CATEGORY:
COURSE_DESCRIPTION: Linear algebra comes in handy when we need to work with a set of points represented in multi-dimensional space. Use this course to explore how systems of linear functions and equations can be represented using linear algebra. Examine how to define and compute the addition, scalar multiplication, dot product, and cross product operations on vectors, and discover how these operations are required while working with matrices. This course will also help you explore matrix multiplication, the inverse and transpose of a matrix, and computing the determinant of a matrix. By the time you finish this course, you will be able to express a system of linear functions as a matrix and perform fundamental operations on matrices, including matrix multiplication and the computation of inverses and determinants.

COURSE_DESCRIPTION: Data storage and management is central to any application, and AWS offers several different types of databases and database services for virtually any type of application. In this course, you'll learn about the functionality of Amazon's database solutions, including Amazon Relational Database Service, DocumentDB, DynamoDB, ElastiCache, and Keyspaces. Then you'll explore features of Neptune Database, Quantum Ledger Database, Aurora, Redshift, and Timestream. Finally, you'll create and configure a DocumentDB service, create a keyspace and table using Amazon Keyspaces, and perform CRUD operations. This course is part of a collection that prepares you for the DVA-C02: AWS Certified Developer - Associate 2022 certification exam.

COURSE_DESCRIPTION: Discover how to integrate version and source control management into Azure DevOps application and infrastructure pipelines, in this 17-video course preparing learners for Microsoft Azure DevOps Solutions (AZ-400) exam. Key concepts covered here include implementing a version control system; branching models; and utilizing Git as a version control system. Next, learn how to utilize TFVC as a version control system; learn about code flow strategy; and identify uses for source control in DevOps pipeline. Then learn to implement a source control system with Azure DevOps; integrate source control into DevOps pipeline; implement private and hosted agents; and integrate third-party build systems into Azure DevOps pipeline. Configure Azure DevOps pipeline; manage agent queues in Azure DevOps pipeline; and use web-hooks to interact with external applications based on events in the pipeline. Trigger multiple pipelines in Azure DevOps; use Git as a source control for versioning; and integrate an external source control. Then use source control for continuous integration-continuous deployment (CI/CD), integrate a third-party build system into Azure DevOps, and use service endpoints for an external application.

 COURSE_DESCRIPTION: The Introduction to SQL with MySQL and Workbench Two Day Boot Camp covers the basics of how to install and use MySQL and a UI on a Linux environment. First, students will set up MySQL and Workbench using the Linux operating system. From there simple database management will be demonstrated. Students will gain firsthand experience with a UI to manipulate tables and databases. On the second day we take a deeper dive into the CRUD operations. Learners will build databases, add tables and insert, edit and delete records. Participants will also add constraints to tables and then test those constraints. Whenever possible, the demonstrations will show database activities using a User Interface and actual SQL commands.

COURSE_DESCRIPTION: The book Moneyball triggered a revolution in the analysis of performance statistics in professional sports, by showing that data analytics could be used to increase team winning percentage. This course shows how to program data using Python to test the claims that lie behind the Moneyball story, and to examine the evolution of Moneyball statistics since the book was published. The learner is led through the process of calculating baseball performance statistics from publicly available datasets. The course progresses from the analysis of on base percentage and slugging percentage to more advanced measures derived using the run expectancy matrix, such as wins above replacement (WAR). By the end of this course the learner will be able to use these statistics to conduct their own team and player analyses.

COURSE_DESCRIPTION: Explore Reactive programming approaches using various components of React JS and Redux, and examine advanced React and Redux features, along with middleware integration. This course introduces you to the Dataflow lifecycle in Redux, and shows you how to integrate Redux with React. Discover presentational and container components and ways to implement them into projects. Learn about Redux middleware and Redux Thunk. From there, step through the Redux life cycle and understand how middleware functions can impact the lifecycle of Redux. Examine React router capabilities and mechanisms. Study React router functionality. Finally, you will trace asynchronous Redux actions.

COURSE_DESCRIPTION: One-sample T-tests are probably the single most commonly used type of hypothesis test. Through this course, learn to manually implement the one-sample T-test to know exactly how the p-value and test statistic are calculated. You'll examine various library implementations of the one-sample T-test and apply the test on data drawn from several different distributions. This course will also help you explore the non-parametric Wilcoxon signed-rank test, which is conceptually very similar to the one-sample T-test and helps estimate the median rather than the mean of that population without making assumptions about the population distribution. Upon completion of this course, you will be able to use the one-sample T-test as well as its non-parametric equivalent to evaluate both one-sided and two-sided hypotheses about the population mean or median.

COURSE_DESCRIPTION: It's common career advice to find yourself a coach - someone to observe your attitudes, behaviors, and actions and then help you fine tune them to your best advantage. And it's fine advice. But for many, it's beyond their means and opportunity. But coaching doesn't always require an outsider. You can be your own - and maybe even your best - coach. Self-coaching is an accessible, affordable way to get to know yourself and take control of your own career. In this course, you will learn about the benefits of self-coaching. You will explore different tools for self-assessment and address different kinds of self-doubt before developing a growth plan for professional success.

COURSE_DESCRIPTION: Enterprises across the world are creating large amounts of language data. There are many different kinds of data with language components including reports, word documents, operational data, emails, reviews, sops, and legal documents. This course will help you develop the skills to analyze this data and extract valuable and actionable insights. Learn about the various building blocks of natural language processing to help in understanding the different approaches used for solving NLP problems. Examine machine learning and deep learning approaches to handling NLP issues. Finally, explore common use cases that companies are approaching with NLP solutions. Upon completion of this course, you will have a strong foundation in the fundamentals of natural language processing, its building blocks, and the various approaches that can be used to architect solutions for enterprises in NLP domains.

COURSE_DESCRIPTION: Staying off of the radar of your target's security team is a common goal for many ethical hackers when performing security assessments. In this course, you'll learn to use the Nmap IDLE/IPID scan to take advantage of other network hosts to obfuscate scan origins from detection systems and logs. You'll explore using Nmap to discover what is utilizing UDP to help you add to your list of possible inroads of a target system. You'll also examine how SCTP works and how to work with Nmap to use it for scanning purposes. Finally, you'll learn about using Nmap's IPv6 option as another way to discover open ports and about using the versioning option to learn more about the service running on open ports. This course is one in a series that helps to prepare you for the Certified Ethical Hacker v11 (312-50) exam.

COURSE_DESCRIPTION: Kotlin supports functional and object-oriented programming constructs. Functions in Kotlin are first-class citizens and function objects can be treated just like other data types. In addition, Kotlin supports very concise function expressions called lambdas that are very often used with collection-related operations. In this course, you will learn the structure, syntax, and features of basic functions in Kotlin. You will learn to define default values for function input parameters, use named and positioned parameters with functions, and create functions with variable numbers of arguments. Next, you will work with higher-order functions. You will learn to pass in functions as input arguments to other functions and return functions as return values from functions. You will also implement and use closures in your code. Finally, you will define and use lambda expressions which are short, concise function definitions for use and throw functions. You will learn how to use the trailing lambda syntax in Kotlin and practice creating and using lambda expressions with collections.

COURSE_DESCRIPTION: We have all heard the phrase "correlation does not equal causation." What, then, does equal causation? This course aims to answer that question and more! Over a period of 5 weeks, you will learn how causal effects are defined, what assumptions about your data and models are necessary, and how to implement and interpret some popular statistical methods. Learners will have the opportunity to apply these methods to example data in R (free statistical software environment). At the end of the course, learners should be able to: 1. Define causal effects using potential outcomes 2. Describe the difference between association and causation 3. Express assumptions with causal graphs 4. Implement several types of causal inference methods (e.g. matching, instrumental variables, inverse probability of treatment weighting) 5. Identify which causal assumptions are necessary for each type of statistical method So join us.... and discover for yourself why modern statistical methods for estimating causal effects are indispensable in so many fields of study!

COURSE_DESCRIPTION: Cybersecurity is the protection of user software from maliciously-intentioned agents and parties. Cyberattacks commonly focus on critical physical infrastructures like power plants, oil refineries, and gas pipelines. For geopolitical reasons, the cybersecurity of such installations is increasingly important. In this course, explore the use of classification models when modeling cyberattacks and the evaluation metrics for classification models. Next, examine a case study where machine learning and cybersecurity attempt to detect intrusions in a gas pipeline. Finally, investigate a case study where machine learning models are used to detect and cope with malware. Upon completion, you'll be able to identify the need for AI in cybersecurity and outline the appropriate use of evaluation metrics for classification models.

COURSE_DESCRIPTION: Grit is key to our success any time, but especially in the midst of uncertainty, challenge and change. Join Shannon Huffman Polson, founder and CEO of the Grit Institute and author of The Grit Factor. As one of the first women to fly the Apache helicopter in the US Army and a veteran of corporate life as well, Polson shares stories and lessons from the cockpit of the most technologically advanced helicopter in the

world that apply to the challenges you face today. Using her Commit-Learn-Launch framework as a backdrop, Polson draws on years of experience and research into grit and resilience, taking learners on a journey to plot their very own course for developing grit for themselves and their organizations, to be better equipped to lead with grit and passion, to overcome resistance, and to embrace the courage of full ownership. You'll learn:

- How a leader's internal work on story and purpose forms the foundation for grit
- The mindset development necessary to build grit and resilience
- Using grit to take risks, and how leaders address fear and failure

Learners will come away freshly energized, with tactical takeaways for succeeding no matter what comes your way in today's world.

COURSE_DESCRIPTION: In this Skillsoft Aspire lab, you will practice performing data analysis tasks using Python by configuring VSCode, loading data from SQLite into Pandas, grouping data and using box plots. Then, test your data science skills by answering assessment questions after using Python to calculate frequency distribution, measures of center, and coefficient of dispersion. This lab provides access to several tools commonly used in data science, including: - VS Code - Anaconda - Jupyter Notebook + JupyterHub - Pandas, NumPy, SiPy - Seaborn Library - Spyder IDE This lab is part of the Data Analyst track of the Skillsoft Aspire Data Science Journey.

COURSE_DESCRIPTION: Project Selection is a critical aspect of Project Management. In an ideal world, organizations can initiate an unlimited number of projects. However, in the real world where organizations have limited resources (time, money, personnel, materials...) only a few projects, in most cases the projects deemed most beneficial are selected for initiation. There are numerous Project Selection Techniques organizations utilize to determine the most beneficial projects. In this Guided Project, we will use Google Sheets to analyze six (6) common Project Selection Techniques and complete a Project Selection Case Activity. This Guided Project was created by a Coursera community member.

COURSE_DESCRIPTION: There are various ways that asynchrony can be added to your application. In this course, you'll discover how multi-threading can be added to an application by recognizing the various APIs used in asynchronous programming, performing periodic operations with timers, and adding background threads to UI applications. You'll begin by learning the purpose of the .NET thread pool, how to convert a while loop to use timers, and what happens if a timer fires faster than a callback completes its work. Then you'll explore how to use the BackgroundWorker component to maintain responsiveness, how BackgroundWorker works, and how to use BackgroundWorker in code. Finally, you'll discover how to cancel BackgroundWorkers and how to report the progress of BackgroundWorkers. This course was originally created by Global Knowledge (GK).

COURSE_DESCRIPTION: Welcome to the course "Augmented Reality & Video Service Emerging Technologies." The level of AR (Augmented Reality) and advanced video & multimedia technology included in a product is what determines the level of value and luxury. The objective of this course is to teach all important technologies that are used in state-of-the-art AR, Skype, and YouTube video and multimedia products and services. This includes the advanced video and real-time multimedia delivery mechanisms based on H.264/MPEG-4 AVC, MPEG-DASH, CDN, and mobile CDN. If you have knowledge of these core technologies, you can understand the operations that are used in every advanced video and multimedia system in the World. As the future World of business and products are driven to be more and more video and multimedia oriented, having knowledge of these core technologies will enable you to lead your company to become the true World leader in AR and video multimedia technology products, services, and business. Thus, I cordially welcome you into the beautiful and powerful World of advanced AR and video multimedia!

COURSE_DESCRIPTION: Linear models, as their name implies, relates an outcome to a set of predictors of interest using linear assumptions. Regression models, a subset of linear models, are the most important statistical analysis tool in a data scientist's toolkit. This course covers regression analysis, least squares and inference using regression models. Special cases of the regression model, ANOVA and ANCOVA will be covered as well. Analysis of residuals and variability will be investigated. The course will cover modern thinking on model selection and novel uses of regression models including scatterplot smoothing.

COURSE_DESCRIPTION: Graph data structures have numerous real-world applications. Recognizing what these applications are and how best to work with graphs in your day-to-day is a must-have skill for any Software Engineer. In this course, you'll identify what is meant by a graph. You'll examine the typical, real-life applications of graphs and explore how they can be represented in programming languages. You'll move on to define different types of graphs, such as directed and undirected graphs, connected graphs, trees, and weighted and unweighted graphs. Next, you'll explore how to write code and perform operations on graphs. Finally, you'll implement graph representations in code using the adjacency matrix representation, the adjacency list, and adjacency set representation.

COURSE_DESCRIPTION: Welcome to Quantitative Formal Modeling and Worst-Case Performance Analysis. In this course, you will learn about modeling and solving performance problems in a fashion popular in theoretical computer science, and generally train your abstract thinking skills. After finishing this course, you have learned to think about the behavior of systems in terms of token production and consumption, and you are able to formalize this thinking mathematically in terms of prefix orders and counting functions. You have learned about Petri-nets, about timing, and about scheduling of token consumption/production systems, and for the special class of Petri-nets known as single-rate dataflow graphs, you will know how to perform a worst-case analysis of basic performance metrics, like throughput, latency and buffering. Disclaimer: As you will notice, there is an abundance of small examples in this course, but at first sight there are not many industrial size systems being discussed. The reason for this is two-fold. Firstly, it is not my intention to teach you performance analysis skills up to the level of what you will need in industry. Rather, I would like to teach you to think about modeling and performance analysis in general and abstract terms, because that is what you will need to do whenever you encounter any performance analysis problem in the future. After all, abstract thinking is the most revered skill required for any academic-level job in any engineering discipline, and if you are able to phrase your problems mathematically, it will become easier for you to spot mistakes, to communicate your ideas with others, and you have already made a big step towards actually solving the problem. Secondly, although dataflow techniques are applicable and being used in industry, the subclass of single-rate dataflow is too restrictive to be of practical use in large modeling examples. The analysis principles of other dataflow techniques, however, are all based on single-rate dataflow. So this course is a good primer for any more advanced course on the topic. This course is part of the university course on Quantitative Evaluation of Embedded Systems (QEEs) as given in the Embedded Systems master curriculum of the EIT-Digital university, and of the Dutch 3TU consortium consisting of TU/e (Eindhoven), TUD (Delft) and UT (Twente). The course material is exactly the same as the first three weeks of QEEs, but the examination of QEEs is at a slightly higher level of difficulty, which cannot (yet) be obtained in an online course.

COURSE_DESCRIPTION: This 17-video course explores how to organize and secure sensitive data by using data classification, as part of preparations for AZ-500 Microsoft Azure Security Technologies certification exam. First, learners will examine the PCI-DSS (Payment Card Industry Data Security Standard), and laws and regulations of the European Union GDPR (General Data Protection Regulation), and HIPAA (Health Insurance Portability and Accountability Act) to protect data. You will examine how to add tags to Microsoft Azure cloud resources in the Azure portal GUI (graphical user interface), and with PowerShell. Next, learn how DLP (data loss prevention) is used to control sensitive data. You will install AIP (Azure Information Protection) client, and learn to add labels to your data to organize it for security purposes. This course demonstrates how to use AIP in MS Word. You will learn to view protected data statistics. Finally, you will learn how to configure blob lifecycle settings, and blob container policies by using the portal.

COURSE_DESCRIPTION: This 6-video course is the first in a 3-course series that explores the concepts of version control systems in general and the popular control system Git, an open-source version-distributed system which tracks changes in source code during software development. The course covers the web-based platform GitHub, which simplifies team collaboration when sharing source code. Participants will examine the features of control systems and learn to use Git repositories to track the desired project source code. Since Git is designed to coordinate work among programmers, this course explores branching and merging the code developed by a team. You will learn how teams can develop code collaboratively when building features for an app, by using branches in Git. This course demonstrates the feature branches used to merge code into the main master branch of a Git repository. Learn to identify merge conflicts. Finally, you will explore GitHub which supports all popular programming languages by demonstrating the features GitHub uses to manage Git repositories, and how GitHub assists in streamlining the iteration process.

COURSE_DESCRIPTION: People react to high pressure differently. Learning to cope with pressure and handling stress are very important, because you don't want pressure to have a negative impact on your performance. In this course, you'll learn about managing stress and pressure, situations that trigger pressure, and how pressure can become stress. You'll also look at how stress affects you emotionally and physically, and how to respond to it. And you'll also learn strategies for managing stress by ensuring you have the right attitude, taking control under pressure, and using performance management to cultivate a "success mentality." You can then optimize your own performance, and prepare to cope with stressed colleagues.

COURSE_DESCRIPTION: Risk is an inevitable aspect of any business. As a manager, it's important that you mitigate or avoid the potential impact of a risk if it comes to pass, to ensure the long-term survival of your organization. This course focuses on the first step in managing risk, identifying risks to your organization. You'll explore the difference between internal and external risks, and how some risks may actually present a strategic opportunity. You'll also learn how to use some techniques that can help you identify risks and calculate the probability that they will occur, including root cause identification, the Delphi technique, and brainstorming sessions.

COURSE_DESCRIPTION: Authority carries a certain positional power. A title grants a person some power and authority, but even that has its limits. To meet goals and get results requires developing a sense of personal power that goes beyond the job description and that print on the business card. Personal power stems from personal credibility, influence, and political savvy. Even those with the most humble job titles can know how to get things done. In this course, you'll learn how developing personal power and credibility, and using them for building trust with your coworkers and organization, allows you to increase your influence at work and reach your goals.

COURSE_DESCRIPTION: Getting things done in the business world requires more than simply issuing orders. And most of us don't have the titles or authority to issue them in the first place. Along with being credible and building trust, you get results without direct authority by using persuasion and influence. Effective persuasion methods and influencing skills are the difference makers for getting results, with or without positional authority. This course will help you engage and enlist others in getting things done without the resort of formal power. It explores persuasion techniques and ways to promote influence through effective communication, reciprocity, the exchange of professional 'currencies', and persevering through resistance.

COURSE_DESCRIPTION: There are many tools available in the Natural Language Processing (NLP) tool landscape. With single tools, you can do a lot of things faster. However, using multiple state-of-art tools together, you can solve many problems and extract multiple patterns from your data. In this course, you will discover many important tools available for NLP such as polyglot, Genism, TextBlob, and CoreNLP. Explore their benefits and how they stand against each other for performing any NLP task. Learn to implement core linguistic features like POS tags, NER, and morphological analysis using the tools discussed earlier in the course. Discover defining features of each tool such as multiple language support, language detection, topic models, sentiment extractions, part of speech (POS) driven patterns, and transliterations. Upon completion of this course, you will feel confident with the Python tool ecosystem for NLP and will be able to perform state-of-art pattern extraction on any kind of text data.

COURSE_DESCRIPTION: Anything taken to an extreme can be a liability, including human behavior. While confident, cautious, or energetic people can be perfectly tolerable in small doses when working together, they can also be annoying or problematic when their behavior is over-the-top. Then there are people who are just plain negative - their glasses are always "half empty." While occasional griping is acceptable when working on a team, the behavior of negative people can eventually wear you down. To ensure successful communication and collaboration in the workplace, it's vital you develop the skills needed for managing difficult people. In this course, you'll learn about the four types of difficult people: dominant-controlling, analytical-obsessive, expressive-impulsive, and skeptical-negative. You'll also discover techniques for dealing with difficult people, and for managing your own emotions.

COURSE_DESCRIPTION: It would be easy to say that to deal with difficult people, you should be tolerant and accept people's differences. This sounds nice, and might work in the short term, but if you're working together with negative people, you're better off learning how to respond and relate to them. Dealing with difficult people requires that you first learn how to manage yourself. In this course, you'll learn techniques for managing difficult people, including becoming self-aware and practicing self-management. You'll explore how to tune into the feelings and emotions of difficult people when working on a team with them. You'll also learn how to build your emotional intelligence to help make your collaboration work more productive.

COURSE_DESCRIPTION: In the fourth course of Machine Learning Engineering for Production Specialization, you will learn how to deploy ML models and make them available to end-users. You will build scalable and reliable hardware infrastructure to deliver inference requests both in real-time and batch depending on the use case. You will also implement workflow automation and progressive delivery that complies with current MLOps practices to keep your production system running. Additionally, you will continuously monitor your system to detect model decay, remediate performance drops, and avoid system failures so it can continuously operate at all times. Understanding machine learning and deep learning concepts is essential, but if you're looking to build an effective AI career, you need production engineering capabilities as well. Machine learning engineering for production combines the foundational concepts of machine learning with the functional expertise of modern software development and engineering roles to help you develop production-ready skills. Week 1: Model Serving Introduction Week 2: Model Serving Patterns and Infrastructures Week 3: Model Management and Delivery Week 4: Model Monitoring and Logging

COURSE_DESCRIPTION: When you're constantly adding items to your never-ending to-do list, feeling overwhelmed at work and at home, and finding your health and relationships negatively impacted, you are likely experiencing stress. Stress is produced by your own feelings and reactions to certain external events, rather than by the events themselves. But while you may not always be able to control the external events causing your stress, by applying mindfulness techniques, you can control your reactions to them. This course explains the physiological, behavioral, and psychological signs and symptoms of stress and where it can come from. It outlines strategies for maintaining work/life balance and managing stress. It also covers ways to change your responses to stress and make them more positive and how to use relaxation techniques and adopting mindfulness to help you focus.

The SSCP Professional Training Certificate shows employers you have the IT security foundation to defend against cyber attacks - and puts you on a clear path to earning SSCP certification. Learn on your own schedule with 120-day access to content aligned with the latest (ISC)2 SSCP exam domains. We're offering the complete online self-paced program for only \$1,000 - a \$200 savings when you get all domains bundled together. 3 Steps to Career Advancement 1. Register for the course 2. Gain access for 120 days 3. Register and sit for the SSCP certification exam Upon completing the SSCP Professional Certificate, you will: 1. Complete six courses of preparing you to sit for the Systems Security Certified Practitioner (SSCP) certification exam as outlined below. Course 1 - Access Controls Course 2 - Security Operations and Administration Course 3 - Risk Identification, Monitoring, and Analysis/Incident Response and Recovery Course 4 - Cryptography Course 5 - Network and Communication Security Course 6 - Systems and Application Security 2. Receive a certificate of program completion. 3. Understand how to implement, monitor and administer an organization's IT infrastructure in accordance with security policies and procedures that ensure data confidentiality, integrity and availability.

COURSE_DESCRIPTION: In order for coaching to be most effective, it's important that there is strong culture of coaching and accountability which you will learn how to incorporate into your one-on-one meetings in this course. We'll discuss strategies in coaching great employees who are highly motivated, consistent performers, and poor performers. We'll explore specific tools, such as a coaching agenda, you can employ immediately in your coaching conversations. You will learn how to use the "Coaching Algebra" technique in typical performance scenarios managers encounter. Finally, you'll walk away from this course with some concrete strategies on how to coach other coach-managers. If you are ready to begin creating a coaching practice within your own organization, please join us in this course!

COURSE_DESCRIPTION: Explore advanced data manipulation and analysis with Pandas DataFrames, a Python library that shares similarities with relational databases. To take this course, prior basic experience is needed with Pandas DataFrames, data loading, and Jupyter Notebook data manipulation. You will learn to iterate data in your DataFrame. See how to export data to Excel files, JSON (JavaScript Object Notation) files, and CSV (comma separated values) files. Sort the contents of a DataFrame and manage missing data. Group data with a multi-index. Merge disparate data into a single DataFrame through join and concatenate operations. Finally, you will determine when and where to integrate data with structured queries, similar to SQL.

COURSE_DESCRIPTION: While Kubernetes introduces many capabilities, if developers aren't prudent, it can also introduce security risks. Use this course to learn the top security considerations with Kubernetes deployments and how to tackle them. Explore traditional application security as well as the 4C's of cloud-native security. Investigate the most crucial security concerns when migrating to the cloud. See the security vulnerabilities related to Kubernetes clusters, containers, scalability, and automation as well as those related to software code. Moving on, discover the security features in Amazon Elastic Kubernetes Service and Azure Kubernetes Service. Learn how Packer and Ansible can be used to security-harden your Kubernetes deployments and Calico to manage security policies. Also, explore several security design patterns. Upon completion, you'll be able to ensure your Kubernetes deployments pose a low-security risk to your organization.

COURSE_DESCRIPTION: Learners can explore Azure Virtual Machines (VMs), creating Windows VMs, Linux VMs, managing VM availability, and creating VM scale sets in this 13-video course, as part of preparations for Microsoft Azure Administrator (AZ-103) exam. To begin, you will learn how to create a Windows VM in the Azure portal; create a Windows VM in Azure PowerShell; and create a Windows VM in Azure CLI (command-line interface). Then you will learn how to create a Linux VM in the Azure portal; a Linux VM in Azure PowerShell, and a Linux VM in Azure CLI. Next, learners will discover how to configure high availability for Windows and Linux VMs, and how to use Azure Monitor to monitor VM performance metrics. Finally, you will explore how to create a VM scale set in the Azure portal, in Azure PowerShell, and in Azure CLI. To conclude the course, the exercise involves deploying Windows and Linux VMs by using the Azure portal and Azure PowerShell.

COURSE_DESCRIPTION: In this 8-video course, you will quickly learn the architecture of the most mature and widely-used of Hyperledger's current frameworks, Fabric. First, survey the beneficial features of Fabric, an enterprise-grade, general-purpose blockchain implementation, with much higher throughput capacity than found in Ethereum. Familiarize yourself with Fabric's phases of transaction flow, from the execute phase to its steps in ordering and validating transactions. Learn how to identify channel properties that enable confidential transactions and how to set up identities. Then select the best option for your company's use from the list of available mechanisms and the Fabric component network. As you progress, you will begin to understand the concept of Hyperledger Fabric's MSP-membership service provider-which establishes what the valid identities are for a network. Finally, emerge better prepared to decide whether Fabric may be the appropriate tool to use in constructing a secure network for your company's specific needs.

COURSE_DESCRIPTION: Today's web applications combine software code and resultant data, with the trustworthiness of both resulting in a secure trusted application. There are many planning strategies and tools that can ensure software and data integrity. In this course, explore IT supply chain security, how to deploy Linux updates, and how to configure a Windows Server Update Services (WSUS) host. Next, examine object-oriented programming (OOP) and how it is related to insecure deserialization attacks. Finally, learn how to use the OWASP Dependency-Check tool to verify that publicly disclosed vulnerabilities are not present in a project's dependencies. Upon completion, you'll be able to ensure that the design of a web application includes business requirements and related security controls.

COURSE_DESCRIPTION: Whether you're thinking about a career in sales, just getting started at your new sales job, or managing entry level sales people, this course will provide you a valuable perspective on your sales career. You'll start out the course with an overview of what it takes to be successful in sales. It might surprise you. You'll learn why most people have it all wrong about sales! The following five lessons will cover the inbound sales methodology, a framework used by thousands of sales professionals to get started in sales. You'll learn the difference between active and passive buyers, and how to build relationships and earn their attention. You'll learn why understanding the buyer's context is imperative providing them solutions. In this course, you'll gain the fundamental knowledge required to be successful in sales. By investing your time in sales training, you're already ahead of the curve.

COURSE_DESCRIPTION: Explore data pipelines and methods of processing them with and without ETL (extract, transform, load). In this course, you will learn to create data pipelines by using the Apache Airflow workflow management program. Key concepts covered here include data pipelines as an application that sits between raw data and a transformed data set, between a data source and a data target; how to build a traditional ETL pipeline with batch processing; and how to build an ETL pipeline with stream processing. Next, learn how to set up and install Apache Airflow; the key concepts of Apache Airflow; how to instantiate a directed acyclic graph in Airflow. Learners are shown how to use tasks and include arguments in Airflow; how to use dependencies in Airflow; how to build an ETL pipeline with Airflow; and how to build an automated pipeline without using ETL. Finally, learn how to test Airflow tasks by using the airflow command line utility, and how to use Apache Airflow to create a data pipeline.

COURSE_DESCRIPTION: This guided project course is part of the "Tensorflow for AI" series, and this series presents material that builds on the first course of DeepLearning.AI TensorFlow Developer Professional Certificate, which will help learners reinforce their skills and build more projects with Tensorflow. In this 1.5-hour long project-based course, you will discover convolutions, apply filters to images, apply pooling layers, and try out the convolution and pooling techniques on real images to learn about how convolutions work. At the end of the project, you will get a bonus deep learning project implemented with Tensorflow. By the end of this project, you will have learned how convolutions work and how to create convolutional layers to prepare for your own deep learning projects using convolutional neural networks. This class is for learners who want to use Python for building convolutional neural networks with TensorFlow, and for learners who are currently taking a basic deep learning course or have already finished a deep learning course and are searching for a knowledge-based course about convolutions in images with TensorFlow. Also, this project provides learners with needed knowledge about building convolutional neural networks and improves their skills in applying filters to images which helps them in fulfilling their career goals by adding this project to their portfolios.

COURSE_DESCRIPTION: Understand how channel management and retailing can improve performance in your business. Nowadays, a distribution strategy is part of the DNA of many companies and a correct channel management is key for the success of your product. Distribution plans need to be prepared for the long run, combining the following main areas: company profile, portfolio structure and price positioning, go-to-market policy, trade and retail marketing, e-commerce and global retail management. In the last decade, there have been two main revolutions that have affected industries, increasing the importance of Distribution Channel Management Profesor Maria Teresa Aranzabal guides you through: The IT revolution: considering developments in CRM, supply chain, planning tools, merchandise and reallocation systems, amongst others; and the retail focus: how a clear retail strategy can be a differentiator for companies and a strong weapon of competitiveness. In this course you will learn how to stay up-to-date on how companies are adding these aspects to their main strategic guidelines and making them key points in their managerial decision-making process. We use interviews with industry experts and give real-life examples of how to ensure your business makes the most of this vital area of marketing.

COURSE_DESCRIPTION: In modern cloud native application development, it's oftentimes the goal to build out serverless architectures that are scalable, are highly available, and are fully managed. This means less operational overhead for you and your business, and more focusing on the applications and business specific projects that differentiate you in your marketplace. In this course, we will be covering how to build a modern, greenfield serverless backend on AWS. Building brand new applications on AWS is a different task than lifting and shifting existing applications into AWS. When you have an existing application that you need to move to AWS, you might first look to using Amazon EC2 as your virtual machines, or maybe you might look into using docker containers and container hosting services like Amazon Elastic Container Service or Amazon Elastic Kubernetes Service. Those are all great application hosting options, but in most cases, they still require you to have some kind of pulse on the underlying infrastructure hosting your application. Building Modern Node.js Applications on AWS will explore how to build an API driven application using Amazon API Gateway for serverless API hosting, AWS Lambda for serverless computing, and Amazon Cognito for serverless authentication. We will follow an API driven development process and first mock up what the API will look like. We will cover all the ins and outs of the service Amazon API Gateway, and as you'll learn- it does a lot more than just hosting an API. Then we will add authentication to the API using Amazon Cognito. You'll learn about how the authorization flow works with Cognito, and how to build it into your APIs. From there, we will add a Lambda backend that will be triggered by API Gateway. The lambda functions will be using the AWS SDKs to perform various data processing tasks. You'll learn about the different configurations that exist for Lambda, and we will show you how to create and manage lambda functions. Some of the features of our API will require multiple lambda functions to execute in a specific order, like a workflow, and we will use AWS Step Functions to create a serverless workflow. Finally, we will talk about how to optimize your APIs at every layer using AWS features. Note: There are three versions of this class, "Building Modern Node.js Applications on AWS" for Node.js developers, "Building Modern Python Applications on AWS" for Python developers, and "Building Modern Java Applications on AWS" for Java developers. The courses do for a large part, overlap and in general, we recommend that you take the course that focuses on the SDK you plan to use to develop your AWS Cloud based applications. We expect that you have basic knowledge of AWS already. Some examples of concepts you should be familiar with are: you should know the basics of the AWS Global infrastructure, like what regions and availability zones are. You also should know the at a high-level AWS Identity and Access Management, or IAM,...

COURSE_DESCRIPTION: In this 11-video course, explore a variety of Amazon Web Services (AWS) features that can help the consumer to protect cloud infrastructures and resources, including network access control lists (NACLs), security groups, and Web Application Firewalls. One of the most important aspects of AWS security begins when you design your virtual private cloud, so the first tutorial teaches you about its design. Next, you will examine how to configure the NACL, along with configuring security groups for Linux instances, and security groups for Windows instances. Following on from this, you will take a look at the Web Application Firewall (WAF). You will then explore a couple of other security services at AWS, beginning with AWS Shield Advanced, and then AWS Inspector. Then move on to AWS GuardDuty, a fully-managed threat detection service that basically continuously monitors for malicious or unauthorized behavior. Then learn how to configure a managed site-to-site VPN, and define AWS Single Sign-On (SSO) and AWS Cognito. The exercise covers infrastructure security.

COURSE_DESCRIPTION: The U.S. rollout of COVID-19 vaccines is reportedly ramping up with the news that nearly all available doses will soon be released to the American public. "The new COVID-19 variants are traveling quickly, and this is a warning that we need to take precautions," says Dr. Gregory Poland, an infectious diseases expert and head of Mayo Clinic's Vaccine Research Group. Dr. Poland says these new variants are a consequence of an RNA virus being transmitted from human to human. "Even after we get our vaccines, we still need to wear masks out in public. We still need to maintain physical distancing. And we still need to wash our hands until about 80% of people get their COVID-19 vaccines," Dr. Poland emphasizes. (Published 01/13/2021)

COURSE_DESCRIPTION: Cryptography is used to secure sensitive information through algorithms that can encrypt or scramble data to ensure data integrity and authentication (hashing algorithms). Delve deeper into cryptography and surrounding concepts through this course. Begin by learning more about symmetric and asymmetric encryption before moving on to Public Key Infrastructure (PKI). You'll then explore the PKI hierarchy and certificate contents along with the certificate lifecycle. Next, you'll discover how to work with AWS Certificate Manager to create a private CA and provision certificates. You'll wrap this course up by getting a closer look at the AWS Key Management Service (KMS). Once you're done with this course, you'll be able to secure resources in the AWS cloud using cryptography and PKI. Moreover, you'll also be closer to preparing for the AWS Certified SysOps Administrator - Associate exam, SOA-C02.

COURSE_DESCRIPTION: Among the newer forms of security for most workers in the 21 st century involves social engineering-protecting workers and work against subtle but dangerous attacks by con men and scammers. This 14-video course reviews security fundamentals and the many ways in which devious people steal information-masquerading as delivery men, entering unauthorized areas without badges, shoulder surfing (airports, coffee shops), spoofing, dumpster-diving, and insidiously clever "spear phishing" attacks-legitimate-looking e-mails luring workers to malicious websites, or worse, into opening "encrypted" attachments with company credentials or password. Review critical measures of Active Directory administration, user management, and encryption of files and disks; implement logon time restrictions and failed-attempt lockouts; disable guest accounts in a timely fashion; avoid use of noncompliant systems; prevent careless moving or copying of office files; encrypt files and disks. In this day of widespread remote teleworking, safeguard home offices-where wireless signals are easily intercepted without simple, appropriate precautions. Danger lurks everywhere, and no one, however experienced, can ever be too careful! Course helps prepare for CompTIA+ certification exam 220-1002

COURSE_DESCRIPTION: To convey the true meaning of data most effectively, data scientists and data management professionals need to be able to harness the capabilities of different approaches of storytelling with data. This 14-video course explores how to select the most effective visuals for a storytelling project, how to eliminate clutter, and how to choose the best practices for story design. In addition, learners will see demonstrations of how to work with Tableau and Power BI bar charts to facilitate storytelling with data. Learn to select appropriate visuals for your data storytelling project; how to use slopegraphs; and learn important steps to take in cluttering and de-cluttering data. Explore the gestalt principle, as well as common problems of visual story design. In the concluding exercise, learners will load data by using Power BI from a CSV file; create a bar chart by using the data; and create a pie chart to show the whole-part relation in the data.

COURSE_DESCRIPTION: In this challenge, you will populate an Azure Synapse Analytics SQL pool by using an Azure data factory data pipeline. First, you will create a storage account that uses an Azure Data Lake Storage hierarchical namespace, and then you will create an Azure Synapse Analytics SQL pool. Next, you will deploy an Azure data factory, and then you will create a data pipeline. Finally, you will author copy data activities that will send data output through the data pipeline, and then you will test the data pipeline. Note: Once you begin the challenge, you will not be able to pause, save, or return to your challenge. Please ensure that you have set aside enough time to complete the challenge before you start.

COURSE_DESCRIPTION: It's not you, it's me! What's going on? This course empowers students, professionals and the wider community to deal with cybersecurity attacks and risks focused on identity management and it is an introduction to the upcoming full course focused on cybersecurity awareness. It provides a practical overview of challenging issues like identity credentials management and security, e-mail threats and web impersonation, or web hacking. In addition to this, you will have a practical appreciation of innovation applied to these concepts through an interview with a renowned expert in fraud and cybercrime. The teaching staff consists of Iván Pau, UPM researcher and expert in usable security, and Román Ramírez, hacker and cybersecurity expert. Learning will be carried out by introducing use cases related to cybersecurity incidents, in a way that ensures participants to get really involved in the course. You will easily acquire practical skills and be ready to face real threats in a digital world. This course is part of an online programme developed by Universidad Politécnica de Madrid (world-class tech university renowned for the quality of its education programmes and the research undertaken at its centres), Ferrovial (the world's leading private investor in cities and infrastructures, with a workforce of more than 74.000 employees and operations in more than 16 countries) and EIT Digital.

COURSE_DESCRIPTION: Once you grasp how to work with the scope of standard Excel chart types, you can expand into more complex visualizations. For example, you can use box-and-whisker plots to convey a wealth of information about the statistical distribution of a variable and identify outliers in a data series. You can use sunburst charts to visualize hierarchical data with differing levels of detail, waterfall charts to show the cumulative effect of positive and negative values, and Gantt charts to illustrate progress toward a goal involving multiple parallel tasks. Additionally, you can avail of band charts to quickly eyeball the trend in a line chart, scatter plots to uncover the relationship between two variables, and waffle charts to visualize progress towards KPIs. In this course, you'll create all of these charts either via Excel's built-in tools or by building them manually using nifty workarounds.

 COURSE_DESCRIPTION: This 17-video course, which helps prepare learners for the MS-200 Planning and Configuring a Messaging Platform certification exam, explores how to troubleshoot mail flow problems. The course includes pointers on working with transport logs and message traces, and monitoring mail flow. You will begin the course by examining how to troubleshoot mail flow issues caused by connectors and incorrect SPF (sender policy framework) records or mail exchanger (MX) records. Then watch demonstrations of how to use delivery reports and tracking logs and how to configure message tracking. Next, you will learn to search the message tracking logs and analyze external connectivity with the remote connectivity analyzer. Here descriptions of information found in nondelivery reports (NDRs), and the different enhanced status codes. Then examine pipeline logging and agent logging, and describe how to use connectivity, protocol, and routing table logging to troubleshoot mail flow issues. The course concludes by examining the use of the test mail flow cmdlet (lightweight command) for diagnosing mail flow issues.

COURSE_DESCRIPTION: Explore features and techniques used to monitor and manage Windows 10, including Windows events, monitoring, and performance tools, in this 11-video course. Key concepts covered here include learning the Windows Event Forwarding feature, which allows you to gather up logs from remote systems; how to create a collector-initiated subscription so that you can receive events from remote computers; and the performance tools available in Windows 10. You will learn to monitor windows updates with Update Compliance, which allows you to essentially monitor your Windows 10 systems; examine features that help deliver an optimized startup and shutdown experience; and examine the process to deliver an improved browsing experience. Then learn settings to be configured to optimize your energy efficiency; transition to modern management by learning new methods of managing devices in your environment; and recognize benefits and capabilities of mobile device management with a new approach in enterprise management. The closing exercise involves using new skills to maintain and manage Windows 10 with performance tools, optimize browsing, and transition to modern management.

COURSE_DESCRIPTION: Discover how to create, modify, save, and deploy Azure Resource Manager (ARM) and hard disk templates, in preparation for the Microsoft Azure Administrator (AZ-103) exam, in this 10-video course. ARM is the new method of managing related Azure resources together as a single unit. Begin the course by learning how to create Azure Resource Manager templates by using the Azure portal, and also by using Visual Studio, which is an integrated development environment. Then discover how to modify an Azure Resource Manager template, and configure an ARM template to use an existing virtual hard disk. Next, learn how to deploy resources from an ARM template by using the Azure portal, using Azure PowerShell, and using Azure CLI (command-line interface). The final tutorial in the course demonstrates how to save deployment as an ARM template. The exercise involves describing ARM templates, listing ARM template deployment methods, creating an ARM template using Visual Studio, and deploying a template by using Microsoft PowerShell.

COURSE_DESCRIPTION: The Java collections framework is a set of classes and interfaces that implement commonly reusable collection data structures. Though not part of the Java collection framework, arrays allow you to store multiple elements. They are incredibly useful, albeit with significant drawbacks, when used as collection containers. Use this course to practice working with arrays and collections. Start by storing data in an ordered form using arrays. Through this, explore the drawbacks of arrays. Next, examine multi-dimensional arrays and jagged arrays. Finally, create and use the non-parameterized array list to store elements. When you're finished with this course, you'll have a good understanding of how arrays work, their drawbacks, and how the use of collections can overcome many of the limitations of working with arrays.

COURSE_DESCRIPTION: Artificial Intelligence (AI) is the most important general-purpose technology of the 21st century. Much like electricity at the turn of the 20th century, it has the potential to transform the way businesses and industries operate. This course will help you grasp AI's potential so you can transform your business. You'll learn about AI in business. You'll examine common cognitive technologies that utilize AI, the effects of its applications in the workplace, and what to consider when identifying AI opportunities and benefits for your business. You'll also learn about some of the ethical considerations, challenges, and risks associated with adopting AI.

COURSE_DESCRIPTION: In most areas of health, data is being used to make important decisions. As a health population manager, you will have the opportunity to use data to answer interesting questions. In this course, we will discuss data analysis from a responsible perspective, which will help you to extract useful information from data and enlarge your knowledge about specific aspects of interest of the population. First, you will

learn how to obtain, safely gather, clean and explore data. Then, we will discuss that because data are usually obtained from a sample of a limited number of individuals, statistical methods are needed to make claims about the whole population of interest. You will discover how statistical inference, hypothesis testing and regression techniques will help you to make the connection between samples and populations. A final important aspect is interpreting and reporting. How can we transform information into knowledge? How can we separate trustworthy information from noise? In the last part of the course, we will cover the critical assessment of the results, and we will discuss challenges and dangers of data analysis in the era of big data and massive amounts of information. In this course, we will emphasize the concepts and we will also teach you how to effectively perform your analysis using R. You do not need to install R on your computer to follow the course, you will be able to access R and all the example data sets within the Coursera environment. This course will become part of the to-be-developed Leiden University master program Population Health Management. If you wish to find out more about this program see the last reading of this Course!

COURSE_DESCRIPTION: What the... is "Culture in a hybrid environment"? Die Kultur und die Werte des Unternehmens wirken sich auf den Rahmen für Hybrid Working aus, den ein Unternehmen setzt. Durch die Interaktion innerhalb dieses Rahmens, z.B. durch Hybrid Collaboration, gestalten und leben die Mitarbeitenden die Unternehmenskultur in hybriden Umgebungen. Das Unternehmen braucht also keine gesonderte oder zusätzliche "hybride" Kultur, sondern die Unternehmenskultur findet im hybriden Umfeld statt und beeinflusst gleichzeitig das hybride Arbeiten - eine Wechselwirkung.

COURSE_DESCRIPTION: Whether being used to customize advertising to millions of website visitors or streamline inventory ordering at a small restaurant, data is becoming more integral to success. Too often, we're not sure how use data to find answers to the questions that will make us more successful in what we do. In this course, you will discover what data is and think about what questions you have that can be answered by the data - even if you've never thought about data before. Based on existing data, you will learn to develop a research question, describe the variables and their relationships, calculate basic statistics, and present your results clearly. By the end of the course, you will be able to use powerful data analysis tools - either SAS or Python - to manage and visualize your data, including how to deal with missing data, variable groups, and graphs. Throughout the course, you will share your progress with others to gain valuable feedback, while also learning how your peers use data to answer their own questions.

COURSE DESCRIPTION: Wenn Sie mit Konflikten bei der Arbeit umgehen, müssen Sie in der Lage sein, die Situation zu verstehen und sich entsprechend anzupassen. Der effektive Umgang mit Konflikten ist eine Schlüsselkompetenz am Arbeitsplatz, insbesondere im Hinblick auf Teamkonflikte, die die Unternehmensziele oder das Wohlbefinden der Mitarbeiter gefährden könnten. In diesem Kurs lernen Sie verschiedene Konfliktmanagementstile kennen und erfahren, wie das schnelle und angemessene Management von Teamkonflikten sowohl den Beteiligten als auch dem gesamten Unternehmen zugutekommen kann. Sie werden verschiedene Ansätze zur Konfliktlösung untersuchen, wann Sie diese anwenden und in welchen Fällen Sie Ihren Stil anpassen müssen. Darüber hinaus lernen Sie, Konflikte mit schwierigen Personen zu lösen.

COURSE_DESCRIPTION: Amazon Elastic Compute Cloud (EC2) is a key AWS service for provisioning resizable computing environments, known as instances, which can be created using Amazon Machine Images (AMIs). In this course, you will examine the features of Amazon EC2, EC2 fleets and networks, Amazon EC2 for AWS Nitro Enclaves, and Linux and Windows instance types. Then, you will install and configure the Linux, Apache, MySQL, and PHP (LAMP) stack and SSL/TLS on an Amazon Linux 2 and Amazon Linux AMI instance. Finally, you will install and configure WordPress on an Amazon Linux 2 instance. This course helps prepare learners for the AWS Certified Developer - Associate 2022 certification exam. Upon completion, you'll know how to configure, launch, secure, and interact with computing environments on AWS using the Amazon EC2 service.

COURSE_DESCRIPTION: In this course, used in preparation for the AZ-500 Microsoft Azure Security Technologies certification exam, you will discover how VPNs provide an encrypted tunnel over the Internet from clients or on-premises networks to the Azure cloud. Explore how to configure a point-to-site or site-to-site VPN and how to connect a Windows 10 device to an Azure VPN. You will begin the 7-video course by receiving an overview of how VPNs allow secure connections to Azure. Next, you will explore how to use PowerShell to generate public key infrastructure (PKI) certificates. To take advantage of Azure VPN connectivity, you need to establish a virtual network gateway in the Azure cloud, which is a configuration that represents a VPN appliance in the Azure cloud. You will do this in order to configure both a point-to-site and site-to-site VPN. In the final tutorial, learners will discover how to connect a Windows 10 device to an Azure VPN.

COURSE_DESCRIPTION: When managing a hybrid cloud environment, applying DevOps principles can aid with deployment complexity, legacy app modernization, and Agile and CI/CD process implementation. In this course, you'll learn how to enable DevOps in a hybrid cloud environment, recognizing the associated challenges, the role of containerization and DevOps deployment strategies, and the implementation process of CI/CD. You'll then examine the challenges, best practices, and tools for monitoring hybrid clouds. You'll also recognize the workload combination used to build hybrid architectures, the tools used to design conceptual architecture and set up CI/CD mechanisms, and the benefits of hybrid CI/CD. You'll set up and configure hybrid cloud connectivity between AWS and on-premises environments, CI/CD processes for hybrid environments using Jenkins with Docker, and monitoring tools to monitor solutions deployed in hybrid environments.

COURSE_DESCRIPTION: Die Computerprogrammierung ist heute eine ausgereifte Branche. Daher gibt es einige Funktionen, über die fast alle Programme verfügen, z. B. die Authentifizierung von Benutzern. Diese Prozesse wurden in Form von Mustern für die Programmierung formalisiert, die Gegenstand dieses Kurses sind. Wir beginnen damit, den Bedarf an Entwurfsmustern zu erörtern, und betrachten die drei grundlegenden Arten: Erzeugungs-, Struktur- und Verhaltensmuster. Anschließend sehen wir uns die einzelnen Arten von Mustern anhand von Beispielen genauer an. Zudem besprechen wir die SOLID-Designprinzipien im Einzelnen. Schließlich wenden wir uns ganz allgemein dem Thema Softwaredesignpraktiken zu. Nach Abschluss dieses Kurses sind Sie in der Lage, bewährte Entwurfsmuster anzuwenden, um Programmierprobleme zu lösen.

COURSE_DESCRIPTION: [As described below, this is Part C of a 3-part course. Participants should complete Parts A and B first -- Part C "dives right in" and refers often to material from Part A and Part B.] This course is an introduction to the basic concepts of programming languages, with a strong emphasis on functional programming. The course uses the languages ML, Racket, and Ruby as vehicles for teaching the concepts, but the real intent is to teach enough about how any language "fits together" to make you more effective programming in any language -- and in learning new ones. This course is neither particularly theoretical nor just about programming specifics -- it will give you a framework for understanding how to use language constructs effectively and how to design correct and elegant programs. By using different languages, you will learn to think more deeply than in terms of the particular syntax of one language. The emphasis on functional programming is essential for learning how to write robust, reusable, composable, and elegant programs. Indeed, many of the most important ideas in modern languages have their roots in functional programming. Get ready to learn a fresh and beautiful way to look at software and how to have fun building it. The course assumes some prior experience with programming, as described in more detail in the first module of Part A. Part B assumes successful completion of Part A. The course is divided into three Coursera courses: Part A, Part B, and Part C. As explained in more detail in the first module of Part A, the overall course is a substantial amount of challenging material, so the three-part format provides two intermediate milestones and opportunities for a pause before continuing. The three parts are designed to be completed in order and set up to motivate you to continue through to the end of Part C. Week 1 of Part A has a more detailed list of topics for all three parts of the course, but it is expected that most course participants will not (yet!) know what all these topics mean.

COURSE_DESCRIPTION: Innovations in medical technologies are one of the leading areas of economic growth in the world. Whether new technologies take the form of pharmaceutical, medical device, biotechnology, information technology of some combination of these innovations, the opportunities for both private enterprise and social welfare are substantial. However, these innovations are not without cost, and require reimbursement from either a privately or publicly financed health care delivery system to enter the marketplace. This course aims to provide knowledge of the concepts, data, and methodology required to critically evaluate new medical technologies in order to secure financial investment, reimbursement, and regulatory compliance objectives, such as FDA approval. The course is designed to provide understanding of the analytic tools needed to evaluate medical technologies. After completing this course, students will have the skills needed to: - Understand the reimbursement systems financing medical technology use. - Understand the role of government and regulatory agencies in the development and use of new medical technologies. - Identify a population to be served by a medical technology. - Use health care data to evaluate a medical technology. - Perform cost/benefit and cost/effectiveness analysis of a new technology.

COURSE_DESCRIPTION: Matplotlib is a Python plotting library used to create dynamic visualizations using pyplot, a state-based interface. You'll learn how to correctly install and use Matplotlib to build line charts, bar charts, and histograms in this course. You'll create basic line charts out of randomly generated data. You'll learn how to use the plt.subplots() function, import data from a CSV file using pandas, and create and customize various line charts. Additionally, you'll create figures holding more than one axes object, learn why and how to use the twinx() function, and create multiple lines in the same line chart with different y-axes for each line. Moving on, you'll construct histograms that visualize multiple variables and approximate the cumulative probability density function. Lastly, you'll create some bar charts to represent categorical data.

COURSE_DESCRIPTION: This course will provide you with an overview over existing data products and a good understanding of the data collection landscape. With the help of various examples you will learn how to identify which data sources likely matches your research question, how to turn your research question into measurable pieces, and how to think about an analysis plan. Furthermore this course will provide you with a general framework that allows you to not only understand each step required for a successful data collection and analysis, but also help you to identify errors associated with different data sources. You will learn some metrics to quantify each potential error, and thus you will have tools at hand to describe the quality of a data source. Finally we will introduce different large scale data collection efforts done by private industry and government agencies, and review the learned concepts through these examples. This course is suitable for beginners as well as those that know about one particular data source, but not others, and are looking for a general framework to evaluate data products.

COURSE_DESCRIPTION: This course 'Unethical decision making in organizations : A seminar on the dark side of the force' will teach you how strong organizational contexts push good people towards unethical decisions. You will also learn how to protect yourself and your organization against such forces lurking in the dark. About the Course This course teaches how narrow frames and strong contexts can push good people towards unethical decisions and how they can protect themselves and their organization against ethical blindness. The goal of this course is to empower the participants to analyze the risks of unethical or illegal behavior that might be triggered by powerful contexts. It draws from various disciplines such as management, psychology, sociology, philosophy, and literature, in order to learn what these disciplines contribute to a better understanding of unethical behavior. The course also analyzes some of the most prominent organizational scandals of the recent decades through the lenses of these disciplines. Whenever we hear about ethical scandals, we tend to believe that unethical or illegal behaviour in organizations is driven by character deficiencies of individual actors. Put differently, we simply assume that bad things are done by bad people. However, numerous corporate scandals have demonstrated that even people with a high level of integrity can break the rules if they are put into a strong context. A better understanding of why and under what conditions good people make bad ethical decisions will enable us to better protect individuals as well as their respective organizations against the potentially overwhelming power of the context. It will also enable us to cure societies from problems like corruption. At the end of the course, you are able to: 1. Explain the impact of social context on individual decision making using various theories (from Management, Sociology, Psychology, and Philosophy) 2. Apply these theories to the analysis of some of the most eminent organizational scandals of the recent decades 3. Assess risks of ethical blindness in your own organizational context 4. Design interventions to reduce such risks for yourself and your organization Recommended Background No background expertise is required. The course is open for interested layperson as well as experts who work on related topics, be it as researchers or practitioners (e.g., compliance managers in corporations). Why is this course important for me? Currently, the understanding of why good people make unethical decisions is rather limited, related research is rather fragmented, and the management of such problems in organizations is overly simplistic, legalistic, and inadequate. Understanding contexts, including the dangers of routines, the mindlessness of our daily decisions, and the healing power of mindful decision-making routines is of increasing importance. In this course, you will learn the latest knowledge and the appropriate tool box for dealing with ethical...

COURSE_DESCRIPTION: In the previous two courses, you have learned how to value startups using the discounted cash flow method and multiple methods. However, you have not learned how to estimate cash flows or earnings of startups. In this course, you are going to learn the concepts and usage of financial ratios. Using financial ratios such as profitability, liquidity, leverage, efficiency, and growth, you can tell financial health of a startup. Profitability ratios measure how profitable a firm is by looking at ROS, ROA, and ROE. Liquidity ratios measure how quickly a firm turns assets into cash to pay-off short-term liability and they include Current Ratio, Quick Ratio, and Cash Ratio. Leverage ratios measure how much long-term debt a firm has relative to its assets or equity. Efficiency ratios measure how efficiently a firm utilizes its assets. It is like a physical exam for humans and you can tell the fiscal status of a startup using financial ratios. You can also develop pro forma financial statement using financial ratios. Using pro forma financial statement, you can tell future financial status of a startup as well as cash flows. In addition, using information from pro forma statement and valuation methods, you can do the valuation of a startup.

COURSE_DESCRIPTION: Getting to the source of why something has gone wrong in a system or process is critical to identifying the changes necessary for resolving the problem. During the Analyze phase of a Six Sigma project, a Black Belt practitioner utilizes a variety of statistical and nonstatistical tools and methods for analyzing systems and processes to identify variation and defects, reduce costs, eliminate waste, and reduce cycle time. While many of the tools used in the Analyze phase are statistical and quantitative in nature, there are many useful nonstatistical methods. Nonstatistical methods help in the analysis by including qualitative considerations in identifying potential problems, their root causes, and their impacts. They help prioritize these causes and generate initial ideas for resolving problems when a project enters the Improve phase. This course covers the use of various nonstatistical analysis methods including failure modes and effects analysis (FMEA), gap analysis, scenario planning, root cause analysis, the 5 Whys, fault tree analysis (FTA), and waste analysis. This course is aligned with the ASQ Certified Six Sigma Black Belt certification exam and is designed to assist learners as part of their exam preparation. It builds on foundational knowledge that is taught in SkillSoft's ASQ-aligned Green Belt curriculum.

COURSE_DESCRIPTION: Welcome to this project-based course on Analyzing Box Office Data with Seaborn and Python. In this course, you will be working with the The Movie Database (TMDB) Box Office Prediction data set. The motion picture industry is raking in more revenue than ever with its expansive growth the world over. Can we build models to accurately predict movie revenue? Could the results from these models be used to further increase revenue? We try to answer these questions by way of exploratory data analysis (EDA) in this project and the next. The statistical data visualization libraries Seaborn and Plotly will be our workhorses to generate interactive, publication-quality graphs. By the end of this course, you will be able to produce data visualizations in Python with Seaborn, and apply graphical techniques used in exploratory data analysis (EDA). This course runs on Coursera's hands-on project platform called Rhyme. On Rhyme, you do projects in a hands-on manner in your browser. You will get instant access to pre-configured cloud desktops containing all of the software and data you need for the project. Everything is already set up directly in your internet browser so you can just focus on learning. For this project, you'll get instant access to a cloud desktop with Python, Jupyter, and scikit-learn pre-installed. Notes: - You will be able to access the cloud desktop 5 times. However, you will be able to access instructions videos as many times as you want. - This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: It's common to need to deliver software that runs with a variety of options and a command line interface is a great way to let users invoke these various options. CLIs have been used to run programs since the early 1960s and are still relevant today. Their simplistic design, small footprint, and self-documentation make them ideal for automated or scheduled tasks. In this course, you'll review the history of CLIs and learn how to build a CLI using argparse, a module in the Python Standard Library. You'll examine positional and optional arguments, as well as how to use custom actions. Finally, you'll learn how to install a Python module as an editable package and explore the alternative, third-party packages for building a CLI - docopt and click. This course was originally created by Global Knowledge (GK).

COURSE_DESCRIPTION: Social and emotional learning, or SEL, programs have flourished in schools during the last decade. In this course the instructor (Emily Price) introduces you to the history and framings of social and emotional learning preK-12 curricula, as well as various elementary, middle, and high school SEL programs and associated research. This course is a part of the 5-course Specialization "The Teacher and Social Emotional Learning (SEL)". Interested in earning 3 university credits from the University of Colorado-Boulder for this specialization? If so check out "How you can earn 3 university credits from the University of Colorado-Boulder for this specialization" reading in the first module of this course for additional information. We want to note that the courses in this Specialization were designed with a three-credit university course load in mind. As a participant you may notice a bit more reading content and a little less video/lecture content. Completing and passing the SEL Specialization allows the participant to apply for 3 graduate credits toward teacher re-certification and professional enhancement. We want to ensure the quality and high standards of a University of Colorado learning experience. Interested in earning 3 graduate credits from the University of Colorado-Boulder for The Teacher and Social Emotional Learning (SEL) Specialization? Check out "How you can earn 3 university credits from the University of Colorado-Boulder for this specialization" reading in the first week of this course for more information.

COURSE_DESCRIPTION: Amazon offers AI developers a wide variety of tools and frameworks including Amazon Web Services (AWS) and the Amazon Machine Learning (ML) framework. By integrating complex machine and deep learning development with the extensive computing capabilities of Amazon, Amazon ML allows AI developers to adopt big data AI services. With many companies actively using AWS and Amazon ML, a basic knowledge of this framework is beneficial. In this course, you'll learn how to use Amazon ML together with AWS, to work with big data, and to create machine and deep learning models. You'll also examine the basics of automated model deployment with Amazon SageMaker. Next, you'll explore how to use Amazon ML for image and video analysis, text-to-speech translation, and text analytics. Finally, you'll implement a system to analyze movie review sentiment using the Amazon ML framework.

COURSE_DESCRIPTION: In this 2-hour long guided project, we will learn the basics of creating GUI Applications with JavaFX. We will do this by creating a simple user interface designed with Scene Builder and FXML. The GUI Application itself will be powered by the JavaFX framework. While JavaFX has a fairly large number of components that offer a lot of functionality, we will focus on creating something simple to familiarize ourselves with the framework and some of its core functionality. To be able to complete this project successfully, you should be familiar with the Java programming language. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Many of today's systems are becoming cloud-based at a rapid pace. In this course, you'll explore different cloud services, deployment models, responsibility areas, and architectures relevant to your CEH exam. Another rapidly adopted technology in today's networks is containers, making knowledge of them a necessary skill. You'll examine containers, technologies like Docker, and orchestration, as well as common security challenges. Next, you'll learn why cloud services have been prone to security issues and breaches and examine common security vulnerabilities and assessment tools. Finally, you'll learn about common security controls for cloud environments that can help you protect cloud accounts, storage, containers, and orchestration. This course is one in a series that helps to prepare you for the Certified Ethical Hacker v11 (312-50) exam.

COURSE_DESCRIPTION: In this 13-video course, discover how to implement access for external users of Microsoft 365 workloads. Explore topics such as creating B2B accounts, creating guest accounts, and designing solutions for external access, in preparation for the MS-100 Microsoft 365 Identity and Services certification exam. Begin by learning how to add guest users to a directory by using Azure portal; add guest users to a group; and add guest users to an application. Then discover how and when to resend invitations to guests, invite a guest user to an app from the access panel, and explore how to invite a user to join a group that has access to an app. Next, you will learn how you can allow or block the sending of invitations in an

organization and also, how to add guest users without an invitation link or e-mail. Then you will take a look at key properties of B2B collaboration users, filter for guest users in the directory, and finally, learn how to remove guest user limitations.

COURSE_DESCRIPTION: In the course 'Establishing a professional 'self' through effective intercultural communication', you will learn how to communicate effectively to establish relationships with colleagues in a culturally and linguistically diverse community and workplace. As language reflects cultures, we begin the course by highlighting the need to take into considerations cultural values when we communicate in a multicultural community and workplace. We then move on to discuss some effective communication skills required to build relationships with colleagues in a globalised workplace. You will learn to adopt appropriate intrapersonal and interpersonal, verbal and nonverbal, communicative strategies to present information based on the 7 communication principles. Finally, you will learn to build your personal profile and appropriately align yourself in a globalised workplace.

COURSE_DESCRIPTION: Cloud computing has revolutionized the way we build, deploy, and maintain applications. Due to this paradigm shift, many businesses now rent rather than own IT infrastructure. This new way of approaching infrastructure requirements has given way to multiple cloud computing models, such as Software as a Service (SaaS), Platform as a Service (PaaS), Infrastructure as a Service (IaaS), and Function as a Service (FaaS). Knowing what your options are for cloud computing can help you choose the best models for your needs. Use this course to gain a solid foundational understanding of cloud computing. Compare various cloud service providers based on services, available tools, and pricing. Learn about real-life use cases for cloud computing and how businesses can benefit from this ever-evolving technological feat. When you've completed this course, your newfound knowledge of cloud computing will help you decide how it can help your business.

COURSE_DESCRIPTION: In this course, you will learn how to use theories and methods to make predictions of the potential impact of new technology - in general, as well as for a specific application. This will prepare you for the changes that we are facing in society, and also help you take advantage of transformations that are driven by technology. The Impact of Technology course takes a broad approach, including social and economic factors. You will study historical examples and learn to recognize recurring patterns and cycles. The curriculum includes general innovation theories, foresight methodology, value chain disruption, and strategy. The general process is as follows. First, you to learn how to draw a map of the potential future business landscape. After that, you get to identify interesting future business roles in emerging value networks. Finally, we find a path from where we are today to a desired end state. You will analyze how an industry or market may change if the technology which is available today is fully implemented in a 10 to 20-year perspective. In addition, you will identify barriers to such a development and make estimates regarding the timing. The course includes a number of assignments to facilitate your learning - some of them compulsory. The largest assignment is about the introduction of self-driving cars (hence the course icon; source and credit to Google). We all know that the future can't be fully predicted in detail. However, the methods presented in this course will help you identify potential consequences. In this way, you will get a toolbox for decision-making in the areas of technology, investments, career path, research & development, or portfolio management.

COURSE_DESCRIPTION: Bez obzira na to radi li se o povećanju ili smanjenju broja zaposlenih, promjeni lokacije, novim procesima ili cjelovitom reorganizaciji, organizacijska je promjena neizbježna u današnjoj poslovnoj okolini. Važno je ne samo preživjeti organizacijsku promjenu, već je i uspješno prevladati osnažujući se za preuzimanje kontrole nad vlastitom karijerom, prepoznavanje novih prilika i razvoj karijere. U ovom tečaju naučit ćete važnost pripreme za organizacijsku promjenu, kao i koje su neophodne vještine potrebne kako biste njome upravljali. Te vještine uključuju spremnost na preuzimanje rizika, otvorenost prema nepoznatom te sposobnost upravljanja sobom tijekom promjene. Tečaj navodi najbolje prakse za izgradnju samomotivacije, što je ključ pripreme za organizacijsku promjenu, te predstavlja ideju preoblikovanja kao metodu za savladavanje prihvaćanja organizacijske promjene. Na kraju, ovaj tečaj pokriva važnost prepoznavanja i kapitaliziranja prilika u karijeri koje predstavlja organizacijska promjena, uključujući posjedovanje karijernog plana.

COURSE_DESCRIPTION: Continue preparing for the MS-300 deploying Microsoft 365 Teamwork certification exam, focusing on the abilities of teamwork administrators to configure and manage SharePoint Online, OneDrive for business, Teams, and workload integrations, with this 14-video course. First, learners will explore Yammer, a social networking platform designed to facilitate better communication and collaboration in your Office 365 subscription. You will learn that files are stored in a SharePoint document library. You will then observe how to configure a Yammer network, and how to add, block, or remove Yammer users. Next, learners see how to monitor account activity and device usage. You will learn about the benefits of using Yammer with Office 365 connected groups, and how to create and manage a group in Yammer. The course then examines applications that can be integrated with Yammer, including how to enable Yammer conversations in a SharePoint online site, and how to enforce Office 365 identities. Finally, explore the use of Azure Active Directory account credentials for Yammer Enterprise login.video.

COURSE DESCRIPTION: This course will introduce you to Amazon Web Services (AWS) core services and infrastructure. Through demonstrations you'll learn how to use and configure AWS services to deploy and host a cloud-native application. Early in the course, your AWS instructors will discuss how the AWS cloud infrastructure is built, walk you through Amazon Elastic Compute Cloud (Amazon EC2) and Amazon Lightsail compute services. They'll also introduce you to networking on AWS, including how to set up Amazon Virtual Public Cloud (VPC) and different cloud storage options, including Amazon Elastic Block Storage (EBS), Amazon Simple Storage Service (S3) and Amazon Elastic File Service (EFS). Later in the course you'll learn about AWS Database services, such as Amazon Relational Database Service (RDS) and Amazon DynamoDB. Your instructors will also walk you through how to monitor and scale your application on AWS using Amazon CloudWatch and Amazon EC2 Elastic Load Balancing (ELB) and Auto Scaling. Lastly, you'll learn about security on AWS, as well as how to manage costs when using the AWS cloud platform. In this course, you won't be required to complete hands-on exercises, but we strongly suggest you take advantage of the AWS Free Tier to follow along as the instructors demonstrate the AWS services. Class forums will also allow you to ask questions and interact with AWS training instructors. After completing this course, you'll have the basic fundamentals to get started on AWS. This course has been developed by AWS, and is delivered by AWS technical instructors who teach cloud computing courses around the globe.

COURSE_DESCRIPTION: Do you hear the word "marketing" on a daily basis, but aren't sure what marketing really is or why your business needs it? Do you know that marketing is important to your company, product, or service, but aren't sure where to start? Cover the concepts and tools you need to successfully develop a marketing strategy for a business, product or service. Begin by understanding consumers and the main market research techniques, then learn how to correctly segment, target and position your product to achieve success. Continue by analyzing the four critical areas in marketing, the famous four Ps of Product, Price, Promotion and Place. Finally, get the backing your ideas deserve and communicate the actions through a Marketing Plan. In the final capstone project you will develop a Marketing Plan for a product or service.

COURSE_DESCRIPTION: Big Data Analytics ist zu einem wesentlichen Bestandteil jedes Unternehmens geworden, das mit der digitalen Welt zu tun hat. Die Fähigkeit, große Datenmengen zu erfassen und in Erkenntnisse umzuwandeln, hat die Geschäftswelt verändert. Damit sie Projekte, die solche Technologien nutzen, richtig handhaben können, sollten Führungskräfte zumindest ein grundlegendes Verständnis von Big Data haben. In diesem Kurs lernen Sie die notwendigen Konzepte und Terminologien kennen, die Sie bei der Erörterung von Big-Data-Projekten benötigen. Sie erfahren mehr über die wichtigsten Quellen und Merkmale von Big Data. Sie tauchen dann in die Welt von Big Data Analytics ein und erkunden die wichtigsten Vorteile, Anwendungsfälle und Herausforderungen. Nach Abschluss dieses Kurses werden Sie in der Lage sein, selbstbewusst über datenbezogene Projekte zu sprechen und relevante Dateninfrastrukturen und -architekturen zu erörtern.

COURSE_DESCRIPTION: Explore tools that can be used to simplify network and service discovery in Docker, for Docker orchestration, and to adopt DevOps continuous delivery (CD) principles. Examine clustering and management, along with architecture of Kubernetes, and how to connect containers across hosts using Ambassadors. Key concepts covered in this 12-video course include implementing Docker network solutions using Weave; creating and configuring Minikube clusters; and setting up the Minikube environment to communicate with Docker daemon. Next, work with Compose to deploy applications on Minikube; create GKE clusters, and install and build continuous integration (CI)/CD pipelines with Jenkins X; and learn tools and their features used to simplify networking and service discovery in Docker. Then connect containers across hosts using Ambassadors; create and configure Minikube clusters and set up the Minikube environment to communicate with Docker daemon; and use Compose to deploy applications on Minikube. Finally, learn about tools used to adopt DevOps continuous delivery principles for managing container-based architectures; learn to create GKE clusters and install Jenkins X; and build CI/CD pipelines using Jenkins X.

COURSE_DESCRIPTION: In this course on Linear Algebra we look at what linear algebra is and how it relates to vectors and matrices. Then we look through what vectors and matrices are and how to work with them, including the knotty problem of eigenvalues and eigenvectors, and how to use these to solve problems. Finally we look at how to use these to do fun things with datasets - like how to rotate images of faces and how to extract eigenvectors to look at how the Pagerank algorithm works. Since we're aiming at data-driven applications, we'll be implementing some of these ideas in code, not just on pencil and paper. Towards the end of the course, you'll write code blocks and encounter Jupyter notebooks in Python, but don't worry, these will be quite short, focussed on the concepts, and will guide you through if you've not coded before. At the end of this course you will have an intuitive understanding of vectors and matrices that will help you bridge the gap into linear algebra problems, and how to apply these concepts to machine learning.

COURSE_DESCRIPTION: In this 2-hour long project-based course, you will learn the basics of AWS VPC(Virtual Private Cloud) and you will also understand how networking works within VPC, which is the key to understanding the overall functionality of AWS. Virtual Private Cloud (Amazon VPC) provides a logically isolated area of the AWS cloud where you can launch AWS resources in a virtual network that you define. By the end of this project you will create your custom VPC from scratch along with its associated components such as Subnets, Route Tables, Network Access Control List. You will also create Windows EC2 instances and validate the networking concepts learned during this project. After completing this training, you will be able to provision the basic infrastructure required for deploying any application on AWS Cloud. Please note: You will need an AWS account to complete this project. All the resources used in this project comes under AWS free-tier.

COURSE_DESCRIPTION: To be a successful AWS Cloud Practitioner, one must first have a fundamental understanding of the features and purposes of the four core services of Amazon Web Services. Building on a solid foundation of the AWS compute and networking services, explore the critical storage and database services offered in AWS. Study in detail the components, features, benefits, and purposes of these services. Investigate the security of Elastic Block Store (EBS) and Simple Storage Service (S3) buckets. Finally, examine the use cases of the AWS database service and AWS networking and content distribution services. This course is one of a collection that prepares learners for the AWS Certified Cloud Practitioner 2022 certification.

COURSE_DESCRIPTION: Kubernetes provides several methods for augmenting functionality through addons, plugins, and API extensions. If you work with Kubernetes, knowing how to extend it will elevate its power. Use this thorough course to learn why and how to extend Kubernetes. Examine operators and the operator pattern. Explore how Kubernetes controllers function relative to customization and extensions. And investigate the Kubernetes object model, controller objects, API extensions, user types, resources, and access extensions. Next, learn about the Kubernetes API and infrastructure extensions. And discover several plugins and addons used to extend the functionality of Kubernetes. As you advance, practice extending the Kubernetes API, implementing multiple schedulers, and configuring an HTTP proxy server. Install a network plugin to extend Kubernetes. And show how device plugins are used. When you're done, you'll know the best way to extend Kubernetes for your needs.

COURSE_DESCRIPTION: Typeform is an online SaaS company that specializes in dynamic form building and online surveys. Typeform is used by large corporations and small businesses for a variety of different business operations. You will see Typeform used in analytics & reporting, collaboration, customer support, email marketing, lead generation, and so much more. Typeform works in conjunction with several well-known apps to seamlessly integrate into your marketing & sales environment. By integrating Typeform into apps you're currently using you will expand your business' capacity for growth. This project is an introductory level course intended for business professionals who would like to collect employee feedback using interactive forms. The project will focus on the basics of creating an interactive form. We will learn about the different types of questions available, themes, and sharing our survey. At the end of the project the learner will be able to design their own professional dynamic form for collecting employee feedback. This project will talk briefly about sharing the survey with respondents. The focus of this project is helping learners to begin the process by familiarizing them with the platform and creating the survey using features available in the free version. Typeform values its user's security and understands the need for rigorous security measures. Their infrastructure is hosted via Amazon Web Services (AWS) on servers located in Virginia and Frankfurt, Germany. You can view Typeform's full security policy here: <https://help.typeform.com/hc/en-us/articles/360029259552-Security-at-Typeform>

COURSE_DESCRIPTION: In this 16-video course, learners will discover how to apply knowledge of Azure virtual machine (VM) deployments and High Performance Computing (HPC) to address business needs, while preparing for AZ-301: Microsoft Azure Architect Design certification exam. Begin by learning about VM planning and recognizing which VM options to use. Then move into creating a VM by using the portal, using PowerShell, using the command-line interface, and using a template. Explore how to modify the underlying power of VMs; link a public IP address resource to a VM; deploy a jump box by enabling single-point incoming remote management; and deploy a VM scale set. Discover how to monitor Azure VM performance and usage metrics with Azure Monitor; set alerts and notifications for VM metrics; view VM activity logs, and examine VM diagnostic settings. Finally, examine Azure HPC and recognize when HPC deployments should be used. The exercise involves describing when Azure HPC should be used, deploying a Linux Azure VM using the portal and a Windows Azure VM using PowerShell, and resizing Azure VMs.

COURSE_DESCRIPTION: In this 1-hour long project-based course, you will learn how to compare the performance of different securities using financial statistics (normal distributions) and the Google Sheets toolkit to decide which one performed the best in terms of risk-to-return (risk-to-reward) metrics. This will teach you how basic risk management using quantitative analysis is done and is applied in calculating mean returns of the stock, variance, standard deviation, the Sharpe ratio, and Sortino Ratio. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions. This course's content is not intended to be investment advice and does not constitute an offer to perform any operations in the regulated or unregulated financial market.

COURSE_DESCRIPTION: Das Management von Projektrisiken ist eine zentrale Aufgabe des Projektmanagers. Es erfordert eine qualitative und quantitative Risikoanalyse, um die Wahrscheinlichkeit und die Auswirkungen von Risiken zu bewerten und sich auf Faktoren, die das Projekt zum Entgleisen bringen können, vorzubereiten und diese zu mindern. In diesem Kurs lernen Sie die Verwendung von Werkzeugen wie der Wahrscheinlichkeits- und Auswirkungsmatrix, der Risikokategorisierung und der Beurteilung der Risikodringlichkeit kennen, um potenzielle Risiken zu definieren. Außerdem lernen Sie Methoden zur Datenerfassung und -darstellung für die Risikomodellierung kennen, darunter Entscheidungsbäume, Tornado-Diagramme und die Analyse des erwarteten Geldwertes (EMV).

COURSE_DESCRIPTION: Project risk management is a key responsibility of the project manager. It requires qualitative and quantitative risk analysis in order to assess risk probability and impact in order to prepare for and mitigate against factors that can derail the project. In this course, you'll explore using tools like a probability and impact matrix, risk categorization, and risk urgency assessments to define potential risks. You'll also learn about data gathering and representation techniques for risk modeling, including decision trees, tornado diagrams, and expected monetary value (EMV).

COURSE_DESCRIPTION: Network security encompasses best practices and policies that are put in place to help monitor and prevent malicious attacks against both internal and external threats. In this course, you'll learn about the confidentiality, integrity, and availability triad and other common security concepts. You'll explore well-known threats, both internal and external, as well as common vulnerabilities and newly discovered software vulnerabilities. Next, you'll examine authentication methods and how to perform security assessments. You'll also examine common attacks, with a focus on technology-based attacks, and learn to differentiate between denial of service, distributed denial of service and Botnet/command and control attacks. You'll further explore how to prevent and remove ransomware and malware. Lastly, you'll learn about human and environmental attacks, such as social engineering, and how to differentiate between different social engineering attacks. This course is one of a collection of courses that prepares learners for the N10-008: CompTIA Network+ certification exam.

COURSE_DESCRIPTION: In this 1-hour long project-based course, you will learn how to - use SketchUp for Web to create simple 3D models - explore 3D modeling - create a simple mockup scene for your artworks By the end of this project, you will learn how to use Sketch Up to create a mockup scene in 3d model for your art works or illustrations. In graphic design and visual arts, mockup is defined as a rough draft of a finished product or visually rendered representation of a finished product. In this guided project we are going to create a mockup scene to simulate the showcasing of print and artworks. SketchUp for Web is a free version of SketchUp that runs in a web browser. It shows a simple interface where anyone can simply draw and create 3D models. This makes 3D modeling accessible and easy to use to anyone interested in exploring this field. This guided project is for graphic designers, illustrators, or artists who want to create visual representations of their prints, illustrations or paintings through 3D modeling. However, anyone interested in exploring 3D modeling is welcome to this course. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: This course aims to help you to draw better statistical inferences from empirical research. First, we will discuss how to correctly interpret p-values, effect sizes, confidence intervals, Bayes Factors, and likelihood ratios, and how these statistics answer different questions you might be interested in. Then, you will learn how to design experiments where the false positive rate is controlled, and how to decide upon the sample size for your study, for example in order to achieve high statistical power. Subsequently, you will learn how to interpret evidence in the scientific literature given widespread publication bias, for example by learning about p-curve analysis. Finally, we will talk about how to do philosophy of science, theory construction, and cumulative science, including how to perform replication studies, why and how to pre-register your experiment, and how to share your results following Open Science principles. In practical, hands on assignments, you will learn how to simulate t-tests to learn which p-values you can expect, calculate likelihood ratio's and get an introduction the binomial Bayesian statistics, and learn about the positive predictive value which expresses the probability published research findings are true. We will experience the problems with optional stopping and learn how to prevent these problems by using sequential analyses. You will calculate effect sizes, see how confidence intervals work through simulations, and practice doing a-priori power analyses. Finally, you will learn how to examine whether the null hypothesis is true using equivalence testing and Bayesian statistics, and how to pre-register a study, and share your data on the Open Science Framework. All videos now have Chinese subtitles. More than 30.000 learners have enrolled so far! If you enjoyed this course, I can recommend following it up with me new course "Improving Your Statistical Questions"

COURSE_DESCRIPTION: Today's business climate is characterized by intense competition coupled with flattened hierarchies, multi-dimensional teams, and a diverse working environment. This reality requires a repertoire of leadership practices and skills for anyone responsible for getting results with and through others. Recent studies confirm the leader is the prime factor for creating a productive work environment and contributing to higher employee retention. The Active Leadership Model provides the concepts, context, and perspective for active leaders. This course will cover the key aspect of KUBA, the tasks, and the ability and motivation for performance. You'll then learn about the difference leadership styles used according to individual abilities and motivation. You'll learn to recognize time and the importance of progression as well as how to adapt the detail and frequency of task-related information with the ability and motivation of the employee. Finally, you'll reflect on the compelling reasons for becoming a better leader. This course was originally created by Global Knowledge (GK).

COURSE_DESCRIPTION: This 13-video course explores recommendation engines, systems which provide various users with items or products that they may be interested in by observing their previous purchasing, search, and behavior histories. They are used in many industries to help users find or explore products and content; for example, to find movies, news, insurance, and a myriad of other products and services. Learners will examine the three main types of recommendation systems: item-based, user-based or collaborative, and content-based. The course next examines how to collect data to be used for learning, training, and evaluation. You will learn how to use RStudio, an open-source IDE (integrated development environment) to import, filter, and massage data into data sets. Learners will create an R function that will give a score to an item based on other user ratings and similarity scores. You will learn to use R to create a function called compareUsers, to create an item-to-item similarity or content score. Finally, learn to validate and score by using the built-in R function RMSE (root mean square error).

COURSE_DESCRIPTION: Calculus is a branch of mathematics that deals with continuous change and with how the output of a function changes when the inputs into that function change by vanishingly small amounts. Calculus has wide-ranging applications - in optimization, machine learning, economics, and medicine. You will start this course by defining a derivative in terms of its mathematical formula and interpreting that derivative of a function at a point in two ways: as the slope of the tangent line to the function at that point or as the instantaneous rate of change of that function at that point. You will also apply these concepts to a constant function, verify that its derivative is zero, and understand the reason behind it. By the time you finish this course, you'll have a good foundation in the basics of differential calculus.

COURSE_DESCRIPTION: To address global poverty - do we really not have enough resources or do we not have the right tools to allocate our resources? The tools of finance, when applied correctly, can be an enabler of social and environmental outcomes. This course is designed to give you the ability to build innovative financing strategies that work towards outcomes such as financial inclusion, access to energy and access to education. The innovative finance process has five key components. It starts with identifying the outcomes you are looking to achieve and next moves on to due diligencing your issue area using techniques like design thinking to make sure you are designing with the end user. Next you must map all of the resources available for your outcome and then discover opportunities to augment these through business model innovation, multi-stakeholder partnerships and innovative financial structures. Finally, the last step is to put all of these pieces together to design an innovating financing strategy. Each week dives into a component of the process using examples and real case studies from social entrepreneurs, non-profits, development funders, impact investors, governments, foundations and more. Over five weeks you'll learn about new types of revenue creation, financing approaches, business models and partnerships. By the end of the course, you'll have the ability to hack finance for social change. Watch the course trailer <https://www.youtube.com/watch?v=tSMUoCJgqkw>

COURSE_DESCRIPTION: As scrum master, you don't just have a responsibility to the work and processes in developing a product, you also have a key responsibility to the Scrum team. In this course, you will learn about servant leadership and how it provides value in Scrum product development initiatives. You will also learn about challenges the team may encounter, or even create, so you can mitigate them. These challenges might include common anti-patterns that you need to consider, common Scrum violations, and technical debt. Finally, you will learn about team dynamics, attributes of effective Scrum teams, and effective team formation. Upon completion, you'll be able to recognize key characteristics and best practices for serving the Scrum team as a scrum master.

COURSE_DESCRIPTION: Whether you want to call it DevSecOps or SecDevOps or DevOps with a security angle, siloed security is no longer an option. Gone are the days where the security team can hold all the relevant knowledge for an IT organization and personally enact all the security checks on software code or infrastructure hosting applications. There are too many new applications and features being deployed, too much infrastructure spun up and down daily. Everyone needs to chip in, and the only way they can do that is if companies properly train members of cross-functional teams on what it means to build and deploy secure software. This webinar is for leaders and decision makers in technology organizations. Particularly those in the midst of or thinking about a DevOps transformation. Brought to you by Skillsoft and Security Innovation, we call this an executive's guide because we're not going to be covering the how-tos of implementation from a DevSecOps perspective. We're really going to be focusing on getting your organization and your teams prepared for it. Agenda: DevOps vs. Traditional Approaches DevSecOps in Practice Managing / Making Room for DevOps

COURSE_DESCRIPTION: Continuous automation in CloudOps provides many benefits, but its impact doesn't come without disadvantages. In this course, you'll explore the advantages and disadvantages of several areas of automation, including continuous product delivery, infrastructure provisioning automation, Zero Code multi-cloud automation, and edge networking automation. Next, you'll investigate how to establish an automation governance model and the role of automation and multi-cloud orchestration in moving cloud workloads and managing infrastructure environments. You'll identify prominent multi-cloud management tools and typical use cases of disposable and repeatable infrastructure. Moving on, you'll configure Terraform for automated workflows, use Jenkins and Terraform on Amazon EKS to configure continuous integration, and use Ansible and Terraform to set up

environments. Lastly, you'll deploy applications to AWS and configure Cloudify to integrate with an automation toolchain and use a single CI/CD plugin.

COURSE_DESCRIPTION: Ziel dieser Schulung ist es, einen Überblick über IoT-Technologien, die Verwendung verschiedener Technologien in der Internet of Things (IoT) -Architektur und die Lücken in der Gesamtkonfiguration / -architektur der gesamten IoT-Plattform zu geben. IoT-Sicherheit ist der Technologiebereich, der sich mit dem Schutz verbundener Geräte und Netzwerke im Internet der Dinge befasst. Dabei wird einem System aus miteinander verbundenen Computergeräten, mechanischen und digitalen Maschinen, Objekten, Tieren und / oder Menschen eine Internetverbindung hinzugefügt. Jedes "Ding" erhält eine eindeutige Kennung und die Möglichkeit, Daten automatisch über ein Netzwerk zu übertragen. Wenn Geräte eine Verbindung zum Internet herstellen können, sind sie einer Reihe schwerwiegender Sicherheitslücken ausgesetzt, wenn sie nicht ordnungsgemäß geschützt sind.

COURSE_DESCRIPTION: This is an introductory course on financial and management accounting. The first part of this course will introduce the basic accounting principles and accounting terminology to understand how a company keeps control of financial events and provides information on how it is performing. These basic concepts will support the analysis of financial reports companies prepare. We will go through balance sheet, income statement, financial statement, learning how to read and analyze them. The course will also provide the basis of management accounting introducing some techniques (e.g. break- even analysis or NPV) to support managers in making short-term and long-term decisions, such as "Is it convenient to dispose a production machine and buy a new one?" or "How many products should the company sell in order to break-even?" The course will bring examples and case studies that will help students better understand the practical applications of the basic accounting principles and techniques. At the end of the course, students will be able to read, understand and analyze financial documents and to apply simple techniques to analyse costs and evaluate capital investment decisions.

COURSE DESCRIPTION: Migrating from monolith to stable microservices architectures require robust, scalable, and containerized deployment and orchestration capabilities. In this course, you'll explore the challenges of transforming from monolith applications to microservices, the benefits of microservices and container orchestration, and various container orchestration deployment options for managing containerized deployments. You'll investigate the evolution, key features, and components of Kubernetes, identifying the pros and cons of the recommended installation and configuration options for Kubernetes and establishing the key criteria for evaluating Kubernetes solutions for enterprise workloads, including using Pods to manage multiple containers. Additionally, you'll install "all-in-one" Kubernetes using containers to run Kubernetes components as Docker containers on a single host. You'll use kubectl to run applications on Kubernetes clusters. Lastly, you'll create a service that targets TCP port 80 on any Pod and expose this service onto an external IP address.

COURSE DESCRIPTION: This week, Stan teaches you about patents. It turns out, they're patently complicated! So, patents have some similarity to copyright, in that they grant a limited monopoly to people who invent things. The key difference in patents and copyright is that patents are for THINGS. Copyright is for an idea. So, if you've come up with a great new invention, like for example, a condiment gun, you should get a patent. We'll also talk about some of the limitations and problems of patents, including patent trolls. Please note that this course material includes content gathered from external websites which may fall outside your company network. Please consult with your IT department policies with respect to any restrictions in viewing content from external websites.

COURSE DESCRIPTION: Visio allows you to create several types of diagrams and graphics. But in order to get the most from the application, you will need to understand its interface. In this 9-video course, recorded in a Visio Online Plan 2 environment, learners will discover Visio's interface, learn how to navigate between multiple documents, and use the zoom function. You will begin the course by observing how to find, open, and close the Visio application, and then exploring the interface and understanding how it is organized. Next, follow an introduction to the Zoom tool, which is an important function in Visio, and then learn how to use multiple documents simultaneously. Discover how to modify the project document display, personalize certain display options in Visio, and also customize the Quick Access toolbar. As the course concludes, you will observe how to customize the ribbon by adding, editing, and removing commands from the ribbon and customizing its display, and configuring the save options.

 COURSE_DESCRIPTION: Explore principles of good design and the three main categories of design patterns in this 11-video course. Examine anti-patterns, including their uses and what to avoid while writing code, then discover how to install NodeJS and NPM for MacOS and Windows. Key concepts covered in this course include how design patterns can be reusable solutions to common problems to the same situations that have come up repeatedly, and how programmers have developed design patterns in order to deal with these situations; principles of good design and architecture; and learning about anti-patterns as shortcuts that seasoned developers use to define or describe a bad solution to a problem that resulted in a poor outcome. You will learn about the uses of and programming of anti-patterns; learn Javascript-specific anti-patterns; and observe how to compare different types of design patterns, including creational patterns, structural design patterns, and behavioral design patterns. Finally, learn how to install required tools on a MacOS machine and how to install required tools on a Windows machine.

COURSE_DESCRIPTION: Much of the world's data resides in databases. SQL (or Structured Query Language) is a powerful language which is used for communicating with and extracting data from databases. A working knowledge of databases and SQL is a must if you want to become a data scientist. The purpose of this course is to introduce relational database concepts and help you learn and apply foundational knowledge of the SQL and R languages. It is also intended to get you started with performing SQL access in a data science environment. The emphasis in this course is on hands-on and practical learning. As such, you will work with real databases, real data science tools, and real-world datasets. You will create a database instance in the cloud. Through a series of hands-on labs, you will practice building and running SQL queries. You will also learn how to access databases from Jupyter notebooks using SQL and R. No prior knowledge of databases, SQL, R, or programming is required. Anyone can audit this course at no charge. If you choose to take this course and earn the Coursera course certificate, you can also earn an IBM digital badge upon successful completion of the course.

COURSE_DESCRIPTION: This course is the fourth course in the specialization about learning how to develop video games using the C# programming language and the Unity game engine on Windows or Mac. Why use C# and Unity instead of some other language and game engine? Well, C# is a really good language for learning how to program and then programming professionally. Also, the Unity game engine is very popular with indie game developers; Unity games were downloaded 16,000,000,000 times in 2016! Finally, C# is one of the programming languages you can use in the Unity environment. This course assumes you have the prerequisite knowledge from the previous three courses in the specialization. You should make sure you have that knowledge, either by taking those previous courses or from personal experience, before tackling this course. The required prerequisite knowledge is listed in the "Who this class is for" section below. Throughout this course you'll build on your foundational C# and Unity knowledge by developing more robust games with better object-oriented designs using file input and output, inheritance and polymorphism, and event handling. This course gives you even more tools to help you build great games with C# and Unity! Module 1: Start using files to implement your Unity games Module 2: Learn how inheritance and polymorphism help us write less code for our games Module 3: Implement event handling to make better object-oriented designs and add menus to your Unity games Module 4: Explore the complete implementation of a small Unity game Module 5: Complete final peer review "Unity" is a trademark or registered trademark of Unity Technologies or its affiliates in the U.S. and elsewhere. This course is an independent work and is not sponsored by, authorized by, or affiliated with Unity Technologies or its affiliates

COURSE_DESCRIPTION: Machine learning (ML) is one of the fastest growing areas in technology and a highly sought after skillset in today's job market. The World Economic Forum states the growth of artificial intelligence (AI) could create 58 million net new jobs in the next few years, yet it's

estimated that currently there are 300,000 AI engineers worldwide, but millions are needed. This means there is a unique and immediate opportunity for you to get started with learning the essential ML concepts that are used to build AI applications - no matter what your skill levels are. Learning the foundations of ML now, will help you keep pace with this growth, expand your skills and even help advance your career. This course will teach you how to get started with AWS Machine Learning. Key topics include: Machine Learning on AWS, Computer Vision on AWS, and Natural Language Processing (NLP) on AWS. Each topic consists of several modules deep-diving into variety of ML concepts, AWS services as well as insights from experts to put the concepts into practice.

COURSE_DESCRIPTION: Web services for Java applications based on the REST technology provide a normalized and scalable means to set up client communication with external applications. This course demonstrates how to integrate RESTful applications with a relational database so that clients can interact with it and perform create, read, update, and delete (CRUD) operations on it. Learn how to link a MySQL database with a RESTful app. Set it up to respond to a GET request by looking up a table in your database. Advancing from read operations, establish add, update, and delete operations, defining methods that can respond to POST, PUT, and DELETE requests. By the end of the course, you'll be able to facilitate your clients to use your web service app to interact with a database.

COURSE_DESCRIPTION: Russian is considered to be one of the world's most difficult languages. This course aimed at helping those who are interested in understanding the Russian language. Every unit of the course consists of several parts explaining vocabulary, phonetics (pronunciation), grammar, and provides examples of simple dialogues in Russian. Russian for Beginners 2 continues to explain the basics of Russian to those who have already completed the first part of the course (Russian for Beginners 1). Upon completion of the course students will have learned: the main Russian verbs of movement as well as their conjugation in the Past, Present and Future tense; the formation of Genitive, Dative and Prepositional case of Russian nouns, pronouns and adjectives; the formation of cardinal and ordinal numerals. The course contains more than 150 new words and conversational phrases providing the learner with a basic vocabulary for everyday communication on such topics as shopping, traveling, life in a city and personal activities.

COURSE_DESCRIPTION: In this hands-on project, you will learn about Generative Adversarial Networks (GANs) and you will build and train a Deep Convolutional GAN (DCGAN) with Keras to generate images of fashionable clothes. We will be using the Keras Sequential API with Tensorflow 2 as the backend. In our GAN setup, we want to be able to sample from a complex, high-dimensional training distribution of the Fashion MNIST images. However, there is no direct way to sample from this distribution. The solution is to sample from a simpler distribution, such as Gaussian noise. We want the model to use the power of neural networks to learn a transformation from the simple distribution directly to the training distribution that we care about. The GAN consists of two adversarial players: a discriminator and a generator. We're going to train the two players jointly in a minimax game theoretic formulation. This course runs on Coursera's hands-on project platform called Rhyme. On Rhyme, you do projects in a hands-on manner in your browser. You will get instant access to pre-configured cloud desktops containing all of the software and data you need for the project. Everything is already set up directly in your internet browser so you can just focus on learning. For this project, you'll get instant access to a cloud desktop with Python, Jupyter, and Keras pre-installed. Notes: - You will be able to access the cloud desktop 5 times. However, you will be able to access instructions videos as many times as you want. - This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In this course, professionals at all levels of an organization will learn the best ways to engage an audience they want and need by smartly implementing their important, strategic stories and information and by using proven tools and techniques to enhance an audience's experiences and interest. Content Strategy is a conversation that provides thought-leadership. It starts a "conversation" with users and stakeholders inside and outside an organization. Conversations are the natural way people think about complex issues. Conversations also enable people to develop "stories," which lead to understanding and helpful mental pictures. Content Strategy practitioners are at all levels of the best enterprises - in all departments and sectors from the top leader to the newcomer in the ranks. In this complex information age, forward-thinking employees know that if they and their organizations are to thrive, they need to go beyond their job descriptions. They must master the most demanding communications frontier - creating engaging, strategic, honest stories and information that is valued by their most important audiences. In turn that will make their enterprise stand out. Regardless of their area of work, position or expertise, Content Strategy practitioners know how to use words, pictures, video, and social and mobile media to interact with their most important constituents with trustable, actionable information that the audience values and will use. The strategic content they produce enhances the user's lives and deepens their understanding and engagement with the organization. Guest lecturers in this course include: -- Rachel Davis Mersey, Associate Professor, Medill, Northwestern -- Ed Malthouse, Theodore R. and Annie Laurie Sills Professor of Integrated Marketing Communications, Medill, Northwestern -- Bobby Calder, Charles H. Kellstadt Professor of Marketing & Director of the Center for Cultural Marketing, Kellogg, Northwestern -- Steven Duke, Associate Professor, Medill, Northwestern -- Janice Castro, Assistant Professor Emerita, Medill, Northwestern

COURSE_DESCRIPTION: The SC-900 Microsoft Security, Compliance, and Identity Fundamentals exam is for individuals who want to familiarize themselves with the basics of security, compliance, and identity across cloud-based and other Microsoft services. In this course, examine security and compliance concepts and methodologies, including the Zero Trust methodology, shared responsibility model, Cloud Adoption Framework, and defense in depth. Next, explore common threats, such as advanced persistent threats, phishing attacks, distributed denial of service (DDoS) botnets, remote access Trojans, ransomware, and viruses and worms. Finally, learn about encryption and hashing. This is one of a collection of courses that fully prepare the learner for the SC-900 Microsoft Security, Compliance, and Identity Fundamentals certification exam.

COURSE_DESCRIPTION: Risk management ensures that realized threats have minimal impact on business operations. This 16-video course explores how security controls address security objectives, as well as the IT audit process, and how to configure high availability for cloud services. This course helps learners prepare for the Certified Cloud Security Professional exam. Key concepts covered include: risk as it applies to cloud services and underlying infrastructure, and risk analysis and management posture regarding cloud computing; integration of information security and risk management activities into a formal framework; threats and attack vectors associated with cloud services and infrastructure; and threat mitigation and attack handling techniques. Next, learn to generate an Azure storage account shared access signature, how to deploy an Azure network security group; and how to configure an Azure role-based access control (RBAC) to control virtual machine (VM) management. Finally, learn about certain auditing techniques and responsibilities and various types of audit reports. Learn how to conduct an Azure VM failover test; to deploy an Azure VM scale set; and to deploy an Azure load balancer.

COURSE_DESCRIPTION: Led by Dan Gordon, a University of Maryland faculty member who teaches business modeling in the National Science Foundation's I-Corps Program, this course enables you to develop and apply the Business Model Canvas tool to scope a corporate challenge or opportunity. You will learn how to identify and communicate the nine elements of a business model: Customer Segments, Value Propositions, Channels, Customer Relationships, Revenue Streams, Key Resources, Key Activities, Key Partners, and Cost Structure. Your completed project will be a customer-validated Business Model

Canvas that outlines the business case for a new product or service to address your selected challenge or opportunity in a corporate context. This project is derived from four areas of focus in the course: • Identifying how to create and deliver value for existing and future customers of the company; • Learning how to extract value for the corporate venture in a sustainable fashion; • Conducting in-depth interviews to guide the customer discovery process for your corporate venture; and • Developing business models that encompass the product or service, customers, and economic engine that deliver on the corporate venture objectives. Try this course for FREE at <https://www.coursera.org/learn/corporate-entrepreneurs-business-model>

COURSE_DESCRIPTION: Explore and compare the various client-side operating systems and their installation processes. In this course you will learn: to identify and define what an operating system is; to differentiate between 32-bit and 64-bit processing; to differentiate between operating system vendors; and to understand the differences between the major smartphone and tablet operating system vendors. Learners also observe how to update limitations and compatibility concerns for vendor-specific operating systems; to identify the differences between versions of Microsoft operating systems; to determine appropriate editions of Windows client, based on customer profiles; and to configure desktop styles and user interfaces. You will learn how to choose the appropriate boot configuration based on needs; to choose appropriate types of installation methods based on deployment needs; to implement network and image-based deployments; how to recover a failed installation; and how to compare common operating system architectures, installation sources, and targets. The course concludes with exercises on aspects of common operating systems, including making distinctions between 32-bit and 64-bit architecture. Course helps prepare for CompTIA A+ certification exam 220-1002

COURSE_DESCRIPTION: If your organization is using or considering using Scrum for key IT initiatives, as a tech leader you'll likely be either leading or participating directly in at least some of the Scrum activities. In this course, you will explore the sprint planning event, including the key

characteristics of sprint planning and the best practices for conducting a sprint planning event. Next, you will learn about the daily scrum, one of the most important ways your team will communicate throughout a scrum initiative. Then you will examine the distinguishing features and best practices of the sprint review and retrospective events. Finally, you will focus on the product backlog refinement event and both team-related and meeting best practices. Upon completion, you will be familiar with the key events used in the Scrum framework and best practices for carrying them out

COURSE_DESCRIPTION: This course will provide you with technical hands-on knowledge of NoSQL databases and Database-as-a-Service (DaaS) offerings. With the advent of Big Data and agile development methodologies, NoSQL databases have gained a lot of relevance in the database landscape. Their main advantage is the ability to effectively handle scalability and flexibility issues raised by modern applications. You will start by learning the history and the basics of NoSQL databases and discover their key characteristics and benefits. You will learn about the four categories of NoSQL databases and how they differ from each other. You will explore the architecture and features of several different implementations of NoSQL databases, namely MongoDB, Cassandra, and IBM Cloudant. You will then get hands-on experience using those NoSQL databases to perform standard database management tasks, such as creating and replicating databases, loading and querying data, modifying database permissions, indexing and aggregating data, and sharding (or partitioning) data.

COURSE_DESCRIPTION: Explore how iterating over elements using for loops can be controlled using the break and continue statements in Python. Creating sequences from other sequences using comprehensions is also covered in this 9-video course. Key concepts covered here include how to terminate a for loop when a specific condition is met using the break statement; learning how the break statement affects the code in the else block of a for loop; and observing how to skip an iteration of a for loop when a specific condition is met using the continue statement. Next, learn how to use the continue statement along with the break statement within the same for loop; learn the fact that no action is performed under specific conditions by using the pass statement; and create a list out of the contents of another list using a comprehension. Finally, you will learn about conditions in list comprehensions in order to filter elements used in the source list and to define values in the newly created list.

COURSE_DESCRIPTION: App Engine is a fully managed serverless platform that provides a managed environment and custom runtimes to build highly scalable applications in Node.js, Java, Ruby, C#, Go, Python, and PHP without any infrastructure concerns. Use this course to become familiar with using Google App Engine. Learn how to deploy multiple API versions to the same App Engine version and structure the services and related resources of applications for App Engine. Explore the different methods for splitting traffic in App Engine, the various mechanisms for securing web applications on App Engine, and the key features of Google Cloud's operations suite. Finally, work with web apps, data, and testing in App Engine and configure monitoring and logging for Google Serverless applications. When you're done with this course, you'll know when and how to use App Engine during serverless implementation.

COURSE_DESCRIPTION: Selenium is one of the most famous UI test automation tool which works well with the TestNG testing framework. Data-Driven testing is test design and execution strategy where test data is external to your functional tests. One of the ways is to keep the test data in external source like a database. The library used to read data from the database (MySQL) is JDBC (My Sql Connector) In this two hours guided project, through hands-on, practical experience, you will go through concepts writing reusable and structure code, writing utilities to read test data from an external source like database, and derive test cases through these test data.

COURSE_DESCRIPTION: How do gamers cause things to happen when they hit buttons on their controller? How does the computer keep track of gamer's scores? This class teaches the concepts of nested loops, events, and variables. For each concept, we'll start by helping you connect real-world experiences you are already familiar with to the programming concept you are about to learn. Next, through a cognitively scaffolded process we'll engage you in developing your fluency with problem solving with nested loops, events, and variables in a way that keeps frustration at a minimum. Along the way you will learn about the common challenges or "bugs" students have with these concepts as well as ways to help them find and fix those concepts. You'll also be guided in running classroom discussions to help students develop deeper understanding of these concepts. Finally, you'll learn how to develop low-frustration learning experiences for learning programming via Parsons' Problems. Additionally, you will create an email to either a counselor, administrator or parent organization to help them understand the value of all students taking computer science.

COURSE_DESCRIPTION: Cybercriminals use post-exploitation techniques to maintain a level of access while they attempt to perform other actions during an open session. In this course, you'll learn about post-exploitation techniques and tools. You'll explore common post-exploitation tools such as Empire, Mimikatz, and BloodHound. Next, you'll examine post-exploitation techniques such as lateral movement, privilege escalation, and upgrading a restrictive shell. You'll learn techniques used to maintain foothold and persistence using trojans, backdoors, and daemons. Finally, you'll learn detection avoidance techniques, as well as enumeration techniques used to extract users, groups, forests, sensitive data, and unencrypted files. This course is one of a collection that helps prepare learners for the CompTIA PenTest+ (PT0-002) certification exam.

COURSE_DESCRIPTION: In this first course of the Python, Bash and SQL Essentials for Data Engineering Specialization, you will learn how to set up a version-controlled Python working environment which can utilize third party libraries. You will learn to use Python and the powerful Pandas library for data analysis and manipulation. Additionally, you will also be introduced to Vim and Visual Studio Code, two popular tools for writing software. This course is valuable for beginning and intermediate students in order to begin transforming and manipulating data as a data engineer.

COURSE_DESCRIPTION: Specific server roles have different uses and software installation requirements. Server technicians need to know about these as well as how to manage servers locally and remotely. Use this mostly practical course to learn what's involved in managing servers and deploying server roles. Examine several GUI and command-line management tools and standards. Then, practice installing a Windows and Linux on-premises virtual machine (VM). Remotely manage the Windows server using RDP and the Linux server through SSH. And learn how to configure SSH public key authentication. Moving on, deploy specific server roles, such as an email, web, hypervisor, and update server. Finally, configure VMs in the cloud. When you're done, you'll be able to install on-premises VMs, manage servers remotely, deploy server roles, and enable server updating. You'll also be more prepared for the CompTIA Server+ SK0-005 certification exam.

COURSE_DESCRIPTION: This free online course is one of 10 courses available in the Goldman Sachs 10,000 Women collection, designed for entrepreneurs ready to take their business to the next level. In this course you will gain the skills that will help you to plan how to best grow your business in future. You will learn how to identify business opportunities, and select the one which is the most progressive and forward-looking, assessing its feasibility. You will also be introduced to the Business Growth Plan (BGP), a strategic tool that will help you identify your business objectives and guide your business's growth. If you choose to take all 10 free online courses, the BGP will be your key takeaway from Goldman Sachs 10,000 Women. The 10,000 Women course collection offers a truly flexible online learning experience. You have the freedom to approach the program in any way that works for you - take any course, or combination of courses, to tailor your learning journey to your individual business growth needs. If you choose to take all 10 courses, you will explore all the key elements of your business and develop a thorough plan for your business's growth. Find out more about the Goldman Sachs 10,000 Women collection in the FAQs.

COURSE_DESCRIPTION: Aside from keeping a reliable shared copy of your source code, one of the main advantages of using source control is the ability to see all changes that have occurred and look at any version of the code from the past. In this course, you'll explore change history, file history, as well as how to find the source of changes, search for changesets, and undo changes with rollback. Nearly all operations in TFS version control depend on the system knowing the relationship of local files to server files, so you'll examine changing file mappings, using workspaces, and the features of local workspaces. You may not be responsible for management and administration of your organization's TFS server, but being aware of the available capabilities can help you make good decisions when setting or changing policies. To finish out this course, you'll learn how to secure code access, configure check-in options, clean up local folders, and interact with TFS outside Visual Studio. This course was originally created by Global Knowledge (GK).

COURSE_DESCRIPTION: In this 9-video course, learners will discover the importance of implementing security governance in an organization. Explore differences between security governance and security management, types of governance frameworks, and the roles of senior management. Also covered are ensuring good IT security governance, risks and opportunities, security governance programs, and governance framework structure. Key concepts covered in this course include how to distinguish between security governance and security management; learning about different types of IT governance frameworks including ISO 27001, PCI DSS, HIPAA (Health Insurance Portability and Accountability Act), ITIL, and COBIT; and learning the various roles and responsibilities of senior management in governance; learn the measures used to ensure good IT security governance including creating governance within an organization, delivering governance through the right stakeholders. Next, observe how to review governance on a periodic basis; learn the risks and opportunities in security governance and making sure the security policies are up to date; and examine the process of rolling out a security governance program. Finally, you will examine the structure of a governance framework.

COURSE_DESCRIPTION: In this course, you will learn about risk assessment techniques and how to implement a number of strategies that will ensure the protection of assets. You will learn about the relationship between assets, vulnerabilities, threats, and risks. You will also engage with a number of current case studies in the industry that illustrate the material. You will leave the course with skills relating to threat modeling and business continuity planning that have direct applications at your current job or in your future career.

COURSE_DESCRIPTION: Ansible allows you to add easy to understand automation to your DevOps environment. No special coding skills are needed to use this tool so your teams can quickly improve productivity. In this course, you will learn about Ansible's key components, the different applications of automation, and the features available within the Ansible platform. You will learn about Ansible's key tools and commands, orchestration, and how to use patterns as well as their limitations. You'll also identify how to use playbooks, and learn how to use Ansible Vault for encryption. Finally, you'll learn about the possible use cases for the Ansible toolset in a modern DevOps practice. Upon completion, you'll be familiar with key concepts and be able to perform basic operations in Ansible.

COURSE_DESCRIPTION: You may know how to implement continuous integration (CI) and continuous delivery (CD) in a single cloud environment, but what about more advanced environments? In this course, you'll explore the challenges of applying CI/CD techniques to hybrid and multi-cloud environments and the benefits and use cases for doing so. You'll examine the 12-factor multi-cloud CI/CD process, the critical components of integrated solution design, the prominent hybrid and multi-cloud architecture patterns, and tools to manage CI/CD processes. You'll then outline how to set up multi-cloud environments geared for CI/CD implementation and how to transition from traditional multi-cloud to secure CI/CD deployment. Next, you'll investigate enterprise CI/CD patterns for diversified hybrid and multi-cloud environments and how to build pipelines for multi-cloud application deployment. Lastly, you'll identify the different hybrid environments that can simplify multi-cloud CI/CD processes.

COURSE DESCRIPTION: In this 13-video course, learners will explore the concept of NIO.2 (non-blocking I/O) architecture with a focus on Buffers, Channels, Charset, and Selector to perform various file operations, and then learn how to implement buffers in Java SE 11. You will recall the important attributes and methods of the Path and File classes; learn how to perform file I/O operations using NIO.2 classes, and perform metadata management using NIO.2. The next tutorial involves walking a file tree using NIO.2, and then learning how to watch directories for changes. Continue by learning to recall the essential channels that support asynchronous I/O operations, and then move on to discovering how to use asynchronous Datagram Channels and Multicasting. You will also examine how to implement completion handler to replace future objects. In the final tutorial in the course, learners will discover how to use the new methods that were added in Java SE 11 in the java.nio.file.Files class. This is one course is a series to prepare for the 1Z0-816: Java SE 11 Programmer II certification exam.

COURSE_DESCRIPTION: Adopting the foundational techniques of natural language processing (NLP), together with the Bidirectional Encoder Representations from Transformers (BERT) technique developed by Google, allows developers to integrate NLP pipelines into their projects efficiently and without the need for large-scale data collection and processing. In this course, you'll explore the concepts and techniques that pave the foundation for working with Google BERT. You'll start by examining various aspects of NLP techniques useful in developing advanced NLP pipelines, namely, those related to supervised and unsupervised learning, language models, transfer learning, and transformer models. You'll then identify how BERT relates to NLP, its architecture and variants, and some real-world applications of this technique. Finally, you'll work with BERT and both Amazon review and Twitter datasets to develop sentiment predictors and create classifiers.

COURSE_DESCRIPTION: Offering an omnichannel customer experience (CX) is a must in today's digital world, but implementing it comes at a cost. In this course, you will learn about how omnichannel affects the CX, and in turn, how the CX drives omnichannel innovation. You will also learn about using data analysis and customer journey mapping to uncover customer expectations, and how these can be used to estimate Customer Lifetime Value (CLV) and to help tailor an agile approach to successful omnichannel design and investment. Finally, you'll learn about the challenges to an omnichannel approach, such as data privacy and protection, and how to mitigate them.

 COURSE_DESCRIPTION: Continuous integration and continuous delivery (CI/CD) include automated and repeatable processes that streamline the software development life cycle (SDLC). In this course, you'll examine the AWS CodeCommit service that provides Git-based source code versioning infrastructure for CI/CD. You will begin by exploring the CI/CD pipeline concept, the DevOps model, the AWS CodeCommit service, and how to identify use cases for CodeCommit. Next, secure access to the AWS CodeCommit service, create a repository, and explore various operations using standard Git-based commands. Moving on, you will work with branches, merging, and pull requests and set Identity and Access Management (IAM) policies for fine-grained control of CodeCommit repositories. Finally, configure repository event notifications and AWS Lambda triggers for responding to CodeCommit events. This course is one of a collection of courses that prepares you for the AWS Certified DevOps Engineer - Professional (DOP-C01) certification exam, covering objectives from Domain 1 of the exam topics.

 COURSE_DESCRIPTION: Objective This Specialization is intended for finance professional who are seeking to develop skills and understanding of FinTech. Through these four courses, you will cover FinTech foundations and overview, FinTech security and regulation (RegTech), FinTech risk management and FinTech disruptive innovation: implications to society, which will prepare you to become more confident and persuasive in your ability to analyze and make decisions regarding how to react to these changes. Key Benefits You will earn a FinTech specialization certificate offered by the HKUST and Coursera after completing all four courses. You can add to your resume and LinkedIn profile which can benefit to your career in finance

industry. Also you will gain knowledge and insights in FinTech for your current and future career development in Finance industry. Who is this Specialization for? Everyone who is interested in FinTech and wants to learn more is welcome and will benefit from this course, and is useful for finance executives, government officers, entrepreneurs, consumers and investors of FinTech. To know more... Find out more and watch the FinTech specialization promotional video on Youtube. <https://youtu.be/MmqNlp4iuZE>

COURSE_DESCRIPTION: When organizations are recruiting, one of the top skills they look for in a candidate is their ability to collaborate. Today's hiring managers know that collaboration leads to improved problem-solving, increased productivity and promotes interconnected team members who share expertise and learn from one another. Defining collaboration is tricky because it means different things across industries, departments and roles. In this course you'll learn about the meaning of collaboration, the concept of teaming in collaboration, and best practices for being a good team member and for being a successful collaborator. You'll examine conflict management styles to determine which one is yours, and the impact on your team.

COURSE_DESCRIPTION: Name resolution resolves fully qualified domain names (FQDNs) to IP addresses and is the most common use of the Domain Name System (DNS). Use this course to get familiar with DNS terminology and learn more about managing DNS name resolution using AWS Route 53. Start by examining DNS record types such as A, AAAA, PTR, and MX. You'll then discover the steps for deploying and managing public and private hosted DNS zones using Route 53 with the help of the AWS Management Console, AWS CLI, and AWS Tools for PowerShell. Next, you'll review various types of DNS routing policies and work with the Route 53 resolver. You'll wrap up by exploring how to configure custom DNS servers. Once you're done with this course, you'll have a solid grasp of DNS name resolution and be a step further in preparing for the AWS Certified SysOps Administrator - Associate exam, SOA-C02.

COURSE_DESCRIPTION: This course can also be taken for academic credit as ECEA 5348, part of CU Boulder's Master of Science in Electrical Engineering degree. M2M and IoT Interface Design and Protocols is the third of three classes in the Embedded Interface Design (EID) specialization, an online version of the on-campus EID class taught in graduate embedded systems design. This course is focused on connecting devices to each other and to the cloud to create prototypes and actual systems that flow data from devices to consumers. The class includes an introduction to M2M (Machine-to-Machine) and IoT (Internet of Things) concepts, using the cloud to develop IoT systems (specifically AWS (Amazon Web Services) and its IoT framework), a review of common communications protocols at every level of connected devices, and other IoT design concerns such as security, message queuing approaches, and the use and design of APIs and microservices. The content ranges from general design best practices to specifics for select tools and methods, but all are presented to support developing embedded devices in IoT applications. The class includes practical projects that let you try some of standard methods in software development of prototype graphical user interfaces for devices using AWS, Python, and optionally NodeJS. This course can be taken for academic credit as ECEA 5348, part of CU Boulder's Master of Science in Electrical Engineering degree.

COURSE_DESCRIPTION: Google Sheets includes built-in formulas to extract and analyze data. First, you will get to know your data by identifying data entries with formulas. Then you will discover how to work with some of these formulas on both numeric and text values. For example, you will learn how to retrieve date information as well as display and retrieve information about your data entries. You are also able to find the largest and smallest values in a list, as well as separate your data. Alternatively, you can combine data and compare two lists by using the VLOOKUP function. You can also use the HLOOKUP function to insert data. Lastly, you can identify errors in formulas by using the IFERROR function.

COURSE_DESCRIPTION: Innovation goes beyond technology, products and processes. The new competitive landscape requires another, more holistic and strategic perspective, based on the concept of business models. This course gives you access to the Odyssey 3.14 approach, a pioneering framework that will help you invent or reinvent business models. This highly innovative approach has been developed by Laurence Lehmann-Ortega and Hélène Musikas and has proven to be a very valuable methodology for start-up entrepreneurs, business unit managers and intrapreneurs alike. It offers a practical and highly effective framework and toolbox to create, invent or reinvent business models in a very disciplined way. The approach starts with a deep dive into the 3 pillars of the business model: - The value proposition (who are our customers and what are we offering them?) - The value architecture (how are we organized in order to deliver this value proposition to our customers in due time) - The profit equation (how the alignment between the first 2 pillars generates a profit) 14 directions are then explored in order to invent or reinvent a business model. Examples of the directions include "reducing clients overall costs", "modifying the revenue stream", "introducing a third party", "eliminating a step in the value chain", and "exploring new resources". Illustrated by numerous examples, both iconic (Ikea, Tetra Pack, Grameen Bank...) and more recent (Airbnb, Zopa, Drive Now...), these directions stimulate your creativity to rigorously explore all possible innovation paths. Innovation becomes an adventure, an odyssey... hence the name of the approach! Odyssey 3.14 is the result of over 15 years of research, consulting and teaching. Over 150 companies that have successfully invented or reinvented their business model have been thoroughly analyzed and will inspire you to develop your own new, innovative business model. This course is a part of the MSIE program at HEC. If you liked it, do not hesitate to consult the other courses of the program.

COURSE_DESCRIPTION: They are an HR manager's worst nightmare: employees who call attention to themselves and the company through rude, inappropriate, racist or sexually abusive behavior online. These are people who simply don't understand that their online persona and actions can lead back to their place of work. And it's often up to HR to untangle the workplace impact and implications of unprofessional online behavior and how the company should respond to it. Please note that this course material includes content gathered from external websites which may fall outside your company network. Please consult with your IT department policies with respect to any restrictions in viewing content from external websites.

COURSE_DESCRIPTION: Welcome to Supply Chain Analytics - the art and science of applying data analytics to assess and improve supply chain performance! A supply chain is a complex system with conflicting objectives of cost efficiency and customer satisfaction. Supply chain management is becoming increasingly data driven. Through the real-life story and data of a major US telecommunication company, you will learn the analytics tools / skills to diagnose and optimize a supply chain. Upon completion of this course, you will be able to 1. Use data analytics to assess the impact of various strategies on all aspects of a supply chain, from inventory, shipping, to warehouse order fulfillment, store operations and customer satisfaction. 2. Customize the supply chain strategy by product to improve the overall cost efficiency without sacrificing customer service. 3. Obtain hands-on experience on the application and financial impact of analytics in integrated supply chain and logistics planning. VASTA (name disguised) is a major wireless carrier in the US selling cell phones through a national network of retail stores. Recently, it wrote off a huge amount of obsolete inventory each year and was suffering a significant cost inefficiency in an increasingly stagnant market. VASTA must assess the competitive environment, and renovate its supply chain to stay competitive. At the end of this course, you will help VASTA save \$billions on supply chain cost and retain its leadership in a stagnant and saturated market. I hope you enjoy the course!

COURSE_DESCRIPTION: In this challenge, you will write several Transact-SQL queries to join data from multiple tables. First, you will launch Microsoft SQL Server Management Studio (SSMS), and then you will develop a query that joins two tables. Next, you will develop more specific queries that include joining tables by using table aliases. Finally, you will explore queries that join more than two tables. Note: Once you begin a challenge you will not be able to pause, save, or return to your progress. Please ensure you have set aside enough time to complete the challenge before you start.

COURSE_DESCRIPTION: A diverse and inclusive workforce is a business and human imperative. Regardless of your role or the size of your organization, everyone can play an active role in fostering diversity, equity, and inclusivity. Future business growth and success depend upon embracing inclusion and eliminating bias and discrimination in the workplace. However, for many organizations, building cultural and business practices that embrace workplace diversity can still feel elusive. Besides hiring diverse talent, what more can we do? This course is your guide to defining diversity, equity, and inclusion and advancing meaningful and impactful diversity, equity, and inclusion practices in your workplace. In this course, you'll learn to recognize key characteristics of DEI and practices for building and sustaining a healthy DEI culture. You'll also learn to identify behaviors that signal a breakdown in achieving an inclusive culture, key elements that enable diversity, equity, inclusion, and belonging to take root, and the steps for demonstrating agility and resilience in your DEI journey.

COURSE_DESCRIPTION: By the end of this project, you will be able to manage data efficiently in a specific database using MYSQL Workbench. You will be able to select data from tables from your database and use keywords in select statements such as LIMIT and Top. You will be able to update the data and filter them using where statements, and also apply conditions with different ways and keywords such as like, and, or, and between. Moreover, you will be able to apply the aggregate functions in your select statement and the grouping by, and finally, you will be able to join tables with each other using three different joins, left, inner and right join. A database management system stores organize and manage a large amount of information within a single software application. The Use of this system increases the efficiency of business operations and reduces overall costs. The world of data is constantly changing and evolving every second. This in turn has created a completely new dimension of growth and challenges for companies around the globe like Google, Facebook, or Amazon. This guided project is for beginners in the field of data management and databases. It provides you with the basics of managing the database and data. It equips you with knowledge of the first steps in data management and data extraction. This in turn has created a completely new dimension of growth and challenges for companies around the globe like Google, Facebook, or Amazon. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: All mobile applications display data to users and allow users to manipulate this data. The data can be stock quotes in a trading application, products in an e-commerce application, or restaurants and dishes in a food delivery application. This data is usually stored in a remote backend and exposed via HTTP REST endpoints. In this course, you will explore data persistence and create an e-commerce application using the Fake Store API. Then you will serialize and parse JSON data using the dart:convert library. Finally, you will set up and run your own HTTP server on your local machine and write code to handle GET, PUT, POST, and DELETE requests to view, update, add, and delete products from your app's catalog. When you are finished with this course, you will have the skills and knowledge to use the http and dart:convert libraries to access and update data from a remote server using HTTP requests.

COURSE_DESCRIPTION: This 13-video course allows learners to explore back-end languages, technologies, and frameworks used in front-end development. A good full stack developer should have a clear understanding of what languages and frameworks are available across the full stack, and the advantages and disadvantages of different language choices. Key concepts covered in this course include the back-end languages, technologies frameworks used in full stack development; how to configure the enterprise service bus, a software architecture connecting all services together using a bus-like infrastructure; and typical uses of enterprise service bus, including as a transaction manager, as a security manager, and as a proxy service. You will also explore JavaScript middleware frameworks (any software between an application and the network); compare SOAP versus REST API calls; and learn to compare SQL and NoSQL databases. Next, learn to configure NodeJS, Ruby on Rails; Django and Python, Docker containers, Firestore Document DB, ASP.NET and MVC; and review what you learn about back-end languages and technologies with a concluding exercise.

COURSE_DESCRIPTION: In this 1-hour long project-based course, you will learn how to add a myriad of text effects. You will learn how to make your text stand out from the background, how to add a border to your text and how to make a text outline. You will learn how to place an image inside text and how to place a gradient inside text. You will learn how to place text on a path and how to make 3D text. You will also learn how to add filters to your text to generate your own text effects. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: There are many things that can go wrong in today's networks. Fortunately, Cisco provides many classic troubleshooting tools that are built right into the software powering your devices. In this course, you learn about using ping, traceroute, debugs, traditional debugs, and SNMP. You might not need all of these tools all of the time, but having them as options is extremely important. Next, you'll move on to learn about Cisco system logging (syslog). You'll discover how to view syslog status messages at the command line and how to configure it to send messages to an internal buffer or a remote server that is designed to collect all of these messages. Finally, you'll examine a powerful packet analysis tool on your Cisco devices called NetFlow. This course can be used in preparation for the 350-401: Implementing and Operating Cisco Enterprise Network Core Technologies certification exam.

COURSE_DESCRIPTION: A vital step between gathering data and creating a report or visualization from it is transforming it into a cohesive form. Use this course to gain hands-on experience in transforming raw data for visualizations. Practice combining related data into a single table. While doing

so, perform a preliminary analysis of the data so you can imagine what visualizations can be created from it. Next, combine data from several files into a single table and conduct several transformations, from aggregating data to filtering out unnecessary rows. Finally, build a simple column chart visual from the contents of a Power BI table. While doing so, identify the different storage modes in Power BI and how they affect your visuals. Upon completion, you'll be able to prepare data for visualization using a variety of transformations.

COURSE_DESCRIPTION: ProfitBooks is an online accounting and payroll management software for small businesses. It allows users to organize offices finances and track all activities related to their business. This free online tool allows you to manage your money without accounting knowledge, grow sales with powerful invoicing tools, track inventory with ease, and run your business with total confidence. This project will take a deeper look into the Expenses tab in Profitbooks. We will explore the functions and features Profitbooks has to offer small business owners for managing their business expenses. In this project we will create a purchase order, record an expense for a project we add to the system, record a purchase, create a payment voucher and add a vendor into the system. ProfitBooks hosts your information on the secure and widely-trusted Amazon Web Services (AWS). The company has also implemented additional security features like secure-access, built-in firewalls, encrypted data storage and periodic back-ups to keep your data safe. You can read more about their security policy here: <https://www.profitbooks.net/cloud-data-security/>

COURSE_DESCRIPTION: Enjoy your favorite music and podcasts on your iOS 12 iPad. This course will show you how to get around the apps to find what you want to listen to or watch. You can also configure the apps' settings to improve the sound quality of your music or automatically remove the podcasts you've already listened to. Begin with how to navigate your music app's features. Next, configure music and podcast settings to optimize your listening experience. Then you can browse and manage your music collection and podcast files before playing them. Find and listen to a podcast, and finally, auto-delete what you no longer need.

COURSE_DESCRIPTION: Nije jednostavno dosljedno ostvarivati rezultate i postizati ciljeve bez obzira na poslovnu situaciju. Uspješno ostvarivanje navedenog uvelike ovisi o učinkovitom upravljanju vremenom. U ovom tečaju naučit ćete zašto je važno uskladiti vlastite ciljeve s ciljevima tvrtke, te kako to postići koristeći se radnim listom za usklađivanje ciljeva. Također ćete naučiti kako postavljati pitanja s ciljem pojašnjavanja ciljeva te kako utvrditi prioritete i odrediti im važnost na temelju tih ciljeva.

COURSE_DESCRIPTION: CrudRepository is a Spring Data interface that helps perform generic CRUD operations on specific types of repositories. Take this course to familiarize yourself with Spring Data's CrudRepository interface and modeling of relationships between entities in a Spring application. Delve into how CrudRepository is used to persist Java objects into a database table and examine Spring Data JDBC's Query annotations to map custom queries to CrudRepository methods. You'll then turn your attention to modeling relationships between entities in a Spring application and configure and implement many-to-one and many-to-many relationships. Having finished this course, you'll have a broader understanding of the features in the Spring Framework that make JDBC tasks easier.

COURSE_DESCRIPTION: JavaScript has rich language features for representing data and controlling the flow of programs. During this course, you will start by considering the seven data types defined by ECMAScript. After that you will explore how Java Script's type conversion functions work with its Comparison and Logical Operators. Next, learn how to declare and use IF Statements. From there you will observe how to employ a conditional operator statement to replace an IF/ELSE statement, and how to write a SWITCH statement that contains CASE and BREAK statements. Other topics include how to use FOR loops, WHILE loops, and DO WHILE loops; how to declare an array; how to insert, retrieve, and modify values. Finally, learn how to loop through arrays, and work with multidimensional arrays.

COURSE_DESCRIPTION: In this 1 hr 40 mins long project-based course, you will learn about the process of developing a new product for start-up companies, and small and medium-sized enterprises (SMEs). You will learn about idea generation and the evaluation processes in product development by using an idea generation model and online resources like Google Trends and Amazon. You will use methods to evaluate your product concept through market segmentation, growth potential, and the competition to your product. You will also evaluate a supplier and the cost to your product by analyzing component prices and production rates. By the end of this project, you will be able to create a full retrospective plan for the product launch and understand how and why the specifications are done. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: This course gives you access to negotiation practical tools and best practices gathered by Professor Aurélien Colson & his team from assignments in more than seventy countries and in a wide set of sectors, be they services, industry, high tech, or public organizations. In an interactive manner, this course will help you, among other topics: get prepared for any negotiation; avoid traps; know how to prompt value-creating partnerships; structure an effective negotiation sequence; bargain in an efficient and respectful manner; overcome deadlocks; and much more! Indeed, negotiation is not simply about deciding who gets what now - it is first and foremost about creating productive, fair, and therefore long-term partnerships. This course guides you through innovative and proven approaches - "win-win...but not at any price". Together with its specialization, this course will lead you towards high impact and sustainable negotiations at all levels, whether finding solutions to people management issues, sealing a deal on a sales package, or entering into high-level strategic or political negotiations involving multi-party stakeholders.

COURSE_DESCRIPTION: This course offers a proven framework for crafting and delivering impactful presentations. In the professional world, academic settings, or public life, we're frequently asked to "share some thoughts." Many individuals struggle in these situations. This course aims to make you excel where others stumble. We'll explore how to structure speeches coherently, write memorably, and present confidently. Upon completion, you will diminish your public speaking anxiety, leverage rehearsal methods to develop a robust, engaging speaking voice, and execute speeches with dynamic movements. The speech model we'll practice is versatile for briefings, elevator pitches, interviews, and even as a blueprint for hour-long presentations. Whether you're a novice or an experienced speaker, this course will help you master speaking fundamentals or elevate your public speaking skills to new heights. As a bonus, you'll gain access to an immersive VR experience that lets you perfect your presentation skills in a simulated auditorium or conference room, complete with a virtual audience. You will receive real-time feedback, empowering you to refine your abilities through practice in a realistic setting.

 COURSE_DESCRIPTION: This course introduces the concepts of Artificial Intelligence and Machine learning. We'll discuss machine learning types and tasks, and machine learning algorithms. You'll explore Python as a popular programming language for machine learning solutions, including using some scientific ecosystem packages which will help you implement machine learning. Next, this course introduces the machine learning tools available in Microsoft Azure. We'll review standardized approaches to data analytics and you'll receive specific guidance on Microsoft's Team Data Science Approach. As you go through the course, we'll introduce you to Microsoft's pre-trained and managed machine learning offered as REST API's in their suite of cognitive services. We'll implement solutions using the computer vision API and the facial recognition API, and we'll do sentiment analysis by calling the natural language service. Using the Azure Machine Learning Service you'll create and use an Azure Machine Learning Workspace. Then you'll train your own model, and you'll deploy and test your model in the cloud. Throughout the course you will perform hands-on exercises to practice your new AI skills. By the end of this course, you will be able to create, implement and deploy machine learning models.

 COURSE_DESCRIPTION: In this CompTIA Security+ SY0-601 course, you'll explore some advanced security concepts and build on some you may already know. The main topics you'll examine are risk management, privacy issues, and sensitive data management. You'll start by recognizing the essential aspects and considerations of risk types, risk management strategies, risk analysis, and disasters. You'll then review the business impact analysis (BIA) aspect of business continuity planning. Moving on to sensitive data security, you'll identify privacy breach consequences, data classification types, and associated roles and responsibilities. You'll also outline privacy protection measures, such as notifications of privacy breaches, privacy-

enhancing technologies, and advanced privacy concepts, like impact assessments and privacy notices. This course is part of a series that prepares you for the CompTIA Security+ (SY0-601) exam.

COURSE_DESCRIPTION: In this 15-video course, discover how to register and publish applications using Azure, and explore how to configure an Azure Active Directory (AD) application proxy, used to enable remote access to on-premises applications by using Azure AD accounts. This course helps learners prepare for the MS-100 Microsoft 365 Identity and Services certification exam. Begin by looking at types of applications available in Azure AD and features and capabilities supported by available application types. Discover how to choose and configure an application's single sign-on mode. Look at configuring application provisioning modes, followed by examining how to prepare an on-premises environment for remote access through application proxy in Azure AD. Next, see how to install and register an application proxy connector and verify that the installed connector is registered correctly. Learn how to add an on-premises app to Azure AD; test that an application has been added correctly, and learn about filtering applications in the Azure portal. Explore how to add or remove users or group assignments from an application, and delete an application entirely.

COURSE_DESCRIPTION: In the Capstone project, you have to design an investment plan for an individual at three different stages of his life. Depending on the stage of his life the individuals biases, risk preferences and wealth requirements change. You have to keep in mind all of these and design an appropriate investment plan for each stage of his life. You will use the concepts learned in the 4 courses to achieve this target. You should consider different assets and different markets to achieve the investors goals by building an optimal portfolio which matches his profile. In the end you should also evaluate the performance of his portfolio.

COURSE_DESCRIPTION: Social and emotional learning, or SEL, programs have flourished in schools during the last decade. In this course the instructors (Emily Price and Ben Kirshner) introduce and help you examine community based and youth-empowerment approaches to social and emotional learning. Some of these approaches address the impact of social and political systems, such as immigration and structural racism, on children's social and emotional experiences. This course is a part of the 5-course Specialization "The Teacher and Social Emotional Learning (SEL)". Interested in earning 3 university credits from the University of Colorado-Boulder for this specialization? If so check out "How you can earn 3 university credits from the University of Colorado-Boulder for this specialization" reading in the first module of this course for additional information. We want to note that the courses in this Specialization were designed with a three-credit university course load in mind. As a participant you may notice a bit more reading content and a little less video/lecture content. Completing and passing the SEL Specialization allows the participant to apply for 3 graduate credits toward teacher re-certification and professional enhancement. We want to ensure the quality and high standards of a University of Colorado learning experience. Interested in earning 3 graduate credits from the University of Colorado-Boulder for The Teacher and Social Emotional Learning (SEL) Specialization? Check out "How you can earn 3 university credits from the University of Colorado-Boulder for this specialization" reading in the first week of this course for more information.

COURSE_DESCRIPTION: This project is for people who are interested in learning how JavaScript works, how it takes data from a plain HTML form and uses it to output another HTML document. The project is simple and easy to learn and has been explained very thoroughly so that basic learners can come up with a useful and fun product. Learners can later use the techniques learnt in this process to output any HTML form and also learn to use simple JavaScript. No prior experience with JavaScript is required, though some familiarity with HTML and CSS is helpful. The end product is a cool and quick resume creator that anyone can use to whip up a resume, download it and use on their job hunt!

COURSE_DESCRIPTION: Welcome to Finding Purpose and Meaning in Life: Living for What Matters Most! In this course, you'll learn how science, philosophy and practice all play a role in both finding your purpose and living a purposeful life. You will hear from historical figures and individuals about their journeys to finding and living a purposeful life, and will walk through different exercises to help you find out what matters most to you so you can live a purposeful life. As an added benefit, you will also have complimentary access, for a period of time, to the Purposeful App. This groundbreaking mobile and desktop app is designed to help you build a purposeful rhythm into each day, so you can bring your best self to what matters most. Look for more information in Week 1 of the course! By the end of this course, you will: 1. Understand that having a strong purpose in life is an essential element of human well-being. 2. Know how self-transcending purpose positively affects well-being. 3. Be able to create a purpose for your life (don't be intimidated, this is different from creating "the purpose" for your life). 4. Apply personal approaches and skills to self-change and become and stay connected to your purpose every day. We are thrilled that you are here! We look forward to hearing and learning from you throughout this course!

COURSE_DESCRIPTION: This course prepares learners for the MS-300 deploying Microsoft 365 Teamwork certification exam, which focuses on the abilities of teamwork administrators to configure and manage SharePoint Online, OneDrive for business, Teams, and workload integrations. In this 20-video course, you will explore management of the Teams environment. First, you will examine app deployment; how to manage organization-wide app permission policies; and how to manage custom app permission policies, and assign them to users in Teams. You will then learn to enable auditing, to retrieve audit log data, and how to deploy and monitor audit log events. This course next explores how to troubleshoot connectivity issues with teams, and how to access log files to assist with troubleshooting. You will examine analytics and reporting, how to view and interpret usage reports in the Microsoft 365 Admin Center, and how to monitor and verify the Team service health. Finally, you will examine settings in the Teams web app and local client to resolve issues with connectivity or configuration.

COURSE_DESCRIPTION: In order to really understand how graphs work, it is important to know how they are implemented. There are multiple ways to represent graphs in code and each representation has its own advantages and disadvantages. In this course, you will implement graphs using three different representations - the adjacency matrix, the adjacency list, and the adjacency set. Learn how the adjacency matrix representation uses a square matrix to represent connections between the nodes of a graph and also edge weights. Next, explore how the adjacency list suffers from a major drawback: the same graph can have multiple representations. Finally, discover how the adjacency set representation has exactly one way in which a graph is represented. When you are finished with this course, you will be able to create and work with your own graph structures and optimize them for different purposes.

COURSE_DESCRIPTION: In the previous course, you learned financial statement analysis and how to make estimate of future financial status. In this course, you are going to learn capital budgeting. That is, how to make an investment decision. You would like to select the best project among various projects you can take. Then, you need to know the criteria. In this course, you are going to learn investment decision criteria such as NPV and IRR, which are most popular decision rules. Using financial analysis and discounted cash flow method, you can make pro forma financial statement and estimate project cash flows. Then, you apply investment criteria to determine whether to invest or not. After learning how to apply NPV and IRR method to investment decision, you are going to learn how to evaluate NPV estimate and scenario, what-if analyses and break-even analysis. In addition to NPV and IRR, you are going to learn Payback period method and Profitability method to determine whether to invest or not when there is a political risk or capital rationing.

COURSE_DESCRIPTION: In this 8-video course, you will explore the critical and often over-looked approaches to legal and regulatory compliance when working with cloud solution providers. The best way to manage compliance by using different regulations and different security controls is to have some type of methodology or architecture, and this can involve a wide variety of different practices, so you will take a look at some of these practices. Next, you will delve into legal requirements and risks as it is important to be aware of certain legal requirements and regulations and other risks that go along with various aspects of dealing with cloud computing. You will continue by examining privacy issues and jurisdictional variation. Next, you will learn about audit processes and methodologies for the cloud, followed by outsourcing and cloud contract design. The final tutorial in this course focuses on common regulations and mandates. The concluding exercise directs learners to describe legal and compliance issues in the cloud.

COURSE_DESCRIPTION: This Specialization is intended for learners that have or wants to have a career in the digital financial industries. The Specialization explores the evolving world of finance, focusing on the changing dynamics caused by the conversion of products and services into digital goods, new customer demands and changing regulation to govern the competitive landscape - the digital transformation of finance. You'll learn about concepts such as digital platforms and business ecosystems, be exposed to the emerging Fintech landscape and master a new toolbox for successfully competing on innovation in the digital era of finance. In the final Capstone Project, you'll create and defend a holistic digital transformation strategy for a real world company. Throughout the course, the instructors will use state of art examples and share their own research from the European and North American finance industries, as well as expose practices from leading digital financial services and companies, such as MobilePay, Saxo Bank and PayPal. The main focus in the course is on the financial sector (in particular in North America and Europe), but the course also include material of relevance for the financial trading and insurance sectors and inspiration from Africa.

COURSE_DESCRIPTION: The C programming language is statically typed, which means that all variables have an associated type specified in the code. The C compiler will rigorously check that values stored in these variables match the declared types. In this respect, C differs from popular languages such as Javascript and Python where the types of variables can be inferred at runtime. You will start this course by learning the basics of variables in C. Learn about the data types that can be stored in those variables and how to use arithmetic operators to perform mathematical operations between literals and on variables. Discover basic arithmetic operators, then progress to unary and assignment operators. Finally, explore relational and logical operators in C and discover how to use relational operators to compare two numbers, and logical operators such as AND, OR, and NOT to combine predicates.

COURSE_DESCRIPTION: In this 8-video course, "Access 2019: Customizing Forms," learners explore how to add and customize forms, restructure individual elements, or change the theme to enhance a form's look and feel. Begin by formatting text boxes inserted into a form. Then move on to inserting a list box-list boxes can be used to limit values that can be inserted into forms. Next, observe how to insert checkboxes, which can be used to simplify some of the questions or fields in an Access form. This leads into inserting buttons, used to give users greater control over Access data entry forms. Next, delve into reorganizing a form, making an Access form easier to use by reorganizing different elements and controls that have been created. Then explore editing information in a form, such as title, time, date, or adding images. Discover how to customize the appearance of a form, by, for example, changing the overall theme, selecting a new color, and changing the text font schemes. Conclude the course by observing how to edit a form's properties.

COURSE_DESCRIPTION: In this course, you will learn about what the world's number one Customer Relationship Manager (CRM) system has to offer. You will begin this course by understanding the components that Salesforce leverages to make it an optimal system. You will learn about the basics in Lightning for Sales, Community Cloud and Marketing, and understanding how to secure your Salesforce Organization and Manage Permissions. These tools will serve as building blocks to implementing Salesforce into any organization. The course includes in-depth readings and practical application activities within Salesforce's Trailhead education platform, peer discussion opportunities, demonstration videos, and peer review assignments.

COURSE_DESCRIPTION: Bilo bi lako reći da je za nošenje s teškim osobama potrebno da budete tolerantni i da prihvaćate razlike među ljudima. To lijepo zvuči i moglo bi funkcionirati kratkoročno, ali ako radite s osobama koje smatrate teškima i očekujete da ćete raditi s njima još neko vrijeme, bilo bi bolje da naučite kako reagirati na njih i kako se povezati s njima. Pristup koji primjenjujete ovisi o osobi, situaciji i vašoj spremnosti na to da prema potrebi izgrađujete i kombinirate vještine. Nošenje s teškim osobama zahtijeva da prvo naučite kako upravljati sami sobom dok ste u kontaktu s njima. To znači da trebate biti samosvjesni i vježbati samoupravljanje. Također znači da trebate biti svjesni osjećaja i emocija drugih, koliko god to teško zna biti. Kada znate koji su vaši okidači i kako uobičajeno reagirate, možete izgraditi vještine koje će vam pomoći u tome da vaša

interakcija s drugima bude produktivnija. Ta se vještina naziva emocionalna inteligencija, i ako izgradite ovu sposobnost, moći ćete se puno učinkovitije nositi s mnogim teškoćama u životu (uključujući i druge ljude)!

COURSE_TITLE: Teške osobe: ne možete ih promijeniti, stoga promijenite sebe

COURSE_DESCRIPTION: Data plays a crucial role in application development. It plays such a crucial role that there are people called Database Administrators that specialize in just organizing the data. The traditional database used to be, and often still is, a relational database. MongoDB is more flexible than a relational database, and as such provides the developer with a database that can easily be changed during the development phase. The increased popularity of MongoDB combined with the popularity of Python has resulted in a Python library called PyMongo, which provides an API for communicating with MongoDB. In this course, you will create a Python application, using PyMongo, that creates a MongoDB database containing words and their definitions. You will then retrieve data from the collection and display a selected Word's definition. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: This free online course is one of 10 courses available in the Goldman Sachs 10,000 Women collection, designed for entrepreneurs ready to take their business to the next level. This course will support you to develop your marketing strategy and build your brand as your business grows. You will explore a range of useful marketing tools and learn how to use analytics to measure success in the context of your own business growth. You will gain a clear and comprehensive understanding of the marketing and sales cycle. You will use this cycle as a foundation to develop your marketing plans and sales process. By the end of this course, you will understand how to identify the right marketing tools to reach your target market, and how an effective marketing plan can convert into sales and revenue for your business. The 10,000 Women course collection offers a truly flexible online learning experience. You have the freedom to approach the program in any way that works for you - take any course, or combination of courses, to tailor your learning journey to your individual business growth needs. If you choose to take all 10 courses, you will explore all the key elements of your business and develop a thorough plan for your business's growth. You can find out more about the Goldman Sachs 10,000 Women collection in the FAQs.

COURSE_DESCRIPTION: In this course, learners explore the features provided by SoapUI, SoapUI and SoapUI NG Pro differences, the concept of assertion, and the concept of test automation in continuous integration. Begin this 14-video course with a look at features of SoapUI and the concept of Web Services Description Language (WSDL). Then compare the differences between SoapUI and SoapUI NG Pro from the perspective of their supporting technologies and features; learn how to configure SoapUI to test REST-based web services; and how to create Test Suites and Test Cases by using SoapUI to test application programming interfaces (APIs). You will observe how to create projects in SoapUI; add WSDL to SoapUI projects; and explore the concept of assertion and assertions available to use in SoapUI. Learn how to create Test Suites in SoapUI projects and add assertions in the Test Suites, and learn the process of creating REST API projects in SoapUI. Examine use of Groovy scripting in SoapUI; integrating SoapUI tests into continuous integration/continuous deployment (CI/CD) process; and observe SoapUI integration with Jenkins.

COURSE_DESCRIPTION: In this 10-video course, you will explore Tableau Prep Builder, a tool for preparing and cleaning data before you start to analyze it. Its core principle is creating flows, based on a series of highly visual steps to process and prepare data. Begin the course by locating and opening Tableau Prep Builder in a Windows 10 work environment, then explore the interface. Learn how to connect to data and add data to the Flow pane; connect to a server-based data source in Tableau Prep Builder; and how to use the Data Interpreter tool to clean files. This leads learners into observing how to use the Profile pane in Tableau Prep Builder to configure data at Input step, and also how to configure field settings at Input step in Tableau Prep Builder. Discover how to change data types to define and correct data for any given scenario, and save standard and packaged flow files, using .TFL and .TFLX formats. Conclude the course by learning how to import flow files and steps in Tableau Prep Builder.

COURSE_DESCRIPTION: Classification models are used in the real world to predict whether to buy, sell, or hold a particular stock or to identify objects in images. RapidMiner studio supports features such as Turbo Prep and Auto Model that completely automate data processing and model building. In this course, discover how classification models can be used to categorize input records and how metrics such as accuracy, precision, and recall can be used to evaluate those classification models. Next, create a process to retrieve, summarize, and visualize data using operators. Finally, configure your own workflow for classification, and train and compare a logistic regression model and a random forest model. You will choose the best-performing model for local deployment on your machine and see how you can use deployed models for predictions. Once you have completed this course you will have the skills to train, clean, and process data in order to train classification models and deploy your model locally.

COURSE_DESCRIPTION: This course is an interdisciplinary look at how we can make each day the best day of our lives by examining the question, "How can you be your most brilliant, passionate self?" You will be joined on this journey by our animated host, Lewis! You will envision your "perfect day" and then slowly deconstruct the elements of that day to better understand key elements such as finding your purpose, defining success, mental and physical health, the importance of community, and navigating risks and challenges. In addition, you will hear stories from a diverse array of individuals, including students, doctors, teachers, professional storytellers, professional athletes, coaches, and others sharing their own journeys, communities, and sources of inspiration. Finally, you will participate in the What's Your Purpose? Project, utilizing storytelling techniques to share your own purpose and inspire other members of this global learning community to pursue theirs.

COURSE_DESCRIPTION: In this 13-video course, used to prepare for the MS-100 Microsoft 365 Identity and Services certification exam, learners explore common Azure Active Directory (AD) identity management tasks such as managing user access with access reviews, resources, and apps using Azure AD groups, users and passwords, Azure AD roles and role membership, and product licenses. You will begin with an overview of Azure AD identities and how to create an access review to manage user access. Then learn how to complete an access review of groups or applications. Next, take a look at implementing groups to manage users, providing an overview of managing resources and apps using Azure AD groups, and then user management, by adding or deleting users using Azure AD. Perform password management tasks such as resetting user passwords, and configuring self-service password resets. Explore user roles with an overview of Azure AD roles and managing user role membership; learn about managing product licenses, and how to restore a deleted user. Conclude the course by discovering how to create and manage users in bulk.

COURSE_DESCRIPTION: In this course, learners can explore the basics of Word 365, the Microsoft's word processing program. If you have no experience with Word, this is the perfect course to choose when you begin using the program. First, learn how to open the application on your desktop from the Windows 10 interface. Next, you will explore many of the tools and functions available in the Start Page to create a document or open an existing one. You will also discover the tools available on the editing interface, for example, how to access the Ribbon, how to use the Backstage view, the Quick Access toolbar, and the Status bar. In this course, you will also learn how to perform basic tasks for editing a document, such as inserting text, undoing and redoing actions, and saving a document. Finally, you will also see how to share your documents via email. In order to practice, you will find the video samples in the Resources section.

COURSE_DESCRIPTION: Prior to beginning any project - before you plan the budget or create the schedule - you need to develop a clear vision for what the project is to achieve and how it will achieve it. That involves clarifying what stakeholders expect to see in the end, all the tasks that will need to be carried out, the resources you will need, and who will be doing the work. These are your project scope and the project team required. In this course you will learn about these aspects of project management. You'll learn how to complete a work breakdown structure to nail down all those big-picture details so that your project gets off on the right foot.

COURSE_DESCRIPTION: Tableau is a data visualization tool suitable for a variety of purposes and situations. Knowing the basics of this tool will help you share necessary data with stakeholders and peers in a meaningful and engaging way. This course will introduce you to Tableau's basic features and cover the fundamental operations performed with this tool. You'll start by loading data into Tableau using a variety of file types. You'll then apply transformations to your data and choose the most appropriate visualization for it. Next, you'll learn how to analyze data in multiple related tables as well as data categories. You'll then practice setting the aesthetics of charts and garnering detailed information through chart interactions. Lastly, you'll get hands-on with the Tableau data interpreter to clean a dataset.

COURSE_DESCRIPTION: This project provides a step-by-step approach to instruction to equip you with fundamental concepts in Graphical User Interface (GUI) programming using JavaFX, from the ground up. Using jGRASP development environment, you will create a program that accepts as input your name and age, and upon clicking a button, display your name and your age. By creating this project, you will master the concepts of using labels, text fields, password text field, grid pane, buttons, and a button event in Java programming with the JavaFX framework. If you are a beginner and this is your first course in Java GUI programming you will benefit from writing a program from a blank sheet to a fully functioning program. If you already have GUI programming experience using JavaFX, this is an opportunity to refresh your skills by going back to basics. No matter your level, you will be able to apply the skills obtained from this course in real-life programming exercises. To provide you with support outside the course, you will find a pool of additional notes and exercises that you can try at home. If you ever wanted to become better at GUI programming using JavaFX by building on your fundamental skills, this project is the right place to start!

COURSE_DESCRIPTION: Azure Container Registry is a fully managed container registry service for storing and managing your Docker container images in Azure. In this course, you will learn about the basics of Azure Container Registry and how to create and manage private container registries using the Azure Portal, Azure CLI, and Azure PowerShell. You will then learn about the various features of Azure Container Registry, including the ability to create geo-replicated registries, store Oracle Cloud Infrastructure (OCI) artifacts, and use Azure Container Registry Tasks to automate the build, test, and deployment of your container images. Finally, you will learn how to use Azure Container Registry with Docker CLI and client libraries to manage your container images, and how to deploy containerized applications using Azure Container Instances and other Azure services. This course is one of a collection that prepares learners for the AZ-204: Developing Solutions for Microsoft Azure certification exam.

COURSE_DESCRIPTION: In this 2 hour long project-based course, you will create a weighted scorecard in Google Sheets and learn how to interpret the outcomes to prioritize product features. In the process, you will review the basics of this prioritization framework, as well as the use of Fibonacci numbers for estimating and Google Sheets functionality. Because time and resources are limited, prioritization is a critical skill that product managers must master in order to optimize product value and minimize development time and costs. There are several frameworks for prioritization which can be used individually or in combination. The weighted score card is one commonly used framework that helps provide objectivity in the decision making process. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In this 14-video course, discover how identifying IT asset risks and applying appropriate data privacy standards helps keep sensitive data from unauthorized entities, while preparing for the ISACA Certified Information Systems Auditor (CISA) exam. Key concepts covered course include: how the CIA triad (confidentiality, integrity, and availability) enhances IT security; understanding examples of personally identifiable information (PII) and protected health information (PHI); how General Data Protection Regulation (GDPR) assures data privacy; and how to align data protection policies with GDPR. Then learn how Payment Card Industry Data Security Standard (PCI DSS) protects cardholder information; how to identify network devices with insufficient antimalware protection with the free Spiceworks tool; and how Hypertext Transfer Protocol Secure Health Insurance Portability and Accountability Act (HIPAA) protects sensitive medical information. Next, learn how Federal Risk and Authorization Management Program (FedRAMP) standards secure US Government information systems; how to determine the annualized loss expectancy (ALE) value with an online ALE calculator; and how to scan a network by using Network Mapper (Nmap) to determine which devices are present. Finally, map IT solutions to data privacy requirements.

COURSE_DESCRIPTION: Welcome to Integrating Scripts for Scene Interactions, the third course in the Unity Certified 3D Artist Specialization from Unity Technologies. The courses in this series will help you prepare for the Unity Certified 3D Artist exam, the professional certification for entry- to mid-level Unity artists. 3D artists are critical to the Unity development pipeline. They are a bridge between the programmers writing the application code and the designers or art directors who define the application's aesthetics and style. In these courses, you will be challenged to complete realistic art implementation tasks in Unity that are aligned to the topics covered on the exam. In this third course, you will complete work on the Kitchen Configurator application - an app that lets users view a realistic rendering of a kitchen and swap out objects and materials to customize the design. Now you'll work on the allowing users to actually interact with your beautiful design. You'll implement a User Interface (UI) in Unity and add some pre-written scripts to the project to make it interactive. Finally, you'll adapt the project to VR with by bringing the UI into world space. By the end of the course, you'll have a functioning Kitchen Configurator app that would be ready to take to the final stages of production and launch. This is an intermediate course, intended for people who are ready for their first paying roles as Unity 3D artists, or enthusiasts who would like to verify their skills against a professional standard. To succeed, you should have at least 1-2 years of experience implementing 3D art in Unity. You should be proficient at importing assets into Unity from Digital Content Creation (DCC) tools, prototyping scenes, working with lighting, and adding particles and effects. You should also have a basic understanding of 2D asset management, animation, and working with scripts. You should have experience in the full product development lifecycle, and understand multi-platform development, including for XR (AR and VR) platforms.

COURSE_DESCRIPTION: Having the correct time helps to ensure systems operate properly, especially if you have configured things like time-based access. In this course, you'll explore the Network Time Protocol, including attributes and enumeration tools. You'll also examine the Network File System and how it can be taken advantage of when implemented incorrectly. Finally, you'll learn about the Simple Mail Transfer Protocol (SMTP) and File Transfer Protocol (FTP), including what details can be enumerated from target systems using both of these protocols. This course is one in a series that helps to prepare you for the Certified Ethical Hacker v11 (312-50) exam.

COURSE_DESCRIPTION: Word 365 offers different tools to create documents and to manage the information each file contains. First, learn how to create your own custom templates to easily create documents that will better suit your needs. Next, learn how to prepare your documents to be shared with other users. For example, check if your document has any hidden information you'll prefer not to include, or verify if your document fulfill basic accessibility requirements. In this course, you will also discover how to setup your documents by changing the orientation, paper size and margins. These settings will be useful to prepare your documents for printing or for exporting them into other file formats, as PDF. In order to practice, you will find the video samples in the Resources section.

COURSE_DESCRIPTION: There are many benefits to using a microservices architecture to develop apps. These include better scalability, fault isolation, and resiliency, among others. Use this course to learn how to use Amazon integration services to build highly available and scalable microservice-based applications. First, learn how Amazon EventBridge, Amazon Simple Queue Service (SQS), and Amazon Message Queue (MQ) are used to interconnect and transfer data. Next, see how messages can be sent using Amazon Simple Notification Service (SNS). Then, find out how AWS Step Functions and the Amazon Simple Workflow (SWF) service are used to perform actions. Moving on, complete several tasks in Amazon EventBridge and create an Amazon SQS queue and an Amazon Simple Notification Service topic. This course helps prepare for the AWS Certified Developer - Associate 2021 certification exam. Upon completion, you'll be able to deploy microservice applications using AWS.

COURSE_DESCRIPTION: This is a recorded replay of the Talent Development and Transformation: Developing the People You Lead Leadercamp Live session that ran on January 20th at 2 PM ET led by Luisa Golgini, Senior Customer Success Manager at Skillsoft. Luisa is joined by Dr. Tan Morales, Global Vice President of Talent Transformation at Equifax. Learning and development is a life-long journey. It enables us to adapt to an ever-changing and evolving world by evolving our mindsets and capabilities. Individual and team development must be a priority for individuals and teams when seeking a competitive edge in the marketplace. This session will help you learn: • Motivational factors and actions for developing your team and managing their performance • Overcome common myths about development, and how to mitigate the challenges leaders face in developing their people • Coaching principles that will guide you in helping your team members reach their full potential

COURSE_DESCRIPTION: This is the final course in the IBM Data Science Professional Certificate as well as the Applied Data Science with Python Specialization. This capstone project course will give you the chance to practice the work that data scientists do in real life when working with datasets. In this course you will assume the role of a Data Scientist working for a startup intending to compete with SpaceX, and in the process follow the Data Science methodology involving data collection, data wrangling, exploratory data analysis, data visualization, model development, model evaluation, and reporting your results to stakeholders. You will be tasked with predicting if the first stage of the SpaceX Falcon 9 rocket will land successfully. With the help of your Data Science findings and models, the competing startup you have been hired by can make more informed bids against SpaceX for a rocket launch. In this course, there will not be much new learning, instead you'll focus on hands-on work to demonstrate and apply what you have learnt in previous courses. By successfully completing this Capstone you will have added a project to your data science and machine learning portfolio to showcase to employers.

COURSE DESCRIPTION: This course explores key concepts and techniques for the adoption of DevOps, and advanced terminologies and vocabularies associated with DevOps tools. It discusses how DevOps can help organizations incrementally adopt DevOps capabilities to achieve a DevOps maturity model. You will learn how to implement delivery pipelines, and how to adopt DevOps on the cloud. You will also learn the benefits of automation, and automation tools available to design and deploy environments to establish a DevOps culture. Next, explore the DevOps lifecycle phases from the perspective of continuous integration and continuous delivery (CI/CD). You will learn to set up different phases of DevOps by using Atlassian Jira and Confluence, and to specify the role of collaborative development and operations. Learners explore end-to-end implementation of CI/CD processes in the cloud for application development, testing, and release. Finally, you will learn the benefits of DevSecOps and cloud computing when they are used together, and learn how to implement DevSecOps in the DevOps workflow lifecycle and pipeline.

COURSE_DESCRIPTION: IaaS on Azure lets you provision and scale rapidly on demand while avoiding costs and time associated with managing infrastructure. In this course, you'll learn to manage IaaS deployments on Azure. You'll start by examining how to deploy an instance of Azure Kubernetes Service, how to incorporate Azure Dev Spaces for developing containerized apps, and how to use pipelines to deploy images to Azure Container Registry. You'll explore OpenShift and Azure Service Fabric, including how to use CI/CD methods to deploy an app to Azure Service Fabric. Next, you'll learn the various database services available in Azure and how to select the best one that suits your application's requirements. Lastly, you'll learn how to deploy and connect to an Azure SQL database and how to use Advanced Data Security to protect resources you deploy to Azure. This course is one of a collection of courses that prepares learners for the AZ-204: Developing Solutions for Microsoft Azure certification exam.

COURSE DESCRIPTION: In this course, you'll explore a variety of ways to execute queries using JPA. You'll run native queries, queries using JPQL, and queries using the Criteria API, which helps avoid syntax errors in your query specification. Next, you'll examine how you can have entity-specific callback methods that can be invoked at different stages in the entity's lifecycle. When you are done with this course, you'll be able to perform complex queries on your database tables and manage your entity's lifecycle in a very granular manner.

COURSE_DESCRIPTION: Amazon DynamoDB is a fully-managed NoSQL database on the AWS cloud. It has many valuable features, including on-demand backup and restore, point-in-time recovery, item expiration setting, local and global secondary indexes, and stream event generation for data modification. Through this course, learn how to interact with DynamoDB. Discover how to set up and work with a local development version of DynamoDB. Next, learn how to execute various database operations, including adding data to a table and then updating it. Finally, learn how to use the Boto3 library for Python and use global secondary indexes to enable different types of queries on DynamoDB data. After course completion, you'll be able to perform operations on a DynamoDB instance.

COURSE_DESCRIPTION: Managers and executives, and people who expect to become managers and executives, need to know the businesses they're in. But to be effective, they also need skills common to all leaders. They need a plan for developing and continuing to develop those skills throughout their careers. Leadership isn't a state you achieve and then you're done - it's a process of growth and experience that requires continuous training and development. In this course, you'll learn to create a personal leadership development plan. You'll learn what to expect from a self-assessment process, and helpful strategies for formulating a personal leadership vision. After identifying key characteristics of an effective leadership development plan, you'll explore the kinds of actions you'll plan and execute in order grow as leader. Finally, you'll learn strategies for continuing that growth throughout your career.

COURSE_DESCRIPTION: Discover benefits of customization, apps, and metadata in SharePoint Online in this 17-video course, used in preparation for MS-300 Deploying Microsoft 365 Teamwork certification exam. Explore how to configure the App Catalog, deploy apps with appropriate permissions and licenses, and perform common Term Store management tasks. Key concepts covered here include benefits of branding a SharePoint Online site; how to customize sites with web parts; and how to edit and customize page layout and content. You will learn benefits of using workflows in a SharePoint Online environment; how to add a task list to the site content; and how to add a discussion board to site content. Then, learners see how to add a survey to site content; manage app licenses for SharePoint Online environments; and monitor apps for a SharePoint Online environment. Finally, you

will learn to create the App Catalog site collection, add custom apps, and install app for users; set up a new group for term sets, as well as new term sets; and assign roles and permissions to manage term sets.

 COURSE_DESCRIPTION: By the end of this project, you will be able to create a stock day trading list using Google sheets, which will help you track all your stock investments. The day trading journal will automatically give you the updated target and risk price as well as the cost and the profit. In addition to that it also provides the win percentage and the total trades. You can use a day trading journal like this for categorizing your stock investment as well as laying out if the stock is win or loss. Based on the ticker, entry price and stop price you input, the journal will calculate the number of shares to buy and the total profit. This journal will help you stay organized, keep track of your winnings and track your progress over time. Along the way, you will be applying and practicing the basic features of spreadsheets such as formatting and calculations, you will apply formulas such as the if and countif formula as well as data validation and conditional formatting to use in your financial management journal that is efficient and versatile and eventually help you better manage your stock finances. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Sessions are like a verified conversation between trusted systems, which makes session hijacking a common form of attack. In this course, you'll learn about session hijacking, including how it's accomplished and the different types. Session hijacking attacks can be performed at the network level, so you'll also explore common network-based session hijacking attacks such as UDP, TCP, and RST hijacking. Next, you'll move on to examine common application level session hijacking attacks such as man-in-the-middle, man-in-the-browser, cross-site scripting, and cross-site request forgery. Finally, you'll learn about common session hijacking security controls and countermeasures, as well as best practices like using encrypted protocols and secure session handling techniques. This course is one in a series that helps to prepare you for the Certified Ethical Hacker v11 (312-50) exam.

COURSE_DESCRIPTION: Der Aufbau einer Beziehung mit Menschen aus einer anderen Kultur dauert lange, aber es braucht nur eine Sekunde, um sie versehentlich durch einen Bruch der interkulturellen Verhaltensvorschriften zu zerstören. Das ist der Grund, weshalb Beziehungen in der heutigen Geschäftswelt, in der Sie mit Menschen aus unterschiedlichen Kulturkreisen dieselben Ziele verfolgen und denselben Arbeitsplatz teilen, so wichtig sind. In diesem Kurs erfahren Sie, wie Sie mit kulturellen Unterschieden effektiv umgehen können, um die interkulturelle Kommunikation zu verbessern und ein harmonisches Verhältnis aufzubauen. Auch erfahren Sie, welche Missverständnisse und Verhaltensweisen einer guten Kommunikation im Wege sein können und wie Sie diese in den Griff bekommen. Zum Schluss werden Strategien für effektive Präsentationen vor Menschen aus Low-Context- und High-Context-Kulturen vermittelt.

COURSE_DESCRIPTION: This course explores VPC (Virtual Private Cloud) connectivity, including how to enable connectivity to AWS (Amazon Web Services) through VPNs (virtual private networks), Direct Connect, and VPC transit in NAT (network address translation) gateways. You will examine VPN solutions for connecting to AWS. You will explore the use of egress-only Internet gateways. You will create a customer gateway as an on-site VPN termination point and a virtual private gateway to the Amazon VPN termination point. You will learn to link them together by making a site-to-site VPN connection, and how use route table propagation to ensure routing is working properly. Learners examine how to use Direct Connect to create a private circuit that does not traverse the internet. This course also covers the AWS egress-only Internet gateway and a NAT for outbound Internet communications. Finally, you will learn how to create VPC gateways to make a direct connection to AWS cloud. This course can be used in preparation for the AWS Certified Solutions Architect-Professional SAP-C01 certification exam.

COURSE_DESCRIPTION: Encryption is one of the best security controls available for defending computer networks and data, and cryptography plays a vital role in this process. In this course, you'll explore cryptography, including its purpose, types, and common ciphers, to help you better understand the strengths and weaknesses of common crypto-systems. Next, you'll examine the common algorithms and implementations used by various crypto-systems, including symmetric and asymmetric algorithms, hashing functions, and digital signatures. Encryption is highly effective for protecting sensitive data, but how do you encrypt something? To complete this course, you'll learn about tools that can help you to secure sensitive data on servers, desktops, e-mail, and mobile. This course is one in a series that helps to prepare you for the Certified Ethical Hacker v11 (312-50) exam.

COURSE_DESCRIPTION: This Specialization is designed for people who are new to software engineering. It's also for those who have already developed software, but wish to gain a deeper understanding of the underlying context and theory of software development practices. At the end of this Specialization, we expect learners to be able to: 1.) Build high-quality and secure software using SDLC methodologies such as agile, lean, and traditional/waterfall. 2.) Analyze a software development team's SDLC methodology and make recommendations for improvements. 3.) Compare and contrast software development methodologies with respect to environmental, organizational, and product constraints.

COURSE_DESCRIPTION: In this project you will use the Modeling and Design Tool in MySQL Workbench to design and create a multiple-table relational database. As a DBMS (database management system), MySQL is used by many organizations for managing a variety of types and sizes of databases. MySQL Workbench acts as an integrated development environment allowing users to work with relational databases using a visual user interface rather than the command line. Hands-on activities include using the Modeling and Design Tool to draw a database design diagram, generating the database from that diagram, and then using MySQL Workbench features to load data into the database tables. You will also find an optional Challenge Task and an optional Capstone task for extra practice. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In this course, you will dive into the concepts of rationality and irrationality and understand how they impact our investment decisions and what the consequences can be at the market level. You will first explore the different biases that we, as humans, are subjected to when facing investment decisions and how they may impact the outcomes of these decisions. Moreover, you will see how emotions and ethical concerns such as honesty and trust influence market participants. When they are considered as a group rather than individually, you will discover how rationality and irrationality can drive asset prices to and away from their fair value. Finally, you will be presented with different portfolio construction methodologies and investment styles that make up the landscape of today's portfolio management industry. At key points throughout the course, you will benefit from the practical knowledge of experts from our corporate partner, UBS, in how to build and manage clients' portfolios.

COURSE_DESCRIPTION: In this challenge, you will configure the CloudWatch agent to collect metrics and logs for a website. First, you will verify that the web server is running, and then you will connect to the console of the Amazon Elastic Cloud Compute (EC2) instance by using EC2 Instance Connect. Next, you will configure the CloudWatch agent on the web server. Finally, you will review the CloudWatch metrics and logs. Note: Once you begin the challenge lab, you will not be able to pause, save, or exit and then return to your challenge lab. Please ensure that you have set aside enough time to complete the challenge lab before you start.

COURSE_DESCRIPTION: Knowing yourself, your team, your manager, and your organization are keys to personal and business success. What were once labeled soft skills are now modern requirements in today's workplace - especially if you are trying to get in the door or are already leading a team. This course is specifically designed for the: -Job Seeker: You will create a usable cover letter with feedback from your peers as well as develop exceptional responses to some of the most common, yet challenging interview questions. We will get you the skills to help get in the door! -Team Member: You will develop an action plan to confront your personality weaknesses and highlight your strengths so you can ace your annual review. We will also cover strategies that will help you uncover your true worth so you can ask with more confidence. We will get you the skills to get ahead! -Manager: You will create an effective action plan for an employee, team, or organization based on your new knowledge of personality types and you

will create a 360 degree review plan to better identify your strengths and weaknesses. We will get you the skills to rise above the rest! We will dive deep into the types and teach you how to translate your new knowledge into business success by leveraging personality and emotional intelligence in the workplace - wherever you may be! Join us!

COURSE_DESCRIPTION: In this 1-hour long project-based course, we will predict titanic survivors' using logistic regression and naive bayes classifiers. The sinking of the Titanic is one of the key sad tragedies in history and it took place on April 15th, 1912. The numbers of survivors were low due to lack of lifeboats for all passengers. This practical guided project, we will analyze what sorts of people were likely to survive this tragedy with the power of machine learning. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Mobile app development has become an essential skill in today's technology-driven world. This learning journey is focused on mobile app development with Flutter and is divided into two tracks. The first track covers the fundamentals of Dart programming and the Flutter framework. It starts with an introduction to Flutter and Dart programming language and covers using variables, collections, functions, classes, and objects. The track then delves into exploring different layouts, including implementing basic Flutter layouts, stateful widgets, stacks, lists, and grids, and building an application using layouts and navigation. The second track focuses on building mobile apps with Flutter, including creating forms, detecting, and handling gestures, implementing and configuring animations, integrating Flutter with backends using HTTP requests, persisting data on the local device, and integrating with Google Firebase. Additionally, it covers testing and debugging techniques for Flutter apps. Throughout the journey, there are hands-on activities and practice labs.

COURSE_DESCRIPTION: An aspiring cloud engineer needs to learn how to build upon DevOps architecture design fundamentals to formulate robust and sound container clustering strategies. In this course, you'll recall the concept of clustering and outline the different cluster architectures for failover and load balancing support. You'll outline what comprises a clustering topology, physical and virtual clusters, and enterprise application cluster management. You'll then name clustered environment resource managers, application containerization types, and containerized cluster implementation solutions. Next, you'll examine data center cluster virtualization and investigate hybrid cloud cluster architectures for multi and hybrid cloud solution delivery. You'll explore clustering in Docker, Kubernetes, and Docker Swarm. Lastly, you'll set up single control-plane Kubernetes clusters, Docker Swarm clusters for high availability, and high-performance compute node clusters in Amazon EC2.

COURSE_DESCRIPTION: In this course, you will learn how Amazon Web Services (AWS) managed services such as Elastic Beanstalk, OpsWorks, Elastic Container Service, Application Programming Interface (API) Gateway, and Lambda functions allow developers to quickly create customized software solutions. This course can be used in preparation for the AWS Certified Solutions Architect-Professional SAP-C01 certification exam. The course begins by exploring the design requirements for cloud applications. You will then look at deploying an Elastic Beanstalk application stack using a sample template. Examine how the API Gateway allows for cloud-hosted solutions and how Lambda provides serverless code solutions, including maximum run times. Then create a Lambda function through AWS and recognize the benefits of using the AWS Elastic Container Service (ECS). This leads on to deploying a sample Docker container using AWS ECS and an Amazon Elastic Container Registry where you can organize your container images. Learners will discover how OpsWorks can manage dynamic applications, and then deploy a sample app stack by using OpsWorks.

COURSE_DESCRIPTION: Note: You should complete all the other courses in this Specialization before beginning this course. This six-week long Project course of the Data Mining Specialization will allow you to apply the learned algorithms and techniques for data mining from the previous courses in the Specialization, including Pattern Discovery, Clustering, Text Retrieval, Text Mining, and Visualization, to solve interesting real-world data mining challenges. Specifically, you will work on a restaurant review data set from Yelp and use all the knowledge and skills you've learned from the previous courses to mine this data set to discover interesting and useful knowledge. The design of the Project emphasizes: 1) simulating the workflow of a data miner in a real job setting; 2) integrating different mining techniques covered in multiple individual courses; 3) experimenting with different ways to solve a problem to deepen your understanding of techniques; and 4) allowing you to propose and explore your own ideas creatively. The goal of the Project is to analyze and mine a large Yelp review data set to discover useful knowledge to help people make decisions in dining. The project will include the following outputs: 1. Opinion visualization: explore and visualize the review content to understand what people have said in those reviews. 2. Cuisine map construction: mine the data set to understand the landscape of different types of cuisines and their similarities. 3. Discovery of popular dishes for a cuisine: mine the data set to discover the common/popular dishes of a particular cuisine. 4. Recommendation of restaurants to help people decide where to dine: mine the data set to rank restaurants for a specific dish and predict the hygiene condition of a restaurant. From the perspective of users, a cuisine map can help them understand what cuisines are there and see the big picture of all kinds of cuisines and their relations. Once they decide what cuisine to try, they would be interested in knowing what the popular dishes of that cuisine are and decide what dishes to have. Finally, they will need to choose a restaurant. Thus, recommending restaurants based on a particular dish would be useful. Moreover, predicting the hygiene condition of a restaurant would also be helpful. By working on these tasks, you will gain experience with a typical workflow in data mining that includes data preprocessing, data exploration, data analysis, improvement of analysis methods, and presentation of results. You will have an opportunity to combine multiple algorithms from different courses to complete a relatively complicated mining task and experiment with different ways to solve a problem to understand the best way to solve it. We will suggest specific approaches, but you are highly encouraged to explore your own ideas since open exploration is, by design, a goal of the Project. You are required to submit a brief report for each of the tasks for peer grading. A final consolidated report is...

COURSE_DESCRIPTION: Enterprises can prioritize business-critical applications and services while maximizing the use of their bandwidth with the help of class of service (CoS). It provides a way of managing multiple traffic profiles across enterprise networks by prioritizing certain types of traffic over others. This course will acquaint you with the components and implementation of CoS in the Cisco Unified Communication Manager (UCM).

You'll discover the features of time of day routing, distinguishing attributes of client matter codes (CMC) and forced authorization codes (FAC), and tools in the UC environment that prevent toll fraud. Upon completion of this course, you'll be able to configure different components of CoS in the Cisco UCM and prepare for the 350-801: Implementing and Operating Cisco Collaboration Core Technologies (CLCOR) certification exam.

COURSE_DESCRIPTION: By the end of this project, you'll be able to create emotes, images that you can use in chat messages to quickly convey an emotion, an idea, and often a brand. You'll build an emote that meets the current Twitch guidelines, and you'll create that emote in Inkscape, a free, open-source program that creates vector graphics. Because what you create in Inkscape is vector-based, those images can be quickly resized and tend to have clear, bold colors and shapes. So vector graphics make great emotes. They can also be resized and edited quickly-and they'll stay clear and sharp even after the changes. During this project, you'll build an emote out of basic and complex vector objects and paths. First, you'll practice researching icon requirements and prepare the Inkscape workspace to create emotes. Then you'll create two different kinds of emotes: a cartoon bat emote, step by step, starting with basic shapes and then using Inkscape's editing and path commands to create complex combinations of shapes. By the end of the project, you'll be comfortable planning and creating emotes for use in Twitch chat. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: This 4 week MOOC builds upon the overview of Java and Android covered in Course 1 by delving deeper into core Android app components, such as intents, activities, and broadcast receivers. You will learn by example how to program these core Android components together with Android concurrency frameworks and basic Java file I/O classes (such as File and InputStream) and Android storage mechanisms (such as Shared Preferences). You'll also learn how to use the Git source code management system. Throughout this MOOC you'll work incrementally on a project involving downloading, storing, and display images from remote websites. Each week you will add additional capabilities to the project, based on material covered in the lecture videos. You'll spend roughly 4 hours per week watching video lectures, taking quizzes, and programming assignments with Java and Android.

COURSE_DESCRIPTION: SQLAlchemy, an object-relational mapper (ORM) library available in Python, provides application developers with the same might and capability of SQL. In this course, you'll learn how to take advantage of some of the more complex queries available in this library. You'll start by constructing queries using dates, the current date, order by, and limit clauses. You'll then learn how to leverage the fetch methods from the cursor provided via the ResultProxy object. You'll perform joins using the .join method on the column object. You'll also specify group by and having clauses in your SQL queries. By the end of this course, you'll be able to implement SQL order by and limit operations using SQLAlchemy Core APIs, work with dates, customize iteration over cursor results, perform joins, and implement group by and having clauses.

COURSE_DESCRIPTION: SharePoint apps provide powerful flexibility through add-on apps. In this 7-video course, recorded in a SharePoint Online environment, learners can explore app management, and discover how to create and use apps, including contact lists, task lists, custom lists, surveys, and calendars. Begin by observing how to add an app to a site, and then create a custom list, so if you have a particular type of data that you want to organize in your SharePoint team site but you cannot find a list app that suits your needs, you can create a custom list. Discover how to create a calendar, and then use the calendar to create and manage events. Next, learn how to customize a task list, useful for organizing your To Do list or daily tasks, and in order to have access to your tasks outside of SharePoint, discover how to export them into a file format or link them with an existing program on your computer.

COURSE_DESCRIPTION: This course aims at providing an introductory and broad overview of the field of ML with the focus on applications on Finance. Supervised Machine Learning methods are used in the capstone project to predict bank closures. Simultaneously, while this course can be taken as a separate course, it serves as a preview of topics that are covered in more details in subsequent modules of the specialization Machine Learning and Reinforcement Learning in Finance. The goal of Guided Tour of Machine Learning in Finance is to get a sense of what Machine Learning is, what it is for and in how many different financial problems it can be applied to. The course is designed for three categories of students: Practitioners working at financial institutions such as banks, asset management firms or hedge funds Individuals interested in applications of ML for personal day trading Current full-time students pursuing a degree in Finance, Statistics, Computer Science, Mathematics, Physics, Engineering or other related disciplines who want to learn about practical applications of ML in Finance Experience with Python (including numpy, pandas, and IPython/Jupyter notebooks), linear algebra, basic probability theory and basic calculus is necessary to complete assignments in this course.

COURSE_DESCRIPTION: In this course, you will learn the fundamental techniques for making personalized recommendations through nearest-neighbor techniques. First you will learn user-user collaborative filtering, an algorithm that identifies other people with similar tastes to a target user and combines their ratings to make recommendations for that user. You will explore and implement variations of the user-user algorithm, and will explore the benefits and drawbacks of the general approach. Then you will learn the widely-practiced item-item collaborative filtering algorithm, which identifies global product associations from user ratings, but uses these product associations to provide personalized recommendations based on a user's own product ratings.

COURSE_DESCRIPTION: About the Session: This session is to provide some more insights of what the T-Hub is all about: from vision and cornerstones to the organizational setup. Your will have the chance to get to know the Chapter Area Leads: Samir Anand, Meike Bosse, Guido Companie, Jakub Probola and Thomas Schweinhuber - including time for Q&A. In addition, we will share the latest update on our future chapter leads. About the Speaker: Janine Rensmann is the Business Owner T-Hub - as a management consultant, and in her latest job as VP HR Business Partner, she had the pleasure of accompanying various teams through transformation. She has the strong conviction that TDI never stops learning and that change is the only constant in life. She is always in for both: pragmatic solutions and finding new ways. Additional Content: The TDI Booklet will follow on 24.11.2021

COURSE_DESCRIPTION: IT security risks can be defined as a combination of the consequences of an event and the associated likelihood of occurrence. They can be managed by an organization through asset-safeguarding strategies. Through this course, learn about managing enterprise information security (InfoSec) risk and risk tolerance. Explore the definition of risk, how it differs from threats and vulnerabilities, and the history of information security. Next, discover common threats to IT systems and data, how to identify and manage security risks, and the key differences between quantitative and qualitative risk analysis. Finally, learn about common risk assessment tools and the differences between penetration testing and vulnerability assessments. Upon completion, you'll be able to outline and manage IT security risks.

 COURSE_DESCRIPTION: This project gives you easy access to the invaluable learning techniques used by experts for visualization in statistics. We'll learn about how to use wolfram language to draw curve in easiest way. We'll also cover illustration and best practices shown by research to be most effective in helping you master plotting curves. Using these approaches, no matter what your skill levels in topics you would like to master, you can change your thinking and change your life. If you're already an expert, this peep under the mental hood will give you ideas for turbocharging successful learning, including counter-intuitive test-taking tips and insights that will help you make the best use of your time on homework and problem sets. If you're struggling, you'll see a structured treasure trove of practical techniques that walk you through what you need to do to get on track. If you've ever wanted to become better at anything, this project will help serve as your guide. In this project we will take some illustrations and be able to Visualize the data by Scatter Plot using Wolfram Mathematica. By the end of this project learners will: Be able to plot basic examples (list of y values and x y pair)& several data items with legends (labeling each Plot and each data item) Be able to plot values including 'units' and using individual 'color' for each point Be able to plot the range where the data is non real are excluded & function ranges where it is selected automatically.

COURSE_DESCRIPTION: By the end of this course, you will create an effective employee management system using When I Work. This course builds on the foundation from the Introduction to Scheduling with When I Work Course and is intended to further develop the program's team management capabilities. In this project, you will manage and track employee attendance and timesheets. In addition, you will create a talent acquisition plan using the free features on When I Work to make job postings, track applicants, and hire new employees. Effective employee management processes and new talent acquisition programs are important elements in every successful company. In this project, you will get hands-on experience using the When I Work program to establish a more detailed and effective employee management system. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Population growth, climate change, and volatile commodity prices risk factors are putting a strain on the agricultural system nowadays. Using artificial intelligence (AI) in agriculture can potentially help mitigate this strain in areas such as yield prediction and disease detection in agriculture. In this course, explore a study that uses machine learning (ML) models for agricultural use cases. Next, explore a specific case study that attempts to predict the yield of maize and soybean crops on various American farms. Finally, examine a study that uses machine learning for pest detection. Upon completion, you'll be able to gather and analyze academic papers on machine learning in agriculture, identify problem categories and solution constructs, and recall common recurring themes in research.

COURSE_DESCRIPTION: Visualizing data patterns often involves re-arrangement and elimination to determine patterns. For example, in a list of data with yearly rainfall amounts, to quickly determine the years with the most rainfall, the data can be sorted according to rainfall in descending order. A filter could be used to limit the amount of data observed, for example, to only show rainfall amounts greater than an inch. A merge can be used to join two datasets together, for example rainfall and temperature data from two different sources. The ability to sort, merge and filter data has always existed using SQL with database data, now it can be done in application memory space using Python. In this course, you will create an application that reads data from two CSV files. You will learn how to merge, sort, and filter the data to ultimately produce a regression plot to determine a possible correlation between two data sets.

COURSE_DESCRIPTION: Market Research is a growing and important field that is used in many industries around the world. Given all the data that is collected whether by organizations, industries, social media, governments, etc., it's important that someone can review and sift through all the noise to provide valuable insights. And that's where you come in as a market researcher. This course will only scratch the surface and provide you a foundational understanding of this field. In this course, you will be able to define market research and identify some tools used in the industry.

You will be able to discuss the importance of secondary and internal research in terms of the planning process. You will be able to define what primary research is and identify the various ways to conduct primary research. You will be able to focus on an actual research plan or proposal for your peer review project. You will be able to compose a response to a request for a proposal or research plan and be able to address the various components of the proposal and package it in a professional manner.

COURSE_DESCRIPTION: The MERN stack represents a combination of popular technologies for robust and powerful web application development. Learners will discover the different technologies that make up the MERN stack and recognize how they are orchestrated together to deliver modern full stack applications, in this 17-video course. Key concepts covered in this course include examining technologies the MERN stack consists of, and how they work together; how to install Node runtime and also MongoDB on a development machine; and how to install Express and related Node Package Manager (npm) dependencies. You will learn to create an HTTP server using Express and Node; learn to install Katalon Studio for web and API testing; and create REST API routes with Express and Node. Next, learn to read and write data to MongoDB via REST API; learn how React and Redux work together and generate a basic React app; and create a basic React front-end component. Finally, install and configure Redux and dependencies; use Redux to manage the state of React apps; and make GET and also POST requests from a React app.

COURSE_DESCRIPTION: Cloud computing represents a fundamental shift in the way that organizations operate business systems and digital services. The nature of running software workloads in the Cloud, with on-demand resources, pay-as-you-go pricing and security and compliance requirements make Cloud Acquisition processes very different from traditional IT procurement models. This course provides an overview of the differences, illuminates the procurement process and its key aspects, the role of key stakeholders in the organization (legal, budget/finance, security, IT, and business leadership) and how to go about planning change management with the digital transformation enabled by the cloud. It explains common pitfalls and best practices, strategies for successful cloud adoption including how to work with cloud providers, and their partners such as the APN, management and governance and success evaluation in procurement and deployment.

COURSE_DESCRIPTION: In this 2 hour-long project-based course, you will learn to implement neural style transfer using PyTorch. Neural Style Transfer is an optimization technique used to take a content and a style image and blend them together so the output image looks like the content image but painted in the style of the style image. We will create artistic style image using content and given style image. We will compute the content and style loss function. We will minimize this loss function using optimization techniques to get an artistic style image that retains content features and style features. This guided project is for learners who want to apply neural style transfer practically using PyTorch. In order to be successful in this guided project, you should be familiar with the theoretical concept of neural style transfer, python programming, and convolutional neural networks. A google account is needed to use the Google colab environment.

COURSE_DESCRIPTION: Proper data governance begins with labeling data and applying security controls based on those labels. Explore information rights management (IRM) and challenges associated with data discovery, as well as the roles played by PKI (public key infrastructure) security certificates and virtual private networks (VPNs) in the cloud. This 6-video course prepares learners for the (ISC)2 Certified Cloud Security Professional (CCSP) exam. Begin with IRM objectives such as data rights, provisioning, and access models. Examine data discovery approaches and techniques for structured and unstructured data, and challenges of data discovery in the cloud. Then examine data classification, enabled by using Microsoft Azure Information protection for sensitive data such as Protected Health Information (PHI) and Personally Identifiable Information (PII), and cardholder data. Recognize how PKI provides security for digital IT solutions; how to use PowerShell to create PKI certificates; and how to generate certificates in a Microsoft Azure Key Vault. Learn how VPNs are used for secure cloud resource access. Then configure a Microsoft Azure point-to-site VPN and a custom Microsoft Azure Key Vault key for storage account encryption.

COURSE_DESCRIPTION: Explore topics that involve physical security attacks related to facilities, and learn about post-exploitation techniques. This course can be used to help prepare for the PT0-001: CompTIA PenTest+ certification exam. You will start with a reminder of the six phases of the pen testing life cycle, with a focus on phase five: post-exploitation or post-exploit. Learn about exploit tactics, such as lateral movement,

persistence, covering tracks, piggybacking, tailgating, fence jumping, dumpster diving, lock picking, bypass, and badge cloning. As you delve deeper into the course, you will discover how to compare the features of various types of egress sensors, such as photoelectric, passive infrared, and vibration.

COURSE_DESCRIPTION: Learners continue their exploration of data science in this 10-video course, which deals with using NumPy, Pandas, and SciPy libraries to perform various statistical summary operations on real data sets. This beginner-level course assumes some prior experience with Python programming and an understanding of basic statistical concepts such as mean, standard deviation, and correlation. The course opens by exploring different ways to visualize data by using the Matplotlib library, including univariate and bivariate distributions. Next, you will move to computing descriptor statistics for distributions, such as variance and standard error, by using the NumPy, Pandas, and SciPy libraries. Learn about the concept of the z-score, in which every value in a distribution is expressed in terms of the number of standard deviations from the mean value. Then cover the computation of the z-score for a series using SciPy. In the closing exercise, you will make use of the matplotlib data visualization library through three points represented by given coordinates, then enumerate all of the details which are conveyed in a Boxplot.

COURSE_DESCRIPTION: While agile has become the de facto standard for managing digital innovation teams, many wonder if they're doing it 'right'. Twitter is full of jokes about how teams say they do agile but don't 'really' do it. The reality is that getting the most out of agile is less about observing specific procedures and more about how a team focuses and measures their progress. Rather than just boring you with an accounting of agile methodologies, this course focuses on helping you better charter your team's focus, definition of success, and practice of agile. While learning about agile mainstays like Scrum, XP, and kanban, you'll also learn to help your team ask the right questions about how they're working and facilitate good answers on how agile can help. This course is supported by the Batten Institute at UVA's Darden School of Business. The Batten Institute's mission is to improve the world through entrepreneurship and innovation: www.batteninstitute.org.

COURSE_DESCRIPTION: Social media and mobile use are closely linked, which means customers are more likely to connect with businesses for customer service when it suits them. Customers prefer social media for contacting businesses because they can multi-task while waiting for a response. This

gives customers more control over the communication channel, so businesses must have a plan to manage expectations and engage with customers on their terms and in the social media platforms they frequent. In this course, you'll learn about the importance of using social media for customer service, the changes brought about by social customer services, and how companies are adapting to this new way of addressing customer issues. You'll also learn how changes in the behavior and expectations of customers have impacted customer service and become familiar with the advantages of social customer service for businesses, gaining an understanding of the importance of other digital tools to support your customers. Finally, you'll explore the challenges of social customer care and the strategic approaches that you can implement to improve customer service. This course was developed in partnership with the Digital Marketing Institute. (www.digitalmarketinginstitute.com) For those who are interested in pursuing a certification, please contact the Digital Marketing Institute directly via this website: <https://digitalmarketinginstitute.com/lp/skillsoft>

COURSE_DESCRIPTION: Continue preparing for the Amazon Web Services (AWS) Certified Solutions Architect-Associate (SAA-C02) certification exam with this 19-video course exploring in depth the core AWS concepts already covered in previous courses. These concepts include how to deploy and manage S3 Cloud Storage and how to manage network components, as well as EC2 deployment and management. Learners examine S3 bucket and lifecycle management and listen to a discussion of S3 fault tolerance. Watch demonstrations of deploying a storage queue, creating a virtual private cloud, and configuring a network access control list. Next, watch as both a security group and a hosted DNS (domain name system) domain are configured. Other demonstrations: using the graphical user interface, command-line interface, and PowerShell to deploy a virtual machine; connecting to Linux virtual machines over a

secure shell (SSH) network; and connecting to Windows virtual machines over remote desktop protocol. In the closing sequence, learn to configure a custom Amazon Machine Image; create an EBS volume and attach it to an EC2 instance; and modify an instance type.

COURSE_DESCRIPTION: Great branding isn't just for marketing. Employees are consumers too, and that same marketing power should also be directed toward the employer brand to help create great candidate experiences and attract the best and brightest talent. Recognizing that the US is in the midst of a talent shortage, HR is forced to become more creative and prescriptive in sourcing efforts. In this course, you'll learn how to create a sustainable talent pipeline. This course can be used in preparation for the HR Certification Institute(r) (HRCI(r)) SPHR(r) certification exam.

COURSE_DESCRIPTION: To prepare for the CompTIA Security+ SY0-601 certification exam, you will need to identify and describe popular organizational security assessment tools and risk mitigation controls. You will likely come across these tools at some point in your career, so prior knowledge of how these work and what they're used for will be highly beneficial. In this CompTIA Security+ SY0-601 course, you'll explore the concept of network reconnaissance and discovery, and examine packet capture and replay, file manipulation, and forensic tools. You'll also identify shell and script environments, exploitation kits, and password crackers. You'll move on to recognize methods for reconfiguring endpoint security solutions and describe configuration changes for mitigation, the concepts of isolation, containment, and segmentation, and secure orchestration, automation, and response (SOAR) solutions. This course can be used in preparation for the CompTIA Security+ SY0-601 certification exam.

COURSE_DESCRIPTION: In Microsoft Planner, an efficient way to manage a plan is to divide it up into tasks. In this course, learn how to create and work with tasks, for example, to assign them to one or more members of your team. You will also discover how to add more details to your tasks, like due dates, priority, progress, or labels. These details are useful to get an overall view of your plan. For instance, to display the progress of your plan, learn how to use the Charts view. If you prefer to display your scheduled and unscheduled tasks, then switch to the Schedule view. Lastly, see how to organize and filter your tasks by adding customized labels. You will also learn how to copy, move, and delete tasks.

COURSE_DESCRIPTION: This course explores several Word 365 features to find and replace items. Learn how to use the Navigation Pane to find words and phrases in a document, and also to browse the results in context. You will also discover how to navigate between pages or lines with the Go To tool. Next, this course will focus on the Advanced Search options in Word's Editing tool set, which allows you to specify the word's case and format. Similarly, learn how to access the Find tool to use wildcard codes to perform approximate searches in Word, including how to search for variable spellings, specific prefixes, and even half- complete numbers. Lastly, you will learn how to use the Find and Replace tool to replace all instances of chosen words. The Replace tool also allows you to change formatting of text without having to manually select and reformat text. In order to practice, you will find the video samples in the Resources section.

COURSE_DESCRIPTION: The Microsoft Azure hierarchy consists of management groups, subscriptions, resource groups, and ultimately resources. Cloud technicians must have the skills to manage Azure hierarchy constituents. In this course, discover how Azure subscriptions can be organized under management groups to facilitate the application of Azure role-based access control and Azure Policy. Then, use the portal, CLI and PowerShell to work with Azure subscriptions. Next, create resource groups and Azure resource locks using the portal, the CLI, and PowerShell. Finally, move resources between resource groups. This course can be used to prepare for exam AZ-900, Microsoft Azure Fundamentals.

COURSE_DESCRIPTION: Many leaders understand that it's important to create closer, more valuable relationships with customers. But if they aren't actively managing their portfolios of weaker and stronger relationships, they're missing big opportunities, according to Fred Selnes and Michael D. Johnson. In their latest research, Selnes and Johnson demonstrate why the heavy emphasis on customer lifetime value (CLV) needs to evolve into a more balanced consideration of customer portfolio lifetime value (CPLV). They show how better-informed decisions about managing an entire portfolio of customer relationships can lead to lower costs and increased revenue.

COURSE_DESCRIPTION: This is a recorded replay of the Leadercamp Seizing the Upside of Turbulence that took place on Tuesday, May 18th at 10 am EDT led by Don Sull, Senior Lecturer, MIT Sloan School of Management. How do companies not only survive, but thrive in turbulent markets? This session will present key insights based on two decades of research on organizations that have successfully seized opportunities arising out of volatile markets. The session will address: • The three types of organizational agility-and what's required for each • How success can erode agility, and how to avoid that insidious dynamic • Practical tools to increase agility in your organization

COURSE_DESCRIPTION: This 15-video course explores such topics as Azure Active Directory Domain Services (AD DS) and access management features in Microsoft 365. Modern businesses need modern security and safe access for users that could be easily managed by administrators, and Microsoft 365 provides those features. Key topics covered in the course include directory structures and their role in network and organizational environments; trust as the security principle defining information and access safety, established by a directory structure managed and maintained by network administrators and delivered to end users. Examine the concepts of protection and domain controllers. Learn about Azure AD Connect, pass-through authentication, Azure AD Seamless Single Sign-On, and federation using Azure AD. A closing exercise asks learners to describe features of AD DS; list examples of AD DS objects and three AD DS Forest models; list four editions of Azure AD; and list the steps for enabling password hash synchronization. The course can be used as part of the preparation for the Microsoft 365 Fundamentals (MS-900) exam.

COURSE_DESCRIPTION: There are many choices when it comes to writing scripts on Linux. The bash shell script has been a popular choice, since the bash shell itself is a programming language and the commands used in the script match the syntax of the shell. Python is becoming increasingly popular for scripting on Linux because of its simple syntax, easy access to Linux system commands, and powerful libraries with which to create reports, for

example. In addition, Python can be used in other applications and on multiple platforms, so there is also the benefit of learning one language for many programming requirements. In this course, you will create a Python script in which you will determine disk space and generate a report on disk usage on an Ubuntu Linux system. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Gantt charts are an invaluable project management visual aid. Learners will discover how to format table text, change chart appearance, format bars, apply bar styles, display progress lines, and draw on Gantt charts in this 6-video course, recorded in a Project Online Desktop Client environment. To begin, you will learn how to format text within a table, which can highlight specific kinds of information in a Gantt chart, and then explore how to modify the appearance of the Gantt chart, changing the color scheme, link styles, and even the gridlines that appear in the chart. In Project, tasks are displayed as bars in the Gantt chart, so you will look at how these bars can be formatted. You can apply bar styles to highlight a particular kind of task in the chart; display progress lines to show how projects are progressing, and finally, learn about drawing on a Gantt chart, where you can add extra information by inserting shapes or text boxes.

COURSE_DESCRIPTION: The world runs on computers. Your watch, your TV, your car. You might be familiar on how to operate each of these. Your home computer you are even more familiar with operating it. But what does it take to really take computer systems to the next level? - The enterprise level. In this course we discuss what makes home computing systems different from enterprise computing systems. This course will also help you prepare and design your own home lab to explore enterprise operating systems. This course is for anyone who is exploring what it might take to have a job as a system administrator or for those who are already specialized in one area of system management and would like to move to another. This course may also be for those who are looking to understand how computer security plays an important role in system management. At the end of the course, you will also be able to illustrate how different enterprise technologies play role in computing at an enterprise level. You will also be able to discuss the three pillars of the CIA triad and how they apply to enterprise systems. While there is no technical and software component installs necessary for the completion of this course, supplemental how-to guides will be provided if you wish to follow along on the technical portion presented during the course.

 COURSE_DESCRIPTION: In this 45-min guided project, you will learn the basics of using the Keras interface to R with Tensorflow as its backend to solve an image classification problem. By the time you complete this project, you will have used the R programming language to build, train, and evaluate a neural network model to classify images of clothing items into categories such as t-shirts, trousers, and sneakers. We will be training the deep learning based image classification model on the Fashion MNIST dataset which contains 70000 grayscale images of clothes across 10 categories. In order to be successful in this project, you should be familiar with R programming, and basics of neural networks. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

 COURSE_DESCRIPTION: Durch die Modellierung von Daten können Unternehmen Daten besser organisieren und darauf zugreifen. Unternehmen verlassen sich auf verschiedene Arten von Daten, einschließlich Big Data, um ihr Geschäft vollständig zu verstehen. Dazu müssen diese Daten leicht zugänglich und verständlich sein. In beiden Fällen spielt die Datenmodellierung eine entscheidende Rolle. In diesem Kurs lernen Sie die Merkmale der Datenmodellierung sowie die gängigen Stile und Typen der verwendeten Datenmodelle kennen. Sie erfahren, wie die drei Ebenen der Datenmodellierung einen detaillierten Plan der Daten eines Unternehmens liefern können. Außerdem erfahren Sie mehr über gängige Strategien zum Erstellen von Datenmodellen und wie dies die täglichen Geschäftsabläufe eines Unternehmens verbessert.

COURSE_DESCRIPTION: Who is this course for? This course is designed for students, business analysts, and data scientists who want to apply statistical knowledge and techniques to business contexts. For example, it may be suited to experienced statisticians, analysts, engineers who want to move more into a business role, in particular in marketing. You will find this course exciting and rewarding if you already have a background in statistics, can use R or another programming language and are familiar with databases and data analysis techniques such as regression, classification, and clustering. However, it contains a number of recitals and R Studio tutorials which will consolidate your competences, enable you to play more freely with data and explore new features and statistical functions in R. Business Analytics, Big Data and Data Science are very hot topics today, and for good reasons. Companies are sitting on a treasure trove of data, but usually lack the skills and people to analyze and exploit that data efficiently. Those companies who develop the skills and hire the right people to analyze and exploit that data will have a clear competitive advantage. It's especially true in one domain: marketing. About 90% of the data collected by companies today are related to customer actions and marketing activities. The domain of Marketing Analytics is absolutely huge, and may cover fancy topics such as text mining, social network analysis, sentiment analysis, real-time bidding, online campaign optimization, and so on. But at the heart of marketing lie a few basic questions that often remain unanswered: (1) who are my customers, (2) which customers should I target and spend most of my marketing budget on, and (3) what's the future value of my customers so I can concentrate on those who will be worth the most to the company in the future. That's exactly what this course will cover: segmentation is all about understanding your customers, scorings models are about targeting the right ones, and customer lifetime value is about anticipating their future value. These are the foundations of Marketing Analytics. And that's what you'll learn to do in this course.

COURSE_DESCRIPTION: This project provides a step-by-step approach in instruction and will equip you with fundamental concepts of using inheritance in Java Programming, from the ground up. Using JGRASP development environment, you will create a Java project that processes students' details using inheritance. These details are college name, student's designation, student ID, subjects taken, learning platform, cost per subject, and a discount rate; You will create three types of students: online student, part-time student, and a special online student, and process and display their data. By the end of this project, you will be able to write a Java program using single inheritance, hierarchical inheritance, and multilevel inheritance, method overriding, and super keyword. If this is the first time you are learning about inheritance you will benefit from writing programs from templates as well as a blank sheet to a fully functioning program. If you already have programming experience, this is an opportunity to refresh your skills in inheritance. No matter your level, you will be able to apply the skills obtained from this course in real-life programming exercises. To provide you with support outside the course, you will find a pool of additional notes and exercises that you can try at home. If you ever wanted to build on your object-oriented skills in Java that you already possess and become better at using inheritance, this project is the right place to start!

COURSE_DESCRIPTION: Die in einer Datenbank gespeicherten Daten können auf verschiedene Weise verwendet werden. Dieser Kurs befasst sich mit der Leistungsfähigkeit von Datenbanken als Werkzeug zum Speichern, Bearbeiten und Abrufen von Daten. Verwenden Sie die Befehle der Datendefinitionssprache (Data Definition Language, DDL), um Strukturen wie Schema, Datenbank und Tabellen zu klären. Lernen Sie die wichtigsten Befehle der Datenbearbeitungssprache (Data Manipulation Language, DML) und führen Sie eine Anweisung der Datenabfragesprache (Data Query Language, DQL) aus. Zum Schluss erfahren Sie, wie Tabellen über Joins und Unterabfragen kombiniert werden können, um aus vorhandenen Daten neue Informationen zu gewinnen. Nach dem Kurs sind Sie in der Lage, grundlegende Befehle zum Einrichten von und Arbeiten mit Datenbanken zu verwenden.

COURSE_DESCRIPTION: This course explores Word 365's tools for typing, inserting, and manipulating text. Discover how to configure Word settings for more efficient typing. For example, to easily choose when to insert text or replace it as you type. You will also learn how to choose the insertion point anywhere in a document or how to insert text by getting quick autocomplete suggestions. Word also provides different tools for selecting text efficiently. See how to use your mouse or keyboard to select words, lines, or paragraphs. Next, you will then learn how to reorder text or paragraphs with cutting, copying, and pasting tools. Lastly, you will also discover other tools to quickly insert text. For example, use text boxes to add small pieces of texts anywhere in your document. If you prefer to insert text without typing, then see how to use and configure the dictation tools. In order to practice, you will find the video samples in the Resources section.

COURSE_DESCRIPTION: The Scrum framework helps teams work better, more collaboratively, and with a focus on solving real-world problems. It engenders continuous improvement and enhances efficiency. In this course, you'll learn about the Scrum team and Scrum team collaboration. Begin with an exploration of working groups versus teams, the values of effective Scrum teams, identifying effective teams, and how to work together as a team.

Then you will consider cross-functional teams, implementing collaboration, and self-management. Finally, you will explore collaboration and sprints, improving collaboration, and ways to interact with customers and users. After completing this course, you'll be able to outline relevant concepts for Scrum teams and collaboration.

COURSE_DESCRIPTION: In this one-hour, project-based course, you will learn how to use Unity's User Interface (UI) Toolkit's Auto Layout System to make the UI elements of your game present correctly on screens of any aspect ratio. This project covers adding Layout Controllers to and customizing each UI component in your game. The guided project will introduce you to the following Unity UI concepts: - Canvas Scaler - Rect Transform - Horizontal Layout Group - Vertical Layout Group This is Part 4 of a four-part series on creating a good-looking user interface for your game or other Unity application. Part 1 covered creating a screen overlay canvas for typical player-feedback such as health and score, while Part 2 showed you how to create world-space canvases to provide information and feedback on GameObjects in the environment. And in Part 3, we demonstrated how to create a settings menu. This is a stand-alone guided project, but because this is a continuation of previous parts in the "User Interface" series, it is recommended that you complete the first parts before commencing this guided project. This series makes use of the sci-fi-themed Unity project created in Create Power-Ups and Obstacles with C# in Unity. It compliments this guided project and, although not a prerequisite, is recommended for a more well-rounded understanding of the concepts presented herein.

COURSE_DESCRIPTION: Visio allows learners to create several types of diagrams and graphics. This 6-video course, recorded in a Visio Online Plan 2 environment, explores Visio tools allowing users to insert and format the text of their documents. First, learners see how to quickly insert, format, find and replace text in a document. Once you have finished drafting a document, you can use the spell check feature to detect and correct any text errors. If the document is in another language, you will observe how to translate the words directly from Visio. Save time by observing how to create and save templates to use later. If you frequently create the same type of document, templates are invaluable, acting as a starting foundation for future projects and speeding up your workflow. Learners observe how to open the Custom Office Templates folder, where templates remain accessible from the Visio start page interface. With the location selected, learn how to change file type from default-a standard Visio Drawing-by opening the drop-down menu and selecting Visio Template.

COURSE_DESCRIPTION: Discover benefits of DevOps principles and cloud computing in implementing enterprise-grade applications. Examine the DevOps workflow, cloud components involved in building delivery pipelines, and the AWS and Azure components that can be used to set up DevOps pipelines in this 13-video course. Explore scenarios where CodeDeploy can be used to automate deployments on various target environments. Key concepts covered include how to install the AWS CLI and PowerShell to access AWS and Azure resources; Azure components that play important roles in setting up DevOps pipelines to build, test, and deploy applications; and how to set up CodeCommit to provision a code repository and use for code management and versioning. Then learn how to set up Cloud9 to enable code writing, running, and debugging from CodeCommit; use CodeBuild to implement continuous integration for compiling source code, running tests, and producing software packages; and automate release pipelines using CodePipeline. Finally, learn scenarios where CodeDeploy can be used to automate deployment on various target environments; and automate software deployments to Amazon EC2 using CodeDeploy.

 COURSE_DESCRIPTION: In this guided project, we are going to create a neural network and train it on a small dataset of superhero names to learn to generate similar names. The dataset has over 9000 names of superheroes, supervillains and other fictional characters from a number of different comic books, TV shows and movies. Text generation is a common natural language processing task. We will create a character level language model that will predict the next character for a given input sequence. In order to get a new predicted superhero name, we will need to give our model a seed input - this can be a single character or a sequence of characters, and the model will then generate the next character that it predicts should follow the input sequence. This character is then added to the seed input to create a new input, which is then used again to generate the next character, and so on. You will need prior programming experience in Python. Some experience with TensorFlow is recommended. This is a practical, hands on guided project for learners who already have theoretical understanding of Neural Networks, Recurrent Neural Networks, and optimization algorithms like gradient descent but want to understand how to use the TensorFlow to start performing natural language processing tasks like text classification or text generation. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

 COURSE_DESCRIPTION: In this 1-hour long project-based course, you will learn how to collect and label images and use them to train a Tensorflow CNN (convolutional neural network) model to recognize relevant areas of (typeface) text in any image, video frame or frame from webcam video. You will learn how to extract image segments that your detector has identified as containing text and enhance them using various image filters from the OpenCV module. Then you will learn how to pass the result image to Google's open-source OCR (Optical Character Recognition) software using the pytesseract python library and read the text to whatever form of output you like. All of this will be done on Windows, but can be accomplished with very little alteration on Linux as well. We will be using the IDLE development environment to write a single script to scan our video, webcam input, or array of images for text and read that text into our output. Tensorflow, the Tensorflow Object Detection API, Tesseract, the pytesseract library, labelImg for image annotation, OpenCV, and all other required software has already been installed for you in your Rhyme desktop. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Explore the steps involved in a web request and the role of web applications in this web development process in this 8-video course examining various pieces that can make up a web application, and the role of the web framework in defining it. Begin by observing a widely used framework, often defined as a microframework, written in the Python language, which is Flask. You will then explore the features of the Flask framework that are available either out of the box or via extensions. Following on from this, you will delve into the roles of routes in a Flask application and the options available when defining a route function. You will learn how to recognize the need for templates when defining a web site and describe the use of jinja for this purpose. The final tutorial in this course focuses on some of the commonly used extensions in the Flask applications and recalls the purposes they serve.

COURSE_DESCRIPTION: Search optimization service is a Snowflake feature used to create an auxiliary data structure optimized as a search access path to improve selective point lookup query performance. While search optimization is an extremely handy feature, it can also run up substantial storage and compute costs. In this course, learn how to implement search optimizations by measuring the cost of search optimizations for your table and adding the service to it. Next, differentiate between search optimizations and clustering and discover how to implement partitioning for external tables. Finally, practice working with views in Snowflake and differentiate between non-materialized, materialized, and secure views. Upon completion, you'll be able to leverage search optimization in Snowflake, implement external table partitioning, and use and analyze views.

COURSE_DESCRIPTION: By the end of this project, you will use the python unittest package to create an application using test-driven development (TDD). Test Driven Development or TDD involves writing tests before the python application is implemented. Writing the test before implementing the code means the tests should fail when they are executed, which removes the likelihood of a test returning a false positive result. It also is another means of verifying the code specification, especially if the tests are written by a person or group outside of the core development team. Finally, the tests may be executed every time a code modification occurs to keep the code base in check. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In this course, you'll recognize how relational data - data with schema and clearly-defined column names - can be imported into Excel as a set of data tables. This data can be sliced-and-diced using classic Excel pivot tables or the more robust PowerPivot add-in. Now a standard part of Excel, this add-in vastly expands the tool's capabilities with some serious entity-relationship modeling and big data analysis.

Excel has powerful capabilities to detect relationships across models and infer foreign key relationships between parent and child tables. Creating, visualizing, and modeling such relationships is an important aspect of working with relational databases. As you'll recognize, you can now accomplish much of that from within Excel using PowerPivot. In this course, you'll use some classic yet powerful worksheet functions that have ensured Excel's use in Wall Street for decades. These functions can be used to compute the yield of a bond and the present and future values of a set of cash flows. They can also be used to perform complex operations on settlement dates and compounding rates of financial instruments.

COURSE_DESCRIPTION: In this Challenge Lab, you will create and manipulate a map that counts items in a file. First, you will declare a variable of type Map that contains keys of type String and values of type Integer, and then you will create an instance of the HashMap class. Next, you will initialize the contents of the HashMap object by using a scanner, and then you will manipulate the contents of the map by using a while loop and an

if-else statement. Finally, you will iterate over the map and display each element in the map, and then you will display the total number of elements that were defined in the file. Note: Once you begin the Challenge Lab, you will not be able to pause, save, or exit and then return to your Challenge Lab. Please ensure that you have set aside enough time to complete the Challenge Lab before you start.

COURSE_DESCRIPTION: This course provides instruction and strategies to support you in developing a course that is inclusive to students with a wide range of abilities, including students with disabilities. We cover effective practices to increase inclusion and avoid some of the common accessibility issues that can arise in an online course. In particular, Basics of Inclusive Design Online covers course organization, the accessibility of Microsoft Office and PDF documents, making course instruction pages accessible, captioning of videos, making images accessible, and designing for learning differences. We also discuss how inclusive course materials can help all students, including students without disabilities. This course will appeal to those who want both a broad overview of the range of accessibility considerations and also a step-by-step guide of how to check documents for accessibility, caption a video, or prepare course content for non-visual users. COURSE_DESCRIPTION: This course is designed to start you on a path toward future studies in web development and design, no matter how little experience or technical knowledge you currently have. The web is a very big place, and if you are the typical internet user, you probably visit several websites every day, whether for business, entertainment or education. But have you ever wondered how these websites actually work? How are they built? How do browsers, computers, and mobile devices interact with the web? What skills are necessary to build a website? With almost 1 billion websites now on the internet, the answers to these questions could be your first step toward a better understanding of the internet and developing a new set of internet skills. By the end of this course you'll be able to describe the structure and functionality of the world wide web, create dynamic web pages using a combination of HTML, CSS, and JavaScript, apply essential programming language concepts when creating HTML forms, select an appropriate web hosting service, and publish your webpages for the world to see. Finally, you'll be able to develop a working model for creating your own personal or business websites in the future and be fully prepared to take the next step in a more advanced web development or design course or specialization.

COURSE_DESCRIPTION: In this practice lab, learners will be presented with a series of exercises to practice developing in Java. Exercises include tasks such as building and analyzing a binary tree, using recursion to solve problems, and inserting nodes properly. Learners will also practice searching BST, sorting string objects lexicographically, building a heap using an integer array, and using multithreading in an app. Learners can also use the environment as an open sandbox. No installation or configuration is required, so you can gain immediate hands-on experience. Create new files or upload your own from a storage location of your choice, such as GitHub, and you can practice coding right away! You can even download a copy of your work when you're done. Whether you're looking to dive into the code presented within our courses or you want to work on your own coding projects, this lab environment will provide you with everything you need. So, go ahead and start coding today! See below for a complete list of available software. - Java 11 - Ant 1.10 - Apache Maven 3.6.0 - Gradle 6.8.3 - Spring Boot 2.4.3 - JUnit test framework - Mockito: Mock objects library - Python 2 & 3 - Pip 2 & 3 - Node.js - npm - Git - Vim editor - Standard Python libraries - Python 3 libraries: - beautifulsoup4 - selenium This lab is part of the Developer track of the Skillsoft Aspire Developer to Software Architect Journey.

COURSE_DESCRIPTION: With distributed systems using potentially hundreds of API endpoints, web APIs must employ advanced authentication and authorization techniques and ensure protection against common web-based security attacks. In this course, you'll explore the function and characteristics of Web API authentication and authorization before learning how to use local logins and external authorization services. Next, you'll learn how to prevent cross-site request forgery (CSRF) attacks, enable cross-origin requests in Web API 2, and use Web API filters. You'll then implement various authentication methods, namely basic authentication, forms authentication, and integrated windows authentication. Finally, you'll learn how to enforce SSL in a Web API controller.

COURSE_DESCRIPTION: Welcome to this Guided Project on Creating Your First Python Program, From UST. For more than 20 years, UST has worked side by side with the world's best companies to make a real impact through transformation. Powered by technology, inspired by people and led by their purpose, they partner with clients from design to operation. With this Guided Project from UST, you can quickly build in-demand job skills and expand your career opportunities in the Computer Science field by learning the foundational elements of the Python programming language and its basic syntax. Python is a computer programming language often used to build websites and software, automate tasks, and conduct data analysis. Python is a general purpose language, meaning it can be used to create a variety of different programs and isn't specialized for any specific problems. This versatility, along with its beginner-friendliness, has made it one of the most-used programming languages today. Through hands-on, practical experience, you will be guided through concepts that Python Programmers use every day to perform their job duties, like using the Terminal and a Text Editor. Together, we will explore how to use variables, create functions, lists and conditional statements, as well as utilize For and While loops. You will then apply the concepts to create your first command line application which will manage a To-Do List. This project is great for learners who are looking to get started with Python programming, and do not have any prior programming experience. By the end of this Guided Project, you should feel more confident about working with the Python language, understanding what it is used for, and have confirmed your skills by creating your own to-do list, which can be used for showing an employer or making your routine daily tasks more efficient through automation. Ready to become a Programmer? Start learning Python today!

COURSE_DESCRIPTION: Whether you're just beginning to work with the cloud or you already have cloud experience and are new to Microsoft Azure, this course provides you with everything you need to get started. It introduces you to Microsoft Azure core concepts and services. You'll learn the basics of cloud computing, its advantages, and how to choose the right Microsoft Azure solution for different business scenarios. You'll use the Microsoft Azure portal and a sandbox to create and test Microsoft Azure resources at no cost to you. You don't need to write code or have scripting skills to do this. You'll learn about several of the database and big data services that are available on Microsoft Azure. You'll also learn how to take advantage of several virtualization services in Microsoft Azure compute, which can help your applications scale out quickly and efficiently to meet increasing demands. Finally, you'll learn about the different storage and virtual network options available in Microsoft Azure. This course can help you prepare for AZ-900: Microsoft Azure Fundamentals exam. This is the first course in a four-course program that prepares you to take the AZ-900 certification exam. This course teaches you the core concepts and skills that are assessed in the cloud concepts and core Microsoft Azure services exam domains. This beginner course is suitable for IT personnel who are just beginning to work with Microsoft Azure and want to learn about Microsoft Azure offerings and get hands-on experience with the product. To be successful in this course, you need to have basic computer literacy and proficiency in the English language. You should be familiar with basic computing concepts and terminology, general technology concepts, including concepts of networking, storage, compute, application support, and application development. You should also be familiar with the concept of application programming interfaces or APIs. It is beneficial to have a high-level familiarity with relevant Microsoft products such as Dynamics 365 and Office 365.

COURSE_DESCRIPTION: AKTUELL: Am 20.05.2019 startet die vorläufig letzte Runde des MOOCs "Sprachtechnologie in den Digital Humanities". Anschliessend wird der Kurs auf der Plattform Coursera pausiert, d.h. Einschreibungen in den Kurs werden ab diesem Datum nicht mehr möglich sein. Die Videos bleiben aber nach wie vor über unseren YouTube-Kanal (<https://www.youtube.com/channel/UCb3Rd5vo3WEgMSy99VINaw>) bzw. den SwitchTube-Kanal der Uni Zürich (<https://tube.switch.ch/channels/bb3adc02>) sichtbar. Die Pausierung dient primär zur Aktualisierung und Erweiterung der Kursinhalte und Lernmaterialien. KURS-BESCHREIBUNG: Sie möchten wissen, was genau die Digitalisierung von Texten beinhaltet? Sie haben sich schon immer gefragt, wie Texte in einem Korpus optimal durchsuchbar gemacht werden? Sie wundern sich, wie Texte mit linguistischen Informationen angereichert werden können? Dann sind Sie in diesem Kurs genau richtig!! Er bietet einen Überblick über die wichtigsten Konzepte und Probleme bei der Digitalisierung und Annotation von geschriebenen Texten. In sechs thematischen Modulen verteilt auf sechs Wochen lernen Sie relevante Technologien und Werkzeuge kennen. Jedes Modul beinhaltet zwei bis drei Videos (10-20 Minuten), ein Quiz oder ein Peer-Assessment sowie kurze Hintergrundtexte und weiterführende Links zu ausgewählten Themen. Für wen ist dieser Kurs interessant: Dieser Kurs richtet sich an Korpuslinguist/-innen, an Geisteswissenschaftler/-innen und Sprachinteressierte, die von einer rein sprachwissenschaftlichen Perspektive ausgehend auch ein paar Schritte in die Welt der Digitalisierung von Texten wagen und die dahinterstehenden Technologien kennenlernen möchten. Für diesen Kurs brauchen Sie keine Programmierkenntnisse. Mit Interesse an der Digitalisierung und Annotation von Texten sind Sie bestens gerüstet für diesen Kurs. Wir freuen uns, mit Ihnen diese digitalen Wege zu beschreiten, die in den Geisteswissenschaften immer wichtiger werden.

COURSE_DESCRIPTION: We are always using experiments to improve our lives, our community, and our work. Are you doing it efficiently? Or are you (incorrectly) changing one thing at a time and hoping for the best? In this course, you will learn how to plan efficient experiments - testing with many variables. Our goal is to find the best results using only a few experiments. A key part of the course is how to optimize a system. We use simple tools: starting with fast calculations by hand, then we show how to use FREE software. The course comes with slides, transcripts of all lectures, subtitles (English, Spanish and Portuguese; some Chinese and French), videos, audio files, source code, and a free textbook. You get to keep all of it, all freely downloadable. This course is for anyone working in a company, or wanting to make changes to their life, their community, their neighbourhood. You don't need to be a statistician or scientist! There's something for everyone in here. _____ Over 1500 people have completed this online course. What have prior students said about this course? "This definitely is one of the most fruitful courses I have participated at Coursera, considering the takeaways and implementations! And so far I finished 12 [courses]." "Excelente curso, flexible y con suficiente material didáctico fácilmente digerible y cómodo. No importa si se tiene pocas bases matemáticas o estadísticas, el curso proporciona casi toda explicación necesaria para un entendimiento alto." "I wish I had enrolled in your course years ago -- it would have saved us a lot of time in optimizing experimental conditions." Jason Eriksen, 3 Jan 2017 "Interesting and developing both analytical and creative thinking. The lecturer took care to bring lots of real live examples which are fun to analyze." 20 February 2016. "... love your style of presentation, and the examples you took from everyday life to explain things. It is very difficult to make such a mathematical course accessible and comprehensible to this wide a variety of people!"

COURSE_DESCRIPTION: In this course, learners will examine the architecture of Docker along with features afforded by Docker to enable and manage multicloud containers, environments, and services. The 12-video course opens with an overview of Docker and the prominent open-source tools that can be used by architects for productive container implementations. You will learn about the role of Docker Container Management in implementing multicloud containerization and the critical Docker services that you need to manage while setting up multicloud containerization. Along the way, explore the features of Docker Cloud and Docker Hub along with the benefits of combining Docker and multicloud computer technologies. You will also learn how to link multiple containers, the steps involved in integrating Docker Cloud with AWS (Amazon Web Services), and how to set up nodes on Docker Cloud and deploy services on the nodes. You will conclude the course by learning how to create multicloud clusters by using Docker Swarm, Docker Machine, and popular cloud platforms.

COURSE_DESCRIPTION: Explore the fundamental concepts and the architecture of Node.js, and acquire a basic understanding of the language to build applications using Node.js. During this course, you will learn how to build apps with node.js, the Java Script run time environment. You will discover the fundamental principles and concepts of the node.js language, and examine its architecture. See how to setup the Node.js development environment. Specify prevalent execution mechanisms for your Node.js environment. Build your first node.js application. Consider the role of package.json in Node.js based applications. Learn the REPL language and its syntax basics. Write and use node.js functions. Finally, employ global and reserved keywords, to refine your node.js application.

COURSE_DESCRIPTION: Digital transformation is a hot topic--but what exactly is it and what does it mean for companies? In this course, developed at the Darden School of Business at the University of Virginia, and led by top-ranked Darden faculty and Boston Consulting Group global management experts, we talk about digital transformation in two ways. First we discuss the pace of change and the imperative it creates for businesses. Next we provide the context for this transformation and what it takes to win in the digital age. Then we walk through BCG's proprietary framework, which helps you identify key areas to digitize, including strategy, core processes, and technology. By the end of this course, you'll be able to: -- describe the underlying economics of innovation, technology, and market disruptions --weigh the pros and cons of current digital technologies driving advancement --utilize BCG's digital transformation framework as a "how-to" for digitizing your organization

COURSE_DESCRIPTION: In diesem Kurs können die Teilnehmer die Grundlagen von Microsoft Teams 2022, der Kommunikationsplattform von Microsoft, erkunden. Wenn Sie noch keine Erfahrung mit Teams haben, ist dies der perfekte Kurs für den Einstieg in die Nutzung des Programms. Zunächst lernen Sie, wie Sie die Anwendung auf Ihrem Desktop öffnen und sich bei Teams anmelden. Danach werden Sie viele der verfügbaren Tools und Funktionen kennenlernen. Sie werden auch verschiedene Möglichkeiten zur Navigation in Teams und Kanälen kennenlernen, z. B. wie Sie auf die Registerkarten zugreifen können. In diesem Kurs lernen Sie auch, wie Sie grundlegende Aufgaben für die Kommunikation in Teams ausführen, z. B. die Verwaltung Ihrer Verfügbarkeit und Ihres Status sowie die Änderung Ihrer Profil- und Datenschutzeinstellungen. Außerdem lernen Sie, wie Sie Ihre Benachrichtigungen anzeigen und verwalten können. Schließlich erfahren Sie, wie Sie ein persönliches Konto hinzufügen, Ihre Kontoeinstellungen konfigurieren und Microsoft Teams für das Web entdecken können.

COURSE_DESCRIPTION: Welcome to this 1.5 hours long hands-on project on Image Super Resolution using Autoencoders in Keras. In this project, you're going to learn what an autoencoder is, use Keras with Tensorflow as its backend to train your own autoencoder, and use this deep learning powered autoencoder to significantly enhance the quality of images. That is, our neural network will create high-resolution images from low-res source images. This course runs on Coursera's hands-on project platform called Rhyme. On Rhyme, you do projects in a hands-on manner in your browser. You will get instant access to pre-configured cloud desktops containing all of the software and data you need for the project. Everything is already set up directly in your internet browser so you can just focus on learning. For this project, you'll get instant access to a cloud desktop with Python, Jupyter, and Keras pre-installed. Notes: - You will be able to access the cloud desktop 5 times. However, you will be able to access instructions videos as many times as you want. - This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: You pick up your iPhone while waiting in line at a coffee shop. You google a not-so-famous actor, get linked to a Wikipedia entry listing his recent movies and popular YouTube clips of several of them. You check out user reviews on Amazon and pick one, download that movie on BitTorrent or stream that in Netflix. But suddenly the WiFi logo on your phone is gone and you're on 3G. Video quality starts to degrade, but you don't know if it's the server getting crowded or the Internet is congested somewhere. In any case, it costs you \$10 per Gigabyte, and you decide to stop watching the movie, and instead multitask between sending tweets and calling your friend on Skype, while songs stream from iCloud to your phone. You're happy with the call quality, but get a little irritated when you see there're no new followers on Twitter. You may wonder how they all kind of work, and why sometimes they don't. Take a look at the list of 20 questions below. Each question is selected not just for its relevance to our daily lives, but also for the core concepts in the field of networking illustrated by its answers. This course is about formulating and answering these 20 questions. All the features of this course are available for free. It does not offer a certificate upon completion.

COURSE_DESCRIPTION: Explore working with strings in Java, including the use of mutable strings through the StringBuilder class. In this course, you will discover the nature and use of strings and primitive data types, in Java. Observe how to compare and sequence strings, through equality tests and lexicography. Discover mutable strings, the advantages of string builder, and how to concatenate strings. Next, split a string via a regular expression, and learn how to split a paragraph of text into words in a string and iterate over individual words. Other topics include how to consider primitive data types, how to perform the standard modulus mathematical operation on an integer. Finally, you will use combined assignment operators to abbreviate common operations.

COURSE_DESCRIPTION: Welcome to the CompTIA Security+ Crash Course Bootcamp channel. The Security+ Bootcamp is a fast-paced, highly condensed, "11th hour" crash course for those students who are getting ready to take the Security+ exam in the next few weeks. It is also an excellent course for those who want to discover the depth and breadth of the exam and build their security knowledge foundation for the real world. The course will cover the high-points and more difficult topics of all Security+ domains as well as examine the special question types that test-takers will encounter on the exam.

COURSE_DESCRIPTION: How can we keep IT and tech professionals upskilled and engaged amid a widening skills gap and rapid pace of technological change? This is a question that organizations and IT decision-makers around the globe are faced with. Because in today's digitally transformed world, this is not just an issue for tech companies - technology is crucial to any successful business. So where does the answer to this question lie? To this discuss this further, we invite Michael Yoo, Customer Market Leader for Skillsoft's Technology and Developer Portfolio, and Angie Okamoto, Vice President of Product for Global Knowledge, to share key insights from Skillsoft's Global Knowledge 2021 IT Skills and Salary Report. The main takeaway: invest in your people. Please note that this course material includes content gathered from external websites which may fall outside your company network. Please consult with your IT department policies with respect to any restrictions in viewing content from external websites.

COURSE_DESCRIPTION: Adequate and accurate measurement systems are vital to the success of any data collection and analysis when striving for business process improvement. And they're critical to the overall success of any Lean or Lean Six Sigma initiatives in an organization. They can then inform decisions about process improvement, process control, and process design. This course will present measurement system analysis. Specifically, you'll explore how to address the precision and accuracy of your system. You'll also learn how to carry out various calculations and analysis, such as gauge repeatability and reproducibility study. This course is aligned with ASQ's 2015 Six Sigma Green Belt Body of Knowledge.

COURSE_DESCRIPTION: Metasploit is an open-source penetration testing framework that can be used by security professionals and ethical hackers to verify vulnerabilities, manage security assessments, and improve security awareness. One of the primary capabilities of Metasploit is the ability to write, test, and execute exploit code. In this course, you'll explore the Metasploit framework, its features, and its capabilities. Discover the Metasploit module types, including exploit, auxiliary, post-exploitation, payload, and no operation payload (NOP) generator, and identify possible disadvantages and limitations of Metasploit. Explore how to download and install Metasploit and discover how to work with modules, exploits, and payloads. Lastly, explore how to execute common Metasploit commands and recognize key steps involved in attacking a system using Metasploit.

COURSE_DESCRIPTION: In this course, you will examine how data is loaded into Cosmos DB, including data migration from a relational database and how to query that data. Begin by using the Cosmos DB web console to load items into a container, focusing on the types of data that can be loaded, like arrays and nested JSON structures. Then, you will query these items using an SQL-like syntax and explore array indexing, in-partition and cross-partition queries, as well as intra-document joins in order to unpack arrays. Then, you will migrate data from a relational Azure SQL Database to

Cosmos DB using Azure's Data Factory service, which allows you to define and launch a pipeline for a migration using an intuitive web UI. Finally, you will define a step to copy specific data from a source database and then migrate it over to a Cosmos DB container, assembling all the little pieces required for such a pipeline.

COURSE_DESCRIPTION: Angular is a platform and framework for building a breed of applications labeled SPAs (single-page applications). Use this course to discover what that means, explore the architecture of an SPA, and investigate the benefits of building one. In addition to building single page applications, Angular lets you implement routing and security. Practice implementing routing via Angular's routing module. Examine how routing does not involve routing to a physical HTML file but by rendering a 'view.' As with any web-based application, Angular implements routing security using a particular interface called route guards. Learn how to implement this interface, examining its features as you go. By the end of this course, you'll be able to create a single-page application and implement routing using Angular.

COURSE_DESCRIPTION: In this challenge, you will configure the firewall service to permit specified network connections. First, you will manage the firewall service, and then you will display the default configuration. Next, you will deploy the FTP service, and then you will configure the firewall service to permit FTP connections by service name. Finally, you will configure the firewall service to permit telnet connections by port number, and then you will test the connection. Note: Once you begin the challenge, you will not be able to pause, save, or return to your challenge. Please ensure that you have set aside enough time to complete the challenge before you start.

COURSE_DESCRIPTION: Spring Data JPA eases the development of applications that need to access Java Persistence API (JPA) by providing repository support. Use this course to get familiar with the basics of Spring Data JPA from a theoretical and practical standpoint. Through this course, you'll examine the concepts around Spring Data JPA and why this technology is a boon for developers, explore how to build a project that uses Spring Data JPA to connect to a database, and discover the use of the Spring Boot module. You'll also get a glimpse into the pieces which must come together to build an app that uses Spring Data JPA - data sources, a JPA implementation, and a CrudRepository. After finishing this course, you'll have the skills and knowledge to persist data using Spring Data JPA.

COURSE_DESCRIPTION: A continuous integration and continuous delivery (CI/CD) pipeline is a software development lifecycle (SDLC) construct that models how software moves from version control to release in a sequence of well-defined steps that include commit, build, and deploy stages. In this course, you will explore AWS CodePipeline, associated terminology, actions, executions, and artifacts. Dive into CodePipeline by building a pipeline, integrating with other AWS services, and implementing approvals. Explore how monitoring is realized in CodePipeline and how CodePipeline works with CodeCommit source actions. Configure stage actions and discover how to integrate test actions in CodePipeline. Then, examine security considerations and examine use cases and best practice while using CodePipeline. Finally, integrate CodePipeline with CloudFormation and compose an application using AWS CodeStar. This course is one of a collection of courses that prepares you for the AWS Certified DevOps Engineer - Professional (DOP-C01) certification exam.

COURSE_DESCRIPTION: Adobe XD is a UI/UX design tool that allows users to create all kinds of graphic art and website design products including website wireframes, mobile app wireframes, Social Media images, and other projects. It has many of the most popular features of Adobe Photoshop, and it allows users to import files from Photoshop, Illustrator, and Sketch. In this project, learners will learn how to start a project with Adobe XD including getting a free account, how to select the right artboards, how to define and develop buyer personas, and other basics that will help learners get their projects off to a good start. This is the perfect project for someone who needs an easy-to-use platform to create advanced-looking graphic art products. This will be beneficial to individuals and teams in creative departments, marketing and sales, design, and departments where creating presentations is a regular need. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Identity and access management (IAM) refers to the creation and configuration of identities and limited access to resources. Through this course, examine how resource access is secured within the AWS cloud. Begin by exploring IAM and identity federation before delving deeper into the steps involved in managing IAM users and groups using the AWS Management Console, AWS CLI, and AWS Tools for PowerShell. Next, you'll work with IAM policies and roles using the GUI and command-line tools. Moving on, you'll learn how to grant permissions to AWS resources, enable multifactor authentication (MFA), and manage AWS organizations and AWS Control Tower. You'll wrap up by discovering how to configure AWS single sign-on (SSO). After completing this course, you'll have a deeper understanding of identity and access management in the AWS cloud and be a step closer to preparing for the AWS Certified SysOps Administrator - Associate exam, SOA-C02.

COURSE_DESCRIPTION: Explore the most prominent modern application delivery models in this 11-video course. Learners encounter tools that can be used to implement automated deployment, along with their associated benefits, including the test automation workflow adopted in DevOps pipelines. The course demonstrates steps involved in managing development and deployment artifacts, demonstrate how to automate build workflows by using Maven and Jenkins, and develop test automation frameworks. Learn the relationship and differences between Maven, a build tool, and Jenkins, an open-source continuous integration software tool. Next, learn how to facilitate single source of truth-a concept used to ensure that everyone in an organization bases business decisions on the same data-when managing development and deployment of artifacts. Then study its three important elements: First, problems must be shared; second, work together to adopt a standard; and third, practice transparency, where everyone enjoys access to data and the ability to add. Other key concepts covered here include delivery models, minimum in-service deployment, traffic distribution, infrastructure automation, and functional automation.

COURSE_DESCRIPTION: Code and run your first C++ program in minutes without installing anything! This course is designed for learners with limited coding experience, providing a solid foundation of not just C++, but core Computer Science topics that can be transferred to other languages. The modules in this course cover functions, recursion, objects, and mutability. Completion of the prior 2 courses in this specialization are recommended. To allow for a truly hands-on, self-paced learning experience, this course is video-free. Assignments contain short explanations with images and runnable code examples with suggested edits to explore code examples further, building a deeper understanding by doing. You'll benefit from instant feedback from a variety of assessment items along the way, gently progressing from quick understanding checks (multiple choice, fill in the blank, and un-scrambling code blocks) to small, approachable coding exercises that take minutes instead of hours.

COURSE_DESCRIPTION: Use this course to get started with Cloud computing while also preparing yourself to take the CompTIA Cloud Essentials+ (CLO-002) certification exam. Learn how Cloud computer enables convenient on-demand access to a shared pool of configurable computing resources. Explore prominent computing models, disadvantages of in-house computing, and benefits of Cloud computing while also examining the required components to set up a cloud computing model and investigate features of cloud service delivery and deployment models. Examine the concept of shared resource pooling, the role of virtualization in cloud models, the lifecycles of applications and services deployed in the cloud, and why cloud is the best choice for resource management and application deployments. Go further by learning to recognize the shared responsibility model adopted by cloud and outline key steps involved in selecting and setting up the right PaaS solution and core components of a cloud infrastructure. Wrap up by practicing an IaaS and PaaS on AWS and Azure. Recap cloud service delivery modules to finish up this course.

COURSE_DESCRIPTION: Survey data sets are often deceptively complex because surveys collect a wide variety of data covering a wide variety of topics and experiences. To further the complexity of survey data, the respondents answering the questions come from a wide variety of backgrounds and stages in their customer journey. It is reasonable that it would be a challenge to boil down survey data into actionable insights because it can be deceptively complex. With large sets of data, Principal Component Analysis or PCA is a useful tool that reduces and transforms variables to a leaner form that allows for a speedier analysis. In this project you will gain hands-on experience with the principles of Principal Component Analysis using survey data. To do this you will work in the free-to-use spreadsheet software Google Sheets. By the end of this project, you will be able to confidently apply Principal Component Analysis concepts to transform large sets of variables into a leaner set of data that still contains the most relevant information. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In Elicitation: Artifact and Stakeholder Driven Analysis, you will learn to use both recorded and presently unrecorded knowledge in your elicitation techniques. As you get started in finding out about the new product, you must first learn about the product that was (if there was one) and then learn about the system to be. Oftentimes, you'll find yourself in an environment you know nothing about! This course will help you find ways to learn about the domain, the system that was, and the system to be. Please review: "Who this class is for to determine if you are ready to take this graduate level course".

COURSE_DESCRIPTION: In this course, learners will explore deploying data models into production through serialization, packaging, deployment, and rollback. You will begin by watching how to serialize models using Python and Pandas. Then the 8-video course takes a look at the tools and approaches to model packaging and deployment. Next, you will explore the concept of the blue-green deployment strategy for data DevOps, which is the strategy for upgrading running software. This leads into examining the concepts behind the Canary deployment strategy in terms of data DevOps. Canary deployments can be regarded as a phase or test rollout on updates and new features. Then take a look at versioning and approaches to rolling back models for machine learning with DevOps. Finally, you will learn about some of the considerations for deploying models to web APIs (application programming interfaces). The concluding exercise involves creating a model by using Python and Pandas, then serializing the results of the model to a file.

COURSE_DESCRIPTION: Resiliency is the ability to provide the required capability in the face of adversity, without significant impact. This is not something that just happens, but rather must be thoroughly planned for and tested, including: 1. Keeping hardware, the operating system, middleware, and applications up and running throughout planned and unplanned outages 2. Recovering a site from an unplanned event without data loss This course is intended for IT managers, IT architects, system programmers, and system operations professionals. It is a high-level course that uses IBM Z architecture to demonstrate these concepts. Learners will be able to earn their badge on successful completion of this course. COURSE_DESCRIPTION: Whether it is a natural disaster that sweeps through a city, a virus that sweeps across the nation, or a computer virus that destroys vital electronic information, businesses need to be able to recover their services and operations as soon as possible if such a disaster does occur. A Business Continuity Program involves planning the recovery of operations when confronted with adverse events such as natural disasters, technological failures, human error, and terrorism. This course provides a basic understanding of the criteria for a comprehensive program that addresses business continuity in accordance with the National Fire Protection Association (NFPA) standard 1600, entitled Standard on Continuity, Emergency, and Crisis Management. The course was developed and reviewed with subject matter support provided by certified subject matter experts and industry professionals. Please note, the course materials and content were current with the laws and regulations at the time of the last expert review, however, they may not reflect the most current legal developments. Nothing herein, or in the course materials, shall be construed as professional advice as to any particular situation with respect to compliance with legal statutes or requirements.

COURSE_DESCRIPTION: Extroversion is often the dominant psychological characterization associated with being a successful leader in the workplace. However, the definition of leadership can be taken to an entirely new level by revealing the valuable traits and strengths of introverted leaders, focusing on equitable talent in the workplace. We explore this topic deeper in this episode of The Edge with Jennifer Kahnweiler, a bestselling author and one of the top global leadership speakers on introverts in the workplace. Together, Jennifer and host Michelle Boockoff-Bajdek chat about the power of the introverted leader, and how organizations can create an introvert-friendly culture that embraces their leadership strengths. Please note that this course material includes content gathered from external websites which may fall outside your company network. Please consult with your IT department policies with respect to any restrictions in viewing content from external websites.

COURSE_DESCRIPTION: Software developers often use existing third-party APIs and software components. This reduces development time and the time to market for software products. In this course, learn about trusted APIs and components, including when they are used, how developers must truly understand how these items work, and how they must be kept up to date. Next, examine the Heartbleed Bug and how to view components in Microsoft Visual Studio. Finally, discover how security must apply to all aspects of continuous integration and continuous delivery (CI/CD) and learn how to search the Shodan website for vulnerable devices and apps. Upon completion, you'll be able to recognize the importance of using only trusted third-party APIs and software components during application development.

COURSE_DESCRIPTION: There are several tools on the market that work together with Selenium to enhance test automation. One of these tools is the cloud-based testing platform for web and mobile applications, BrowserStack. In this course, you'll explore how to set up and configure test environments using BrowserStack, Selenium, and WebDriver to test URLs, run parallel tests, and automate testing on various combinations of browsers and devices. Next, you'll learn how to manage security certificates, Flash, and pop-ups during test automation. Finally, you'll learn to integrate Selenium with the tools, Lettuce and Behave and use these set ups to run automated tests in cloud environments.

COURSE_DESCRIPTION: After reviewing the elements of blockchains and how they can store sequences of records, you will learn how to recognize Ethereum's characteristics in this 8-video course. Participants will learn how to implement important concepts such as hashing, mining, miners (who successfully mine blocks of data), smart contracts, and cryptocurrencies. Familiarize yourself in depth with the process of mining; learn how mining acts to sequence records; and become able to distinguish between centralized and distributed ledgers. You will now be able to describe the role played by Ethereum's special cryptocurrency-known as Ether-and identify the key details required when invoking transactions in the Ethereum network, which records data in a transparent and verifiable manner. By the end of this course, you will also be more proficient at recognizing the role played by mining nodes, and learn to define the special concept of gas, the term used to measure complexity of transactions.

COURSE_DESCRIPTION: As an Azure administrator, you will need the skills to determine how you will use resource groups and management groups. First, discover how management groups are used to organize Azure subscriptions and how resource groups can organize related resources under a single heading. Next, create a management group and organize subscriptions under it. Then, create and manage resource groups using the portal, the CLI, and PowerShell. Finally, move Azure objects between resource groups, view resource group deployments, and delete a resource group and its resources. This course can be used to prepare for exam AZ-104: Microsoft Azure Administrator.

COURSE_DESCRIPTION: In this 14-video course, learners explore the DevOps continuous integration/continuous deployment (CI/CD) process and approaches for switching from traditional practices to CI/CD practices. You will learn to recognize risks and challenges associated with CI/CD and approaches for eliminating them. Then delve into CI/CD pipelines and the benefits of implementing automated testing for CI/CD; different CI/CD pipeline architectures that can be set up to implement automated testing; and the CI/CD framework features that can help accelerate continuous integration with Jenkins test automation. Look at CI/CD tools used to build next-gen delivery pipelines; configure Jenkins with the supported tools needed to set up continuous integration from the perspective of test automation, and use Git Hooks to automate development and deployment tasks. Observe how to build CI/CD pipelines; set up architectures of CI/CD pipelines for container automation; and recognize the core technologies and strategies that are used to implement continuous testing and deployment with containers. Finally, learn how to implement continuous testing by using Selenium and Jenkins.

COURSE_DESCRIPTION: Russian is considered to be one of the most difficult languages in the world, and many learners struggle to master its grammar and pronunciation. This course is aimed at those who wants to work in Russia, do business with Russian partners or study on business-related majors in Russian. In three units of this course learners are going to find out how to estimate sales volumes, discuss terms of contracts and resolve problems occurring in their business activities. The course is the final part of Business Russian Communication series of courses offered by St Petersburg State University. This part introduces such grammar topics as comparative and superlative forms of adjectives, the use of construction 'y меня получилось' and 'мне удалось', how to express objectives with the words чтобы and за, the use of prepositions в - из, на - с, к - от with verbs of motion, the use of particle бы and constructions with потому and потому что. Learners can practice their skills and test themselves in Grammar quiz section. The course provides extensive vocabulary with more than 100 new words and conversational phrases which learners can use in their everyday communication on professional or informal topics. Each unit of the course contains dialogues, which are extremely useful for those who wants to listen to original Russian speech and get used to the pace and intonations of Russian language. Scripts and exercises are provided for all dialogues of the course. In the end of the course learners will have a chance to use the material learnt and assess their progress while preparing the Final Assignment. This course is aimed at those who already achieved A2-A2+ level in Russian.

COURSE_DESCRIPTION: In this new course, you'll gain evidence-based knowledge and practical tools to help you design and lead diverse, equitable, and inclusive (DEI) teams and organizations. Whatever your background, and wherever in the world you may be, you'll gain tools to accelerate your personal journey to lead diverse teams and organizations. This program is specifically designed to accommodate learners from different backgrounds (gender, race, country of origin, etc) as well as different starting knowledge points (new to the topic or social justice warriors). In the course, you'll learn to better understand yourself and your personal identity in the workplace and gain new skills to identify privilege, implicit bias, and microaggressions in your organization and to take action as an active ally and change advocate. After hearing from experts representing a diverse array of real-world perspectives, you'll understand best practices for equitable organizational processes and norms and inclusive behavioral practices in teams. Finally, you'll learn about best practices for organizational DEI strategy, including the role of metrics in DEI work and how DEI work can be integrated into the heart of an organization. At the end of the course, you'll create a DEI action plan which you can apply to your own life and workplace. Throughout the course, you'll: - Describe the organizational benefits of diversity, equity, and inclusion - Identify the conditions under which diversity is most likely to benefit teams and organizations. - Deepen your understanding of different demographic differences and how identity, implicit bias, and structural inequalities impact workplace dynamics. - Identify best practices for equitable organizational processes and norms. - Incorporate important considerations for how to lead inclusive teams, including conflict management skills, group decision making best practices, and emotion regulation. - Gain tools for the implementation of DEI strategies in organizations, including the architecture of DEI groups, the role of data and metrics, and tools to integrate DEI into the very heart of an organization.

COURSE_DESCRIPTION: When products or work initiatives or companies fail, it's rarely because of the ability of the people working on the problem. Rather, it's because smart people worked hard and found that when they were done..that they had been working on the wrong problem. They created something their customers didn't need, and all that brain power and effort was wasted. Design thinking is a methodology used by the most customer-centric companies in the world, companies like Apple, Amazon, IDEO, OXO. It helps you to discover the problems your customers actually face and create solutions rapidly that actually solve them. As an HR and Talent veteran of 17 years and a design thinking coach at Stanford, Randal Vegter puts his expertise to work in this Leadercamp to simplify design thinking and help you apply it to your most pressing issues. Join Randal Vegter, Skillsoft's Vice President of Talent Enablement & Culture, for a fun and interactive session that will give you a new and exciting frame to view your work.

COURSE_DESCRIPTION: Welcome to this project-based course Introduction to EDA in R. In this project, you will learn how to perform extensive exploratory data analysis on both quantitative and qualitative variables using basic R functions. By the end of this 2-hour long project, you will understand how to create different basic plots in R. Also, you will learn how to create plots for categorical variables and numeric or quantitative variables. By extension, you will learn how to plot three variables and save your plot as an image in R. Note, you do not need to be a data scientist to be successful in this guided project, just a familiarity with basic statistics and using R suffice for this project. If you are not familiar with R and want to learn the basics, start with my previous guided projects titled "Getting Started with R" and "Calculating Descriptive Statistics in R"

COURSE_DESCRIPTION: Azure provides a variety of business continuity solutions to minimize the impact of disruptions. In this course, you'll learn to plan the use of Azure Site Recovery services. Next, you'll examine how to create a Recovery Services vault and replication policies. You'll then explore how to configure Azure Backup policies, enable backup for Azure VMs and on-premises file servers, and perform restoration of backed up data. Next, you'll learn how to enable VM replication and conduct a failover test. Finally, you'll explore how to reuse a VM OS disk for a failed VM. This course is one of a collection of courses that prepares learners for the AZ-304: Microsoft Azure Architect Design certification exam.

COURSE_DESCRIPTION: By the end of this project, you will create a basic game using additional features with an introductory, web-based coding program called Scratch. Learning to code will allow you to build basic coding or computer science skills and a fundamental understanding in order to grow your programming abilities. Learners will engage in the design process in order to develop an understanding of how to develop algorithms that control programs, use event-driven programming, and debug a program. Introduction to Basic Game Development using Scratch is a prerequisite for this project. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: A key indication of a mature scrum team is having self-management/self-organization at a high level. As a scrum master, you have a responsibility to help the scrum team achieve that. In this course, learn about the value that self-managing scrum teams provide to the team's work and the organization as a whole. Next, discover the common challenges that self-managing scrum teams face and how a scrum master can overcome them. Finally, examine some best practices for developing and supporting self-managing scrum teams and building team performance. Upon completion, you'll be able to recognize key characteristics and best practices of self-managing teams as a scrum master.

COURSE_DESCRIPTION: Businesses and their supply chains are facing increasing competition and uncertainty in what is now a truly globalised trade environment. To remain competitive, organisations need to think globally - ensuring supply chains meet customer demands while minimising costs and maximising responsiveness. From a strategic perspective, this involves making important trade-off decisions between cost, quality and flexibility of supply chains. Via structured learning activities (video lectures, quizzes, discussion prompts and written assessments) this course will equip you with the future-focused capabilities needed to design and manage effective, sustainable and efficient global supply chains of tomorrow.

COURSE_DESCRIPTION: Whether you are just starting in your career or you're a seasoned executive, asking for help is key to success. Yet its power is often overlooked. Further, asking for help can be learned. It's a skill that we can all develop and that can be practiced and honed over time. At first, we might feel shy about asking for help, or assume that we are bothering people. Or, we might be OK asking for small favors but shy away from asking for bigger ones. In this leadercamp, speaker and writer Debbie Madden will share the most common obstacles to effectively asking for help, and teach you how to get unstuck. She'll offer best practices for starting small and iterating your way toward mastery.

COURSE_DESCRIPTION: This 13-video course offers a comprehensive overview of best practices and safety standards: the working rules which keep operators from causing harm to their systems. Documentation best practices, for example, begin with network topologies-mapping diagrams of distribution of devices and subnetworks, home or office-while sensible password policies exist to offer invaluable protection to users and systems alike. Record all incidents; manage inventory carefully; comply with government regulations and MSDS documentation. Basic safety procedures-goggles, air filter masks, weight limitations, toxic waste handling-are needed to protect users, equipment, and IT staff alike, and must be up-to-date. Change management is critical to continued success; what the world you work in will look like next year is almost impossible to guess, so learn to be ready for anything. Remote access technologies are constantly evolving, and you must keep abreast of changes. A closing exercise allows you to assess your knowledge of just a few: password policies; airborne dust and debris; and government regulatory compliance laws. Course helps prepare for CompTIA A+ certification exam 220-1002

COURSE_DESCRIPTION: In today's business landscape, the media is rife with stories of employee burnout. Across the board, we need to learn how to better manage our energy so that we continue to be healthy, productive, and happy. Possessing over 30 years of experience as Vice President of Communications, Marketing and Public Relations, expert Leadership Coach Yvette Castanon will reveal how we can effectively manage our energy. In this Leadercamp, Castanon will show you how to maximize your energy by helping you understanding what depletes your energy, what brings you energy, and how best to manage it. Attendees will learn: •The Four Energy Dimensions: Physical, Emotional, Mental and Spiritual •The Dynamics of Energy Engagement-How to renew your energy and enhance performance •The Leadership characteristics that have the biggest impact on Energy and Performance •Recommended Actions and small changes that can increase your energy

COURSE_DESCRIPTION: Google Compute Engine (GCE) offers various advantages for deploying your applications, such as throughput, stability, pricing, backup, and security. Containers on Compute Engine instances allow you to conveniently run your apps on host virtual machines (VMs) with fewer dependencies. In this course, learn about the different types of containers that can be run on Compute Engine instances. Next, discover how to install applications and manage service accounts for VMs, bootstrap applications on Compute Engine, and configure and manage sinks. Finally, practice exporting metrics, using operating system images to create boot disks for instances, and configuring a Binary Authorization policy with Google Kubernetes Engine (GKE). This course is one of a collection that prepares learners for the Google Professional Cloud Developer exam.

COURSE_DESCRIPTION: In this course, we will explore basic principles behind using data for estimation and for assessing theories. We will analyze both categorical data and quantitative data, starting with one population techniques and expanding to handle comparisons of two populations. We will learn how to construct confidence intervals. We will also use sample data to assess whether or not a theory about the value of a parameter is consistent with the data. A major focus will be on interpreting inferential results appropriately. At the end of each week, learners will apply what they've learned using Python within the course environment. During these lab-based sessions, learners will work through tutorials focusing on specific case studies to help solidify the week's statistical concepts, which will include further deep dives into Python libraries including Statsmodels, Pandas, and Seaborn. This course utilizes the Jupyter Notebook environment within Coursera.

COURSE_DESCRIPTION: A DevOps approach to cloud computing helps establish a pipeline that automates end-to-end application deployment and management. In this course, you'll explore best practices for DevOps implementation, examining approaches to address and mitigate the inherent risks associated with cloud computing. You'll then compare immutable and mutable infrastructure and investigate the implementation of Infrastructure as Code. Next, you'll differentiate between continuous integration and continuous delivery and outline the lifecycle of CI/CD in cloud. You'll explore the concept of QA testing for cloud and how sandboxing is used in this process. You'll outline how to implement regression and load testing for cloud resources and distinguish cloud configuration management from cloud change management. Moving on, you'll differentiate between cloud automation and orchestration and explore the concepts of cloud patch management and cloud integration. Lastly, you'll practice implementing APIs in the cloud, using AWS API Gateway to expose services to end users.

COURSE_DESCRIPTION: Übergänge und Animationen sind zwei wesentliche Funktionen von PowerPoint, um Ihre Bildschirmpräsentationen zum Leben zu erwecken und die Aufmerksamkeit Ihres Publikums zu fesseln. PowerPoint enthält über fünfzig verschiedene Arten von Animationen: Eingang, Ausgang, Hervorhebungs- und Animationspfade. In diesem Kurs erfahren Sie, wie Sie diese Animationen zu verschiedenen Arten von Folienobjekten hinzufügen und ihre Optionen für einen maximalen Effekt konfigurieren können. Sie werden auch sehen, wie Sie Übergänge hinzufügen können, um von Folie zu Folie auf eine fesselnde Weise zu wechseln. Schließlich zeigt der Kurs eine Reihe von nützlichen Möglichkeiten auf, die Bildschirmpräsentation selbst zu personalisieren. Dazu gehören das Einrichten von Bildschirmpräsentationsoptionen, das Erstellen einer benutzerdefinierten Präsentation und die Verwendung der Präsentationsansicht. Möchten Sie das Gelernte praktisch üben? Gehen Sie zum Bereich Kursinhalt oder zum Abschnitt Ressourcen und laden Sie die Beispieldateien herunter, die Sie zusammen mit ausgewählten Videos verwenden können.

COURSE_DESCRIPTION: Network security includes controlling which network traffic is allowed into and out of networks and virtual machines. Network access control lists (ACLs) serve as packet filtering firewalls to control network traffic at the subnet level while security groups control network traffic flow to specific virtual machine instances. In this course, discover how to create network ACLs using the AWS console, the CLI, and PowerShell. Then, create rules in the network ACL to restrict inbound and outbound traffic and associate the network ACL with a subnet. Next, create security groups using the AWS console, the CLI, and PowerShell and learn how to create security group rules and associate a virtual machine. Finally, deploy the AWS Network Firewall for network perimeter protection including intrusion prevention. This course can be used to prepare for exam SAP-C02, AWS Certified Solutions Architect - Professional.

COURSE_DESCRIPTION: Ständig versuchen Leute Git richtig zu erklären. So auch ich, schließlich hat sich Git schon seit einigen Jahren als Standard festgesetzt. Viele nutzen zwar Git, kennen aber nicht alle Funktionen oder verstehen die Arbeit damit richtig. Nichtsdestotrotz ist Git nicht für alle Probleme eine Lösung. Dieser Vortrag stellt einige Ideen vor, die Menschen schon mit Git Repositories angestellt haben, die vielleicht nicht ganz so sinnvoll gewesen sind. Es werden einige Beispiele genannt, die man ausdrücklich nicht machen sollte. Darüber hinaus wird natürlich auch noch darauf eingegangen, warum solche Aktionen nicht sinnvoll mit Git umzusetzen sind und was für Alternativen es gibt.

COURSE_DESCRIPTION: Hello, In this project, we will see in detail the steps required to create a PowerBI report using PowerBI Desktop and also we will publish this report on PowerBI service in the respective workspace. This project is designed for beginners who have no idea about PowerBI so they can quickly get a glimpse of how to create a report in PowerBI. Pre-requisites: - PowerBI Account Here is a brief description of the tasks we are going to perform in this project: Task1: Get Data In this task we will first see an overview of PowerBI Desktop and then using PowerBI Desktop we will connect to the source data using the Get Data option. At the end of this task we would have imported all the source data in PowerBI Desktop Task2: Create Relationship & Calculated Columns In this task, we will create relationships between different source tables imported in PowerBI. In this process of creating relationship, we will also see how to create a calculated column using DAX query language. Task3: Customize field level properties In this task, we will explore and customize different field level properties like datatype, summarization, hidden etc. Task4: Create visualizations in report In this task, we will see how to create different visualizations in the report. We will also see how to add filters or slicers. We will explore visualizations like line chart, pie chart, table etc. Task5: Publish report to PowerBI service In all previous tasks, we have developed the report in PowerBI Desktop which is the local application installed on our desktop. In this task, we will see how to publish the task in power bi service. All The Best !!

COURSE_DESCRIPTION: Using a hands-on lab approach, explore how to use Amazon Redshift to set up and configure a data warehouse on the cloud in this 9-video course. Discover how to interact with Redshift service with both the console and Amazon Web Services (AWS) Command Line Interface (CLI). Key concepts covered here include how to use the Amazon Redshift Quick Launch feature to provision a data warehouse; provisioning a Redshift cluster with the default cluster; and tool configuration options for a Redshift cluster, and metrics available to optimize a cluster configuration. Next, learn how to create Identity and Access Management (IAM) roles on AWS that include necessary permissions to interact with Redshift and S3 services; to provision an IAM user that can connect to and interact with AWS using the CLI; and to install the AWS command-line interface to create and delete Redshift clusters. Then learn to use Redshift Query Editor to create tables, load data, and run queries; and learn features of Amazon Redshift and commands and configurations needed to work with Redshift by using the CLI.

COURSE_DESCRIPTION: Learners can explore basic concepts of Python socket programming, and how to communicate small amounts of data between Python applications by using either the same machine or over a network, in this 9-video course. Begin by learning how to use Python language to set up a communication line by creating a socket. Then learn to initialize a simple socket, and use it to transfer text data from one application to another. This course next demonstrates how to create a client app and server app in Python, and how each app uses a socket to communicate. Learners will observe a demonstration of how to transmit a Python dictionary and custom object over a socket connection. You will learn how to use a socket model to set up a simple TCP (transmission control protocol) socket to transfer text between applications. Next, learners will examine other properties of Python sockets, including its use with the context manager and the setting of a time-out for connections. Finally, you will learn to use the Pickle library to convey Python objects over a socket connection.

COURSE_DESCRIPTION: This course will introduce you to basic concepts of emergency management, planning, and crisis risk communication. You will understand the definitions of and operational challenges associated with disasters and public health emergencies. You will identify important components of risk communication, and you will identify and evaluate the ways social characteristics shape vulnerabilities to crises and health outcomes. In completing this course, you will begin to learn about the nature of different kinds of extreme events and the disruptions they can cause for communities affected by them. You will learn about how to approach the planning process. You will also explore the ways extreme events can be felt differently by different members within our communities. Finally, you will go over important considerations in crafting messages about risks. As you go through the course, you will apply your knowledge of these principles in assignments which ask you to consider how you would approach the crisis risk communication planning process for your organization or community.

COURSE_DESCRIPTION: macOS Ventura is the current version of the operating system that runs on macOS. macOS Ventura offers new multitasking features and new ways to share and collaborate in your favorite apps. In this course, discover the macOS Ventura interface, so you can easily navigate and access its most essential elements. The Dock on Mac is a convenient place to quickly access applications and features that you frequently use. Learn how to add, organize, and remove items from your Dock. Mission control allows you to get an overview of all your open apps and easily navigate to the one you need. See how to use Mission Control to manage multiple windows and desktops. Explore the Notification Center to view your notifications and additional information about events, the weather, and the time in your current location from the notification center. Also, see how to add and remove app widgets from the notification center. Learn how to turn on Do Not Disturb, so you won't be distracted by notifications. View information about your Mac via the System Settings and learn how to access user guides on System Settings and macOS. And finally, see how to restart, put to sleep, shut down, or lock your Mac.

COURSE_DESCRIPTION: Explore web application hacking methodology through practical examples, from footprinting the target server to gaining root privileges. This course will help prepare for the 312-50: Certified Ethical Hacker v10 exam. Watch these videos and learn how to discover systems on the network, find the command that determines if there is web server software running on a system, locate web server vulnerabilities, and remember the command that scans a Wordpress site. You'll also learn how to recognize the tool that checks for website vulnerabilities, choose a tool that creates a PHP payload, pick a tool that creates a listener that will accept connections from the victim, and list commands that create a listener in Metasploit.

COURSE_DESCRIPTION: This course offers an in-depth exploration of the creation and management of concurrent threads in Python. In its 14 videos, you will learn how to significantly improve the performance and responsiveness of your apps by using concurrent threads. Begin by examining how threads are created in Python from their initialization to their execution; then learn how to use the various synchronization mechanisms such as locks, semaphores, and events. Next, you will examine how concurrent execution could occur in two ways: multithreading and parallel. You will learn to use multithreading to run chunks of each task at one time, and then switch between them regularly. You will learn multiprocessing of threads by executing tasks in parallel. Learners will examine concurrent execution of threads, and some of the issues that arise when these threads are not synchronized. Finally, you will examine several threads of synchronization mechanisms available in Python such as locks, semaphores, events, and conditions and explore the properties and use cases for each of these objects.

COURSE_DESCRIPTION: As new COVID-19 variants spread and more people are vaccinated for COVID-19, people have more questions about COVID-19 vaccines. Dr. Gregory Poland, an infectious diseases expert and head of Mayo Clinic's Vaccine Research Group, says that's understandable with new information released every day. For instance, people are wondering what type of medications they can take if they're being vaccinated for COVID-19. There are also concerns about whether a person who has been vaccinated for COVID-19 can transmit the virus. And some are asking why they need to wait 14 days, before and after being vaccinated for COVID-19, if they are scheduled to be given a different vaccine, such as a shingles vaccine. (Published 02/10/2021)

COURSE_DESCRIPTION: Dart is an object-oriented programming language that supports mixin-based inheritance and functional constructs. Mixin-based inheritance allows you to reuse code from a class without having to inherit from that class and is very useful for modeling inclusive functionality for classes. In this course, we will focus on object-oriented programming constructs in Dart. We'll explore generative and factory constructs, and also see how const constructors can be used to create objects that are compile-time constants. Next, you will learn to use getters and setters in Dart and see how you can implement operator overloading, a feature borrowed from C++. You will discover class inheritance and interface implementation and see how to apply the mixin-based inheritance model to reuse code from classes. You will learn how to install and use third-party libraries from the pub.dev repository and include these as dependencies in your code using the pubspec.yaml file. Finally, you will use futures and the async and await keywords to write asynchronous code in Dart.

COURSE_DESCRIPTION: Reactive programming can provide a powerful framework for creating web apps, although it does require thinking differently sometimes. In this course, you will explore RxJS and how to create Reactive apps with Angular 6. See how to migrate apps to RxJS in Angular 6, and how to create observables. Use RxJS6 pipeline operators, and create custom operators. Convert observables into promises. Handle errors on the observer side. Use custom logic or automatically resubscribe to observables. Find ways to combine multiple observables and buffer them. Finally, handle nested observables with FlatMap, and accumulate emitted values with the scan function.

COURSE_DESCRIPTION: This course is the seventh course in the Google Data Analytics Certificate. These courses will equip you with the skills needed to apply to introductory-level data analyst jobs. In this course, you'll learn about the programming language known as R. You'll find out how to use RStudio, the environment that allows you to work with R. This course will also cover the software applications and tools that are unique to R, such as R packages. You'll discover how R lets you clean, organize, analyze, visualize, and report data in new and more powerful ways. Current Google data analysts will continue to instruct and provide you with hands-on ways to accomplish common data analyst tasks with the best tools and resources. Learners who complete this certificate program will be equipped to apply for introductory-level jobs as data analysts. No previous experience is necessary. By the end of this course, you will: - Examine the benefits of using the R programming language. - Discover how to use RStudio to apply R to your analysis. - Explore the fundamental concepts associated with programming in R. - Explore the contents and components of R packages including the Tidyverse package. - Gain an understanding of dataframes and their use in R. - Discover the options for generating visualizations in R. - Learn about R Markdown for documenting R programming.

COURSE_DESCRIPTION: In this challenge, you will develop an Azure web app by using deployment slots. First, you will create a web app, and then you will create an Azure SQL database and a database connection string for the web app. Next, you will create a staging deployment slot, and then you will deploy and test code by using the staging deployment slot. Finally, you will swap the code to the production deployment slot, and then you will test the web app in production. Note: Once you begin a challenge you will not be able to pause, save, or return to your progress. Please ensure you have set aside enough time to complete the challenge before you start.

COURSE_DESCRIPTION: Cost management allows enterprises to monitor and manage costs associated with its cloud technology in an environment where costs can spiral out of control. DevOps engineers must know how to use automated tools to manage costs on the AWS platform effectively. Explore how to use cost management tools like AWS Cost Explorer and AWS Budgets to track, budget, and optimize costs. Learn about AWS CloudFormation and Service Catalog and how to automate repeatable functions to save time and reduce cost. Finally, discover how to detect resource drift and automate cost optimization using Trusted Advisor. This course is part of a series that helps learners prepare for the AWS Certified DevOps Engineer - Professional exam (DOP-C01), focusing on objectives from Domain 4 of the exam requirements.

COURSE_DESCRIPTION: It is a common misconception that Scrum is only suitable for software development. While this is where it started, the fact is that Scrum is a framework that can be applied to all kinds of projects and initiatives. As a tech leader, you should be familiar with Scrum artifacts and how they are useful in Agile initiatives in your organization. In this course, you will learn about the product vision and backlog, including their purpose for guiding Agile work in your organization. Next, you will learn about the importance of the sprint vision and backlog. Finally, you will explore the key characteristics, benefits, and value of Definition of Done, product increments, and using burndown charts. Upon completion, you will be able to recognize key characteristics and best practices when involved in or overseeing Agile initiatives as a tech leader.

COURSE_DESCRIPTION: Java is a powerful object-oriented programming language that encapsulates data and code in classes using properties and methods. Java uses objects that can interact with other objects. In this course, you'll learn about the components of a basic Java program such as classes, attributes, methods, and variables. First, you'll learn about the concepts of Java access modifiers and Java class members. Next, you'll examine the differences between a class, instance, and local variables and how they relate to Java. Next, you'll learn about the concept of overloading and how it applies to the constructor and methods. Finally, you'll explore how to create and instantiate a class with and without constructor parameters and modify the object fields. This course is one of a collection of courses that prepares learners for Oracle's 1Z0-811: Java Certified Foundations Associate certification.

COURSE_DESCRIPTION: This course extends object-oriented analysis and design by incorporating design patterns to create interactive applications. Through a survey of established design patterns, you will gain a foundation for more complex software applications. Finally, you will identify problematic software designs by referencing a catalog of code smells. You will be challenged in the Capstone Project to redesign an existing Java-based Android application to implement a combination of design patterns. You will also critique a given Java codebase for code smells. After completing this course, you will be able to: • Demonstrate how to use design patterns to address user interface design issues. • Identify the most suitable design pattern to address a given application design problem. • Apply design principles (e.g., open-closed, dependency inversion, least knowledge). • Critique code by identifying and refactoring anti-patterns. • Apply the model-view-controller architectural pattern.

COURSE_DESCRIPTION: Azure Machine Learning designer allows you to create machine learning models using no-code, drag-and-drop pipelines. Use this course to build pre-trained neural network models that detect diseases from image scans using Azure Machine Learning designer. Learn how to set up data for model training, validation, and testing and how to feed that data into a pipeline that employs a DenseNet model. Next, discover how a model can be configured and substitute a pipeline's DenseNet model with a ResNet model. Finally, explore how a model's training metrics can be analyzed to understand what tweaks need to be applied to build a more reliable model. Upon completion, you'll be able to build DenseNet and ResNet models that can identify tumors from chest scan images.

COURSE_DESCRIPTION: If you have tasks in Excel 2019 that you do repeatedly, you can record a macro to automate those tasks. When you create a macro, you are recording your mouse clicks and keystrokes. After you create a macro, you can edit it to make minor changes to the way it works. Key concepts covered in this 10-video course include how to record macros and perform actions that can be implemented in Excel workbooks, how to save a workbook with macros and an Excel macro-enabled workbook, how to find and use macro tools that are available in multiple locations, and how to add macro recording to your status bar for easy access. Then learn how to navigate the VBA Editor interface, an application easily accessible via Excel, to manage your macros and workbook VBA code; how to manage macros, edit macros, and enable macros in a workbook; and how to access macro security settings and manage macro security options. Finally, you will observe how to use macros across multiple workbooks. In order to practice what you have learned, you will find the Word document named Excel 2019 for Windows: Getting to Know Macros Exercise as well as the associated materials in the Resources section.

COURSE_DESCRIPTION: To ensure that devices continue to run smoothly and securely, Windows 10 periodically checks for updates and security features and installs them automatically. In this 14-video course, learners can explore BranchCache, express delivery updates, servicing strategies, and update types for business. Also covered are Windows as a Service (WaaS), servicing tools, deployment rings, and update compliance, all in preparation for MD-101: Managing Modern Desktops certification exam. Begin by looking at configuring optimization settings in Group Policy and configuring clients and servers for BranchCache. Learn how express update delivery works and how to prepare a servicing strategy for Windows 10 updates. Study available Windows Update for Business updates, and how to configure Windows Update for Business settings by using Group Policy. Learn how to integrate Windows Update for Business with management solutions; explore WaaS, including building, deploying, and servicing; and look at servicing tools. Build deployment rings for Windows 10 updates; use Update Compliance to monitor Windows 10 updates, and recognize Update Compliance Perspectives including states. The concluding exercise involves working with Windows 10 updates.

 COURSE_DESCRIPTION: This is the first of seven courses in the Google Digital Marketing & E-commerce Certificate, which will equip you with the skills you need to apply to entry-level roles in these fields. People who work in digital marketing and e-commerce help their organizations attract new customers, engage customers through various digital channels, and drive transactions like purchases and customer loyalty. In this course, you'll explore entry-level jobs in digital marketing and e-commerce and identify the roles and functions that those jobs play within an organization. You'll also learn about the marketing funnel and how it shapes the customer journey. Google employees who currently work in the field will guide you, providing hands-on activities and examples that simulate common digital marketing and e-commerce tasks, and helping you build your skills and prepare for the job. Learners who complete the seven courses in this program will be equipped to apply for entry-level jobs in digital marketing and e-commerce. No previous experience is necessary. By the end of this course, you will be able to do the following: - Define the fields of digital marketing and e-commerce - Describe the job responsibilities of an entry-level digital marketing coordinator and e-commerce analyst (and similar job titles) - Summarize how this program will help prepare you for a career in digital marketing and e-commerce - Identify the roles and functions that digital marketing and e-commerce play within an organization - Understand the customer journey and the function of journey maps - Explain the concept of a marketing funnel - Understand the elements and goals of a digital marketing and e-commerce strategy

 COURSE_DESCRIPTION: In this 14-video course, explore the importance of assessing and managing project risk, including the role of the project analyst, recognizing risk, important teams, and types of risk. Discover how to identify and classify risk, use qualitative and quantitative methods to assess risks, and use the risk register tool. Begin by learning how to define project risk, then look at the project analyst's role in risk assessment. Next, examine the specific risks associated with a software project; define key terms associated with risk assessment; and learn to identify common types of risk in a project. You will discover commonly used techniques for risk identification; learn how to classify identified

risks in a project; and explore the qualitative and quantitative methods to assess risks. You will examine the risk register tool used for risk management; view key risk management strategies; and learn risk mitigation best practices. The course concludes by describing tools used to measure efficiency of risk management.

COURSE_DESCRIPTION: Being able to perform mathematical, conditional, and relational operations is a key feature of the Java programming language. In this course, you'll learn about the available mathematical, conditional, relational, bitwise, and unary operations. First, you'll explore the arithmetic and assignment operators available in Java and how to use them. Then, you'll move on to learn about Java unary, equality, and relational operators. Next, you'll examine Java conditional and bitwise operators. Finally, you'll learn about the precedence of Java mathematical, conditional, relational, unary, and parentheses operators. This course is one of a collection of courses that prepares learners for Oracle's 1Z0-811: Java Certified Foundations Associate certification.

COURSE_DESCRIPTION: The JavaScript Object Notation (JSON) format is a widely used data format for serializing the internal state of objects to a structured and human-readable format. Take this course to explore the org.json library, which offers powerful features and constructs for the serialization of Java objects to the JSON format and parsing JSON files and structures. Investigate how JSON in the Java library offers more powerful functionality to work with JSON as compared to the JSON Simple library. You'll also explore the use of different methods to create JSON arrays, discover the nuances of working with each of these methods and how they differ from each other. You will have the skills and the ability to use the powerful features of JSON in the Java library to perform JSON serialization and parsing after finishing this course.

COURSE_DESCRIPTION: There are several types of software testing tools for testing different aspects of web applications, including web service, REST application programming interface (API), load, and relational database testing. In this 14-video course, learners can explore types of tools along with examples of popular tools. Begin with an overview of software testing tools for testing web applications, web services, system load, and databases. Observe the Selenium test automation tool and its advantages, and learn about web testing with Selenium. Next, take a look at Katalon Studio and the available web, API, and mobile testing modules, then learn how to record and play back a web test with Katalon Studio. Then discover how to create an API test using Katalon Studio. Learners will explore the SoapUI test tool, its features and benefits, and learn how to perform REST API testing by using SOAPUI. Delve into load testing and tools available to perform it, and how to perform load, stress, and endurance testing with NeoLoad. Learn about relational database testing, and conclude by choosing unit testing tools.

COURSE_DESCRIPTION: Optimizing Docker performance occurs long before the containers are in a production environment. Optimization needs to be part of the initial design and planning process. In this course, you'll learn how to optimize the various sections of the Docker ecosystem. First, you'll examine why Docker container performance needs to be part of the initial design and planning process and some of the best practices for designing docker containers. You'll learn some of the common bottlenecks encountered when running Docker containers, best practices when optimizing performance for Docker containers, and considerations when planning for performance. Next, you'll explore considerations for scaling and capacity planning Docker containers in a production environment. You'll move on to learn about the different methods for Docker orchestration and how to configure Docker swarm. Finally, you'll learn how to plan for Docker storage and network performance.

COURSE_DESCRIPTION: In this project-based course, you will learn step-by-step procedures for serving Tensorflow models with a RESTful API. We will learn to save a Tensorflow object as a servable, deploy servables in Docker containers, as well as how to test our API endpoints and optimize our API response time. I would encourage learners to experiment with the tools and methods discussed in this course. The learner is highly encouraged to experiment beyond the scope of the course. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Examine data-driven organizations, how they use data science, and the importance of prioritizing data in this 13-video course. Data-driven organizations are committed to gathering and utilizing data necessary for a business holistically to gain competitive advantage. You will explore how to create a culture within an organization by involving management and training employees. You will examine analytic maturity as a metric to measure an organization's progress. Next, learn how to analyze data quality; how it is measured in a relative manner, not an absolute manner; and how it should be measured, weighed and appropriately applied to determine the value or quality of a data set. You will learn the potential business effects of missing data and the three main reasons why data are not included in a collection: missing at random, missing due to data collection, and missing not at random. This course explores the wide range of impacts when there is duplicate data. You will examine how truncated or censored data have inconsistent results. Finally, you will explore data provenance and record-keeping.

COURSE_DESCRIPTION: The impact of technology and networks on our lives, culture, and society continues to increase. The very fact that you can take this course from anywhere in the world requires a technological infrastructure that was designed, engineered, and built over the past sixty years. To function in an information-centric world, we need to understand the workings of network technology. This course will open up the Internet and show you how it was created, who created it and how it works. Along the way we will meet many of the innovators who developed the Internet and Web technologies that we use today. What You Will Learn: After this course you will not take the Internet and Web for granted. You will be better informed about important technological issues currently facing society. You will realize that the Internet and Web are spaces for innovation and you will get a better understanding of how you might fit into that innovation. If you get excited about the material in this course, it is a great lead-in to taking a course in Web design, Web development, programming, or even network administration. At a minimum, you will be a much wiser network citizen.

COURSE_DESCRIPTION: Sometimes when we say we work with sustainable fashion people look at us like... "Mmmm, is it really possible for something like fashion to be sustainable?" And let's face it, people are right being suspicious. If anything the fashion industry has become increasingly unsustainable over the last decades, using more and more natural resources and creating more and more waste. In this course, we provide an overview of business model theory and discuss business models as essential tools in the transformation towards more sustainable businesses. Throughout the course, we will use business model theory as a foundation to look at how real-world fashion brands are adopting more sustainable ways of doing business. We will provide you with a rich opportunity to examine their efforts and consider strategies for your own organisation. Hopefully, you can also enlighten us with some local examples in your own countries for us to discover together new ways of dealing with sustainability. By the end of the course, you have an understanding of the overall challenges and potential solutions for businesses to become more sustainable. You will learn about the challenges and opportunities of implementing circular business models and we will introduce various tools that companies use to measure and report about sustainability. You will be able to think about business model theory in new ways and apply strategies to manage business model innovation towards sustainable practices. This is a very exciting time to be working in the fashion industry, so let's get started!

COURSE_DESCRIPTION: An increased focus on the importance of DEI in the workplace has shed light on the fact that everyone has bias. Though it's

rooted in human nature, it's important to understand what implicit bias is in order to develop the thoughtful inclusion mindset. In this course,

you'll learn about the different kinds of implicit bias and how to recognize them in action. You'll also learn about the importance of committing to

thoughtful inclusion in the workplace.

COURSE_DESCRIPTION: Discover how to apply knowledge of public key infrastructure (PKI) certificate and Azure VPN configurations to address remote networking needs, in preparation for the AZ-301: Microsoft Azure Architect Design certification exam. You will begin this 9-video course with a look at Azure virtual private network (VPN) planning, and learning to recognize the best VPN solution in a given scenario. Next, you will learn how to use PowerShell to create PKI certificates for use with a VPN. Examine virtual and local network gateways, using the portal to create VPN gateway objects. Discover how to use the portal to configure a site-to-site (S2S) IPsec tunnel via Azure portal, via Azure PowerShell, and via Azure command-line interface. In the final tutorial, you will learn how to create a point-to-site connection via Azure portal. In the concluding exercise, you will describe point-to-site and site-to-site VPN configurations, and create a virtual network gateway, a local network gateway, and an S2S VPN connection.

COURSE_DESCRIPTION: Moving to the cloud creates numerous opportunities to start working in a new way and it empowers the workforce to better collaborate and innovate. But it's also a big change. Sometimes the success of the change hinges not on the change itself, but on how it's managed. This course will help people managers to understand some of the key challenges associated with cloud adoption, and provide them with a verified in-the-field framework that will assist them in supporting their teams on the change journey. By addressing the human factor of moving to the cloud, organizations increase their chances of realizing business objectives and investing in their future talent.

COURSE DESCRIPTION: Entdecken Sie die vielen Möglichkeiten zum Einfügen von Mediendateien in Word 365. In diesem Kurs lernen Sie, wie Sie Bilder, Piktogramme und andere Bilder einfügen und wie Sie einen Screenshot erstellen können. Als Nächstes erfahren Sie, wie Sie die Position eines Objekts und die Optionen für den Textumbruch anpassen können, die beide für die Anzeige Ihres Dokuments nützlich sind. Dann können Sie Bildformatvorlagen verwenden und ein eingefügtes Bild bearbeiten und ändern, was besonders praktisch ist, um Ihr Dokument professioneller oder kreativer zu gestalten. Schließlich erfahren Sie auch, wie Sie ein 3D-Modell einfügen und formatieren können, um Ihrem Dokument weitere interessante Elemente hinzuzufügen.

COURSE_DESCRIPTION: What in the world is the 5G protocol stack? Communication technologies are often discussed in terms of constructs called protocol stacks, which outline the distinct mechanisms working together to accomplish communication. 5G is no different! The 5G protocol stack is a complex monster - difficult to understand even for seasoned network engineers. Taking a step back to examine the good old Open Systems Interconnection (OSI) model is an excellent way to further familiarize ourselves with protocol stacks as a concept and begin to understand the 5G protocol stack. Use this course to examine the OSI model and see how 5G fits into the picture. Then, use the OSI model to further appreciate some of the 5G protocol stack components and their purposes and operation. Upon completion of the course, you'll have a deeper understanding of the inner workings of the remarkable 5G protocol stack.

COURSE_DESCRIPTION: Now more than ever, people need access to data to gain insights and make quick business decisions. Some of the world's top organizations choose Tableau to help teams organize, visualize, and analyze data to drive better results while saving time and reducing costs. Adding Tableau Public to your skillset will put you ahead of the curve in the current job market, aid in professional growth, and yield better business results. 'Create a Story in Tableau Public' guided project is for anyone who wants to quickly get hands-on experience building charts and dashboards to tell a story using data. In this project, you will create a packed bubbles chart, treemap, and line charts to tell the story of the Tour de France bicycle race using a sample data set. By the end of this project, you will know how to connect an Excel data set, prepare simple dashboards, and create a story in Tableau Public to share your data insights online.

COURSE_DESCRIPTION: The Kotlin programming language is a modern language that gives you more power for your everyday tasks. Kotlin is concise, safe, pragmatic, and focused on interoperability with Java code. It can be used almost everywhere Java is used today: for server-side development, Android apps, and much more. Kotlin is 100% compatible with all existing Java frameworks, and has good tooling support. It's a pragmatic language with a very low learning curve, and can be quickly grasped by Java developers. Kotlin code might be compiled not only to JVM bytecode but to JavaScript and Native code as well, but this course is focused on Kotlin/JVM. This course aims to share with you the power and the beauty of Kotlin. We'll have a basic overview of the language, as well as a discussion of many corner cases, especially concerning Java interoperability. The course is based on your Java experience; it shows the similarities between the two languages and focuses on what's going to be different. Note that this course won't cover the programming fundamentals. We'll discuss: basic syntax, nullability, functional programming with Kotlin, object-oriented programming with Kotlin, the power of the Kotlin standard library, and Java interoperability.

COURSE_DESCRIPTION: This project will teach you TypeScript Variables and Data Types by writing and testing TypeScript code using TypeScript Playground. Variables and Data types are one of the core concepts of Typescript programming language. You will learn how to create, declare and assign variables, differences between var, let and const, scope of variables and also learn different Data Types in TypeScript programming. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In this 9-video course, learners will explore additional techniques for secure implementation and management of Azure resources, while preparing for the AZ-500 Microsoft Azure Security Technologies certification exam. You will begin the course by examining how to enable Azure AD user multifactor authentication (MFA) and how to configure password lockout. Other topics covered are virtual private networks (VPNs); Transport Layer Security (TLS); just-in-time (JIT) access; and core concepts of Azure security. Then watch a demonstration of how to create a network security group (NSG), and how to control access to virtual networks (VNETs). Next, learn how to configure Azure firewall; how to configure site-to-site VPN connectivity; and how to enable web app TLS bindings. The course continues by demonstrating how to harden Azure VMs to reduce the attack surface, and how to create an Azure Key Vault. Finally, you will see how to limit resource access through Azure role-based access control or RBAC (role-based access control) as well as through Azure policies.

 COURSE_DESCRIPTION: By the end of this project, you will learn how to create an Excel Spreadsheet by using a free version of Microsoft Office Excel. Excel is a spreadsheet that works like a database. It consists of individual cells that can be used to build functions, formulas, tables, and graphs that easily organize and analyze large amounts of information and data. Excel is organized into rows (represented by numbers) and columns (represented by letters) that contain your information. This format allows you to present large amounts of information and data in a concise and easy to follow format. Microsoft Excel is the most widely used software within the business community. Whether it is bankers or accountants or business analysts or marketing professionals or scientists or entrepreneurs, almost all professionals use Excel on a consistent basis. You will learn what an Excel Spreadsheet is, why we use it and the most important keyboard shortcuts, functions, and basic formulas.

 COURSE_DESCRIPTION: In this 10-video course, learners will discover the Full Stack Development (FSD) methodology, including how it differs from traditional methodologies, how to identify the advantages and disadvantages associated with using the FSD methodology; and how to begin the transition towards utilizing it in your projects. Key concepts covered in this course include the basics involved in the FSD methodology; the fundamentals associated with the Agile development methodology; and major differences between the Waterfall and Agile development methodologies. You will explore the influence Agile development had on the FSD methodology; examine the advantages and disadvantages associated with using the FSD methodology and the various components involved; and learn some of the most common stacks used with the FSD methodology and how to identify factors influencing which full stack technology option is best for you. Finally, compare the Waterfall and Agile methodologies; learn the FSD pros and cons; learn common FSD technology stacks; and determine the best stack to use for projects.

COURSE_DESCRIPTION: The first COVID-19 vaccines to reach the market are likely to be messenger RNA vaccines or mRNA. According to the Centers for Disease Control and Prevention, mRNA vaccines work by teaching cells in the body how to make a protein that triggers an immune response. Unlike many vaccines that use a weakened or inactivated form of a virus, mRNA vaccines do not use the live virus that causes COVID-19. (Published 12/02/2020)

COURSE_DESCRIPTION: Predictive analytics enable modern businesses to obtain important insights about the market and gaining a competitive advantage. Use this course to explore how predictive analytics could provide insights about the future, empowering businesses to make informed decisions. Start by delving deeper into the concepts of deep learning, machine learning, and data. You'll then examine neural networks theory of operation and discover natural language processing (NLP) and computer vision applications. You'll wrap up the course by developing a deeper understanding of the future of analytics. Once you've completed this course, you'll be able to identify how regression, classification, time-series analysis, and recommender engines can be used to drive business decisions. You'll also have a solid grasp of using machine learning and deep learning methodologies for predictive analytics.

 COURSE_DESCRIPTION: This Specialization is an introduction to the fascinating world of Supply Chain Management. When you complete the program you'll have a richer understanding of the complexities that companies are facing in today's global networked economy. The Specialization is for you, if: 1. you're looking to start a career in Supply Chain Management, but lack the basic background; 2. you're working with people in Supply Chain Management and want to understand their daily challenges better; 3. you're fascinated by how the global economy is linked together by the flow of products, information, and finances. The Supply Chain Management Specialization is made up of four basic courses in logistics, operations, planning, and sourcing, followed by a capstone course in Supply Chain Management Strategy. The Supply Chain Logistics course will cover transportation, warehousing and inventory, and logistics network design. The Supply Chain Operations course covers techniques used to optimize flow and focuses specifically on Six Sigma quality and Lean practices. In the Supply Chain Planning course you'll master different forecasting approaches. The Supply Chain Sourcing course deals with different techniques that help you create lasting and productive supplier relationships. Finally, in the capstone course on Supply Chain Management Strategy you'll solve a real-life business case. Interested in learning advanced supply chain topics? View the Supply Chain Excellence MasterTrack(tm) Certificate.

 COURSE_DESCRIPTION: In this 13-video course, you will explore the capabilities and features of convolutional networks for machine learning that make it a recommended choice for visual recognition implementation. Begin by examining the architecture and the various layers of convolutional networks, including pooling layer, convo layer, normalization layer, and fully connected layer, and defining the concept and types of filters in convolutional networks along with their usage scenarios. Learn about the approach to maximizing filter activation with Keras; define the concept of feature map in convolutional networks and illustrate the approach of visualizing feature maps; and plot the map of the first convo layer for given images, then visualize the feature map output from every block in the visual geometry group (VGG) model. Look at optimization parameters for convolutional networks, and hyperparameters for tuning and optimizing convolutional networks. Learn about applying functions on pooling layer; pooling layer operations; implementing pooling layer with Python, and implementing convo layer with Python. The concluding exercise involves plotting feature maps.

COURSE_DESCRIPTION: It is no longer acceptable for organisations to focus entirely on financial success if they are to be competitive on the global stage. As corporate scandals continue to make headlines, you will expand your strategic thinking beyond your organisation's competitive financial environment to consider its broader impact on society. You will grapple with the conflicting outcomes of maximising financial return and societal impact as you develop the skills to create a balance that is sustainable. Through structured learning activities (video lectures, quizzes, discussion prompts and written assessments) you will gain an appreciation of how important sustainability will be for every organisation in the future - and how to achieve it.

COURSE_DESCRIPTION: Note: The rhyme platform currently does not support webcams, so this is not a live project. This guided project is about human activity recognition using Python, TensorFlow2 and Keras. Human activity recognition comes under the computer vision domain. In this project you will learn how to customize the InceptionNet model using TensorFlow2 and Keras. While you are watching me code, you will get a cloud desktop with all the required software pre-installed. This will allow you to code along with me. After all, we learn best with active, hands-on learning. Special Feature: 1. Manually label images. 2. Learn how to use data augmentation normalization. 3. Learn about transfer learning using training the pre-trained model InceptionNet V3 on the data. Note: This project works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In this 2-hour guided project, you are going to use EfficientNet model and train it on Pneumonia Chest X-Ray dataset. The dataset consist of nearly 5600 Chest X-Ray images and two categories (Pneumonia/Normal). Our main aim for this project is to build a pneumonia classifier which can classify Chest X-Ray scan that belong to one of the two classes. You will load and fine tune the pretrained EfficientNet model and also to create a simple pytorch trainer to train the model. In order to be successful in this project, you should be familiar with python, convolutional neural network, basic pytorch. This is a hands on, practical project that focuses primarily on implementation, and not on the theory behind Convolutional Neural Networks. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: PowerApps has a multitude of possibilities for customizing your app. You can easily present data as a chart or table to give more perspective on your data values. Inserting images and videos can give your app more depth. In this 10-video course, learners will observe how to

manage controls, variables, and even lists from SharePoint. Key concepts covered in this course include how to insert and edit labels to add text and configure displayed dates; how to insert text controls to help your text stand out and to indicate where users can insert data within forums; and how to insert an image and video into an app. Begin by learning how to manage media files by identifying, replacing, and using safe media files; how to insert tables and insert charts into an app; and how to configure and manage controls. Finally, learn how to customize lists; and learn to work with collections and variables, including adding interactions such as buttons or text input fields.

COURSE_DESCRIPTION: You can't build a house without tools and materials. Similarly, you can't build a DevOps infrastructure without the tools and materials needed to support developer needs. In this course, learn about the basics of the Google Cloud Platform (GCP). Explore how GCP compares to other cloud platforms and learn about different elements of the platform, such as computing, storage, and networking. Next, investigate tools and services like identity management, databases, analytics, and artificial intelligence. Finally, examine the relationships between the GCP and container technologies such as Docker, clustering container technologies such as Kubernetes, and orchestration technologies such as Jenkins. Upon completion, you'll be able to identify how elements of Google Cloud Platform (GCP) support a DevOps framework.

COURSE_DESCRIPTION: In this 1.5-hour long project-based course, you will learn how to create attractive and eye-catching T-shirt designs in Canva and edit them to make them suitable for Redbubble and Merch by Amazon Print-on-Demand marketplaces. In this project, we will be starting a Print on Demand business. You will learn everything you need to know to start a T-shirt Print on Demand business. You will learn about Trademarks and Copyrights & also explore the US Trademark database. I will also guide you through the Merch by Amazon content creator application process. By the end of this project, you will have a Print on Demand business with a live listing and you will also be confident in dealing with Trademarks and Copyright. You do NOT need any prior experience in graphic design to be able to complete this project. This project is beginner-friendly. You do NOT

need to spend a single penny to start a T-shirt Print-on-Demand business. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

 COURSE_DESCRIPTION: This course will allow you to identify and evaluate opportunities for creating a tech business, and to better understand its principal issues on a human, technical, commercial, environmental and financial level. As such, you will obtain solid foundations either for building your own tech business, or for joining one. Deciding to create or to join a tech business in these early years is an out-of-the-ordinary adventure, and it certainly won't be straightforward: you need to be ready to accept that not all "good" ideas will lead to success, and that only a very small number of projects lead to great success. You must learn to overhaul your relationship with failure, which is a valuable source of experience and should be managed according to the logic of "acceptable loss": the entrepreneur loves uncertainty, not excessive risk. The creation of tech businesses gives you a genuine opportunity to change the world, but requires you to adopt a particular state of mind and to be able to acquire knowledge, know-how and interpersonal skills. You will have the chance to work alongside passionate and exciting people from a whole multitude of backgrounds. From a technological point of view, these women and men have constructed numerous companies of a global scale. The development trajectory of a tech business is full of mishaps which require you to be both agile and greatly prepared to build on a strong idea, choose your market, develop your proposal, assemble a team worthy of the task in hand, and finding financing. The course is made up of methodological sessions as well as first-hand accounts from entrepreneurs and people who have succeeded in creating tech businesses themselves. You will thus be able to get to know the essential dilemmas with which high-tech business creators are confronted with, beginning with the initial decision to set up your very own structure, which itself represents a significant life decision. You will also see that the creation of a tech business is much more a collective adventure than an individual one. In the English version, all of the reading content, quizzes and assessments will be in English, whilst the videos will have French audio and English subtitles.

COURSE_DESCRIPTION: Most software solutions are backed by a database, meaning the overall application performance is greatly affected by the database's performance. It's therefore highly advantageous for software professionals to know how to analyze and optimize database performance. Take this comprehensive course to learn about the many facets of database performance optimization. Discover how to optimize data structures and examine the data definition language (DDL) used to manage that structure. Find out how to optimize data storage within a database as well as SQL queries that act on that data. Study performance tuning techniques. Practice optimizing a SQL table using indexes. And explore several optimization tools. Next, examine several strategies for optimizing database performance. Then see how to troubleshoot slow database symptoms in the context of an application. Upon completion, you'll know how to optimize database performance in isolation and as part of an application.

COURSE DESCRIPTION: Apache Cassandra is a trusted open-source NoSQL distributed database that easily integrates with Apache Kafka as part of an ETL pipeline. This course focuses on that integration of Kafka, Spark and Cassandra and explores a managed version of Kafka with the Confluent data streaming platform. Begin by integrating Kafka with Apache Cassandra as part of an ETL pipeline involving a Spark application. Discover Apache Cassandra and learn the steps involved in linking Spark with this wide-column database. Next, examine the various features of the Confluent platform and find out how easy it is to set up and work with a Kafka environment. After completing this course, you will be prepared to implement and manage stream processing systems in your organization.

COURSE DESCRIPTION: Explore the structure of Java classes, as well as how to work with Java control statements, Java operators, and loops, along with other topics covered in this 11-video course. Begin with observing data manipulation by using the StringBuilder class and the methods that it provides, and then learn to use Java operators, including parenthesis to override operator precedence. You will then learn how to work with Java control statements including if, else, and switch. Next, you will discover how to create and work with do/while, while, for, and for each loops to control program flows. You will also declare, instantiate, initialize, and work with one-dimensional arrays, and declare, instantiate, initialize, and work with two-dimensional arrays and multi-dimensional arrays. Then you will observe how to declare and instantiate Java objects and illustrate an object's lifecycle. You will explore Java class definition, and in the final tutorial in this course, you will discover how to read and write to object fields. This is one course is a series to prepare for the 1Z0-816: Java SE 11 Programmer II certification exam.

COURSE_DESCRIPTION: Market hospitality services, manage demand, and optimize revenue. This Specialization covers the basics of hotel demand management, distribution, and revenue management. You'll learn how e-commerce intermediaries such as online travel agencies are impacting the already-complex hospitality sector, and you'll explore tools and techniques that will help you effectively market hospitality services and maximize business revenue in this new global industry landscape. In the final Capstone Project, you'll evaluate the importance of hotel branding in business success through a hands-on, real-world case study. During the sessions, you will hear from senior hotel industry executives commenting on distribution, revenue and demand management issues. We will also interview two leading Online Travel Agents on how to maximise online business for your property, and have partnered with Duetto and SnapShot, two leading hospitality industry companies, to gain access to cutting edge knowledge, thus insuring that the competencies that you gain will make you operational immediately as well as bang up to date on industry trends.

COURSE_DESCRIPTION: This course explores various issues related to privacy requirements, and their importance in determining how to provide security throughout the software development lifecycle. You will learn the software requirements used to help identify privacy requirements, including data anonymization, user consent, and data disposition. You will learn how an enterprise's high-level privacy policy influences its security

responsibilities for the collection, storage, use, and transfer of personal information. This 7-video course examines how organizations collect personal information during their day-to-day business operations. Next, learn the legal importance of protecting PII (personally identifiable information), which is a legal term defined in a memorandum published by the US Office of Management and Budget. You will learn how the European Union (EU) views data protection by its data protection directive, known as EUDPD. Finally, learners will explore the importance of securing data during the process of disposal. This course can be used in preparation for the (ISC)2 CSSLP: Certified Secure Software Lifecycle Professional certification exam.

COURSE_DESCRIPTION: In this 2-hour long project-based course, you will be able to design, analyze, and innovate with the business model canvas as we work you through the 9 building blocks that make up the canvas. You will be able to conceptualize how it all begins with strategy and how having the right strategy determines how you approach each of the blocks. We will use a spreadsheet to sketch and analyze the business model canvas, and innovatively fill up each of the blocks. We will work you through the process with our social venture to conduct the analysis, as that would empower you to apply the concepts to analyze any organization. This project is for entrepreneurs and innovators who want to have a holistic understanding of how to analyze their venture and create a strategy that puts all factors into consideration. Also, for intrapreneurs who are interested in creating a venture out of an existing business, or analyzing their current business. All you need to have is a business idea you want to implement, and we will work you through the model step-by-step. At the end of the project, you will be able to design, analyze, and innovate strategically with the business model canvas.

COURSE_DESCRIPTION: This course focuses on enhancing your understanding of (1) how an internal venture is organized and (2) how to overcome resistance to your new venture ideas within the company. The course is specifically valuable for: • Employees who have creative ideas important to their company; • Managers seeking to assemble creative people and resources; • Technical specialists desiring to become part of an internal venture; and • Consultants who advise companies on ways to launch and grow internal ventures. You will learn strategies to help you launch a corporate venture with coursework focused on four key areas: • Examining how to audit a company's internal environment to establish a framework for its innovation capabilities; • Creating a plan for an organizational structure and operational format that incorporates key roles and players for internal ventures within the company; • Analyzing corporate culture to identify creative capabilities that leverage the company's best practices for innovation; • Evaluating innovation portfolios and compose innovation strategies that are best aligned with the implementation potential within the company. COURSE_DESCRIPTION: The stream insertion and extraction operators are often overloaded because they provide a convenient way to read objects in and write objects out to standard IO. The copy assignment operator is even more crucial because of how important it is in correctly freeing up resources held by an object. In this course, learn how to implement the correct overloads of the insertion and extraction operators and why these are invariably implemented as non-member functions. Then, move on to correctly overloading the copy assignment operator and using standard formats to ensure that resource cleanup occurs exactly once. Finally, find out how the copy-and-swap idiom provides a way to use the std::swap function to implement the copy assignment operator in a manner that is exception-safe. This idiom leads to an elegant implementation that is not only less complex, but also more robust.

COURSE_DESCRIPTION: To query data with SQL, you need to know which queries and keywords to use for which operations. In this course, you'll learn to query data using the classic SQL syntax construct, the SELECT-FROM-WHERE query, and how keywords, such as LIKE, can be used to filter data based on a condition and using wildcards. You'll learn how to carry out different aspects of inserting, updating, and deleting data - such operations, along with querying, are collectively known as CRUD operations, an acronym for Create-Read-Update-Delete. Finally, you'll learn how to take advantage of another important aspect of relational database usage - the ability to impose constraints upon data. You'll work with UNIQUE, NOT NULL, and FOREIGN KEY constraints.

COURSE_DESCRIPTION: This 13-video course explores how Microsoft Excel spreadsheets can be created, opened, and modified programmatically from within Python. Learners will review the Microsoft Excel object model, the attributes of the worksheet cell object which can be leveraged to create and

modify workbooks programmatically. First, you will review VBA (Visual Basic for Applications) technology, before exploring how Python and its ecosystem of libraries are fast emerging as a popular choice for easy spreadsheet automation. Then you will learn how to use openpyxl (open pixel library) to manipulate Excel's object model programmatically from within Python. Continue by learning how to write spreadsheets by using openpyxl, and examining how existing Excel workbooks can be opened, as well as how new spreadsheet files can be created, and written out to disk. Finally, you will learn how Python iterators and indexing can be used to access and manipulate individual cells, ranges consisting of many cells, as well as entire rows and columns.

COURSE_DESCRIPTION: In this Challenge Lab, you will define functions in an application. First, you will define a function that calculates the mean of a list of numbers, and then you will define a function that calculates the factorial of a number by using recursion. Next, you will calculate the number of possible seats in a room by using the factorial function. Finally, you will define a function that delegates actions to another function to reduce redundancy Note: Once you begin the Challenge Lab, you will not be able to pause, save, or exit and then return to your Challenge Lab. Please ensure that you have set aside enough time to complete the Challenge Lab before you start.

COURSE_DESCRIPTION: In the fourth course of the Deep Learning Specialization, you will understand how computer vision has evolved and become familiar with its exciting applications such as autonomous driving, face recognition, reading radiology images, and more. By the end, you will be able to build a convolutional neural network, including recent variations such as residual networks; apply convolutional networks to visual detection and recognition tasks; and use neural style transfer to generate art and apply these algorithms to a variety of image, video, and other 2D or 3D data. The Deep Learning Specialization is our foundational program that will help you understand the capabilities, challenges, and consequences of deep learning and prepare you to participate in the development of leading-edge AI technology. It provides a pathway for you to gain the knowledge and skills to apply machine learning to your work, level up your technical career, and take the definitive step in the world of AI.

COURSE_DESCRIPTION: Do you want to think about the future with more creativity and optimism? Do you want to see what's coming faster, so you can be better prepared for disruptions and more in control of your future? Do you want to get better at changing what's possible today - in your company, your industry, your community, and in your own life? This course will introduce you to the practice of futures thinking, as developed and applied for the past 50 years by the Institute for the Future, a Silicon-Valley-based research and learning group founded in 1968. In this course, you'll build your understanding of what futures thinking is and what you can do with it. You'll master essential foresight techniques. You'll meet some professional futurists. And you'll choose one or more future topics you want to investigate with your new foresight skills. This course is for anyone who wants to spot opportunities for innovation and invention faster. You can gain the skills and confidence to help YOU become someone who makes the future, instead of letting the future happen to you. Many thanks to the Enlight Foundation and the Enlight Collaborative, which provided a grant to support the creation of this course.

COURSE DESCRIPTION: An Office 365 subscription with Project 2019 offers access to additional useful features. In this 4-video course, "Using the Application With Office 365," you will discover that these features include the ability to create and manage sprint charts as well as Agile projects like Waterfall projects. This course, recorded in a Project Online Desktop Client environment, begins by demonstrating how to create a sprint project. Sprint projects are designed for small teams whose work can be broken into goals that can be completed within time box iterations, which are sprints. Once the sprint project has been created, you will learn how to access and use available tools. The next tutorial explores the creation of a waterfall project for Agile task management. Project lets you view and manage your existing traditional waterfall projects in a task board view. Conclude the course by examining the Agile management tools, so you will be able to create Agile reports to analyze project progression.

COURSE DESCRIPTION: This is a hands-on, guided introduction to using H2O Flow for machine learning. By the end of this project, you will be able to train and evaluate machine learning models with H2O Flow and AutoML, without writing a single line of code! You will use the point and click, web-based interface to H2O called Flow to solve a business analytics problem with machine learning. H2O is a leading open-source machine learning and artificial intelligence platform trusted by data scientists and machine learning practitioners. It has APIs available in R, Python, Scala, and also a web-based point and click interface called Flow. H2O's AutoML automates the process of training and tuning a large selection of models, allowing the user to focus on other aspects of the data science and machine learning pipelines such as data pre-processing, feature engineering, and model deployment. To get the most out of this project, we recommend that you have an understanding of basic machine learning theory, and have trained machine learning models. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE DESCRIPTION: In this two day ReactJS bootcamp we will build a simple application with components. The course focusses on getting started with ReactJS. After building the app, we will add components, organize them and build a menu system to display those components. We will also add a mock

database system to the apps so that we can work with CRUD operations. Once the app is functioning we will build a login system and demonstrate some of the features of ReactJS. Some of the features you will hear about are components of course, higher order components, JSX, state, React keys and life cycle hooks. Students looking to attend this Bootcamp should have experience with HTML, CSS and JavaScript.
