelj sažima donesene odluke i prati radnje koje se moraju provesti. Ovaj tečaj pokriva vještine i lekcije koje će vam pomoći da ispunite ključne odgovornosti voditelja sastanka u svakoj fazi poslovnog sastanka.

COURSE_DESCRIPTION: Social-Media-Seiten, Websites für Benutzerbewertungen und Online-Communities sind einige gängige digitale Marketinginstrumente, mit denen Sie sich mit Ihrem Zielmarkt verbinden können. Diese Instrumente können jedoch auch von Kunden verwendet werden, um Produkte oder Dienstleistungen eines Unternehmens zu bewerten - und sich darüber zu beschweren. Ohne ein geeignetes Online-Reputationsmanagement kann Ihre Beziehung zu Ihren Kunden unwiderruflich beeinträchtigt werden. In diesem Kurs lernen Sie, wie Sie Beziehungen zu Ihren Online-Kunden aufbauen und pflegen, um den Ruf Ihres Unternehmens zu schützen. Außerdem erfahren Sie, wie Sie digitale PR-, Blogs- und Online-Benutzer-Communities nutzen, um Ihre Marke voranzubringen.

COURSE_DESCRIPTION: By the end of this project, you will have successfully set up two virtual machines using Microsoft Azure and tested a Windows-based virtual machine through Windows Remote Desktop Connection. Virtual machines are industry standard in productivity and cost-efficiency. The skill required in creating and launching virtual machine instances provides the foundation to understand and implement Infrastructure-as-a-Service (IaaS) solutions. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Working with Cisco iOS Gateways works as the demarcation point to a collaboration network, connecting the internal network with the provider's network and processing inbound and outbound calls. In this course, you'll explore unified communication, a technology that allows people to work remotely. You'll examine several primary collaboration and network technology implementation and deployment methods, including infrastructure and design, communication protocols, audio and video codecs, and endpoints. You'll also review the Cisco Internetwork Operating System (IOS) XE gateway and media resources, call control, Quality of Service (QoS), and additional Cisco collaboration applications. Furthermore, you'll outline supplementary services, such as adding media resources (i.e., Music on Hold, Annunciator), call control, and the Quality of Service (QoS) as the solution deployment. This course is a part of a collection of courses that will prepare you for the 350-801: Implementing and Operating Cisco Collaboration Core Technologies (CLCOR) certification exam.

COURSE_DESCRIPTION: Starting a small business in an emerging market can be very rewarding. Many of entrepreneurship opportunities in emerging markets arise out of necessity, or the drive to solve a real need or a social problem. Thus emerging markets often offer huge opportunities for disruptive innovation. Entrepreneurship has contributed to economic growth and been able to respond to social problems, helping some communities prosper. With the rise of fintech, financial solutions using technologies such as the cloud, blockchain and machine learning have by-passed or partnered with established financial institutions to serve new markets. This course takes us through the basics from "What is entrepreneurship?" to applying commonly used business planning tools, such as design thinking and business model canvas. Design thinking is a methodology that encourages startups to focus on user-centric products and services. There are also insights on topics like regulation, intellectual property, funding and growth that are important for startups. I've invited along experts who teach and support entrepreneurs. This includes some really interesting people in various stages of their start-up business development. We will be talking with Zlto (a digital currency), Yoco (mobile payments), Proof of Steak (alternative asset investment) and Kuba (a digital 'middleman' for small businesses) to name a few. As we will learn, there is no such thing as being 'ready' or, choosing the 'perfect time' to become an entrepreneur. You are already one, so let's take the next steps on your entrepreneurial journey by joining your peers around the world on this course. This course is for everyone, and not only those interested in only fintech.

COURSE_DESCRIPTION: How can innovators understand if their idea is worth developing and pursuing? In this course, we lay out a systematic process to make strategic decisions about innovative product or services that will help entrepreneurs, managers and innovators to avoid common pitfalls. We teach students to assess the feasibility of an innovative idea through problem-framing techniques and rigorous data analysis labelled 'a scientific approach'. The course is highly interactive and includes exercises and real-world applications. We will also show the implications of a scientific approach to innovation management through a wide range of examples and case studies.

COURSE_DESCRIPTION: In this course, you will learn the neuroscience of change, why we are so change-averse, how to train for change resilience, and most importantly, you will begin developing a practice to help you be prepared for changes in personal life and in your career. You will learn specific strategies and tools for overcoming fear, anxiety and managing stress related to these changes. By the end of this course, you will know what you need to do to become truly unshakable. You will build a practice for getting stronger emotionally and mentally. By understanding neuroscience and building awareness of yourself, you will build a solid foundation for understanding your team and the greater behavior of the business world. Remember, these changes won't happen if you don't take action. You might be uncomfortable, you might find some of the exercises silly, you might have doubts, and you might want to quit. Babies don't quit trying to walk because they fall a lot, and neither should you. The only way to truly change is to practice consistently.

COURSE_DESCRIPTION: Identity management is a framework used to ensure appropriate access controls are in place to grant authenticated users access to enterprise assets. In this course, you will learn about the key fundamentals of identity management, including privilege administration, access control, and system scalability. Explore identification, authentication, authorization, accountability (IAAA) services and discover how personally identifiable information (PII) can be used to identify a subject. Explore the three main types of authentication factors: something you know, something you have, and something you are, and discover how to choose appropriate and accurate biometric criteria. You'll also learn about directory services and how they can be used to organize network resources. Explore password cracking techniques and tools, and discover when to use same sign-on and single sign-on authentication schemes. Lastly, explore how federation can be used to link together different authentication systems. This course was originally created by Global Knowledge (GK).

COURSE_DESCRIPTION: In this project, you will create and learn how to facilitate an online discussion with Eduflow. Eduflow is a free, easy-to-use online course builder that allows you to develop an interactive learning experience. One of the many great features of Eduflow is their user friendly and interactive discussion format. Eduflow allows you to break the course participants up into smaller groups, giving you the ability to host more effective and interactive discussions. Instructors also have the ability to create prerequisites, completion rules, and deadlines to better manage the discussion process and keep course participants on task. With its social-media-like aesthetic, it is a great way for learners to interact with their instructor and peers and fully immerse themselves into the course content. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Eine positive Einstellung hinsichtlich des Effekts einer Präsentation kann Vortragende inspirieren, noch mehr Einsatz zu zeigen und so die gewünschten Ergebnisse zu erzielen. Eine Präsentation kann extrem verbessert werden, wenn der Vortragende der Planung ausreichend Zeit und Aufmerksamkeit widmet. In diesem Kurs lernen Sie, wie Sie die Eigenschaften, das Wissen, die Bedürfnisse und Reaktionen Ihrer Zuhörer erkennen und verstehen. Sie lernen auch, wie Sie die Zeitplanung Ihrer Präsentation, den Zweck, die Kernpunkte und den Ansatz organisieren. Zu guter Letzt lernen Sie die verschiedenen Präsentationsmethoden und wann sie am effektivsten verwendet werden.

COURSE_DESCRIPTION: By the end of this project, you will learn how to load and extract useful information from your dataset using Python, a free, open-source program that you can download. You will then learn how to clean your data set by removing unwanted whitespaces, columns containing several empty values, rows containing empty column values and duplicated row entries. Next, you will create various visualizations to identify patterns and outliers in your dataset, and visualize correlations between different columns. Lastly, you will learn how to visualize a highly dimensional dataset using principal component analysis (PCA). These steps are part of exploratory data analysis that you will need to carry out for any data science project to help you understand your dataset. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: This 11-video course explores architecting solutions using Azure resource configurations, and how match them to business needs, while continuing to prepare learners for the AZ-300: Microsoft Azure Architect Technologies certification exam. First, learn how to use the Azure AD (Active Directory) to create a new Azure AD tenant and related objects such as users and groups. You will learn how to enable Azure Active Directory MFA (multifactor authentication), and how to configure conditional access. This course demonstrates how to establish distributed management by assigning RBAC (role-based access control) rules and storage permissions in the Azure portal. Next, you will learn how to audit Azure resource configurations using policies, and how to configure a point-to-site VPN (virtual private network). You will learn how to deploy an app container, and how to create and manage storage accounts. Finally, this course examines cost-saving measures in Azure, and how to enable VM (virtual machine) auto shutdown.

COURSE_DESCRIPTION: In this 11-video course, you will examine the architecture of IoT (Internet of Things) solutions and the essential approaches of integrating data sources. Begin by examining the required elements for deploying IoT solutions and its prominent service categories. Take a look at the capabilities provided and the maturity models of IoT solutions. Explore the critical design principles that need to be implemented when building IoT solutions and the cloud architectures of IoT from the perspective of Microsoft Azure, Amazon Web Services, and GCP (Google Cloud Platform). Compare the features and capabilities provided by the MQTT (Message Queuing Telemetry Transport) and XMPP (Extensible Messaging and Presence Protocol) protocols for IoT solutions. Identify key features and applications that can be implemented by using IoT controllers; learn to recognize the concept of IoT data management and the applied lifecycle of IoT data. Examine the list of essential security techniques that can be implemented to secure IoT solutions. The concluding exercise focuses on generating data streams.

COURSE_DESCRIPTION: Accounting has always been about analytical thinking. From the earliest days of the profession, Luca Pacioli emphasized the importance of math and order for analyzing business transactions. The skillset that accountants have needed to perform math and to keep order has evolved from pencil and paper, to typewriters and calculators, then to spreadsheets and accounting software. A new skillset that is becoming more important for nearly every aspect of business is that of big data analytics: analyzing large amounts of data to find actionable insights. This course is designed to help accounting students develop an analytical mindset and prepare them to use data analytic programming languages like Python and R. We've divided the course into three main sections. In the first section, we bridge accountancy to analytics. We identify how tasks in the five major subdomains of accounting (i.e., financial, managerial, audit, tax, and systems) have historically required an analytical mindset, and we then explore how those tasks can be completed more effectively and efficiently by using big data analytics. We then present a FACT framework for guiding big data analytics: Frame a question, Assemble data, Calculate the data, and Tell others about the results. In the second section of the course, we emphasize the importance of assembling data. Using financial statement data, we explain desirable characteristics of both data and datasets that will lead to effective calculations and visualizations. In the third, and largest section of the course, we demonstrate and explore how Excel and Tableau can be used to analyze big data. We describe visual perception principles and then apply those principles to create effective visualizations. We then examine fundamental data analytic tools, such as regression, linear programming (using Excel Solver), and clustering in the context of point of sale data and loan data. We conclude by demonstrating the power of data analytic programming languages to assemble, visualize, and analyze data. We introduce Visual Basic for Applications as an example of a programming language, and the Visual Basic Editor as an example of an integrated development environment (IDE).

COURSE_DESCRIPTION: This 11-video course, which can be used to prepare for AZ-400 Microsoft Azure DevOps Solutions certification exam, explores Azure DevOps data protection, and how Azure protects the main pillars of data protection: data availability, service availability, service security, and data privacy. First, learners will be introduced to Azure App Service, and learn how to configure Azure tools to utilize secrets for secure access and development. This course next examines the Azure App Service with containers, and how it enables users to deploy applications that runs on Linux or Windows box. You will learn how to manage secrets, tokens, and certificates, and learn to implement the security components in AKS (Azure Kubernetes Service), a managed container service to protect application workloads. Then learners will examine Microsoft's Azure Key Vault to store various types of secret or key data. Finally, you will learn how to implement Key Vault with Azure pipelines and implement Azure policies for managing security and compliance.

COURSE_DESCRIPTION: The Reinforcement Learning Specialization consists of 4 courses exploring the power of adaptive learning systems and artificial intelligence (AI). Harnessing the full potential of artificial intelligence requires adaptive learning systems. Learn how Reinforcement Learning (RL) solutions help solve real-world problems through trial-and-error interaction by implementing a complete RL solution from beginning to end. By the end of this specialization, learners will understand the foundations of much of modern probabilistic artificial intelligence (AI) and be prepared to take more advanced courses or to apply AI tools and ideas to real-world problems. This content will focus on "small-scale" problems in order to understand the foundations of Reinforcement Learning, as taught by world-renowned experts at the University of Alberta, Faculty of Science. The tools learned in this Specialization can be applied to game development (AI), customer interaction (how a website interacts with customers), smart assistants, recommender systems, supply chain, industrial control, finance, oil & gas pipelines, industrial control systems, and more.

COURSE_DESCRIPTION: All leaders have imposed limits-limits on time, limits on personnel, limits on budgets, limited resources. Faced with these limitations and the multiple goals leaders are still required to achieve, setting priorities is paramount to success. In this course, you'll learn methods for establishing priorities that will allow you to meet organizational and team goals. You'll learn how to evaluate and adjust your own style in regard to priority management principles, and how individual personalities and motivators can drive priorities. You'll also discover how to organize your time and manage disruptions to ensure you meet your goals and learn from the experience.

COURSE_DESCRIPTION: Microsoft SharePoint is a powerful collaboration and document management tool. This 7-video course, recorded in a SharePoint Online environment, helps learners discover how to sign in for the first time, edit their profiles, work with the app launcher, find information, view other profiles, and edit SharePoint themes. Begin by learning how to log in, view your account, and securely log out of your SharePoint account, then explore the SharePoint interface layout, navigate, and find the key SharePoint features. Examine how to edit your profile information, used to help people learn a little more about you. Discover how to use the SharePoint search feature, which can return a huge amount of information taken from all the different components and areas on the platform. You can view a colleague's profile via SharePoint, and edit your SharePoint theme to one of your own choosing. Finally, the course covers modifying regional settings, useful if your company or team features people who are based in different locations.

COURSE_DESCRIPTION: This course is for you if you are looking to dive deeper into Six Sigma or strengthen and expand your knowledge of the basic components of green belt level of Six Sigma and Lean. Six Sigma skills are widely sought by employers both nationally and internationally. These skills have been proven to help improve business processes and performance. This course will introduce you to the purpose of Six Sigma and its value to an organization. You will learn about the basic principles of Six Sigma and Lean. Your instructors will introduce you to, and have you apply, some of the tools and metrics that are critical components of Six Sigma. This course will provide you with the basic knowledge of the principles, roles, and responsibilities of Six Sigma and Lean. Every module will include readings, videos, and a quiz to help make sure you understand the material and concepts that are studied. You will also have the opportunity to participate in discussions and peer review exercises to give you the opportunity to apply the material to your daily life. Registration includes online access to course content, projects, and resources but does not include the companion text The Certified Six Sigma Green Belt Handbook (2nd edition). The companion text is NOT required to complete the assignments. However, the text is a recognized handbook used by professionals in the field. Also, it is a highly-recommended text for those wishing to move forward in Six Sigma and eventually gain certification from professional agencies such as American Society for Quality (ASQ).

COURSE_DESCRIPTION: Have you ever gotten really excited about reading or writing a business plan? You might have started out excited, but I'm going to bet you didn't stay that way. Let's be honest- business plans are boring and mostly ignored. The beauty of the one-page Business Model Canvas is that it drives meaningful focus. It helps us organize our ideas and have better discussions by forcing specificity and bringing linkages between key business drivers to the foreground. Innovation requires one hand being very focused on a fundamental need or problem while the other hand quickly tests different solutions. For this, the Business Model Canvas is very innovation friendly: It's a lot easier to tweak the model and try things with something that's sitting on a single page. In this course, developed at the Darden School of Business at the University of Virginia and taught by top-ranked faculty, you'll learn key tools from the worlds of design thinking and Lean Startup to approach the Canvas with thoughtfulness, focus, and above all a test-driven approach to business model innovation.

COURSE_DESCRIPTION: This course focuses on the concepts and tools behind reporting modern data analyses in a reproducible manner. Reproducible research is the idea that data analyses, and more generally, scientific claims, are published with their data and software code so that others may verify the findings and build upon them. The need for reproducibility is increasing dramatically as data analyses become more complex, involving larger datasets and more sophisticated computations. Reproducibility allows for people to focus on the actual content of a data analysis, rather than

on superficial details reported in a written summary. In addition, reproducibility makes an analysis more useful to others because the data and code that actually conducted the analysis are available. This course will focus on literate statistical analysis tools which allow one to publish data analyses in a single document that allows others to easily execute the same analysis to obtain the same results.

COURSE DESCRIPTION: Every device that communicates in a TCP/IP network must have an IP address configured. The most efficient way to configure end devices in the network is to do so automatically. The Dynamic Host Configuration Protocol is used for such automatic configurations. In this course, you'll explore the disadvantages of static IP configuration and the steps for autoconfiguration using DHCP. You'll also learn about DHCP, including the message format, scopes, renewal process, how it works in a routed network, and troubleshooting techniques. The sheer volume of resources available on the Internet and enterprise networks is astounding. Trying to remember the IP address of even a fraction of these resources would be quite difficult. However, we can assign names to these resources and use the Domain Name System to translate easy to remember names into their specific IP addresses. In this course, you'll also learn about the organizations that coordinate the global DNS. You'll explore the organization and structure of the DNS namespace, the types of top level domains, the purpose of the root name servers and primary and secondary name servers, the DNS name resolution process, and the DNS message format. You'll also learn to match the abbreviations with the resource record function when give a list of resource record abbreviations. Finally, you'll examine the advantages of DDNS and DNS troubleshooting tools. The size and complexity of modern networks almost ensures that problems will sometimes occur in the delivery of IP packets. The Internet Protocol provides a mechanism for reporting error information when those problems arise. The Internet Control Messaging Protocol provides for diagnostic and error reporting in a TCP/IP network. You'll learn how ICMP provides error reports and diagnostic messages. You'll explore the layout of ICMP messages, as well as the common ICMP message types and their functions. You'll also learn to recognize several common types of ICMP messages by examining output from a protocol analyzer. Finally, you'll examine how the ICMP time exceeded message is used with traceroute. This course was originally created by Global Knowledge (GK).

 COURSE_DESCRIPTION: The Windows 10 October 2020 Update offers some improvements and new features to Microsoft's operating system. The most important change is the new built-in browser based on Chromium, Microsoft Edge. In this course, discover how to use and customize this new browser, as well as how to pin your frequently visited sites to the taskbar. Other tools have received important updates. For example, learn how to customize the interface colors to improve the design of the Start menu. If you work with documents, and other applications, see how to navigate, and browse the opened windows with your mouse or keyboard. Lastly, discover the differences between using a local account or a Microsoft account to work in Windows 10.

 COURSE_DESCRIPTION: A database is an organized collection of data that can be accessed, analyzed, and exported into useful reports. In order to create a database, you will first need to become familiar with the database tool at hand. In this 6-video course, "Working with Databases," you will explore the Access 2019 database application in the Microsoft Office 2019 suite. Learners will also discover how to open existing databases and create new ones, and learn how to customize the interface, including the Quick Access Toolbar and ribbon. Begin the Access 2019 course by observing how to open the application and open a database, and then how to use database templates to create a database quickly. You will then navigate the interface to locate tools available to manage and create a database, and explore how to customize the application's interface and theme. This leads into customizing the Quick Access toolbar. Learners will conclude the course by observing how to customize the tool ribbon.

COURSE_DESCRIPTION: The BRAVE acronym offers a starting point for conversations about race and racism at work. In the past few months, there have been strong calls for organizations to join the movement in the fight against racial injustice, and many have started to answer this call. Although many see the value in addressing race and racism in organizations, it can be difficult to have conversations about these topics in the workplace. Please join diversity and inclusion experts Enrica N. Ruggs and Derek R. Avery as they discuss the importance of explicitly talking about race in the workplace and provide advice on how to begin productive conversations. They will discuss factors to consider when planning these conversations, such as audience, timing, and purpose, as well as how to structure, facilitate, and navigate a conversation about race. They will provide tips on how to have brave conversations that address tense aspects of race as a way to build competency around what inclusion really looks like in organizations.

COURSE_DESCRIPTION: This course will introduce you to the basic elements of academic information seeking - we will explore the search process from defining a strategy to evaluating and documenting your search results. Attending the course will make you a proficient information seeker. You will learn how to carry out comprehensive literature searches based on your own research assignment. You will be guided through the various information seeking steps from selecting relevant search strategies and techniques to evaluating your search results, documenting your search process and citing your sources. Attending the course will enable you to: • Identify your information need • Evaluate databases and other information resources • Set up search strategies and use various search techniques • Formulate search strings based on your own research assignment • Identify relevant material types • Undertake critical evaluation of your sources • Search more efficiently on the internet • Avoid plagiarism • Cite correctly • Work with reference management • Document your search process The course is intended for undergraduate students but the lessons will be useful to anyone who is interested in becoming better at finding scientific information. There are no formal requirements for the course. The series consists of 21 lectures that are organized into three modules. The lectures include small assignments and quizzes (to check comprehension). The lectures will each touch upon a topic that is essential to the information seeking process. To get the most out of the lecture series, we recommend that you access the lectures while you are working on an academic paper. We also recommend that you watch the lectures in the order in which we have structured them. We recommend that you create and fill out a log book while attending the lectures. We have created a log book template that you can use during the course. The lecture series has been developed in collaboration between information specialists at University of Copenhagen and Technical University of Denmark

COURSE_DESCRIPTION: The distribution kinks for COVID-19 vaccines are getting ironed out, says Dr. Gregory Poland, an infectious diseases expert and head of Mayo Clinic's Vaccine Research Group."It's a logistics nightmare, but now you're seeing a plan to administer 1 million doses a day and I think that's very achievable," says Dr. Poland. "And the production of the vaccine is just going to accelerate." Dr. Poland also repeats the reminders about preventing transmission of COVID-19: Wear a mask. Wash your hands. Keep your social distance. "The current estimates are that in the next four weeks, we'll probably have about another 100,000 deaths," adds Dr. Poland. "It's stunning when you think about 1 out of every 860 Americans has now died of this." (Published 01/20/2021)

COURSE_DESCRIPTION: Inklusive Führung ist eine Kunst und eine Wissenschaft. Führungskräfte müssen ihre Fähigkeit ausbauen, ein inklusives und sicheres Umfeld zu schaffen, in dem sich Mitarbeitende wertgeschätzt und einbezogen fühlen und in dem sie ihr authentisches Ich sein können. Dieser Kurs soll Führungskräften eine Grundlage für eine agile, inklusive Führung bieten, auf der sie aufbauen und die sie ihrerseits bei anderen entwickeln können. In diesem Kurs lernen Sie, eine Führungsmentalität zu entwickeln, die Inklusion in allen Arbeitsumgebungen unterstützt, und welche Schlüsselemente der Selbstführung Inklusion fördern. Sie lernen Strategien kennen, um Inklusion und Zugehörigkeit für alle Teammitglieder zu individualisieren, einschließlich der Verwendung einer inklusiven Sprache und geschlechtsneutraler Pronomen, Techniken für einen intersektionalen Ansatz zur DEI-Führung und inklusive Führungspraktiken, die die Entwicklung des ganzen Menschen fördern. Als Teil Ihrer DEI-Arbeit empfehlen wir Ihnen, www.lawanaharris.com/assessment zu besuchen und eine Selbsteinschätzung vorzunehmen, um Ihre Stärken und Schwächen im Bereich DEI zu ermitteln.

COURSE DESCRIPTION: In the field of data science, the volumes of data can be enormous, hence the term Big Data. It is essential that algorithms operating on these data sets operate as efficiently as possible. One measure used is called Big-O time complexity. It is often expressed not in terms of clock time, but rather in terms of the size of the data it is operating on. For example, in terms of an array of size N, an algorithm may take N^2 operations to complete. Knowing how to calculate Big-O gives the developer another tool to make software as good as it can be and provides a means to communicate performance when reviewing code with others. In this course, you will analyze several algorithms to determine Big-O performance. You will learn how to visualize the performance using the graphing module pyplot. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE DESCRIPTION: Congratulations on reaching the Capstone Class of the Become a Sustainable Business Change Agent specialization. The class will help you apply material from the previous three classes. We have developed a case about a hypothetical ski resort that offers lots of opportunities to develop sustainability recommendations. A second option is to develop a proposal for a change in your company or organization. Or you can do both the case and your own proposal. The goal of the class is to have you practice the entire process from identifying a problem, finding a possible solution, doing analysis to determine the proposed change's financial and sustainability impacts, figure out who to present the proposal and what they need to see to say 'Yes' and develop a budget and implementation plan. It is a big assignment, but if you have gone through the material in the first three classes you should be well-equipped for the challenge. We hope that the concepts and tools we have introduced will start you on your way to making positive changes in your company, organization, community and the world. We have provided just the most basic tools. As you progress you will enhance your skills and become more effective. Best of luck on all your change endeavors.

COURSE DESCRIPTION: Learners can explore graphic tools available in Word for Office 365 to create charts and diagrams in this 8-video course. You will learn how to create custom charts and flow charts with shapes, using Word's preset charts and shapes, and how to custom freehand a shape. Then you will learn how to create, format, and edit custom shapes. You will learn how to arrange individual items on a page manually, or align several items at once. Next, the course demonstrates how to use the Selection Pane to organize objects in a document, and to hide or show certain objects. Then learn how to use a drawing canvas to group several objects or shapes, and how the canvas can be treated as one large object. The course demonstrates for learners how the SmartArt tool can be used to add professional-looking graphics to documents. You will learn how to customize shapes, and how to create a graphic that can display names, roles, and pictures. Finally, learn how to change positioning, colors, and styles of graphics.

COURSE_DESCRIPTION: Creativity is an essential skill for the 21st Century that is innate in all people and can be nurtured. We constantly need new and better ideas for almost every aspect of our professional and personal lives. The goal of this course is to help you recognize, develop and act upon the creativity that you already possess. We will accomplish this using three methods: b aware, b inspired, and b creative. Upon completion of this course participants will: Recognize the inherent creativity in yourself and others. Identify characteristics of a creative person that relate to yourself. Develop creative problem solving skills using the basic elements of the creative process. Examine qualities of a creative environment in real world settings. Evaluate an idea using the creative product criteria.

CATEGORY:
COURSE_DESCRIPTION: This 10-video course examines end-user security from the rogue attacker point of view, including motivations, Malware-as-a-Service (MaaS) phishing techniques, pharming, ransomware, data theft, cryptojacking, denial-of-service (DoS), and toolkits. One of the first things to do to be successful as a security technician or practitioner is to start to understand the mind of the attacker, so you will examine the possible motives for attacking user endpoints. You will then take a look at Malware-as-a-Service, which is available all over the world. You will explore the phishing techniques an attacker might take, as they are becoming stealthier, sending phishing e-mails over varied infrastructures. Delve into ransomware, this time from the attacker's perspective, and learn about data breaches and theft. You will also examine cryptojacking, what it is and explore some examples, and have a look at DoS and distributed-denial-of-service (DdoS) attacks using, for example, botnets. The final tutorial surveys common exploit kits such as Kali Linux and Metasploit. The concluding exercise entails listing common motives for attacking endpoints, common ransomware payloads, and exploit kits.

COURSE_DESCRIPTION: The fundamentals of computer programming are not only for novice programmers. Knowing how humans manipulate computer programs can be game-changing for many other roles, such as UI designers, support engineers, or system administrators. This course acts as an introduction to programming for all. Discover the structure of a simple program, identifying the role of each part. Examine variables, looking at their types and purpose in a program. Dive into the role of functions, discovering how they use variables to achieve a result. Moving along, explore standard file operations, the use of a main method, the difference between compilation and interpretation, and different types of programming languages. When you're done, you'll be able to give a theoretical explanation of the elements and methods involved in programming.

COURSE_DESCRIPTION: This guided project is for those who want to learn how to use Julia for data cleaning as well as exploratory analysis. This project covers the syntax of Julia from a data science perspective. So you will not build anything during the course of this project. While you are watching me code, you will get a cloud desktop with all the required software pre-installed. This will allow you to code along with me. After all, we learn best with active, hands-on learning. Special Features: 1) Work with 2 real-world datasets. 2) Detailed variable description booklets are provided in the github repository for this guided project. 3) This project provides challenges with solutions to encourage you to practice. 4) The real-world applications of each function are explained. 5) Best practices and tips are provided to ensure that you learn how to use pandas efficiently. 6) You get a copy of the jupyter notebook that you create which acts as a handy reference guide. Please note that the version of Julia used is 1.0.4 Note: This project works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: The network discovery policy on the Firepower Management Center controls how the system collects data on your organization's network assets and which network segments and ports are monitored. In this course, you'll learn about this policy and how to configure it. Next, you'll examine the authentication options that are possible thanks to identity policies. You'll learn about DNS-based security intelligence and how it allows you to allow or block traffic based on the domain name requested by a client using an Allow or Block list. Cisco provides domain name intelligence, so you'll learn how to customize this and even add your own domains. Finally, you'll explore why you might want to have your FTD engage in event correlation to enact some remediation for a very tricky and specific situation. This course can be used in preparation for the 300-710: Securing Networks with Cisco Firepower (SNCF) certification exam.

COURSE_DESCRIPTION: Cloud computing presents a number of unique risks and issues since it routinely crosses many geographic and political boundaries, and international legislation, regulations, and privacy requirements can conflict with one another. In this course, examine the legal and privacy issues that a Certified Cloud Security Professional can expect to face. Begin by investigating conflicting international laws, eDiscovery, and Cloud Security Alliance (CSA) guidance. Then, focus on personal privacy issues related to protected health information (PHI), personally identifiable information (PII), and privacy impact assessments (PIAs), and compare privacy requirements including ISO/IEC 27018, Generally Accepted Privacy Principles (GAPP), and General Data Protection Regulation (GDPR). Finally, explore risk management by assessing risk management programs and studying regulatory transparency requirements, including breach notification, Sarbanes-Oxley (SOX), and GDPR. This is one of a collection of courses that fully prepares the learner for the ISC2 Certified Cloud Security Professional (CCSP) 2022 exam.

COURSE_DESCRIPTION: In this course, you will explore the foundations of Hyperledger Fabric, including setting up a Fabric network and using Hyperledger Composer with business-level abstractions. Learn about blockchains and their mechanism to securely record transactions. Learn to identify characteristics and limitations of public blockchain networks. The course recalls origins of the Hyperledger project and its approach toward building blockchain solutions, and the different blockchain implementations offered by Hyperledger. Participants will set up a Fabric network without using any of the Hyperledger tools. Use a tech-based approach to identify the components of the Fabric network that must be planned and provisioned. You will learn to recognize how to use business-level abstractions and enumerate different files to define a blockchain network in Hyperledger Composer. You will also learn about the features of Hyperledger Composer Playground. Steps involved in deploying a Fabric network definition into a production environment will be examined. The concluding exercise reviews the Hyperledger Fabric framework, describing tools, definition files used in Composer, and the features of Hyperledger Composer Playground.

COURSE_DESCRIPTION: This course teaches learners (industry professionals and students) the fundamental concepts of concurrent programming in the context of Java 8. Concurrent programming enables developers to efficiently and correctly mediate the use of shared resources in parallel programs. By the end of this course, you will learn how to use basic concurrency constructs in Java such as threads, locks, critical sections, atomic variables, isolation, actors, optimistic concurrency and concurrent collections, as well as their theoretical foundations (e.g., progress guarantees, deadlock, livelock, starvation, linearizability). Why take this course? • It is important for you to be aware of the theoretical foundations of concurrency to avoid common but subtle programming errors. • Java 8 has modernized many of the concurrency constructs since the early days of threads and locks. • During the course, you will have online access to the instructor and mentors to get individualized answers to your questions posted on the forums. • Each of the four modules in the course includes an assigned mini-project that will provide you with the necessary hands-on experience to use the concepts learned in the course on your own, after the course ends. The desired learning outcomes of this course are as follows: • Concurrency theory: progress guarantees, deadlock, livelock, starvation, linearizability • Use of threads and structured/unstructured locks in Java • Atomic variables and isolation • Optimistic concurrency and concurrent collections in Java (e.g., concurrent queues, concurrent hashmaps) • Actor model in Java Mastery of these concepts will enable you to immediately apply them in the context of concurrent Java programs, and will also help you master other concurrent programming system that you may encounter in the future (e.g., POSIX threads, .NET threads).

COURSE_DESCRIPTION: You have probably heard the expression "garbage in and garbage out." When it comes to having confidence in a data set, "garbage in" refers having poor data quality. Poor data quality translates to poor quality or low confidence in the insights mined from the data. How do we shore up the data quality of a survey data set so we can have confidence in using that data for decision-making? We apply Exploratory Data Analysis or EDA methodology to identify strategies to handle and replace missing values. In your Handle Missing Survey Data Values in Google Sheets project, you will gain hands-on experience conducting EDA, identifying strategies for handling missing values, and replacing missing values in a survey data set. To do this you will work in the free-to-use spreadsheet software Google Sheets. By the end of this project, you will be able to confidently handle missing values in a survey data set to aid in shoring up the data quality and confidence in using the data for decision-making. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Go channels are constructs used by Goroutines to communicate with each other. Go channels, which can be buffered or unbuffered, are similar to pipes in that one Goroutine can send data from one side of the pipe to other Goroutines that receive the data on the other side. In this course, you'll explore how channels fit in Go's overall concurrency model. You'll learn how to implement non-blocking channel operations in Go programs and about the use of pipelines in Go. Next, you'll examine how to work with Goroutines, as well as buffered and unbuffered channels. You'll explore the range() and close() functions in the context of channels and learn how to combine channels and WaitGroups. Lastly, you'll learn how to implement a pipeline in a Go program.

COURSE_DESCRIPTION: Because a database is only the storage medium, we need to use a different kind of tool in order to work with that stored data. Take this course to learn how to use structured query language (SQL) to manage data in a relational database management system (RDBMS). Perform create, read, update, and delete (CRUD) operations on data using SQL, to make raw data useful. Examine data definition language (DDL) commands that work with database and table objects. Use SQL to add constraints to data in tables, for example, to specify what kind of data gets stored in which column. And explore the repercussions of constraint violation. After completing this course, you will be able to illustrate how SQL can be used within a database to add and secure tables.

COURSE_DESCRIPTION: The AWS Global Infrastructure facilitates the deployment of AWS services that meet business needs. Business needs must be mapped to the appropriate AWS services while ensuring that cloud solutions can protect sensitive data. In this course, discover how regions and availability zones affect resource placement and high availability. Then, explore the AWS Well-Architected Framework and match AWS services to business needs. Next, install the AWS CLI on Windows, Linux, and the macOS. Finally, view existing service quotas and limits. This course can be used to prepare for exam SOA-C02, AWS Certified SysOps Administrator - Associate.

 COURSE_DESCRIPTION: Building applications with real use cases nearly always involves the use of complex data structures such as maps, or structs and control structures such as if-else statements and loops in your Blockchain solutions. In this 11-video course, participants will explore the use of mapping and struct data structures in the Solidity language, as well as covering the looping operations with for, while, and do-while loops. Learn to build a smart contract which can be used to conduct a poll. The demos in this course will help you gain a very broad understanding of the Solidity language, and know how to use complex data structures, access modifiers, require clauses, as well as control structures, to build an application representing a real-life use case. The concluding exercise tests your ability to identify the rules you must follow to access transaction data from a smart contract and initialize a new instance of a struct (SampleStruct), setting two different methods which are supported.

COURSE_DESCRIPTION: Welcome to the Python Fundamentals Bootcamp channel! This course introduces you to the basics of programming in Python. The course will prepare you for intermediate courses and more advanced uses of the Python programming language. You will benefit from this course if you are new to programming, whether you have a business role or IT background. The course consists of 4 half-days of interactive lab sessions, where you will practice coding. No boring PowerPoint presentations, but live demos and hands-on exercises. The course is suitable for anyone interested in learning Python. You don't need any prior programming experience to participate in this course. After completing the course, you will have a solid foundation to continue your developer journey. Before the course, you need to install Anaconda. It is a free open source distribution of Python including the most important packages/modules. During the sessions, Jupyter Notebooks will be used for the exercises. You can test if the software is working correctly by opening "Anaconda Navigator" and following the steps in "Run Python in a Jupyter Notebook".

COURSE_DESCRIPTION: Simple and Fast Multimedia Library (SFML) is a cross-platform, software development library used for designing gaming applications, providing features like audio, graphics, and a network, which together allow you to build the complete multimedia experience. Begin by creating and managing windows that can hold multimedia gaming applications. Learn how to keep a game constantly running and updated using a game loop. Next, explore event handling in SFML, including mouse clicks, scrolls, keypress events, resize, and focus events. Finally, use the Graphics module in SFML to draw graphical entities, like geometric shapes, to the screen and configure the properties of these entities. When you have completed this course, you will have the foundational knowledge to create and render graphical entities within SFML windows.

COURSE_DESCRIPTION: Das heutige Arbeitsumfeld zwingt Manager dazu, neue Erfolgsstrategien zu entwickeln. Eine Person allein kann nicht alles beherrschen, was für den Erfolg erforderlich ist - man braucht Experten. Experten verfügen über das Wissen und die Fähigkeit, einzigartige Perspektiven und innovative Strategien zu entwickeln. Allerdings haben sie nicht nur einzigartige Perspektiven, sondern auch einzigartige Bedürfnisse. In diesem Kurs erfahren Sie, was Experten für Unternehmen so wertvoll macht und welche Methoden Ihnen dabei helfen, mit ihnen die besten Ergebnisse zu erzielen. Außerdem lernen Sie, wie Sie mit Experten zusammenarbeiten und ihnen das bieten können, was sie benötigen, und welche Strategien Ihnen helfen, Schwierigkeiten, die sich aus der Kollaboration mit herausfordernden Experten ergeben, zu bewältigen.

COURSE_DESCRIPTION: Testing, debugging, and monitoring serverless applications are critical tasks when building and deploying serverless solutions. Developers, engineers, and project managers alike can use this course to discover the most appropriate application, cloud, and automated testing mechanisms, frameworks, and tools for use with serverless implementations. Outline the challenges of testing cloud applications, the role of mock and

dummy data in testing APIs, and the prominent testing strategies for local and cloud environments. Learn how to simplify Lambda function testing. Then practice testing and debugging serverless applications using AWS SAM and SAM CLI. Recognize the prominent AWS services for monitoring AWS applications. Explore the AWS Lambda console's role in monitoring AWS Lambda functions. Practice monitoring AWS Lambda functions and applications. Then fetch, tail, filter, and highlight Lambda function errors using AWS SAM CLI commands. Upon completion, you'll be able to discern the best methods for ensuring the smooth running of your serverless applications.

COURSE_DESCRIPTION: Um Aufgaben und Verantwortlichkeiten erfolgreich zu delegieren, müssen Sie viel mehr tun, als nur jemanden auszuwählen, an den Sie Aufgaben verteilen können. Das ist nur der erste Schritt. Um gute Delegierungsergebnisse zu erzielen, müssen Sie auch das richtige Maß an Aufsicht, Feedback und Ermutigung bereitstellen. In diesem Kurs lernen Sie, wie Sie Ihre Beauftragten leiten und motivieren, damit sie mit Zuversicht neue Aufgaben übernehmen können. Sie erkunden auch, wie Sie negatives oder demotivierendes Verhalten erkennen und vermeiden. Sie erfahren außerdem, wie Sie auf Probleme am besten reagieren und konstruktive Kritik üben.

COURSE_DESCRIPTION: In this 2-hour long project-based course, you will learn the basics of Neural Style Transfer with TensorFlow. Neural Style Transfer is a technique to apply stylistic features of a Style image onto a Content image while retaining the Content's overall structure and complex features. We will see how to create content and style models, compute content and style costs and ultimately run a training loop to optimize a proposed image which retains content features while imparting stylistic features from another image. This course runs on Coursera's hands-on project platform called Rhyme. On Rhyme, you do projects in a hands-on manner in your browser. You will get instant access to pre-configured cloud desktops containing all of the software and data you need for the project. Everything is already set up directly in your internet browser so you can just focus on learning. For this project, you'll get instant access to a cloud desktop with Python, Jupyter, and Tensorflow pre-installed. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Widgets such as buttons, labels, and user-entry fields for input form the core of any GUI. Tkinter includes button, entry, and label objects and geometry managers in Tkinter allow you to choose how to position your widgets. You will begin this course by creating an interactive button widget which displays an exit prompt when clicked. Discover how to instantiate text entry widgets where users enter text input to a box. Set up an app where the user enters obscured password credentials into a text entry widget and submits them using a button widget. Finally, explore the grid, pack, and place geometry managers in Tkinter. Upon completion of this course, you will be able to configure interactive widgets in Tkinter and choose between place, pack, and grid geometry managers to optimize app layout.

COURSE_DESCRIPTION: Monitoring Azure service usage can enhance security as well as improved performance of deployed services. You'll begin by reviewing individual resource log activity followed by monitoring Azure service health. Next, you'll explore Log Analytics Workspaces and alert notification. You will then how to configure Azure Dashboards for quick access to cloud service status and recognize Azure service previews and general availability. Next, you will learn how to review and filter Azure cloud computing charges related to an Azure subscription. Next, you'll learn how to use the pricing calculator to estimate cloud charges based on selected services. You will then learn how to use the TCO calculator to determine the trust cost of cloud computing over time followed by configuring alert thresholds related to cost. Lastly, you'll explore a variety of cost saving measures including reserved instances. This course is one of a collection of courses that prepares learners for the AZ-900 Microsoft Azure Fundamentals certification.

COURSE_DESCRIPTION: Eine diverse und inklusive Belegschaft ist ein wirtschaftliches und menschliches Erfordernis. Unabhängig von Ihrer Funktion oder der Größe Ihres Unternehmens kann jeder eine aktive Rolle bei der Förderung von Diversität, Chancengleichheit und Inklusion spielen. Künftiges Unternehmenswachstum und zukünftiger Erfolg hängen davon ab, dass Inklusion begrüßt wird und Voreingenommenheit und Diskriminierung am Arbeitsplatz beseitigt werden. Für viele Unternehmen ist es jedoch schwierig, kulturelle und geschäftliche Praktiken zu entwickeln, die die Diversität am Arbeitsplatz begrüßen. Was können wir außer der Einstellung diverser Talente noch tun? Dieser Kurs ist Ihr Leitfaden für die Definition von Diversität, Chancengleichheit und Inklusion und für die Förderung nachhaltiger und wirkungsvoller Praktiken in puncto Diversität, Chancengleichheit und Inklusion am Arbeitsplatz. In diesem Kurs lernen Sie die wichtigsten Merkmale der DEI sowie Praktiken für den Aufbau und die Aufrechterhaltung einer gesunden DEI-Kultur kennen. Sie erfahren auch, wie Sie Verhaltensweisen erkennen, die ein Scheitern bei der Verwirklichung einer inklusiven Kultur signalisieren, wie Sie Schlüsselemente identifizieren, dank der Diversität, Chancengleichheit, Inklusion und Zugehörigkeit Wurzeln schlagen, und Schritte unternehmen, um Agilität und Widerstandsfähigkeit auf Ihrem Weg zur DEI an den Tag zu legen.

COURSE_DESCRIPTION: In this 1-hour long project-based course on Introduction to Docker: Build your own portfolio website, you will learn how to use Docker on the command line and create your own portfolio website from a Bootstrap template in a Docker container. You will get to explore and demystify the Docker landscape and see how Docker works by using it. You will learn many fundamental concepts which will help you progress in your career, studies and knowledge, such as images, containers, the registry, the client/server model in Docker via the Docker Engine etc. You will use various commands and become comfortable spinning up containers, doing basic debugging to see statuses of containers, linking local files to files inside of Docker and learning basic networking to map a container port to a port on your local host machine to set up a development environment with Docker. Most importantly you will leave this course more confident in your knowledge of Docker and ready to understand Docker at a more advanced level, and ready to contribute better to your technical or development teams Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In the business world, smart organizations use branding and strategic management techniques to differentiate themselves from their competition and to achieve a competitive advantage. In this Specialization, you will learn how to use proven brand management methods and tools for individual career development in competitive job environments. You will gain knowledge and analytical skills for career self-management and learn techniques for career brand building. You will create a robust self-management information system that will help you self-organize and increase your human capital by building high demand employability skills. During each week of the Specialization, you will be practicing various career branding techniques in your custom-built, individual Career Development Lab. The final Capstone Project is designed as a training facility where you will create your evidence-based portfolios, professional development plans, personal self-marketing and branding strategies, presentations, and public profiles

COURSE_DESCRIPTION: Model-driven app design is an approach that focuses on quickly adding components to your apps. These components include dashboards, forms, views, and charts. With no code, or very little, you can make apps that are simple or very complex. Unlike in canvas app development, where the designer has total control over the app layout, much of the layout in model-driven apps is determined by the components you add. In other words, the emphasis is more on quickly viewing your business data and making decisions than on intricate app design.

COURSE_DESCRIPTION: This course explores DevOps, the practice of operations and development used by engineers participating together in the entire service lifecycle. Learners will examine the Agile environment, where development takes an incremental approach to design and testing. You will explore differences between continuous testing and automation testing, the disadvantages of late testing, and common causes of technical debt. This course will examine tools used in continuous testing, including Katalon Studio, Selenium, Appium, Eggplant, and Testsigma. You will work with BDD (Behavior Driven Development), a test-first Agile testing practice, and learn its benefits for programs and release management. Next, learn about unit testing, the tools to use, and how to implement it. You will examine technical debt, the debt owed to the code to become quality code, and its main causes. Then you will learn to test Web Services and the reason for integration testing. Finally, you will learn to implement unit testing on Java by using its JUnit framework, and how to test REST (representational state transfer) web services by using the SoapUI protocol.

COURSE_DESCRIPTION: This course is a stand-alone course that builds on the knowledge included in the C# Programming for Unity Game Development Specialization, so the course assumes you have the prerequisite knowledge from that Specialization. You should make sure you have that knowledge, either by taking those courses or from personal experience, before tackling this course. Throughout this course you'll build on your foundational C# and Unity knowledge by developing more robust games with better object-oriented designs using various data structures and design patterns. Data structures and design patterns are both general programming and software architecture topics that span all software, not just games. Although we'll discuss these ideas in the game domain, they also apply if you're writing a web app in ASP.NET, building a tool using WinForms, or any other software you decide to build. Module 1: Explore a Dynamic Array data structure and learn the basics of algorithm analysis Module 2: Learn about and use the common Linked List and Graph data structures Module 3: Learn about and use several additional data structures: Stacks, Queues, and Trees Module 4: Learn why design patterns are so useful and discover a number of design patterns useful in game development "Unity" is a trademark or registered trademark of Unity Technologies or its affiliates in the U.S. and elsewhere. This course is an independent work and is not sponsored by, authorized by, or affiliated with Unity Technologies or its affiliates

COURSE_DESCRIPTION: This Specialization is an introduction to building web applications for anybody who already has a basic understanding of responsive web design with JavaScript, HTML, and CSS. Web Applications for Everybody is your introduction to web application development. You will develop web and database applications in PHP, using SQL for database creation, as well as functionality in JavaScript, jQuery, and JSON. Over the course of this Specialization, you will create several web apps to add to your developer portfolio. This Specialization (and its prerequisites) will prepare you, even if you have little to no experience in programming or technology, for entry level web developer jobs in PHP. You'll demonstrate basic concepts, like database design, while working on assignments that require the development of increasing challenging web apps. From installing a text editor to understanding how a web browser interacts with a web server to handling events with JQuery, you'll gain a complete introductory overview of web application development.

COURSE_DESCRIPTION: When struggling with a difficult problem, it's easy to become hemmed in by traditional habitual thinking. Learning to leverage the power of analogical thinking allows you to think creatively and gain fresh insights through the exploration of unexpected similarities. In this

course, you'll learn what analogical thinking is, when it's best used, and how to use it. You'll also learn under what situations it can fail, and how to avoid superficial analogies so you can make better strategic choices.

COURSE_DESCRIPTION: Welcome to Graphic Design, the second course in the Effective Communications Specialization. Over 70 different companies have provided this specialization to their employees as a resource for internal professional development. Why? Because employers know that effective visual communication is the key to attracting an audience, building a relationship, and closing the sale. This practical course gives you the tools to create professional looking PowerPoints, reports, resumes, and presentations. Using a set of best practices refined through years of experience, you'll: • make your work look fresh and inspired. • apply simple design "tricks" to begin any project with confidence and professionalism. • receive and respond to criticism and revise your project from good to great. "This course is fantastic. It teaches a great amount of starter graphic design information but it is broken down into easily understood videos and quizzes. The quality was top notch and the interaction was as good as you would get in a brick and mortar school. I did not feel like I was missing anything by taking it online." - a recent Graphic Design student All of the course assignments can be completed with basic presentation software such as Microsoft PowerPoint, Google Slides, or Apple Keynote. You'll also have opportunities to explore and apply more sophisticated tools, such as Adobe Photoshop, Illustrator, and InDesign. This course can be taken for academic credit as part of CU Boulder's Master of Science in Data Science (MS-DS) degree offered on the Coursera platform. The MS-DS is an interdisciplinary degree that brings together faculty from CU Boulder's departments of Applied Mathematics, Computer Science, Information Science, and others. With performance-based admissions and no application process, the MS-DS is ideal for individuals with a broad range of undergraduate education and/or professional experience in computer science, information science, mathematics, and statistics. Learn more about the MS-DS program at <https://www.coursera.org/degrees/master-of-science-data-science-boulder>.

COURSE_DESCRIPTION: Asynchronous methods can be called and added to your application. In this course, you'll explore how asynchrony can be added to an application by calling asynchronous methods using Task and add asynchronous methods to a class. You'll begin by learning how to use the Task class, Wait method, and Result property and how to catch exceptions using the Task class. Then you'll discover how to chain tasks together, how to cancel tasks, and how to create a task and add an asynchronous version of a method to an existing class. Finally, you'll discover how to create tasks that return data, how to pass parameters into tasks using explicit and explicit parameters, and how to add cancellation support to your code.

COURSE_DESCRIPTION: A picture speaks a thousand words, but why stop there? Explore the graphic elements of PowerPoint, from working with images to audio and video files as well as hyperlinks with PowerPoint 2019 in this 11-video course. Key concepts covered here include how to insert hyperlinks to access websites, files, and send e-mails; how to insert an image from existing files or online locations; and how to insert screenshots from an open program or online source. You will learn how to modify an image position by using rotation and cropping; how to edit an image's size, border, and apply effects; and how to modify an images aspects to improve its appearance. The course continues by demonstrating how to insert a 3D model from an existing file or an online source; how to insert an existing audio file or an audio recording; and how to insert a file from your computer or an online source. Finally, learn how to edit a video in a presentation; and learn to create a photo album presentation.

COURSE_DESCRIPTION: Iza komunikacije i načina na koji neuropsihološki reagiramo na druge - na njihove radnje, riječi, ton i govor tijela - stoji znanost. Kako bi namjera vaše komunikacije bila jasna i razumljiva, moguće je razviti vještine povezivanja s drugim ljudima. Komunikacija je i umjetnost jer vam omogućuje da istaknete ono što zaista jeste te da se razmjenja s drugom osobom odvija prirodno. Međuljudska je komunikacija komplicirana: istovremeno se odvija više razgovora. Odvija se ono što vi mislite i govorite, kao i ono što vaša publika misli i govori. U ovom tečaju naučit ćete o umjetnosti i znanosti komunikacije putem rasprave o tome kako se povezati sa svojom publikom te kako poboljšati i ojačati tu vezu tijekom komuniciranja.

COURSE_DESCRIPTION: There are many different styles of site-to-site VPNs possible because there are Cisco-centric types, as well as open standard designs. In this course, you'll examine a typical configuration of a site-to-site VPN, such as the DMVPN configuration and verification. Then you'll explore the many types of remote access VPN Cisco supports, including having a Cisco ASA provide VPN access to remote clients. Finally, you'll learn how to determine if your traffic is being protected in your IPsec site-to-site VPN built between Cisco devices. This course can be used in preparation for the 350-701: Implementing and Operating Cisco Security Core Technologies (SCOR) certification exam.

COURSE_TITLE: SCOR: Configuring and Verifying VPN & IPsec

COURSE_DESCRIPTION: We encounter fallacies almost everywhere we look. Politicians, salespeople, and children commonly use fallacies in order to get you to think whatever they want you to think. It's important to learn to recognize fallacies so that you can avoid being fooled by them. It's also important to learn about fallacies so that you avoid making fallacious arguments yourself. This course will show you how to identify and avoid many of the fallacies that lead people astray. In this course, you will learn about fallacies. Fallacies are arguments that suffer from one or more common but avoidable defects: equivocation, circularity, vagueness, etc. It's important to learn about fallacies so that you can recognize them when you see them, and not be fooled by them. It's also important to learn about fallacies so that you avoid making fallacious arguments yourself. Suggested Readings Students who want more detailed explanations or additional exercises or who want to explore these topics in more depth should consult Understanding Arguments: An Introduction to Informal Logic, Ninth Edition, Concise, Chapters 13-17, by Walter Sinnott-Armstrong and Robert Fogelin. Course Format Each week will be divided into multiple video segments that can be viewed separately or in groups. There will be short ungraded quizzes after each segment (to check comprehension) and a longer graded quiz at the end of the course.

COURSE_DESCRIPTION: Cloud computing enables the delivery of computing services such as storage, networking, and software over the Internet. This capability allows individuals or organizations to scale resources as needed, lower operating costs, and increase productivity. Explore how business transformation can allow you to shift or re-align business operations. Discover how to plan and prepare for business transformation-related changes, learn how to communicate changes to employees and stakeholders, and explore how information technology has revolutionized business operations. Next, examine the role of information technology (IT) decision makers and learn how to differentiate between brand-centric, multifocal, and aggregator

decision makers. Discover how information technology helped grow and reduce costs for organizations prior to cloud computing, and explore challenges when adopting a digital-first mindset for business. Lastly, explore the differences between on-premise and cloud environments, and recognize key factors to examine when considering a move to the cloud.

COURSE_DESCRIPTION: This guided project course is part of the "Tensorflow for Natural Language Processing" series, and this series presents material that builds on the third course of DeepLearning.AI TensorFlow Developer Professional Certificate, which will help learners reinforce their skills and build more projects with Tensorflow. In this 2-hour long project-based course, you will learn the fundamentals of Text Embedding and Text Classification, and you will learn practically how to use text embeddings for a classification task in the real world and create, train, and test a neural network with Tensorflow using texts, and you will get a bonus deep learning exercise implemented with Tensorflow. By the end of this project, you will have learned text embedding and created a neural network with TensorFlow on text classification. This class is for learners who want to learn how to work with natural language processing and use Python for building neural networks with TensorFlow, and for learners who are currently taking a basic deep learning course or have already finished a deep learning course and are searching for a practical deep learning project with TensorFlow. Also, this project provides learners with further knowledge about creating and training text classification models and improves their skills in Tensorflow which helps them in fulfilling their career goals by adding this project to their portfolios.

COURSE_DESCRIPTION: In response to the COVID-19 pandemic, the U.S. Government is supporting a national Expanded Access Program to collect and provide convalescent plasma to patients in need across the country (uscovidplasma.org). Convalescent plasma refers to blood plasma collected from people who have recovered from COVID-19. That plasma, which contains antibodies against the virus, is then used to treat others with advanced illness. Working collaboratively with industry, academic and government partners, Mayo Clinic is serving as the lead institution for the program. (Published 05/21/2020)

COURSE_DESCRIPTION: In this 8-video course, explore the basics of secure testing methodologies such as unit, regression, and integration testing. Discover how to work with security metrics and track security bugs. Begin by looking at the concepts of security testing, and the goals of testing. The course offers an overview and a framework with which to conduct security testing. This framework is applicable to any particular approach to testing-whether automated or manual, unit, integration, or regression testing, the same conceptual framework will apply. Then learners move on to secure unit testing, and how to apply it, including how secure testing is done and who should do it. The next tutorial involves secure regression testing, which is, in general, a term for testing after a change has been made, so you will learn how to apply effective and secure regression testing. You will also explore secure integration testing, how to apply it and when and who conducts integration testing. Then discover how to use effective security metrics, and finally, how to effectively track security bugs.

COURSE_DESCRIPTION: Mathematical optimization models allow us to represent our objectives, decision variables, and constraints in mathematical terms, and solving these models gives us the optimal solution to our problems. Linear programming is an optimization model that can be used when our objective function and constraints can be represented using linear terms. Use this course to learn how decision-making can be represented using mathematical optimization models. Begin by examining how optimization problems can be formulated using objective functions, decision variables, and constraints. You'll then recognize how to find an optimal solution to a problem from amongst feasible solutions through a case study. This course will also help you investigate the pros and cons of the assumptions made by linear programming and the steps involved in solving linear programming problems graphically as well as by using the Simplex method. When you are done with this course, you will have the skills and knowledge to apply linear programming to solve optimization problems.

COURSE_DESCRIPTION: The principles and practices of DevOps help enterprises innovate with greater efficiency and agility. In this course, you'll explore these practices, identify the problems they eliminate, and recognize their application in DevOps environments and solutions. You'll also list the DevOps methods and toolchains to improve product development and release and outline how to achieve DevOps transformation to leverage continuous integration and continuous delivery. You'll list the DevOps and Cloud principles that help achieve continuous operations in public, private, and hybrid clouds and the steps involved in building cloud-ready application architectures. You'll identify the IT operational principles for moving to an automated self-service CloudOps model, define the concept of DevOps as a Service, outline the steps involved in modernizing applications, and recognize some DevOps documentation challenges.

COURSE_DESCRIPTION: There are numerous formatting techniques that can be applied to Outlook 2019 e-mails. Discover how to format text, use lists, work with color, and manage your styles and style sets, in this 11-video course. Begin with a look at ways to format your text. You can change its appearance with various text formatting options. Then learn how to add color and text effects, such as highlighters, bold, italics, underline, and strikethrough. Also learn how to add custom colors using the Advanced Color tools. Learners next discover how to format the text in an e-mail by using the Alignment and Capitalization tools; ensure that text is laid out properly by using Line and Paragraph Spacing tools; and observe how to insert special characters. Browse the various text styles available in the styles gallery, moving between styles sets and customizing your default style settings in Outlook. Explore how to create your own text style, and then create a style set. Finally, observe how to create bullet and numbered lists, and then customize your lists.

COURSE_DESCRIPTION: Most Java developers use a full-fledged IDE to build complex Java applications. However, there will be many occasions where you need to test snippets of Java code quickly or build a small script without the overhead of having to develop, compile, and execute programs. This is where JShell comes in. In this course, practice using JShell to run snippets of Java code and get immediate results. Use various features of JShell, from the declaration of functions, available feedback modes, and the auto-complete feature. Define a class in various iterations until you're satisfied with its behavior. Then, compile several snippets of previously run Java code to build a JShell script that reads data from one file, transforms it, and writes it into another file. When you're done with this course, you'll be able to use JShell to write your Java programs.

COURSE_DESCRIPTION: What makes the programming language Java so useful is that can run on multiple platforms. In this course, you will examine Java and its support for object-oriented programming. This course uses real-world entities to demonstrate how member variables represent the state of those entities, and how member functions represent the behavior of those entities. Participants study the various basic types of variables in Java and distinctions between eight primitive types and strings, which are a type of object. You will learn that all basic building blocks of all operations are these basic types of variables. As a practical exercise, create a project in Java with Java's two basic building blocks, the twin concepts of classes and objects. Next, learn to create classes and instantiate objects of these classes. You will discover that all objects in Java come with certain built-in capabilities, because they all inherit from a common ancestor base class. Finally, participants learn how to use constructors, getter methods, and setter methods to configure and initialize Java objects.

COURSE_DESCRIPTION: In this Skillsoft Aspire course, learners discover how to set up a Hadoop Cluster on the cloud and explore bundled web apps-the YARN Cluster Manager app and the HDFS (Hadoop Distributed File System) NameNode UI. This 9-video course assumes a good understanding of what Hadoop is, and how HDFS enables processing of big data in parallel by distributing large data sets across a cluster; learners should also be familiar with running commands from the Linux shell, with some fluency in basic Linux file system commands. The course opens by exploring two web applications which are packaged with Hadoop, the UI for the YARN cluster manager, and the node name UI for HDFS. Learners then explore two shells which can be used to work with HDFS, the Hadoop FS shell and Hadoop DFS shell. Next, you will explore basic commands which can be used to navigate HDFS; discuss their similarities with Linux file system commands; and discuss distributed computing. In a closing exercise, practice identifying web applications used to explore and also monitor Hadoop.

COURSE_DESCRIPTION: In the final stages of the Six Sigma DMAIC methodology, teams need to control the improved processes in order to sustain improvement gains. Process control includes applying tools to continuously monitor and maintain each improved process, and to prevent it from reverting to its previous state. Apart from the statistical process control, there are a number of other Six Sigma and Lean tools to help to this end. This course introduces basic control tools commonly used in Lean Six Sigma projects. Specifically, it explores how total productive maintenance (TPM) promotes shared responsibility for maintaining process gains, and how the visual controls provide at-a-glance information about process performance. In addition, this course highlights the need to re-analyze the measurement system after improvement solutions are implemented, and provides guidelines for drawing conclusions from this. It tours the key elements of a vital tool for maintaining controls - the control plan - and explores the steps for developing an effective plan. This course is aligned with the ASQ Certified Six Sigma Black Belt certification exam and is designed to assist learners as part of their exam preparation. It builds on foundational knowledge that is taught in SkillSoft's ASQ-aligned Green Belt curriculum.

COURSE_DESCRIPTION: Explore security solutions related to securing cloud-based IT systems and data including jump boxes and firewalls in this 13-video course. Discover how disaster recovery concepts such as RTO (recovery time objective) and RPO (recovery point objective) apply to the cloud. This course prepares learners for the (ISC)2 Certified Cloud Security Professional (CCSP) exam. Examine Internal Information Security Management and Security Control Systems, cryptography, and encryption of cloud-hosted assets. Learn about access control for cloud-hosted assets, asset removal, and storage media sanitization. Explore cloud network security issues and solutions such as firewall access control lists (ACLs). Learn how a jump box limits direct cloud virtual machine access. Capture traffic in a Microsoft Azure cloud computing environment, and deploy a Microsoft Azure Firewall. Look at security in virtualized environments, including infrastructure and data threats and platform-specific security responsibilities. Examine the security-based lifecycle of cloud-hosted assets and business continuity and disaster recovery concepts such as RTO and RPO and cloud functional security. Finally, learners view methodologies for mapping cloud service requirements to service provider certification and product certifications.

COURSE_DESCRIPTION: Developers who choose Azure to aid in their serverless DevOps tasks have several tools available to them. Use this course to become familiar with and practice using some of these services. Investigate the features and capabilities of the prominent Azure DevOps services, such as Azure Pipelines and Azure Test Plans. Create Azure pipelines for building GitHub repositories. Use the Azure CLI to build, test, and deploy JavaScript and Node.js apps. As you advance, use Azure DevOps services to implement end-to-end automated testing. Then, use Azure Pipelines to implement continuous integration and continuous deployment (CI/CD) pipelines for Azure Functions and automate Azure Functions deployment. By the end of the course, you'll be able to use the suite of Azure DevOps services to complete the DevOps cycle for your serverless projects.

COURSE_DESCRIPTION: In this project, you will use the UNIX command line to create photo albums that organize photos into directories by date. You'll learn what's the difference between a terminal, bash, command-line, and prompt. With lots of hands-on exercises, you'll master the most fundamental Unix commands for navigating, manipulating and inspecting files. Interacting with a computer through a command-line interface (CLI) is a powerful technique. In such an interface, you type commands telling the computer to perform desired tasks. Mastering the command line can greatly improve your productivity during development.

COURSE_DESCRIPTION: This is a peer review course. In the capstone project, you are going to apply what you have learned in the previous courses. The final output from this project is an estimation of a firm. You can choose either a public company or a startup depending on the availability of information on the firm. If you have your own startup, then you can do this capstone project on the startup. If not, then you can do this project of a public company. Therefore, the first step is selecting an actual company that you are interested in. Next, you have to do the research on and describe the firm's industry and business. Based on your research, you make an estimate of firm's growth, cash flows and earnings. In order to do this, you need to apply what you have learned in financial statement analysis. Once you find firm's cash flows and earnings, you can apply what you have learned in discounted cash flow method and multiple methods to find the value of the company. In addition to the valuation, you will be given a hypothetical project and have to decide whether to take the project if the opportunity is given to the company of your choice. Be doing this Capstone project, you will complete your understanding of valuation and financial analysis of startups.

COURSE DESCRIPTION: Managing Google Workspace is the second course in the Google Workspace Administration series. This course focuses on the Google Workspace core services such as Gmail, Calendar, and Drive & Docs. You will become familiar with the various service settings, and learn how to enable them for all or just a subset of your users. You will gain an understanding of Google Vault, Google's ediscovery service. You will understand the various admin console reports that are available and be able to search and filter the information in these reports. Finally you will see how multiple domains can be used with Google Workspace and learn how to add a new domain to your account.

COURSE_DESCRIPTION: Jeder Mensch macht Fehler. Aber wenn man weiß, wie man richtig damit umgeht, kann man auch ein mögliches Scheitern noch in einen Erfolg verwandeln. Das Geheimnis liegt darin, Fehler als Chancen zu erkennen, aus denen man etwas lernen kann. Mit dieser Einstellung kann man das Gelernte nutzen, um künftige Fehler zu vermeiden. In diesem Kurs lernen Sie zu erkennen, wann ein Fehler eine Chance für Ihre persönliche Weiterentwicklung sein kann und wie Sie Fehler vermeiden können. Sie erfahren außerdem, dass Fehler auch Verbesserungen vorantreiben können und lernen Techniken kennen, mit denen Sie negative Auswirkungen eindämmen und aus Fehlern lernen können.

COURSE_DESCRIPTION: Are you ready for the next big change? For over a century, changes in the business landscape have forced organizations to react quickly. Some were able to pivot and remain successful, while others could not adapt to the change and failed. Does your organization have what it takes to respond successfully to the next big change? In this course, you will learn how a culture of innovation prepares an organization for whatever may be around the corner. You will learn what a culture of innovation looks like before delving into details around how to lead for such a culture. From attracting and nurturing talent to building innovative teams, this course will help you get future-ready with a culture of innovation.

COURSE_DESCRIPTION: Welcome to the second course in the Data Analytics for Business specialization! This course will introduce you to some of the most widely used predictive modeling techniques and their core principles. By taking this course, you will form a solid foundation of predictive analytics, which refers to tools and techniques for building statistical or machine learning models to make predictions based on data. You will learn how to carry out exploratory data analysis to gain insights and prepare data for predictive modeling, an essential skill valued in the business. You'll also learn how to summarize and visualize datasets using plots so that you can present your results in a compelling and meaningful way. We will use a practical predictive modeling software, XLMiner, which is a popular Excel plug-in. This course is designed for anyone who is interested in using data to gain insights and make better business decisions. The techniques discussed are applied in all functional areas within business organizations including accounting, finance, human resource management, marketing, operations, and strategic planning. The expected prerequisites for this course include a prior working knowledge of Excel, introductory level algebra, and basic statistics.

COURSE_DESCRIPTION: In this challenge, you will create maintenance windows in AWS Systems Manager to perform maintenance tasks on your AWS Elastic Cloud Compute (Amazon EC2) resources. First, you will create two new maintenance windows, and then you will register targets against the windows. Next, you will register a Run Command task on one of the windows, and then you will run a patch automation on the other window. Finally, you will verify that the Run Command task executed successfully. Note: Once you begin the challenge lab, you will not be able to pause, save, or exit and then return to your challenge lab. Please ensure that you have set aside enough time to complete the challenge lab before you start.

COURSE_DESCRIPTION: Azure Machine Learning Studio provides DevOps support in the form of orchestrating machine learning pipelines. In this course, you'll learn to create, publish, and schedule machine learning pipelines. First, you'll examine Azure Machine Learning pipelines and how they are used to build, optimize, and manage machine learning workflows. Next, you'll explore how to use the Azure Machine Learning SDK to create and run machine learning pipelines. You'll learn how to use a pipeline to import, transform, and move data between steps, as well as how to publish and track pipelines and use triggers to schedule a machine learning pipeline based on some event. Finally, you'll learn techniques for troubleshooting and debugging machine learning pipelines This course is one in a collection that prepares learners for the Designing and Implementing a Data Science Solution on Azure (DP-100) exam.

COURSE_DESCRIPTION: Cloud service providers (CSPs) must generate confidence in cloud service users by managing costs and risks. To facilitate this, they must provide tools to help cloud consumers create estimates and adopt the right risk mitigation approach. In this course, you'll learn how to manage your CSP-related costs and risks. You'll start by investigating various elements that impact cloud pricing, such as cloud resource types, the impact of cloud computing on chargeback, and cloud licensing models. You'll also examine how cloud maintenance services enable resilient and robust cloud services. Moving on, you'll recognize common considerations when addressing cloud computing risks, the Cloud Computing Risk Assessment Matrix, and how cloud risk mitigation factors are categorized. Finally, you'll outline why vendor lock-in is a risk in cloud computing, some risk mitigation approaches, and how to implement a compliance program in the cloud. You'll then practice creating cloud resource usage, cost estimates, and roles and permissions for AWS maintenance windows.

COURSE_DESCRIPTION: Blockchain will bring about profound changes to business, and even to the nature of business itself. This technology will disrupt how enterprises are funded and managed, how they create value, and even how they perform basic functions like marketing and accounting. In this course you will learn how blockchain technology will penetrate into the structures of organizations. You will explore how blockchain will transform the roles of the C-Suite, and how a blockchain can be used to manage and protect intellectual property. You will be able to identify the different layers of the blockchain technology stack, and explain how these affect the governance of blockchain systems. As well, you will be able to identify seven qualities that a region in the world needs in order to attract technology startups and to build a vibrant blockchain ecosystem.

COURSE_DESCRIPTION: The main goal of this specialization is to provide the knowledge and practical skills necessary to develop a strong foundation on information visualization and to design and develop advanced applications for visual data analysis. This course aims at introducing fundamental knowledge for information visualization. The main goal is to provide the students with the necessary "vocabulary" to describe visualizations in a way that helps them reason about what designs are appropriate for a given problem. This module also gives a broad overview of the field of visualization, introducing its goals, methods and applications. A learner with some or no previous knowledge in Information Visualization will get a sense of what visualization is, what it is for and in how many different situations it can be applied; will practice to describe data in a way that is useful for visualization design; will familiarize with fundamental charts to talk about the concept of visual encoding and decoding.

COURSE_DESCRIPTION: Learners will deepen their understanding and appreciation of ways in which race, ethnicity and cultural diversity have shaped American institutions, ideology, law, and social relationships from the colonial era to the present. Race and ethnicity are ideological and cultural categories that include all groups and individuals. Hence, this course is designed in significant part to take a broad look at the ideology of race and cultural diversity in America's past and present. The primary focus is on the historical and social relationships among European Americans, Native Americans, African Americans, Latino/as, and Asian/Pacific Americans. Issues of race and ethnicity are examined across different ethno-cultural traditions in order to interweave diverse experiences into a larger synthesis of the meaning of race and ethnicity in American life. In this course, we conceive of "race" and "diversity" as references to the entire American population, even as we recognize that different groups have unique historical experiences resulting in distinctive and even fundamental cultural differences. We treat race and ethnicity as dynamic, complex ideological and cultural processes that shape all social institutions, belief systems, inter-group relationships, and individual experiences.

COURSE_DESCRIPTION: Explore numerous types of data architecture that are effective data wrangling tools when working with big data in this 9-video Skillssoft Aspire course. Learn the strategies, design, and constraints involved in implementing data architecture. You will learn the concepts of

data partitioning, CAP theorem (consistency, availability, and partition tolerance), and process implementation using serverless and Lambda data architecture. This course examines Saga, newly introduced in data management pattern catalog of microservices; API (application programming interface) composition; CQRS (Command Query Responsibility Segregation); event sourcing; and application event. This course explores the differences in traditional data architecture and serverless architecture which allows you to use client-side logic and third-party services. You will learn how to use AWS (Amazon Web Services) Lambda to implement a serverless architecture. This course then explores batch processing architecture, which processes data files by using long running batch jobs to filter actual content, real-time architecture, and machine learning at scale architecture built to serve machine learning algorithms. Finally, you will explore how to build a successful data POC (proof of concept).

COURSE_DESCRIPTION: Die richtige Einschätzung und Priorisierung von Projektanforderungen ist entscheidend für die erfolgreiche Planung agiler Projekte. Sie sollten in der Lage sein, das erforderliche Arbeitsprogramm für Ihr Produktrelease festzulegen. In diesem Kurs lernen Sie entscheidende Aktivitäten im Rahmen der agilen Projektplanung kennen, darunter die Erstellung von Rollen und Wireframes. Auch werden in diesem Kurs die gängigsten agilen Schätzungsmethoden, wie Story Points, Breitband-Delphi und Affinity Estimation, dargelegt. Der Kurs befasst sich ferner mit Methoden zur Priorisierung von Anforderungen und Aktivitäten, die im Rahmen der Ausführung Ihres Releaseplans stattfinden. Dieser Kurs ist Teil einer Kursreihe im Bildungsweg von Skillsoft und behandelt die Vorgaben der "PMI Agile Certified Practitioner (PMI-ACP) (r)"-Prüfung. PMI-ACP ist ein eingetragenes Handelszeichen des Project Management Institute, Inc.

COURSE_DESCRIPTION: In einer Verkaufsatmosphäre, in der Kunden gut informiert, eng vernetzt und technisch versiert sind, müssen sich Verkäufer gut vorbereiten, um mit informierten Käufern und den damit verbundenen Herausforderungen klarzukommen. Beim Umgang mit dieser anspruchsvollen neuen Art von Kunden müssen Sie sich über Fragen, Einwände und Widerstände freuen und sie als das sehen, was sie sind: Gelegenheiten. Bereiten Sie sich darauf vor und meistern Sie sie mit Ihrer Kompetenz. Dieser Kurs soll Sie bei der Vorbereitung auf Einwände unterstützen, die während Ihrer Verkaufsaktivitäten auftreten können, und Ihnen Methoden für den Umgang mit Fragen, Einwänden und Widerständen an die Hand geben.

COURSE_DESCRIPTION: In this 10-video course, you will explore part of chapter 4 from the ISTQB Software Testing Foundation Level 2018 certification exam syllabus, covering categories of test techniques, with a primary focus on experience-based test techniques. Start by learning how to identify the factors that influence which test technique to use. The purpose of a test technique is to help identify test conditions, test cases, and test data. Then learners will examine black-box, white-box, and experience-based test techniques and their characteristics. Explore what each of those experience-based testing techniques are, and identify their common characteristics, by focusing on error guessing, exploratory testing, and checklist-based testing and the benefits they provide when testing a software product. In the final tutorial of this course, look at exploratory testing, performing tests on software based on the tester's unique domain-based experience. To conclude the course, an exercise covers describing various testing techniques available in the experience-based testing category.

 COURSE_DESCRIPTION: When working with big data, there needs to be a mechanism to process and transform this data quickly and efficiently. Azure Databricks is a service that provides the latest version of Apache Spark, which provides functionality for machine learning and data warehousing. In this course, you'll learn about the features of Azure Databricks such as clusters, notebooks, and jobs. Next, you'll learn about autoscaling local storage when configuring clusters. Next, you'll explore how to create, manage, and configure Azure Databricks clusters, as well as how to create, open, use, and delete notebooks. Finally, you'll learn how to create, open, use, and delete jobs. This course is one in a collection that prepares learners for the Microsoft Data Engineering on Microsoft Azure (DP-203) exam.

 COURSE_DESCRIPTION: At Mayo Clinic in Arizona, the COVID-19 pandemic means expanding virtual capabilities, increasing innovation, communicating and coordinating even more than usual, and streamlining patient care. Dr. Richard Gray, CEO of Mayo Clinic in Arizona, says the medical teams and staff continue to be nimble and flexible, and they are learning each step of the way. "I think that all of the creative solutions and accelerations in health care transformation will be what we'll carry with us," says Dr. Gray. "Because those will still be a day-to-day part of how we're taking care of patients and how we're performing our research and education duties." Dr. Gray adds, "It's validated a lot of our thoughts of what the future should look like for Mayo Clinic and in a patient-centered way." (Published 03/05/2021)

COURSE_DESCRIPTION: Explore key aspects of software testing, software validation, and bug tracking methods in this 14-video course, beginning with a look at very specific testing methodologies, and an in-depth introduction into how to do testing. This leads learners into observing how to apply unit testing; integration testing; regression testing, and user acceptance testing. Another tutorial will explore the roles and responsibilities in testing, or who in one's team is responsible for what aspect of testing. You will also learn about specific testing methods, and how to do the individual test, regardless of what type it is. Following on from this, learners will examine test cases and reporting, where formalized testing requires some level of reporting and specific test cases. Then discover how to apply software metrics and explore software verification and software validation. To complete the course, you will learn about the concepts of bug tracking and how to use various bug tracking methods.

COURSE_DESCRIPTION: NoSQL databases are designed for the storage of vast unstructured datasets. A crucial part of becoming a certified AWS SysOps Administrator is recognizing which databases to work with and how to deploy them. In this course, you'll begin by distinguishing document and key-value NoSQL databases, before outlining the unique characteristics of DocumentDB and DynamoDB. You'll then deploy DocumentDB and DynamoDB for various purposes using the GUI and CLI. Next, you'll outline the use of ElastiCache and the in-memory data stores Memcached and Redis, before deploying ElastiCache with each of these to boost database performance. Lastly, you'll work with Amazon Redshift for data warehousing and querying. This course is one of a collection of courses that prepares learners for the AWS Certified SysOps Administrator - Associate (SOA-COI) exam.

COURSE_DESCRIPTION: In this 2-hour long project-based course, you will learn how to implement a Triplet Loss function, create a Siamese Network, and train the network with the Triplet Loss function. With this training process, the network will learn to produce Embedding of different classes from a given dataset in a way that Embedding of examples from different classes will start to move away from each other in the vector space. This course runs on Coursera's hands-on project platform called Rhyme. On Rhyme, you do projects in a hands-on manner in your browser. You will get instant access to pre-configured cloud desktops containing all of the software and data you need for the project. Everything is already set up directly in your Internet browser so you can just focus on learning. For this project, you'll get instant access to a cloud desktop with (e.g. Python, Jupyter, and Tensorflow) pre-installed. Prerequisites: In order to be successful in this project, you should be familiar with Python, Keras, Neural Networks. Notes: - You will be able to access the cloud desktop 5 times. However, you will be able to access instructions videos as many times as you want. - This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Having a secure cloud environment is crucial for ensuring system and data integrity and security. Cloud environments have numerous methods for meeting these security needs. Use this course to learn some of the most beneficial network security methods when working with AWS. Examine how to use network segmentation, network protocols, and network services. See how to harden a network environment and monitor its security using log and event monitoring. Explore some of the AWS network security tools used to manage, monitor, and protect AWS services. Take an in-depth look at using AWS CloudTrail, AWS CloudWatch, and AWS Elastic Load Balancing. Moving along, practice creating an AWS CloudTrail and a network load balancer as well as using AWS CloudWatch. Upon completion, you'll be able to secure a network in a cloud environment. This course helps prepare learners for the AWS Certified Developer - Associate 2021 certification exam.

COURSE_DESCRIPTION: While growth has become a primary driver of business valuations and key performance indicators for executives, a renewed emphasis on profitability has led to greater attention being placed on cost-effective, tailored strategies for customer acquisition. This makes predicting the likely response of a prospect to a marketing campaign an increasingly important skill. Discover how to predict the purchase intention of shoppers on e-commerce websites, beginning with cleaning the data and then exploring it for patterns using heatmaps and correlation analysis. Next, perform classification analysis to predict whether a shopper will purchase something. Then, explore different evaluation metrics such as the confusion matrix, recall, precision, and the F1-score. Finally, you will predict whether a specific user responded to a marketing campaign and use feature selection to optimize the number of explanatory variables used in the process.

COURSE_DESCRIPTION: Cloud computing is rapidly expanding into all areas of businesses, creating new and exciting career opportunities. These opportunities cover a broad range of roles, from developers and architects to security professionals and data scientists. This program will give you the fundamental knowledge, skills, and confidence to begin your Microsoft Azure certification journey. This Microsoft Azure Fundamentals AZ-900 Exam Prep Specialization consists of four courses that will act as a bedrock of fundamental knowledge to prepare you for the AZ-900 certification exam and for a career in the cloud. The content of this program is tightly aligned to the AZ-900 exam objective domains. This program will provide foundational level knowledge on Microsoft Azure concepts; core Microsoft Azure services; core solutions and management tools; general security and network security; governance, privacy, and compliance features; Microsoft Azure cost management, and service level agreements. Ideal for IT personnel just beginning to work with Microsoft Azure or anyone wanting to learn about it. This Specialization will prepare you to take the AZ-900: Microsoft Azure Fundamentals exam. Upon completion of the Specialization, you will be offered a discount to the Microsoft Azure Fundamentals Certification Exam to be redeemed at Pearson Vue, Microsoft's proctor exam site. Limited discount vouchers are available on first-come-first-serve basis. Coursera and Microsoft may end the offer at any time.

COURSE_DESCRIPTION: In this 11-video course, learners will discover key concepts related to subnetting, virtual machines (VMs), container, and DNS (domain name system) security. Examine tips and tricks used in subnetting and subnetting advantages. Explore classless inter-domain routing (CIDR), notation, deployment and security considerations for VMs and containers, and types of DNS attacks and mitigation strategies. You will begin the course by taking a look at the importance of subnetting, how it relates to security, and its advantages and disadvantages. Then move on to defining the CIDR notation. You will examine the subnetting cheat sheet, and learn various subnetting tips and tricks; compare VMs and containers, and examine the deployment considerations for VMs and containers. Next, learners will observe the best practices for deploying VMs, and the best practices for VM and container security. In the final two tutorials of this course, you will discover the various types of DNS attacks and their mitigations, and the various types of subnetting attacks and mitigations.

COURSE_DESCRIPTION: Built on the Python programming language, pandas provides a flexible and open source tool for data manipulation. In this course, you'll develop the skills you need to get started with this library. You'll begin by installing pandas from a Jupyter notebook using pip. Next, you'll instantiate a pandas object, including a Series and DataFrame, and practice several ways of instantiating Dataframes - for instance, from lists, dictionaries of lists, and tuples created from lists using the zip method. You round out this course by performing filter operations on DataFrames using the loc and iloc operations - fundamental techniques used to access specific rows and columns. You'll use loc to identify rows based on labels and iloc to access rows based on the index offset position starting from 0.

COURSE_DESCRIPTION: This course is for business analysts and SAS programmers who want to learn data manipulation techniques using the SAS DATA step and procedures to access, transform, and summarize data. The course builds on the concepts that are presented in the Getting Started with SAS Programming course and is not recommended for beginning SAS software users. In this course you learn how to understand and control DATA step processing, create an accumulating column and process data in groups, manipulate data with functions, convert column type, create custom formats, concatenate and merge tables, process repetitive code, and restructure tables. This course addresses Base SAS software. Before attending this course, you should be able to write DATA step code to access data, subset rows and columns, compute new columns, and process data conditionally. You should also be able to sort tables using the SORT procedure and apply SAS formats.

COURSE_DESCRIPTION: Explore basic Javascript, one of the most widely used programming languages in the domain of web development, including concepts involved in the programming language, the features which distinguish it from other languages, and its applications. Key concepts covered in this 10-video course include the role of Javascript within a larger web application involving HTML and CSS; learning how browsers render web pages as a structured document object model (DOM); and the high-level properties of the Javascript programming language. Begin by examining properties and features around arrays and functions in Javascript; learning what an object is in Javascript and how it is represented; and learning some of the quirks of the Javascript language, and what distinguishes it from most other high-level languages. Next, learn what closures are in Javascript and what is included within this construct; and learn how common attributes of a set of objects can be defined within a prototype for those objects.

 COURSE_DESCRIPTION: After completing this course, you will have an understanding of the fundamental principles and processes of software testing. You will have actively created test cases and run them using an automated testing tool. You will be writing and recognizing good test cases, including input data and expected outcomes. After completing this course, you will be able to... - Describe the difference between verification and validation. - Explain the goal of testing. - Use appropriate test terminology in communication; specifically: test fixture, logical test case, concrete test case, test script, test oracle, and fault. - Describe the motivations for white and black box testing. - Compare and contrast test-first and test-last development techniques. - Measure test adequacy using statement and branch coverage. - Reason about the causes and acceptability of and poor coverage - Assess the fault-finding effectiveness of a functional test suite using mutation testing. - Critique black-box and white-box testing, describing the benefits and use of each within the greater development effort. - Distinguish among the expected-value (true), heuristic, consistency (as used in A/B regression), and probability test oracles and select the one best-suited to the testing objective. - Craft unit and integration test cases to detect defects within code and automate these tests using JUnit. To achieve this, students will employ test doubles to support their tests, including stubs (for state verification) and mocks (for behavioral verification) (<https://martinfowler.com/articles/mocksArentStubs.html>). This course is primarily aimed at those learners interested in any of the following roles: Software Engineer, Software Engineer in Test, Test Automation Engineer, DevOps Engineer, Software Developer, Programmer, Computer Enthusiast. We expect that you should have an understanding of the Java programming language (or any similar object-oriented language and the ability to pick up Java syntax quickly) and some knowledge of the Software Development Lifecycle.

COURSE_DESCRIPTION: Azure policies can be used to control resource creation, management, and configuration. In this 9-video course, one of a collection of courses used in preparation for the AZ-104 Microsoft Azure Administrator certification exam, you will learn about Azure policies, including policy assignment, compliance, and remediation; and examine Azure policies and how they apply to Azure permissions. Key concepts covered in this course include definitions, assignments, and parameters of Azure policies; learning to assign Azure policies for an Azure subscription and for your resource group; and identifying noncompliant resources by creating a policy assignment using Azure PowerShell and also by using a template. Then learn to create and assign a new custom policy with Azure portal; manage Azure policies and assignments by using the portal; and create an Azure AD Identity Protection resource. Configure a multifactor authentication (MFA) registration policy, a user risk policy, and a baseline policy. Finally, learn to define the purpose of Microsoft Azure policies, assign built-in policies using the portal and PowerShell, and enable admin account MFA through a baseline policy.

COURSE_DESCRIPTION: The Dart programming language is primarily used to develop cross-platform Flutter applications. Flutter allows you to use the same code to build apps not only for Android and iOS mobile platforms but also for web and desktop applications. In this course, you will set up with the correct environment to develop Flutter applications on Windows and MacOS devices. You will set up Android Studio and the Flutter SDK and configure the plugins needed for Flutter development on this integrated development environment (IDE) Next, you will create a simple Flutter application and run this sample app using the command line and Android Studio on the Chrome web browser. You will then configure an Android Virtual Device on Android Studio and run this application on the Android emulator. For MacOS users you will configure the iOS simulator and run the application on this simulator. Finally, you will test-drive your Flutter installation by creating a very simple web application using Flutter HTML elements and wiring up event handlers.

COURSE_DESCRIPTION: Ethereum allows the use of customized tokens as currency in your Blockchain applications, as long as they comply with one of their standards. In this multiple-video course, you will explore how to define the fields and events for an Ethereum token and implement functions for the token in adherence with the ERC20 specifications. You will learn how to build, deploy, and instantiate a bespoke ERC20 token. In the first part of a two-part tutorial on testing the token operations, you will invoke transfer operation for an ERC20 token to pass tokens to another Ethereum account. In the second part, you will use the approve and transferFrom functions to enable and perform token transfers through a third party. In the concluding exercise, you will define Ethereum tokens by listing and describing two events that must be implemented in an ERC20 token and summarizing details of the transferFrom function for an ERC20 token.

COURSE_DESCRIPTION: This course explores a variety of Cypher queries that go beyond simple reads and writes. The course also involves identifying complex patterns and combinations of data in nodes and relationships. Begin with a deep dive into querying for patterns in relationships. Move on to the operation of finding the shortest paths between two nodes in a graph structure. Next, explore queries based on the properties of nodes or relationships, where you will look for elements matching a single criterion as well as multiple criteria defined using logical operations. Following that, explore some of the fundamental aggregation operations which can be performed on data using the Cypher language on both text and numeric data. Finally, discover how to order query results and limit their size using the LIMIT and SKIP clauses. Upon completion, you'll know how to apply graph-specific and generic database features to analyze a Neo4j database using the Cypher language.

COURSE_DESCRIPTION: DevOps pipelines are an efficient means of ensuring the continuous integration and delivery of applications, maintaining clean code, and managing and simplifying production deployment. In this course, you'll explore the key phases of DevOps pipelines, the steps and patterns involved in creating them, and the differences between DevOps pipelines and traditional approaches. Next, you'll explore the principles of continuous integration and the benefits of containerization in DevOps pipelines. You'll identify the patterns of source code management used to simplify production deployment, the code integration strategies used to manage code repositories for diversified staging deployment, and the different types

of tests that can be automated when using DevOps pipelines. Finally, you'll examine how to implement continuous monitoring and observability in DevOps pipelines, create pipelines using Azure DevOps tools, and use branching strategies to facilitate collaborative development and operations.

COURSE_DESCRIPTION: Ein Excel 365-Arbeitsblatt kann mehr als nur Zahlen und Text enthalten. In diesem Kurs erfahren Sie, wie Sie Ihre Arbeitsblätter mithilfe von Hyperlinks, Bildern, Screenshots, Formen, Symbolen, Sonderzeichen sowie Farben und Designs optisch ansprechender gestalten können.

Lernen Sie zunächst, wie Sie ein Bild oder Foto einfügen, um Ihre Daten zu veranschaulichen, und lernen Sie dann, wie Sie einen Screenshot einfügen. Entdecken Sie, wie Sie ein Bild bearbeiten können, nachdem es in Ihre Excel-Tabelle eingefügt worden ist. Sie erfahren, wie Sie die Helligkeit, den Kontrast und die Sättigung eines Bildes anpassen, eine Reihe von künstlerischen Effekten anwenden und einen Rahmen hinzufügen können. Sie können auch Diagramme mit Formen erstellen und Symbole einfügen, um ein Arbeitsblatt zu illustrieren. Sie werden die verschiedenen Arten von Links und Hyperlinks kennen lernen, die Sie in Ihr Dokument einfügen können. Sie werden lernen, wie Sie Sonderzeichen in eine Zelle einfügen und wie Sie Farben und Designs verwenden können, um Daten hervorzuheben und eine Tabelle besser lesbar zu machen. Außerdem erfahren Sie, wie Sie saubere, professionell

aussehende Titel mit WordArt erstellen und bearbeiten können.

COURSE_DESCRIPTION: Microsoft Azure technicians can secure containerized applications and Kubernetes clusters using a variety of methods, including Azure Active Directory (AD) authentication and role-based access control (RBAC). In this course, you will identify how to use application containerization within the Microsoft Azure environment. Then, you will configure Docker on Linux and Windows hosts and build a Docker container image from a Dockerfile. Next, you will configure an Azure Container Registry, deploy Azure Container Instances (ACIs), and manage an Azure Kubernetes Service (AKS) cluster. Lastly, you will enable Azure AD authentication for AKS and configure AKS RBAC roles. This course can be used to prepare for exam AZ-500, Microsoft Azure Security Technologies.

COURSE_DESCRIPTION: Securing multi-cloud deployments and CloudOps platforms involves managing the security and privacy of your cloud services. In this course, you'll explore the key principles and strategies for securing the enterprise cloud, recommended practices and models for perimeter security, and how to choose appropriate security mechanisms. You'll examine the configurable options for security mechanisms on both service and client side, the prominent intrusion detection techniques for managing cloud computing and security challenges, and prominent cloud audit methods. Next, you'll learn approaches for overcoming the impacts of security challenges in multi-cloud environments, best practices for improving the security of multi-cloud deployments, and how to secure CloudOps platforms to build secure pipelines, middleware, and infrastructure for multi-cloud applications. Finally, you'll explore issues a cloud architect should consider when designing cloud solutions and cloud service consumers should evaluate and manage the security and privacy of cloud services.

COURSE_DESCRIPTION: This course introduces you to sampling and exploring data, as well as basic probability theory and Bayes' rule. You will examine various types of sampling methods, and discuss how such methods can impact the scope of inference. A variety of exploratory data analysis techniques will be covered, including numeric summary statistics and basic data visualization. You will be guided through installing and using R and RStudio (free statistical software), and will use this software for lab exercises and a final project. The concepts and techniques in this course will serve as building blocks for the inference and modeling courses in the Specialization.

COURSE_DESCRIPTION: In this 1-hour long project-based course, you will learn how to create a script and then create a Promotional Video around it and make the video appealing using video backgrounds, images and animations. By the end of this project, you will be confident in creating an eye-catching and professional Promotional Video in Canva which you can use to Market on Social Media Platforms. The same skills can be used in creating Promotional Video in any industry like real estate, finance, healthcare or for any other business. We will be using Canva for this purpose and we will create a Promotional Video slide by slide. We will begin by creating video slides around the Customer's pain points and introduce our Solutions. We will then persuade our target customers through USPs and Testimonials and finish the video with a Call to Action. No prior experience in video creation or graphic design or scriptwriting is needed. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In preparation for the MS-201 Implementing a Hybrid and Secure Messaging Platform certification exam, which tests abilities of messaging administrators to plan and implement a hybrid configuration, manage migration, secure the messaging environment, and manage organizational settings, this 14-video course explores protecting organizations against malicious threats by using Office 365 ATP (Advanced Threat Protection) capabilities. You will examine MS Office 365 ATP, a cloud-based e-mail filtering service with several capabilities, including real-time protection. You will also learn how to set up a custom list of blocked URLs, and to edit a custom "Do not write" URL list. Next, learners will examine dynamic delivery options for e-mails with attachments, and Office 365 ATP for SharePoint, OneDrive, and Microsoft Teams. This course then demonstrates how to submit suspicious content to Microsoft for scanning, how to access real-time messaging reports, and explore the use of threat trackers against cyber threats. Finally, learn features of the Threat Explorer tool and how to use the Attack Simulator tool.

COURSE_DESCRIPTION: Welcome to the Introduction to Embedded Systems Software and Development Environments. This course is focused on giving you real world coding experience and hands on project work with ARM based Microcontrollers. You will learn how to implement software configuration management and develop embedded software applications. Course assignments include creating a build system using the GNU Toolchain GCC, using Git version control, and developing software in Linux on a Virtual Machine. The course concludes with a project where you will create your own build system and

firmware that can manipulate memory. The second course in this 2 course series , Embedded Software and Hardware Architecture, will use hardware tools to program and debug microcontrollers with bare-metal firmware. Using a Texas Instruments MSP432 Development Kit, you will configure a variety of peripherals, write numerous programs, and see your work execute on your own embedded platform!

COURSE_DESCRIPTION: Während Frauen auf höchster Führungsebene noch immer eine Minderheit darstellen, sind heute mehr Führungspositionen in Frauenhand als jemals zuvor in der Geschichte. Die normalerweise mit Führungsrollen verbundenen Merkmale wie Durchsetzungsvermögen, Seriosität und Intelligenz sind bei Frauen genauso häufig zu finden wie bei Männern. Welche Hindernisse müssen Frauen auf Ihrem Weg zu einer Führungsposition aus dem Weg räumen? Dieser Kurs befasst sich mit den Problemen weiblicher Führungskräfte. Sie erfahren dabei, wie Ihnen eine Änderung Ihrer eigenen Ansichten bei der Bewältigung dieser Probleme, einschließlich der Tatsache, dass das Geschlecht eine Rolle spielt, hilft. Außerdem erfahren Sie, wie Sie Kompetenzen, Selbstbewusstsein und eine persönliche Marke entwickeln können.

COURSE_DESCRIPTION: In this class, Introduction to Designing Data Lakes on AWS, we will help you understand how to create and operate a data lake in a secure and scalable way, without previous knowledge of data science! Starting with the "WHY" you may want a data lake, we will look at the Data-Lake value proposition, characteristics and components. Designing a data lake is challenging because of the scale and growth of data. Developers need to understand best practices to avoid common mistakes that could be hard to rectify. In this course we will cover the foundations of what a Data Lake is, how to ingest and organize data into the Data Lake, and dive into the data processing that can be done to optimize performance and costs when consuming the data at scale. This course is for professionals (Architects, System Administrators and DevOps) who need to design and build an architecture for secure and scalable Data Lake components. Students will learn about the use cases for a Data Lake and, contrast that with a traditional infrastructure of servers and storage.

COURSE_DESCRIPTION: This 9-video Skillsoft Aspire course focuses solely on theory and involves no programming or query execution. Learners begin by examining what a data warehouse is, and how it differs from a relational database, important because Apache Hive is primarily a data warehouse, despite giving a SQL-like interface to query data. Hive facilitates work on very large data sets, stored as files in the Hadoop Distributed File System, and lets users perform operations in parallel on data in these files by effectively transforming Hive queries into MapReduce operations. Next, you will hear about types of data and operations which data warehouses and relational databases handle, before moving on to basic components of the Hadoop architecture. Finally, the course discusses features of Hive making it popular among data analysts. The concluding exercise recalls differences between online transaction processing and online analytical processing systems, asking learners to identify Hadoop's three major components; list Hadoop offerings on three major cloud platforms (AWS, Microsoft Azure, and Google Cloud Platform); and list benefits of Hive for data analysts.

COURSE_DESCRIPTION: Why and how are teachers integrating ICT (Information and Communication Technology) into primary education? In this course we analyse examples from schools in different parts of the world, and bring professional teachers, headteachers and policymakers together to share their best ideas and inspiring stories. The materials in the course are based on studies carried out for the UNESCO Institute of IT in Education, Moscow. Learning Outcomes: to be aware of the range of reasons for using ICT to critique the strategies for developing ICT over time to analyse the strengths and weakness of different decision-making mechanisms to become familiar with a wider range of useful tools and resources for integrating ICT

COURSE_DESCRIPTION: Experience making and processing HTTP requests using HTTPX will help you integrate such requests into your web applications. In this entirely hands-on course, you'll dive into the mechanics of HTTP requests and responses using the HTTPX library. You'll begin by invoking basic GET requests to request data from a remote server. You'll then explore the different possible forms of responses - ranging from HTML content and structured JSON data to binary data, such as images and videos. Moving on, you'll learn to use POST requests to submit information to a remote server. Lastly, you'll cover a host of other HTTP requests that can be invoked with HTTPX, namely HEAD requests to retrieve headers, OPTIONS requests to get communication information, PUT requests to create or update resources, and DELETE requests to remove them.

COURSE_DESCRIPTION: Successful leadership in today's business world requires a multitude of skills and competencies. Among them is the ability to manage diverse teams of individuals with different backgrounds, experiences and expertise. Running an effective team debrief helps business teams more fully understand both the positive outcomes and shortcomings of team events and what needs to be done to rectify missteps and make similar future events even more successful. In this course, you will learn specific techniques and strategies for running a successful team debriefing while handling the challenges of diverse personalities and perspectives. You'll also learn how to keep your business team focused on improving processes, mitigating potential future risks, and finding solutions while avoiding the temptation of assigning blame or abdicating responsibility.

COURSE_DESCRIPTION: In this challenge, you will optimize a batch processing solution by using Azure Data Factory, Azure Synapse Analytics, and Azure Data Lake. First, you will create a storage account that uses a Data Lake Storage hierarchical namespace, and then you will design a batch processing solution. Next, you will run a performance benchmark to optimize and ingest data for a data lake by using the AzCopy utility, and then you will deploy an Azure data factory that contains a data pipeline to transform data into a blob data file. Finally, you will create a data pipeline in Azure Synapse Studio to populate a new, dedicated SQL pool, and then you will create a data pipeline to run a performance benchmark by using a data factory. Note: Once you begin the challenge lab, you will not be able to pause, save, or return to your challenge lab. Please ensure that you have set aside enough time to complete the challenge lab before you start.

COURSE_DESCRIPTION: The components of Splunk provide CloudOps practitioners with reliable methods to give their data meaning and structure in efficient ways. In this course, you'll examine various Splunk components used to create reports, including datasets, data models, and inheritance. You'll also explore the primary components of Splunk's Search Processing Language, some best practices for designing data models with Splunk, and the different types of lookup configurations you can create in Splunk. You'll then use the Data Model Editor to design a data model and create charts, dashboards, and reports for visualizing ingested data. You'll use commands in Splunk to transform search results into data structures. You'll create pivot reports, lookup files, alerts, and search macros. Lastly, you'll learn how to run Splunk reports automatically.

COURSE_DESCRIPTION: In this course, discover Agile tools and techniques for creating and managing the product backlog and the sprint backlog. Also, learners will review daily Scrum meetings, burndown charts, performance metrics, and project review meetings. Begin this 13-video course with a look at the product backlog, its purpose, and how it applies to the Agile process. Then move on to the methods to effectively manage the product backlog; techniques for estimating Agile user story points and involving the Agile team in the decision-making process; and defining the sprint backlog and how to use it in day-to-day operations. Learn how to manage the sprint backlog; describe the daily Scrum and how to effectively use it in the Agile process; and discover how to run an effective sprint review meeting. Also learn how to run a sprint retrospective that will lead to change, and explore the purpose of Agile performance metrics and some of the best Agile metrics. Finally, you will focus on use of the Scrum board and charts, and the Kanban board and charts.

COURSE_DESCRIPTION: Software is quickly becoming integral part of human life as we see more and more automation and technical advancements. Just like we expect car to work all the time and can't afford to break or reboot unexpectedly, software industry needs to continue to learn better way to build software if it were to become integral part of human life. In this course, you will get an overview of how software teams work? What processes they use? What are some of the industry standard methodologies? What are pros and cons of each? You will learn enough to have meaningful conversation around software development processes. After completing this course, a learner will be able to 1) Apply core software engineering practices at conceptual level for a given problem. 2) Compare and contrast traditional, agile, and lean development methodologies at high level. These include Waterfall, Rational Unified Process, V model, Incremental, Spiral models and overview of agile mindset 3) Propose a methodology best suited for a given situation

COURSE_DESCRIPTION: This specialization is a precursor to the Applied Project Management Certificate. Project management has been proven to be the most effective method of delivering products within cost, schedule, and resource constraints. This intensive and hands-on series of courses gives you the skills to ensure your projects are completed on time and on budget while giving the user the product they expect. You will gain a strong working knowledge of the basics of project management and be able to immediately use that knowledge to effectively manage work projects. At the end of the series you will be able to identify and manage the product scope, build a work breakdown structure, create a project plan, create the project budget, define and allocate resources, manage the project development, identify and manage risks, and understand the project procurement process.

COURSE_DESCRIPTION: Unstructured data is prevalent in business and needs specific datastores for storing and managing this type of data. Azure provides several database systems that fulfill these needs. In this course, you'll learn about the types of non-relational data and available Azure non-relational datastores. Next, you'll explore Azure Cosmos DB and the available API models that can be used with it. Next, you'll learn about the features and how to work with Azure data blobs and Azure Data Lake Storage Gen2. Finally, you'll examine how to secure data by using dynamic data masking and encrypting data at rest and in motion in Azure. This course is one in a collection that prepares learners for the Designing and Implementing a Data Science Solution on Azure (DP-100) exam.

COURSE_DESCRIPTION: In this 1-hour 30-minutes long project-based course, you will learn how to use Wireshark to capture the Network Traffic you need and analyze it securely. You will have a better understanding of encrypted and unencrypted traffic and how to differentiate between them. You will dig deeply into unencrypted protocols such as RADIUS, HTTP, DNS and Telnet by generating the Traffic of each of them and capturing it yourself. Also you will generate, capture and look into secure and encrypted protocols such as HTTPS and SSH. Additionally, you will learn how to capture HTTPS Traffic and decrypt them by using a pre-master secret key. Note: This project works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Explore fundamentals of cybersecurity and engineering in this 10-video course, which examines the fundamental concepts of the CIA (confidentiality, integrity, and availability) triangle, and views security operations, security planning, engineering, application security through these three concepts. First, learners will examine the more advanced version: the McCumber Cube. You will learn to integrate systems engineering into cybersecurity, and explore requirements engineering, and how to gather requirements. Next, learn how to analyze them, to apply security requirements engineering techniques, and to finalize project requirements. You will be introduced to SecML (Security Modeling Language) which takes SysML (System Modeling Language) used by systems engineers, and to modify portions of it to be specific to cybersecurity. You will examine how SecML can be used to create both offensive and defensive security mitigation controls. This course examines security metrics, and how to apply engineering failure analysis methods to cybersecurity. Finally, you will observe how to incorporate security requirements engineering into cybersecurity, and the relevance of regulatory requirements.

COURSE_DESCRIPTION: Properly estimating activities and effective time and resource management are critical when planning projects. In this course, you'll explore common Agile estimation techniques used when managing projects, like story points and ideal days, identifying any adjustments that need to be made, and completing your release plan. You'll explore setting work in progress limits and implementing project buffers. This course also covers recommended project time management processes for monitoring and tracking progress at both the iteration and project levels. Finally, you'll learn about key Agile exam concepts such as muda or waste, the Kanban system, work in progress, Little's Law, and process cycle efficiency.

COURSE_DESCRIPTION: This course is open to professionals interested in learning more about leadership in higher education for a changing demographic or interested in developing their own leadership skills. The very idea that individuals can be taught to lead is not without its skeptics. Reasonable people, even some scholars in the field, point to the important traits, skills, and attributes that are observed in many visible leaders and contend that certain qualities necessary for effective leadership are not easily transmitted. To accept this premise and conclude that some people are born as natural leaders and others cannot be expected to lead at all is to make a mistake at the other end of the logical spectrum. We believe that leadership can be taught as long as it is concurrently nurtured, that most people possess a constellation of strengths around which they can construct their own leadership philosophy and approach, and that leadership development programming-if done well-can be transformative for organizers and participants. Course Level Objectives: Understand the historical narrative of institutions as well as institutional structures that have created instances of inclusion and exclusion in colleges and universities. Describe how transformational leadership is enacted for diversity, equity, and inclusion in a complex and contested environment. Compare legislative, governance, and public accountability and expectations in relation to contemporary issues in higher education. Analyze the strategic diversity planning process and documents of a selected institution. Recommend innovations and opportunities for transformational change at various levels of the ecological model using the strategic diversity planning process as a tool.

COURSE_DESCRIPTION: In this 7-video course, learners can explore the concepts of language modeling, natural language processing (NLP), and sequence generation for NLP. Prominent machine learning modeling algorithms such as vanishing gradient problem, gated recurrent units (GRUs), and long short-term memory (LSTM) network are also covered. Key concepts studied in this course include language models, one of the most important parts of NLP, and how to implement NLP along with its essential components; learning the process and approach of generating sequence for NLP; and vanishing gradient problem implementation approaches to overcome the problem of taking longer times to achieve convergence. Then, learn about features and characteristics of GRUs used to resolve issues with vanishing gradient problems, and learn the problems and drawbacks of implementing short-term memory and LSTM as modeling solutions. In the concluding exercise, learners will review the essential components and prominent applications of language modeling and specify some of the solutions for vanishing gradient problems.

COURSE_DESCRIPTION: This Course is the first of a series of courses that make up the Core Java Specialization. The Core Java Specialization, in turn, is part of a series of programming specializations, derived from LearnQuest's private Java Bootcamps, designed to provide the skill set necessary to be hired as an IT developer using Java in many corporate environments. This course includes hands-on practice and will give you a solid knowledge of the Java language. After completing this course, you will be able to identify Java's benefits, program in basic Java syntax using Java data types, and incorporate branches and loops. The audience for this course: - Anyone interested in learning Java - Programmers - Technical Managers - Application Developers Prerequisites: To be successful with this course, you should understand the fundamentals of software development in either a procedural or object-oriented language.

COURSE_DESCRIPTION: Even a thoroughly developed business strategy may fail if you don't pay enough attention to its implementation. This rings particularly true with strategies based on innovation or implemented in complex or fast-changing environments. In the 20th century successful implementation leveraged stability and typically proceeded through hierarchy and control. Today the key is to stay vibrant and able to quickly respond to trends in competition and technology while not losing sight of the strategic objective. In this course we'll build a toolbox of techniques to execute today's business strategies to help them succeed. After completing this course, you'll be able to: - Create objectives and goals to guide strategy implementation - Identify organizational structures that fit particular strategies - Understand how to leverage company culture in implementation - Describe how to communicate the strategy so that the organization "gets" it - Detect and mitigate risks to implementation

COURSE DESCRIPTION: The analytical process does not end with models than can predict with accuracy or prescribe the best solution to business problems. Developing these models and gaining insights from data do not necessarily lead to successful implementations. This depends on the ability to communicate results to those who make decisions. Presenting findings to decision makers who are not familiar with the language of analytics presents a challenge. In this course you will learn how to communicate analytics results to stakeholders who do not understand the details of analytics but want evidence of analysis and data. You will be able to choose the right vehicles to present quantitative information, including those based on principles of data visualization. You will also learn how to develop and deliver data-analytics stories that provide context, insight, and interpretation.

COURSE_DESCRIPTION: Besonders in Zeiten von Umbrüchen und Veränderungen können Ihre Gesundheit und Ihr Wohlbefinden (sowohl körperlich als auch geistig) hinter dringenden Angelegenheiten zurückgestellt werden. Die Priorisierung Ihres Wohlbefindens kann auf persönlicher Ebene lebensverändernd sein und bietet zusätzliche Vorteile für Arbeitgeber in Form von erhöhter Produktivität, Mitarbeiterengagement und -bindung. In diesem Kurs lernen Sie, die Aspekte des Wohlbefindens bei der Arbeit zu identifizieren und zu verstehen, wie häufige Faktoren bei der Arbeit und im Privatleben dazu führen können, dass das Wohlbefinden aus dem Gleichgewicht gerät. Außerdem erfahren Sie, wie Sie Anzeichen von Stress bei sich und anderen erkennen und welche Strategien dabei helfen, die Belastbarkeit zu erhöhen und das Wohlbefinden in allen Lebensbereichen zu fördern: bei der Arbeit und zu Hause, geistig, körperlich und bei menschlichen Verbindungen.

COURSE_DESCRIPTION: When it comes to continuity of operations, the CCSP candidate must look at business continuity from the perspective of data center security management, as well as leveraging cloud managed services for continuity as a large customer. In this course, explore the main elements of business continuity planning (BCP). You will focus on the business impact analysis (BIA), including Recovery Time Objective (RTO), Recovery Point Objective (RPO), and recovery service levels. Then, you will examine different backup and restore policies and take a look at disaster recovery planning (DRP) and managed DRP cloud solutions. Finally, you will discover various disaster recovery plan testing strategies. This is one of a collection of courses that fully prepares the learner for the ISC2 Certified Cloud Security Professional (CCSP) 2022 exam.

COURSE_DESCRIPTION: Every time you use Google to search something, every time you use Facebook, Twitter, Instagram or any other SNS (Social Network Service), and every time you buy from a recommended list of products on Amazon.com you are using a big data system. In addition, big data technology supports your smartphone, smartwatch, Alexa, Siri, and automobile (if it is a newer model) every day. The top companies in the world are currently using big data technology, and every company is in need of advanced big data technology support. Simply put, big data technology is not an option for your company, it is a necessity for survival and growth. So now is the right time to learn what big data is and how to use it in advantage of your company. This 6 module course first focuses on the world's industry market share rankings of big data hardware, software, and professional services, and then covers the world's top big data product line and service types of the major big data companies. Then the lectures focused on how big data analysis is possible based on the world's most popular three big data technologies Hadoop, Spark, and Storm. The last part focuses on providing experience on one of the most famous and widely used big data statistical analysis systems in the world, the IBM SPSS Statistics. This course was designed to prepare you to be more successful in businesses strategic planning in the upcoming big data era. Welcome to the amazing Big Data world!

COURSE_DESCRIPTION: What stands between you and success? People who are the best they can be are empowered by a belief that throughout their lives and careers, within their organizations and in their relationships, they can take action to improve their current state. They see themselves as responsible for their own happiness and success. In this course, you'll learn principles and characteristics shared by people who have broken through the barriers holding them back from true success. You'll discover how to identify those barriers - as well as your own personal triggers and mental blocks - and overcome them. You'll also learn strategies to jumpstart your work mindset and to advocate for yourself to get you out of your own way and on a path to success.

COURSE_DESCRIPTION: This specialization is designed for students, business analysts, and data scientists who want to apply statistical knowledge and techniques to business contexts. We recommend that you have some background in statistics, R or another programming language, and familiarity with databases and data analysis techniques such as regression, classification, and clustering. We'll cover a wide variety of analytics approaches in different industry domains. You'll engage in hands-on case studies in real business contexts: examples include predicting and forecasting events, statistical customer segmentation, and calculating customer scores and lifetime value. We'll also teach you how to take these analyses and effectively present them to stakeholders so your business can take action. The third course and the Capstone Project are designed in partnership with Accenture, one of the world's best-known consulting, technology services, and outsourcing companies. You'll learn about applications in a wide variety of sectors, including media, communications, public service, etc. By the end of this specialization, you'll be able to use statistical techniques in R to develop business intelligence insights, and present them in a compelling way to enable smart and sustainable business decisions. You'll earn a Specialization Certificate from one of the world's leading business schools and learn from two of Europe's leading professors in business analytics and marketing.

COURSE_DESCRIPTION: By the end of this project you will implement a program using C that uses pointers to access a csv file and searches the file for a character string. The C programming language is the basis for many other programming languages. Its syntax has been used in languages such as C++, Java, and C# to name a few. These languages utilize pointers to access variables, so it is an important concept to grasp. C is still the language of choice for writing Operating systems, games, and many other applications where performance is critical. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In this course, you'll explore how nested collections within an outer entity can be mapped using JPA. You'll implement mappings for collections of primitive types, embeddable objects, and collections of entities. You'll examine how JPA and Hibernate handle list, set, and map collections. Next, you'll relate how specific operations such as entity persistence, update, and removal can be cascaded from parent entities to child entities and illustrate how inheritance relationships in your code can be mapped to database tables. Once you're done with this course, you'll be able to use nested collections within your entities and also map inheritance relationships in your code to meaningful representations using tables.

COURSE_DESCRIPTION: Selenium is one of the most widely used functional UI automation testing tools and TestNG is a brilliant testing framework. Test automation frameworks are a set of guidelines or rules for writing test cases. They can reduce maintenance costs and testing efforts and will provide a higher return on investment (ROI) for teams looking to optimize their processes. Testing guidelines include coding standards, test-data management, defining object repositories, reporting guidelines, and logging strategies. Through hands-on, practical experience, you will go through concepts writing reusable and structure code which is easy to maintain and understand, creating helper classes or utilities, write effective testcases, and generating reports and logs.

COURSE_DESCRIPTION: In this 19-video course, learners explore deep learning with Keras, including how to create and use neural networks with Keras for machine learning solutions. Begin with an overview of what neural networks are and their main components, followed by an introduction to Keras and its guiding principles. Observe how to configure Microsoft Cognitive Toolkit (CNTK) as your Keras backend; install and configure Keras; identify and work with both types of models available in Keras; and recognize features of commonly-used Keras layers and when to use them. Use Keras to make regression classifications and image classifications; Keras metrics to judge a model's performance; and Jupyter Notebooks with Keras. Next, download and load a data set from MNIST or CIFAR-10; explore data sets in Keras; prepare your data in Keras by defining input and target tensors, and compile the model in Keras. Then train and test your neural network; evaluate and score the performance of neural networks in Keras, and make predictions using your data set in Keras. The closing exercise involves using a neural network to make predictions.

COURSE_DESCRIPTION: In this course, you will focus on one of the most important concepts in all object-oriented programming for Java, the interface. Learners explore how anonymous inner classes provide lightweight instantiations of interfaces, and how interfaces are pure abstract entities. Begin with an introduction into using interfaces and how all their methods are abstract by default. Examine how the instanceof operator works the same way with interfaces as with classes. This leads on to combining the extends and implements keywords: implementing a derived class that can extend a base class and implement an interface. Then learners learn to set up two inheritance hierarchies and combine these into a set of objects that implement both sets of interfaces. Advanced features of interfaces are also examined. Learn how interfaces can support default method implementations. You will set up a class that implements some of the methods of an interface and declares itself abstract. Finally, you will create and define anonymous inner class objects and access outer class variables from your anonymous inner class.

COURSE_DESCRIPTION: Today's challenging business world demands that organizations move beyond traditional silos and toward broader, cross-functional collaboration. This means that organizations have to adeptly utilize skills and creative ideas from functions across the organization. And this requires effort and support from leadership. But in the end, it can maximize what an organization can accomplish. This course explores how to establish and cultivate true cross-functional team collaboration. In it, you'll learn about the characteristics and key benefits of effective cross-functional team collaboration. You'll also learn how to assess your team's cross-functional collaboration readiness using relevant software solutions. And you'll explore how to overcome potential barriers to achieve true cross-functional collaboration throughout your organization.

COURSE_DESCRIPTION: Explore convolutional neural networks, their different types, and prominent use cases for machine learning, in this 10-video course. Learners will study the different layers and parameters of convolutional neural networks and their roles in implementing and addressing image recognition and classification problems. Key concepts covered in this course include the working mechanisms of convolutional neural networks, and the different types of convolutional neural networks that we can implement; and problems associated with computer vision, along with the prominent techniques to manage them. Next, you will learn about the role of neural networks and convolutional neural networks in implementing and addressing image recognition and classification problems; observe the prominent layers and parameters of convolutional neural networks for image classification; and learn to see the convolutional layer from a mathematical perspective, while recognizing the mathematical elements that enter into the convolution operations. Finally, learners will be shown how to build a convolutional neural network for image classification by using Python.

COURSE_DESCRIPTION: This course discusses the transition of data warehousing to cloud-based solutions using the AWS (Amazon Web Services) cloud platform. In 11 videos, the course explores how data lakes store data using a flat structure, and the data are tagged, making it easy to search and query. You will learn how to build a data lake on the AWS cloud by storing data in S3 (simple storage service) buckets. You will learn to set up your data lake architecture lake using AWS Glue, a fully managed ETL (extract, transform, load) service. You will learn to configure and run Glue crawlers, and you will examine how crawlers merge data stored in an S3 folder path; and to use S3 to generate metadata tables in Glue. Learners will use Athena, Amazon's interactive query service as a simple way to analyze data in S3 using standard SQL. Finally, you will examine how to merge the data crawled by our CSV (comma separated values) crawler into a single table.

COURSE_DESCRIPTION: This project is focused on building your first search engine using Amazon Kendra without writing a single line of code. By the end of this guided project, you will be able to build your first enterprise search engine by leveraging Amazon's Kendra. Search as a capability is an important feature which is required by almost all medium and large enterprises as search helps filter relevant and required information in the world of big data. Search helps find relevant information quickly and saves time to go through vast information. Google's first product was search engine, Amazon leverages search capability to browse the millions of products listed on its marketplace, Facebook has search capability for its users to find friends based on name, location, etc. and Microsoft also has its own bing search engine. AWS Kendra provides search as a service capability and as part of this guided project we shall study how to build a search engine.

COURSE_DESCRIPTION: Knowing how to perform a variety of database management tasks from the Neo4j Browser allows database administrators to make best use of the available features and to maximize productivity. Begin with learning about the fundamental administration tasks of creating a new user with a specific set of permissions on a database system and testing that user's permissions. Discover the various built-in roles available for a Neo4j user and how to manage a user during their lifecycle. Moving on, explore the different ways in which query results can be viewed, from a graph view where the nodes and relationships are clearly visible, to a tabular and plain text view of the data. Finally, test out the Neo4j API by submitting an HTTP POST request to initialize a transaction for the creation of a node, and then commit that transaction. By completing this course, you'll explore the various granular details which can be configured in the Neo4j Browser to customize it for your own requirements.

COURSE_DESCRIPTION: Self-starters take initiative, work without supervision, and begin projects independently. Organizations are always looking for people who come to the table with creative ideas, who find work that needs to be done and do it without waiting to be told. But self-starters also gain personal benefits from being someone who takes responsibility for their own happiness, the success of their work and relationships, the morale of their workplace, and their life. In this course, you'll learn the characteristics that most self-starters have in common, and why they are valued as employees and as leaders. You'll also learn the skills you need to build or enhance your own self-starting toolbox, the barriers you may encounter on the path to being a self-starter, and strategies to overcome those challenges.

COURSE_DESCRIPTION: In this course, we deal with the general issues regarding packet switching networks. We discuss packet networks from two perspectives. One perspective involves external view of the network, and is concerned with services that the network provides to the transport layer that operates above it at the end systems. The second perspective is concerned with the internal operation of a network, including approaches directing information across the network, addressing and routing procedures, as well as congestion control inside the network.

COURSE_DESCRIPTION: Welcome to the AWS Certified SysOps Administrator Associate Bootcamp channel! This bootcamp is designed as a supplement to your existing AWS experience or training in preparation for the AWS Certified SysOps Administrator - Associate SOA-C01 exam. You will benefit from this course whether you are planning an AWS strategy or managing an existing AWS environment. This course covers SOA-C01 exam objectives from AWS service planning and resource migration to securing resources and keeping cloud costs as low as possible. This course consists of four 4-hour days with each day focusing on SOA-C01 content. While this course includes live demonstrations that you can choose to observe or follow along with, there are no dedicated hands-on labs. Before attending the course, if you don't already have one, please make sure you sign up for a free AWS trial account at <https://aws.amazon.com/free>.

COURSE_DESCRIPTION: WebLOAD is a load testing tool that can be used to test performance and scalability. During this course, you will explore features that enable successful testing, monitoring, and correlation. Topics in the course include recording, script debugging, parameterization, correlation, test load scenarios and test data collection. Other subjects include customizing and predefining a dashboard, actionable intelligence, application performance management (APM), server monitoring, and root-cause analysis. As you progress, you then learn how to identify WebLOAD's supported web protocols and technologies, including HTML5, SOAP, JSON, Angular, and many others. As a review exercise, you will use WebLOAD to configure a report template, generate a PDF report, list dashboard features, use predefined dashboards for an analysis, and customize a dashboard.

COURSE_DESCRIPTION: Successful business-IT alignment is rapidly gaining importance. In today's business world, technological and digital innovation are constantly changing the rulebook for running a competitive business. To thrive in this environment, businesses require a digital transformation strategy that encourages the alignment of the business and IT functions. They can then use cross-functional teams to efficiently adapt to technological changes and opportunities. In this course, you'll learn about effective business-IT collaboration. You'll also explore the critical concepts, processes, and best practices for establishing and sustaining effective strategic alignment while avoiding pitfalls common to these initiatives. And you'll explore how you can sustain success toward true digital transformation.

COURSE_DESCRIPTION: In this 2h 10m long project-based course, you will learn how to create dynamic web pages using Javascript. Javascript is one of the most popular scripting languages used in front-end, back-end web applications and hybrid mobile applications. It can be used to add interactivity to static HTML pages. It also could be used at the back end of modern web applications. Moreover, it is the core of many modern frameworks used to build hybrid mobile web applications. Learning Javascript opens up a huge variety of promising career options. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Im Umgang mit Macht und Einfluss müssen Sie sich unweigerlich in politisches Fahrwasser begeben. Es ist allgemein bekannt, dass "Politik" in Unternehmen zur Realität gehört, und selbst wenn Sie sie nicht mögen, können Sie nicht dagegen angehen oder sie einfach ignorieren. Denken Sie einmal an die Menschen in einflussreichen Positionen - vermutlich haben sie diese nicht nur wegen ihrer Kenntnisse inne, sondern weil sie wissen, wer Macht hat und wie sie diese Menschen für sich gewinnen, um mächtige, einflussreiche Koalitionen zu bilden. In diesem Kurs lernen Sie, wie man einen Sinn für Politik einsetzen kann, um ohne direkte Autorität Einfluss auf andere zu nehmen.

COURSE_DESCRIPTION: With Dash, you can create interactive web apps with elements such as buttons, dropdowns, sliders, range sliders, checkboxes, date pickers, and more. In this course, you'll learn how to get started with Dash, beginning with installing Dash and various extension libraries using the pip package installer. You'll move on to building web apps using Dash and the Plotly Express library. You'll also work with two other important Dash extension libraries - the Dash Core Components library and the Dash HTML Components library. You'll put all of these libraries together while exploring some of the default interactivity features, such as zooming and panning charts. You'll create a callback app where the title of a chart updates based on the values on a range slider before creating a more refined app with a callback that updates the chart itself and not just the title. Finally, you'll build a fully-fledged interactive scatter plot.

COURSE_DESCRIPTION: With so many online offerings for a user to choose from, an efficient and optimized user interface is crucial to an application's success. To make this happen, software developers should know which client-side UI libraries to use and how. In this course, you'll examine several possible methods for consuming web services from client-side devices and compare their strengths and limitations. You'll move on to learn how to use these client-side UI libraries to consume REST and SOAP APIs, namely AngularJS, ReactJS, Vue.js, JavaScript, jQuery, TypeScript, and Node.js.

COURSE_DESCRIPTION: Many Microsoft Azure services require credentials to access a variety of Azure resources. Azure Key Vault provides a secure centralized storage solution for these types of secrets. In this course, you will work with Azure key vaults. First, you will create a key vault and manage key vault secrets using the portal, the command line interface (CLI), and PowerShell. Next, you will work with public key infrastructure (PKI) certificates using the portal, the CLI and PowerShell. Lastly, you will review how hardware security modules (HSMs) work in Azure. This course can be used to prepare for exam AZ-500, Microsoft Azure Security Technologies.

COURSE_DESCRIPTION: Show your mastery of full stack and cloud native application development by completing this capstone project! In this course, you will apply your knowledge and skills to a real-life inspired challenge and use your expertise to develop a successful solution. The project provides you with an opportunity to solidify your full stack proficiency. As you design a dynamic user experience, you will work with GitHub actions to build, test, and deploy your application. You will develop frontend pages, add user administration, build actions for database operations, create backend services, make connections with cloud native APIs, and launch CI/CD pipelines. You will boost your capabilities with cloud native services, JavaScript, Django, JSON, IBM Code Engine, Python, and Kubernetes. Then you will devise a solution for managing the containerized deployment of your application. This project is created for you to apply knowledge of relevant and in-demand skills such as: - Designing applications and their architecture - Creating web frontends with static and dynamic pages using HTML, CSS, and JavaScript - Implementing user management and authentication - Creating and invoking RESTful microservices - Developing backend services and communicating with databases - Continuously Integrating and Deploying changes using CI/CD pipelines - Deploying the entire solution on Cloud using containers and serverless technologies When you complete this project, you will have a working cloud native application showpiece that will impress potential employers. Before completing this project, it is highly recommended that you complete all the prior courses offered in the IBM Full Stack Software Developer Professional Certificate.

COURSE_DESCRIPTION: There are many benefits to using a microservices architecture to develop apps. Learning to use Amazon integration services to build highly available and scalable microservice-based applications is a key activity for mastering app development in AWS. In this course, you'll learn how EventBridge, Simple Queue Service (SQS), and Message Queue (MQ) are used to interconnect and transfer data. Then you'll discover how to send messages using Simple Notification Service (SNS), AWS Step Functions, and the Simple Workflow (SWF) Service. Finally, you'll complete several tasks in EventBridge and create an SQS queue and a Simple Notification Service topic. This course is part of a collection that prepares you for the DVA-C02: AWS Certified Developer - Associate 2022 certification exam.

COURSE_DESCRIPTION: In this hands-on project, we will understand the fundamentals of data analysis in Python and we will leverage the power of two important python libraries known as Numpy and pandas. NumPy and Pandas are two of the most widely used python libraries in data science. They offer high-performance, easy to use structures and data analysis tools. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Bash syntax is a scripting language used for data manipulation. During this course, you will learn how to form conditional statements and evaluate them with the Bash test command tool. Begin by creating compound conditional statements with comparison operators. Next, learn how to use a for loop construct within a Shell script. Other topics include wildcards, while loops, until loops, break and continue commands, and case statements. From there you will observe how to create an array, and manipulate data. Then discover how to perform simple math operations, calculate floating point math, and convert numbers between bases. Conclude by employing Bash's string manipulation operations and learn the basic syntax to manipulate strings, directories, and directory structures.

COURSE_DESCRIPTION: In this course, you'll explore IT support levels that can be structured to provide appropriate technical support and the skills required by traditional Support Engineers to play the role of a Cloud Support Engineer. Next, you'll look at the phases of the Cloud Adoption Framework that you need to follow to manage support services for Cloud. You'll learn about the Cloud Decision Support Framework, which you can adopt to define application migration processes, as well as the concept of Cloud Affinity Assessment. You'll move on to explore how to evaluate drivers and inhibitors of cloud adoption and the metrics that you can use to score potential solution candidate. You'll examine multi-cloud use cases that need to be considered to define support strategy and support levels and the Technical Support Services Guidelines for managing support for GCP resources. Finally, you'll learn how to create a support case, select the severity for AWS resources, and create new support requests from the Azure Portal.

COURSE_DESCRIPTION: Embedded Software and Hardware Architecture is a first dive into understanding embedded architectures and writing software to manipulate this hardware. You will gain experience writing low-level firmware to directly interface hardware with highly efficient, readable and portable design practices. We will now transition from the Host Linux Machine where we built and ran code in a simulated environment to an Integrated Development Environment where you will build and install code directly on your ARM Cortex-M4 Microcontroller. Course assignments include writing firmware to interact and configure both the underlying ARM architecture and the MSP432 microcontroller platform. The course concludes with a project where you will develop a circular buffer data structure. In this course you will need the Texas Instruments LaunchPad with the MSP432 microcontroller in order to complete the assignments. Later courses of the Specialization will continue to use this hardware tool to develop even more exciting firmware.

COURSE_DESCRIPTION: In this project-based course, you will use the Multiclass Neural Network module in Azure Machine Learning Studio to train a neural network to recognize handwritten digits. Microsoft Azure Machine Learning Studio is a drag-and-drop tool you can use to rapidly build and deploy machine learning models on Azure. The data used in this course is the popular MNIST data set consisting of 70,000 grayscale images of handwritten digits. You are going to deploy the trained neural network model as an Azure Web service. Azure Web Services provide an interface between an application and a Machine Learning Studio workflow scoring model. You will write a Python application to use the Batch Execution Service and predict the class labels of handwritten digits. This is the third course in this series on building machine learning applications using Azure Machine Learning Studio. I highly encourage you to take the first course before proceeding. It has instructions on how to set up your Azure ML account with \$200 worth of free credit to get started with running your experiments! This course runs on Coursera's hands-on project platform called Rhyme. On Rhyme, you do projects in a hands-on manner in your browser. You will get instant access to pre-configured cloud desktops containing all of the software and data you need for the project. Everything is already set up directly in your internet browser so you can just focus on learning. For this project, you'll get instant access to a cloud desktop with Python, Jupyter, and scikit-learn pre-installed. Notes: - You will be able to access the cloud desktop 5 times. However, you will be able to access instructions videos as many times as you want. - This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Durch den MOOC "Das liebe Geld - Finance im Alltag" erlangen Sie ein Basiswissen für bewusste und korrekte finanzielle Entscheidungen im Alltag. Sie eignen sich konkrete Werkzeuge an, die Ihnen helfen können, bessere Alltagsentscheidungen zu treffen und bekommen einen Einblick in verschiedene neueste Forschungserkenntnisse der Finance. Wir begleiten Sie in sechs Wochenmodulen zu soliden finanziellen Alltagsentscheidungen. Nach einer Einführung erlernen Sie den Zeitwert des Geldes als zentrales Konzept zur Entscheidungsfindung. Überlegungen zur persönlichen Finanzplanung folgt das Basiswissen zur Geldanlage. Danach halten Sie inne und reflektieren die Frage der Werte anhand konkreter Beispiele, insbesondere in Bezug auf Finanzprodukte wie Derivate und Strukturierte Produkte. In einem Exkurs erhalten Sie auch Einblick in Bitcoin und Blockchain. Das Thema Geldanlage wird anschliessend vertieft: Sie begegnen dem grössten Feind des Anlegers und betrachten die Interaktion der Finanzmarktteilnehmenden in biologischen Analogien. Am Ende reflektieren Sie das Gehörte und Erlernte kritisch und nehmen hoffentlich viele konkrete Hilfsmittel in den Alltag mit. Die Inhalte der einzelnen Module können auch einzeln bearbeitet werden. Der Kurs eignet sich also auch für jene Interessierte, die nicht Zeit oder Interesse am Gesamtkurs haben. Der Kurs wird in deutscher Sprache gehalten.

COURSE_DESCRIPTION: Failure is trendy. Every day you can read about failure being celebrated for lessons learned. People are encouraged to fail as fast as they can, with buzzwords exhorting "Fail Fast," "Fail Big," and "Fail Often." But while you certainly can learn from failures, you can also learn powerfully from successes. The key is to take advantage of all your experiences to learn essential lessons that will help you prosper in the future. In this course, you'll learn methods to glean growth and learning from any experience, and to identify each stage of the success cycle to make that happen. You'll also examine actions that allow you to learn from setbacks or even mistakes, and how to use your successes to inspire and guide you to future triumphs.

COURSE_DESCRIPTION: Windows 10 offers networking features for network environments of all sizes. Supporting a wide range of network connectivity options and settings, Windows 10 networking settings are powerful and easy to implement for networking professionals. Through this course, learn key features of Windows 10 networking. In this course, explore Windows 10 networking, beginning with networking concepts, connecting Windows 10 clients, and network settings. Next, discover how to work with network drives, connect to a VPN, and about the Connection Manager Administration Kit (CMAC). Finally, learn about digital certificates and certificate management, as well as common network troubleshooting techniques. This course is part of a series preparing learners for the MD-100: Windows Client exam.

COURSE_DESCRIPTION: Co-management is a feature that allows Windows 10 devices to be managed using both Configuration Manager and Microsoft Intune. Learners explore the numerous benefits of co-management in Windows 10, and view the list of prerequisites for co-management, such as Configuration

Manager, Azure Active Directory (AD), and Intune, in this 12-video course. Learn about the workloads supported by co-management and how to switch Configuration Manager workloads to Intune. Discover the immediate value of co-management, such as conditional access, remote actions from Intune, client health, hybrid Azure AD, and Windows Autopilot. Take a close look at the two primary paths for achieving co-management and what is required to upgrade Windows 10 for co-management. Learn how to enable co-management for Configuration Manager clients, for Internet-based devices, and how to monitor co-management in Configuration Manager. The concluding exercise involves listing the benefits of implementing co-management and the workloads supplied by it, and describing workload co-management states, existing clients' configuration, and configuration Manager Options. This is one course in a series to prepare for the MD-101: Managing Modern Desktops certification exam.

COURSE_DESCRIPTION: This course will introduce you to cleaning data and replacing missing values with imputed data to support demand forecasting. Demand forecasts are used to maximize revenue, build efficiencies in operational planning, and to drive future growth. Forecasting techniques can be applied to make realistic predictions of outcomes of everything from how demand affects pricing and sales opportunities to operational planning for electrical utilities and healthcare facilities. We can only have confidence in the demand predictions we produce, when we also have confidence in the data quality feeding those predictions. Ensuring that confidence requires using clean data with no missing values for our forecast models. Handling missing data is an essential part of prepping clean data for a demand forecast. In this course, we will review the principles of applying central measures of tendency and regression techniques to impute missing values. As you clean the data, you will visualize it with charts, replace inconsistent values and impute values while comparing the outcomes of the statistical techniques you have applied. When your data is clean, you will create a demand forecast. You will do this as we work side-by-side in the free-to-use software Google Sheets. By the end of this course, you will understand use cases for imputing missing values and be able to confidently apply multiple statistical imputation techniques in any spreadsheet software. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Globalisation and advances in information and communication technology have resulted in a 24/7 work environment characterised by rapid change, a greater sense of competition, and an explosion in access to communication and information. These pressures compound stress related to workload and information processing - this not only reduces performance but can lead to a reduced sense of meaning and purpose as well as physical and mental health issues. Understanding stress and how to boost your resilience to it are essential skills for contemporary leaders and play a vital role in managing the demands you face at work. This course will focus on the nature of stressors facing leaders in today's work environments and how to deal with them. You'll explore personal resilience - your capacity to withstand and cope with stress - and strategies for self-management, motivation and organisation. You'll also learn how resilience is impacted by health and social relationships.

COURSE DESCRIPTION: Discover the value of metrics in an Agile environment. In this 11-video course, learners explore the three types of metrics-Agile, software development, and business-and learn limitations and risks associated with measurement. Key concepts covered in this course include understanding the value for metrics in an Agile environment including used to measure productivity, determining value to the customer; and understanding how we do things in the quantitative manner over qualitative, and as tools to validate the outcome of attempting improvement experiments. First, learn about types of metrics in an Agile environment; learn about burndown and velocity; and learn about cumulative flow and control charts. Continue by learning about other Agile reports, including burnup and sprint/release report, and how to use Jira software to generate reports. Finally, learn about software metrics, including code coverage, static code analysis, and escaped defects; learn business-related metrics, including net promoter, customer satisfaction, and team health; and learn the general limitations and risks in metrics measurement.

 COURSE_DESCRIPTION: To understand how we can best support adolescents and develop guardrails for the future, Common Sense generated the Tweens, Teens, Tech, and Mental Health report. The report synthesizes what is known about adolescents' mental health and its associations with digital technology use. Perhaps most importantly, the report provides guidance to identify those who may be most vulnerable, signal when parents should be concerned, and outline what stakeholders can do to help. Please note that this course material includes content gathered from external websites which may fall outside your company network. Please consult with your IT department policies with respect to any restrictions in viewing content from external websites.

COURSE_DESCRIPTION: Being a successful FinTech firm requires more than just great technology; it also requires an understanding of the laws and regulations applicable to your business. This course will provide you with that understanding. You will learn about the critical legal, regulatory, and policy issues associated with cryptocurrencies, initial coin offerings, online lending, new payments and wealth management technologies, and financial account aggregators. In addition, you will learn how regulatory agencies in the U.S. are continually adjusting to the emergence of new

financial technologies and how one specific agency has proposed a path for FinTech firms to become regulated banks. You will also learn the basics of how banks are regulated in the U.S. If you are unfamiliar with how these new financial technologies work, fear not. We will begin each new course section with a high-level overview of the underlying technology. While the course is principally focused on the U.S. FinTech industry, we cannot possibly cover every relevant legal and regulatory issue. Therefore, this course should not be construed as legal advice. Rather, the goal of the course is to familiarize you with the key legal and regulatory challenges FinTech firms in various sectors face, as well as the critical policy debates that are occurring in Washington D.C. and state capitals across the country.

COURSE_DESCRIPTION: Menschen neigen über alle Maßen dazu, schnelle Entscheidungen basierend auf mentalen Abkürzungen zu fällen. Menschen mögen es, mit konkreten Antworten Ungewissheit zu beenden, daher ziehen sie manchmal voreilige Schlüsse, die auf minimalen Informationen beruhen und von vergangenen Erfahrungen, sozialen Normen, Faustregeln oder Emotionen geprägt sind. Die Menschheit ist Experte darin, voreilige Schlüsse zu ziehen. In einigen Situationen ist das durchaus angebracht, zum Beispiel bei der Entscheidung über die beste Route zur Arbeit. Komplexe Probleme können jedoch nicht durch schnelle Entscheidungsfindung oder anhand unzureichender Informationen gelöst werden. Dieser Kurs zeigt Ihnen, wie Sie notwendige Beweise erfassen, um ein fundiertes Fazit zu ziehen, und welche visuellen Tools Ihnen dabei helfen, die Beweise besser zu verstehen. Außerdem erfahren Sie, wie Sie Fragestellungen anwenden, um Einfluss und Gültigkeit Ihrer Beweise zu prüfen. Sie lernen darüber hinaus Techniken kennen, mit denen Sie zu Ihren logischen Schlussfolgerungen kommen, sie bewerten und implementieren können.

COURSE_DESCRIPTION: A key component to wrangling data is the data lake framework. In this 9-video Skillsoft Aspire course, learners discover how to implement data lakes for real-time management. Explore data ingestion, data processing, and data lifecycle management with Amazon Web Services (AWS) and other open-source ecosystem products. Begin by examining real-time big data architectures, and how to implement Lambda and Kappa architectures to manage real-time big data. View benefits of adopting Zanol data lake reference architecture. Examine the essential approach of data ingestion and comparative benefits provided by file formats Avro and Parquet. Explore data ingestion with Sqoop, and various data processing strategies provided by MapReduce V2, Hive, Pig, and Yam for processing data with data lakes. Learn how to derive value from data lakes and describe benefits of critical roles. Learners will explore steps involved in the data lifecycle and the significance of archival policies. Finally, learn how to implement an archival policy to transition between S3 and Glacier, depending on adopted policies. Close the course with an exercise on ingesting data and archival policy.
