 COURSE_DESCRIPTION: Sustainability, Resilience and Efficiency are fundamental considerations for city managers in managing urban infrastructures. Today, more than 3.9 billion people, making up more than 54% of the global population, live in cities. Urbanization is expected to continue in the coming years, raising the urban population to 6.0 billion by 2045. This dramatic increase in urban populations will inevitably increase the demand for energy, mobility (transportation), water, and other urban services in every city around the world. Without functional governance and management structures that ensure efficient, resilient and sustainable performance in cities, the current urbanization growth might become a catastrophic risk threatening the quality of life of the humanity. Sustainable development in 21st century can only be realized by introducing innovations in both management and operations of urban infrastructures systems. Developing management practices that effectively integrates the processes of urban planning with urban infrastructures planning and management is a challenging goal that many cities are struggling with nowadays, but is a must for transforming cities to sustainable and resilient engines of growth in both developing and developed economies. This course will provide you with the basic principles of urban infrastructure management that are fundamental for building prosperous cities that are sustainable, resilient and

efficient. In order to obtain a certificate for this course, the participants have to pass four graded quizzes and complete four mandatory assignments, plus a final exam. In addition to the graded assignments students have the option to write a 7-10 page peer-reviewed case study about management of energy OR transportation system in their city (on your own choice). The best case studies will be also evaluated by our jury at IGLUS and the authors of the 3 best case studies will win a full tuition fee waiver scholarship to enroll in the IGLUS professional training program in Spring 2017. You can also pre-enroll in our upcoming MOOC on Smart Cities now. Find our more here: <http://iglus.org/smart-cities-mooc/>

COURSE_DESCRIPTION: Want to know how to query and process petabytes of data in seconds? Curious about data analysis that scales automatically as your data grows? Welcome to the Data Insights course! This four-course accelerated online specialization teaches course participants how to derive insights through data analysis and visualization using the Google Cloud Platform. The courses feature interactive scenarios and hands-on labs where participants explore, mine, load, visualize, and extract insights from diverse Google BigQuery datasets. The courses also cover data loading, querying, schema modeling, optimizing performance, query pricing, and data visualization. This specialization is intended for the following participants: • Data Analysts, Business Analysts, Business Intelligence professionals • Cloud Data Engineers who will be partnering with Data Analysts to build scalable data solutions on Google Cloud Platform To get the most out of this specialization, we recommend participants have some proficiency with ANSI SQL. >>> By enrolling in this specialization you agree to the Qwiklabs Terms of Service as set out in the FAQ and located at: [<<< https://qwiklabs.com/terms_of_service](https://qwiklabs.com/terms_of_service)

COURSE_DESCRIPTION: In this practice lab, learners will be presented with a series of exercises to practice middle and back-end development. Exercises include tasks such as creating an API using Python and Flask, creating a PostgreSQL Python application, GET and POST requests with Python and perform end to end NodeJS testing with Cypress. Learners will also practice creating a POST handler with Python, testing a Python app with Pytest, building MongoDB databases and collection and implementing JSON error exceptions. Learners can also use the environment as an open sandbox. No installation or configuration is required, so you can gain immediate hands-on experience. Create new files or upload your own from a storage location of your choice, such as GitHub, and you can practice coding right away! You can even download a copy of your work when you're done. Whether you're looking to dive into the code presented within our courses or you want to work on your own coding projects, this lab environment will provide you with everything you need. So, go ahead and start coding today! See below for a complete list of available software. • Tkinter GUI • ipython • Octave 4.2 • Jupyter Notebook • Python 2/3 libraries: • chunking • features • gensim • hmmlearn • jupyter • keras • matplotlib • nltk • numpy • opencv • python • pandas • pytest • scipy • seaborn • sklearn • tensorflow • testbook • beautifulsoup4 • selenium • Python 3 • Python 2 • Pip 3 • Pip 2 • Node.js • npm • Git • Vim editor • Standard Python libraries This lab is part of the Middle/Back-End Developer track of the Skillsoft Aspire Enterprise Developer to Full Stack Developer journey.

COURSE_DESCRIPTION: Go leverages some of the best features from other languages focusing on a simple, concise program structure and syntax. Go's relatively short learning curve means developers can start developing right away. In this course, you'll explore Go program structure and syntax and the various data types supported by Go. Next, you'll examine various approaches utilized in Go for developing program logic. You'll learn how to declare and initialize variables and constants and explore the specific operators used with different data types. You'll move on to learn how to work with complex data types and how to write code to control the flow of programs by leveraging looping and branching. Lastly, you'll learn how to manipulate and manage strings with various string functions available in Go.

COURSE_DESCRIPTION: In this course, you'll learn how to use QlikView charts for visualization purposes, such as Mekko charts, funnel charts, and gauge charts. You'll start by using a Bar Mekko chart to show the relative importance of bars by adding a bar width variable. You'll then use a funnel chart to visualize the comparable success rates of steps in a linear sequential process, such as the number of product views, interactions, and buys on an e-commerce site. Next, you'll use gauge charts to track how a current metric value performs against a pre-defined target value. You'll then use various QlikView gauge charts, such as the tank, thermometer, joystick, and test tube variants. Finally, you'll build and customize a scatter chart using sliders, animations, and a search box.

COURSE_DESCRIPTION: This guided project course is part of the "Tensorflow for Convolutional Neural Networks" series, and this series presents material that builds on the second course of DeepLearning.AI TensorFlow Developer Professional Certificate, which will help learners reinforce their skills and build more projects with Tensorflow. In this 2-hour long project-based course, you will learn In this project, you will learn practically how to build a data augmentation model which is a key topic in training visual recognition systems with real-world applications, and you will create your own data augmentation algorithm with TensorFlow and apply it to real data, and you will get a bonus deep learning exercise implemented with TensorFlow. By the end of this project, you will have learned the fundamentals of data augmentation and created a deep learning model with TensorFlow, and applied data augmentation using real images. This class is for learners who want to learn how to work with convolutional neural networks and use Python for applying data augmentation to images with TensorFlow, and for learners who are currently taking a basic deep learning course or have already finished a deep learning course and are searching for a practical deep learning project with TensorFlow. Also, this project provides learners with further knowledge about creating and training convolutional neural networks and improves their skills in Tensorflow which helps them in fulfilling their career goals by adding this project to their portfolios.

COURSE_DESCRIPTION: Microsoft certifications give you a professional advantage by providing globally recognized and industry-endorsed evidence of mastering skills in digital and cloud businesses. In this course, you will prepare for the AZ-900 Microsoft Azure Fundamentals exam. You will refresh your knowledge of cloud concepts, Microsoft Azure services, Microsoft Azure workloads, security and privacy in Microsoft Azure, as well as Microsoft Azure pricing and support. In short, you will recap all the core concepts and skills that are measured by the exam. You will test your knowledge in a series of practice exams mapped to all the main topics covered in the AZ-900 exam, ensuring you're well prepared for certification success. You will prepare to pass the certification exam by taking practice tests with similar formats and content. You will also get a more detailed overview of the Microsoft certification program and where you can go next in your career. You'll also get tips and tricks, testing strategies, useful resources, and information on how to sign up for the AZ-900 proctored exam. By the end of this course, you will be ready to sign-up for and take the AZ-900 exam. This beginner course is suitable for IT personnel who are just beginning to work with Microsoft Azure and want to demonstrate foundational level knowledge of cloud services and how those services are provided with Microsoft Azure platforms. This course can help you prepare for AZ-900: Microsoft Azure Fundamentals exam. This is the final course in a four-course program that prepares you to take the AZ-900 certification exam. This course gives you opportunities to hone your exam technique and refresh your knowledge of all the key areas assessed in the certification exam. To be successful in this course, you need to have basic computer literacy and proficiency in the English language. You should be familiar with basic computing concepts and terminology, general technology concepts, including concepts of networking, storage, compute, application support, and application development. You should also be Familiarity with the concept of application programming interfaces or APIs. It is beneficial to have a high-level familiarity with relevant Microsoft products such as Dynamics 365 and Office 365.

COURSE_DESCRIPTION: This course will provide an in-depth exploration of desktop 3D printing hardware. It will examine the history of desktop 3D printing and demonstrate how 3D printers are made and how they work. This course will also provide step-by-step instructions for how to use and repair a 3D printer. It will also explore the different types of materials that can be 3D printed and will demonstrate how you can create various objects using these tools and materials. Learners who complete this course will be able to successfully operate, repair, and upgrade a 3D printer. In addition, learners who enroll in the course certificate will be able to purchase a desktop 3D printer at a discounted price (provided by Ultimaker). If you enjoy this business course and are interested in an MBA, consider applying to the iMBA, a flexible, fully-accredited online MBA at an incredibly competitive price offered by the University of Illinois. For more information, please see the Resource page in this course and onlinemba.illinois.edu.

COURSE DESCRIPTION: With the rise in Digital, businesses are challenged to carefully consider how customer and employee data are captured, stored, and retained. Because data security risks such as data breaches and cyber threats regularly affect organizations, businesses do well to plan, manage, and mitigate against these internal and external risks. Without careful management, risks can easily get out of hand, especially in a social media environment. This can cause serious damage to a business or its brand. In this course, you'll learn about the risks that can affect organizations online, how, without careful management, they can grow beyond control, and ways to manage and mitigate against them. You'll also review the potential impacts of various risks related to Digital, such as a data breaches and cyber threats, and how proper planning can prevent them. You'll explore how the rise in social media increases the likelihood that small events can quickly become a global issue for a company, and how issues that arise must be treated with care, using pre-defined guidelines. In addition to these risks, you'll examine various business challenges associated with Digital, such as lack of digital skills faced by many companies, the need for innovation, and difficulties related to an organization's structure. Finally, you'll review evolving regulations around the use of Digital, and how to ensure that your approach is aligned with local market requirements. This course was developed in partnership with the Digital Marketing Institute. (www.digitalmarketinginstitute.com) For those who are interested in pursuing a certification, please contact the Digital Marketing Institute directly via this website:

COURSE_DESCRIPTION: Before adopting cloud services, you need to calculate costs and establish the most appropriate contract with cloud providers. In this course, you'll explore the direct cost and financial implications of various aspects of cloud computing. You'll also examine cloud computing licensing models and subscription types and compare cloud computing's initial costs with the long-term benefits. Additionally, you'll list core considerations when establishing contracts for cloud service usage. You'll investigate requests for information (RFIs), cloud pricing models, the differences between fixed and dynamic pricing, and best practices for deriving cloud-based professional services. Moving on, you'll outline the end-to-end services provided by managed cloud service providers (CSPs) and the benefits of those services. You'll examine the essential components of SOWs for cloud managed services. Lastly, you'll configure cost estimates for AWS service usage using the AWS Pricing Calculator. You can use this course in preparation for the CompTIA Cloud Essentials+ (CLO-002) certification exam.

COURSE_DESCRIPTION: Take the next step in your software engineering career by getting skilled in container tools and technologies! The average salary for jobs that require container skills is \$137,000 in the US according to salary.com, making Devops professionals and developers with these skills highly in demand. More than 70 percent of Fortune 100 companies are running containerized applications. But why? Using containerization, organizations can move applications quickly and seamlessly among desktop, on-premises, and cloud platforms. In this beginner course on containers, learn how to build cloud native applications using current containerization tools and technologies such as Docker, container registries, Kubernetes, Red Hat, OpenShift, and Istio. Also learn how to deploy and scale your applications in any public, private, or hybrid cloud. By taking this course you will familiarize yourself with: - Docker objects, Dockerfile commands, container image naming, Docker networking, storage, and plugins - Kubernetes command line interface (CLI), or "kubect1" to manipulate objects, manage workloads in a Kubernetes cluster, and apply basic kubect1 commands - ReplicaSets, autoscaling, rolling updates, ConfigMaps, Secrets, and service bindings - The similarities and differences between OpenShift and Kubernetes Each week, you will apply what you learn in hands-on, browser-based labs. By the end of the course, you'll be able to build a container image, then deploy and scale your container on the cloud using OpenShift. The skills taught in this course are essential to anyone in the fields of software development, back-end & full-stack development, cloud architects, cloud system engineers, devops practitioners, site reliability engineers (SRE), cloud networking specialists and many other roles.

COURSE_DESCRIPTION: Learners explore how to monitor Azure resources and control cloud-related costs in this 12-video course dealing with AZ-900 entry-level Microsoft Azure certification. You will learn about Azure service offerings, including those related to storage, virtual machines (VMs), databases, and developer solutions, and how Azure Resource Monitoring provides performance and security insights for subscribers. First, the course demonstrates use of Azure Monitoring to view Azure resource logs, and how to configure alert notifications and create custom dashboards. Then learn to utilize Azure cost management with Azure Pricing Calculator and Azure Total Cost of Ownership (TCO) Calculator; how to configure billing supports; and how to submit an Azure support request. In the closing exercise, learners will enable alerts to administrators, notifying when a specific VM's CPU utilization exceeds 85 percent; create a custom dashboard (HQ Admin) that shows Resource Groups and Users and Groups; use Azure Pricing Calculator to estimate costs related to three Linux VMs, and one managed Azure SQL Database instance; and configure an Azure billing alert when Azure charges reach \$300.

COURSE_DESCRIPTION: In this challenge, you will configure an Amazon Elastic File System (Amazon EFS) for your server infrastructure. First, you will create a file system, and then you will map a file share to a Linux bastion host. Next, you will map the EFS file system to the web servers, and then you will add files to the file share. Finally, you will configure the web servers to use the content in EFS, and then you will verify fault tolerance. Note: Once you begin the challenge lab, you will not be able to pause, save, or exit and then return to your challenge lab. Please ensure that you have set aside enough time to complete the challenge lab before you start.

COURSE_DESCRIPTION: In this 1 hour long guided project, you will learn to create and train multi-task, multi-output models with Keras. You will learn to use Keras' functional API to create a multi output model which will be trained to learn two different labels given the same input example. The model will have one input but two outputs. A few of the shallow layers will be shared between the two outputs, you will also use a ResNet style skip connection in the model. If you are familiar with Keras, you have probably come across examples of models that are trained to perform multiple tasks. For example, an object detection model where a CNN is trained to find all class instances in the input images as well as give a regression output to localize the detected class instances in the input. Being able to use Keras' functional API is a first step towards building complex, multi-output models like object detection models. We will be using TensorFlow as our machine learning framework. The project uses the Google Colab environment. You will need prior programming experience in Python. You will also need prior experience with Keras. Consider this to be an intermediate level Keras project. This is a practical, hands on guided project for learners who already have theoretical understanding of Neural Networks, Convolutional Neural Networks, and optimization algorithms like gradient descent but want to understand how to use Keras to write custom, more complex models than just plain sequential neural networks. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: This 9-video course explores the bulk mail tools available in Word 2019. You will learn how to use the envelope creation tool to insert addresses, format the style, and place addresses on an envelope. You will then learn how to create address labels, and how to change the margins and dimensions. Next, you will learn to use the Mail Merge function, which allows data from a mailing list to be incorporated into a document when you send bulk e-mails or letters. You will learn to create a list of addresses and contact information in Word for a mail merge document, and to import a mailing list from an Excel spreadsheet or MS Access file to use in a mail merge. Continue by learning how to edit, sort data, filter, and search your data in a contact list. You will learn to create bulk e-mails or letters with multiple recipients. Finally, the course demonstrates how to create simple rules to change elements, for example, a greeting in a letter. In order to practice what you have learned, you will find the Word document named Word 2019 for Windows: Creating Bulk Mailings Exercise as well as the associated materials in the Resources section.

COURSE_DESCRIPTION: Paired with humorous elements and illustrating examples, the Competitive Strategy and Organization Design specialization is the ideal choice for curious individuals who enjoy unique learning experiences and innovative teaching approaches. Its style is likely to appeal especially to young, middle-aged and young-at-heart learners. The specialization is intended for learners interested in engaging in fundamental theories and concepts of strategy and organization and applying these to practice. Employed professionals and management students will benefit from deepening and refreshing their existing knowledge by means of our specialization. Learners with non-business backgrounds will gain valuable additional business insights complementing their existing knowledge. Participants will learn to understand and analyze • behavior of organizations in situations in which strategic decisions are interdependent • strategies to build up and maintain a customer base • internal workings of an organization as well as its interaction with the outside world, i.e. partners, complementors and competitors • the design of an effective organization that can compete, grow and adjust flexibly to different environments This specialization is the only online learning program in which students can learn and laugh at the same time. That said, we are looking forward to learning and laughing with you!

COURSE_DESCRIPTION: This is the second course in the Java as a Second Language Specialization. In this course, we'll take a look at Java data types, discuss what primitive data types are, and explain data classes. We'll also explore characters and strings and you'll add a new class in the lab. Next, we'll take a look at Java Control Structures. We'll explain IF statements, Loops, and arrays, and will discuss Switch Statements and the Java Programming Environment. After that, we'll define inheritance and explore how methods and properties are inherited in Java. We'll also discuss polymorphism and overloading functions before completing a lab and quiz. The final module discusses how all of the things we've learned in the previous lessons together will come together for our final lab. The labs in this course require you to download and install the Java environment. The instructor walks you through the installation of the environment in course 1 of this Specialization. It is recommended that you take these courses in order because the knowledge is cumulative.

 COURSE_DESCRIPTION: Explore components and features of the Java Spring Framework and using them to create enterprise Java applications in this 14-video course. Discover how to install and configure the framework, build a Rest API, work with the Spring Data component to access and write to a database, and use Spring Security to secure an full stack application. Key concepts covered here include Spring Framework components and features and reasons to develop web services with the Spring MVC Framework; building a REST API (application programming interface) using the Spring Framework; and learning the mission of Spring Data and features of common modules. Use the Spring Data JPA module to access and write data to a database; learn authentication and authorization and the components of Spring Security; secure an application using Spring Security and basic configuration; and examine inversion of control, the BeanFactory, and Bean scopes. Finally, use the BeanFactory to create Beans using the Spring Framework; learn the components and features of the Spring MVC Framework; and use the Spring MVC Framework to create simple web applications.

 COURSE_DESCRIPTION: Die Fähigkeit, wirklich konstruktives Feedback zu geben, ist am Arbeitsplatz von entscheidender Bedeutung. Wenn Sie Manager und für die Entwicklung anderer verantwortlich sind, müssen Sie die Mitarbeiter wahrscheinlich informieren, wenn ihre Leistung nicht dem erforderlichen Standard entspricht. Dies ist eine heikle Situation, die Fingerspitzengefühl und Vorbereitung erfordert. Wenn die Bereitstellung von Feedback effektiv erfolgt, kann es nicht nur die Leistung verbessern, sondern auch die Menschen motivieren und die Beziehungen stärken. In diesem Kurs lernen Sie, wie Sie ein Feedback-Gespräch planen und wie Sie Rückmeldungen positiv geben. Sie lernen außerdem Techniken zum Umgang mit negativen Reaktionen auf Feedback und Ihrer eigenen Nervosität sowie dazu, wie Sie Personen auf verschiedenen Organisationsebenen Rückmeldungen geben.

COURSE_DESCRIPTION: In this 12-video course focusing on cloud computing, in preparation for the Microsoft 365 Fundamentals (MS-900) Exam, learners can explore cloud concepts, and Microsoft 365 services, including product pricing and support. First, learn how security, compliance, and trust are protected in Microsoft 365. You will then learn about various cloud services, including ITaaS (IT as a service), SaaS (software as a service), IaaS (infrastructure as a service), and PaaS (platform as a service). The course uses a business case study to demonstrate cloud services and security principles; in it, you will examine public, private, and hybrid cloud services, and discuss their unique security issues. This course discusses security as it pertains to business, and will demonstrate how to see data security through the CIA (confidentiality, integrity, and availability) triad. You will examine encryption and multifactor authentication to protect information, and listen to a discussion of compliance issues for businesses adopting cloud solutions. Finally, explore the steps that go into creating a business case for a cloud solution.

COURSE_DESCRIPTION: Success in business can be greatly enhanced with an understanding of key entrepreneurial characteristics and competencies solutions. This interactive course provides potential entrepreneurs with the knowledge of succeeding in an entrepreneurial opportunity. Topics include: how creativity, opportunity and feasibility are best evaluated; business strategies for new businesses; importance of a business plan; achieving success in a new business. At the end of the course students will have the skills and confidence to evaluate starting a business, in addition to becoming more enterprising in how they approach their roles should they decide to work in organizations. Upon completing this course, you will be able to: 1. Learn about the many faces of and contexts for entrepreneurship 2. Learn about the entrepreneurial process and how to manage it 3. Learn about what it takes to be an entrepreneur and your own potential to be one 4. Learn to recognize opportunities to generate and assess your own business idea 5. Explain the business planning process 6. Apply entrepreneurial approaches, concepts and methods to your own business idea 7. Learn about the operational issues in developing new business ventures

COURSE_DESCRIPTION: Jede Führungskraft ist nur so gut wie die Mitarbeiter, die sie führt, und es kommt ausgesprochen selten vor, dass ein Teamleiter ein Team führt, das nur aus kompetenten Experten in jeder Position besteht. Für alle anderen ist die Mitarbeiterentwicklung der Schlüssel für eine effektive Führung. Die Entwicklung des einzelnen und des Teams muss für Sie und Ihr Unternehmen Priorität haben, wenn Sie einen Wettbewerbsvorteil auf dem Markt anstreben. In diesem Kurs lernen Sie, wie Sie Motivationsfaktoren und Maßnahmen zur Entwicklung Ihres Teams einsetzen. Sie erkunden Strategien zur Leistungsverbesserung sowie zum Festlegen und Aufrechterhalten hoher Standards. Darüber hinaus erfahren Sie, wie Sie gängige Mythen über Entwicklung überwinden und die Herausforderungen, denen Führungskräfte bei der Mitarbeiterentwicklung gegenüberstehen, meistern können.

COURSE_DESCRIPTION: This 13-video course explores DevOps tools used for collaboration, source code, repository management; and the tools used to implement DevOps pipelines. You will learn to set up Puppet, an open-source software configuration management tool, and to automate configuration management, implement, and utilize the flexibility afforded by infrastructure as code. Learners will explore artifact management by using JFrog Artifactory, a universal DevOps solution providing end-to-end automation and management of binaries and artifacts through the application delivery process that improves productivity across your development ecosystem. You will examine and compare the continuous integration tools used to build integration pipelines. This course demonstrates how to use Jenkins software to integrate and configure build and testing tools in order to create a DevOps pipeline that implicitly contains build and tests, and explore automated testing tools, including Selenium and Robot framework, TestComplete, Unified Function Test, or UFT, and IBM Rational Function Tester. Finally, you will explore configuration management tools, and learn to use the Puppet software environment for configuration management.

COURSE_DESCRIPTION: When you get better at thinking about the future, you get better at changing the future. This course will help you take all of the foresight skills you've developed so far and apply them to making real positive change in your life, in your work, and in the world around you. You'll learn how to create and share "preferred futures", which are highly persuasive, compelling visions of the changes you want to make real. You'll use your preferred future to identify obstacles, recruit allies, collect resources, and plan action to make your vision real. You'll also practice making "artifacts" from the future, which are creative representations of how everyday life might be different in the future. Artifacts can inspire others to join you in your quest to make a preferred future real. Leading futurists from the Institute for the Future will share with you their favorite future artifacts - and walk you through the entire creative process it took to make them. Every action we take today changes the future. This course will help you identify and take the actions that make the BIGGEST, most strategic impacts on the most urgent challenges you and society face. Many thanks to the Enlight Foundation and the Enlight Collaborative, which provided a grant to support the creation of this course.

COURSE_DESCRIPTION: Monitoring & Telemetry for Production Systems is a concise guided project about various methods of monitoring Production Servers to ensure Reliability of Web Services, Sites, Servers and Applications. This guided-project introduces you to Monitoring & Telemetry for Production Systems. The tasks comprising this project demonstrate how Production Servers and Applications are monitored and the tools used in the process. For a successful DevOps setup, a good monitoring platform lets you monitor infrastructure and application performance, whether on-premise, in the cloud, or across containerized environments - so you have complete visibility into every system, all the time. This guided-project introduces you to these tenets of monitoring with meaningful hands-on exercises. By the end of this project, you will be able to: - Learn Monitoring & Telemetry Fundamentals - Equip yourself with Linux Command line Monitoring Tools - Understand how to perform Server & Docker Container Monitoring with Netdata & Cadvisor - Perform Application Monitoring & Telemetry with Prometheus & Grafana - Part I - Perform Application Monitoring & Telemetry with Prometheus & Grafana - Part II - Implement Log Monitoring & Analysis with ELK Stack

COURSE_DESCRIPTION: One of the early stages in ethical hacking is reconnaissance of the target. In this 10-video course, you can explore various scanning tools and techniques used in ethical hacking, including Nmap, OWASP ZAP, Vega, Shodan, and specialized Google searches. Key concepts covered in this course include how to use Nmap, an open-source network scanner and one of the most widely-used scanning tools for scanning a target system or network; how to use OWASP ZAP, an open-source web application security scanner, to scan a target website; and how to use Vega, an open-source web security scanner and testing platform, to scan a target website. Next, learners observe how to use the Shodan search engine to gather information about vulnerabilities, its purpose and usage, and the role it plays in ethical hacking and penetration testing. Finally, learn how to use multiple informational websites to gain information about a target; and apply specialized advanced Google searches to find information for ethical hacking.

COURSE_DESCRIPTION: The course will begin with what is familiar to many business managers and those who have taken the first two courses in this specialization. The first set of tools will explore data description, statistical inference, and regression. We will extend these concepts to other statistical methods used for prediction when the response variable is categorical such as win-don't win an auction. In the next segment, students will learn about tools used for identifying important features in the dataset that can either reduce the complexity or help identify important features of the data or further help explain behavior.

COURSE_DESCRIPTION: In this practice lab, learners will be presented with a series of exercises to practice developing in Python. Exercises include tasks such implementing good design principles and writing applications that can communicate using TCP sockets. Learners will also practice working with Singleton, Observer and Factory design patterns and implementing iterators using special methods. Learners can also use the environment as an open sandbox. No installation or configuration is required, so you can gain immediate hands-on experience. Create new files or upload your own from a storage location of your choice, such as GitHub, and you can practice coding right away! You can even download a copy of your work when you're done. Whether you're looking to dive into the code presented within our courses or you want to work on your own coding projects, this lab environment will provide you with everything you need. So, go ahead and start coding today! See below for a complete list of available software. • Tkinter GUI • ipython • Jupyter Notebook • Octave 4.2 • pip / pip3 Packages: • numpy • matplotlib • scipy • features • hmmlearn • nltk • chunking • sklearn • gensim • opencv • python • seaborn • pandas • jupyter • tensorflow • keras • Python 3 • Python 2 • Pip 3 • Pip 2 • Node.js • npm • Git • Vim editor • Standard Python libraries • Python 3 libraries: • BeautifulSoup4 • selenium This lab is part of the Pythonista track of the Skillsoft Aspire Python Novice to Pythonista journey.

COURSE_DESCRIPTION: Excel's Scenario Manager allows you to create named scenarios with different values for key variables. These scenarios can be quickly examined and summarized using the What-If Analysis tool. In this course, you'll use GoalSeek and Solver, both of which are mathematical tools. Goal Seek comes in handy when solving quadratic, cubic, or other equations. Solver is much more powerful and allows complex constrained optimization problems to be easily defined and addressed. As you'll recognize, Solver's interface, used for specifying objective functions and constraints, is intuitive and easy to use. Next, you'll use several heavy-duty statistical techniques in Analysis ToolPak. These range from the creation of correlation and covariance matrices, hypothesis testing, and F-test and T-test interpretations to ANOVA, random and periodic sampling, and the construction and analysis of linear regression models.

COURSE_DESCRIPTION: Excel 365 enthält mehrere Funktionen, die bei der Datenformatierung und -verarbeitung helfen. In diesem Kurs lernen Sie verschiedene Möglichkeiten kennen, Ihre Daten nach Typ zu formatieren, um sie zu klassifizieren. Sie lernen, wie Sie Dropdown-Menüs erstellen, Zellen mit der Blitzvorschau-Funktion ausfüllen und eine automatische Datenreihe erstellen können. Als Nächstes erfahren Sie, wie Sie mit den erweiterten Optionen zum Ausfüllen von Reihen eine automatische Datenreihe erstellen und wie Sie Daten formatieren, einschließlich der Optionen zum Konfigurieren der Größe oder zum Anwenden von Schrifteffekten wie Fett, Kursiv und Unterstrichen. Außerdem erfahren Sie, wie Sie Zellenformatvorlagen anwenden, Zellen mit dem Formatierungswerkzeug formatieren, benutzerdefinierte Zahlenformate erstellen, benutzerdefinierte Zellformate anwenden und alle Formatierungen aus Zellen entfernen können.

COURSE_DESCRIPTION: Conflict is everywhere and it is impossible to avoid conflicting viewpoints. However, not all conflict is bad, nor is it inherently negative. How conflict is handled makes all the difference. It is through proper identification and understanding of conflict that allows for effective resolutions, some of which may yield positive outcomes. In this course, we will examine the different types of conflict, how to understand and embrace the positive aspects of conflict, and how to successfully navigate conflict to positive resolution. This course presents the material through video lessons, case studies, and interviews. In each module students will be presented with in-video quiz questions to test their understanding. To further their mastery of the content students will also be asked to complete two peer reviewed assignments. Upon completing this course, you will be able to: 1. Identify the different types of conflict 2. Illustrate the positive aspects of conflict 3. Provide examples of positive ways to deal with conflict

COURSE_DESCRIPTION: In this guided project you will learn how to build a precedence network diagram. You will start with a WBS (see Guided Project: Creating a WBS, for how to create one), and decompose the work packages (lowest elements in the WBS) into the necessary activities. You will order the activities based on the logic of the work, and decide which can be done in parallel and which have to be done in sequence, because of dependencies. You will consider the different types of task relationships and use them as necessary. You will do the task (we are using task and activity interchangeably) definition in Google docs, and the generation of the network and task relationships in scheduling tool (we will use an open source tool: Project Libre) but the concepts can be used with any other tool(s). Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Introduction to OO Programming with Java is course 2 of the Core Java Specialization. After completing this course, you'll be able to create simple Java classes that exhibit the principle of Encapsulation, to import other classes for use, to work with Strings, print output and use advanced math functions. We'll begin with a brief refresher on necessary concepts from Object-Oriented Programming. Next, we'll introduce basic Java concepts regarding classes, enabling you to start writing simple Java classes with attributes and methods. We'll introduce the idea of instances, or objects created from classes, so that you can start to build object-oriented solutions. Finally, we'll cover namespaces and Java Libraries to explain how Java packages classes, so that everyone can develop code without name collisions. You will be able to organize and access classes, as well as use selected standard classes from the Java runtime environment. To be successful in this course, you should have taken Course 1: Introduction to Java or have equivalent knowledge.

COURSE_DESCRIPTION: Discover the challenges faced by an organization transitioning to Agile and examine comparisons of the Hybrid, Lean, and Bimodal Agile models and frameworks, along with other topics covered in this 14-video course. Begin with a look at Agile philosophy at organizational level, then compare and contrast the different Agile frameworks available for Agile transformation of the organization. Explore the features of the Hybrid model, and those of the Bimodal model. Delve into the seven principles that guide the Lean model of Agile, and view guidelines to identify the best fit Agile framework for an organization. Examine methods that can be used to increase benefits of Agile from a project level to an organizational level; various scaling models available for integrating Agile; and the SAFe framework available for scaling Agile. Discover benefits offered by Agile estimation models over traditional estimation models; recognize how to establish a governance framework for adopting Agile at an organizational level, and finally, learn best practices for building an Agile team culture in an organization.

COURSE_DESCRIPTION: Microsoft certifications give you a professional advantage by providing globally recognized and industry-endorsed evidence of mastering skills in digital and cloud businesses. In this course, you will prepare to take the DP-900 Microsoft Azure Data Fundamentals certification exam. You will refresh your knowledge of the fundamentals of database concepts in a cloud environment, the basic skillset in cloud data services, and foundational knowledge of cloud data services within Microsoft Azure. You will recap on non-relational data offerings, provisioning and deploying non-relational databases, and non-relational data stores with Microsoft Azure. You will test your knowledge in a series of practice exams mapped to all the main topics covered in the DP-900 exam, ensuring you're well prepared for certification success. You will prepare to pass the certification exam by taking practice tests with similar formats and content. You will also get a more detailed overview of the Microsoft certification program and where you can go next in your career. You'll also get tips and tricks, testing strategies, useful resources, and information on how to sign up for the DP-900 proctored exam. By the end of this course, you will be ready to sign-up for and take the DP-900 exam. This course is intended for candidates with both technical and non-technical backgrounds. Data science and software engineering experience is not required; however, some general programming knowledge or experience would be beneficial. To be successful in this course, you need to have basic computer literacy and proficiency in the English language. You should be familiar with basic computing concepts and terminology, general technology concepts, including concepts of machine learning and artificial intelligence.

COURSE_DESCRIPTION: Data scientists spend a majority of their time exploring and analyzing data, which may become the foundation for a machine learning model. The Azure Machine Learning Studio provides Jupyter Notebooks that can be used to perform data analysis. In this course, you'll learn about project Jupyter and how it is used for by data scientists to perform data analysis. You'll explore how to create a compute instance in Azure Machine Learning Studio and clone a sample training repository. Next, you'll learn how to use a Jupyter Notebook to perform basic data analysis and , create a regression model, classification model, and clustering model. Finally, you'll examine how to use Jupyter Notebook to perform deep learning using PyTorch and perform deep learning using TensorFlow. This course is one in a collection that prepares learners for the Designing and Implementing a Data Science Solution on Azure (DP-100) exam.

COURSE_DESCRIPTION: Ihre Karriereoptionen zu untersuchen, ist ein wichtiger Punkt, um auf dem richtigen Weg zu bleiben. Wenn Sie sich über Ihr Ziel im Klaren sind, können Sie die Maßnahmen ergreifen, um es zu erreichen. In diesem Kurs werden Optionen beschrieben, die Ihnen zur Verfügung stehen, wenn Sie Ihre Karriere auf den richtigen Weg bringen möchten. Sie lernen, wie Sie sich erfolgreich intern beruflich verändern und wie Sie horizontale Wechsel innerhalb desselben Unternehmens vornehmen. Sie lernen Methoden kennen, mit denen Sie einen effektiven Karriereplan erstellen und umsetzen können. Und Sie erfahren, wie Sie am besten um neue Aufgaben bitten, die Ihre Karriere voranbringen können. Sie lernen auch Wege kennen, wie Sie erfolgreich den Arbeitgeber wechseln können, wenn Sie an Ihrem aktuellen Arbeitsplatz alle Optionen ausgeschöpft haben.

COURSE_DESCRIPTION: Preparation for the Amazon Web Services (AWS) Certified Solutions Architect-Associate (SAA-C02) certification exam continues with this 9-video course on analyzing large amounts of data, automating resource deployment, and database caching. Participants will begin with an overview of the Amazon Kinesis service for adjusting and analyzing streaming data, and learn how clusters in Redshift-a large-scale data warehouse solution known for its high performance-can store and analyze large amounts of data. Next, you will learn how CloudFormation uses templates for automating resource deployment. Then watch as AWS resources are deployed with a CloudFormation template. You will explore the uses of Elastic Beanstalk stacks and cloud deployment, as well as Elastic Transcoder for converting media formats. The course concludes with an analysis of performance benefits of database caching by using both ElastiCache Memcached, and ElastiCache Redis. After completing this course, your next course will review core AWS concepts, including pulling and managing, cloud storage, and EC2 deployment and management.

COURSE_DESCRIPTION: With rapid advancements in technologies to meet changing customer expectations, developing a successful software solution is more than just writing error-free code. Businesses are focusing on optimizing software performance to deliver customer-centric, scalable solutions to gain that elusive competitive edge. Performance Engineers build and deliver optimized solutions. They adopt best practices to resolve performance issues in software architecture and development, as well as build a culture of performance engineering across the organization. The Performance Engineering Aspire Journey will help you gain a competitive advantage by adopting best practices to optimize the performance of customer-centric solutions.

COURSE_DESCRIPTION: In order to start building out your app, you will first need to understand the elements that make up your app. Whether you are creating an app from an existing source file or from scratch, your app will contain elements that can help the user interact with your app. In order to start customizing your app, you can start inserting additional screens. These screens will allow you to connect to a data source and even create forms to allow the user to input additional data. In this 10-video course, you will observe how to navigate the app interface, customize app screens, and manage your app screens in PowerApps. Key concepts covered in this course include the structure of an app; how to manage data sources; and how to add a new app screen and to customize it. Finally, learn how to insert app galleries and how to edit a gallery; learn to insert and edit a form; how to connect multiple screens; and how to manage your app screens.

COURSE_DESCRIPTION: In this challenge, you will configure Amazon CloudWatch to generate an alarm when CPU utilization reaches a specific level. First, you will create a CloudWatch alarm to monitor CPU utilization on an Amazon Elastic Cloud Compute (Amazon EC2) instance, and then you will connect to the console of the EC2 instance by using EC2 Instance Connect. Next, you will install a stress testing tool, and then you will run a stress test to simulate load. Finally, you will monitor the CloudWatch alarm until it is triggered. Note: Once you begin the challenge lab, you will not be able to pause, save, or exit and then return to your challenge lab. Please ensure that you have set aside enough time to complete the challenge lab before you start.

COURSE_DESCRIPTION: In this project you will create an application that calculates a monthly expense estimation using a calculated monthly house payment and grocery bills using Java. Java is an Object-Oriented language that contains many Classes but also contains what are called Primitive Data Types. These primitive data types are used to store numbers and characters in Java and have all the Arithmetic operations needed to perform various calculations. To get started with Java, it is important to know how to use these built in data types as they are found throughout the language. The primitive data types take up much less space than objects do and can make a program much more efficient when used properly. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Please note: You will need an AWS account to complete this course. Your AWS account will be charged as per your usage. Please make sure that you are able to access Sagemaker within your AWS account. If your AWS account is new, you may need to ask AWS support for access to certain resources. You should be familiar with python programming, and AWS before starting this hands on project. We use a Sagemaker P type instance in this project, and if you don't have access to this instance type, please contact AWS support and request access. In this 2-hour long project-based course, you will learn how to train and deploy an image classifier using Amazon Sagemaker. Sagemaker provides a number of machine learning algorithms ready to be used for solving a number of tasks. We will use the image classification algorithm from Sagemaker to create, train and deploy a model that will be able to classify 37 breeds of dogs and cats from the popular IIIT-Oxford Pets Dataset. Since this is a practical, project-based course, we will not dive in the theory behind deep learning based image classification, but will focus purely on training and deploying a model with Sagemaker. You will also need to have some experience with Amazon Web Services (AWS). Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Wireless networks are much more versatile than wired networks, especially in an environment where running wires might be difficult. This course covers the most efficient wireless networking protocols for various scenarios. You will explore wireless frequencies and channels and learn how to differentiate between 802.11 standards: - a, - b, - g, - n, - ac, and - ax. Next, delve into considerations for working with long-range fixed wireless, including licensed, unlicensed, power, and regulatory requirements. You will also identify features of near-field communication (NFC) and radio-frequency identification (RFID). Finally, explore server roles such as domain name system (DNS) and dynamic host configuration protocol (DHCP), and discover the global market for Internet of things (IoT) end-user solutions. After completing this course, you'll be able to differentiate between wireless networking protocols and tune common host services. This course will prepare learners for the CompTIA A+ Core 1 (220-1101) certification exam.

COURSE_DESCRIPTION: In this first course of this specialization, you will discover what data visualization is, and how we can use it to better see and understand data. Using Tableau, we'll examine the fundamental concepts of data visualization and explore the Tableau interface, identifying and applying the various tools Tableau has to offer. By the end of the course you will be able to prepare and import data into Tableau and explain the relationship between data analytics and data visualization. This course is designed for the learner who has never used Tableau before, or who may need a refresher or want to explore Tableau in more depth. No prior technical or analytical background is required. The course will guide you through the steps necessary to create your first visualization from the beginning based on data context, setting the stage for you to advance to the next course in the Specialization.

COURSE_DESCRIPTION: If an incident or outage occurs, network administrators must be able to respond effectively and resolve network problems in a timely fashion. In this course, you'll learn about best practices for identifying a problem, establishing a theory of probable cause, testing theories, formulating a plan of action to resolve a problem, implementing a solution, or escalating the issue. You'll explore how to verify full system functionality and document findings, actions, outcomes, and lessons learned. You'll examine how to troubleshoot common cable connectivity issues and explore network specifications and limitations, cable considerations, and common issues such as attenuation, interference, bad ports, and duplexing issues. Lastly, you'll learn about common cable connectivity tools including cable crimpers, punchdown tools, tone generators, loopback adapters, and cable testers. This course is one of a collection of courses that prepares learners for the N10-008: CompTIA Network+ certification exam.

COURSE_DESCRIPTION: There are many key utilities and approaches Windows System Admins can take to ensure a well-optimized, fast, and smooth computing experience in Windows 11. In this course, you will explore the term 'maintenance' in the context of a Windows system and learn the importance of performing regular and ongoing maintenance of Windows 11 systems. Next, discover the benefits of the Disk Cleanup utility and learn how to run the Disk Defragmenter utility to defrag a hard drive. Then examine how to access resources and configure devices in Device Manager and find out how to use the Device Manager to troubleshoot hardware issues. Finally, investigate the features of common Windows tools including System File Checker, Disk Management, and the CHKDSK.

COURSE_DESCRIPTION: How does Google Maps plan the best route for getting around town given current traffic conditions? How does an internet router forward packets of network traffic to minimize delay? How does an aid group allocate resources to its affiliated local partners? To solve such problems, we first represent the key pieces of data in a complex data structure. In this course, you'll learn about data structures, like graphs, that are fundamental for working with structured real world data. You will develop, implement, and analyze algorithms for working with this data to solve real world problems. In addition, as the programs you develop in this course become more complex, we'll examine what makes for good code and class hierarchy design so that you can not only write correct code, but also share it with other people and maintain it in the future. The backbone

project in this course will be a route planning application. You will apply the concepts from each Module directly to building an application that allows an autonomous agent (or a human driver!) to navigate its environment. And as usual we have our different video series to help tie the content back to its importance in the real world and to provide tiered levels of support to meet your personal needs.

COURSE_DESCRIPTION: In this course you will be introduced to two methods of writing SQL queries that retrieve data from two or more tables. Since one of the functions of a database is to store data in an organized format, many databases are made up of multiple tables. Often, the data output required from the database is made up of data from more than one table. For example, the data that populates a student transcript might come from the Student, Course, and Section tables. While the Student table may provide the student's name, the name and number of the course might come from the Course table and the specific grade for that course may come from yet another table. While writing SQL queries in SQLiteStudio, you'll learn the SQL syntax required to join tables together as you develop an understanding of how the relationships among tables come into play. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: The third course in the Salesforce Sales Operations Professional Certificate, Opportunity Management in Salesforce, is for anyone who is curious about entry level sales roles that require foundational skills in Salesforce, the sales operations specialist role specifically, and how to use tools in Salesforce to manage opportunities and close sales deals in a real world business setting. This third course will give you a foundational understanding of how to help sales teams optimize the opportunity management process. Specifically, this course shows how a sales operations specialist would support account executives and empower them to progress opportunities through a sales pipeline and close sales deals as effectively and efficiently as possible. This will require the use of new tools in Salesforce, including products, price books, quotes, contracts, and orders. Learning how to leverage these aspect of Salesforce are crucial skills for anyone interested in entry level sales jobs. For this course, it is recommended (but not required) that you have some background knowledge of sales and CRM, as well as an understanding of the basics of Salesforce platform navigation. If you're a total beginner with these concepts, you can still be successful in this course - however, it might

require some additional work on your part. By enrolling in this course, you are taking the next step to kickstarting your career in Salesforce. Congratulations on continuing this exciting journey!

COURSE_DESCRIPTION: The Version Control with Git course provides you with a solid, hands-on foundation for understanding the Git version control system. Git is open source software originally created by Linus Torvalds. Git manages team files for large and small projects. This allows the team to continuously improve its product. It is used by most major technology companies, and is assumed knowledge for many modern programming and IT jobs. It is a core component of DevOps, continuous delivery pipelines and cloud-native computing. You could also use Git to manage the many continuously improving revisions of that book that you are writing. In this course, you will not learn everything there is to know about Git, but you will build a strong conceptual understanding of the technology, and afterward will be able to confidently dig deeper on any topic that interests you. This course assumes no previous knowledge of Git, but if you do have experience with it, you may find this course to be both useful and challenging. This is especially true if you currently "know just enough Git to be dangerous". There are two paths in this course. Both rely heavily on hands-on labs. One path assumes that you have experience using a command line interface, and the other path uses the Sourcetree graphical client. If you are not experienced with a command line, we highly suggest that you go through the Sourcetree path. Eventually, you might want to go through both paths, so that you can decide which tool to use for specific tasks. Besides, repetition is good for learning :) You can watch the videos and take the quizzes from your phone if you want, but the hands-on labs require you to have a Windows or Mac computer. If you use the command line path through the course, you can also use Linux. This course uses Bitbucket (bitbucket.org) as the hosted provider for remote Git repositories. Bitbucket is free for teams of up to 5 people, including private repositories. However, most of the knowledge that you gain in this course applies to Git itself, and you can apply this knowledge to other hosted Git providers (such as GitHub). This course tries to be as concise as possible. It will probably take you about 5-10 hours to go through one of the two paths, but your mileage may vary.

COURSE_DESCRIPTION: One of the key attractions of C is the low-level control it gives us over its compilation process. Indeed, the C language allows us to control the compilation of a program to a level unmatched by other languages such as Java. You will start this course by learning the compilation process of C which includes four main steps: preprocessing, compiling, assembling, and linking. Once you grasp the output of each step in the compilation process, move on to investigating preprocessor directives. Next, use conditional preprocessor directives including #if, #elseif and #endif. Finally, discover how to issue instructions to the compiler using pragmas, upgrade a warning to a regular error, and convert a warning to an extremely severe fatal error. After completing this course, you'll be able to list the steps for compiling a C program including creating macros with preprocessor directives, control conditional compilation, and use pragmas to alter compiler settings.

COURSE_DESCRIPTION: The way that software components - subroutines, classes, functions, etc. - are arranged, and the interactions between them, is called architecture. In this course you will study the ways these architectures are represented, both in UML and other visual tools. We will introduce the most common architectures, their qualities, and tradeoffs. We will talk about how architectures are evaluated, what makes a good architecture, and an architecture can be improved. We'll also talk about how the architecture touches on the process of software development. In the Capstone Project you will document a Java-based Android application with UML diagrams and analyze evaluate the application's architecture using the Architecture Tradeoff Analysis Method (ATAM). After completing this course, you will be able to: • Compare and contrast the components, connections, protocols, topologies, constraints, tradeoffs, and variations of different types of architectural styles used in the design of applications and systems (e.g., main program and subroutine, object-oriented, interpreters, pipes and filters, database centric, event-based). • Describe the properties of layered and n-tier architectures. • Create UML ipackage, component, and deployment diagrams to express the architectural structure of a system. • Explain the behaviour of a system using UML activity diagrams. • Document a multi-application system with a layered architecture.

COURSE_DESCRIPTION: This 15-video course explores the DevOps pipeline, including test strategies in a DevOps culture, continuous integration/continuous deployment (CI/CD), and configuration management. Learners will discover how to work with Agile test environments and orchestrate software tests in a DevOps culture. Begin by examining the concept of CI and its benefits; the concept of continuous delivery; the concept of CD; and the concepts of continuous testing and test orchestration in a DevOps testing pipeline. Explore the benefits and challenges related to continuous testing in a DevOps testing pipeline, and then take a look at some of the common tools used in the orchestration of continuous testing in a DevOps environment. Recognize key challenges when automating software testing; learn how to work with Git for code versioning control, and how to work with the CircleCi continuous integration tool. Then observe use of Docker containers for application packaging, and with VirtualBox and Vagrant to provision infrastructure. The concluding exercise involves describing CI, continuous delivery, and testing, and listing benefits of continuous delivery and testing.

COURSE_DESCRIPTION: Data professionals working with various data management systems must be able to implement data correction by using R and have a good understanding of data and data management systems. In this 12-video course, learners explore how to apply and implement various essential data correction techniques; to follow transformation rules; and to use deductive correction techniques and predictive modeling by using critical data and analytical approaches. Learn more about data wrangling, essentially the process of transforming and mapping data into another format to ensure that data are appropriate for analytical requirements. Along the way, you will learn key terms and concepts, including how to design data dimension; dimensional data design; cleansing data, and cleansing data with Python; data operations for fact finding; and common data operations for fact-finding. Next, learn about data categorization with Python; data visualization in general; and data visualization with Python. In a concluding exercise, you create a series data set by using Python; create a data frame using the series data; and, finally, calculate the standard deviation of the data frame.

COURSE_DESCRIPTION: It's important to know why the roles, philosophy, and principles behind release engineering - a relatively new discipline of software engineering - are used for building and delivering software. In this course, you'll learn about the automated release system called Rapid, and how it can be used to provide a framework for delivering reliable software builds and releases. You'll also learn about configuration management and the importance of collaboration between release engineers and site reliability engineers.

COURSE_DESCRIPTION: In this 1-hour long project-based course, you will perform real-time object detection with YOLOv3: a state-of-the-art, real-time object detection system. Specifically, you will detect objects with the YOLO system using pre-trained models on a GPU-enabled workstation. To apply YOLO to videos and save the corresponding labelled videos, you will build a custom command-line application in Python that employs a pre-trained model to detect, localize, and classify objects. It will use OpenCV to read the video streams, draw bounding boxes around detected objects, label the objects along with confidence scores, and save the labelled videos to disk. This course runs on Coursera's hands-on project platform called Rhyme. On Rhyme, you do projects in a hands-on manner in your browser. You will get instant access to pre-configured cloud desktops containing all of the software and data you need for the project. Everything is already set up directly in your internet browser so you can just focus on learning. For this project, you'll get instant access to a cloud desktop with Python, Jupyter, and Keras pre-installed. Notes: - You will be able to access the cloud desktop 5 times. However, you will be able to access instructions videos as many times as you want. - This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: C is a general-purpose, structured programming language that allows maximum control with minimal commands. C is one of the easiest languages to learn. The significant advantage of the C language is the performance it offers, which makes it suitable for system programming. For a long, system programming and embedded programming space have been dominated by languages like C. Concepts and understanding of C lays the foundations to begin one's career in the world of IT Programming. Even if the modern programming languages have impacted the position of the C language, it still continues for a longer period of time. The C Programming Proficiency journey facilitates the learners to understand the procedural/functional programming model. The first track of this journey focuses on the fundamentals of C where the learners will get familiar with the language features and syntax. The next track leads the learners toward building the logical programs using control structures which then enables them to explore the functional programming aspects of the C language. The journey concludes with an exploration of advanced topics of C like File Handling, Preprocessor directives, type conversions

COURSE_DESCRIPTION: Social media platforms are driven by digital advertising. As a result, social media advertising is affordable and can be purchased at almost any budget. Targeting options in social media advertising are also sophisticated. It is possible to tailor ads around a user's behaviors (e.g., likes, posts and clicks). This course unpacks small business use cases of Facebook, Instagram and Twitter advertising. From basic campaigns, to advanced techniques including lookalike modeling and audience retargeting, this course shows how to effectively advertise on three major social media platforms.

COURSE_DESCRIPTION: To really understand what is special about Bitcoin, we need to understand how it works at a technical level. We'll address the important questions about Bitcoin, such as: How does Bitcoin work? What makes Bitcoin different? How secure are your Bitcoins? How anonymous are Bitcoin users? What determines the price of Bitcoins? Can cryptocurrencies be regulated? What might the future hold? After this course, you'll know everything you need to be able to separate fact from fiction when reading claims about Bitcoin and other cryptocurrencies. You'll have the conceptual foundations you need to engineer secure software that interacts with the Bitcoin network. And you'll be able to integrate ideas from Bitcoin in your own projects. Course Lecturers: Arvind Narayanan, Princeton University All the features of this course are available for free. It does not offer a certificate upon completion.

COURSE_DESCRIPTION: API stands for Application Programming Interface which helps two independent software to communicate with each other. When an application is built, the functionalities are built first as APIs and then integrated with the frontend layer (UI). Waiting for integration to find bugs in the application will add a lot of costs. The later the bugs are found in the system, the more cost it adds to the application. API Testing helps reduce the cost as it will be performed before integration with frontend (or UI). RestSharp is one of the best test automation tools to test APIs with C# programming language. It's an open-source tool and is very easy to code using Rest Sharp. This project will provide you step by step instructions to write scripts to automate API testing using Rest Sharp, how to automate and test CRUD (Create, Read, Update and Delete) operations with HTTP methods like GET, POST, PUT and DELETE, and adding assertions to the API response.

COURSE_DESCRIPTION: Mit der richtigen Einstellung können Führungskräfte die Kultur von Teams und Unternehmen verändern. Dieser Kurs soll Führungskräften helfen, die Methodik des Systemdenkens anzuwenden, um die Dynamik von Teams und Arbeitsplätzen zu verändern. Führungskräfte, die einen systemorientierten Ansatz entwickeln, sind besser in der Lage, die Komplexität von Diversität, Chancengleichheit und Inklusion am Arbeitsplatz zu erkennen und zu bewältigen. In diesem Kurs erfahren Führungskräfte und Manager, wie sie ein inklusives Arbeitsumfeld schaffen können, einschließlich der Verwendung einer inklusiven Sprache, um das gesamte Unternehmen und nicht nur seine einzelnen Teile zu verändern. Sie werden auch erfahren, wie eine neue Art der Führung DEI unterstützen kann und welche Techniken das Engagement und die Motivation der Mitarbeitenden in Sachen DEI konstant hoch halten können. Als Teil Ihrer DEI-Arbeit empfehlen wir Ihnen, www.lawanaharris.com/assessment zu besuchen und eine Selbsteinschätzung vorzunehmen, um Ihre Stärken und Schwächen im Bereich DEI zu ermitteln.

COURSE_DESCRIPTION: This journey is for colleagues who currently work and process a lot of data in their daily work, and would like to gain insights on how to consolidate those data into a visual using the Power BI tool, to be able to drive data-driven discussions. During these 10 weeks of journey, blended with Percipio digital content, subject matter expert calls and supported by virtual "class-room-alike" mentored sessions (the blue circles in the curricula), you will learn starting from the basics, and going deeper orientation around the Power BI tool. After this journey you

will able to: • Consolidate multiple data sources through Power BI • You'll know how to use data modeling to transform raw data into powerful visuals and reports. • you'll know how to take advantage of the analytics features of Power BI visuals • you'll gain insight into how to use key design best practices to ensure your visualizations are clearly and accurately telling the story you want them to.

COURSE_DESCRIPTION: Der digitale Kunde von heute lässt sich nicht mehr einfach nur nach Alter oder Generation definieren. Er ist ein Digital Native, Online versiert und nutzt mehrere Kanäle zur Bewältigung seiner alltäglichen Aufgaben. In diesem Kurs erfahren Sie mehr über die Charakteristiken digitaler Kunden und wie die Online-Welt deren Erwartungen formt. Sie erfahren, wie Sie Daten und Analysen mithilfe von Tools wie CRO (Optimierung der Konversionsrate) und Funnel-Verfahren nutzen können, um ein besseres Kundenerlebnis zu schaffen. Sie werden auch den Wert des Datenschutzes und das für die Speicherung von Kundendaten notwendige Vertrauen kennenlernen. Schließlich erfahren Sie, wie wichtig die Aufrechterhaltung einer menschlichen Online-Beziehung ist und welche Maßnahmen ein Unternehmen ergreifen muss, um die Innovationen zu fördern, die für die Erfüllung des erwarteten Kundenerlebnisses erforderlich sind.

COURSE_DESCRIPTION: If I Googled you, what would I find? As we move around the online world we leave tracks and traces of our activity all the time: social media accounts, tagged images, professional presences, scraps of text, but also many artefacts we don't always realise we are leaving behind, or that others leave about us. In this course you will hear from a range of experts and you will have an opportunity to explore and reflect on your own online tracks and traces, to understand why your digital footprint is important. We will introduce you to some of the tools and approaches to effectively manage your online presence (or digital footprint). The course will focus on the different dimensions of a digital footprint, including developing an effective online presence, managing your privacy, creating opportunities for networking, balancing and managing professional and personal presences (eprofessionalism). By the end of this course (MOOC) you should be equipped to ensure that your digital footprint works for you, whether you want to be more private online, or are looking to create a more effective and impactful presence. You can also join the conversation on Twitter using the hashtag #DFMOOC and follow us @DFMOOC We hope you enjoy the course!

COURSE_DESCRIPTION: This 9-video course explores the concept of web frameworks and how they can speed up development of web applications, and examines the Django framework, a widely used framework written in the Python language. Learners begin by studying fundamentals of web requests, the steps and software required when processing web requests for static and dynamic websites. This leads into examining tasks involved in building a website and how web frameworks can speed up the process. Next, you will look at the Django framework and its features that can help to simplify web development, and the components of a Django application that are involved in processing web requests. Continue by observing what templates are in the context of Django and their use cases, and comparing Django models to database tables; then look at the role of the Django object-relational mapping layer (ORM) in mapping the two. Conclude the course by examining some of the built-in Django apps that developers can integrate into their own projects.

COURSE_DESCRIPTION: This course is designed to provide a basic understanding of financial statements with an emphasis on the balance sheet. However, to understand accounting driven financial statements, it is important to recognize that accounting is less about counting and more about measuring. "What is it that is being measured?" Well, as the course unfolds, you will learn about the three measurement questions and how the balance sheet helps to answer the first two of these questions. By touring a real company and interviewing real business people, the course describes the basic content of financial statements in a simple yet relevant context. The goal of the course is to leave a lasting impression about what balance sheet consists of and what it reveals. The next course in the Fundamentals of Accounting Specialization completes the conversation by addressing the remaining measurement question. Upon successful completion of this course, you will be able to: • Describe the purpose of a balance sheet. • Define the three components of a balance sheet. • Recognize and understand the meaning of several items typically presented on a balance sheet. • Explain the broader purpose of financial statements and the role of accounting in producing the financial statements. • Read and, to some extent, interpret real-world balance sheets. If you enjoy this business course and are interested in an MBA, consider applying to the iMBA, a flexible, fully-accredited online MBA at an incredibly competitive price offered by the University of Illinois. For more information, please see the Resource page in this course and onlinemba.illinois.edu.

COURSE DESCRIPTION: Discover the future of payment technology, from mobile payments to tokenization. In this course, you will learn new ways of making payments from consumer-to-business (C2B), from consumer-to-consumer (C2C), and from business-to-business (B2B). You will explore current payment system technologies to examine their strengths and weaknesses, and understand the ways technological innovation is changing these traditional systems. You'll learn about new front-end innovations like digital wallets and mobile payments and also discover back-end innovations like tokenization, mobile money, and new payment infrastructure.

COURSE_DESCRIPTION: This 12-video course explores Hybrid Agile approaches, including situations when a hybrid approach may be appropriate, common hybrid models, and assessments of Agile and hybrid suitability. Discover project tailoring and the impact of hybrid approaches on fundamental Agile values and principles. Begin by looking at the characteristics of various project management methodologies, and then at situations for which hybrid methodologies may be necessary. Next, you will examine the V model, the Spiral model, and Iterative traditional-Agile hybrid models. View different scenarios where various hybrid methods may be applied, and learn about using a hybrid while transitioning to Agile. Consider the Agile-Agile Hybrid, which blends elements of Scrum, Kanban, or Extreme Programming. Discover the assessment tool that predicts suitability of a project to use the Agile, traditional, or hybrid approach, and take a look at project tailoring. Delve into Agile values and mindset, recalling Agile values and conducting an Agile suitability assessment based on these values. In conclusion, explore which areas of the Agile Manifesto may be sacrificed when using a hybrid approach.

COURSE_DESCRIPTION: Digitale Disruption. Digitale Transformation. Wie auch immer Sie es nennen, die Umstellung auf digitale Technologien erfordert einen genauen Blick auf die Kerngeschäftsprozesse, die Governance eines Unternehmens, die Kundenerlebnisse und natürlich auf die eigentlichen transformativen digitalen Technologien. In diesem Kurs lernen Sie die entscheidenden Führungskompetenzen kennen, die erforderlich sind, um die digitale Transformation in die Tat umzusetzen. Sie werden verstehen, wie ein solider Kompass Ihnen helfen kann, die Umsetzung der digitalen Transformation zu steuern, indem Sie die anstehenden Herausforderungen formulieren. Sie lernen auch bewährte Verfahren kennen, um den Kunden in den Mittelpunkt zu stellen, sowie Maßnahmen zur Mobilisierung und Aufrechterhaltung der Betriebsabläufe und der Mitarbeitererfahrung. Sie werden auch ein Verständnis für die zugrundeliegenden Geschäftsmodelle und digitalen Plattformen gewinnen, die die digitale Transformation vorantreiben.

COURSE_DESCRIPTION: This course (The English copy of "用Python玩转数据") is mainly for non-computer majors. It starts with the basic syntax of Python, to how to acquire data in Python locally and from network, to how to present data, then to how to conduct basic and advanced statistic analysis and visualization of data, and finally to how to design a simple GUI to present and process data, advancing level by level. This course, as a whole, based on Finance data and through the establishment of popular cases one after another, enables learners to more vividly feel the simplicity, elegance, and robustness of Python. Also, it discusses the fast, convenient and efficient data processing capacity of Python in humanities and social sciences fields like literature, sociology and journalism and science and engineering fields like mathematics and biology, in addition to business fields. Similarly, it may also be flexibly applied into other fields. The course has been updated. Updates in the new version are : 1) the whole course has moved from Python 2.x to Python 3.x 2) Added manual webpage fetching and parsing. Web API is also added. 3) Improve the content order and enrich details of some content especially for some practice projects. Note: videos are in Chinese (Simplified) with English subtitles. All other materials are in English.

COURSE_DESCRIPTION: This 11-video course explores advanced features of Python sockets, including the transfer of large files over sockets, two-way communication, and differences between blocking and nonblocking sockets. You will learn to transfer large files over sockets by breaking them up into chunks, and to transfer images over TCP (transmission control protocol) sockets. Then you will learn how to transfer Python objects by using the pickle module. Next, learn how to create a chat application and use it to transfer several types of data from a server application to a client. Learners continue by exploring how to configure two-way communication over sockets by building a simple chat. This course examines the performance versus reliability trade-off when one uses blocking and nonblocking sockets. You will examine and compare TCP, a connection-oriented protocol, and UDP (Universal Datagram Protocol) which is connectionless. Finally, you will examine the performance versus reliability trade-off with a TCP and UDP, and why TCP is better suited for apps which require high reliability at the other end of the communication line.

COURSE_DESCRIPTION: Discover how to implement the linked list in Java, including the doubly linked list and the circular linked list, and learn how to perform operations on these linked lists. In this course, you'll explore variations on the singly linked list that you covered earlier. You'll see how the doubly linked list holds an additional reference to the previous node in the linked list along with a reference to the next node. This means additional space is required to store each node, but it also makes certain operations faster, such as traversing backwards over the elements in the linked list. You'll also learn about the circular linked list, where the tail of the linked list points back to the head of the linked list.

COURSE_DESCRIPTION: Examine how to design a release strategy, and to build a release management workflow for Azure DevOps solutions in this 18-video course, which helps learners prepare for AZ-400 Microsoft Azure DevOps Solutions certification exam. First, you will learn about release approvals, and how to create a strategy for measuring release quality. Next, learn to create release notes in the Release Notes Generator, how to specify deployment targets, and to implement approvals. Learners observe how to integrate Jenkins automation server, and AKS (Azure Kubernetes Service) into pipelines by using Azure Service Fabric. You will learn to deploy applications to Azure Web Apps; to use the Azure Key Vault for storage of sensitive information; how to integrate secrets in Azure key vault into the pipeline; and how to build a CI/CD (continuous integration-continuous delivery) environment. The course then demonstrates how to encapsulate a sequence of predefined tasks into a reusable task, and use variable groups to store across multiple pipelines. Finally, you will learn to use Azure Test.

COURSE DESCRIPTION: In this 20-video course, learners will explore the concepts of Generics and Collections in Java, including different types of Generics, Collections framework, implementation of Adapter and Map interfaces, features of concurrent implementations, and custom collection development. Begin by creating and using interfaces with default methods, and interfaces with private methods. Examine Wrapper class in Java and its associated benefits and simplifying programs with Wrapper classes. Delve into concepts of auto-boxing and auto-unboxing, and managing objects with boxing and unboxing. Describe Generics, including different types and restrictions; create and use Generic classes and methods with diamond notation; and discover use of wild cards in Generic classes. Explore Collections framework and use of key Collection interfaces; use NavigableSet, and demonstrate the utility of ConcurrentMap and ConcurrentNavigableMap. Discover Adapter implementations on Collections; recognize essential implementations of Map interfaces in Java SE 11, and the prominent features of concurrent implementations; view custom collections and the Collections class; and implement algorithms by using the Collections class. Finally, learn to use marker interfaces in List implementations to improve Collection performance. This is one course is a series to prepare for the 1Z0-816: Java SE 11 Programmer II certification exam.

COURSE DESCRIPTION: Power BI und Power Query können in Kombination verwendet werden, um sowohl grundlegende als auch erweiterte Operationen zu erleichtern. In diesem Kurs erfahren Sie, wie Sie mit Power Query die beiden Arten von berechneten Spalten erstellen können: benutzerdefinierte und bedingte Spalten. Als Nächstes werden Sie Power BI verwenden, um Daten zu importieren und zu bereinigen und gestapelte Liniendiagramme (Flächendiagramme) zur Visualisierung der Daten zu erstellen. Sie werden die eindeutigen Kategoriewerte der visualisierten Reihen mit verschiedenen Verfahren filtern. Und die Daten anschließend zwischen Tabellen mithilfe einer Fremdschlüsselbeziehung kombinieren und ein Balkendiagramm mit Linienmarkern anhand der Karte "Analyse" erstellen. Dann werden Sie eine große Anzahl von Dateien importieren, die sich im gleichen Ordner befinden.

Schließlich werden Sie die Benutzeroberfläche und den erweiterten Editor von Power BI verwenden, um grundlegende Datenbereinigungsoperationen durchzuführen, sowie Power Query, um verschiedene erweiterte Operationen durchzuführen.

COURSE_DESCRIPTION: Reusable API code can translate into quicker development and release times. In this course, you'll learn about the different types of reusable code patterns and best practices when using each. You'll examine the creation of reusable code using a multi-tier software architecture process, a component-based development process, and an API First development process. You'll then learn the differences between API documentation, specifications, and definitions. Next, you'll move on to look at how to implement both a multi-tier software application and a component-based library. You'll explore the differences between APIs and web services. Finally, you'll learn about reusable REST API web services and how to implement them.

COURSE_DESCRIPTION: A large percentage of the population carries at least one mobile device on them at all times. These devices often contain applications that can be attractive targets for mobile attacks. This course covers how to troubleshoot mobile OS applications and application security issues. Discover common symptoms pertaining to mobile OS and application issues such as applications that fail to launch, crash, and fail to update. Next, explore connectivity issues pertaining to Bluetooth, Wi-Fi, near-field communication, and AirDrop and learn how to identify internet connectivity issues, including limited or no connectivity. Lastly, discover how to deal with high numbers of ads, fake security warnings, unexpected application behavior, and leaked personal files and data. This course helps prepare for CompTIA+ certification exam 220-1102.

COURSE_DESCRIPTION: Für die Bearbeitung von Daten in Excel 365 ist es wichtig zu wissen, wie man auf Zellen verweist. Dies beinhaltet die Verwendung von Zellkoordinaten, um den Wert einer bestimmten Zelle zu extrahieren. Sie können auf einzelne Zellen, einen Bereich von Zellen oder ganze Spalten und Zeilen verweisen. In diesem Kurs lernen Sie absolute und relative Zellbezüge kennen und erfahren, wie Sie Datenbezüge über mehrere Arbeitsblätter hinweg verwenden können. Zu den wichtigsten Konzepten, die in diesem Kurs behandelt werden, zählt, wie Sie auf Zellen in Ihrem Excel-Arbeitsblatt verweisen, wie Sie Daten über mehrere Arbeitsblätter hinweg verwenden können, um auf Daten für Formeln zu verweisen, und wie Sie absolute und relative Zellbezüge definieren. Darüber hinaus lernen Sie, wie Sie mit benannten Bereichen arbeiten, um auf Daten zu verweisen und Berechnungen zu erleichtern, wie Sie Zellbezüge indirekt verwenden und wie Sie Berechnungen mit konstanten Werten durchführen können.

COURSE_DESCRIPTION: AWS Virtual Private Clouds (VPCs) provide virtual network infrastructure for AWS services. VPC subnets are configured with IP address ranges which are then assigned to deployed resources. VPC settings related to dynamic host configuration protocol (DHCP) and domain name system (DNS) control specific Transmission Control Protocol/Internet Protocol (TCP/IP) behavior. Elastic IP addresses can be assigned to EC2 instances to provide public IP addressing. In this course, discover how VPCs and subnets can address cloud networking needs. Then, create VPCs and subnets using the console, the command line interface (CLI), and PowerShell. Next, configure VPC DHCP and DNS settings as well as subnet IP addressing. Then, create and assign Elastic IP addresses to provide public IP addressing. Lastly, peer VPCs together, configure a virtual private network (VPN), and troubleshoot VPC issues. This course can be used to prepare for exam SOA-C02, AWS Certified SysOps Administrator - Associate.

COURSE_DESCRIPTION: Event-driven architectures are used for highly scalable, asynchronous, decoupled applications. In this course, you'll explore event and message handling services on Azure. You'll learn how to use Azure Event Grid to architect a cloud-based app. route a custom event to a web endpoint, and monitor changes to a VM. Next, you'll use Azure Notification Hubs to create pushed alerts and a notification hub on Azure. You'll then learn how to integrate Notification Hubs with Visual Studio App Center. Lastly, you'll identify the components used in Azure Event Hubs, how to create an event hub, and how to stream data into a collector and analyzer using Event Hubs. This course is one of a collection of courses that prepares learners for the AZ-204: Developing Solutions for Microsoft Azure certification exam.

COURSE_DESCRIPTION: One of the most exciting aspects of business analytics is finding patterns in the data using machine learning algorithms. In this course you will gain a conceptual foundation for why machine learning algorithms are so important and how the resulting models from those algorithms are used to find actionable insight related to business problems. Some algorithms are used for predicting numeric outcomes, while others are used for predicting the classification of an outcome. Other algorithms are used for creating meaningful groups from a rich set of data. Upon completion of this course, you will be able to describe when each algorithm should be used. You will also be given the opportunity to use R and RStudio to run these algorithms and communicate the results using R notebooks.

COURSE_DESCRIPTION: Cloud networking helps enterprises deliver information rapidly, reliably, and securely without bearing the cost of building and operating their own networks. In this course, you'll investigate the process of migrating to a cloud computing model from a legacy one. You'll explore the concept of a VPC, the key technologies to isolate VPCs from public clouds, and the CSP interface types to manage VPCs. Moving on, you'll examine how a DMZ works in the cloud and how to isolate a single DMZ network from others. You'll also explore how firewalls, the intrusion detection system, and virtual network interfaces work in the cloud. You'll then outline when and how to attach multiple network interfaces to an instance. Lastly, you'll investigate how SDN and DNS work in the cloud, use AWS to set up a VPN, and connect to cloud resources using various protocols. This course can be used in preparation for the CompTIA Cloud Essentials+ (CLO-002) certification exam.

COURSE_DESCRIPTION: Explore Azure database security and the available mechanisms designed to protect data in this 17-video course, which helps prepare learners for AZ-500 Microsoft Azure Security Technologies certification exam. First, examine characteristics of the Azure SQL Database, a DBaaS (database as a service), offered in the Azure cloud and the NoSQL database Azure Cosmos DB. Then learn to protect sensitive data with data masking, and how to enable geofencing. Learners will next examine how security is managed in Azure Data Lake, and how to analyze data stored in the data lake. You will learn to work with several Azure SQL database security mechanisms, including the always-encrypted option, column security, auditing, and SQL backups. Then you will learn how to enable SQL Geo-Replication and use the CLI (command-line interface) to manage SQL Replication. Finally, examine when to use SQL failover groups, and how to restore SQL data by using the portal, PowerShell, and the CLI.

COURSE_DESCRIPTION: If you know how most threat actors and groups attack their targets, you'll be better equipped to defend against those attacks. In this course, you'll explore the seven phases of the Cyber Kill Chain, which aims to guide defenders in their understanding of commonly used attack strategies. Next, you'll learn how tactics, techniques, and procedures can help you better understand the threats your organization faces. You'll move on to examine behavioral patterns typical with today's threat actors and Advanced Persistent Threats. The average time it takes to detect a breach is around 200 days, which is why threat hunting has become a standard security practice. To complete this course, you'll explore threat hunting and its usefulness, as well as the concept of Indicators of compromise. This course is one in a series that helps to prepare you for the Certified Ethical Hacker v11 (312-50) exam.

COURSE_DESCRIPTION: In "Engaging in Persuasive and Credible Communication", you will learn the key skill of persuasion, in the context of professional communication in a globalised world. Persuasive communication is essential to any professional workplace. From a simple email request for your colleague to help you, to developing a presentation for the board of directors, these are acts of communication that require a good degree of persuasion. Even the process of entering the workforce requires effective persuasive communication, for in the act of writing your resume, cover-letter, or in the interview process, you are essentially persuading the potential employer to hire you. By the end of this course, you will be able to structure and express your ideas in a convincing and persuasive manner in writing, apply basic principles of persuasive writing to convince different sets of audiences at the globalised workplace, and learn to engage in persuasive and credible communication across different cultures in a complex globalised environment.

COURSE_DESCRIPTION: In this 1-hour long project-based course on Linux: Intro to process and system resource management for DevOps, you will be working entirely on the command line and using powerful Linux commands such as ps -ef, top, and pstree to learn how process and system resources work and are managed in Linux. You will be starting, stopping, searching and viewing running processes and seeing how they are all linked together in the process hierarchy. You will no longer be mystified by what these commands and options are doing, and you will be able to effectively start administering server processes. This course is designed for any person working or who intends to work with Linux, from Linux system administrators to developers and DevOps practitioners. Or even if you are a student who is curious to get comfortable with Linux this course is for you also. This is an intermediate level course and is designed for an individual who has a beginner's knowledge of the Linux/Unix command line and Unix crud practices in computer science. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: This specialization targets learners who seek to understand the opportunities that data and analytics present for their organization and those interested in the value of and implications for data as an asset to their organization. Individuals who manage data and make decisions about how data can be leveraged in their organization will find this specialization of particular value. Businesses run on data, and data offers little value without analytics. The ability to process data to make predictions about the behavior of individuals or markets, to diagnose systems or situations, or to prescribe actions for people or processes drives business today. Increasingly many businesses are striving to become "data-driven", proactively relying more on cold hard information and sophisticated algorithms than upon the gut instinct or slow reactions of humans. In this information age, the value of data as a business asset is essential. Organizations must creatively consider and implement new ways to generate economic benefits from the wide array of information assets available. Unfortunately, information frequently is under-appreciated and underutilized. Besides, accounting practices fail to recognize the financial value of information, and traditional asset management practices fail to recognize information as an asset to be managed with earnest discipline. This has led to a business culture of complacency, and the inability for organizations to leverage available information assets.

COURSE_DESCRIPTION: In asynchronous programming, there are ways to improve responsiveness, share collections, and parallelize algorithms. In this course, you'll explore the various ways that parallelism can be added to an application by improving responsiveness of a desktop UI with asynchrony, collections of data can be shared between threads, and algorithms can be parallelized to use multiple cores. You'll begin by discovering considerations for using tasks in desktop applications. Then you'll learn how async and await factor into better UI responsiveness and how the function Task.Delay() can be used with async and await to implement functionality similar to a timer. Finally, you'll explore how to await multiple tasks using Task.WhenAll() and how BlockingCollection can be used as a wrapper around other collections. This course was originally created by Global Knowledge (GK).

COURSE_DESCRIPTION: Over a series of seven tutorials, you will explore how to develop a Hyperledger Fabric smart contract to serve as an inventory of vehicles using NodeJS and how to deploy and interact with it for your Blockchain solutions. Beginning with the Fabric network setup, you will learn

how to provision a new Hyperledger Fabric network by reusing some of the configurations generated previously. Learn how to code the Init and Invoke methods of a Fabric smart contract in NodeJS, then access the contract state in NodeJS chaincode by adding entries and reading them. This leads to defining the NodeJS application and its dependencies in the package.json file for the chaincode. The next tutorial examines how to install, instantiate, and invoke a function on the NodeJS chaincode. A concluding exercise on Fabric chaincode in NodeJS reviews your new knowledge of describing NodeJS smart contract component requirements, then deploying and interacting with chaincode by using peer commands.

COURSE_DESCRIPTION: Microsoft 365, an integrated complete solution that allows users to work from everywhere while taking advantage of its security and device management capabilities, unleashes integrated collaboration tools that empower users in an organization. This 12-video course describes the various ways in which Microsoft 365 enables collaboration with Microsoft Teams, which provides integration with more than 140 apps and services and secure encryption, among other features. SharePoint Online, OneDrive, and Yammer. Other key topics covered include Azure; Skype for Business, a cloud-hosted communications solution with both audio and video components, which operates on multiple devices and can even be used with meeting room systems; and Microsoft Teams, a full-featured solution for hosting online meetings, live events, and video conferencing. A concluding exercise involves providing explanations of Skype, Teams, and collaboration, and their core features, elements, subscription options, and collaboration tools. The course can be used as part of preparations for the Microsoft 365 Fundamentals (MS-900) exam.

COURSE_DESCRIPTION: You should complete the VLSI CAD Part I: Logic course before beginning this course. A modern VLSI chip is a remarkably complex beast: billions of transistors, millions of logic gates deployed for computation and control, big blocks of memory, embedded blocks of pre-designed functions designed by third parties (called "intellectual property" or IP blocks). How do people manage to design these complicated chips? Answer: a sequence of computer aided design (CAD) tools takes an abstract description of the chip, and refines it step-wise to a final design. This class focuses on the major design tools used in the creation of an Application Specific Integrated Circuit (ASIC) or System on Chip (SoC) design. Our focus in this part of the course is on the key logical and geometric representations that make it possible to map from logic to layout, and in particular,

to place, route, and evaluate the timing of large logic networks. Our goal is for students to understand how the tools themselves work, at the level of their fundamental algorithms and data structures. Topics covered will include: technology mapping, timing analysis, and ASIC placement and routing. Recommended Background: Programming experience (C, C++, Java, Python, etc.) and basic knowledge of data structures and algorithms (especially recursive algorithms). An understanding of basic digital design: Boolean algebra, Kmaps, gates and flip flops, finite state machine design. Linear algebra and calculus at the level of a junior or senior in engineering. Elementary knowledge of RC linear circuits (at the level of an introductory physics class).

COURSE_DESCRIPTION: To adopt RPA, you begin with the Discovery and Design phases and proceed onto the Development and Testing phase. RPA Lifecycle - Development and Testing is the second course of the Specialization on Implementing RPA with Cognitive Solutions and Analytics. In this course, you will learn how to develop and test bots. For this, you will use Automation Anywhere Enterprise Client (or AAE Client) to record, modify, and run tasks. AAE Client is a desktop application with an intuitive interface, that enables the creation of automated tasks with ease. It features 'SMART' Automation technology that quickly automates complex tasks without the need for any programming efforts. The learning will be reinforced through concept description, building bots, and guided practice.

COURSE_DESCRIPTION: This 11-video course helps learners explore the use of PowerPoint by focusing on how to control the delivery of a slide show. After you have activated your slide show, you will observe several tools to control how your presentation progresses. You will then learn how to turn your mouse into a laser pointer, and to activate the Summary View, and the Presenter View to control the slide show. Next, learn how to use the notes pane to store and access information you may need to help present your presentation. Learners will then explore how to associate an action with an item, including another slide, file, program, or website. You will learn how to use the Annotation tools, including the pen, highlighter, and eraser. Continue the course by learning how to use the PowerPoint Zoom tool to add slide summaries and to access different slides and sections in your presentation. You will explore how to record narrations, annotations, and timings. Finally, you will observe how to use PowerPoint to deliver your presentation online.

COURSE_DESCRIPTION: Explore detailed concepts of programming IoT applications using Arduino language and Arduino IDE. During this course, you will begin by examining Arduino device components, such as the voltage regulator, connection pins, crystal oscillator, microcontroller, and reset button. Then you will observe how to install and view the Arduino integrated development environment (IDE). Next, you will learn how to connect Arduino to Raspberry Pi. Other topics in the course include an introduction to Arduino language fundamentals and program examples; how to identify essential Arduino pin connections and their functions and how to set up Arduino serial communication. Finally, as a review exercise, you will connect an Arduino board to a computer, write and compile code, and upload code to the Arduino board.

COURSE_DESCRIPTION: Creating designs using Canva: An easy first step to creating graphic designs in Canva. Canva is a graphic design platform with the provision to create social media graphics, presentations, posters, documents and other visual content. There are templates for users to use. The platform is free to use and offers paid subscriptions like Canva Pro and Canva for Enterprise for additional functionality. For this project, we will look into the features and functionality included in the free version of Canva. We will start by creating an account and complete it with exporting the design created in the website. This Guided Project was created by a Coursera community member.

COURSE_DESCRIPTION: Site reliability engineers often find data processing complex as demands for faster, more reliable, and extra cost-effective results continue to evolve. In this course, you'll explore techniques and best practices for managing a data pipeline. You'll start by examining the various pipeline application models and their recommended uses. You'll then learn how to define and measure service level objectives, plan for dependency failures, and create and maintain pipeline documentation. Next, you'll outline the phases of a pipeline development lifecycle's typical release flow before investigating more challenging topics such as managing data processing pipelines, using big data with simple data pipelines, and using periodic pipeline patterns. Lastly, you'll delve into the components of Google Workflow and recognize how to work with this system.

COURSE_DESCRIPTION: This fourth and final course in the "Good with Words: Writing and Editing" series will help you master perhaps the most important step in the writing process: revising. You'll learn about the difference between editing and proofreading. You'll practice "un-numbing the numbers" so that data and statistics you use are clear and compelling. And you'll be introduced to a framework for giving and receiving feedback that helpfully systematizes what should be cut and what should be kept from each draft. As with the other three courses in this series, you will also get access to a wide range of books and other resources you can use even after you finish the course. These include: (1) the readings and exercises provided to the students who have taken the in-person version of this course at the University of Michigan and the University of Chicago; (2) two digital libraries of excellent writing from a diverse collection of journalists, scientists, novelists, poets, historians, and entrepreneurs; and (3) a monthly "Good Sentences" email.

COURSE_DESCRIPTION: Innovation strategy is about creating unique value for consumers by delivering a great product that satisfies their needs. This course introduces the fundamental strategy concepts and tools that enable firms to manage technological innovations for competitive advantage. It does so by first considering the sources of technological change and how to leverage technologies to create firm value. It then examines the various mechanisms for extracting value from technologies, both legal (e.g., patents, trade secrecy, etc.) and strategic (e.g., lead time, complementary assets, etc.). We will explore the fundamentals of technology strategy through readings and case studies in both established and entrepreneurial firms across a range of technology-based industries. You will be able to: - Learn fundamental strategy concepts and frameworks for technology-based firms - Apply theories and frameworks toward the analysis and formulation of strategies for creating and capturing value through technological innovations - Develop an ability to think strategically and make decisions under uncertainty and risk - Develop skills in performing analytic research and preparing professional reports - Develop skills in managing diverse teams and working under time and resource constraints This course is part of Gies College of Business' suite of online programs, including the iMBA and iMSM. Learn more about admission into these programs and explore how your Coursera work can be leveraged if accepted into a degree program at <https://degrees.giesbusiness.illinois.edu/idegrees/>.

COURSE_DESCRIPTION: Powtoon is a free cloud platform that allows the user to design animated presentations to better engage and educate their desired audience. In this course, we will design an attractive and educational animated training video. Adding animation to your presentation through movement of text and graphics creates a more dynamic and eye catching experience for your viewer. Powtoon can help you design an effective presentation where your information is displayed in an organized and well-timed fashion. Animation allows you to present material in a fun, visually enhanced way which can improve audience engagement and add emphasis to key ideas and concepts. Powtoon provides a number of free presentation options that can get you well on your way to becoming a better animator and video designer. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: By the end of this project, you will create personalized Desktop notifications using python. You will be able to effectively use different python libraries to fetch data from the internet, process the data, and present the data as notifications. In this project, we will make a Covid-19 news notification to help to be always updated about the current situation. Python language is one of the most accessible programming languages available because of its simplified syntax that gives emphasis on natural language. It is highly used in machine learning and data science applications which are some of the biggest trends in computer science right now. It is also supported by many corporations such as Facebook and Amazon. It is specially adapted by Google making it the number one choice for many programmers and engineers. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Companies that do not understand threats facing their information are at risk of costly data breaches. In this 13-video course, learners can explore common security threats, types of network attacks, and the human element of security threats. Key concepts covered here include what an attack surface is, and how it must be understood to protect corporate information; and what network hardening is and how it relates to protection of corporate information. Next, learners will examine network demilitarized zones and how they protect corporate information; observe differences between threats, vulnerabilities, and risks in corporate environments; and study top kinds of security threats facing organizations

today. Continue by learning the role that physical security plays in protecting corporate data; how social engineering is conducted and how it is mitigated through corporate policy; and the importance of corporate security policies, and why they should be strictly adhered to. Finally, explore the importance of password policies and why they should be adhered to; and learn reasons why IT administrators need to protect an organization by refusing to bend rules.

COURSE_DESCRIPTION: Windows servers are the heart of many corporate networks and may contain sensitive company data that, if leaked or stolen by an attacker, would be catastrophic. Protecting the Windows Server assets and preventing a security compromise is an important skill for IT security professionals to master. In this course, you'll learn how to help prevent security incidents by hardening the Windows Server and reducing the attack surface. You'll learn how to follow common security best practices to lock down a Windows system by hardening user accounts, passwords, services, the file system, and common network services, such as DNS and IIS.

COURSE_DESCRIPTION: Microsoft Azure offers a wide range of services to deploy your applications. To keep control of your environment and to make deployments easier, it also offers a wide array of management tools and services. In this course, you will be introduced to these tools and services and you will be asked to help choose the best one for a given business scenario. Some modules cover software development processes and services. You will learn about cloud monitoring solutions for your applications and infrastructure. As well as picking the right Microsoft Azure management tool depending on your technical needs. When you have completed this course, you will be able to choose the right serverless compute technology, Azure IoT service, or Azure Artificial Intelligence service. Having a good security strategy is essential in today's digital world. Every application and service, whether on-premises or in the cloud, needs to be designed with security in mind. Security needs to happen at the application level, at the data level, and the network level. You will learn about the various Microsoft Azure services you can use to help ensure that your cloud resources are safe, secure, and trusted. When you have completed this course, you will be able to identify security threats in Microsoft Azure, make security recommendations, and detect and respond to events using security and event management. From a developer perspective, you will look at how to secure your secrets and ensure that they are not exposed. You will also examine network security scenarios such as firewalling, network security groups, and protecting yourself from distributed denial of service attacks. You will learn how to build a complete network security solution that brings all

these tools together to secure your Microsoft Azure deployments and resources. When you have completed this course, you will be able to choose the best Microsoft Azure tools and services for a given business scenario. You will also be able to describe how to protect the workloads that you run both in the cloud and in your on-premises datacenter. This beginner-level course is suitable for IT personnel who are just beginning to work with Microsoft Azure and want to learn about Microsoft Azure offerings and get hands-on experience with the product. This course can help you prepare for AZ-900: Microsoft Azure Fundamentals exam. This is the second course in a four-course program that prepares you to take the AZ-900 certification exam. This course teaches you the core concepts and skills that are assessed in the Microsoft Azure management tools, and security solutions exam domains. To be successful in this course, you need to have basic computer literacy and proficiency in the English language. You should be familiar with basic computing concepts and terminology, general technology concepts, including concepts of networking, storage, compute, application support, and application development. You should also be familiar with the...

COURSE_DESCRIPTION: This course is an introduction to computer science and programming in Python. Upon successful completion of this course, you will be able to: 1. Take a new computational problem and solve it, using several problem solving techniques including abstraction and problem decomposition. 2. Follow a design creation process that includes: descriptions, test plans, and algorithms. 3. Code, test, and debug a program in Python, based on your design. Important computer science concepts such as problem solving (computational thinking), problem decomposition, algorithms, abstraction, and software quality are emphasized throughout. This course uses problem-based learning. The Python programming language and video games are used to demonstrate computer science concepts in a concrete and fun manner. The instructional videos present Python using a conceptual framework that can be used to understand any programming language. This framework is based on several general programming language concepts that you will learn during the course including: lexics, syntax, and semantics. Other approaches to programming may be quicker, but are more focused on a single programming language, or on a few of the simplest aspects of programming languages. The approach used in this course may take more time, but you will gain a deeper understanding of programming languages. After completing the course, in addition to learning Python programming, you will be able to apply the knowledge and skills you acquired to: non-game problems, other programming languages, and other computer science courses. You do not need any previous programming, Python, or video game experience. However, several basic skills are needed: computer use (e.g., mouse, keyboard, document editing), elementary mathematics, attention to detail (as with many technical subjects), and a "just give it a try" spirit will be keys to your success. Despite the use of video games for the main programming project, PVG is not about computer games. For each new programming concept, PVG uses non-game examples to provide a basic understanding of computational principles, before applying these programming concepts to video games. The interactive learning objects (ILO) of the course provide automatic, context-specific guidance and feedback, like a virtual teaching assistant, as you develop problem descriptions, functional test plans, and algorithms. The course forums are supported by knowledgeable University of Alberta personnel, to help you succeed. All videos, assessments, and ILOs are available free of charge. There is an optional Coursera certificate available for a fee.

COURSE_DESCRIPTION: This 15-video course explores how to design advanced machine learning algorithms by using training patterns, pattern association, the Hebbian learning rule, and competitive learning. First, learners examine the concepts and characteristics of online and offline training techniques in implementing artificial neural networks, and different training patterns in teaching inputs that are used in implementing artificial neural networks. You will learn to manage training samples, and how to use Google Colab to implement overfitting and underfitting scenarios by using baseline models. You will examine regularization techniques to use in training artificial neural networks. This course then demonstrates how to train previously-built neural network models using Python, and the prominent training algorithms to implement pattern associations. Next, learn the architecture and algorithm associated with learning vector quantization; the essential phases involved in implementing Hebbian learning; how to implement Hebbian learning rule using Python; and the steps involved in implementing competitive learning. Finally, you will examine prominent techniques to use to optimize neural networks, and how to debug neural networks.

 COURSE_DESCRIPTION: In this 13-video course, learners can explore best practices for securing commonly used architecture and technologies such as virtualization, databases, and the programming language environment. First, learn the three steps involved in authentication and identity management. Next, earn the principles of Credential Management and protecting credentials used for authentication, including passwords, tokens, biometrics, and certificates. Learners will then examine logging or recording a user's actions within a system, and data flow control methods. Next, learn about data loss prevention as an in-depth security strategy that encompasses many different technologies. Learn how virtualization allows for software to be hosted in a virtual environment. Learners will then examine digit rights management (DMR), which restricts access to content that is not local to secure digital content, and protect intellectual property. Finally, the course explores the basis of trusted computing-the hardware, software, and firmware components critical to securing a system which includes discussion of programming language and operating systems. This course may be used in preparation for the (ISC)2 CSSLP: Certified Secure Software Lifecycle Professional certification exam.

 COURSE_DESCRIPTION: This course is designed to help you create dynamic, interactive online courses through the use of multimedia tools, student collaboration opportunities, and formative assessment and feedback. Each week we will focus on a particular topic: 1. Using multimedia for teaching and learning 2. Encouraging student collaboration 3. Formative assessment and feedback You will have a range of materials to read, videos to watch, topics to research, activities to perform, discussions to participate in, and an assessment to complete. In addition, you will have a random assignment of fellow participants' assessments to mark in order to receive your own mark. While most of the videos and activities are mandatory, we have included a number of "Take it Further" activities and longer versions of videos that are voluntary. At first glance, It may seem like a lot, but you will quickly find that many activities will take just minutes to perform. The emphasis in this MOOC is on gaining a wide range of experience in order to decide for yourself which tools and techniques to explore in more depth. Although we introduce a few concepts along the way, this is a very practical course. You will be assessed according to what you create and share. We hope you will enjoy the active, hands-on nature of this course and find many ideas to incorporate in your teaching.

COURSE DESCRIPTION: In this Challenge Lab, you will manage and maintain Windows. First, you will create and use a system restore point, and then you will configure and use file history. Next, you will install Windows Server Update Services, and then you will use a new Group Policy Object to configure automatic updates. Next, you will attach a task to a System event, and you will block an application from running by using the Registry Editor. Next, you will create and trigger a task. Next, you will configure Remote Assistance and create an invitation, and then you will establish a Remote Assistance connection. Note: Once you begin the challenge lab, you will not be able to pause, save, or exit and then return to your challenge lab. Please ensure that you have set aside enough time to complete the challenge lab before you start.

COURSE DESCRIPTION: Extensible Markup Language uses tags to describe data and has become the standard information exchange format between dissimilar systems. Many applications use XML to share and manage data. In this course, you'll begin with an XML overview, including document type definitions and how XML differs from HTML. Next, you'll learn what XML external entity attacks are. Moving on, you'll examine how the OWASP ZAP tool can scan a vulnerable web application and identify weaknesses. Next, you'll explore how to scan a web app for XXE vulnerabilities and execute an XXE attack. Lastly, you'll learn how to mitigate XXE attacks.

COURSE_DESCRIPTION: Welcome to Core Interaction Programming, the first course in the Unity Certified Programmer Specialization from Unity Technologies. This course will help you prepare for the Unity Certified Programmer exam, the professional certification for entry to mid-level Unity programmers. Unity is used to create real-time 3D applications for many industries, including video games, automotive, film, training, and more. In this course, you will be challenged to solve realistic Unity programming problems that are aligned to topics covered on the exam. Throughout the first course, you will build the foundation for a 2D action video game: AsteraX. In doing so, you will practice many of the skills covered in the exam, including evaluating scripting needs from a project requirements document, implementing the three "C's" of an interactive applications (Character, Controls, Camera), providing user feedback through basic UI elements, and applying professional programming practices like developer testing. This is an intermediate course, intended for people who are ready for their first paying roles as Unity programmers, or enthusiasts who would like to verify their skills against a professional standard. To succeed, you should have at least 1-2 years of experience programming interactive applications in Unity. You should be proficient at programming in the C# language and familiar with Unity's scripting APIs. You should have experience in the full product development lifecycle, from concept to launch (and beyond). And you should understand multi-platform development, including deploying applications to XR (AR and VR) platforms.

COURSE_DESCRIPTION: In today's ever-growing and changing world, being able to think creatively and innovatively are essential skills. It can sometimes be challenging to step back and reflect in an environment which is fast paced or when you are required to assimilate large amounts of information. Making sense of or communicating new ideas in an innovative and engaging way, approaching problems from fresh angles, and producing novel solutions are all traits which are highly sought after by employers. This course will equip you with a 'tool-box', introducing you to a selection of behaviours and techniques that will augment your innate creativity. Some of the tools are suited to use on your own and others work well for a group, enabling you to leverage the power of several minds. You can pick and choose which of these tools or techniques suit your needs and interests, focusing on some or all of the selected approaches and in the order that fits best for you. The practical approach of this course enables you to acquire an essential skill-set for generating ideas, with plenty of: - Fun e-tivities and exercises; - Practical lectures and tips; - Video representations of the techniques in action. By the end of this course you should be able to: - Pick a type of brainstorming you think will be useful to apply to a challenge - Use alphabet brainstorming in tackling a challenge - Use grid brainstorming in tackling a challenge - Use a morphological chart to synthesise a solution to a challenge - Use the TRIZ contradiction matrix to identify recommended inventive principles - Apply SCAMPER to a range of challenges The greatest innovators aren't necessarily the people who have the most original idea. Often, they are people- or teams- that have harnessed their creativity to develop a new perspective or more effective way of communicating an idea. You can train your imagination to seize opportunities, break away from routine and habit, and tap into your natural creativity. Join this course and a community of practitioners in CREATIVITY!

COURSE_DESCRIPTION: In this course, learners will examine the core security support resources of Amazon Web Services (AWS), including Network Access Control Lists (NACLs), Security Groups, Web Application Firewall (WAF), AWS Shield Standard and Advanced, Amazon Inspector, AWS Key Management Services (KMS) and GuardDuty. Learn how NACL adds an optional layer of security that acts as a firewall; how Security Groups collect user accounts, computer accounts, and other groups into manageable units; and how WAF lets you control and monitor requests; how AWS Shield Standard and Advanced adds protection against common denial of service flooding attacks and exploits. Next, learn the value of Amazon Inspector as an automated security assessment service that uses the AWS infrastructure, and enhances security and compliance of the applications; and how Amazon Guard Duty, as a threat detection service, continuously monitors for malicious activity and unauthorized behavior to protect your AWS accounts and workloads. This course is one of a collection of courses that prepares learners for the AWS Certified Cloud Practitioner 2019 certification.

COURSE_DESCRIPTION: Vulnerabilities vary by architecture and family of processor. Recognizing the processor implementations and the differences that lead to an exploit is essential. In this course, you'll explore different classes of vulnerabilities based on the computing environment. You'll learn about the architectural differences and system implementations that lead to race conditions, shellcode and out-of-order execution vulnerabilities. You'll explore mitigations and protections to prevent stack smashing, use-after-free, and integer vulnerabilities. Next, you'll examine contemporary exploits such as Spectre and Meltdown and mitigations provided by Write XOR Execute (W^X). Finally, you'll investigate protections to prevent privileged escalation and exploiting processes and tasks.

COURSE_DESCRIPTION: Parameterized tests in JUnit help developers save time by running the same tests repeatedly, using only different inputs, and getting different results. The focus of this course is on scaling test case executions using repeated and parameterized tests. Start by setting a particular test case to run multiple times using the RepeatedTest annotation. Next, move on to defining test cases that can accept parameters. Then, look into different ways in which the parameters can be fed into your test case - from hard-coded values defined in your test class to CSV files and method invocations. Finally, learn how to build a specialized class to pre-process your parameters before being fed into test cases. Upon completion, you'll know how to conduct repeated executions of JUnit test cases with or without parameters.

COURSE_DESCRIPTION: In appr. 62 hours you will learn about the Software Development Lifecycle. This Specialization is designed for people who are new to software engineering. It's also for those who have already developed software, but wish to gain a deeper understanding of the underlying context and theory of software development practices. At the end of this Specialization, we expect learners to be able to: 1.) Build high-quality and secure software using SDLC methodologies such as agile, lean, and traditional/waterfall. 2.) Analyze a software development team's SDLC methodology and make recommendations for improvements. 3.) Compare and contrast software development methodologies with respect to environmental, organizational, and product constraints.

COURSE_DESCRIPTION: This 20-video course prepares learners for the MS-201 Implementing a Hybrid and Secure Messaging Platform certification exam by examining Exchange Server e-mail address policies, available policy templates, and filtering methods. The exam tests abilities of messaging administrators to plan and implement a hybrid configuration, manage migration, secure the messaging environment, and manage organizational settings. In this course, you will learn to use the EAC (Exchange administrator center) to create and modify e-mail address policies, apply policies to e-mail recipients, and remove e-mail address policies. Then you will examine managed availability, workload management components, and user resource consumption. Next, learn how to use the Get-ThrottlingPolicy cmdlet (lightweight command in PowerShell) to determine user throttling settings; use the new throttling policy cmdlet to create a user throttling policy; and use the Set-ThrottlingPolicy association cmdlet to assign policies to users. Then examine how to view and remove existing throttling policy associations, and delete policies. Finally, learners examine the available scopes in custom throttling policies and considerations for throttling in coexistence environments.

COURSE_DESCRIPTION: Technicians need to familiarize themselves with strategies, features, and techniques that can help ensure a safe and secure small office/home office (SOHO) environment. In this course, discover home router security settings to configure on a SOHO network. Explore wireless security considerations, including changing the service set identifier (SSID), disabling SSID broadcast and encryption settings, disabling guest access, and changing channels. Next, discover firewall security features such as disabling unused ports and port forwarding or mapping. You'll also learn to install and configure browsers and relevant security settings. Next you'll explore browser installations, extensions, and plug-ins, as well as password managers and certificates. Lastly, explore Internet browsing security features and techniques, including pop-up blockers, clearing browsing data, clearing cache, private-browsing mode, sign-in/browser data synchronization, and ad blockers. Once you have completed this course, you'll be able to configure security settings for browsers and SOHO networks. This course is part of a series that will help you prepare for the CompTIA A+ Core 2 (220-1102) certification exam.

COURSE_DESCRIPTION: Das Gradientenverfahren ist eine äußerst leistungsstarke numerische Optimierungstechnik, die häufig verwendet wird, um optimale Werte von Modellparametern während der Trainingsphase eines Machine-Learning-Modells zu finden. Nutzen Sie diesen Kurs als Einführung in das Gradientenverfahren und untersuchen Sie, wie es bei einer Vielzahl von Optimierungsproblemen eingesetzt werden kann. Sie werden sehen, wie es zur Durchführung einer linearen Regression verwendet werden kann, und den Hyperparameter Lernrate sowie die Matrixgleichungen zur Berechnung der Gradienten und zur Aktualisierung der Modellparameter unter Verwendung der Gradienten genauer kennenlernen. Schließlich werden Sie eine Form des Gradientenverfahrens anwenden, die als stochastisches Gradientenverfahren bekannt ist, um eine S-Kurve anzupassen und so eine logistische Regression auf einen Datensatz anzuwenden. Am Ende des Kurses werden Sie in der Lage sein, die logistische Regression mithilfe des Gradientenverfahrens sicher zu implementieren.

COURSE_DESCRIPTION: In this 11-video course, learners can explore well-established practices for Scrum product owners to facilitate development of products in Scrum, an Agile framework for developing, delivering, and sustaining complex products. You will learn that the purpose of TDD (test-driven development) is to facilitate this thought process, to make the product work, make it right, and make it fast. You will examine the guidelines for adopting TDD. Next, learners examine refactoring to clarify and simplify the design of existing code without changing its behavior. You will learn how continuous integration offers a solution to ensure a clean build, and learn guidelines for continuous integration adoption, including having a single repository for the team to commit, build, test, and deploy their code to the user. You will learn the roles of the product owner, Scrum master, and Scrum team. You will learn the steps, methodologies, and best practices for performing TDD tests. Finally, this course demonstrates a case study using Scrum practices for product development from the requirement stage to the end product.

COURSE_DESCRIPTION: This course introduces you to the nonprofit sector, nonprofit organizations, and the concepts of leadership and governance. While this course has been developed with North American culture in mind, we do appreciate that in other parts of the world the nature of the nonprofit sector, nonprofit organizations, nonprofit leadership and governance may not be the same. Nevertheless, it is our hope that much of the course content will still be of value to those in other parts of the world. To learn more about this course, please watch the overview video by copying and pasting the following link into your web browser: <https://goo.gl/YMglQd>. Keywords: Nonprofit; Nonprofit Sector; Voluntary Sector; Nonprofit Organizations, Non-Governmental Organizations, Volunteer Organizations, Leadership, Management, Governance, Board, Board of Directors, Performance, Effectiveness Course 1 Overview: Week 1: Some of the questions you will explore this week are: What is the nonprofit sector and why does it exist? What are the unique characteristics of nonprofit organizations? What are the trends and emerging issues facing organizations in the nonprofit sector? Week 2: Questions to be explored this week are: What is leadership at the governance level and how is it different from management? What is good governance and why does it matter? What is a board of directors? Week 3: This week's questions: What roles do board members play in nonprofit organizations? Broadly speaking, what are boards responsible for and how do they go about their work? What are some of the issues that challenge the

board's ability to go its work? Week 4: At this stage, you are asked to review the course content, submit a written assignment (known lightheartedly as a BEAR (Board Effectiveness Readiness Assessment), and take two multiple choice Readiness Assurance Tests (known similarly as RATs). One RAT will assess knowledge and reading comprehension and the other will test application of knowledge within a practical case. Week 5: We will encourage you to discuss the RATs in the discussion forums and take them again should you wish to change any of your answers based on the information exchanged.

COURSE_DESCRIPTION: In this challenge, you will ensure that all traffic between the front-end and back-end subnets of the virtual network are routed through a firewall virtual appliance. First, you will create the route tables and routes, and then you will then associate them to the subnets. Next, you will enable IP forwarding on the virtual appliance. Finally, you will verify that traffic is being routed through the virtual appliance. Note: Once you begin the challenge, you will not be able to pause, save, or exit and then return to your challenge. Please ensure that you have set aside enough time to complete the challenge before you start.

COURSE_DESCRIPTION: An open-source cluster-computing framework used for data science, Apache Spark has become the de facto big data framework. In this Skillsoft Aspire course, learners explore how to analyze real data sets by using DataFrame API methods. Discover how to optimize operations with shared variables and combine data from multiple DataFrames using joins. Explore the Spark 2.x version features that make it significantly faster than Spark 1.x. Other topics include how to create a Spark DataFrame from a CSV file; apply DataFrame transformations, grouping, and aggregation; perform operations on a DataFrame to analyze categories of data in a data set. Visualize the contents of a Spark DataFrame, with Matplotlib. Conclude by studying how to broadcast variables and DataFrame contents in text file format.

COURSE_DESCRIPTION: Microservices describe an architecture where software is designed and built as a collection of modular services. In this course, you'll examine how services like Amazon SQS, SNS, and Kinesis are configured and organized in AWS to build highly-available and scalable microservice-based applications. You'll use Amazon SQS to create and configure Standard, FIFO, and Dead Letter queues. Next, you'll create a Topic and a Subscription using Amazon SNS and publish a message to subscribers. Finally, you'll create, use and then delete an Amazon Kinesis Data Stream. This course is one of a collection of courses that prepares you for the AWS Certified Developer - Associate 2020 certification exam.

COURSE_DESCRIPTION: After taking this course, you will be able to describe two different approaches to converting raw data into analytics-ready data. One approach is the Extract, Transform, Load (ETL) process. The other contrasting approach is the Extract, Load, and Transform (ELT) process. ETL processes apply to data warehouses and data marts. ELT processes apply to data lakes, where the data is transformed on demand by the requesting/calling application. Both ETL and ELT extract data from source systems, move the data through the data pipeline, and store the data in destination systems. During this course, you will experience how ELT and ETL processing differ and identify use cases for both. You will identify methods and tools used for extracting the data, merging extracted data either logically or physically, and for importing data into data repositories. You will also define transformations to apply to source data to make the data credible, contextual, and accessible to data users. You will be able to outline some of the multiple methods for loading data into the destination system, verifying data quality, monitoring load failures, and the use of recovery mechanisms in case of failure. Finally, you will complete a shareable final project that enables you to demonstrate the skills you acquired in each module.

COURSE_DESCRIPTION: Unternehmen sind auf verschiedene Arten von Daten, einschließlich Big Data, angewiesen, um ihre Kunden und Geschäftsabläufe vollständig zu verstehen. Die Modellierung von Datensystemen kann Unternehmen helfen, Daten besser zu organisieren und darauf zuzugreifen. Voraussetzung dafür ist, dass die Daten leicht zugänglich und verständlich sind. Die Datenmodellierung spielt in beiden Fällen eine entscheidende Rolle. In diesem Kurs erfahren Sie mehr über die Datenmodellierung, die Vorteile, die sie einem Unternehmen bringen kann, und die verschiedenen Ebenen ihrer Anwendung. Sie lernen die verschiedenen Arten von Datenmodellen kennen und erfahren mehr über den Prozess der Datenmodellierung.

COURSE_DESCRIPTION: This course builds upon what you learned in Financial Accounting: Foundations and Financial Accounting: Advanced Topics and introduces you to formal foundations of financial accounting. The main purpose of the course is to familiarize you with technical terms in financial accounting, such as debit, credit and T-account. While knowledge on technical aspects of financial accounting is not necessary to understand and interpret financial statements, this knowledge is critical to be able to understand advanced topics in accounting. Formal Financial Accounting is a prerequisite course for the University of Illinois' iMSA program and the terminology we will cover will be used throughout the courses in iMSA program. The University of Illinois at Urbana-Champaign, consistently ranked as one of the nation's top three accounting programs, now offers a master's in accounting at a very affordable tuition rate and is completely online. The iMSA is a full Master of Accountancy program and students graduate with a highly recognized master degree. Try an open course or two, then apply for admission into the credit-bearing version, as you may be eligible to take credit-bearing courses during the application process. If you are missing any prerequisites for the full degree, you can complete Coursera courses to demonstrate readiness and strengthen your application for the iMSA. For more information on this exciting online master's in accounting program, refer to this link: <https://www.coursera.org/university-programs/imsa>

COURSE_DESCRIPTION: Menschen kaufen nicht einfach Produkte. Sie kaufen Marken. Wer erschafft Marken? Menschen. Wie machen sie das? Mit der richtigen Marketingforschung und -planung. Der traditionelle Marketing-Mix konzentriert sich auf die vier Ps: "Product" (die Produktpolitik), "Price" (die Preispolitik), "Place" (die Vertriebspolitik) und "Promotion" (die Kommunikationspolitik). Dabei werden jedoch zwei andere wichtige Marketingaspekte übersehen: Planung und Menschen. Planung und Menschen sind für jede Marketingaktivität von entscheidender Bedeutung. Die Marketingplanung steuert, wie Marketing umgesetzt wird. Daher ist es unerlässlich, dass sie fundiert und umfassend ist. Da Mitarbeiter einen starken Einfluss auf den Marketing-Mix ausüben, müssen sie unbedingt die Marketingmaßnahmen des Unternehmens verstehen und unterstützen. In diesem Kurs lernen Sie die Typen von Personen kennen, die für den Aufbau und die Förderung starker Marken nötig sind. Sie werden mit interner Markenbildung, dem Branding, und der Bedeutung der Einbeziehung von Mitarbeitern als Markenbotschafter vertraut gemacht. Außerdem erfahren Sie, wie strategische und taktische Planung zur Durchführung effektiver und kohärenter Marketingforschung eingesetzt werden, um davon Erkenntnisse für die digitalen Marketingaktivitäten abzuleiten. Abschließend lernen Sie die Faktoren kennen, die zu einem integrierten Marketingkommunikationsplan beitragen.

COURSE_DESCRIPTION: This course introduces students to data and statistics. By the end of the course, students should be able to interpret descriptive statistics, causal analyses and visualizations to draw meaningful insights. The course first introduces a framework for thinking about the various purposes of statistical analysis. We'll talk about how analysts use data for descriptive, causal and predictive inference. We'll then cover how to develop a research study for causal analysis, compute and interpret descriptive statistics and design effective visualizations. The course will help you to become a thoughtful and critical consumer of analytics. If you are in a field that increasingly relies on data-driven decision making, but you feel unequipped to interpret and evaluate data, this course will help you develop these fundamental tools of data literacy.

COURSE_DESCRIPTION: Planning the structure for data storage is integral to performance in big data operations. In this course, you'll learn about key considerations for data lakes and how to determine which file type and file format are the most appropriate for your use case. Then, you'll explore how to define how to design table storage for efficient querying and how data pruning can remove unnecessary data to accelerate transactions. You'll examine folder structures and data lake zones for organizing data effectively. Finally, you'll learn how to define storage tiers and how to manage the life cycle of data. This course is one in a collection that prepares learners for the Microsoft Data Engineering on Microsoft Azure (DP-203) exam.

COURSE_DESCRIPTION: Work is important on many levels. A job your employees enjoy and find meaningful can also affect their physical and emotional health. On a strictly business level, organizations benefit when employees are happy and healthy at work because workplace wellness leads to increases in productivity and creativity, a greater focus on safety and retention, and decreases in nonattendance. In this course, you'll discover the impact of work on three major areas of work life and how facets of wellness programs can help support your employees in those areas. You'll come to recognize symptoms of stress and burnout in your people and discover methods you can use to help them balance the demands of work and private life. Additionally, you'll learn approaches to employee wellness that connect all the important areas of health.

COURSE_DESCRIPTION: Angular helps build interactive and dynamic single-page applications (SPAs) through templating, two-way binding, modularization, RESTful API handling, dependency injection, and AJAX handling. It's a highly demanded technology and a useful language among experienced developers who want to move into full stack development. Use this course to explore the different building blocks of Angular. Examine some of the advanced features of Angular 11 and install various software components for making use of its features and benefits. Install Node.js, Visual Studio Code, and Angular CLI and learn to create and run an Angular application. Finally, investigate the different characteristics of package.json files and outline the basics of Typescript. When you're done with this course, you'll have a basic grasp of working with Angular.

COURSE_DESCRIPTION: Message-based architectures decouple services and applications, allowing them to run on different platforms at different speeds with resilient, highly-available patterns. In this course, you'll explore how to use Azure when building message-based applications. You'll examine how to broker messages and identify when to use either a Service Bus queue or a topic and subscription model. You'll outline how to code messages to include payload, routing, and serialization information, and to validate message transferal and settlement. Next, you'll describe message sequencing, scheduling, and expiration in Azure Service Bus and learn how to deploy a new Azure Service Bus. Lastly, you'll learn how to use Azure Queue Storage to store message queues, build queue storage functions into a .NET app, and manage queues. This course is one of a collection of courses that prepares learners for the AZ-204: Developing Solutions for Microsoft Azure certification exam.

COURSE_DESCRIPTION: Discover the concepts associated with Lean development practices, including the seven wastes of Lean and the seven principles of Lean, and how Lean development connects to the Scrum methodology. Key concepts covered in this 10-video course include the origins and the seven wastes of Lean; how the seven wastes concept is an integral part of Lean thinking and helps to increase profitability; and examining the correlation between Lean and the Scrum methodology. Learn the first principle of Lean, eliminating waste in software development; the second principle of Lean, building quality into processes and products; and the third principle of Lean, creating knowledge and the infrastructure to properly document and retain valuable learning. Continue with the fourth principle of Lean, deferring commitment, which includes not to plan in excessive or great detail; the fifth principle of Lean, delivering fast; and the sixth principle of Lean, respecting people. Finally, study the seventh principle of Lean, optimizing the whole.

COURSE_DESCRIPTION: Remember to get your voucher before starting the course to earn your Brightline(r) Initiative certificate using this link: <https://www.coursera.org/promo/brightlinepromo>. In today's competitive business environment, organizations are facing unprecedented levels of change and disruption. Only 1 out of 10 executives based on a global survey admit that their organizations successfully deliver all of their strategic initiatives. This course will help you as a leader of your organization to bridge the costly and wasteful gap between strategy design and delivery. You will learn how external and internal factors impact the organizations' capability to implement strategies. You will understand Brightline's 10 Guiding Principles and see how these can help bridge the strategy-implementation gap based on real-world examples from the profit-, non-profit- and government sectors. We bring you interviews from global leaders and experts to share their experiences and examples in strategy implementation. You will also analyze a fictional case and create a strategic action plan following the Brightline's 10 Guiding Principles. After completing this course, you will comprehend how the 10 Guiding Principles can address and resolve your organization's challenges to successfully achieve its strategic goals.

COURSE DESCRIPTION: Successfully marketing brands today requires a well-balanced blend of art and science. This course introduces students to the science of web analytics while casting a keen eye toward the artful use of numbers found in the digital space. The goal is to provide the foundation needed to apply data analytics to real-world challenges marketers confront daily. Digital Analytics for Marketing Professionals: Marketing Analytics in Practice is the second in a two-part series of complementary courses and focuses on the skills and practical abilities analysts need to be successful in today's digital business world. You will be able to: - Identify the web analytic tool right for your specific needs - Understand valid and reliable ways to collect, analyze, and visualize data from the web - Utilize data in decision making for agencies, organizations, or clients This course is part of Gies College of Business' suite of online programs, including the iMBA and iMSM. Learn more about admission into these programs and explore how your Coursera work can be leveraged if accepted into a degree program at <https://degrees.giesbusiness.illinois.edu/idegrees/>.

COURSE_DESCRIPTION: This 14-video course explores different types of environments for software testing automation by examining key parameters for designing and developing test automation frameworks. Learn about test automation frameworks, their features, advantages and disadvantages, and selecting the right one. Learners will take a look at test automation frameworks that can be implemented by using Selenium WebDriver; build a Selenium Data Driven Framework; implement a Data Driven Automation Framework using TestNG with the @dataProvider annotation; and learn how to implement a Keyword Driven Framework with Selenium WebDriver and Excel Test Suite. You will build a Hybrid Automation Framework using a collection of two or more frameworks; set up Jenkins to run continuous integration/continuous deployment (CI/CD) tests from Maven projects using Selenium WebDriver, and discover how to automate non-web UI with Selenium. Conclude the course by learning about implementing the Docker containerized test automation framework and the Selenium containerized test automation framework, and the best practices for building test automation frameworks in Agile and DevOps.

COURSE_DESCRIPTION: Virtual machines are the workhorses that underlie cloud services and can be manually deployed, configured, and managed. Through this course, you'll explore EC2 instance settings related to Windows and Linux virtual machines. Begin by investigating how to deploy Linux instances using the AWS Management Console, AWS CLI, and AWS Tools for PowerShell, followed by remotely manage those instances using the Secure Shell Protocol (SSH). Moving on, you'll delve deeper into deploying Windows instances using the AWS Management Console, AWS CLI, and AWS Tools for PowerShell, followed by remotely managing those instances using Remote Desktop Protocol (RDP). Finally, you'll examine how to resize EC2 instances. After completing this course, you'll have the skills and knowledge to manage and deploy EC2 instance virtual machines in the AWS cloud. Further, you'll be closer to preparing for the AWS Certified SysOps Administrator - Associate exam, SOA-C02.

COURSE_DESCRIPTION: In diesem Kurs lernen Sie - durch eine Kombination aus Videovorträgen, Demonstrationen und praktischen Übungen - die Hauptkomponenten eines Betriebssystems kennen und erfahren, wie wichtige Aufgaben wie beispielsweise das Verwalten von Software und Benutzern sowie das Konfigurieren von Hardware funktionieren. Zum Abschluss zeigen wir Ihnen anhand eines Beispiels, wie diese Inhalte in einem Bewerbungsgespräch auftauchen könnten. Nach diesem Kurs... • können Sie mithilfe der grafischen Benutzeroberfläche und der Eingabeaufforderung durch Windows- und Linux-Dateisysteme navigieren. • können Sie Nutzer, Gruppen und Berechtigungen für Kontozugriffe konfigurieren. • können Sie Software unter Windows und Linux installieren, konfigurieren und deinstallieren. • können Sie Laufwerkpartitionen und Dateisysteme konfigurieren • wissen Sie, wie Systemprozesse funktionieren und wie sie verwaltet werden. • wissen Sie, wie der Umgang mit Systemlogs und Remote-Verbindungstools funktioniert. • können Sie Ihr Wissen zum Thema Betriebssysteme anwenden, um als IT-Supportspezialist häufige Probleme zu beheben.

COURSE_DESCRIPTION: In Java, sometimes you have to iterate through and process a list of data. In this course, you will learn how Arrays and ArrayList are designed to handle looping through lists of data. First, you will learn about Arrays and the ArrayList class. Next you will learn about the Iterator class and how it can be used to processes list of data. Finally, you will learn about special classes used to store and retrieve lists of data such as the LinkedList class, the HashMap class, and the HashSet class. This course is one of a collection of courses that prepares learners for Oracle's 1Z0-811: Java Certified Foundations Associate certification.

COURSE_DESCRIPTION: Users marvel at a system's ability to recommend items they're likely to appreciate. As someone working with machine learning, implementing these recommendation systems (also called recommender systems) can dramatically increase user engagement and goodwill towards your products or brand. Use this course to comprehend the math behind recommendation systems and how to apply latent factor analysis to make recommendations to users. Examine the intuition behind recommender systems before investigating two of the main techniques used to build them: content-based filtering and collaborative filtering. Moving on, explore latent factor analysis by decomposing a ratings matrix into its latent

factors using the gradient descent algorithm and implementing this technique to decompose a ratings matrix using the Python programming language. By the end of this course, you'll be able to build a recommendation system model that best suits your products and users.

COURSE_DESCRIPTION: Internet Protocol (IP) addresses, which are assigned to network-equipped devices that are part of a Transmission Control Protocol (TCP)/IP-based network, allow computers and other resources to communicate with each other. Explore the basics of IP addressing and networking concepts such as Domain Name System (DNS) and Dynamic Host Configuration Protocol (DHCP). Begin with an overview of DNS and its benefits. Then take a closer look at the DHCP, its features, and the concept of reservations. Next, discover the use of virtual private networks (VPNs) and look at virtual local area networks (VLANs). Finally, explore the various networking tools including crimpers, Wi-Fi analyzers, and loopback plugs. This course will prepare learners for the CompTIA A+ Core 1 (220-1101) certification exam.

COURSE_DESCRIPTION: Learners can explore the concept of loss function, the different types of Loss function and their impact on neural networks, and the causes of optimization problems, in this 10-video course. Examine alternatives to optimization, the prominent optimizer algorithms and their associated properties, and the concept of learning rates in neural networks for machine learning solutions. Key concepts in this course include learning loss function and listing various types of loss function; recognizing impacts of the different types of loss function on neural networks models; and learning how to calculate loss function and score by using Python. Next, learners will learn to recognize critical causes of optimization problems and essential alternatives to optimization; recall prominent optimizer algorithms, along with their properties that can be applied for optimization; and how to perform comparative optimizer analysis using Keras. Finally, discover the relevance of learning rates in optimization and various approaches of improving learning rates; and learn the approach of finding learning rate by using RMSProp optimizer.

COURSE_DESCRIPTION: Supply chain leaders manage products, information, and finances to create an efficient, effective supply chain. With this online certificate program, you'll study at the graduate level to gain the knowledge you need to advance in your career. You'll gain a thorough understanding of the three distinct flows that create supply chain excellence in any company. Learn from lectures, readings, discussions and quizzes designed by faculty from the Department of Supply Chain Management at Rutgers University. You'll also benefit from graded feedback from the instructor and live sessions with groups of high-caliber peers. This course will provide you with an introduction and head-start to the Supply Chain Excellence MasterTrack.

COURSE_DESCRIPTION: This third course of the Blockchain specialization prepares you to design and develop end-to-end decentralized applications (Dapps) - which provide anyone with access to the blockchain's features and services. You will use Truffle IDE, smart contracts, a simple web client and a MetaMask client. You will learn about the architecture of a Dapp: the front-end client interface, backed by the blockchain and smart contracts. The course covers the basic design of a Dapp, Truffle development process and commands (init, develop, test and migrate), test-driven development of Dapp, Dapp application models and emerging standards that are essential for predictable Dapp behavior. Main concepts are delivered through videos, demos and hands-on exercises.

COURSE_DESCRIPTION: As a tech leader in your organization, it is important that you have a good understanding of the fundamental concepts of Agile. In this course, you will explore the key drivers for organizations to become more agile, the benefits of doing so, and the key characteristics of agile organizations. Next, you will examine the characteristics that distinguish traditional and agile organizations and focus on the foundational building blocks of agile. Finally, you will discover practical ways that organizations demonstrate agility, some challenges of becoming agile, as well as the key characteristics and benefits of an Agile mindset as a tech leader in your organization. Upon completion, you will be able to describe the fundamental concepts of Agile for tech leaders.

 COURSE_DESCRIPTION: This is the final course in the specialization which builds upon the knowledge learned in Python Programming Essentials, Python Data Representations, and Python Data Analysis. We will learn how to install external packages for use within Python, acquire data from sources on the Web, and then we will clean, process, analyze, and visualize that data. This course will combine the skills learned throughout the specialization to enable you to write interesting, practical, and useful programs. By the end of the course, you will be comfortable installing Python packages, analyzing existing data, and generating visualizations of that data. This course will complete your education as a scripter, enabling you to locate, install, and use Python packages written by others. You will be able to effectively utilize tools and packages that are widely available to amplify your effectiveness and write useful programs.

 COURSE_DESCRIPTION: This specialization teaches the fundamentals of programming in Python 3. We will begin at the beginning, with variables, conditionals, and loops, and get to some intermediate material like keyword parameters, list comprehensions, lambda expressions, and class inheritance. You will have lots of opportunities to practice. You will also learn ways to reason about program execution, so that it is no longer mysterious and you are able to debug programs when they don't work. By the end of the specialization, you'll be writing programs that query Internet APIs for data and extract useful information from them. And you'll be able to learn to use new modules and APIs on your own by reading the documentation. That will give you a great launch toward being an independent Python programmer. This specialization is a good next step for you if you have completed Python for Everybody but want a more in-depth treatment of Python fundamentals and more practice, so that you can proceed with confidence to specializations like Applied Data Science with Python. But it is also appropriate as a first set of courses in Python if you are already familiar with some other programming language, or if you are up for the challenge of diving in head-first.

COURSE_DESCRIPTION: RESTful services are a key component of Full Stack Development. In this 13-video course, you will discover how to implement a working RESTful API (application programming interface) by using Python and the Flask framework. This is an essential skill to acquire on the journey from being an enterprise developer to a full stack developer. Learners will examine best practices for RESTful services, and some of their related challenges. Then take a look at the valuable art of identifying activities and breaking them down into steps for designing RESTful APIs; and explore some of the tools used to extend the features of RESTful APIs. Next, learn how to implement the tools to sanitize data for APIs by implementing the GET, POST, PUT, PATCH, and DELETE handlers for an API endpoint. This leads on to learning how to test each endpoint by using Pytest. To conclude the course, complete an exercise involving the building of a RESTful service and testing its endpoint and methods.

COURSE_DESCRIPTION: Follow the path a developer takes in the journey to become a full stack developer (FSD). This course provides an overview of modern web development along the way. Begin by exploring the three layers of full stack development: the presentation layer, the business logic layer, and the database layer. Consider build tools, application tests, workflow, hosting, maintenance, and services. Discuss client-side technologies as they relate to FSD, such as HTML, CSS, JavaScript, Sass, Gulp, and Grunt. Look at popular front-end and server-side technologies, and how to apply persistence. Conclude by examining the model-view-controller (MVC), application design patterns, and tools to build and test your work.

COURSE_DESCRIPTION: Die Analogie von Daten als Bargeld gibt es bereits seit den frühen 2000er Jahren. Die Daten selbst sind aber wertlos. Der wirkliche Wert liegt in den Einblicken, die Sie daraus gewinnen können. Hier kommt die Datenanalyse zum Tragen. Die Datenmodellierung ist ein unerlässlicher Aspekt der Datenanalyse. Sie hilft Ihnen, aus Rohdaten korrekte Einblicke zu gewinnen und aussagekräftige Berichte zu erstellen. In diesem Kurs lernen Sie, wie Sie Datenmodelle mit Power BI Desktop entwickeln und optimieren. Untersuchen Sie das Stern- und Schneeflockenschema. Erfahren Sie mehr über die DAX-Formelsprache. Führen Sie dann eine Anzahl von Aufgaben aus, z. B. Tabellen kombinieren, berechnete Spalten definieren, Measures erstellen und Werte zählen. Nach Abschluss des Kurses wissen Sie, wie Sie mithilfe der Datenmodellierung Rohdaten in aussagekräftige Darstellungen und Berichte verwandeln. Außerdem sind Sie damit besser auf die Zertifizierungsprüfung DA-100: Datenanalyse mit Microsoft Power BI vorbereitet.

COURSE DESCRIPTION: In this challenge, you will create a solution that will automatically start an Amazon Elastic Cloud Compute (Amazon EC2) instance when it stops. First, you will create a new Lambda execution role, and then you will create a Lambda function to start a specific EC2 instance. Next, you will create a new Amazon EventBridge rule to monitor the EC2 instance state and execute the Lambda function if the instance stops. Finally, you will test the rule by manually stopping the EC2 instance. Note: Once you begin the challenge lab, you will not be able to pause, save, or exit and then return to your challenge lab. Please ensure that you have set aside enough time to complete the challenge lab before you start.

COURSE_DESCRIPTION: Do you want to know why Data Science has been labelled as the sexiest profession of the 21st century? After taking this course you will be able to answer this question, and get a thorough understanding of what is Data Science, what data scientists do, and learn about career paths in the field. The art of uncovering the insights and trends in data has been around since ancient times. The ancient Egyptians used census data to increase efficiency in tax collection and they accurately predicted the flooding of the Nile river every year. Since then, people using data to derive insights and predict outcomes have carved out a unique and distinct field for the work they do. This field is data science. In today's world, we use Data Science to find patterns in data, and make meaningful, data driven conclusions and predictions. This course is for everyone, and teaches concepts like Machine Learning, Deep Learning, and Neural Networks and how companies apply data science in business. You will meet several data scientists, who will share their insights and experiences in Data Science. By taking this introductory course, you will begin your journey into the thriving field that is Data Science!

COURSE_DESCRIPTION: Excel 365 enthält leistungsstarke Tools zum Zusammenfassen und Darstellen von Daten. In diesem Kurs lernen Sie, wie Sie PivotTables und PivotCharts erstellen, bearbeiten und formatieren und wie Sie mit Slicern arbeiten. Zu den wichtigsten Inhalten, die in diesem Kurs behandelt werden, gehören die Verwendung einer PivotTable zum Auffinden von Trends und zum Aufschlüsseln von Daten, zum Hinzufügen zusätzlicher Detailebenen und mehrerer Wertfelder in einer einzigen Tabelle, die Verwendung des Datenmodells zum Arbeiten mit Daten aus mehreren Tabellen und das

Importieren vorhandener Datenbanktabellen in das Datenmodell und deren Verwendung in einer PivotTable. Da eine PivotTable in hohem Maße anpassbar ist, werden Sie sehen, wie Sie ihre Anzeige- und Steuerungseinstellungen konfigurieren und anpassen können. Als Nächstes werden Sie untersuchen, wie Sie Beschriftungs- und Wertfilter zum Analysieren von Daten verwenden, wie Sie einen Slicer zum Filtern von Daten einsetzen und wie Sie das Verhalten und die Darstellung eines Slicers anpassen können. Schließlich werden Sie untersuchen, wie Sie Daten aus einer PivotTable in einem PivotChart verwenden und das PivotChart anpassen und formatieren können.

COURSE_DESCRIPTION: Learners will discover how to plan for use of Azure Site Recovery (ASR) to ensure business continuity, while preparing for the AZ-301: Microsoft Azure Architect Design certification exam, with this 17-video course. Begin by recalling how Azure Data Centers provide cloud services and are secured. Examine differences between availability zones and Azure regions. Next, study disaster recovery (DR), and Azure DR terms: recovery time objective (RTO), recovery level objective (RLO), and recovery point objective (RPO). Explore site recovery planning and how ASR can address DR needs; deploy a recovery services vault via Azure portal and PowerShell; replicate Azure virtual machines (VMs) to a different region; and use the portal to run VM recovery drills. Next, learn how to clean up resources after conducting a VM test fail-over; use the portal to disable VM replication; create an ASR replication policy, and view the capacity planner tool. Recognize how Azure Backup provides resiliency; perform a backup of an Azure VM, and ensure file availability by backing up to Azure. The exercise involves Azure site recovery.

COURSE_DESCRIPTION: Physical inactivity and sedentariness are "silent killers". Do you feel like you spend too much time sitting? Do you feel like you would like to be more active? Are you unsure about how to incorporate physical activity into your daily life? We are here to help. Join us on a journey to learn about how to sit less and become more active. Use this FREE course to learn how to monitor your own activity and set physical

activity goals. We will feature various examples of how physical activity could be increased in different settings, such as your neighbourhood, home or work, to give you ideas of ones that could best fit your lifestyle. Are you a health professional? Use this opportunity to learn how to incorporate physical activity into your daily routine and also how to empower your patients to be more physically active. If time with a patient is an issue, you can simply "prescribe" this course to your patient. This course offers you a unique opportunity to receive weekly physical activity health messages and monthly video-reminders on how to increase physical activity in various settings for 6 months after the initial 3 week course. So, join us on the Sit less, get active! journey. Follow us on Twitter @GetActive MOOC, #GetActiveMOOC or follow our Online Learning Twitter feed @uoe_online. Visit our YouTube channel to check out the promo videos (more are to come) <https://www.youtube.com/channel/UC6xpBMzJXnffdUaY32-zPdA> If YouTube is not available in your country, you can access the promo videos here <https://media.ed.ac.uk/search/searchkeyword/sit%20less%20get%20active>

COURSE_DESCRIPTION: As organizations migrate to the cloud, they need information security professionals who are cloud-savvy. The Certificate of Cloud Security Knowledge (CCSK) certificate is widely recognized as the standard of expertise for cloud security and gives you a cohesive and vendor-neutral understanding of how to secure data in the cloud. The CCSK credential is the foundation to prepare you to earn additional cloud credentials specific to certain vendors or job functions. Earning the CCSK will provide you with the knowledge to effectively develop a holistic cloud security program relative to globally accepted standards. It covers key areas, including best practices for IAM, cloud incident response, application security, data encryption, SecaaS, securing emerging technologies, and more

COURSE_DESCRIPTION: New product development is essential for the survival of many companies in the Hi-Tec sector, as well as other sectors. The percentage of sales of successful business organizations tied to the successful introduction of new products and services is high. However, the failure rate of new products development projects is also high and therefore there is a need for a methodology based on a well-designed process as well as tools and techniques to manage New Product Development (NPD) projects. Since most companies develop new products, it is important to you as a manager to be familiar and understand the basic concepts and terminology of NPD projects. This course will give you holistic view of the new product development arena and will help you gain specific knowledge in how to select, plan, monitor and control a new product development project, using the proper tools and techniques. Upon completion of this MOOC, you will: 1. have a clear view and understanding of the New Product Development (NPD) arena 2. be able to select the right product configuration based on value (Voice of the customer), cost, time to market and risks. 3. be able to develop a feasible plan for your own product. 4. be able to execute your plan in an uncertain dynamic environment using the right tools and techniques. As part of the course the learners are required to purchase a discounted license for the Product Team Builder Simulator (<http://www.sandboxmodel.com/>), which is used for training and assignment submission. Please notice the simulator can only be used with Internet Explorer from a Windows computer.

COURSE_DESCRIPTION: Diversity, equity, and inclusion are not just initiatives and programs - they are cultural DNA that can completely transform an organization, drive business, and generate positive results for people, organization, and community. This course is designed to provide organizational leaders and HR leaders with a toolkit for designing a diverse, equitable, and inclusive employee and leadership experience from first interactions onward. It provides practical examples for infusing inclusion into every aspect of the employee experience. In this course, you will learn the key elements of developing a DEI scorecard as a first step in ensuring systemic DEI, strategies to create an inclusive talent acquisition experience including using inclusive language and gender-neutral honorifics, and techniques to enable talent to develop and advance equitably. You'll also learn ways to democratize DEI leadership in association with employee groups and techniques to ensure inclusion in policies, processes, and systems. As part of your DEI work, we encourage you to visit www.lawanaharris.com/assessment and take a self-assessment to help you determine your strengths and weaknesses around DEI.

COURSE_DESCRIPTION: In this 21-video course, learners will discover how to manage Azure App Service web applications and Azure Batch jobs. Learn about deploying and managing web apps, configuring Azure Batch, and managing Azure application container solutions while preparing for AZ-104 Microsoft Azure Administrator certification exam. Key concepts covered here include components that provide Azure-hosted web applications; how to deploy a code-based web application and a Docker-based web application; and how to use PowerShell to manage an Azure app service plan. Next, learn how to deploy a web application by using Microsoft Visual Studio; configure a custom DNS domain name for a web application; and enable HTTPS by using a custom DNS domain name for a web application. Then learn to configure web application staging with Azure deployment slots; enable scaling in an app service plan; enable backup for a web application; and learn automation benefits of Azure Batch. Finally, learn when to use Azure Kubernetes Service and Azure Container Instances; manage the Azure Kubernetes Service; and manage Azure Container instances.

COURSE_DESCRIPTION: Are you ready to dive into the world of data engineering? You'll need a solid understanding of how data is stored, processed, and accessed. You'll need to identify the different types of database that are appropriate for the kind of data you are working with and what processing the data requires. In this course, you will learn the essential concepts behind relational databases and Relational Database Management Systems (RDBMS). You'll study relational data models and discover how they are created and what benefits they bring, and how you can apply them to your own data. You'll be introduced to several industry standard relational databases, including IBM DB2, MySQL, and PostgreSQL. This course incorporates hands-on, practical exercises to help you demonstrate your learning. You will work with real databases and explore real-world datasets. You will create database instances and populate them with tables. No prior knowledge of databases or programming is required. Anyone can audit this course at no-charge. If you choose to take this course and earn the Coursera course certificate, you can also earn an IBM digital badge upon successful completion of the course.

COURSE_DESCRIPTION: Each CCSP candidate must approach the exam in two roles. One role is that of a customer of a large cloud service provider, and the other is that of a security manager overseeing their own cloud data center infrastructure. With this course, look deeper at cloud infrastructure and platform components. In this course, learn about the physical and network cloud environments. Next, explore cloud communications and the compute resources of cloud. Finally, examine cloud virtualization resources, core components of cloud storage, and the management plane. This is one of a collection of courses that fully prepares the learner for the ISC2 Certified Cloud Security Professional (CCSP) 2022 exam.

COURSE_DESCRIPTION: AWS offers a variety of application solutions to meet specific app requirements. In particular, application containers provide a logical boundary for application files and settings. Through this course, discover when and how to work with containerized applications in the AWS Cloud. Learn how to install Docker on Linux and Windows platforms. Next, practice deploying a containerized application, container image repository, and an Amazon Elastic Kubernetes Service (EKS) cluster in the cloud. Finally, discover when and how to use AWS Fargate in conjunction with application containers. This course can be used to prepare for exam SAP-C02, AWS Certified Solutions Architect - Professional.

COURSE_DESCRIPTION: In this one-hour, project-based course, you'll learn how to create and configure properties for a weapon. This project covers managing the health of destructible objects, setting up the weapon's damage, firing rate and force, and adding effects to the destroyed objects. The guided project will introduce you to the following Unity concepts: - Prefabs - Particle Effects - Physics - Game mechanics such as weapon cool-down and applying force - Coding techniques such as Interfaces This is Part 3 of a four-part series on creating a weapon for your FPS game. In Part 1, we covered equipping your FPS player with a gun. In Part 2, we learned how to create visual effects when your player fires the gun. Lastly, in Part 4, we will walk you through the steps for adding ammunition, reloading the weapon and creating magazines and other weapons. This is a stand-alone guided project, but because this is a continuation of previous parts in the "FPS Weapon" series, it is recommended that you complete the first parts before commencing this guided project. This series also makes use of the western-themed Unity project created in Control physics with C# in Unity and the VM-compatible FPS Player script written in Create a VM Compatible First Person Camera. These complement this guided project and, although not prerequisites, are recommended for a more well-rounded understanding of the concepts presented herein.

COURSE_DESCRIPTION: Dieser einwöchige Kurs beschreibt den Prozess der Datenanalyse und wie man diesen Prozess verwaltet. Wir beschreiben den iterativen Charakter der Datenanalyse sowie die Rolle der Formulierung einer präzisen Frage, der explorativen Datenanalyse, der Inferenz, der formalen statistischen Modellierung, der Interpretation und der Kommunikation. Darüber hinaus werden wir beschreiben, wie analytische Aktivitäten innerhalb eines Teams gelenkt werden können und der Datenanalyseprozess in Richtung kohärenter und nützlicher Ergebnisse gesteuert werden kann. Dies ist ein zielgerichteter Kurs, der Sie schnell in den Prozess der Datenanalyse einführen und Ihnen zeigen soll, wie dieser gehandhabt werden kann. Unser Ziel war es, dies für Sie so bequem wie möglich zu gestalten, ohne auf wesentliche Inhalte zu verzichten. Wir haben die technischen Informationen beiseitegelassen, damit Sie sich darauf konzentrieren können, Ihr Team zu managen und voranzubringen. Nach Abschluss dieses Kurses werden Sie: 1. Die grundlegende Datenanalyse-Iteration beschreiben 2. Verschiedene Arten von Fragen identifizieren und diese in spezifische Datensätze umwandeln 3. Verschiedene Arten von Datenabrufen beschreiben 4. Datensätze untersuchen, um festzustellen, ob Daten für eine bestimmte Frage geeignet sind 5. Modellerstellungsbemühungen bei gebräuchlichen Datenanalysen steuern 6. Die Ergebnisse gebräuchlicher Datenanalysen interpretieren 7. Statistische Ergebnisse zur Bildung kohärenter Datenanalyse-Präsentationen integrieren Aufwand: 1 Kurswoche, 4-6 Stunden Kurs-Cover-Bild von fdecomite. Creative Commons BY <https://flic.kr/p/4HjmvD>

COURSE_DESCRIPTION: Agile Projekte sind nur dann erfolgreich, wenn das agile Team kohärent, produktiv und engagiert ist. Starke Projektleiter ermutigen zu aktiver Eingebundenheit, um sicherzustellen, dass das Team ein umfassendes Verständnis der Projektanforderungen und der Stakeholdererwartungen besitzt. In diesem Kurs werden Kenntnisse über agile Teams und deren Führung einschließlich der Merkmale eines effektiven agilen Teams vermittelt. Dieser Kurs führt auch in gängige Entwicklungsstrategien sowie in entwicklungspolitische Beherrschungsmodelle ein. Schließlich werden in diesem Kurs Kommunikationstools und die Vorteile der Anwendung von Moderationstechniken wie agilen Spielen behandelt, um die Kollaboration und Kooperation im agilen Team zu fördern. Dieser Kurs ist Teil einer Kursreihe im Bildungsweg von Skillsoft und behandelt die Vorgaben der "PMI Agile Certified Practitioner (PMI-ACP) (r)"-Prüfung. PMI-ACP ist ein eingetragenes Handelszeichen des Project Management Institute, Inc.

COURSE_DESCRIPTION: For three decades and longer we have heard educators and technologists making a case for the transformative power of technology in learning. However, despite the rhetoric, in many ways and at most institutional sites, education is still relatively untouched by technology. Even when technologies are introduced, the changes sometimes seem insignificant and the results seem disappointing. If the print textbook is replaced by an e-book, do the social relations of knowledge and learning necessarily change at all or for the better? If the pen-and-paper test is mechanized, does this change the nature of our assessment systems? Technology, in other words, need not necessarily bring significant change. Technology might not even represent a step forward in education. But what might be new? How can we use technologies to innovate in education? This course explores seven affordances of e-learning ecologies, which open up genuine possibilities for what we call New Learning – transformative, 21st century learning: 1. Ubiquitous Learning 2. Active Knowledge Making 3. Multimodal Meaning 4. Recursive Feedback 5. Collaborative Intelligence 6. Metacognition 7. Differentiated Learning These affordances, if recognized and harnessed, will prepare learners for success in a world that is increasingly dominated by digital information flows and tools for communication in the workplace, public spaces, and personal life. This course offers a wide variety of

examples of learning technologies and technology implementations that, to varying degrees, demonstrate these affordances in action. -----
----- Recommended Background ----- This course is designed for people interested in the future of education and the "learning society," including people who may wish to join education as a profession, practicing teachers interested in exploring future directions for a vocation that is currently undergoing transformation, and community and workplace leaders who regard their mission to be in part "educative." ----- Related Resources ----- Online resources are available here:

COURSE_DESCRIPTION: Amazon Web Services (AWS) provides over 100 services. That may seem like an intimidating number, but with AWS Elastic Beanstalk (EB) deployment details, such as capacity provisioning, load balancing, Auto Scaling, and application health monitoring, are all handled automatically. In this course, you'll learn how to manage your AWS applications and environments using EB and explore features, components, and supported platforms. Then you'll discover how EB applications are monitored and examine how the EB command line interface (EB CLI) works. Finally, you'll practice using Elastic Beanstalk to create, manage, and deploy various application types and a Docker environment. This course helps you prepare for the AWS Certified Developer - Associate 2022 certification exam.

COURSE_DESCRIPTION: This 8-video course explores how to build an effective incident response plan, including creation of response policies, plans, procedures, and teams. In this course, you will examine the process to recover from security related incidents such as malware, data leakage, or stolen equipment. You will also review what to implement for security controls to prevent attacks against confidentiality, integrity, and availability of company assets. Learners observe how to create an incident response plan and the steps for creating incident response policies, plans, and procedures. You will learn the six phases necessary to build an incident response plan, and the job roles for each member of the team. You will examine who should be part of the CSIRT (computer security incident response team). Next, examine the different roles that make up a computer security incident response team, their purposes, and the elements of an incident response policy. Finally, this course uses a real-world case study to demonstrate how to implement the incident response plan.

COURSE_DESCRIPTION: Developing Flutter applications requires programmers to be familiar with the Dart programming language. Dart is an object-oriented programming language that supports mixin-based inheritance and functional constructs. In this course, you will learn how variables in Dart are initialized and used. Next, you will work with basic collection constructs such as the list, set, and map and explore some new operators such as

the spread operator. You will also see how Dart implements sound null safety using specific types and null assertion and null aware operators. Finally, you will learn that functions in Dart are first-class citizens, which means that functions can be stored in variables, passed in as input arguments to other functions, and returned as values from functions.

COURSE_DESCRIPTION: Bei der Rechenschaftspflicht geht es darum, die Verantwortung für Ihre eigenen Handlungen, Verhaltensweisen und Entscheidungen zu übernehmen. In den heutigen großen, oft gewaltigen Organisationen kann es verlockend sein, die Verantwortung einfach abzuschieben. Eine verantwortungsbewusste Führungskraft hingegen hält, was sie verspricht, und stellt die Rechenschaftspflicht gegenüber ihrem Team und der Organisation sicher. In diesem Kurs lernen Sie, wie Sie in Ihren Teams Verantwortlichkeit aufbauen, Ihre eigene Bereitschaft zur Rechenschaftspflicht demonstrieren, insbesondere wenn etwas schief geht, und ein Umfeld der Verantwortlichkeit bei denjenigen fördern, mit denen Sie zusammenarbeiten.

COURSE_DESCRIPTION: Cyber insurance is becoming more common as companies seek to protect their IT systems. During this course, you will explore potential security breach sources such as mobile and IoT devices. Topics include the pros and cons of workplace Bring Your Own Device (BYOD) policies; the risks of outsourcing your IT; how internet-connected devices, including wearable gadgets, may present security risks. You will also discover how Transport Layer Security (TLS) plays a key role, and learn how to protect stored data with encryption, such as BitLocker. As you progress through the course, you will explore how insecure databases can leak data; and learn how to evaluate cloud data security options, Data Loss Prevention (DLP), Multi-factor Authentication (MFA), cloud MFA, Single Sign-On (SSO), Identity Federation, and cyber insurance. You will conclude by listing common sources of security breaches and how to protect against them.

COURSE_DESCRIPTION: Front-End frameworks like Angular must be capable of accepting data from users and forwarding that data onto a database, usually via an API. Explore forms and the form submission process to endpoints using this course. Learn more about two-way binding, form events like button clicks, and validating forms for user input. You'll also work with APIs to perform some of the CRUD operations that have become synonymous with database programming and examine shareReplay to implement local caching. Having completed this course, you will be able to create forms and effectively handle form controls in Angular.

COURSE_DESCRIPTION: Welcome to this Project about "Two Major Models of running Containers in AWS". This Project will be focusing on one of the many types of computing in AWS, called "Container Computing". To understand the benefits of AWS Products and services, which relates to Containers, you need to understand what 'Containers' are and what benefits 'Container Computing' Provides. In this Project, you are going to get a chance to make a 'Container'. If you are looking to deploy applications across multiple machines and platforms, Containers and virtual machines (VMs) are two of the top approaches in use today. Both can help your IT team become more agile and responsive to business demands. Both are used to host applications. Before containers came along, the "virtual machine" was the technology of choice for optimizing server capacity, but Virtual Machines had some drawbacks. If you run a virtual machine, say with 4 GB RAM and 4 GB disk, the operating system can easily consume 60 - 70% of the disk and much of the available memory, leaving relatively little for application which run in those Virtual Machine. But Containerization handles things in a different way. Instead of running a whole 'operating System' for each application, containers run as a process. So if you could run 5 applications

using 'Virtualization', you will be able to run 15 applications using 'Containerization'. This Project will help you to learn different ways of running "containers" in AWS. There are two different ways to run "containers" in AWS. One is using "EC2 instance" and other using "ECS Fargate". So this Project has two major parts. In the first part, you will learn to create a docker image and test that image by running on a container, and once you verified your docker image works, you are going to upload it to "DockerHub", which is a popular online resource for uploading docker images for others to access, either public or specific private individuals. In the second part of this project, you will learn to create an ECS cluster with Fargate cluster mode, and will deploy the container we created, into Fargate Cluster. So you are going to get some practical experience of how to deploy real container into a Fargate Cluster. There is a lot to get through though. so let's get started!! Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: The Foundations of Teaching for Learning programme is for anyone who is teaching, or who would like to teach, in any subject and any context - be it at school, at home or in the workplace. With dynamic lessons taught by established and respected professionals from across the Commonwealth, this eight course programme will see you develop and strengthen your skills in teaching, professionalism, assessment, and more. As you carry on through the programme, you will find yourself strengthening not only your skills, but your connection with colleagues across the globe. A professional development opportunity not to be missed. How we teach has its foundation in how we were taught and how we learned. This course provides an opportunity for you to reflect on your personal and professional development as a teacher. Through reflection and portfolio development you will enhance your knowledge and understanding of how to promote learning. Enhance your course by joining the Commonwealth teaching community on our website, Facebook and Twitter.

COURSE_DESCRIPTION: Learners can explore the Windows Update service, which in addition to service packs and patches, also provides common driver updates for hardware devices running Windows. Key concepts covered in this 14-video course include different types of Windows updates; how to enable automatic updates in Windows 10 and how to check for updates manually in Windows 10; and how to optimize Windows 10 update delivery with express

updates. Then learn to deploy updates by using Windows Update for Business; how to manage updates using Group Policy in Windows 10; and learn traditional Windows servicing and how it relates to updates. Next, learn Windows 10 servicing channels; perform update validation and verification in Windows 10; troubleshoot common update issues in Windows 10; and learn common update log files in Windows 10. Learners examine additional Windows Update settings. In the concluding exercise, practice checking, validating, and uninstalling updates; examine Windows Update for Business and servicing channels; and update log files. This is one course in a series to help learners prepare for the MD-100: Windows 10 certification exam.

COURSE_DESCRIPTION: The Startup Valuation and Financial Analysis Specialization teaches two of the most often used methods to find the value of a startup. You'll learn how to find the value of founder's ownership before and after additional funding, how to read financial statements and make pro-forma statements, and how to determine the financial health and status of a startup and estimate future earnings and value. You'll then use various investment criteria, such as Net Present Value (NPV) and Individual Rate of Return (IRR), to make a decision about whether and where to invest your money. Specific topics include: the time value of money, discounted cash flows method, multiple method, financial statements analysis, free cash flows, capital budgeting decision rules and current trends. The Capstone Project will find the value of startups using the methods taught in the course.

COURSE_DESCRIPTION: In this course, learners can discover how to manage Azure subscriptions and role-based access control (RBAC). Explore Azure Portal, Azure PowerShell, Azure CLI (command-line interface), Azure AD (Active Directory) administrator roles, and how to manage access to Azure resources. This 16-video course helps prepare for the Microsoft Azure Administrator (AZ-103) certification exam. Begin by signing up for a new Azure subscription or reactivate an Azure subscription, then examine steps required to transfer ownership of an Azure subscription and cancel a subscription. Next, navigate through the Azure portal, and install and use Azure PowerShell to connect to your Azure subscription. Then learn how to install and use Azure CLI; identify classic administrator roles, and identify the Azure AD administrator roles. Learn about assigning an administrator, and identifying role-based access control roles. Manage access to Azure resources with RBAC, using a template, and for external users. Examine deny assignments for Azure resources using Azure portal and create a custom role using Azure PowerShell cmdlets (lightweight commands). The exercise involves managing Azure subscription roles.

COURSE_DESCRIPTION: As a Lean Six Sigma improvement team moves into the Improve phase of a DMAIC project, it begins to generate a list of solutions to address process problems. Lean offers several techniques to reduce waste and cycle time, as well as improvement tools such as kaizen, theory of constraints, and overall equipment effectiveness (OEE). After appropriate methods and tools are used and solutions developed, the implementation of proposed solutions needs to be tested and verified to ensure that optimal choices are made. This course looks at some of the popular Lean methods and implementation planning in Six Sigma. It examines Lean tools used for reducing waste and cycle time, and the Japanese principles of continuous improvement - kaizen and kaizen blitz. It also looks at some other process improvement methodologies such as theory of constraints and OEE. Finally, the course examines planning for proposed solutions, including conducting pilot tests and simulations. This course is aligned with the ASQ Certified Six Sigma Black Belt certification exam and is designed to assist learners as part of their exam preparation. It builds on foundational knowledge that is taught in SkillSoft's ASQ-aligned Green Belt curriculum.

 COURSE_DESCRIPTION: In this fourth and final course of the specialization, you will synthesize your learning into a project deliverable called a Blockchain Opportunity Analysis. The goals of this course are twofold: One, it's for you to identify a specific need or problem in your chosen industry that can potentially be solved using blockchain technology. Two, it's for you to investigate possible solutions to this problem, including how these solutions might be executed. You will accomplish different project milestones each week, and will be introduced to several tools that entrepreneurs use to organize their findings. Throughout this process, you will hear from real-world practitioners who have hands-on experience in the blockchain ecosystem. Additionally, by participating in this course you will gain access to our Blockchain Case Commons-a crowdsourced collection of blockchain applications and use-cases spanning multiple industries. As an outcome of this course, you'll walk away with a consolidated, peer-reviewed Blockchain Opportunity Analysis, which you can use to pitch your idea to your organization or even to potential investors.

COURSE_DESCRIPTION: Discover the importance of selecting the right DevOps tools and the impacts of working with the wrong ones. This 16-video course explores steps that guide tool selection decisions, rules to consider, and what tools are appropriate for different phases of DevOps. Key concepts covered here include DevOps strategies and practices that can be applied to streamline development and operations; DevOps steps for selecting the right DevOps tools; and rules that should be considered when selecting DevOps. Next, learn the impact of selecting the wrong tools in the DevOps lifecycle; how to install Bamboo and Jenkins to illustrate their comparative capabilities; and benefits of test automation and test automation tools, including JMeter and API. Then see the capabilities of provisioning and change management tools, by focusing on configuration management and infrastructure as code implementation, and release orchestration and various tools that can be used to implement it. Finally, learn how logging and continuous monitoring tools are used to implement feedback loops in the DevOps process, and explore capabilities of Nagios as a comprehensive continuous monitoring tool.

COURSE_DESCRIPTION: Explore advanced penetration testing tools and techniques used to find vulnerabilities, sniff network traffic, deal with cryptography, and crack passwords in this 14-video course. Learners will discover common techniques used to find weaknesses in both Linux and

Windows-based systems. Key concepts covered here include finding vulnerability by using scanners and other techniques; how to capture and analyze network traffic with Wireshark; and learning about wireless security technologies, such as WEP, WPA/2/3, and their vulnerabilities. Continue by learning about cryptography and its four goals; learning to differentiate between symmetric and asymmetric cryptography; and learning how to choose a password cracking technique. Next, learn to differentiate between malware types and recognize the consequences of using targeted malware; learn to differentiate between scanning and enumeration; and learn the benefits of using Python to build scripts and deliver exploits. Then perform Linux privilege escalation with a penetration tester; perform Windows privilege escalation to exploit a Windows system by using the AlwaysInstallElevated technique; and use PowerShell to perform pen testing tasks such as reporting on all USB devices installed.

COURSE_DESCRIPTION: Bernard Marr defines Big Data as the digital trace that we are generating in this digital era. In this course, you will learn about the characteristics of Big Data and its application in Big Data Analytics. You will gain an understanding about the features, benefits, limitations, and applications of some of the Big Data processing tools. You'll explore how Hadoop and Hive help leverage the benefits of Big Data while overcoming some of the challenges it poses. Hadoop is an open-source framework that allows for the distributed processing of large data sets across clusters of computers using simple programming models. Hive, a data warehouse software, provides an SQL-like interface to efficiently query and manipulate large data sets residing in various databases and file systems that integrate with Hadoop. Apache Spark is an open-source processing engine that provides users new ways to store and make use of big data. It is an open-source processing engine built around speed, ease of use, and analytics. In this course, you will discover how to leverage Spark to deliver reliable insights. The course provides an overview of the platform, going into the different components that make up Apache Spark. In this course, you will also learn about Resilient Distributed Datasets, or RDDs, that enable parallel processing across the nodes of a Spark cluster.

COURSE_DESCRIPTION: Welcome to Predictive Modeling, Model Fitting, and Regression Analysis. In this course, we will explore different approaches in predictive modeling, and discuss how a model can be either supervised or unsupervised. We will review how a model can be fitted, trained and scored to apply to both historical and future data in an effort to address business objectives. Finally, this course includes a hands-on activity to develop a linear regression model.

COURSE_DESCRIPTION: By the end of this project, you will know how to use Canva to promote and advertise your fundraiser both digitally and locally. You will have learned how to create a Facebook Post, an event poster and a flyer with the help of Canva. We will both use templates, and create designs from scratch. You will be able to incorporate a color scheme, images, and other design elements for aesthetically pleasing. Creating high quality advertisements is the perfect way to proactively engage with your target audience both digitally and in your local community. This project will include intermediate to advanced level skills using the free version of Canva. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Extreme weather events, wars, famine and environmental destruction are just a few of the wicked problems faced by humanity. That's why in 2015 the United Nations adopted the 2030 Agenda for Sustainable Development. This agenda includes 17 Sustainable Development Goals (SDGs) that target the big challenges such as how to eliminate poverty, how to protect the environment and how to bring about peace. Every member state committed to achieving these goals by 2030. What can businesses do to counter climate change and create a sustainable business culture? Why is this relevant for business anyway? Explore how business can contribute to a better future for people AND the planet without giving up profits. This course has been developed by Rotterdam School of Management at Erasmus University (RSM). It focuses on the role of businesses in achieving the SDGs. You will gain insights from leaders of international companies and academics in business and management who will guide you through the issue of how businesses can contribute to the SDGs. The course received a 'MOOC Award of Excellence' by the Sustainable Development Solutions Network and the SDG Academy in September 2019 (<https://www.unsdsn.org/2019-sdsn-awards-of-excellence-winners-announced>) After completing this course you will: • know what the SDGs are, why they are important and how each individual can be an agent for positive change in the world; • understand the role of business in the transition to sustainable development to create a prosperous future for all; • be able to identify interconnectedness of the SDGs and the challenges behind solving them; • know how management insights can contribute to the SDGs; • be able to evaluate the effectiveness of current business strategies in contributing to the SDGs; • develop a positive, critical, aware and courageous attitude towards the SDGs. The course consists of seven units, each focusing on several aspects of sustainable development and taking one week to complete. You will study by watching videos, reading literature and by engaging in other activities such as weekly challenges. Assignments will consist of quizzes, discussions with your fellow students, and challenges to implement in your daily life. Are you ready to find out how you can be an agent for positive change? Register now!

COURSE_DESCRIPTION: "Introduction to Systems Engineering" uses a structured yet flexible approach to provide a holistic, solid foundation to the successful development of complicated systems. The course takes you step by step through the system life cycle, from design to development, production and management. You will learn how the different components of a system interrelate, and how each contributes to a project's goals and success. The discipline's terminology, which can so often confuse the newcomer, is presented in an easily digestible form. Weekly video lectures introduce and synthesise key concepts, which are then reinforced with quizzes and practical exercises to help you measure your learning. This course welcomes anyone who wants to find out how complex systems can be developed and implemented successfully. It is relevant to anyone in project management, engineering, QA, logistic support, operations, management, maintenance and other work areas. No specific background is required, and we welcome learners with all levels of interest and experience.

COURSE_DESCRIPTION: Data as a form of currency is an analogy that's been around since the early 2000s. However, data itself is worthless. The real value is in the insights you gain from it; this is where data analysis comes in. Data modeling is a crucial part of data analysis, helping turn raw data into accurate insights and meaningful reports. Use this course to learn how to design and optimize data models through Power BI Desktop. Examine the star and snowflake schemas. Learn about the DAX formula language. Then, conduct a range of tasks, including combining tables, defining calculated columns, creating measures, and counting values. Upon course completion, you'll know how to use data modeling to transform raw data into powerful visuals and reports. You'll also be further prepared for the DA-100: Analyzing Data with Microsoft Power BI certification exam

COURSE DESCRIPTION: Business continuity ensures that business processes continue in the event of a disruption. This process includes disaster recovery planning, which strives to reduce downtime and data loss, and incident response plan implementation, which helps minimize impacts during an incident. In this course, you'll review both aforementioned methods before learning how to define AWS methods for achieving high availability, implementing load balancing, identifying horizontal and vertical scaling, and configuring AWS Auto Scaling. As you advance, you'll configure database replicas for high availability. At the end of the course, you'll be able to confidently use AWS features to ensure business continuity in the case of a disaster. You'll also be more prepared for the AWS Certified SysOps Administrator - Associate exam, SOA-C02.

COURSE_DESCRIPTION: Modeling complex entities involves defining and invoking methods and constructors. Furthermore, defining robust and reusable code requires learning important mechanisms for code re-uses, such as constructor chaining and method overloading. Use this course to delve into these important techniques that are required to write clean and maintainable Java code. Learn how to define methods with the same name but different signatures (i.e., different order and type of input arguments), invoke overloaded methods, and add constructors to a class. This course will also enable you to use the 'this' keyword to invoke multiple constructors, also known as constructor chaining. By the time you are done with this course, you will have the skills to use important code re-use mechanisms such as method overloading and constructor chaining in java.

COURSE_DESCRIPTION: What if every employee could learn to use AI to improve their performance - and deliver more value to the enterprise? At Levi Strauss & Co., tech and nontech workers alike learn about AI through corporate boot camps, which have led to new initiatives in product design, operations, and customer engagement. Join Katia Walsh, chief global strategy and AI officer at Levi Strauss & Co., as she explains how the company's AI boot camps have transformed worker attitudes toward AI. Co-presenters David Kiron (MIT SMR) and Shervin Khodabandeh (BCG) will also share findings from their recent research on additional cultural benefits that come with corporate AI adoption.

COURSE_DESCRIPTION: Amazon SageMaker can be used with multiple other frameworks and toolkits to precisely define machine learning (ML) algorithms and train models and is not limited to a specific set of algorithms for ML. SageMaker also provides a wide range of tools that can be used for incremental training, distributed training, debugging, or explainability. Use this course to learn about advanced SageMaker functionality, including supported frameworks, Amazon EMR, and autoML. You'll also gain hands-on experience in using new features, such as SageMaker Experiments, SageMaker Debugger, Bias Detection, and Explainability. Once you have finished this course, you'll have the skills and knowledge to implement SageMaker's advanced functionalities. Further, you'll be a step closer to preparing for the AWS Certified Machine Learning - Specialty certification exam.

COURSE_DESCRIPTION: Campus networks are private mobile networks for enterprise customers, available on their premises only, to enable mobile access to their own local network. DT has defined different Campus solutions, where part of the equipment of the mobile network is located at the customer's premise. This breaks up the mobile core network into two parts - the central part at DT and the customer part. This exposes internal interfaces. Therefore, security of the architecture needs to be considered carefully. SIM provisioning and further aspects are further relevant security aspects to consider. The session will start with general security principles and walk-through Campus security at DT. About the Speaker Sven Lachmund: Senior Network Security expert at DT Security • Jointly works with solution architects and technology introduction projects to ensure security is considered and to provide security solutions • Is involved in international standardization on various topics regarding mobile security

COURSE_DESCRIPTION: In this challenge, you will configure networking in your vSphere environment. First, you will create a standard virtual switch that has a VMkernel adapter configured for VMware vSphere vMotion, and then you will add your VMware ESXi hosts to a new distributed virtual switch. Next, you will add new port groups to the distributed virtual switch, and then you will migrate virtual machines to the correct port groups. Finally, you will configure each port group on a separate virtual LAN (VLAN), and then you will create a backup of your distributed virtual switch. Note: Once you begin a challenge you will not be able to pause, save, or return to your progress. Please ensure you have set aside enough time to complete the challenge before you start.

COURSE_DESCRIPTION: Beim Start eines Projekts müssen zahlreiche Überlegungen angestellt werden. Ein Schwerpunkt ist das Risiko. Sie müssen sich rechtzeitig vorbereiten auf alles, was schiefgehen... oder gutgehen kann! Ein weiterer Kernbereich ist Qualität. Wie können Sie sicherstellen, dass Ihr Produkt oder Ihre Dienstleistung die Erwartungen der Stakeholder erfüllt? Und dann gilt es noch, herauszufinden, ob es sinnvoller ist, alle Aufgaben intern auszuführen oder sie auszulagern. Und wie wählt man den richtigen Fremdanbieter im Hinblick auf Minimalisierung der Risiken und Maximierung der Qualität? Dieser Kurs unterstützt Sie bei diesen Überlegungen, indem er gängige Methoden und bewährte Praktiken zur Beherrschung von Risiken, Qualität und Auftragswesen darlegt.

COURSE_DESCRIPTION: This is a 2-hour long project-based course and the most comprehensive one about Docker Containers. By the end of this project, you will have packaged, built, and deployed a static web application using Docker. Along the way, you will also learn the essential concepts and commands about Docker containers. Apart from demystifying the Docker landscape, it'll prepare you with hands-on experience for building and containerizing your own applications. Even if you have no prior experience with containers, this project should be all you need to: - Get started with Docker containers & related concepts. - Deep-dive to get your hands dirty with Docker command-line. - Emerge as someone who knows how to use Docker and build containerized applications. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Bringing a machine learning model into the real world involves a lot more than just modeling. This Specialization will teach you how to navigate various deployment scenarios and use data more effectively to train your model. In this third course, you will: - Perform streamlined ETL tasks using TensorFlow Data Services - Load different datasets and custom feature vectors using TensorFlow Hub and TensorFlow Data Services APIs - Create and use pre-built pipelines for generating highly reproducible I/O pipelines for any dataset - Optimize data pipelines that become a bottleneck in the training process - Publish your own datasets to the TensorFlow Hub library and share standardized data with researchers and developers around the world This Specialization builds upon our TensorFlow in Practice Specialization. If you are new to TensorFlow, we recommend that you take the TensorFlow in Practice Specialization first. To develop a deeper, foundational understanding of how neural networks work, we recommend that you take the Deep Learning Specialization.

COURSE_DESCRIPTION: Please note: You will need an AWS account to complete this course. Your AWS account will be charged as per your usage. Please make sure that you are able to access Sagemaker within your AWS account. If your AWS account is new, you may need to ask AWS support for access to certain resources. You should be familiar with python programming, and AWS before starting this hands on project. We use a Sagemaker P type instance in this project, and if you don't have access to this instance type, please contact AWS support and request access. In this 2-hour long project-based course, you will learn how to train and deploy an object detector using Amazon Sagemaker. Sagemaker provides a number of machine learning algorithms ready to be used for solving a number of tasks. We will use the SSD Object Detection algorithm from Sagemaker to create, train and deploy a model that will be able to localize faces of dogs and cats from the popular IIIT-Oxford Pets Dataset. Since this is a practical, project-based course, we will not dive in the theory behind deep learning based SSD or Object Detection, but will focus purely on training and deploying a model with Sagemaker. You will also need to have some experience with Amazon Web Services (AWS). Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE DESCRIPTION: In this 17-video course, explore the concept of functional automation and benefits and weaknesses of using Selenium for functional automation. Examine Selenium architecture, Selenium Test Suite components, and the basic elements of Selenium test scripts. Then learn how to install Selenium integrated development environment (IDE) and configure Firebug and Firepath add-ons. Compare Selenium WebDriver with release candidate (RC); learn about recording Selenium test cases and exporting Selenium test cases, and execute Selenium test scripts on Chrome and Firefox browsers. Examine locating strategies in Selenium used to specify locations of web elements; learn about locating strategies in Selenium by using Selenium locators; and observe the use of hard assertions in Selenium and soft assertions in Selenium to determine the state of applications. Discover how to build maintainable Selenium frameworks; how to integrate Selenium with Bamboo and Maven, and Selenium with Jenkins. Explore Selenium Advanced User Interaction API; work with Selenium WebDriver Compatibility and cross-browser tests and automating in the cloud using Browserstack. To conclude the course, take a look at Selenium Headless Browser testing.

COURSE_DESCRIPTION: Es wäre zu einfach zu sagen, dass man im Umgang mit schwierigen Menschen tolerant sein und die Unterschiede der Menschen akzeptieren sollte. Das hört sich gut an und könnte kurzfristig funktionieren, aber wenn Sie mit negativen Menschen zusammenarbeiten, sollten Sie besser lernen, wie Sie darauf reagieren und mit ihnen umgehen. Der Umgang mit schwierigen Menschen erfordert, dass Sie zuerst lernen, wie Sie mit sich selbst umgehen. In diesem Kurs lernen Sie Techniken zum Umgang mit schwierigen Menschen, einschließlich Selbstwahrnehmung und Selbstmanagement. Sie lernen, wie Sie sich auf die Gefühle und Emotionen schwieriger Menschen einstellen können, wenn Sie mit ihnen in einem Team arbeiten. Außerdem erfahren Sie, wie Sie Ihre emotionale Intelligenz entwickeln, um Ihre Zusammenarbeit produktiver zu gestalten.

COURSE DESCRIPTION: Securing today's enterprise computing environments means understanding how virtualization is used. Organizations must consider how to secure virtualization solutions used both on-premises in and the cloud. In this course, you'll learn to identify various types of virtualization solutions such as network virtualization, operating system virtualization, desktop, and app virtualization. You will then learn to distinguish the difference between type 1 and type 2 hypervisors. Next, you'll focus on virtualization security and how to deploy virtual machines on-premises. Lastly, you'll learn to work with application containers. This course is one of a collection of courses that prepares learners for the CompTIA Advanced Security Practitioner (CASP+) CAS-004 exam.

COURSE_DESCRIPTION: Part of project management is creating and keeping to a schedule. PMs must list, define, and sequence a project activity list, including activity attributes and product milestones, and they must take into consideration lead and lag time. It can be a lot to keep track of. In this course, you'll explore methods for creating workable project schedules using tools like a work breakdown structure (WBS) and methods like precedence diagramming, network diagrams, and analogous estimating. You'll also explore parametric and three-point estimating and tools for defining activities.

COURSE_DESCRIPTION: This course introduces you to a breadth of features available in the Molten framework to help you build HTTP APIs. You'll begin by creating a virtual environment, installing Molten and various other libraries such as Pytest to test out your Molten apps, and installing Unicorn to serve your apps. You'll then move on to creating REST APIs using the Molten framework. You'll create a very basic REST API with only one route that maps to a function and the API to process an HTTP GET request. You'll also explore the use of a QueryParam object to handle query parameters passed in an HTTP request. You'll next test your Molten APIs using Pytest by writing some simple tests to ensure an HTTP 200 status code is returned when a correct request is sent to the server and an error code is returned with the response otherwise. You'll also learn how these tests can be executed and how to analyze their outputs. You'll learn about the processing of POST requests, how to ensure the validity of POST data using a Molten Schema instance, different ways to define a schema, and how to use a forward reference. You'll explore the built-in objects available in the Molten framework and how to pass in a plain Python dictionary containing settings for an app. Finally, you'll see how settings can be saved in an external JSON file and then imported into a Molten app and how to load settings defined within a TOML file.

COURSE_DESCRIPTION: By the end of this course, learners are empowered to implement data-driven process improvement objectives at their organization. The course covers: the business case for IoT (Internet of Things), the strategic importance of aligning operations and performance goals, best practices for collecting data, and facilitating a process mapping activity to visualize and analyze a process's flow of materials and information. Learners are prepared to focus efforts around business needs, evaluate what the organization should measure, discern between different types of IoT data and collect key performance indicators (KPIs) using IoT technology. Learners have the opportunity to implement process improvement objectives in a mock scenario and consider how the knowledge can be transferred to their own organizational contexts. Material includes online lectures, videos, demos, project work, readings and discussions. This course is ideal for individuals keen on developing a data-driven mindset that derives powerful insights useful for improving a company's bottom line. It is helpful if learners have some familiarity with reading reports, gathering and using data, and interpreting visualizations. It is the first course in the Data-Driven Decision Making (DDDM) specialization. To learn more about the specialization, check out a video overview at <https://www.youtube.com/watch?v=Oi4mmeSWcVc&list=PLQvThJe-IglyYljMrdqwfsDzk56ncfoLx&index=11>.

COURSE_DESCRIPTION: Excel 365 includes various sort and filtering tools, which you can use to analyze the data in a worksheet. You can use these tools to organize and choose what values are shown in a range. The key concepts in this course include how to use filter tools and how to remove duplicate values in a data range. See how to use column filters to filter data and apply multiple filters to values in a worksheet. Create filter arguments using text and number data types to show values that meet defined filter criteria. Finally, you will learn how to sort and filter data according to their background fill color; sort data in a worksheet according to a specific data type; customize the sort options; apply multiple criteria and sort levels, and create and use custom sort lists. In order to practice what you have learned, you will find practice exercises and samples in the Resources section.

COURSE_DESCRIPTION: The versatility of BigML allows you to build supervised learning models without much complexity. In this course, you'll practice constructing a selection of supervised learning models using BigML. You'll start by building an ensemble of decision trees to perform binary classification. Next, you'll build a linear regression model to predict the values of homes in a particular region. You'll then train and evaluate a logistic regression model to illustrate how it can be used to solve similar problems to those solved using ensemble methods. Another BigML capability you'll explore is building a time series plot to make various forecasts. In each demonstration, you'll delve into some optional configurations for the model being trained. Lastly, you'll use the OptiML feature to find the optimal model for your data.

COURSE_DESCRIPTION: This course is for you if you are looking to dive deeper into Six Sigma or strengthen and expand your knowledge of the basic components of green belt level of Six Sigma and Lean. Six Sigma skills are widely sought by employers both nationally and internationally. These skills have been proven to help improve business processes and performance. This course will take you deeper into the principles and tools associated with the "Analyze" phase of the DMAIC structure of Six Sigma. It is highly recommended that you complete the "Yellow Belt Specialization" and the courses "Six Sigma and the Organization (Advanced)" and "Six Sigma Advanced Define and Measure Phase" before beginning this course. In this course, your instructors will introduce you to, and have you apply, some of the tools and metrics that are critical components of Six Sigma. This course will provide you with the advanced knowledge of hypothesis testing and design of experiments as they are associated with Six Sigma and Lean. Every module will include readings, videos, and quizzes to help make sure you understand the material and concepts that are studied. Registration includes online access to course content, projects, and resources but does not include the companion text The Certified Six Sigma Green Belt Handbook (2nd edition). The companion text is NOT required to complete the assignments. However, the text is a recognized handbook used by professionals in the field. Also, it is a highly recommended text for those wishing to move forward in Six Sigma and eventually gain certification from professional agencies such as American Society for Quality (ASQ).

COURSE_DESCRIPTION: Problem framing and algorithm selection is the most important part of any machine learning (ML) project. ML engineers have to apply appropriate techniques that will result in expected prediction behavior. It is important to fully understand a particular task and choose among all the available methods and toolkits before implementing a machine learning project. Use this course to learn more about the ML mindset, discover how goal-oriented business problems can be formulated as machine learning problems, and describe factors that drive the selection of the correct algorithm for a particular scenario. The course will also help you refresh important ML concepts and terminologies. After completing this course, you'll be able to implement machine learning solutions to solve business problems, further preparing you for the AWS Certified Machine Learning - Specialty certification exam.

COURSE_DESCRIPTION: Collaboration is key to getting the most out of your team and ensuring your clients receive their desired service. In this course, you'll learn to collaborate and communicate as an SRE effectively. You'll learn how to run traditional and virtual meetings to ensure maximum effectiveness and productivity, whether it's with customers, internal or external team members, or distributed teams. You'll examine how to plan, carry out, and post-analyze meetings using best practices and sufficient preparation, tailoring these methods to suit the participants and the end-goal. You'll delve into the unique characteristics of different meeting types, such as those for problem-solving or innovation. You'll explore the advantages and challenges of SRE pair programming. You'll then end the course by investigating some helpful collaboration and communication tools.

COURSE_DESCRIPTION: In this 2 hour-long project, you will learn the basics of R programming language. In addition, you will take your first steps in the use of R programming language for Data Analysis. By the end of this 2-hour long project, you will understand how to use the R GUI called R studio. By extension, you will learn the different data types and data structures used in R. Finally, you will learn how to install packages and how to import data sets into the R studio work space. This course is aimed at learners who are looking to get started with the R programming language. There are no hard prerequisites and any competent computer user should be able to complete the project successfully.

 COURSE_DESCRIPTION: Welcome to State Estimation and Localization for Self-Driving Cars, the second course in University of Toronto's Self-Driving Cars Specialization. We recommend you take the first course in the Specialization prior to taking this course. This course will introduce you to the different sensors and how we can use them for state estimation and localization in a self-driving car. By the end of this course, you will be able to: - Understand the key methods for parameter and state estimation used for autonomous driving, such as the method of least-squares - Develop a model for typical vehicle localization sensors, including GPS and IMUs - Apply extended and unscented Kalman Filters to a vehicle state estimation problem - Understand LIDAR scan matching and the Iterative Closest Point algorithm - Apply these tools to fuse multiple sensor streams into a single state estimate for a self-driving car For the final project in this course, you will implement the Error-State Extended Kalman Filter (ES-EKF) to localize a vehicle using data from the CARLA simulator. This is an advanced course, intended for learners with a background in mechanical engineering, computer and electrical engineering, or robotics. To succeed in this course, you should have programming experience in Python 3.0, familiarity with Linear Algebra (matrices, vectors, matrix multiplication, rank, Eigenvalues and vectors and inverses), Statistics (Gaussian probability distributions), Calculus and Physics (forces, moments, inertia, Newton's Laws).

COURSE_DESCRIPTION: Millions of people in the U.S. are being vaccinated for COVID-19. However, the discussion is ongoing as to whether people who are immunocompromised, such as patients undergoing cancer treatment, or people who have autoimmune diseases, should be vaccinated for COVID-19. "Both of those categories (of people) should be vaccinated," says Dr. Gregory Poland, an infectious diseases expert and head of Mayo Clinic's Vaccine Research Group. "Those are not contraindications. Those are indications to get the vaccine." He adds that research is ongoing, but current information demonstrates the benefits far outweigh the theoretical risks. (Published 03/17/2021)

COURSE_DESCRIPTION: Jedes moderne Unternehmen muss mit großen Datenmengen umgehen können. Damit eine Organisation voll und ganz auf Daten ausgerichtet ist, müssen Führungskräfte und Entscheidungsträger eine tiefgreifende Datenkultur etablieren. Machen Sie sich mithilfe dieses Kurses mit den zugrunde liegenden Prinzipien der Datenanalyse und den Begriffen im Zusammenhang mit Daten vertraut, damit Sie Datenprojekte versiert durchführen können. Dieser Kurs erklärt Ihnen die grundlegenden Konzepte und Prozesse im Zusammenhang mit Datenanalyse, modernen Datenquellen und Datenpipelines. Sie lernen außerdem die grundlegenden Prinzipien der Datenspeicherung, -migration und -integration sowie gängige Methoden zur Datenvisualisierung und Berichterstellung kennen. Nach Abschluss des Kurses sind Sie mit grundlegenden Datenkonzepten, der zugehörigen Terminologie und verschiedenen Datenverarbeitungsmethoden bestens vertraut.

COURSE_DESCRIPTION: The "What Is Social?" MOOC is for business owners, executives, and marketing professionals who want to significantly improve their abilities to grow their social strategy using effective, proven methodologies. This hands on, "how to" program won't just tell you how to grow your professional persona using social - you will actually do it! This course is the first in the six-course specialization, Social Media Marketing: How to Profit in a Digital World. While the course can be audited for free, paid learners will receive additional content beyond the course basics. For MOOC 1, the toolkit includes a special video from Alessandro Acquisti on Big Data and a set of studies done by IBM on engagement and social marketing strategies with bottom-line profits. This course has been designed to give you the tools, insights, knowledge, and skills to immediately impact your organization. In addition, we will help you network with thought leaders in social. After completing this course, you and your organization's staff will be able to position, engage, and grow relationships with the consumers of highest value to you. Today, we are living in a period of massive disruption. New technologies are changing the way people engage with each other and with the organizations that interest them. This course will start you on the path to growing your own social strategy using effective, proven methodologies. Additional MOOC 1 faculty include: * Judy Ungar Franks (President, The Marketing Democracy, Ltd. & Lecturer, Medill Integrated Marketing Communications, Northwestern)

COURSE_DESCRIPTION: Data governance helps to ensure data usability, integrity, and security. In this 16-video course, discover how to implement and manage data governance in Microsoft 365, as you prepare for the MS-101: Microsoft 365 Mobility and Security exam. Key concepts covered here include how to import PST files into Office 365; enabling archive mailboxes for users; and how retention policies work with content in place. Next, you will learn how to retain content for a specific period of time; understand the principles of retention and describe how policies are applied to content; and set up a retention policy and learn what you can do with retention labels. Then, learners begin to compare how retention labels work with label policies; become familiar with the relationship between event types, labels, events, and asset IDs; and receive an overview of the file plan manager. You will learn the purpose of inactive mailboxes; learn how to recover and restore an inactive mailbox; and learn to view data governance reports.

COURSE_DESCRIPTION: The third course of the specialization CREATING INNOVATION will teach you what is at the core of all innovations that solve complex problems and how to foster methods to make big breakthroughs possible. It advances your knowledge of your own field by teaching you to look at it in new ways. CREATING INNOVATION is constructed in the following way: Week I. "What is Innovation?" - What lies at the core of all innovations. Week II. "The Evolution of Human Creativity" - How humans developed the ability to innovate and think creatively. Week III. "Innovation in a Complex Global Network" - How innovations emerge from human networks. Week IV. "Planning Innovation" - How organisations seek out and create the right conditions for new breakthroughs. Week V. "Market Innovation" - What makes innovations more likely to emerge in a market setting. Week VI. "Innovation in the Anthropocene" - How innovations are crucial to meet the problems of the 21st century.

COURSE_DESCRIPTION: Being an ethical hacker means, in some ways, that you'll need to assume the identity of a bad hacker. In this course, you'll learn what it means to be a hacker, the common hacker classes, and the five phases of hacking. As an ethical hacker, you may encounter those that don't understand what that means and how a person can use seemingly dangerous skills towards an ethical purpose. You'll examine ethical hacking and how it can be a great tool for helping to create a more secure network. You'll also explore skills and limitations common to ethical hackers. This course is one in a series that helps to prepare you for the Certified Ethical Hacker v11 (312-50) exam.

COURSE_DESCRIPTION: By the end of this project, you will create a marketing analysis report using Google sheets. You will be able to measure, manage and analyze marketing performance to maximize its effectiveness and optimize return on investment (ROI). Beyond the obvious sales and lead generation applications, marketing analysis can offer profound insights into customer preferences and trends, which can be further utilized for future marketing and business decisions. Throughout the project you will be able to acquire the basic Google Sheets skills that are needed to organize your data, create pivot tables and create charts to best showcase your analysis. Along the way, you will be applying and practicing the basic features of spreadsheets, as well as creating reports to use in your future presentations with your managers, resulting in major changes with the company by allocating the resources you have to obtain better results in your department. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

 COURSE_DESCRIPTION: Diversity, equity, and inclusion are necessary for the healthy development and success of individuals and organizations alike. But to achieve those, they have to be more than catchphrases and buzzwords. True DEI and belonging journeys require developing a growth mindset and embracing the perspective that with every person we meet, there's something new to learn. In this course, you'll meet people with compelling stories to tell of how they fought for, and found, a welcoming workplace. By sharing their stories, they offer you an opportunity to learn, understand, and grow in ways that will help you make your own workplace a safe and welcoming place for everyone.

 COURSE_DESCRIPTION: You'll never have a complete picture of what's possible in the future if you look at it from just one point of view. The best way to expand your vision? Engage as many people as you can, and "game out" the possibilities together. In this course, you'll learn how to use collaborative gaming techniques to go beyond your own thinking and see many, many different sides of the same future. Over the past decade, the Institute for the Future has pioneered new methods in "massively-multiplayer foresight." You'll learn how to adapt these methods to get diverse, surprising views of what's possible, build your empathy for other people's futures, and reduce your risk of being "blindsided" by the future. This course features content from the Ethical Operating System, a tool created by the Institute in collaboration with Omidyar Networks' Tech and Society Lab. It's designed to help technology companies anticipate risks and prevent unwanted consequences of the things they build. Whether or not you work in tech, the Ethical Operating System will give you the chance to participate right now in an urgent future forecasting game. The stakes of the game are the future of truth, privacy, democracy, security, and our collective well-being. It's a unique opportunity to join creative and strategic forces with people who are making the tech that's inventing the future, and with fellow futures thinkers like you. Many thanks to the Enlight Foundation and the Enlight Collaborative, which provided a grant to support the creation of this course.

 COURSE_DESCRIPTION: Whether you are accessing a bank website, Netflix or your home router, chances are that your computer is interacting with a Linux system. The world runs on Linux. In this course, we will dive into how Linux works from an enterprise perspective. In week 1 we will look at what Linux is used for in the enterprise. By the end of week 1, you will be able to differentiate between different versions of Linux and understand how they are used in an enterprise environment. In week 2, we will explore how Linux systems are configured. By the end of week 2, you will be able to demonstrate different Linux commands and how they are used. You will also be able to interact with a Linux system. In week 3, we will explore Linux authentication mechanisms and how to add users and user controls to a Linux system. By the end of week 3, you should be able to demonstrate how to appropriately add users to a Linux machine and secure them. In week 4, we will explore how to harden a Linux system. By the end of week 4, you should be able to classify different technologies to secure Linux and differentiate access control methods for Linux applications.

 COURSE_DESCRIPTION: Agile is a widely adopted software product management approach. Implementing Agile methods can result in higher productivity, quality, and customer satisfaction benefits for you, your team, and your organization. Through this course, learn the key advantages and best practices of using Agile for software product management. Discover how Agile values and principles apply in practice. Next, investigate how to transition to Agile from the Waterfall approach. Finally, learn best practices for applying Agile to product management team organization and the work itself, along with key challenges to consider when doing so. After course completion, you'll be able to outline how Agile adds value to software product management.

COURSE_DESCRIPTION: Deploying to the cloud and managing cloud operations are core duties of the AWS Cloud Practitioner role. To do this, you first need to know the AWS tools for the job and how to set them up. In this course, you'll explore the fundamental set-up procedures for cloud deployment and operations through AWS. You'll start by learning the basics of deploying Linux and Windows instances. You'll then illustrate the purposes of and configuration techniques for the following Amazon services: Auto Scaling, Elastic Load Balancing (ELB), Elastic Block Storage (EBS), S3, JSON, AWS CloudFront, and AWS CloudFormation. This course is part of a courseware collection that prepares learners for the AWS Certified Cloud Practitioner 2020 certification.

COURSE_DESCRIPTION: The purpose of this course is to summarize new directions in Chinese history and social science produced by the creation and analysis of big historical datasets based on newly opened Chinese archival holdings, and to organize this knowledge in a framework that encourages learning about China in comparative perspective. Our course demonstrates how a new scholarship of discovery is redefining what is singular about modern China and modern Chinese history. Current understandings of human history and social theory are based largely on Western experience or on non-Western experience seen through a Western lens. This course offers alternative perspectives derived from Chinese experience over the last three centuries. We present specific case studies of this new scholarship of discovery divided into two stand-alone parts, which means that students can take any part without prior or subsequent attendance of the other part. Part 1 (<https://www.coursera.org/learn/understanding-china-history-part-1>) focuses on comparative inequality and opportunity and addresses two related questions 'Who rises to the top?' and 'Who gets what?'. Part 2 (this course) turns to an arguably even more important question 'Who are we?' as seen through the framework of comparative population behavior - mortality, marriage, and reproduction - and their interaction with economic conditions and human values. We do so because mortality and reproduction are fundamental and universal, because they differ historically just as radically between China and the West as patterns of inequality and opportunity, and because these differences demonstrate the mutability of human behavior and values. COURSE_DESCRIPTION: Database Management Essentials provides the foundation you need for a career in database development, data warehousing, or business intelligence, as well as for the entire Data Warehousing for Business Intelligence specialization. In this course, you will create relational databases, write SQL statements to extract information to satisfy business reporting requests, create entity relationship diagrams (ERDs) to design databases, and analyze table designs for excessive redundancy. As you develop these skills, you will use either Oracle, MySQL, or PostgreSQL to execute SQL statements and a database diagramming tool such as the ER Assistant or Visual Paradigm to create ERDs. We've designed this

course to ensure a common foundation for specialization learners. Everyone taking the course can jump right in with writing SQL statements in Oracle, MySQL, or PostgreSQL.

COURSE_DESCRIPTION: Technically, the network interface layer of the TCP/IP model is not described in the family of protocols. But an IP packet cannot travel between devices without using physical media and protocols to access that media. In this course, you'll review how to identify physical layer connectivity options. You'll learn three types of MAC addresses and how to identify different Ethernet frame formats and modifications. You'll also explore the header fields of Ethernet and how they are used, as well as modifications of the Ethernet frame format. Finally, you'll learn about the use of protocol analyzers. In order for internetworking to work, there has to be a way to distinguish which network a device belongs to. This is accomplished with a form of addressing called logical addressing, which is presented by an IP address. In this course, you'll also learn the evolution of IP addressing from classical addressing through class-less addressing. You'll examine how network masking operates. Finally, you'll explore network address translation and the value of variable length subnet masking. This course was originally created by Global Knowledge (GK).

COURSE_DESCRIPTION: Last year companies pledged over 50 billion dollars in diversity, equity, and inclusion (DEI) commitments, showing they are ready to act and invest in change - yet only 250 million dollars has actually been spent. The message is clear; organizations are still not sure where to start. In part one of a special two-part episode featuring individuals from Skillsoft's new DEI courses, TaChelle Lawson, Founder and President of FIG Strategy and Consulting, joins to share her perspective on where we go from here. Her answer? Awareness is only the first step. Next is accountability and process. Please note that this course material includes content gathered from external websites which may fall outside your company network. Please consult with your IT department policies with respect to any restrictions in viewing content from external websites.

COURSE_DESCRIPTION: Many experiments in engineering, science and business involve several factors. This course is an introduction to these types of multifactor experiments. The appropriate experimental strategy for these situations is based on the factorial design, a type of experiment where factors are varied together. This course focuses on designing these types of experiments and on using the ANOVA for analyzing the resulting data. These types of experiments often include nuisance factors, and the blocking principle can be used in factorial designs to handle these situations. As the number of factors of interest grows full factorials become too expensive and fractional versions of the factorial design are useful. This course will cover the benefits of fractional factorials, along with methods for constructing and analyzing the data from these experiments.

COURSE DESCRIPTION: Not only do IT security teams need to be ready to identify security incidents, but they also need to be able to respond to and manage the environment during a crisis. In this course, you'll explore the term 'crisis' and identify crisis management practices. Discover the key components of an organizational crisis readiness program, including planning, training, technology, tools, and continuous improvement. Next, investigate the roles and responsibilities of a crisis management team, examine measures to minimize disruptions, and determine how incident response planning can help organizations better respond to critical incidents. Then, investigate how to best identify incidents and learn how early detection of incidents can be crucial to containing threats. Lastly, explore the various steps of a typical incident response plan, focusing on identification, containment, investigation, eradication, recovery, and lessons learned. After completing this course, you will be able to recognize what constitutes a crisis and respond to and manage security incidents.

COURSE_DESCRIPTION: Google Docs is a web-based word processing tool that can be used to easily create, edit, and view documents of all kinds. This course covers everything you need to get started using the application. First, you will see how to access the web application and navigate the different tools in its interface. Next, the course will teach you how to open documents, whether by creating a new document from scratch or from a template, uploading a file from Microsoft Word, or opening an existing document saved to your Google Drive. You will also discover useful tips to allow you to get started using Google Docs efficiently, such as by quickly applying commands with keyboard shortcuts and choosing the most appropriate document mode for your purpose.

COURSE_DESCRIPTION: The Graph Data Science (GDS) library provides data scientists and developers with the necessary tools to perform powerful analysis of their graph data. In this course, you will look at various use cases of GDS and cover some of its essential operations. Begin with an overview of the GDS library and then dive into using the library by building in-memory graphs from the contents of your Neo4j database. Explore how to build graphs using native and Cypher projections. Next, apply a graph algorithm to your GDS graph and see how it can be used to obtain meaningful information about the nodes and relationships in your data. After completing this course, you will have a fundamental understanding of the GDS library for Neo4j and the necessary capabilities to build your own in-memory graphs and extract significant insights.

COURSE_DESCRIPTION: Neben Bildern und Text können Sie durch das Hinzufügen von Formen und anderen grafischen Elementen zu Ihren Folien eine vollständige, abgerundete Präsentation erstellen. Dieser Kurs befasst sich mit den Grundlagen der Verwendung und Formatierung von grafischen Elementen in PowerPoint 365. Insbesondere lernen Sie, wie Sie Textkontur und Formen einfügen und deren Größe ändern können. Sie werden sehen, wie Sie diese Objekte formatieren können, indem Sie Füllungen, Konturen und Effekte ändern, und Sie werden Werkzeuge entdecken, die Ihnen helfen, verschiedene Elemente präzise auf der Folie zu positionieren. Sie werden auch sehen, wie diese verschiedenen Elemente zueinander in Beziehung stehen, indem Sie lernen, wie Sie sie mit anderen Objekten ausrichten, sie als ein Element gruppieren und die Stapelreihenfolge ändern können. Möchten Sie das Gelernte praktisch üben? Gehen Sie zum Bereich Kursinhalt oder zum Abschnitt Ressourcen und laden Sie die Beispieldateien herunter, die Sie zusammen mit ausgewählten Videos verwenden können.

COURSE_DESCRIPTION: Image processing has been used to create weird and beautiful modifications to pictures many of us have seen online. Older black and white photos can be brought to life using colorization techniques. On the other hand, color photos can be made to look like old black and white photos. In addition to distorting images for entertainment, image processing can be used for more serious applications, for example, to enhance medical imaging to screen patients for cancer or other diseases. In this tutorial, you will create a Python application that reads from a list of

images, modifies their size and appearance, and saves the images in another directory. Note: This tutorial works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE DESCRIPTION: Explore how IT management frameworks provide a structured approach to managing and auditing IT assets and how risk assessments often drive the IS audit in this 11-video course, helping learners prepare for the ISACA Certified Information Systems Auditor (CISA) exam. Key concepts covered in this 11-video course include: how IT governance provides a structured approach to ensuring IT solutions are aligned with business goals, including outsourced tasks; how Control Objectives for Information and Related Technologies (COBIT) can ensure business objectives are met by aligning appropriate IT processes; and how Information Technology Infrastructure Library (ITIL) practices can streamline IT service delivery. Learn how International Organization for Standardization (ISO)/International Electrotechnical Commission (IEC) standards can result in proper IT governance; how risk management can improve business operations; how to map various risk treatments to threats; and how the Business Model for Information Security (BMIS) encompasses information security planning, implementation, and management. Finally, learn how the Information Technology Assurance Framework (ITAF) is an assurance that an audit is done properly; the purpose of IT balanced scorecards; and how to map common framework characteristics to IS audits.

COURSE_DESCRIPTION: In this course, you will explore the differences between the Agile process and the waterfall method and examine the steps involved in the basic Agile project management process. Begin this 14-video course by learning how the Agile process applies to project management and how it differs from the waterfall method. Then discover the steps involved in the basic Agile project management process; examine the manager's role in a self-organizing team; and identify roles and responsibilities of Agile team members. Delve into best practices when transitioning from traditional software project management to Agile; identify how to build strong Agile teams; and look at methods and technologies for promoting Agile collaboration within teams. You will recognize Agile project management artifacts, and the types of Agile management tools with examples of each. Learners can explore the Agile lifecycle; the significance of continuous integration by using the Agile process; and learn about Agile assessments and how to migrate an organization to the Agile methodology. To conclude the course, learners follow an exercise involving understanding Agile project management practices.

COURSE_DESCRIPTION: In this short project-based course, you will learn how to extend your Blazor applications to communicate with JavaScript - the browser's first class language. You'll learn how to invoke JavaScript functions from .NET code, and how to invoke .NET methods from JavaScript. You'll also implement a solution for accessing the browser's localStorage with a .NET service class. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Once you've assessed an organization's risks, you need to implement continuous visibility and reporting to understand risk evolution. Furthermore, once you've established security policies and controls, you need to test and evaluate them to confirm their efficacy. To meet these goals, security practitioners need to know how to uncover vulnerabilities, identify events of interest, monitor logs, and analyze metrics. Use this course to learn security and vulnerability assessment techniques and methodologies. Explore security testing, risk review, and vulnerability management. Examine data logging and event aggregation. Learn how to implement monitoring and event data analysis. And see how to document and communicate findings. Upon completion, you'll be able to identify, monitor, and analyze security risks. You'll also be further prepared to sit the (ISC)² Systems Security Certified Practitioner (SSCP) 2021 exam.

COURSE_DESCRIPTION: This 16-video course, used in preparation for AZ-400 Microsoft Azure DevOps Solutions certification exam, explores several tools available in Azure to create infrastructure as code. First, learners will examine ARM (Azure Resource Manager), the management layer for all operations in Azure, and learn how to use Nested Resource Templates to deploy and configure resources on Azure's cloud platform. Next, you will learn to use ARM templates to deploy new resources, provide configuration settings, and to retrieve information stored in other places, for example, retrieving secrets from Azure Key Vault. Then explore Terraform, a utility for managing infrastructure as code, and Chef, an automation tool to automate deployment of applications and their dependencies, and to accelerate and standardize infrastructure configuration. You will explore Ansible to deploy and manage infrastructure as code; learn to use AKS (Azure Kubernetes Service) with Ansible; and learn to use Helm to manage Kubernetes applications. Finally, learners will use Azure DevOps projects to scale applications.

COURSE_DESCRIPTION: Software developers have a variety of PaaS solutions at their disposal in AWS. In this course, you'll identify these tools to use and learn how to use them. You'll start by exploring the concept of continuous integration and continuous deployment and its implementation via AWS. Next, you'll list some AWS APIs before learning how to deploy message queues and SNS topics. You'll investigate how serverless code is implemented in AWS through Lambda functions. You'll then create a function using AWS Lambda before deploying a container image repository in Amazon Elastic Container Registry. Lastly, you'll learn how to deploy app stacks using Opsworks and Elastic Beanstalk. This course is one of a collection that prepares learners for the AWS Certified SysOps Administrator - Associate (SOA-COI) exam.

COURSE_DESCRIPTION: Aging has been coined as one of the major societal challenges. The fact that we simply live longer, is in itself not a problem but rather a triumph. However, this unprecedented demographic change significantly affects individual life histories through an increased number of e.g. lifestyle related chronic diseases. These extra life years, also have a massive imprint on the organization of welfare institutions and the financial sustainability of the welfare system. This course will introduce you to healthcare innovation within the field of healthy living and active aging. By following two specific cases on diabetes and rehabilitation, this interdisciplinary course will provide you with key theories, tools and concepts for analyzing and developing viable innovative solutions for aging populations. The lectures will cover demographic, biological, economic, social and cultural aspects of active aging and healthy living, along with lectures on current innovation theories and methods. During the course you will meet leading researchers and experts from among others: University of Copenhagen, Copenhagen Business School, Steno Diabetes Center in Copenhagen and Erasmus University of Rotterdam. They work with very different aspects of active aging and healthy living, from biomedicine to digital design, but what ties them together is the belief that an interdisciplinary approach to healthcare innovation will benefit the aging population. The course is part of the EIT Health Campus programme <https://www.eithealth.eu/campus>. We hope you will enjoy this course and equip yourself to take a more professional approach to healthcare innovation.

COURSE_DESCRIPTION: Um die Diversität am Arbeitsplatz zu verstehen und zu schätzen, müssen wir ein Verständnis für uns selbst und für die verschiedenen Arten, wie wir die Welt sehen, entwickeln. Die Arbeit in einer diversen und inklusiven Belegschaft bringt viele persönliche und berufliche Vorteile mit sich, die von verbessertem Wohlbefinden und persönlicher Gesundheit über Engagement und Gemeinschaft bis hin zu Innovation und Kreativität reichen. Ebenso wichtig ist die Fähigkeit, die einzigartigen Talente, Fähigkeiten und Beiträge jedes Einzelnen zu nutzen. In diesem Kurs lernen Sie Strategien kennen, die Ihnen helfen, sich für Diversität, Chancengleichheit und Inklusion am Arbeitsplatz einzusetzen. Sie werden lernen, ein Bewusstsein für Ihre Werte und Ihre soziale Sichtweisen zu entwickeln und spezifische Maßnahmen zu erkennen, die die sozialen und kulturellen Aspekte von DEI verbessern können. Sie werden auch die Schlüsselkonzepte der Verbündetheit, Methoden für eine inklusivere Kommunikation und das RISE-Modell kennenlernen, um ein Verbündeter der DEI zu werden.

COURSE_DESCRIPTION: Our primary goal is to help you to understand FinTech and to become more confident and persuasive in your ability to analyze and make recommendations to executives within the finance industry regarding how to react to these changes. This FIRST MOOC ON FINTECH IN ASIA-PACIFIC offered by HKUST presents the insight of several professors from the top business school in Asia as well as perspectives from industry professionals. HKUST has been ranked for many years as the No.1 EMBA program in the world, as the number one Finance program in Asia, and as the top MBA program in Asia by multiple independent rating and review journals and surveys. This course "FinTech Foundations and Overview" offers the combined strengths of HKUST in Business, Finance, and Technology as one of the world's leading academic institutions on an important area of technology and business innovations. For learners from outside Asia, this also gives an insight into changes happening in the most advanced FinTech markets of the world, since Asia leads worldwide in FinTech adoption and creative innovations.

COURSE_DESCRIPTION: In this course we adopt the object-oriented analysis and design (OOAD) methodology for developing computer programs. This methodology guides the developer into the proper structure for developing programs. We will begin by looking at this methodology to see how it helps the programmer develop better computer programs and consider how this approach compares to the traditional procedural style of software development. Next, we will discuss design patterns and take a look at how object-oriented relationships work. Finally, you will use an object-oriented programming (OOP) approach to solving programming problems and developing code based on your solutions. After completing this course, you'll be able to outline the object-oriented analysis and design (OOAD) approach to solving programming problems.

COURSE_DESCRIPTION: The Internet of Things (IoT) stands to be the next revolution in computing. Billions of data-spouting devices connected to the Internet are already fundamentally changing the way we live and work. This course teaches a deep understanding of IoT technologies from the ground up. Students will learn IoT device programming (Arduino and Raspberry Pi), sensing and actuating technologies, IoT protocol stacks (Zigbee, 5G, NFC, MQTT, etc), networking backhaul design and security enforcement, data science for IoT, and cloud-based IoT platforms such as AWS IoT. As an optional honors activity, students will be guided through laboratory assignments designed to give them practical real-world experience, where they will deploy a distributed wifi monitoring service, a cloud-based IoT service platform serving tens of thousands of heartbeat sensors, and more. Students will emerge from the class with a cutting-edge education on this rapidly emerging technology segment, and with the confidence to carry out tasks they will commonly encounter in industrial settings. Important: To complete the practical part of the whole series (honors) there will be practical experimentation using actual hardware, which you will need to acquire. (Cost may vary between 100 and 200 USD depending on your location). Most parts that are needed for the first course, will be re-used in the following courses.

COURSE_DESCRIPTION: This is Course 3 in the Salesforce Sales Development Representative Professional Certificate. In order to successfully complete the course, please ensure you have taken Course 1: Groundwork for Success in Sales Development and Course 2: Foundations for Interviewing with Confidence. This course will dive into the 8 principles of SV Academy's Conversational Selling Methodology, which will optimize you for success. You'll be able to integrate these principles not only in the real world, but in your career. Additionally, you'll be taught SV Academy's unique approach to objection handling and framework for high-quality prospecting. Course 3 in the Sales Development Representative (SDR) Professional Certificate will give you the necessary skills to launch a career in the non-technical side of the tech industry. By the end of the course, you will be able to: - Understand the process of asking strategic questions, establishing trust, identifying pain points and proposing value in efforts to closing a sale - Identify and empathize with your Ideal Customer Profile (ICP) and target persona to build a high-quality lead list, efficiently qualify prospects, and leverage data to drive activity - Investigate various outreach channels and generate a call script incorporating Conversational Selling strategies - Develop a foundation for emotional intelligence in a sales context and generate an empathetic email - Generate a multi-channel sales strategy to outreach prospects via phone, email, video, and social media To be successful in this course, you should have: - An ability to communicate in verbal and written form in a way that is accessible and understandable by a general audience (you don't need to be formal or refined) - Baseline computer literacy (you must be able to use a word processor, web search, and email) - Familiarity with social media, including LinkedIn - Ability and willingness to learn new technology tools - Motivation to grow personally and professionally - Hunger for feedback and coaching - Successfully completed the previous courses in this training

COURSE_DESCRIPTION: This course examines the most mature and widely used language for coding smart contracts, Solidity. The 12-video series assumes a reasonably broad understanding of Solidity language; you should also be familiar with different types of functions and data structures available, needed here to build a number of decentralized applications (dApps). Begin by refining an application used to conduct a poll, then implement a smart contract which functions as an escrow. Watch how the different types of data structures in the Solidity programming language operate. Explore different types of functions, including the payable functions which collect ether in a smart contract. Next, build a smart contract application which mimics a bank, with customers represented by their Ethereum account addresses, and each account can have an Ether balance. By completing the course labs, you will incorporate all the skills needed to build the back end of any decentralized application. With some additional Javascript knowledge, you need only integrate your front end with your smart contract in order to become a full-stack blockchain developer.

COURSE_DESCRIPTION: By the end of this guided project, you will be fluent in identifying, and mapping variables for Gap Analysis using a hands-on example. This will enable you to map business states from the AS IS to the TO BE state which is important in for preparing and managing change in professional and personal life. Change happens all the time and in being able to identify factors involved in change and preparing to manage change you increase your chances for success. This analysis will help you if you are in: + Strategy development + Program Management + Project Management + Business Process Re-Engineering + Product Development + Organisational Development And much more. On a personal level this analysis can help you to map where you are and where you want to be for example: + Competing in sports + Having a professional goal + Developing a good habit Furthermore, this guided project is designed to engage and harness your visionary and exploratory abilities. You will use proven models in change management with Miro to identify the gaps in products/services, and further equip you with the knowledge to utilise the learned concepts, methodologies, and tools to prepare for change in various settings.

COURSE_DESCRIPTION: Windows 10 clients offer sophisticated integrated security features that make network administration easier for small and large enterprises. With a large range of security controls that can be configured at the administrative level, Windows 10 clients provide an added layer of network security. With this course, learn about Key Windows 10 integrated security features. Explore Windows 10 security management, beginning with Microsoft Defender Antivirus and threat protection, account protection, and Windows Defender Firewall. Next, learn about Windows Defender Credential Guard, app and browser control, device security, and device performance and health. Finally, examine family options, BitLocker Drive Encryption, and Windows 10 security best practices. This course is part of a series preparing learners for the MD-100: Windows Client exam.

COURSE_DESCRIPTION: This 8-video course explores how to enrich a Word for Office 365 document by inserting content, charts, equations, and how to add data from an Excel spreadsheet. First, you will learn how to access the AutoText and Quick Parts galleries to save and easily insert frequently used items or groups of items into other documents. You will learn to use AutoText for smaller items like names or numbers, while Quick Parts is used for larger items like graphics. Then learners will observe how to insert equations directly into Word by copying an equation from an online source, inserting it from a preset, or by creating one's own equation. You will learn how to customize a chart, and manage the data table without using a separate spreadsheet application. Learners will observe how to customize a chart by using Word's presets, alter individual elements to give charts a personal style, and to label charts to contextualize data and statistics. Finally, you will learn how to insert charts and tables from Excel into Word.

COURSE_DESCRIPTION: In this course, you will learn best practices for how to use data analytics to make any company more competitive and more profitable. You will be able to recognize the most critical business metrics and distinguish them from mere data. You'll get a clear picture of the vital but different roles business analysts, business data analysts, and data scientists each play in various types of companies. And you'll know exactly what skills are required to be hired for, and succeed at, these high-demand jobs. Finally, you will be able to use a checklist provided in the course to score any company on how effectively it is embracing big data culture. Digital companies like Amazon, Uber and Airbnb are transforming entire industries through their creative use of big data. You'll understand why these companies are so disruptive and how they use data-analytics techniques to out-compete traditional companies.

COURSE_DESCRIPTION: In this course, you will: - Learn about GANs and their applications - Understand the intuition behind the fundamental components of GANs - Explore and implement multiple GAN architectures - Build conditional GANs capable of generating examples from determined categories The DeepLearning.AI Generative Adversarial Networks (GANs) Specialization provides an exciting introduction to image generation with GANs, charting a path from foundational concepts to advanced techniques through an easy-to-understand approach. It also covers social implications, including bias in ML and the ways to detect it, privacy preservation, and more. Build a comprehensive knowledge base and gain hands-on experience in GANs. Train your own model using PyTorch, use it to create images, and evaluate a variety of advanced GANs. This Specialization provides an accessible pathway for all levels of learners looking to break into the GANs space or apply GANs to their own projects, even without prior familiarity with advanced math and machine learning research.

COURSE_DESCRIPTION: Do you want to gain a competitive edge on the job market? Would you like to improve the way that you organize, manage, and present your skills to succeed in a competency-based, competitive job selection? Have you prepared to compete for jobs in the age of AI-powered recruiting? This advanced, project-centered course* is designed for working professionals who want to direct their skill-building activities towards creating powerful, evidence-based, data-driven, and externally verified job applications. When you complete the course, you'll be able to objectively measure your level of skills acquisition against your desired job's requirements and the likely competition. You'll learn how to use experiential methods and tools, such as simulations, benchmarking, competency dashboards, and skills assessment to operationalize and quantify your skills. You will know how to realistically estimate your likely score in the competitive job selection; you will also find out how much of each skill you need to develop to stand out and beat the competition. In addition to improving your job applications, the course will teach you how to increase the effectiveness of your ongoing professional development by monitoring the level of skills acquisition. The course will provide you with tangible outcomes for immediate use. We'll show you how to use a simple, powerful computer program to organize and manage your skills inventory. Your completed project will focus on your desired job and will include three components: 1) a Skillset Summary Checklist; 2) a Selection Criteria Statement; and 3) a Professional Development Plan. Upon completion of the course, you will be able to use the results of the project to strengthen your next job application (or promotion request). You'll be able to use the same technique to direct your skill-building activities and continuously monitor their effectiveness. What is required: In the course, we'll provide videos, readings, and learning activities. There is an optional course companion book available for purchase on Amazon.com. In the course, you'll be asked to download and use the course software, "J.A.F.A.R, Skills Manager Pro (R)." The software is a copyrighted Excel spreadsheet template; for course participants, it is provided free of charge (for personal, non-commercial use only). To use the software, you will need to have a basic level of proficiency and a licensed copy of MS Excel. *About Project-Centered Courses: Project-centered courses are designed to help you complete a personally meaningful real-world project, with your instructor and a community of like-minded supportive learners with similar goals providing guidance and suggestions along the way. By actively applying new concepts as you learn, you'll master the course content more efficiently; you'll also get a head start on using the skills you gain to make positive changes in your life and career. When you complete the course, you'll have a finished project that you'll...

COURSE_DESCRIPTION: Code and run your first python program in minutes without installing anything! This course is designed for learners with limited coding experience, providing a solid foundation of not just python, but core Computer Science topics that can be transferred to other languages. The modules in this course cover lists, strings, and files. Completion of Python Basics: Selection and Iteration before taking this course is recommended. To allow for a truly hands-on, self-paced learning experience, this course is video-free. Assignments contain short explanations with images and runnable code examples with suggested edits to explore code examples further, building a deeper understanding by doing. You'll benefit from instant feedback from a variety of assessment items along the way, gently progressing from quick understanding checks (multiple choice, fill in the blank, and un-scrambling code blocks) to small, approachable coding exercises that take minutes instead of hours.

COURSE_DESCRIPTION: The COVID-19 pandemic has revealed how quickly life can change. That's evident in people's personal lives and across the scientific community. Remarkable advances have been made in science over the past year, guided by international research collaborations. "When you look at nine months from when we first identified this pathogen to having a vaccine, that's as close to a human miracle, if I could use that term, as as one could expect," says Dr. Gregory Poland, an infectious diseases expert and head of Mayo Clinic's Vaccine Research Group. But he says there have been some frustrations. "As soon as we make some progress, everybody wants to open up and relax restrictions," says Dr. Poland. "Opening up and getting back to normal is not a light switch." (Published 03/10/2021)

COURSE_DESCRIPTION: The second course in the Salesforce Sales Operations Professional Certificate, Lead Management in Salesforce, is for anyone who is curious about entry level sales roles that require foundational skills in Salesforce, the sales operations specialist role specifically, and how to use tools in Salesforce to manage leads in a real world business setting. This second course will give you a foundational understanding of how to help sales and marketing teams optimize the lead management process. Specifically, this course shows how a sales operations specialist would support a marketing associate and sales development representative to make the lead management more effective and efficient. You will learn the basics of data management, how to upload lead data into Salesforce, and then how to effectively train team members to manage leads using the different tools available in the Salesforce Sales Cloud. These are crucial skills for anyone interested in entry level sales jobs. For this course, it is recommended (but not required) that you have some background knowledge of sales and CRM, as well as an understanding of the basics of Salesforce platform navigation. If you're a total beginner with these concepts, you can still be successful in this course - however, it might require some additional work on your part. By enrolling in this course, you are taking the next step to kickstarting your career in Salesforce. Congratulations on continuing this exciting journey!

COURSE_DESCRIPTION: This course explores the prominent frameworks for testing Python-based applications, how to implement tests using Pytest and PyCharm, and also Pytest test parameterization. Begin this 14-video course with a look at the concept of automated testing and classifying the different types of automation testing. Then view the prominent Python testing frameworks, and features of DocTest, Nose, and unittest that can be used to automate testing of Python-based applications. Discover how to implement unit testing in Pytest by using the PyCharm integrated development environment (IDE), and the procedure to parameterize tests by using Pytest. Learn about configuring Robot and executing Python tests using the Robot framework; build and test application programming interfaces (API) using Flask, and explore the process of testing APIs built in Flask using Postman. Also learn how to configure the Behave framework for Python testing by writing feature files. To conclude the course, learners observe how to automate testing of web components by using Selenium with Python.

COURSE_DESCRIPTION: Schwierige Gespräche mit unterstellten Mitarbeitern, Kollegen oder einem anderen Manager können für einen Manager viel Stress bedeuten. Eine falsche Gesprächsführung kann Ihren Beziehungen am Arbeitsplatz schaden und Sie in Bezug auf Ihre Fähigkeiten verunsichern. Das können Sie verhindern, indem Sie sich gut vorbereiten und die richtige Einstellung mitbringen. In diesem Kurs lernen Sie die Grundregeln für die Bestimmung des Zeitpunkts und des Orts für ein schwieriges Gespräch kennen und erfahren, wie Sie mit dem damit verbundenen Stress umgehen. Sie erfahren, wie Sie sich in vier Schritten auf das Gespräch vorbereiten, damit Sie das Gespräch selbstsicher und konstruktiv führen können. Schließlich lernen Sie, wie Sie im Gespräch die richtige Einstellung demonstrieren, sodass die besten Ergebnisse erzielt werden.

COURSE_DESCRIPTION: In this course you will learn and practice techniques of user research and early UI design exploration. First, you will learn and practice several techniques for user research, including in-person research and survey and log-analysis techniques. Then, you will learn to analyze and deliver user research in forms that support UI design, including personas, use cases, tasks, and scenarios. Finally, you will learn and practice ideation techniques that start from user research and broadly generate potential design ideas.

COURSE_DESCRIPTION: In this fourth and final course of the specialization, you will synthesize your learning into a Strategic Action Plan. The goals of this course are twofold: One, it's for you to identify a specific need or problem within the financial services industry that can potentially be solved using blockchain technology. Two, it's for you to investigate possible solutions to this problem, and to develop a strategic plan for how these solutions might be executed. You will accomplish different project milestones each week, and will be introduced to several tools to organize your findings. Throughout this process, you will hear from real-world practitioners who have hands-on experience in the blockchain ecosystem. Additionally, by participating in this course you will gain access to our Blockchain Case Commons-a crowdsourced collection of blockchain applications and use-cases spanning multiple industries. As an outcome of this course, you will walk away with a consolidated, peer-reviewed Strategic Action Plan, which you can use to pitch your idea to your organization and/or potential investors.

COURSE_DESCRIPTION: Virtual Private Cloud (VPC) peering allows for service and network connectivity between VPCs and various AWS services. Virtual Private Networks (VPNs) allow for secured connections to AWS and Direct Connect provides dedicated network circuits to AWS. In this course, you will learn about managing AWS network configurations related to VPC peering, VPNs, Direct Connect, and network gateways. Discover when to use VPC peering, how to enable VPS peering using the console, and how endpoints are used for AWS service connectivity. Next, learn how to configure site-to-site and client VPN connections to AWS. Finally, practice configuring various network gateways. This course can be used to prepare for exam SAP-C02, AWS Certified Solutions Architect - Professional.

COURSE_DESCRIPTION: This course explores DevOps implementation, and the tools used to implement automated deployment, deploy pipelines, manage containers, and monitor DevOps processes to achieve higher levels of customer or end-user satisfaction and retention. You will learn about container management and how to use software or applications to create, deploy, and scale containers. Next, learn to automate release management with Puppet Pipelines. Then learn how to implement Kibana dashboards, an open source data visualization dashboard for Elasticsearch, and to add visualizations, saved searches, and maps for side-by-side analysis. This 13-video course next demonstrates how to implement an end-to-end continuous delivery process by using Puppet, Chef, and Jenkins in our own data center to deploy or distribute codes across different nodes and manage the entire DevOps cycle. You will work with an AWS (Amazon Web Services) fully managed continuous service CodePipeline. Learners will explore tool selection criteria to build a DevOps implementation stack. Finally, this course demonstrates the planning phase by utilizing Atlassian's JIRA.

COURSE_DESCRIPTION: This 13-video course explores machine learning predictive analytics, and how its application can drive revenues, reduce costs, and provide a competitive advantage to businesses. Learners will observe the predictive modeling process and how to apply tools and techniques for performing predictive analytics, and how to use historical data to identify trends and patterns to forecast future events. First, you will learn about the predictive modeling process, the statistical concepts for predictive modeling, and regression techniques. This course uses two examples to demonstrate commonly used methods of predictive analytics, by examining decision trees and SVMs (support vector machines). Next, you will learn about survival analysis, market basket analysis, and how to apply data for cluster models. You will learn about random forests in predictive analytics, and you will examine probabilistic graphical models. Learn about classification models, and how to organize data into groups based on predicting the class of the data points. Finally, you will explore some best practices for predictive modeling.

COURSE_DESCRIPTION: With the Google Chat iOS app, you can easily communicate and collaborate from your mobile device. This course covers the fundamental skills you will need to be proficient in the app. First, discover the app interface, and see how to start conversations and exchange messages. See options for managing conversations and discover how to share and send files, video meetings, and events. Next, the course introduces you to spaces, a kind of group chat for collaborating in teams. In particular, you will learn how to create or join a space, take part in space threads and topics, and use spaces to share files and tasks. You will also discover some tools to optimize how you use the app. Learn how to find messages with the search tool and configure the app settings to better suit your needs. Finally, see how to install apps to get added functionality.

COURSE_DESCRIPTION: Role-based access control is an approach to restricting system access to authorized users. Kubernetes supports multiple authorization modules, including role-based access control, which works using Role, ClusterRole, RoleBinding, and ClusterRoleBinding objects, which are declared using RBAC API. In this course, you'll explore the concept of authorization and the authorization modes supported by Kubernetes. You'll investigate how to control access to the Kubernetes API server, including the prominent principles for planning and implementing Kubernetes role-based access control, the features of Role, ClusterRole, RoleBinding, and ClusterRoleBinding objects. Next, you'll utilize kubectl subcommands and commands to query the API authorization layer, enable the NamespaceLifecycle and LimitRanger admission control plugins, and get a list of existing Roles, ClusterRoles, RoleBindings, and ClusterRoleBindings from Kubernetes clusters. You'll then create a file and use it to create a Role, ClusterRole, RoleBinding, and ClusterRoleBinding. Next, you'll create kubeconfig files to allow users to perform operations in Kubernetes cluster Namespaces. Finally, you'll implement Aggregated ClusterRole and use the AggregationRule to define label selectors and match other ClusterRole objects.

COURSE_DESCRIPTION: Bayesian models are the perfect tool for use-cases where there are multiple easily observable outcomes and hard-to-diagnose underlying causes, using a combination of graph theory and Bayesian statistics. Use this course to learn more about stating and interpreting the Bayes theorem for conditional probabilities. Discover how to use Python to create a Bayesian network and calculate several complex conditional probabilities using a Bayesian machine learning model. You'll also examine and use naive Bayes models, which are a category of Bayesian models that assume that the explanatory variables are all independent of each other. Once you have completed this course, you will be able to identify use cases for Bayesian models and construct and effectively employ such models.

COURSE_DESCRIPTION: This course focuses on one of the most important tools in your data analysis arsenal: regression analysis. Using either SAS or Python, you will begin with linear regression and then learn how to adapt when two variables do not present a clear linear relationship. You will examine multiple predictors of your outcome and be able to identify confounding variables, which can tell a more compelling story about your results. You will learn the assumptions underlying regression analysis, how to interpret regression coefficients, and how to use regression diagnostic plots and other tools to evaluate the quality of your regression model. Throughout the course, you will share with others the regression models you have developed and the stories they tell you.

COURSE_DESCRIPTION: Explore the world of spatial analysis and cartography with geographic information systems (GIS). In this class you will learn the basics of the industry's leading software tool, ArcGIS, during four week-long modules: Week 1: Learn how GIS grew from paper maps to the globally integrated electronic software packages of today. You will install ArcGIS on your computer and learn how to use online help to answer technical questions. Week 2: Open up ArcGIS and explore data using ArcMap. Learn the foundational concepts of GIS, how to analyze data, and make your first map. Week 3: Make your own maps! Symbolize data and create an eye-catching final product. Week 4: Share your data and maps and learn to store and organize your data. Take Fundamentals of GIS as a standalone course or as part of the Geographic Information Systems (GIS) Specialization. By completing the first class in the Specialization you will gain the skills needed to succeed in the full program. Students who need an ArcGIS license will receive a non-commercial, 1 year student license for participation in this course and specialization.

COURSE_DESCRIPTION: The process of authenticating entities such as end users has evolved well beyond the simple username and password credential modality. As modern enterprises build towards zero-trust environments, the demand for more robust authentication and identity solutions are emerging. In this course, explore different authentication methods and capabilities such as self-service password reset, password protection, and multi-factor authentication schemes. Discover Azure AD Conditional Access and the benefits of Azure AD roles. Next, examine Azure AD Identity Governance, entitlement management, access reviews. Finally, take a look at the robust capabilities of Privileged Identity Management (PIM) and Azure AD Identity Protection. This is one of a collection of courses that fully prepare the learner for the SC-900 Microsoft Security, Compliance, and Identity Fundamentals certification exam.

COURSE_DESCRIPTION: This course prepares you to effectively participate in a connected world. Metaliteracy advances reflective and empowered learning in collaborative communities. You will learn how to creatively and ethically produce and share information. As a metaliterate learner, you will see yourself as an informed content creator and a responsible contributor to information environments. Metaliteracy is empowering because it encourages individuals to be reflective and to take charge of their learning. This approach is relevant to anyone who wants to be an informed consumer of information and responsible participant in a connected world. This requires an understanding of copyright and open licensing through the Creative Commons. It also involves Digital Storytelling as a creative form of information production. Metaliteracy supports learners in a variety of professional fields and academic disciplines to become effective contributors to collaborative communities. Being a metaliterate learner includes self-reflection and critical thinking while successfully adapting to new forms of technology.

COURSE_DESCRIPTION: Code and run your first C++ program in minutes without installing anything! This course is designed for learners with limited coding experience, providing a solid foundation of not just C++, but core Computer Science topics that can be transferred to other languages. The modules in this course cover inheritance, encapsulation, polymorphism, and other object-related topics. Completion of the prior 3 courses in this specialization is recommended. To allow for a truly hands-on, self-paced learning experience, this course is video-free. Assignments contain short explanations with images and runnable code examples with suggested edits to explore code examples further, building a deeper understanding by doing. You'll benefit from instant feedback from a variety of assessment items along the way, gently progressing from quick understanding checks (multiple choice, fill in the blank, and un-scrumbling code blocks) to small, approachable coding exercises that take minutes instead of hours.

COURSE DESCRIPTION: Cloud storage provides virtually unlimited capacity for AWS customers. Through this course, learn more about the Amazon Simple Storage Service (S3) bucket usage and configuration settings. Begin by examining how to deploy and manage S3 buckets using the AWS Management Console, AWS CLI, and AWS Tools for PowerShell. You'll then work with CloudFront and learn how to enable static website hosting for an S3 bucket. This course will also help you discover the steps involved in configuring a cloud-based file share using Amazon Elastic File System (EFS) and deploying AWS Storage Gateway to link on-premises storage to cloud storage. Upon completion of this course, you'll have the skills to implement AWS storage management solutions and be further in your journey of preparing for the AWS Certified SysOps Administrator - Associate exam, SOA-C02.

COURSE_DESCRIPTION: Workhorse visualizations, such as line charts, column charts, and bar charts, are beneficial in all visualization use cases. Microsoft Power BI does a great job of making these common charts easy to put together and thoroughly customizable. Take this hands-on course to learn how to create and customize various chart types using Power BI. Learn how to create and customize column charts and bar charts from imported data. Explore how to import time-related data using Power Query and transform it into line charts. Then, experiment with multiple formatting operations on the line chart. Upon course completion, you'll be able to build line, bar, and column charts that are engaging and meaningful and be ready to learn how to create more advanced charts, including ribbon and pie charts. This is one of a series of four paths that can be used to prepare for the DA-100: Analyzing Data with Microsoft Power BI exam.

COURSE_DESCRIPTION: In this 1-hour 30-minute long project-based course, you will learn how to set up a Node project and your development environment, create a basic express server and routes, set up a MongoDB Database and Mongoose models, and implement Twitter functionality (CRUDs). By the end of this project, you will create a fully functioning backend server for a Twitter clone with Node, express and MongoDB. You will have enough knowledge to start working on any backend projects comfortably. This project will give you a head start into backend development which could lead to, if pursued and expanded on properly, a brand new back-end development career. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: By the end of this guided project, you will be able to analyze, and set the right strategic direction for your organization using the Strategic Position and Action Evaluation (SPACE) Matrix. SPACE Matrix is a strategic management tool that focuses on strategy formulation especially as it relates to competitive position of an organization. The axes of the matrix represent two internal dimensions -Financial Stability (FS) and Competitive Advantage (CA), and two external dimensions-Environmental Stability (ES) and Industry Attractiveness (IA). Essentially, the four-quadrant framework indicates whether aggressive, conservative, defensive, or competitive strategies is the most appropriate for a given organization. We will use spreadsheet to sketch and analyze the framework to determine the best strategic position for our organization. Also, we will use an energy services company to practically demonstrate how the model works, as we analyze the company with the matrix. The project is for business leaders who want to set strategic direction for their organizations given the operational and environmental conditions they have to contend with. Also, for strategist who are interested in helping organization in making informed strategic decisions. At the end of the project, you will be able to design, analyze, and create a competitive advantage for your organization using the SPACE Matrix

COURSE_DESCRIPTION: Build on the software engineering skills you learned in "Java Programming: Solving Problems with Software" by learning new data structures. Use these data structures to build more complex programs that use Java's object-oriented features. At the end of the course you will write an encryption program and a program to break your encryption algorithm. After completing this course, you will be able to: 1. Read and write data from/to files; 2. Solve problems involving data files; 3. Perform quantitative analyses of data (e.g., finding maximums, minimums, averages); 4. Store and manipulate data in an array or ArrayList; 5. Combine multiple classes to solve larger problems; 6. Use iterables and collections (including maps) in Java.

COURSE_DESCRIPTION: This course describes different types of computer vision use cases and then highlights different machine learning strategies for solving these use cases. The strategies vary from experimenting with pre-built ML models through pre-built ML APIs and AutoML Vision to building custom image classifiers using linear models, deep neural network (DNN) models or convolutional neural network (CNN) models. The course shows how to improve a model's accuracy with augmentation, feature extraction, and fine-tuning hyperparameters while trying to avoid overfitting the data. The course also looks at practical issues that arise, for example, when one doesn't have enough data and how to incorporate the latest research findings into different models. Learners will get hands-on practice building and optimizing their own image classification models on a variety of public datasets in the labs they will work on.

COURSE_DESCRIPTION: PowerPoint is all about presenting information in a clear and intuitive way. What better way to visually communicate data and complex ideas than through tables and diagrams? In this course, you will learn how to insert and format tables in your presentation. You will see how to insert them from outside sources like Excel, create them from scratch in PowerPoint, and modify their layout and style. In addition, you will discover an essential PowerPoint design element: the SmartArt graphic. SmartArt allows you to create diagrams and other visual layouts to illustrate complex ideas. Find out all about how to use and format this handy tool in this course! Would you like hands-on practice? Go to the Resources section of the course and download the sample files to follow along with select videos.

COURSE_DESCRIPTION: Explore the core concepts that define the Amazon Web Services (AWS) Cloud and cloud computing. Cloud computing is the on-demand delivery of compute power, database, storage, applications, and other IT resources via the Internet with pay-as-you-go pricing. In this course, you will get an overview of cloud computing, as well as an understanding of the different cloud types and compare cloud deployment models. Learn about the most popular cloud model and the one that really applies most to AWS which is public cloud deployment model. You will begin to explore AWS and the elements of agility, elasticity, cost structure, flexibility, and security benefits, also known as the value proposition. The AWS global infrastructure is designed and built to offer the most flexible, reliable, scalable, and secure cloud computing solution with the highest quality global network performance available. This course is one of a collection of courses that prepares learners for the AWS Certified Cloud Practitioner 2019 certification.

COURSE_DESCRIPTION: Word 365 bietet verschiedene Tools zur Dokumentengestaltung. Zunächst lernen Sie, wie Sie einen Seitenumbruch einfügen und einen Formatierungsabschnitt erstellen, um das Layout der Seite zu gestalten. Als Nächstes lernen Sie, wie Sie vordefinierte Kopf- und Fußzeilen einfügen und benutzerdefinierte Kopf- und Fußzeilen erstellen können. Sie können eine Kopfzeile auch speichern und wiederverwenden. In diesem Kurs erfahren Sie auch, wie Sie eine Seitenzahl einfügen können, um Ihr Dokument besser zu organisieren. Diese Einstellungen sind sowohl für Sie als auch für Ihre Leser nützlich. Außerdem lernen Sie, wie Sie Absatz- und Seitenrandes sowie Farben anpassen und ein Wasserzeichen einfügen können, um Ihr Dokument einzigartig zu machen.

COURSE_DESCRIPTION: This 14-video course explores challenges associated with a traditional approach to project management, how to use DevOps tools, and the principles of flow, feedback, and continual experimentation to improve project management. Learners examine the role of people, process, and technologies when implementing DevOps. You will learn the benefits of using tools provided by AWS (Amazon Web Services) and Microsoft's Azure to adopt DevOps on the cloud. This course next demonstrates integrated approaches using the Agile method of software development, and ITSM (IT Service Management) processes. You will explore tools used to facilitate collaboration and encourage team-oriented process management including Atlassian Confluence collaboration software, Atlassian Jira to engage an entire team, and Slack for one-on-one communication. Next, explore the primary tools to implement continuous code build and adopt a team driven development approach. Then examine the objectives of continuous integration and deployment, and automation; and the benefits of continuous monitoring and reporting to enhance the DevOps process. Finally, you will learn to implement an AWS DevOps delivery pipeline.

COURSE_DESCRIPTION: Workhorse visualizations, such as line charts, column charts, and bar charts, are beneficial in all visualization use cases. Microsoft Power BI does a great job of making these common charts easy to put together and thoroughly customizable. Take this hands-on course to learn how to create and customize various chart types using Power BI. Learn how to create and customize column charts and bar charts from imported data. Explore how to import time-related data using Power Query and transform it into line charts. Then, experiment with multiple formatting operations on the line chart. Upon course completion, you'll be able to build line, bar, and column charts that are engaging and meaningful and be ready to learn how to create more advanced charts, including ribbon and pie charts. This is one of a series of four paths that can be used to prepare for the PL-300: Analyzing Data with Microsoft Power BI exam.

COURSE_DESCRIPTION: This course gives you a complete insight into the communication and managerial techniques put into practice in the creation of the most important sporting mega event in the world. You will learn about the essentials of television production, programming strategies and television rights management of the Olympic Games. At the same time, you will gain valuable knowledge about the fundamentals of communication via social media and of the Olympic culture which is so closely connected with classic culture and humanism. The Olympic Games are a precise reflector of advanced current societies as a whole. Many of the strategies and trends dealt with in this course are transferable to other fields beyond the world of sport. Este curso te ofrece un conocimiento completo de las técnicas de comunicación y gestión que se ponen en práctica en la creación del acontecimiento deportivo más importante del mundo. Aprenderás las claves de la producción y realización televisiva de los Juegos, su programación y la estrategia de gestión de los derechos audiovisuales de los Juegos Olímpicos. Al mismo tiempo, conseguirás un valioso conocimiento sobre los fundamentos de la comunicación en las redes sociales y la cultura Olímpica, que está estrechamente conectada con la cultura clásica y el humanismo. Los Juegos Olímpicos son un preciso reflector de las sociedades avanzadas modernas consideradas como un todo. Muchas de las estrategias y tendencias que abordamos en este curso pueden aplicarse a otros campos diferentes al mundo del deporte.

COURSE_DESCRIPTION: Terraform allows infrastructure to be expressed as code. The desired state is expressed in a simple human-readable language.

Terraform uses this language to provide an execution plan of changes, which can be reviewed for safety and then applied to make changes. Extensible providers allow Terraform to manage a broad range of resources, including hardware, IaaS, PaaS, and SaaS services. In this 1-hour long project-based course, you will get Understanding of Infrastructure as code Understanding of Terraform basics and its execution flow Understanding HCL language

(Hashicorp Language System) syntax Creating infrastructure using Terraform Defining variables in Terraform

COURSE_DESCRIPTION: The stress that comes with work pressures can be overwhelming. But while you can't control the external events that lead to pressure, you can be proactive at recognizing stress and pressure, and consciously choose how you react. This allows you to use pressure to sharpen your focus and energize your work instead of being rolled by its force and dragged under its waves. In this course, you'll learn what situations are likely to trigger pressure, and how stress affects you physically and mentally. You'll also learn daily methods to make you more resilient to the challenges of pressure and stress, techniques for developing the mental flexibility to adjust to a high-pressure situation, and how to take action in the midst of one.

COURSE_DESCRIPTION: Since the emergence of the first decentralized cryptocurrency Bitcoin in 2009, the landscape of global finance has been rapidly evolving. The discussion is increasingly complex, jargon-heavy, and at times controversial. This Teach-Out will provide an introduction to the mechanisms of cryptocurrency, systems of blockchain, and the process of mining. It will delve into the history of this financial instrument, the principles that underpin its development, and the extent to which the technology may deliver upon those principles. It further positions the discussion socioculturally by exploring topics such as ecological impacts, controversial and humanitarian uses, and what it may mean for the future of both global finance and individuals. The Teach-Out will encourage learners to develop their knowledge further, such that they take a personal, active role in their digital financial literacy.

COURSE_DESCRIPTION: This is Course 1 in the Salesforce Sales Development Representative Professional Certificate. In order to successfully complete later Courses, please ensure you have completed this course before moving on. This course is here to introduce you to the key role of a Sales Development Representative at a tech company. We want you to develop a winning professional mindset powered by emotional literacy, strategic thinking, time management, and task prioritization. We'll also focus on how you'll be managing your physical, mental, emotional, and spiritual well-being in both your personal and professional life. Course 1 in the Sales Development Representative (SDR) Professional Certificate will give you the

necessary skills to launch a career in the non-technical side of the tech industry. In this course you will learn to: - Confidently articulate the purpose and power of the SDR role in the tech industry - Effectively select strategies and tools for developing a winning professional mindset - Justify strategies for time management and prioritization that yield results in your personal and professional life - Compose plans for taking responsibility for your physical, mental, emotional, and spiritual well-being within personal and professional relationships To be successful in this course, you should have: - An ability to communicate in verbal and written form in a way that is accessible and understandable by a general audience (you don't need to be formal or refined) - Baseline computer literacy (you must be able to use a word processor, web search, and email) - Familiarity with social media, including LinkedIn - Ability and willingness to learn new technology tools - Motivation to grow personally and professionally - Hunger for feedback and coaching

COURSE_DESCRIPTION: Explore how to use JS (Javascript) Mocha, the most popular unit testing framework to run unit tests, in this 13-video course, which examines different hooks that Mocha.js provides to run the test suites. First, learners will examine specific testing environments using the Mocha before and beforeEach hooks. You will then learn how to tear down these test environments, after the completion of the tests, by using the after and afterEach hooks. You will learn how to write tests for asynchronous functions by using the done method, and how to use Async aware keywords. You will learn to use the async/await methods to test asynchronous code that return promises. This course then demonstrates how to set up a simple HTTP server to run Mocha tests in a browser environment. Finally, you will learn how to use the Mocha command line to run multiple tests and how to select a specific test to run by using regular expressions.

COURSE_DESCRIPTION: Today's distributed systems can consist of hundreds or even thousands of servers, and getting them to work together efficiently is a challenge. Load balancing is a multifaceted concept whose many techniques can help SREs face this challenge. In this course, you'll explore how front-end load balancing works and its associated techniques, concepts, and capabilities. You'll examine the characteristics of load balancers, their use in application delivery and security, and the use of DNS load balancers. You'll outline strategies for virtual IP load balancing, cloud load balancing, and handling overload. Finally, you'll learn how the Google Front End Service, Andromeda virtualization stack, Maglev network load balancing service, and the Envoy edge and service proxy are used for load balancing-related tasks.

COURSE_DESCRIPTION: In this Challenge Lab, you will learn about the attacker tactic known as lateral movement and how attackers might perform a lateral movement operation against a network. First, you will gain remote control access over a network boundary server to inject meterpreter, and then you will use meterpreter to set up a routing function to redirect additional attack functions to a private network. Next, you will perform network reconnaissance to locate an internal target supporting a telnet service. Finally, you will gain access to the internal system through a telnet shell. Note: Once you begin the Challenge Lab, you will not be able to pause, save, or exit and then return to your Challenge Lab. Please ensure that you have set aside enough time to complete the Challenge Lab before you start.

COURSE_DESCRIPTION: Augment the descriptive power of your data with Excel 2019 for Windows. In this course, learners will discover how to insert and edit images, screenshots, and shapes, insert hyperlinks, and use the new Smart Lookup feature. Begin by learning how to insert an image or photograph, which can be used to illustrate your table, and then learn how to insert a screenshot. Discover how to edit an image, adjust its brightness, contrast, saturation levels, and apply different artistic effects or add a border. Learners can also observe how to create diagrams by using shapes and insert icons to help illustrate a worksheet. There are several different types of links that can be inserted into your document, including hyperlinks. Finally, learners will explore how to use the Smart Lookup tool in Excel to quickly access additional information about words used in a document. In order to practice what you have learned, you will find the Word document named Excel 2019 for Windows: Illustrating Documents Exercise as well as the associated materials in the Resources section.

COURSE_DESCRIPTION: By the end of this project, you will learn how to design your virtual classroom using Canva. We will create a Zoom virtual background for your classroom and a virtual classroom design for your learning platform. You will be able to incorporate a color scheme, images, and other design elements for aesthetically pleasing and value added business marketing collateral. We can use Canva to complete this project because it provides all the tools you need to create an organized and visually appealing product while offering a variety of options for sharing and collaboration. You will learn how to plan and organize your ideas and utilize graphic design tools as you create your virtual classroom. This project will include intermediate to advanced level skills using the free version of Canva. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: This course, Machine Learning for Accounting with Python, introduces machine learning algorithms (models) and their applications in accounting problems. It covers classification, regression, clustering, text analysis, time series analysis. It also discusses model evaluation and model optimization. This course provides an entry point for students to be able to apply proper machine learning models on business related datasets with Python to solve various problems. Accounting Data Analytics with Python is a prerequisite for this course. This course is running on the same platform (Jupyter Notebook) as that of the prerequisite course. While Accounting Data Analytics with Python covers data understanding and data preparation in the data analytics process, this course covers the next two steps in the process, modeling and model evaluation. Upon completion of the two courses, students should be able to complete an entire data analytics process with Python.

COURSE_DESCRIPTION: In this 18-video course, learners explore features of Google Cloud Platform (GCP), Google Kubernetes Engine (GKE), best practices for operating containers, and how to build cloud-native applications with CloudOps methodology. First, compare Google Cloud Source Repository with GitHub, and see how automated deployment capabilities of Google Cloud Deployment Manager compare with Terraform. Then delve into GCP's machine learning (ML), artificial intelligence, and analytical capabilities and essential design patterns for connecting GCP with other cloud platforms. Discover how to create and configure GKE clusters; deploy applications across multiple Kubernetes clusters; create repositories and manage code with Google Cloud Source Repository; and deploy applications from Cloud Source Repository to App Engine. Next, learn how to automate the configuration of GCP resources and application deployment with Google Cloud Deployment Manager, create virtual machine (VM) instances on GCP; build applications with Terraform; and configure AutoML and BigQuery to manage large volumes of data and build ML models. Finally, learners discover how to set up fully-managed real-time messaging environments, and transfer data between GCP and other Cloud Service providers.

COURSE_DESCRIPTION: Windows 10 clients provide workstations for users in networking environments, backed by servers and other technology used to create a network infrastructure. Management of these clients is facilitated in numerous ways, but at the center of network user management is Group Policy. Explore working with Group Policy in Windows, beginning with the basics of Group Policy, and how to navigate and configure Group Policy. Learn about aspects of Windows that can be managed using Group Policy, including Windows settings, the Control Panel, security policy, users, and user rights. Finally, discover audit policy configuration and how to troubleshoot Group Policy issues, as well as best practices for Group Policy management. This course is part of a series preparing learners for the MD-100: Windows Client exam.

COURSE_DESCRIPTION: It used to be the case that everyone viewed webpages on about the same size screen. But with the explosion of the use of smartphones to access the Internet, the landscape of design has completely changed. People viewing your site will now expect that it will perform regardless of the platform (smartphone, tablet, laptop, or desktop computer). This ability to respond to any platform is called responsive design. This course will expand upon the basic knowledge of CSS3 to include topics such as wireframes, fluid design, media queries, and the use of existing styling paradigms such as Bootstrap. After the course, learners will be able to: ** Explain the mobile-first paradigm and the importance of wireframes in the design phase ** Create sites that behave across a range of platforms ** Utilize existing design frameworks such as Bootstrap This is the fourth course in the Web Design For Everybody specialization. A basic understanding of HTML and CSS is expected when you enroll in this class. Additional courses focus on adding interactivity with the JavaScript Programming Language and completing a capstone project.

COURSE_DESCRIPTION: Building DevOps Skills upskills learners to multiple modern DevOps practices for both clouds and more traditional on-premise platforms, operating systems, and associated tools. In addition, this course covers numerous DevOps-specific applications, tools, and utilities. We will cover core DevOps practices like CI/CD, pipeline management, and automation routines. Next, we discover how container technologies such as Docker and Kubernetes have become integral to DevOps. Lastly, we walk through several key enabling technologies, such as Chef, Jenkins, and Ansible, and how several major cloud providers implement DevOps.

COURSE_DESCRIPTION: Machine learning (ML) allows us to teach computers to make predictions and decisions based on data and learn from experiences. In recent years, incredible optimizations have been made to machine learning algorithms, software frameworks, and embedded hardware. Thanks to this, running deep neural networks and other complex machine learning algorithms is possible on low-power devices like microcontrollers. This course will give you a broad overview of how machine learning works, how to train neural networks, and how to deploy those networks to microcontrollers, which is

known as embedded machine learning or TinyML. You do not need any prior machine learning knowledge to take this course. Familiarity with Arduino and microcontrollers is advised to understand some topics as well as to tackle the projects. Some math (reading plots, arithmetic, algebra) is also required for quizzes and projects. We will cover the concepts and vocabulary necessary to understand the fundamentals of machine learning as well as provide demonstrations and projects to give you hands-on experience.

COURSE_DESCRIPTION: Apache Spark provides a robust framework for implementing machine learning and deep learning. It takes advantage of resilient distributed databases to provide a fault-tolerant platform well-suited to developing big data applications. Because many large companies are actively using this framework, AI developers should be familiar with the basics of implementing AI with Apache Spark and Spark ML. In this course, you'll explore the concept of distributed computing. You'll identify the benefits of using Spark for AI Development, examining the advantages and disadvantages of using Spark over other big data AI platforms. Next, you'll describe how to implement machine learning, deep learning, natural language processing, and computer vision using Spark. Finally, you'll use Spark ML to create a movie recommendation system commonly used by Netflix and YouTube.

COURSE_DESCRIPTION: The ecosystems of mainstream programming languages include various types of client mechanisms for interacting with common databases, including both SQL and NoSQL databases. The Go programming language is no exception. The Go ecosystem contains multiple libraries for building and using SQL and several drivers for connecting with and operating on different databases. In this course, explore how databases are accessed from Go programs. Work with databases by implementing a database driver for Go. Experiment by performing various operations and transactions on the database. Work with prepared statements. Finish up by practicing how to handle errors, null values, and unknown columns. Upon completion, you'll be able to perform several routine database operations from your Go program.

 COURSE_DESCRIPTION: Identifying the job roles, workflows, and processes that can support and maintain DevOps performance is essential for any enterprise. In this course, you'll explore core support roles and responsibilities. You'll also define the best DevOps team pattern to debug key components, identify an effective value stream for observing delivery across multiple systems for debugging, and establish a troubleshooting workflow to ensure continuous delivery and deployment. Next, you'll examine the processes of logical, systematic, and effective DevOps troubleshooting. You'll identify troubleshooting tasks to resolve common DevOps deployment challenges, and the concept, working mechanism, and benefits of reverse debugging. You'll move on to outline approaches to debugging cloud deployment solutions, define techniques for resolving DevOps performance issues, and distinguish the pros and cons of incremental and full deployment processes. Finally, you'll identify troubleshooting approaches for application distribution in multi-cloud and the role of the error monitoring and logging integrated approach. You'll also explore orchestrated service deployment, maintenance, and debugging processes in IaaS clouds.

COURSE_DESCRIPTION: Learners will discover the purpose and importance of full stack development (FSD) continuous integration (CI) and continuous deployment (CD) in this 14-video course. You will examine some of the best practices of FSD continuous integration, along with common mistakes that users make. Learn about the stages of the CI pipeline and the importance of each stage. Compare CI, continuous delivery, and continuous deployment (CD), and learn how they relate to each other. Take a look at the benefits of using continuous integration for FSD and identify the metrics that should be tracked when you are performing CI/CD. Then move on to exploring the features of common continuous integration tools. You will learn how to create a demo by using Azure DevOps demo generator, examine basic operations in GitHub, and take a look at basic repository operations in BitBucket. Performing a Jenkins installation in a Windows environment and implementing continuous integration using a Jenkins CI/CD pipeline are also covered in this course.

COURSE_DESCRIPTION: By the end of this project, you will have created a Scrum Master's toolbox of interactive websites and games you can use to improve communication, increase cohesion and camaraderie, and facilitate a smoother sprint experience. In every Scrum ceremony, there are opportunities to inspire improved teamwork and help your team build professional bonds that will make them more effective. Scrum should allow developers to double their output in half the time, as the saying goes, but solid teamwork is necessary to work efficiently. Using online tools and including games will build engagement and interest in team members and offer an opportunity for the Scrum Master to step back and observe, find weak points, and facilitate improvements. Whether distributed or collocated, your team will build strength and efficiency with the toolbox you will build. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Treemaps are an impressive hierarchical data visualization feature of Power BI. Add in tooltips, matrices, slicers, and mobile readiness, and your reports will be highly interactive and engaging. You'll start this course by creating and configuring a treemap in Power BI. You'll then set up a treemap tooltip and configure it to use a chart on another Power BI page. Next, you'll create a Power BI report that automatically links the treemap to a matrix visualization. You'll then optimize this report for mobile device viewing. You'll move on to use slicers and add them to a page in your Power BI report. Lastly, you'll work with different slicer settings for numeric and string (categorical) fields and implement horizontal and vertical slicer layouts.

COURSE_DESCRIPTION: Machine learning skills are becoming more and more essential in the modern job market. In 2019, Machine Learning Engineer was ranked as the #1 job in the United States, based on the incredible 344% growth of job openings in the field between 2015 to 2018, and the role's average base salary of \$146,085 (Indeed). This four-course Specialization will help you gain the introductory skills to succeed in an in-demand career in machine learning and data science. After completing this program, you'll be able to realize the potential of machine learning algorithms and artificial intelligence in different business scenarios. You'll be able to identify when to use machine learning to explain certain behaviors and when to use it to predict future outcomes. You'll also learn how to evaluate your machine learning models and to incorporate best practices. By the end of this program, you will have developed concrete machine learning skills to apply in your workplace or career search, as well as a portfolio of projects demonstrating your proficiency. In addition to receiving a certificate from Coursera, you'll also earn an IBM Badge to help you share your accomplishments with your network and potential employer. You can also leverage the learning from the program to complete the remaining two courses of the six-course IBM Machine Learning Professional Certificate and power a new career in the field of machine learning.

COURSE_DESCRIPTION: In this challenge lab, you will control the flow of code in an application by using looping. First, you will create a console application, and then you will create an array to hold a collection of data. Next, you will iterate through the data in the array by using a for loop, and then you will iterate through an array by using a foreach loop. Finally, you will iterate through an array by using a do while loop. Note: Once you begin the challenge lab, you will not be able to pause, save, or exit and then return to your challenge lab. Please ensure that you have set aside enough time to complete the challenge lab before you start.

COURSE_DESCRIPTION: Effective cybersecurity risk management requires intricate knowledge of day-to-day IT security risks, network vulnerabilities, and cyber attacks. In this course, you'll detail several cybersecurity breaches and how best to prevent each one. You'll start with a general overview of what comprises security risks before categorizing different types into information, cloud, and data-related risks. Next, you'll explore cybercrime methods, the motivations behind them, and the security gaps that invite them in. You'll then use real-life examples to detail some commonplace cyberattacks and crimes. Moving on, you'll investigate what's meant by malware and outline best practices to manage worms, viruses, logic bombs, trojans, and rootkits. You'll also learn how to safeguard against malware, spyware, ransomware, adware, phishing, zero-day vulnerabilities, DoS, and backdoor attacks. By the end of the course, you'll be able to outline guidelines and best practices for securing against the most prevalent types of cybercrimes.

COURSE_DESCRIPTION: Learn more about knowledge exchange and how to use, protect and monetize your knowledge while working with various partners. Interested in increasing the impact of your knowledge on society? This course is for those who are new to how knowledge is transferred from yourself or from a knowledge institute into society at large. It is for those who want to know how to protect their knowledge, how to approach parties for collaboration, and how to find the right funding for your idea. It is for those who want to start thinking about how knowledge exchange might be useful in their business or academic career. It provides an introduction to one of the basics of knowledge exchange, the stakeholders involved and the most common pitfalls on your way to transform our world with your ideas! About the course lecturers Each week a different expert in his or her field will shed light on a different aspect within knowledge exchange. In addition, each module contains an interview with a Leiden academic who will share his or her practical experience concerning that week's subject. Each module is introduced and concluded by the course leader, Professor Gert-Jan van Ommen, former head of the Department of Human Genetics of Leiden University Medical Center. About Luris This course was developed by Luris, in cooperation with Leiden University and Leiden University Medical Center (LUMC). As knowledge exchange office, Luris matches societal needs with possibilities available in Leiden and enhances the impact of novel technologies and knowledge from Leiden University and LUMC. Luris establishes valuable partnerships and represents the interests of academics and research teams.

COURSE_DESCRIPTION: iOS App Development Basics, the second course in the iOS App Development with Swift specialization, expands your programming skills and applies them to authentic app development projects. The topics covered in this course include Xcode basics, Core iOS and Cocoa Touch frameworks, simple user interface creation, MVC Architecture and much more. With a focus on using Apple's components to access sensors like camera, microphone and GPS, by the end of this course you will be able to create a basic App according to specified parameters and guidelines. Currently this course is taught using Swift 2. The team is aware of the release of Swift 3 and will be making edits to the course in time. Please be aware that at this time the instruction is entirely with Swift 2.

COURSE_DESCRIPTION: >>> By enrolling in this course you agree to the End User License Agreement as set out in the FAQ. Once enrolled you can access the license in the Resources area <<< This course, Advanced Machine Learning and Signal Processing, is part of the IBM Advanced Data Science Specialization which IBM is currently creating and gives you easy access to the invaluable insights into Supervised and Unsupervised Machine Learning Models used by experts in many field relevant disciplines. We'll learn about the fundamentals of Linear Algebra to understand how machine learning modes work. Then we introduce the most popular Machine Learning Frameworks for python Scikit-Learn and SparkML. SparkML is making up the greatest portion of this course since scalability is key to address performance bottlenecks. We learn how to tune the models in parallel by evaluating hundreds of different parameter-combinations in parallel. We'll continuously use a real-life example from IoT (Internet of Things), for exemplifying the different algorithms. For passing the course you are even required to create your own vibration sensor data using the accelerometer sensors in your smartphone. So you are actually working on a self-created, real dataset throughout the course. If you choose to take this course and earn the Coursera course certificate, you will also earn an IBM digital badge. To find out more about IBM digital badges follow the link ibm.biz/badging.

COURSE_DESCRIPTION: In this one hour long project-based course, you will learn the basics of support vector machines using Python and scikit-learn. The dataset we are going to use comes from the National Institute of Diabetes and Digestive and Kidney Diseases, and contains anonymized diagnostic measurements for a set of female patients. We will train a support vector machine to predict whether a new patient has diabetes based on such measurements. By the end of this course, you will be able to model an existing dataset with the goal of making predictions about new data. This is a first step on the path to mastering machine learning. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In this 1-hour long project-based course, you will learn basic principles of feature selection and extraction, and how this can be implemented in Python. Together, we will explore basic Python implementations of Pearson correlation filtering, Select-K-Best knn-based filtering, backward sequential filtering, recursive feature elimination (RFE), estimating feature importance using bagged decision trees, lasso regularization, and reducing dimensionality using Principal Component Analysis (PCA). We will focus on the simplest implementation, usually using Scikit-Learn functions. All of this will be done on Ubuntu Linux, but can be accomplished using any Python I.D.E. on any operating system. We will be using the IDLE development environment to demonstrate several feature selection techniques using the publicly available Pima Diabetes dataset. I would encourage learners to experiment using these techniques not only for feature selection, but hyperparameter tuning as well. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: This capstone project course for the Recommender Systems Specialization brings together everything you've learned about recommender systems algorithms and evaluation into a comprehensive recommender analysis and design project. You will be given a case study to complete where you have to select and justify the design of a recommender system through analysis of recommender goals and algorithm performance. Learners in the honors track will focus on experimental evaluation of the algorithms against medium sized datasets. The standard track will include a mix of provided results and spreadsheet exploration. Both groups will produce a capstone report documenting the analysis, the selected solution, and the justification for that solution.

COURSE_DESCRIPTION: In this challenge, you will configure an AWS Config rule to ensure that public access to Amazon Simple Storage Service (Amazon S3) buckets is automatically disabled. First, you will create an Amazon Identity and Access Management (IAM) role for automation, and then you will create an S3 bucket that is noncompliant. Next, you will create an AWS Config rule to automatically remediate any noncompliant S3 buckets. Finally, you will test the AWS Config rule. Note: Once you begin the challenge lab, you will not be able to pause, save, or exit and then return to your challenge lab. Please ensure that you have set aside enough time to complete the challenge lab before you start.

COURSE_DESCRIPTION: Professional marketers today have unprecedented access to customer data and complex data sets. By using Big Data technologies and analytical tools, they can gather insights about their target markets through things like website traffic, e-mail marketing, and social media activity. And they can glean incredibly useful information from dealing with Big Data to help drive effective operational marketing strategy. In this course, you'll learn about the characteristics of Big Data, the benefits of managing Big Data for marketing purposes, the key challenges associated with using Big Data, and the best practices for data storage and handling methods. The course also covers considerations when implementing Big Data strategies.

COURSE_DESCRIPTION: This course lays the foundation of marketing analytics. You'll learn the basic principles of marketing. You'll learn the role analytics plays in digital marketing and how data is collected and managed for marketing. You will also learn basic privacy regulations that govern the online marketing space as well as common challenges when working with marketing data. By the end of this course you will be able to: • Describe how data and measurement inform a marketing action • Describe the basic principles of marketing • Identify why measurement and analytics matter in digital marketing • Describe how data is collected and related to digital marketing • Explain the significance of the privacy regulations that govern the online marketing space • Describe the Meta pixel and how it is created on the Meta platform • Describe how information is recorded on mobile devices • Explain how an API connects data captured offline to an online platform • Describe common platforms for online data management and evaluation • Navigate Google Analytics and Meta Ads Manager reports Regardless of your current marketing and analytics experience, this course will help you build a solid foundation for incorporating data into your marketing efforts. Learners don't need marketing or data analysis experience, but should have basic internet navigation skills and be eager to participate.

COURSE_DESCRIPTION: Technology provides you with great opportunities for professional advancement, and technical certifications prove your knowledge, expertise, and hands-on experience to prospective employers or clients. It is extremely important to organizations like AWS, Google, Microsoft, Oracle, ITIL, PMI, and many others that their certifications prove technical expertise; otherwise, their certifications are of no value. That is why the exams are so hard. This course is intended to help you formulate an effective learning plan that will build the knowledge you need, not only to pass the exam but to be truly competent in the technology you are being tested on.

COURSE_DESCRIPTION: Explore the domain of security assessment, design, and mitigation for web-based, mobile, and embedded systems. This course will start by examining common web-based attacks, such as SQL injection, cross-site scripting (XSS), cross-site request forgery (CSRF), carjacking, clickjacking, and cookie exploits. Next, you will learn how to evaluate general strategies to mitigate vulnerability. The course then moves on to mitigation strategies for mobiles, such as containerization, sandboxes, wrappers, secure encrypted enclaves, TPM, and tokenization. You will then study enterprise mobility management methods, privacy concerns, and security issues. Other topics include how to assess vulnerabilities and common threats for embedded devices; and how to walk through methods to reduce embedded device vulnerability. Finally, as a review exercise, you will describe how to assess and mitigate systems vulnerabilities.

COURSE_DESCRIPTION: In this 7-video course, which was recorded in a Project Online Desktop Client environment, learners can start working on their first projects. Discover how to create new projects, decipher project structure, work with displays, and work with templates. You will begin by creating a new project: a blank project, a new project from an already open project, or one selected from many available templates. Next, the course focuses on creating a new project from existing documents. These documents can be Project documents, or even Excel workbooks. Then you will explore the built-in chart display. Project offers a number of built-in chart views to choose from. You will observe how to modify and use the different display modes and then create, manage, and save display modes. You will also look at project templates, of which Project offers a wide range that you can use to create professional documents quickly and easily. Conclude the course with an explanation of how to spell-check your project.

COURSE_DESCRIPTION: When building Java apps which interact with a database, you may need to work with stored procedures and also large binary objects. The goal of this course is to give you hands-on experience with the handling of binary and text data and working with stored procedures. You will load image and text files from your file system to a database using JDBC, and will then do the reverse operations. You will also create and execute a variety of stored procedures from a Java app.

COURSE_DESCRIPTION: This course will teach you to use operations that modify in-memory graphs built with the Graph Data Science (GDS) library, update the properties of the underlying database, and export their contents to a database or file. You begin with a mutate operation to add new properties to an in-memory graph. You will learn how you can save the results of graph algorithms in such graphs for later reference. Next, you explore the write operation to update the underlying database with the results of graph algorithms on in-memory graphs. You will then move on to exporting your graph to a persistent store. Finally, you cover the different ways you can remove GDS graphs from the graph catalog. While doing so, you will explore the degree centrality calculation, which measures how well-connected nodes are in a network. After completing this course, you will have a fundamental understanding of how to administer in-memory graphs using the Graph Data Science library in Neo4j.

COURSE_DESCRIPTION: By the end of this project you will implement a C program that determines how many words, characters, and lines are in a file using C control constructs. The C programming language is the basis for many other programming languages. Its syntax has been used in languages such as C++, Java, and C# to name a few. All these languages utilize control constructs such as the decision constructs and loop constructs. C is still the language of choice for writing Operating systems, games, and many other applications where performance is critical. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In this course, learners discover the role played by databases in the FSD (full stack development) process. The 14-video course explores differences between relational and non-relational databases and the advantages associated with each type; how to install and configure the MySQL, PostgreSQL, and MongoDB database systems; and how these systems are used in both the test and live environments of FSD development. Learn how to recognize best practices associated with the design of database systems in the FSD development process. You will then examine how to download, install, and configure the MySQL relational database system for use in FSD development. Then move on to the installation and configuration of the PostgreSQL, MongoDB NoSQL, and SQL Server relational database systems for use in FSD development. Learners will examine components required in both a test and live environment for FSD development, and the requirements of the FSD test environment and specific challenges. Finally, you will learn about the requirements of the FSD production environment and specific challenges.

COURSE_DESCRIPTION: Join us for an action-oriented online teacher professional development course! This course will teach participants how to identify and implement a local service-learning campaign using the Roots & Shoots program model. The service learning curriculum equips participants with teacher resources to discover the differences between service-learning and community service, and apply the Roots & Shoots model to help youth have a voice in identifying and addressing needs in their community. At Roots & Shoots, our goal is to develop compassionate leaders to make the world a better place for people, other animals and the environment. Help us achieve that goal! Complete the course and mentor young people to lead change in their communities using community mapping, collaborating with stakeholders, and designing practical solutions in the form of campaigns. Connect young people to Dr. Jane Goodall's message of hope while facilitating a sense of empowerment that comes from helping others!

COURSE_DESCRIPTION: If you're fully vaccinated for COVID-19 you can travel domestically and where travel is allowed internationally, according to new interim travel guidelines from the Centers for Disease Control and Prevention (CDC). Even with those recommendations the CDC continues to recommend not traveling unless it is essential. Regardless, the CDC strongly recommends people continue to wear a face mask, practice social distancing and sanitize their hands. Meanwhile, COVID-19 vaccine research is continuing in teenagers. "The early data show equal safety in young people age 12 to 16," says Dr. Gregory Poland, an infectious diseases expert and head of Mayo Clinic's Vaccine Research Group. "I think this is going to imply that, somewhere between this fall and Christmas, we're going to be able to offer the (COVID-19) vaccine to every age group." (Published 04/07/2021)

COURSE_DESCRIPTION: Course Description This specialization is intended for both students and businesses who aim to learn more about how Cloud technology can help them grow. With Cloud Computing, Big Data, and Cloud Security courses, users will be exposed to a series of products that combine to make architectures fit for any task. This specialization will train the user on two levels: first, the basic specifications and functions of our principle product line, and secondly, evaluates a user's ability to use several different products together to create best practice solutions on Alibaba Cloud. Users that pass this specialization will stand out among their peers as IT professionals that can not only build a cloud architecture on their own but administrate a larger network of cloud resources on Alibaba Cloud. Taking this training offered by our official training partner, Coursera, will also prepare you to succeed on the ACP/ACA professional certification exam series (offered here: <https://edu.alibabacloud.com/certification>) and launch your next career as a Cloud professional.

COURSE DESCRIPTION: In this 2-hour long project-based course, you will learn the basics of image noise reduction with auto-encoders. Auto-encoding is an algorithm to help reduce dimensionality of data with the help of neural networks. It can be used for lossy data compression where the compression is dependent on the given data. This algorithm to reduce dimensionality of data as learned from the data can also be used for reducing noise in data. This course runs on Coursera's hands-on project platform called Rhyme. On Rhyme, you do projects in a hands-on manner in your browser. You will get instant access to pre-configured cloud desktops containing all of the software and data you need for the project. Everything is already set up directly in your internet browser so you can just focus on learning. For this project, you'll get instant access to a cloud desktop with Python, Jupyter, and Tensorflow pre-installed. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Project managers must play close attention to resource management. They must assess the project's needs, in terms of both materials and staffing, create organizational charts and position descriptions, and acquire all of the necessary resources. Further, managing human resources also requires interpersonal skills to build and manage teams. In this course, you'll learn about planning, estimating, acquisition, and coordination of project resources. You'll also explore meeting training and development needs, setting ground rules, and strategies for mixing virtual and collocated team members. Finally, you'll learn how to apply personnel and team performance assessments and conflict management skills.

COURSE_DESCRIPTION: This course examines macroeconomic performance in the short and long run based on the economy's institutional and policy environment. First, we will develop a model of macroeconomy in the short run when the price level has its own momentum and does not respond much to supply and demand forces. Then, we'll begin analyzing the long-run equilibrium by examining the foreign exchange market. The third module examines the drivers of aggregate output in the long run and the mechanisms of adjustment from the short run to the long run. Finally, we will discuss the characteristics of desirable macroeconomic policies and the reasons why actual policies deviate from them. You will be able to: • Understand how the market for aggregate goods and services interacts with the money market to shape the macroeconomic equilibrium which determines income, interest rate, and exchange rate in the short run • Assess the dynamic effects of macroeconomic policies and understand the roles of globalization, government policies, institutions, and expectations in macroeconomic outcomes This course is part of Gies College of Business' suite of online programs, including the iMBA and iMSM. Learn more about admission into these programs and explore how your Coursera work can be leveraged if accepted into a degree program at <https://degrees.giesbusiness.illinois.edu/idegrees/>.

COURSE_DESCRIPTION: In diesem Kurs mit insgesamt 15-Videomodulen lernen die Teilnehmer die Grundlagen der Programmiersprache Python kennen. Sie lernen, eine interaktive Umgebung einzurichten, mit der Sie Python-Skripts auf Ihrem Rechner entwickeln und ausführen können. Sie beginnen mit der Installation von Anaconda, einer Open-Source-Distribution der Programmiersprachen Python und R. Sie lernen, Ihr erstes aussagekräftiges Programm in Python zu schreiben und dann ein Jupyter-Notizbuch zu erstellen, das beliebteste Werkzeug zum Schreiben und Ausführen von Python-Code. Sie erfahren auch, wie man mit den Jupyter-Notebooks von Python einfache Programmierungen durchführt, und lernen verschiedene Jupyter-Funktionen, einschließlich integrierter Funktionen, kennen. Sie lernen, wie man eine Python-Variable zur Speicherung von Werten verwendet, zwischen verschiedenen Variablentypen zu unterscheiden sowie die verschiedenen Möglichkeiten, Variablen Werte zuzuweisen. Sie untersuchen, wie Variablen als Container fungieren, und erfahren, wie man Werte innerhalb eines Containers ändern kann. Schließlich lernen Sie den Umgang mit ganzen Zahlen, Gleitkommawerten und Zeichenfolgen sowie mit booleschen Werten.

COURSE_DESCRIPTION: Data is everywhere. Charts, graphs, and other types of information visualizations help people to make sense of this data. This course explores the design, development, and evaluation of such information visualizations. By combining aspects of design, computer graphics, HCI, and data science, you will gain hands-on experience with creating visualizations, using exploratory tools, and architecting data narratives. Topics include user-centered design, web-based visualization, data cognition and perception, and design evaluation. This course can be taken for academic credit as part of CU Boulder's Master of Science in Data Science (MS-DS) degree offered on the Coursera platform. The MS-DS is an interdisciplinary degree that brings together faculty from CU Boulder's departments of Applied Mathematics, Computer Science, Information Science, and others. With performance-based admissions and no application process, the MS-DS is ideal for individuals with a broad range of undergraduate education and/or professional experience in computer science, information science, mathematics, and statistics. Learn more about the MS-DS program at <https://www.coursera.org/degrees/master-of-science-data-science-boulder>.

 COURSE_DESCRIPTION: This course is all about data and how it is critical to the success of your applied machine learning model. Completing this course will give learners the skills to: Understand the critical elements of data in the learning, training and operation phases Understand biases and sources of data Implement techniques to improve the generality of your model Explain the consequences of overfitting and identify mitigation measures Implement appropriate test and validation measures. Demonstrate how the accuracy of your model can be improved with thoughtful feature engineering. Explore the impact of the algorithm parameters on model strength To be successful in this course, you should have at least beginner-level background in Python programming (e.g., be able to read and code trace existing code, be comfortable with conditionals, loops, variables, lists, dictionaries and arrays). You should have a basic understanding of linear algebra (vector notation) and statistics (probability distributions and mean/median/mode). This is the third course of the Applied Machine Learning Specialization brought to you by Coursera and the Alberta Machine Intelligence Institute.

 COURSE_DESCRIPTION: Data science is one of the hottest professions of the decade, and the demand for data scientists who can analyze data and communicate results to inform data driven decisions has never been greater. This Professional Certificate will help anyone interested in pursuing a career in data science or machine learning develop career-relevant skills. It's a myth that to become a data scientist you need a Ph.D. Anyone with a passion for learning can take this Professional Certificate - no prior knowledge of computer science or programming languages required - and develop the skills, tools, and portfolio to have a competitive edge in the job market as an entry level data scientist. The program consists of 9 online courses that will provide you with the latest job-ready tools and skills, including open source tools and libraries, Python, databases, SQL, data visualization, data analysis, statistical analysis, predictive modeling, and machine learning algorithms. You'll learn data science through hands-on practice in the IBM Cloud using real data science tools and real-world data sets. Upon completing these courses, you will have built a portfolio of data science projects to provide you with the confidence to plunge into an exciting profession in data science. In addition to earning a Professional Certificate from Coursera, you'll also receive a digital badge from IBM. This program is ACE(r) recommended-when you complete, you can earn up to 12 college credits.

COURSE_DESCRIPTION: Have you ever wanted to invest in financial markets, but were always afraid that you didn't have the proper tools or knowledge to make informed decisions? Have you ever wondered how investment management companies operate and what fund managers do? AXA Investment Managers, in partnership with HEC Paris, will introduce you to the most important ideas and concepts in investment management, to help you better understand your financial future. This course will enable you to: • Define what type of investor you are, your investment objectives, and potential constraints. • Identify the main investable assets and important players in financial markets. • Understand basic portfolio management techniques. • Apply these techniques in real case studies from the outset, through practical assessments. Finally, we will provide a comprehensive overview of today's asset management industry: the product cycles, professionals, and regulations. For those who want to identify a talented fund manager to invest for you, we offer important criteria for selecting one. For those who are interested in learning more about this fascinating industry, we lay the foundation for your ongoing financial journey. Join us now to explore the world of investment management! Course Specialists The course has been developed in collaboration between HEC Paris, with Hugues Langlois managing the academic aspect, and AXA Investment Managers specialists, sharing their experiences and expertise and coordinated by Marion Le Morhedec. AXA Investment Managers participants include Maxime Alimi, Stephanie Condra, Nicholas Jeans, Elodie Laugel, Pierre-François de Mont-Serrat, Jean-Gabriel Pierre (AXA Group), Dorothee Sauloup, Irina Topa-Serry, Fiona Southall, Patrice Viot Coster, Susanna Warner, and Joachim Weitgasser. Recommended Background We expect most participants to have a basic level of knowledge in mathematics and economics. However this is not essential, and we believe that people from any background can succeed with commitment and a strong interest. Be aware that in the case study, you will have to use Excel. Course Format This course will run for 4 weeks and consists of 4 modules, each with a series of lecture videos between 5 to 8 minutes long. Each module contains a set of practice and graded quiz questions. A complete portfolio management exercise covers concepts learned in all modules Language The course is in English, with Spanish, Italian, German, French, and Chinese (Simplified) subtitles. The Project The preparation of this MOOC has been an exciting adventure for many professionals at AXA Investment Managers and HEC, both for the speakers and a wealth of contributors. Thank you to all of them. We hope you enjoy this course as much as we enjoyed creating it!

COURSE_DESCRIPTION: In this course, the second in the Geographic Information Systems (GIS) Specialization, you will go in-depth with common data types (such as raster and vector data), structures, quality and storage during four week-long modules: Week 1: Learn about data models and formats, including a full understanding of vector data and raster concepts. You will also learn about the implications of a data's scale and how to load layers from web services. Week 2: Create a vector data model by using vector attribute tables, writing query strings, defining queries, and adding and calculating fields. You'll also learn how to create new data through the process of digitizing and you'll use the built-in Editor tools in ArcGIS. Week 3: Learn about common data storage mechanisms within GIS, including geodatabases and shapefiles. Learn how to choose between them for your projects and how to optimize them for speed and size. You'll also work with rasters for the first time, using digital elevation models and creating slope and distance analysis products. Week 4: Explore datasets and assess them for quality and uncertainty. You will also learn how to bring your maps and data to the Internet and create web maps quickly with ArcGIS Online. Take GIS Data Formats, Design and Quality as a standalone course or as part of the Geographic Information Systems (GIS) Specialization. You should have equivalent experience to completing the first course in this specialization, Fundamentals of GIS, before taking this course. By completing the second class in the Specialization you will gain the skills needed to succeed in the full program.

COURSE_DESCRIPTION: Alle Projekte sind mit Risiken behaftet. Eine effektives Management der Projektrisiken kann für einen Projektmanager den Unterschied zwischen Erfolg und Misserfolg ausmachen. Die Fähigkeit, Risiken zu überwachen und Strategien zur Umsetzung von Risikobewältigungsmaßnahmen zu erstellen, ist der Schlüssel zu einem effektiven Projektmanagement. In diesem Kurs lernen Sie die Rolle des Risikoverantwortlichen kennen und erfahren, wie Sie Risikoaudits und Risikoneubewertungen durchführen. Sie werden sich mit der Varianz- und Trendanalyse, der technischen Leistungsmessung, der Reserveanalyse und den Reaktionen auf negative und positive Risiken beschäftigen. Schließlich lernen Sie, wie Sie Risikoauslöser und Sekundärrisiken bewerten können.

COURSE_DESCRIPTION: In past iterations of the CISSP exam, physical security was a domain in itself. In the recent version of CISSP, this topic is found in the Security Architecture and Engineering domain. Use this course to explore security principles and for site and facility design and examine various site and facility security controls. Discover how to navigate the essentials of facility and site security, investigate common physical controls, and get familiar with the physical defense-in-depth approach. You'll also learn about the prevention, detection and, suppression of fire in greater detail. After completing this course, you'll be able to assess issues with the security design of a site or facility and implement appropriate controls to address them. Moreover, you can also use this course to prepare for the CISSP exam.

COURSE_DESCRIPTION: To be a successful ethical hacker, you need to be good at gathering information. In this course, you'll explore the concept of enumeration, including what it is, how it's done, and the importance of the details gathered during this process. Next, you'll learn how to enumerate a target's useful or sensitive information using both SMB and NetBIOS. You'll move on to learn how you can use SNMP to access information about target systems. Finally, you'll explore the details of the LDAP protocol and some tools that use LDAP to help you enumerate your targets. This course is one in a series that helps to prepare you for the Certified Ethical Hacker v11 (312-50) exam.

COURSE_DESCRIPTION: In this lab, you will configure a secure Amazon Web Services (AWS) virtual private cloud (VPC) architecture for a web server. First, you will configure an AWS VPC environment following AWS best practices for security and reliability. Next, you will create an Auto Scaling Group that contains a load balancer to host multiple web servers in the VPC. Finally, you will test your environment to make sure that it is functioning. Note: Once you begin a challenge you will not be able to pause, save, or return to your progress. Please ensure you have set aside enough time to complete the challenge before you start.

COURSE_DESCRIPTION: In this one hour long project-based course, you will learn the basics of reading, analyzing and writing video using Python, NumPy and OpenCV. We will be working with a short documentary film which is in the public domain, so we are free to download and manipulate it. We will read in the video data frame-by-frame, examine the contents and modify them from Python. By the end of this project, you will have analyzed a video at the pixel level, modified its contents and created a new video file Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Welcome to Course 1 of the E-Marketing Specialization: Identifying, Attracting, and Growing Your Digital Audience. In this course, we will begin with a brief introduction to digital marketing and how a brand's identity is closely linked to its digital presence. We will explore strategies to identify, grow, and maintain an online audience to help achieve your marketing goals. You are highly encouraged to use this course experience to begin building a digital marketing plan for your current or future business. The activities in this course are all designed to guide you through different sections of a digital marketing plan. Our learning goals for this course are to: - Recognize the current landscape of the digital business environment. - Develop an audience persona based on a target audience. - Identify strategies to define, attract, and engage your audience online. - Review an e-commerce experience and discuss how to improve customer experience. - Compare social networks and develop a social media strategy designed to meet your marketing goals and objectives.

COURSE_DESCRIPTION: Annotations on Java code allow you to associate additional metadata with classes, member variables, constructors, and methods. These annotations can be used to perform additional checks or add functionality to your Java code. Use this course to practice using annotations with reflection. Work with both built-in and custom annotations and see how you can access the annotations applied on classes, fields, and methods. Learn why not all annotations can be accessed via reflection. Create your own custom annotation and experiment with various retention policies. Next, examine accessing generics and arrays with reflection. When you're finished, you'll be able to harness the power of reflection to add new functionality to your code and work with generics and arrays.

COURSE_DESCRIPTION: In this course, learners discover how to implement cloud architecture for large-scale data science applications, serverless computing, adequate storage, and analytical platforms using DevOps tools and cloud resources. Key concepts covered here include the impact of implementing containerization on cloud hosting environments; the benefits of container implementation, such as lower overhead, increased portability, operational consistency, greater efficiency and better application development; and the role of cloud container services. You will study the concept of serverless computing and its benefits; the approaches of implementing DevOps in the cloud; and how to implement OpsWorks on AWS by using Puppet which provides the ability to define which software and configuration a system requires. See demonstrations of how to classify storage from the perspective of capacity and data access technologies; the benefits of implementing machine learning, deep learning, and artificial intelligence in the cloud; and the impact of cloud technology on BI analytics. Finally, learners encounter container and cloud storage types, container and serverless computing benefits, and advantages of implementing cloud-based BI analytics.

COURSE_DESCRIPTION: Course Information: In many areas of computer science such as robotics, computer graphics, virtual reality, and geographic information systems, it is necessary to store, analyze, and create or manipulate spatial data. This course deals with the algorithmic aspects of these tasks: we study techniques and concepts needed for the design and analysis of geometric algorithms and data structures. Each technique and concept will be illustrated on the basis of a problem arising in one of the application areas mentioned above. Goals: At the end of this course participants should be able - to decide which algorithm or data structure to use in order to solve a given basic geometric problem, - to analyze new problems and come up with their own efficient solutions using concepts and techniques from the course. Prerequisites: In order to successfully take this course, you should already have a basic knowledge of algorithms and mathematics. Here's a short list of what you are supposed to know: - O-notation, Q-notation, Θ-notation; how to analyze algorithms - Basic calculus: manipulating summations, solving recurrences, working with logarithms, etc. - Basic probability theory: events, probability distributions, random variables, expected values etc. - Basic data structures: linked lists, binary search trees, etc. - Graph terminology - Programming skills for practical assignments Most of the material in this course is based on the following book: M. de Berg, O. Cheong, M. van Kreveld, and M. Overmars. Computational Geometry: Algorithms and Applications (3rd edition). Springer-Verlag, 2008. It is not mandatory to buy this book. However if participants want to know more than is offered in this course or want to have another look at the material discussed in the lectures, we recommend buying this book. The video lectures contain a few very minor mistakes. A list of these mistakes can be found under resources. If you think you found an error, report a problem by clicking the square flag at the bottom of the lecture or quiz where you found the error.

COURSE_DESCRIPTION: In this 2-hours long project-based course, you will learn how to implement a Neural Network model in TensorFlow using its core functionality (i.e. without the help of a high level API like Keras). You will also implement the gradient descent algorithm with the help of TensorFlow's automatic differentiation. While it's easier to get started with TensorFlow with the Keras API, it's still worth understanding how a slightly lower level implementation might work in tensorflow, and this project will give you a great starting point. In order to be successful in this project, you should be familiar with python programming, TensorFlow basics, conceptual understanding of Neural Networks and gradient descent. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: This course provides learners with a baseline understanding of common cyber security threats, vulnerabilities, and risks. An overview of how basic cyber attacks are constructed and applied to real systems is also included. Examples include simple Unix kernel hacks, Internet worms, and Trojan horses in software utilities. Network attacks such as distributed denial of service (DDOS) and botnet- attacks are also described and illustrated using real examples from the past couple of decades. Familiar analytic models are outlined such as the confidentiality/integrity/availability (CIA) security threat framework, and examples are used to illustrate how these different types of threats can degrade real assets. The course also includes an introduction to basic cyber security risk analysis, with an overview of how threat-asset matrices can be used to prioritize risk decisions. Threats, vulnerabilities, and attacks are examined and mapped in the context of system security engineering methodologies.

COURSE_DESCRIPTION: Needless to say, authentication and authorization are imperative to data security. As someone working on developing and maintaining AWS-based applications, you may know this intuitively, but you may not how to put these systems in place. Use this course to gain a theoretical background in working with the primary AWS authentication and authorization resources and services. Examine the features, terminology, activities, and considerations involved in using AWS Identity and Access Management, various AWS identities, Amazon Cognito user and identity pools, Amazon Cloud Directory, AWS Directory Service, Resource Access Manager, Resource Groups, Tag Editor, Single Sign-On, and Audit Manager. This course is part of a collection that prepares learners for the AWS Certified Developer - Associate 2021 certification exam.

 COURSE_DESCRIPTION: Possible uses for blockchain technology seem almost limitless-and its potential is indeed impressive. But the complex nature of this transformative tool bears thorough study, as well as the innovative solutions being developed to broaden its usefulness. In this 7-video series, newcomers and experienced users will learn both the strengths and limitations of this widely-publicized technology and the networks that implement it-from the first, widely-popular public Ethereum network to the newer Hyperledger umbrella of technologies, whose more extensive private frameworks may prove to be of even greater benefit to your company. Become familiar with the ways in which blockchains store transaction data and prevent fraud, the essential role of smart contracts, and the versatile frameworks and tools used by Hyperledger to provide better security, strengthen confidentiality, and improve speed with multiple, industry-specific solutions. Along the way, you are introduced to Hyperledger tools, or specialized software used to design, deploy, and maintain blockchains and blockchain networks.

COURSE_DESCRIPTION: Explore automation approaches, how to work with the tools and services provided by AWS (Amazon Web Services) to implement DevOps and CloudOps in the enterprise, and their associated challenges, in this 18-video course. You will learn about critical automation patterns for implementing AWS DevOps and CloudOps; the effective approaches for automating IT processes using the AWS DevOps Reference Architecture; and the DevOps Transformation Assessment and Strategy. Additionally, you will discover how to use essential AWS Serverless Architecture patterns in automating IT processes and the prominent containerization services provided by AWS for CI/CD (continuous integration/continuous deployment). Learners will examine how to use and work with serverless architecture, AWS Lambda, AWS OpsWorks, AWS Systems Manager, and AWS Config to automate CI/CD pipelines. The course concludes with demonstrations of how to implement configuration management; how to manage EC2 (Amazon Elastic Compute Cloud) Systems; how to enforce compliance for infrastructures; and how to deploy code into containers running on ECS (Elastic Container Service).

COURSE_DESCRIPTION: Power BI is one of the most commonly-used tools for building data reports from various source data. In this course, you'll start by installing Power BI Desktop and importing data to it from several sources, including the relational databases, MySQL and PostgreSQL, cloud data warehouses, and Excel, CSV, JSON, and XML files. You'll then use Power BI to perform simple operations, such as changing data types, renaming columns, and using uppercase text. You'll also open and run the Power Query app. Moving on, you'll use Power BI to create and format simple data visualizations, such as bar charts, line charts, and stacked bar charts. Finally, you'll practice aggregating numeric data and string (categorical) data in charts, working with the correct aggregation operators for their respective fields.

COURSE_DESCRIPTION: With the right mindset, leaders can transform team and organizational culture. This course is designed to help leaders apply systems thinking methodology to transform team and workplace dynamics. Leaders who develop a systems-thinker approach are better equipped to honor and navigate the complexity of diversity, equity, and inclusion in the workplace. In this course, leaders and managers will learn how to push in the direction that produces an inclusive work environment, including using inclusive language, to lead toward transformation for the total enterprise, not just its component parts. You'll also learn how a new way of leadership can support DEI, and what techniques can keep employee engagement and motivation in the work of DEI consistently high. As part of your DEI work, we encourage you to visit www.lawanaharris.com/assessment and take a self-assessment to help you determine your strengths and weaknesses around DEI.

COURSE_DESCRIPTION: This course is designed to provide a basic understanding of financial statements with an emphasis on the income statement. Building on the foundation formed in the first course, you will learn about the third of our three measurement questions and how the income statement helps to answer this final measurement question. Returning to the real business people introduced in the first course, this second course describes the basic content of income statement in a simple yet relevant context. The course ends by summarizing many of the lessons learned in both courses to leave you with a lasting impression about what financial statements are and how accounting can work for you. We all know that accounting is "the language of business"; let's make learning this language engaging, and perhaps even fun! Upon successful completion of this course, you will be able to:
• Describe the purpose of an income statement. • Define the basic components of an income statement. • Recognize and understand the meaning of several items typically presented on an income statement. • Explain the broader purpose of financial statements and the role of accounting in producing the financial statements. • Read and, to some extent, interpret real-world income statements. If you enjoy this business course and are interested in an MBA, consider applying to the IMBA, a flexible, fully-accredited online MBA at an incredibly competitive price offered by the University of Illinois. For more information, please see the Resource page in this course and onlinemba.illinois.edu.

COURSE_DESCRIPTION: Marketing Mix Fundamentals prepares you for arguably the most important stage of bring your product to market - how and where are you going to market it? It sets out a detailed introduction to the four P's of Marketing (Product, Pricing, Place and Promotion), this course forces you to strategically analyze your product and/or service. The Product session is designed to provide you with the knowledge to understand and manage the strategic role of brands and products in generating business results, whilst the focus on Pricing will cover the main concepts and techniques to formulate prices. Complement this with skills from the "P" session Place, where you consider channels and retail strategies with the overriding objective of defining a distribution strategy for your product or service. Finally, through the Promotional activities (Communication) session, explore the different communication channels available and understand the importance of the media plan, dealing specifically with social media and omni-channel strategy. IE Professors Maria Teresa Aranzabal and Fernando Cortiñas will guide you through this incredibly important stage of marketing strategy using expert interviews with industry professionals. After this course you will be ready to decide where and how you want to market your product.

COURSE_DESCRIPTION: Social and emotional learning, or SEL, programs have flourished in schools during the last decade. While this growth has been impressive, inadequate attention has been paid to teachers' social and emotional learning. In this course Dan Liston and Randy Testa introduce you to various rationales for why teacher SEL is needed as well as examine and reflect on various emotions in teaching and learning. This course is a part of the 5-course Specialization "The Teacher and Social Emotional Learning (SEL)". Interested in earning 3 university credits from the University of Colorado-Boulder for this specialization?? If so check out "How you can earn 3 university credits from the University of Colorado-Boulder for this specialization" reading in the first module of this course for additional information. We want to note that the courses in this Specialization were designed with a three-credit university course load in mind. As a participant you may notice a bit more reading content and a little less video/lecture content. Completing and passing the SEL Specialization allows the participant to apply for 3 graduate credits toward teacher re-certification and professional enhancement. We want to ensure the quality and high standards of a University of Colorado learning experience. Interested in earning 3 graduate credits from the University of Colorado-Boulder for The Teacher and Social Emotional Learning (SEL) Specialization? Check out "How you can earn 3 university credits from the University of Colorado-Boulder for this specialization" reading in the first week of this course for more information.

COURSE_DESCRIPTION: Welcome to this project-based course, SQL CASE Statements. In this project, you will learn how to use SQL CASE statements to query tables in a database. By the end of this 2-hour long project, you will be able to write simple CASE statements to retrieve the desired result from a database. Then, we will move systematically to write more complex SQL CASE statements. Furthermore, we will see how to use the CASE clause together with aggregate functions, and SQL joins to get the desired result you want from tables in a database. Also, you will learn how to use the CASE clause to transpose the result of a query. Also, for this hands-on project, we will use PostgreSQL as our preferred database management system (DBMS). Therefore, to complete this project, it is required that you have prior experience with using PostgreSQL. Similarly, this project is an advanced SQL concept; so, a good foundation for writing SQL queries, and performing joins in SQL is vital to complete this project. If you are not familiar with writing queries in SQL and SQL joins and want to learn these concepts, start with my previous guided projects titled "Querying Databases using SQL SELECT statement", "Performing Data Aggregation using SQL Aggregate Functions" and "Mastering SQL Joins". I taught these guided projects using PostgreSQL. So, taking these projects will give the needed requisite to complete this project on SQL CASE Statements. However, if you are comfortable writing queries in PostgreSQL, please join me on this wonderful ride! Let's get our hands dirty!

COURSE_DESCRIPTION: This 14-video course explores Azure database user access management, SQL threat detection, and how to enable SQL threat policies, while helping prepare learners for AZ-500 Microsoft Azure Security Technologies certification exam. First, you will learn to use SQL and Azure AD (Active Directory) logins to authenticate Azure SQL deployments, and create SQL logins. You will learn how to use SQL Server Management Studio to connect to Azure SQL and how to enable RBAC (role-based access control) for Azure AD administration by using the GUI (graphical user interface), CLI

(command-line interface), and PowerShell. You will learn to configure the Azure SQL Firewall, and to configure custom keys for Azure SQL TDE (transparent data encryption). This course then demonstrates how to conduct a SQL vulnerability assessment to determine security shortcomings. You will examine Advanced Threat Detection, and how to configure threat detection settings at the Azure SQL Server level and at individual database level. Finally, learn to enable threat policies by using CLI and PowerShell.

COURSE_DESCRIPTION: In this course, you will learn about method overriding, including the use of the super keyword from contexts other than within constructions, and also examine the behavior of static methods. To start, participants learn how to apply method overriding and recognize the concept of hiding, and use the super keyword inside any method invocation in the derived class. This follows on to the use of advanced forms of overriding, combining method overriding with complex inheritance hierarchies. Study static methods and static binding, recognizing that static methods do not support run-time polymorphism. Examine pitfalls to avoid with static methods by learning to recognize how static methods are bound using compile-time rather than run-time binding. Learn how to correctly override the method .toString, which is inherited from java.lang.Object, and describe how the .equals method and the == operator are related. Explore how to correctly override the .hashCode method and write the code to correctly override the .equals method, inherited from java.lang.Object. Finally, after studying the link between equals and hashCode, discover how to implement the .hashCode contract.

COURSE_DESCRIPTION: In this course, you'll learn about characteristics of the Embedded Event Manager in an NX-OS context. You'll explore uses of the Scheduler for routine maintenance tasks that you need to perform on data center equipment. Next, you'll examine the different options for user interfaces on the Cisco Nexus equipment and how you can enable them. You'll learn about system differences between JSON and XML, as well as about the automation features of Ansible and Puppet. Next, you'll learn about the ease of programmability of Python with the Cisco Data Center portfolio. You'll explore how PowerOn Auto Provisioning allows you to automate software upgrades, as well as configuration when a new Cisco Nexus device joins the network. Finally, you'll learn about features of the Data Center Network Manager and the UCS Director products. This course is one in a collection that helps prepare learners for the 350-601 Implementing Cisco Data Center Core Technologies (DCCOR) certification exam.

COURSE_DESCRIPTION: Learn SAS or Python programming, expand your knowledge of analytical methods and applications, and conduct original research to inform complex decisions. The Data Analysis and Interpretation Specialization takes you from data novice to data expert in just four project-based courses. You will apply basic data science tools, including data management and visualization, modeling, and machine learning using your choice of either SAS or Python, including pandas and Scikit-learn. Throughout the Specialization, you will analyze a research question of your choice and summarize your insights. In the Capstone Project, you will use real data to address an important issue in society, and report your findings in a professional-quality report. You will have the opportunity to work with our industry partners, DRIVENDATA and The Connection. Help DRIVENDATA solve some of the world's biggest social challenges by joining one of their competitions, or help The Connection better understand recidivism risk for people on parole in substance use treatment. Regular feedback from peers will provide you a chance to reshape your question. This Specialization is designed to help you whether you are considering a career in data, work in a context where supervisors are looking to you for data insights, or you just have some burning questions you want to explore. No prior experience is required. By the end you will have mastered statistical methods to conduct original research to inform complex decisions.

COURSE_DESCRIPTION: In this 2-hour long project-based course, you will learn how to deploy TensorFlow models using TensorFlow Serving and Docker, and you will create a simple web application with Flask which will serve as an interface to get predictions from the served TensorFlow model. This course runs on Coursera's hands-on project platform called Rhyme. On Rhyme, you do projects in a hands-on manner in your browser. You will get instant access to pre-configured cloud desktops containing all of the software and data you need for the project. Everything is already set up directly in your Internet browser so you can just focus on learning. For this project, you'll get instant access to a cloud desktop with (e.g. Python, Jupyter, and TensorFlow) pre-installed. Prerequisites: In order to be successful in this project, you should be familiar with Python, TensorFlow, Flask, and HTML. Notes: - You will be able to access the cloud desktop 5 times. However, you will be able to access instructions videos as many times as you want. - This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Most current question answering datasets will frame the task as reading comprehension, where the question is about a paragraph or document and the answer often is a span in the document. Some specific tasks of reading comprehension include multi-modal machine reading comprehension and textual machine reading comprehension, among others. This course focuses on the architecture of the Q&A pipeline. First, install the Transformers library and import a text comprehension model to create your Q&S pipeline. Then, use Gradio to develop a user interface for answering questions about a given article. Upon completion, you'll be able to develop an application that can answer questions asked by a user about a given article.

COURSE_DESCRIPTION: This course is an introductory programming course that combines programming with animation, using the programming environment Alice. You will first learn to tell 3D animated stories by programming Alice's 3D objects. In particular you will learn how to set up a scene, to tell a story using storyboarding, to move the camera, and how to move and rotate objects. You will learn programming concepts such as writing your own instructions, repetition, making decisions, and grouping similar objects together. In the second half of the course you will learn how to combine the topics you have learned with event programming to build 3D games you and your friends can play.

COURSE_DESCRIPTION: In this intermediate-level course you will explore and compare three methods of applying CSS (Cascading Stylesheets) styles to HTML to visually enhance a website. While HTML provides web page content, it is CSS that can turn simple text and images into a stunning website. As you compare and practice with inline styles, internal stylesheets, and external stylesheets you will gain a better understanding of how and when to use each method, and why the word "cascading" is used to describe them. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In this 15-video course, learners can review key concepts and technologies including account management, Active Directory (AD), and basics of device management. You will begin by learning how to create local or Active Directory user accounts; logical concepts of AD, creating forests, domains and OUs (organizational units); and navigating AD infrastructure. Next, review physical concepts, deploying domain controllers, configuring sites, and describing NTDS.dit file. This is followed by learning how to manage AD and perform common AD administrative functions. You will learn about writing distinguished names, enabling schema management, and managing DNS (domain name system) dependency. Next, navigate Azure AD, learn about Group Policy Objects (GPOs), and learn how to create and configure new GPOs. Explore essentials of device management by configuring mobile device management policies and enumerating potential challenges. Perform static and automated IP Address configuration, and navigate the deployment landscape. The concluding exercise involves editing the domain partition of the AD DB, creating an OU, and creating and configuring a user object. This is one course in a series to help learners prepare for the MD-100: Windows 10 certification exam.

COURSE_DESCRIPTION: In today's world, data warehouses have become necessary for making informed business decisions. The wide availability of data comes at an increased cost of storing it efficiently - a necessity for any business working with large amounts of data. Learn more about the key concepts, architecture, stages, use cases, and available solutions for data warehouses using this course. You will examine data warehousing solutions, architecture, and techniques, discover Amazon Redshift and Google BigQuery, and explore the concepts, such as batch, stream, and real-time analytics. This course will also help highlight the considerations for implementing a data warehouse for a business and the implementation steps and best practices required. After completing this course, you will have a foundational knowledge of implementing a data warehousing solution for your business.

COURSE_DESCRIPTION: In this project we are going to design a company brand using Wix's website builder, branding and marketing tools, and their SEO (search engine optimization) tools. By the end of this project you will feel confident and capable in improving the strength of your company's brand and your website's search ability. Wix is a free website building platform that combines professional designs with easy to use editing features. In addition to their website building capabilities, Wix can also help you build your brand through a wide variety of helpful marketing tools included on their platform. Whether you're designing a logo or business cards, trying to send out fun and informative emails, or trying to create posts for social media, Wix can do it all. Wix even has a number of search engine optimization (SEO) tools which can help you increase your website's visibility on web search engines. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Designing successful and competitive AI products involves thorough research on its existing application in various markets. Most large scale businesses use AI in their workflows to optimize business operations. AI Architects should be aware of all possible applications of AI so they can look at market trends and come up with the most appropriate, novel, and useful AI solutions for their industry. In this course, you'll explore examples of standard AI applications in various industries like Finance, Marketing, Sales, Manufacturing, Transportation, Cybersecurity, Pharmaceutical, and Telecommunications. You'll examine how AI is utilized by leading AI companies within each of these industries. You'll identify which AI technologies are common across all industries and which are industry-specific. Finally, you'll recognize why AI is imperative to the successful operation of many industries.

COURSE_DESCRIPTION: Larger enterprises using AWS can benefit from managing multiple AWS accounts through AWS Organizations. Knowing how to do this will help you in your role as a certified AWS SysOps Admin. In this course, you'll begin by using AWS Organizations to add accounts to organizations, identifying the benefits of using AWS organizations and organizational units (OUs). Next, you'll manage AWS organizations and OUs using the AWS Organizations GUI and CLI. Lastly, you'll apply service control policies (SCPs) to AWS organizations for central control of the AWS environment. This course is one of a collection that prepares learners for the AWS Certified SysOps Administrator - Associate (SOA-COI) exam.

COURSE_DESCRIPTION: This course introduces simple and multiple linear regression models. These models allow you to assess the relationship between variables in a data set and a continuous response variable. Is there a relationship between the physical attractiveness of a professor and their student evaluation scores? Can we predict the test score for a child based on certain characteristics of his or her mother? In this course, you will learn the fundamental theory behind linear regression and, through data examples, learn to fit, examine, and utilize regression models to examine relationships between multiple variables, using the free statistical software R and RStudio.

COURSE_DESCRIPTION: In this course, you will learn how to better and more successfully engage your ELL(s) and their families in the school and community. You will learn how to engage your ELL student in the classroom setting as well as in various aspects of the school including extracurricular activities and the inner workings of the school and education system. You will also be introduced to strategies for engaging the families of your ELL students in the school community and the wider community of your city and state. You will interact with a variety of case studies that highlight teachers, schools, and communities in different cities throughout the United States and the ways in which they successfully engage ELLs and their families. From sharing their experience, you will have the tools necessary to implement strategies and procedures for engaging your ELLs and their families. Upon completing this course, you will be able to: * Define the culture of ELLs in K-12 classrooms across the U.S. * Recognize cultural impact on learning and formal education * Assess your school's engagement of ELLs and their families * Incorporate culturally sensitive techniques to engage ELLs in the classroom and school * Implement strategies for engaging ELLs' families in the school and larger community * Design a plan for engagement of ELLs and their families in your school * Create a checklist for school and community resources for engaging ELLs and their families

COURSE_DESCRIPTION: By the end of this guided project, you will be fluent in identifying and creating Epics for Agile projects based on previous high-level analyses and research data. This will enable you to identify and map the value and features required for new products and services. Furthermore, it is essential for generating positive results for your business venture. This guided project is designed to engage and harness your visionary and exploratory abilities. You will use proven models in Agile Project Management with Taiga to shape the development roadmap of products and services. We will practice critically linking our stories to thematic elements and stages of the customer journey with the proposed product and service.

COURSE_DESCRIPTION: Welcome to this project-based course on Visual Machine Learning with Yellowbrick. In this course, we will explore how to evaluate the performance of a random forest classifier on the Poker Hand data set using visual diagnostic tools from Yellowbrick. With an emphasis on visual steering of our analysis, we will cover the following topics in our machine learning workflow: feature analysis, feature importance, algorithm selection, model evaluation using regression, cross-validation, and hyperparameter tuning. This course runs on Coursera's hands-on project platform called Rhyme. On Rhyme, you do projects in a hands-on manner in your browser. You will get instant access to pre-configured cloud desktops containing all of the software and data you need for the project. Everything is already set up directly in your internet browser so you can just focus on learning. For this project, you'll get instant access to a cloud desktop with Python, Jupyter, Yellowbrick, and scikit-learn pre-installed. Notes: - You will be able to access the cloud desktop 5 times. However, you will be able to access instructions videos as many times as you want. - This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

 COURSE_DESCRIPTION: This 13-video course allows learners to explore Microsoft 365 collaboration features and Office 365 deployment, as part of preparations for the Microsoft 365 Fundamentals (MS-900) exam. In this course, you will hear detailed discussion of Office 365 deployment consideration, along with descriptions of the various ways Office 365 enables collaboration, including collaboration with Office 365 groups, Dynamics 365, and email collaboration. Learn about Deploy and Dynamics 365, a suite of enterprise resource planning (ERP) solutions that includes customer resource management (CRM). Learn more about creating groups with SharePoint, Outlook, Teams, Yammer, or Planner; about Outlook, Microsoft's e-mail client; and about the three Office 365 business plans and their various monthly costs and features. A concluding exercise asks learners to explain Office 365 plans and collaboration; describe the three Office 365 plans for business and the four Office 365 plans for enterprises; discuss the three Office 365 update channels; explain ways to collaborate with Office 365 Groups; and describe four ways to collaborate with Outlook.

COURSE_DESCRIPTION: Welcome to this project-based course on Regression Analysis with Yellowbrick. In this project, we will build a machine learning model to predict the compressive strength of high performance concrete (HPC). Although, we will use linear regression, the emphasis of this project will be on using visualization techniques to steer our machine learning workflow. Visualization plays a crucial role throughout the analytical process. It is indispensable for any effective analysis, model selection, and evaluation. This project will make use of a diagnostic platform called Yellowbrick. It allows data scientists and machine learning practitioners to visualize the entire model selection process to steer towards better, more explainable models. Yellowbrick hosts several datasets from the UCI Machine Learning Repository. We'll be working with the concrete dataset that is well suited for regression tasks. The dataset contains 1030 instances and 8 real valued attributes with a continuous target. We will cover the following topics in our machine learning workflow: exploratory data analysis (EDA), feature and target analysis, regression modelling, cross-validation, model evaluation, and hyperparameter tuning. This course runs on Coursera's hands-on project platform called Rhyme. On Rhyme, you do projects in a hands-on manner in your browser. You will get instant access to pre-configured cloud desktops containing all of the software and data you need for the project. Everything is already set up directly in your internet browser so you can just focus on learning. For this project, you'll get instant access to a cloud desktop with Python, Jupyter, Yellowbrick, and scikit-learn pre-installed. Notes: - You will be able to access the cloud desktop 5 times. COURSE_DESCRIPTION: Intercultural Communication and Conflict Resolution is a growing area of importance considering the pace and volume of global transactions. The ease of global communication using technology, the abundance of cheaper transportation costs, and the frequency of businesses using cross-border talent is fostering millions of interactions a day between people of different cultures. Examine how the process of communication can be further complicated during interactions between people of different cultures. The topics of stereotypes, generalizations, communication styles, communication strategies, and communication orientations will be explored. Upon completing this course, you will be able to: 1. Explain the dimensions of intercultural interactions that add to conflict 2. Analyze the dynamics of intercultural interactions 3. Plan strategies for success in intercultural interactions

COURSE DESCRIPTION: Angular is a commonly-used language among experienced developers moving into full stack development. Through templating, two-way binding, modularization, RESTful API handling, dependency injection, and AJAX handling, Angular provides the tools needed to build interactive and dynamic single-page applications. This course elevates a basic working knowledge of Angular by guiding you on some more advanced practices. Learn to create classes in TypeScript and add properties and functions to TypeScript classes. Define decorators in JavaScript and create a simple Angular component. Add templates, styles, and styleUrls to Angular components. Furthermore, investigate binding data with interpolation and ng-bind. After taking this course, you'll be able to use components in Angular to make the most of this dynamic web framework.

COURSE_DESCRIPTION: In this challenge, you will monitor a new Azure data factory that supports a data pipeline. First, you will create a storage account to store diagnostic settings, and then you will design a monitoring solution for data storage and data processing. Next, you will deploy an Azure data factory, and then you will create a data pipeline. Finally, you will publish and monitor the data pipeline. Note: Once you begin the challenge lab, you will not be able to pause, save, or exit and then return to your challenge lab. Please ensure that you have set aside enough time to complete the challenge lab before you start.

COURSE_DESCRIPTION: Explore standard Azure load balancers and Azure Application Gateway to improve web application performance in this 7-video course, helping prepare learners for the AZ-300: Microsoft Azure Architect Technologies certification exam. This course examines how management of back-end virtual machines is enabled through load balancer inbound NAT (network address translation) rules, and you will learn how to configure NAT rules. You will explore how the Azure Load Balancer takes incoming client requests or app traffic, and evenly distributes it against a pool of servers running in the background, which improves application performance and resiliency against server failure. You will learn to configure a public load balancer for public-facing apps. Next, learn how to deploy a load balancer using Azure portal, and how to deploy a load balancer from an ARM

(Azure Resource Manager). You will learn to use Azure Application Gateway as a load balancer. Finally, the course demonstrates how to enable inbound NAT rules.

COURSE_DESCRIPTION: Change can be disruptive but adapting to change can also open new possibilities. A changing work situation can create a period of uncertainty while you adapt. A clear understanding of what organizational change is can help build your resilience and flexibility. In this course, you'll find out what organizational change is and what can trigger it. You'll identify the reasons why organizational change is difficult, as well as exploring the positive results that can come out of it. Finally, you'll identify the stages of reactions to change and learn how to prepare yourself to get the most out of change.

COURSE_DESCRIPTION: The key to success when security testing a web application is making sure you have an effective plan. In this course, you'll explore the common web app hacking methodology, as described by EC-Council. Next, you'll learn how the tools you have at your disposal will be crucial to your success when testing the security of any web application. Finally, getting past the login page of a web application can be a common first stop for security researchers, so you'll examine how to accomplish this using techniques like injection and brute-force attacks. This course is one in a series that helps to prepare you for the Certified Ethical Hacker v11 (312-50) exam.

COURSE_DESCRIPTION: Want your workplace writing to make a positive impression? At the end of this course, you will be a more confident writer, able to create higher quality professional documents more quickly. This course is at the introductory or beginner level and focuses on mastering the basics of email etiquette and communication. While this course will help learners become faster and more efficient writers by virtue of practice with common writing purposes, it does not cover marketing emails or job application materials. In this project-based learning course, you will work on a continuous project, the writing of a professional email/memo. At the end of the course, you will write a clear and concise email/memo. The final product will be individualized to your professional endeavors and follow the guidelines for one of the common types of emails/memos explained in the course: directives, progress reports, incident reports, response to inquiries, and meeting minutes. You will gain a wealth of skills. You will learn about appropriate email/memo formats, common ways to organize email/memo contents, common email/memo routing protocols, and expectations upon writers in professional environments. This course is designed to be beneficial to all levels of learners, whether you have never heard of an email/memo or write them every day. Everyone will learn something from this experience. In fact, different levels of learners are encouraged in this course so that we can all learn from each other. There will be thousands of learners working side-by-side on their projects, and the environment will be social, supportive, and constructive. By the end of this course, learners will be able to: - write clear and concise emails/memos relative to their professional endeavors - recognize five different types of emails/memos and their formats - analyze email/memo context for audience and tone - use basic grammar correctly in their email/memo writing Materials required: Learners in this course will need only a computer with strong enough Internet to play videos and hear sound. A word processing software is suggested, but not required. Time required: This course will require approximately 4 hours of work in the platform, including videos, reading, quizzes, and other activities. The course project will require approximately 6 hours of work, including the rough draft, draft peer review, final draft, and final peer review.

COURSE_DESCRIPTION: In this course, you learn how to design APIs, and how to use OpenAPI specifications to document them. You learn about the API life cycle, and how the Apigee API platform helps you manage all aspects of the life cycle. You learn about how APIs can be designed using API proxies, and how APIs are packaged as API products to be used by app developers. Through a combination of lectures, hands-on labs, and supplemental materials, you will learn how to design, build, secure, deploy, and manage API solutions using Google Cloud's Apigee API Platform. This is the first course of the Developing APIs with Google Cloud's Apigee API Platform series. After completing this course, enroll in the API Security on Google Cloud's Apigee API Platform course.
COURSE_TITLE: API Design and Fundamentals of Google Cloud's Apigee API Platform

COURSE_DESCRIPTION: Explore asset and change management, and their relationship to security through discussion and demonstration, in this 14-video course, which examines classes of assets, including personnel, hardware, software, data, and trade secrets. Prepare for the Systems Security Certified Practitioner (SSCP) certification exam by learning how to inventory hardware assets; how hardware is configured; and learning about network entry points such as VPN concentrators, wireless access points, and ethernet switches. This course examines software assets, including off-the-shelf and customized software. Learners observe how to configure a hardware inventory using Microsoft SCCM (System Center Configuration Manager). You will learn about data classification, and techniques to help facilitate security on a larger scale. Next, learn how file classification works by using the Windows Server Operating System and the File Server Resource Manager role service. You will examine TPM (Trusted Platform Module), firmware that is embedded in a chip, and which can be used with MFA (multifactor authentication). You will explore MDM (mobile device management). Finally, this course demonstrates a structured approach to change management and adoption.

COURSE_DESCRIPTION: If you would like to create an engaging sensory experience for your intended audience, multimedia can be an excellent addition to your presentations. This course explores the many ways to use multimedia elements in PowerPoint, from audio and video to links and 3D models. You will see how to use hyperlinks to integrate websites, files, and emails to your slides. You will also discover how to use Summary, Section, and Slide Zooms to allow you to freely navigate to different slides and sections of your presentation. This course will not only cover how to insert these various elements onto your slide, but also how to manage and format them to ensure you get the most out of them. Would you like hands-on practice? Go to the Resources section of the course and download the sample files to follow along with select videos.

COURSE_DESCRIPTION: In order to build effective applications in Java, developers must understand how the apps interact with a database. Through this course, gain hands-on experience in defining entities and the relationship between them in a JPA application and their implementation with Hibernate. Begin by defining entities in an app that have identifiers based on a single as well as a combination of properties - i.e., single value primary keys and composite keys. You'll then explore CRUD operations (create, read, update, and delete) using JPA APIs. Finally, you'll delve into defining one-to-one, one-to-many, and many-to-many relationships between entities in an application. After you're done with this course, you'll have a solid grasp of how to define entities using JPA, model their relationships, and how Hibernate translates these into database relations.

COURSE_DESCRIPTION: IT professionals in enterprise environments planning for device deployment should be familiar with the Microsoft Deployment Toolkit (MDT). The Microsoft Deployment Toolkit (MDT) is a collection of automation tools and procedures for deploying operating systems to devices. Through this course, learn how to work with the Microsoft Deployment Toolkit (MDT). Examine MDT and discover how to prepare for Windows deployments with MDT, manage boot images and OS upgrade packages, and manage applications and drivers. Next, learn how to manage user state, deploy to unknown systems, and deploy Windows 10 with PXE. Finally, work with task sequences, configure customsettings.ini and bootstrap.ini, troubleshoot MDT deployments, and explore the User State Migration Tool (USMT). This course is part of a series preparing learners for the MD-101: Managing Modern Desktop exam.

COURSE_DESCRIPTION: A very important job that a cybersecurity professional will need to be familiar with is that of incident management. In this course, you'll explore incident management and what it's designed to accomplish. Next, you'll examine the nine steps of the incident handling and response process to help familiarize yourself with the actions and expectations you may need to take to properly deal with a security incident. You'll learn about effective tools for protecting against advanced threats, as well as the role artificial intelligence and machine learning play in the current cybersecurity battlefield. Finally, you'll examine standards, regulations, and laws that govern how computer systems must be secured and maintained. This course is one in a series that helps to prepare you for the Certified Ethical Hacker v11 (312-50) exam.

COURSE_DESCRIPTION: With the Google Chat Android app, you can easily communicate and collaborate from your mobile device. This course covers the fundamental skills you will need to be proficient in the app. First, discover the app interface, and see how to start conversations and exchange messages. See options for managing conversations, and discover how to share and send files, video meetings and events. Next, the course introduces you to spaces, a kind of group chat for collaborating in teams. In particular, you will learn how to create or join a space, take part in space threads and topics, and use spaces to share files and tasks. You will also discover some tools to optimize how you use the app. Learn how to find messages and people with the search tool and configure the app settings to better suit your needs. Finally, see how to install apps to get added functionality.

COURSE_DESCRIPTION: Sorting and searching involve the three programming concepts of sequence, selection, and repetition. At least one of these three concepts is present in every program ever written. There are special sorting and searching algorithms that you'll likely need to use when developing a computer program. Use this course to investigate the main algorithms used in program development. Recognize their efficacy and how they're used as problem-solving tools. Learn about various algorithm types. Moving along, examine two sorting and two searching algorithms in detail. By the end of the course, you'll be able to recognize how sorting and searching algorithms apply to computer program development.

COURSE_DESCRIPTION: Firms make significant investments in IT. In the IS/IT Governance course we will discuss how to govern IT to make sure that the IT investments contribute to organizational goals and strategies. Firms need to formally evaluate significant IT investments. IT investments are also risky, so firms need to consider the risk associated with the investments to appropriately evaluate the investment. We will discuss how to evaluate IT investments. Firms usually make multiple IT investments in a given year. In this course we will discuss how to evaluate a portfolio of IT investments. Firms need a mechanism to charge users for the IT investments made to encourage prudent consumption of IT resources. We will discuss different mechanisms for charging for IT that incents users to spend IT dollars wisely. Finally, IT investments are made to generate value for the firm. This requires that employees actually use the new IT systems that is developed. Thus, in the IS/IT Governance course we will discuss strategies to make sure that users use the new system so that the firm derives value from its IT investments.

COURSE_DESCRIPTION: In this 6-video course, learners can explore ways in which to enhance presentation by using basic editing capabilities in PowerPoint for Office 365. You will learn how to select items in a slide, and several ways to edit an item. You will then learn how to move items between slides by using cut, copy, and paste functions. Next, you will observe how to use the Selection pane to select specific items in a slide. You will learn to use the Clipboard, which stores the information you have selected, and keeps the formatting applied in the original item or text. This course continues by exploring several available tools in PowerPoint that can be used to organize items within a slide, including how to adjust the alignment of items, and how the slide is layered by bringing objects to the front or setting them behind other items. This course concludes by demonstrating how to group items together, and how to modify or move the entire group.

COURSE_DESCRIPTION: Explore implementations of comparable subinterfaces, the features of the Collator and RuleBasedCollator classes, the rules of functional interfaces and their role in functional programming, and the structure and syntax of building Lambda expressions, along with other topics covered in this 12-video course. To begin, you will work with Comparator and Comparable interfaces, which leads into a closer look at Comparable subinterfaces and their implementations, and also the features of Collator and RuleBasedCollator as implementations of Comparator interfaces. Discover how to use RuleBasedCollator with specialized tailored rules; work with convenience factory methods for Collections; and recall the roles of functional interfaces and how they are used in functional programming, and then work with functional interfaces. Next, you will explore the structure and syntax of building Lambda expressions, and then create and use Lambda expressions in Java SE 11. In the final tutorial in this course, you will work with Lambda statements and use local-variable for Lambda parameters. This is one course is a series to prepare for the 1Z0-816: Java SE 11 Programmer II certification exam.

COURSE_DESCRIPTION: In this challenge, you will provision a new Azure Cosmos DB account that is designed for high availability. First, you will deploy an Azure Cosmos DB account. Next, you will create a container in a new database, and then you will add items to the container. Finally, you will enable high availability, and then you will test the configuration. Once you begin the challenge lab, you will not be able to pause, save, or exit and then return to your challenge lab. Please ensure that you have set aside enough time to complete the challenge lab before you start.

COURSE_DESCRIPTION: This intermediate-level course introduces the mathematical foundations to derive Principal Component Analysis (PCA), a fundamental dimensionality reduction technique. We'll cover some basic statistics of data sets, such as mean values and variances, we'll compute distances and angles between vectors using inner products and derive orthogonal projections of data onto lower-dimensional subspaces. Using all these tools, we'll then derive PCA as a method that minimizes the average squared reconstruction error between data points and their reconstruction. At the end of this course, you'll be familiar with important mathematical concepts and you can implement PCA all by yourself. If you're struggling, you'll find a set of jupyter notebooks that will allow you to explore properties of the techniques and walk you through what you need to do to get on track. If you are already an expert, this course may refresh some of your knowledge. The lectures, examples and exercises require: 1. Some ability of abstract thinking 2. Good background in linear algebra (e.g., matrix and vector algebra, linear independence, basis) 3. Basic background in multivariate calculus (e.g., partial derivatives, basic optimization) 4. Basic knowledge in python programming and numpy Disclaimer: This course is substantially more abstract and requires more programming than the other two courses of the specialization. However, this type of abstract thinking, algebraic manipulation and programming is necessary if you want to understand and develop machine learning algorithms.

COURSE_DESCRIPTION: Learn how to go from raw data to meaningful insights using AWS with this one-week course. Throughout the course, you'll learn about the fundamentals of Data Analytics from AWS experts. Start off with an overview of different types of data analytics techniques - descriptive, diagnostic, predictive, and prescriptive before diving deeper into the descriptive data analytics. Then, apply your knowledge with a guided project that makes use of a simple, but powerful dataset available by default in every AWS account: the logs from AWS CloudTrail. The CloudTrail service enables governance, compliance, operational auditing, and risk auditing of your AWS account. Through the project you'll also get an introduction to Amazon Athena and Amazon QuickSight. And, you'll learn how to build a basic security dashboard as a simple but practical method of applying your newfound data analytics knowledge.

COURSE_DESCRIPTION: Statistical inference is the process of drawing conclusions about populations or scientific truths from data. There are many modes of performing inference including statistical modeling, data oriented strategies and explicit use of designs and randomization in analyses. Furthermore, there are broad theories (frequentists, Bayesian, likelihood, design based, ...) and numerous complexities (missing data, observed and unobserved confounding, biases) for performing inference. A practitioner can often be left in a debilitating maze of techniques, philosophies and nuance. This course presents the fundamentals of inference in a practical approach for getting things done. After taking this course, students will understand the broad directions of statistical inference and use this information for making informed choices in analyzing data.

COURSE_DESCRIPTION: Welcome to Visual Perception for Self-Driving Cars, the third course in University of Toronto's Self-Driving Cars Specialization. This course will introduce you to the main perception tasks in autonomous driving, static and dynamic object detection, and will survey common computer vision methods for robotic perception. By the end of this course, you will be able to work with the pinhole camera model, perform intrinsic and extrinsic camera calibration, detect, describe and match image features and design your own convolutional neural networks. You'll apply these methods to visual odometry, object detection and tracking, and semantic segmentation for drivable surface estimation. These techniques represent the main building blocks of the perception system for self-driving cars. For the final project in this course, you will develop algorithms that identify bounding boxes for objects in the scene, and define the boundaries of the drivable surface. You'll work with synthetic and real image data, and evaluate your performance on a realistic dataset. This is an advanced course, intended for learners with a background in computer vision and deep learning. To succeed in this course, you should have programming experience in Python 3.0, and familiarity with Linear Algebra (matrices, vectors, matrix multiplication, rank, Eigenvalues and vectors and inverses).

COURSE_DESCRIPTION: In this course, you will examine IP (Internet Protocol) addresses, which are assigned to network-equipped devices that are part of a TCP (Transitional Control Protocol)/IP-based network. Learners explore the basics of IP addressing and networking concepts such as DNS (Domain Name System), DHCP (Dynamic Host Configuration Protocol), and NAT (Network Address Translation). Begin with an overview of DNS and its benefits. Then, take a closer look at the DHCP, its features and reservations. Explore some of the basic characteristics of IP version 4, the fourth revision of the Internet protocol. Next, look at IP version 6, the successor to version 4; version 5's functionality was worked into version 6. Study the purpose of the Subnet Mask, a key component of IP address configurations, and the Default Gateway, commonly found as a value in an IP configuration. Recognize when to use VPNs (Virtual Private Networks), and look at virtual local area networks, or VLANs. Finally, explore the benefits of NAT. A closing exercise assesses skills in configuring network settings and components. This course can be used to help prepare for the 220-1001: CompTIA A+ certification exam

COURSE_DESCRIPTION: By the end of this project, you will learn how to create a web-based application to view and analyse your dataset using RShiny, a free, open-source R library that you can download. You will learn how reactive programming works between the user interface (UI) and the server. You will then learn how to create a real world web-based application to upload your dataset in CSV format, and view and extract summary information from the dataset. Lastly, you will learn how to dynamically create high quality plots from different columns in your dataset and download these plots for business use. An RShiny web application is a dynamic application that updates automatically when the user input changes or updates. These web applications can save you time and resources while speeding up the processes and analysis. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In this Challenge Lab, you will configure VRF lite (Virtual Routing and Forwarding) to allow multiple isolate tenant networks to share a single Tier-0 Gateway. First, you will create uplink trunk segments for each tenant, and then you will deploy multiple VRF gateways. Next, you will deploy new Tier-1 gateways that connect to each VRF, and then you will create network segments for the Tier-1 gateways. Finally, you will attach VMs to the VRF segments, and then you will test connectivity. Note: Once you begin the Challenge Lab, you will not be able to pause, save, or exit and then return to your Challenge Lab. Please ensure that you have set aside enough time to complete the Challenge Lab before you start.

COURSE_DESCRIPTION: In this 10-video course, learners will discover how resource tagging can facilitate Azure cost management and explore other options such as reserved instances, service level agreements (SLAs) and pricing, Azure budgets, Azure costs analysis, and the Azure pricing calculator, in preparation for AZ-301: Microsoft Azure Architect Design certification exam. You will begin with a look at resource tagging and how it can facilitate Azure cost management, and adding tag names and values to Azure resources. Then move on to examining the SLA-the contract between a cloud service provider and a cloud customer-and pricing information. You will learn how to enable virtual machine (VM) shutdown, and how to deploy a reserved instance. Next, discover how to create an Azure budget, so you can start to plan ahead for your recurring monthly charges. Learn about Azure cost analysis, and how to plan Azure costs using the pricing calculator. Finally, take a look at cost management scheduled exports. The exercise involves planning Azure cost management.

COURSE_DESCRIPTION: This capstone project course ties together the knowledge from three previous courses in IoT though embedded systems: Development of Real-Time Systems, Web Connectivity & Security and Embedded Hardware and Operating Systems. The students will develop a larger system using the learning outcomes from these courses, and the students will evaluate the developed system in a real-world programming environment. This course is a true engineering task in which the student must, not only implement the algorithm code, but also handle the interfaces between many different actors and hardware platforms. The students will learn how to motivate engineering decisions and how to choose implementations to make a system actually running. The students will also learn to evaluate the efficiency and the correctness of their system as well as real-world parameters such as energy consumption and cost.

COURSE_DESCRIPTION: To create attractive, easy-to-read slides, it is important to know how to format your presentations. In this course, you will learn the fundamental tools needed to modify the size, style, and alignment of your text. Improve the contrast and accessibility of your presentation by seeing how to add color to elements. Make your text boxes and shapes stand out more by applying a border color. Organize long pieces of text by formatting them into a bulleted or numbered list. Change the overall appearance of your presentation by seeing how to import and apply a theme. And finally, you can create unique slide layouts and edit the overall theme of a presentation using the Theme builder tool. Would you like hands-on practice? Download the sample files from the Course Contents pane or from the Resources section. Then upload the files to your Google Drive to follow along with select videos.

COURSE_DESCRIPTION: LVMH! Huawei! Energysquare! Three companies in very different industries: luxury goods, telecommunications, energy. Three companies with very different sizes, histories and DNA. And yet, they all share the same objective: to innovate and change, and so to remain or

become leaders in their respective markets. The multiple questions that this raises for them warrant your close attention. In this capstone module, you will study each of these three companies and will in turn be an analyst, a consultant and a manager, depending on the assignment. You will use the knowledge acquired in the three MOOCs of this specialization to complete your assignments: analyse a digital business process, define and formulate a strategic shift, apply the principles of growth hacking, and more.

COURSE_DESCRIPTION: Learners can explore the creation, adoption, and use of an IRP (Incident Response Plan) in this 14-video course, which examines the purpose and objectives of an IPR, and how it incorporates the objectives of an organization. You will learn how to draft an IRP, and examine the six stages of incident response: preparation, identification, containment, eradication, recovery, and lessons learned. Next, you will examine several tools that are available for incident response strategies, including Sleuth Kit, Metasploit, Websense, and FireEye Security Orchestrator. You will explore the different types of CSIRTs (Computer Security Incident Response Teams), team roles, their purpose, and the benefits of an outsourced team. This course demonstrates an incident team response with two hypothetical scenarios. You will learn about compliance and regulatory requirements, and will examine the international standard, ISO 27001. You will examine governance policy to direct and control IT security. Finally, you will learn to use governance policies to create incident response policies, and you will learn the elements and best practices for creating a plan.

COURSE_DESCRIPTION: Power BI and Power Query can be used in combination to facilitate both basic and advanced operations. In this course, you'll learn how to use Power Query to create the two types of calculated columns, custom and conditional. Next, you'll use Power BI to import and clean data and create stacked line charts (area charts) to visualize data. You'll filter the unique categorical values of the visualized series using various filtering techniques. You'll then combine data between tables using a foreign key relationship and create a bar chart with line markers using the analytics card. You'll move on to import a large number of files residing in the same folder. Lastly, you'll use Power BI's UI and Advanced Editor to perform basic data cleaning operations and Power Query to perform various advanced operations.

COURSE_DESCRIPTION: This Professional Certificate will equip you with key skills and technical know-how to kickstart your career as a Full-Stack Cloud Native Application Developer. Guided by IBM, you will learn to build your own cloud-based applications and work with the technologies behind them. This program consists of 10 courses with ample instructional content as well as hands-on exercises and projects designed to hone your skills and help you build your portfolio. No prior programming experience or Cloud background is required to start this program. You'll skill up with the tools and technologies that successful software developers use to build, deploy, test, run, and manage Full Stack Cloud Native applications, giving you the practical skills to begin a new career in an in-demand area. The courses in this program will help you develop skill sets in many technologies including: Cloud foundations, HTML, CSS, JavaScript, GitHub, Node.js, React, Cloud Native practices, DevOps, CI/CD, Containers, Docker, Kubernetes, OpenShift, Istio, Python, Databases, SQL, NoSQL, Django ORM, Bootstrap, Application Security, Microservices, Serverless computing, and more. After completing all the courses in the program, including the capstone project, you will have developed several applications using front-end and back-end technologies and deployed them on a cloud platform using Cloud Native methodologies. Additionally, this program is ACE(r) recommended-when you complete, you can earn college credits.

COURSE_DESCRIPTION: In this 2-hour long project-based course, you will learn how to create a banking application that uses conditions and locks to ensure thread safety, practice designing programs that take advantage of multiple threads without losing data integrity, and learn how to apply multithreading to your own projects. By the end of the guided project, you will be able to create your own thread-safe Java multithreaded applications. Multithreading is an essential part of modern programming. Almost all modern computers contain multi-core CPUs, GPUs, or even multiple CPUs. Multithreading allows us to have multiple parallel threads of execution, allowing our programs to become multiple times faster than a single threaded application. In addition, understanding parallel programming principles is essential for building many modern applications such as video games, data science, and server connections. Understanding how to create Java multithreaded applications will greatly expand your programming potential. This course works on the Rhyme platform, which allows you to have a custom Windows VM ensuring you do not have to worry about any of the setup work for your application. Students will be able to code along on their desktop and learn by coding with the instructor. At the end of the course, you will receive the files you created in the course. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: At the end of the course, you will be able to: *Retrieve data from example database and big data management systems *Describe the connections between data management operations and the big data processing patterns needed to utilize them in large-scale analytical applications *Identify when a big data problem needs data integration *Execute simple big data integration and processing on Hadoop and Spark platforms This course is for those new to data science. Completion of Intro to Big Data is recommended. No prior programming experience is needed, although the ability to install applications and utilize a virtual machine is necessary to complete the hands-on assignments. Refer to the specialization technical requirements for complete hardware and software specifications. Hardware Requirements: (A) Quad Core Processor (VT-x or AMD-V support recommended), 64-bit; (B) 8 GB RAM; (C) 20 GB disk free. How to find your hardware information: (Windows): Open System by clicking the Start button, right-clicking Computer, and then clicking Properties; (Mac): Open Overview by clicking on the Apple menu and clicking "About This Mac." Most computers with 8 GB RAM purchased in the last 3 years will meet the minimum requirements. You will need a high speed internet connection because you will be downloading files up to 4 Gb in size. Software Requirements: This course relies on several open-source software tools, including Apache Hadoop. All required software can be downloaded and installed free of charge (except for data charges from your internet provider). Software requirements include: Windows 7+, Mac OS X 10.10+, Ubuntu 14.04+ or CentOS 6+ VirtualBox 5+.

COURSE_DESCRIPTION: In this 1-hour long project-based course, you will create an end-to-end classification model using PyCaret a low-code Python open-source Machine Learning library. The goal is to build a model that can accurately predict whether a teacher's project proposal was accepted, based on the data they provided in their application. You will learn how to automate the major steps for building, evaluating, comparing and interpreting Machine Learning Models for classification. Here are the main steps you will go through: frame the problem, get and prepare the data, discover and visualize the data, create the transformation pipeline, build, evaluate, interpret and deploy the model. This guided project is for seasoned Data Scientists who want to build a accelerate the efficiency in building POC and experiments by using a low-code library. It is also for Citizen data Scientists (professionals working with data) by using the low-code library PyCaret to add machine learning models to the analytics toolkit In order to be successful in this project, you should be familiar with Python and the basic concepts on Machine Learning Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: It's very common to want to display numeric values in different ways depending on the type of data. If you have a floating-point number in a scientific application, you may want to display your number like 6.022E23. If you are working in a financial application, you may want your number to appear like \$1,234.56. Or perhaps you want to display dates in a certain way. In this course, you'll learn how to store and display numeric values. You'll explore string formatting and variables. Next, you'll examine PascalCase vs. camelCase and how to use the snippets feature. You'll also learn about formatting and aligning numeric output. Finally, you'll learn about input and parsing, accepting user input, and working with dates. This course was originally created by Global Knowledge (GK).

COURSE_DESCRIPTION: Managing risk is a significant part of the project manager's job. It involves planning for threats and opportunities, both known and unknown, and preparing a risk response that will keep the project on track. In this course, you'll explore the planning and management of project risk from both traditional and Agile project management perspectives. You'll learn about tools like risk and sensitivity analysis, SWOT analysis, and expected monetary value (EMV), and the role of the risk owner. You'll also learn how risk audits and tolerance can help to avoid, share, and mitigate threats to your project.

COURSE_DESCRIPTION: This course will highlight the most interesting experiments within the field of psychology, discussing the implications of those studies for our understanding of the human mind and human behavior. We will explore the brain and some of the cognitive abilities it supports like memory, learning, attention, perception and consciousness. We will examine human development - both in terms of growing up and growing old - and will discuss the manner in which the behavior of others affect our own thoughts and behavior. Finally we will discuss various forms of mental illness and the treatments that are used to help those who suffer from them. The fact of the matter is that humans routinely do amazing things without appreciating how interesting they are. However, we are also routinely influenced by people and events without always being aware of those influences. By the end of this course you will have gained a much better understanding and appreciation of who you are and how you work. And I can guarantee you that you'll learn things that you'll be telling your friends and family about, things that will fundamentally change the way you think of yourself and others. How can you resist that?!

COURSE_DESCRIPTION: For the new project manager, the essentials - what you need to know to undertake your new responsibilities - are not always obvious. Project management involves a lot of moving parts. In this course, you'll learn some of the foundational concepts, such as what a project and its project environment and scope are. You'll learn what you'll be responsible for, and things you'll need to understand before planning begins. You'll also learn where to go to access useful information and how to identify the different types of people who will have an interest in the project - its stakeholders.

COURSE_DESCRIPTION: In this 1.5 hour long project-based course, you will tackle a real-world prediction problem using machine learning. The dataset we are going to use comes from the U.S. Census Bureau; they recorded a number of attributes such as gender and occupation as well as the salary range for a sample of more than 32,000 Americans. We will fit a decision tree to this data, and try to predict the salary for a person we haven't seen before. By the end of this project, you will have created a machine learning model using industry standard tools, including Python and sklearn. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In this course, you'll explore the concept of AI Explainability, the role of CloudOps Explainability in managing multi-cloud solutions, how to evaluate explanatory systems, and the properties used to define systems to accommodate explainability approaches. You'll look at how users interact with explainable systems and the effect of explainability on the robustness, security, and privacy aspects of predictive systems. Next, you'll learn about the use of qualitative and quantitative validation approaches and the explainability techniques for defining operational and functional derivatives of cloud operation. You'll examine how to apply explainability throughout the process of operating cloud environments and infrastructures, the methodologies involved in the three stages of AI Explainability in deriving the right CloudOps model for implementation guidance, and the role of explainability in defining AI-assisted Cloud Managed Services. Finally, you'll learn about the architectures that can be derived using Explainable Models, the role of Explainable AI reasoning paths in building trustable CloudOps workflows, and the need for management and governance of AI frameworks in CloudOps architectures.

COURSE DESCRIPTION: In this Guided Project, you will create a Virtual Machine in Azure to deploy a web server, specifically a Nextcloud server. Instead of using just the presets, you will explore how the basic architecture of Azure works, by creating a Virtual Machine, connecting it to a subnet, protected by inbound and outbound rules thanks to Network Security Groups, in a Virtual Network. You'll also learn how to use Bastion to connect to the machine via SSH, without exposing an external port to the Internet, and then installing a simple Nextcloud server and make the Virtual Machine available to you by opening a public IP and a DNS label. Note: before taking this Guided Project, if you don't have an Azure subscription yet, please create an Azure Free Trial beforehand at <https://portal.azure.com>

COURSE DESCRIPTION: Big data analytics provides a way to turn the vast amounts of data available in today's digital world into valuable insights. For this reason, big data analytics techniques have taken a central place in many businesses' IT infrastructure. These comprise complex processes and multiple stack layers that allow you to transform raw data into visualizations that demonstrate trends or other phenomena. Use this course to explore the basic principles and techniques of big data analytics in a business context. Go through each step of data processing to fully comprehend the big data analytics pipeline. Furthermore, explore various use cases of big data analytics through real-world examples. When you're done with this course, you'll have a foundational comprehension of some of the technologies behind big data and how these can drive business decisions for the better.

COURSE DESCRIPTION: Amazon Elastic Compute Cloud (EC2) is one of the primary AWS services for provisioning resizable computing environments, known as instances. Use this course to learn how to configure and launch instances using Amazon Machine Images (AMIs). Examine the features of Amazon EC2, EC2 fleets and networks, and Amazon EC2 for AWS Nitro Enclaves. Explore available Linux and Windows instance types. And discover how to monitor Amazon EC2. Moving along, install and configure the LAMP stack and SSL/TLS on both an Amazon Linux 2 and Amazon Linux AMI instance. Then, do the same with

WordPress on an Amazon Linux 2 instance. This course helps prepare learners for the AWS Certified Developer - Associate 2021 certification exam. Upon completion, you'll know how to configure, launch, secure, and interact with computing environments on AWS using the Amazon EC2 service.

COURSE_DESCRIPTION: In most cases, the ultimate goal of a machine learning project is to produce a model. Models make decisions, predictions-anything that can help the business understand itself, its customers, and its environment better than a human could. Models are constructed using algorithms, and in the world of machine learning, there are many different algorithms to choose from. You need to know how to select the best algorithm for a given job, and how to use that algorithm to produce a working model that provides value to the business. This third course within the Certified Artificial Intelligence Practitioner (CAIP) professional certificate introduces you to some of the major machine learning algorithms that are used to solve the two most common supervised problems: regression and classification, and one of the most common unsupervised problems: clustering. You'll build multiple models to address each of these problems using the machine learning workflow you learned about in the previous course. Ultimately, this course begins a technical exploration of the various machine learning algorithms and how they can be used to build problem-solving models.

COURSE_DESCRIPTION: Surveys collect a wide variety of data covering a wide variety of topics and experiences. To further the complexity of survey data, the respondents answering the questions come from a wide variety of backgrounds and stages in their customer journey. It is reasonable that it would be a challenge to boil down survey data into actionable insights because it can be deceptively complex. Conducting a factor analysis is a useful tactic to cut through the complexity in survey data so that we can land on insights that can fuel decision-making. In this project you will gain hands-on experience designing and conducting a factor analysis with survey data. To do this you will work in the free-to-use spreadsheet software Google Sheets. By the end of this project, you will be able to confidently apply factor analysis techniques to find actionable insights within survey data using any spreadsheet software. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In this project, you will create a training and development course using Eduflow. Eduflow is a free, easy to use course builder that gives you the ability to create an interactive and customizable learning experience. Training and development is an essential part of operating any business. Without the personal and professional growth and advancement of your employees and team, your business will become stagnant. Eduflow makes continuing employee education easy and enjoyable. This project will teach you just how simple it is to create an effective training and development program for your team. Eduflow courses are easy to create, manage, and update. With their wide variety of educational activities, you are sure to meet all of your training and development needs and successfully grow your team's talents and advance their professional education. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Explore Seaborn, a Python library used in data science that provides an interface for drawing graphs that conveys a lot of information, and are also visually appealing. To take this course, learners should be comfortable programming in Python and using Jupyter notebooks; familiarity with Pandas for Numpy would be helpful, but is not required. The course explores how Seaborn provides higher-level abstractions over Python's Matplotlib, how it is tightly integrated with the PyData stack, and how it integrates with other data structure libraries such as NumPy and Pandas. You will learn to visualize the distribution of a single column of data in a Pandas DataFrame by using histograms and the kernel density estimation curve, and then slowly begin to customize the aesthetics of the plot. Next, learn to visualize bivariate distributions, which are data with two variables in the same plot, and see the various ways to do it in Seaborn. Finally, you will explore different ways to generate regression plots in Seaborn.

COURSE_DESCRIPTION: Though the concept of personal branding isn't new, questions remain about how to create one and, more importantly, what it means to maintain and inhabit that brand. Learners will: o Understand both what personal branding means and what it means to inhabit their brand o Establish themselves on at least three social media platforms o Create a mission statement for their personal brand o Build a board of directors for their brand o Become familiar with the basics of digital security and reputation management o Create a system for on-going brand maintenance Join instructor Kimberley R. Barker as she provides a warm, supportive atmosphere in which learners are encouraged to intensively explore themselves in order to create a personal brand that authentically and effectively communicates their values and professional gifts. Together we will build a strong community in which to provide encouragement and feedback, and support each other as learners pursue their goal of successful brand creation.

COURSE_DESCRIPTION: In this course, students in the health and information technology professions will examine models for interprofessional collaboration and teamwork, practice communication techniques to promote effective interaction, and envision futures literacy in interprofessional informatics scenarios. We will hear from nurses and other informaticians who are leading and working interprofessionally, and glean insights from their diverse perspectives. When we think about the requisite variety of leadership skills that are essential in nursing informatics, we may deduce that leadership in interprofessional informatics will demand at least that diversity or more. We'll expand our nursing informatics leadership vision to include interprofessional applications of the Competing Values Framework and the Minnesota Nursing Informatics Leadership Inventory. For students who are interested in completing the specialization, there is a sixth module in this course dedicated to the creation of a portfolio which is peer reviewed. The purpose of the portfolio is to help students integrate, synthesize and document their learning through completion of the five course specialization. Students will: Define the term interprofessionalism to support the development of an interprofessional informatics leadership skill set Describe how the competing values framework supports knowledge leadership and interprofessional informatics practice to achieve collective impact in health care contexts Explain the core competencies expected to support culturally-sensitive interprofessional practice to deepen leadership insights in interprofessional informatics Discuss selected policy, practice, and standardization issues related to knowledge representation and framing to support interprofessional informatics practice Analyze the future of interprofessional informatics leadership to develop an anticipatory leadership skill set

COURSE_DESCRIPTION: Proactive planning goes a long way in minimizing the impact of IT service disruptions. AWS provides methods of ensuring IT service high availability across a variety of services, data availability, and long-term data retention. In this course, you will discover disaster recovery terminology and common strategies. Then, you will work with Amazon Simple Storage Service (S3) Glacier archiving, S3 replication, versioning, and lifecycle management. Next, explore Elastic Block Storage (EBS) volume snapshots. Finally, you will configure a load balancer to improve application performance and resiliency to failure. This course can be used to prepare for exam SAP-C02, AWS Certified Solutions Architect - Professional.

COURSE_DESCRIPTION: This 20-video course helps learners prepare for the MS-200 Planning and Configuring a Messaging Platform certification exam by exploring how to manage recipient resources, including groups, mailboxes and license options. The course begins by examining the different recipient types in Exchange and demonstrating how to create a user mailbox, change the mailbox properties, and add or remove email addresses for a mailbox.

Then you will learn how to create distribution, mail-enabled security, and dynamic distribution groups. Next, use the EAC (Exchange administrator center) to create mail contacts and users, create room mailboxes, and assign permissions to a mailbox. Learners examine mailbox moves, and collaboration features such as public folders, shared mailboxes, archives, and distribution groups. From there, you will watch demonstrations of how to create shared mailboxes, view and configure Outlook on the web policies and manage mailbox archives. Finally, learners explore the various licensing options available in Exchange server: standard and enterprise licenses, distinguished by number of database mailboxes per server.

COURSE_DESCRIPTION: Because neural networks comprise thousands of neurons and interconnections, one can assume training a neural network involves millions of computations. This is where a general-purpose optimization algorithm called gradient descent comes in. Use this course to gain an intuitive and visual understanding of how gradient descent and the gradient vector work. As you advance, examine three neural network activation functions, ReLU, sigmoid, and hyperbolic tangent functions, and two variants of the ReLU function, Leaky ReLU and ELU. In examining variants of the ReLU activation function, learn how to use them to deal with deep neural network training issues. Finally, implement a neural network from scratch using TensorFlow and basic Python. When you're done, you'll be able to illustrate the mathematical intuition behind neural networks and be prepared to tackle more complex machine learning problems.

COURSE_DESCRIPTION: In a very competitive workplace, outstanding performance, versus good performance, can make all the difference in opportunities for retention and advancement. Outstanding performance depends a great deal though on circumstances, the people you are interacting with, the task at hand, and your personality. Do you know what it takes to achieve your optimal performance? In this course you will discover your optimal performance profile in order to turn any situation to your performance advantage. You will (1) learn the optimal performance model, (2) apply the model to your unique profile, (3) test the model via a practical case situation, and (4) articulate your ability to use the model career success. Please Note: This course is scheduled to close new learner enrollment on November 15th, 2021, and fully close on May 15th, 2022. All graded assignments, including peer reviews, must be completed by May 15th in order to be accepted for Certificate credit.

COURSE_DESCRIPTION: Digital Marketing Institute is the global standard in Digital Marketing Certification. Our mission is to give our students the confidence and knowledge they need to advance in their careers through this specialization. Digital and mobile technology coupled with the explosive adoption of social media globally has fundamentally disrupted consumer expectations, and how businesses must operate to support their customers. If you want to understand the forces driving and transforming businesses today and how cutting-edge digital and social strategies can help businesses thrive in a dynamic environment, this course will help you do so. You will learn the core principles and foundations of digital marketing before diving deeper into the disciplines of social media marketing and content marketing. After completing the course you will: - • Understand how digital and social media have disrupted the way businesses sell to consumers • Recognize how marketers use the customer journey model to influence purchase decisions on digital platforms using digital content and tools • Appreciate the benefits of integrating traditional and digital marketing with the advantages of inbound and outbound marketing strategies • Recognize how to use the principles of effective content marketing to create content that engages an audience This course also explains how to choose the right content for consumers - and how to ensure it gets seen by them. It outlines the different content formats available on social media and which platform best suits specific needs. This is the first course in the Digital Marketing Institute's Social Media Marketing specialization. On completion of all courses in your Specialization, you will also be awarded a Digital Marketing Institute Certified Digital Marketing Associate certification, along with three months of free Power Membership, allowing you to boost your career and unlock your next opportunity. 92% of DMI members have said their courses have had a positive impact on their careers, while 88% are now working at senior or manager level.

COURSE_DESCRIPTION: Jakarta Server Faces (JSF), a component-based framework, helps build rich and dynamic Java-based web apps. As part of this process, you might want to allow users to interact with a server-side database. Use this course to learn how to implement this capability in your JSF app. Begin by loading a database with data. Then, set up your JSF app to connect to the database, read that data, and render it in a dataTable. Next, allow for adding data by accepting user input and editing and deleting data through user interactions. Upon completion, you'll be able to allow your JSF app users to perform read, insert, update, and delete operations on a database.

COURSE_DESCRIPTION: Explore reactive programming concepts by taking this course. You will begin by learning how to solve programs reactively, all the while exploring Java functional programming techniques. You will discover how to write lambda expressions and pure Java functions. Then progress onto creating higher-order Java functions. Other topics include the following: how to install and include RxJava in Java; how to use a single object to create an Observable in Java, and how to setup and subscribe to a Java Observable. As you progress, you will learn how to implement Java Observable methods. Finally, as a review exercise, you will use RxJava to create an Observable, subscribe to the Observable, and implement handlers for ON NEXT, ON ERROR, and ON COMPLETE events.

COURSE_DESCRIPTION: Information security, often called InfoSec, consists of tools and processes used to protect data and sensitive information from threats and attacks. In this course, explore the history of information security and discover how to differentiate between cybersecurity and information security. Discover common myths and misconceptions about information security and learn about types of information security, such as infrastructure, cloud, application, and incident response. Next, you will explore security threats, including social media attacks, social engineering, malware, and misconfigurations, and common information security and data protection laws. Finally, you will investigate the responsibilities of a Chief Information Security Officer (CISO), including developing sound security practices, identifying security objectives, conducting awareness and training programs, and ensuring regulatory compliance. Upon completion, you'll be able to recognize the importance of information security and the key roles and responsibilities required to protect an organization

COURSE_DESCRIPTION: Discover how application containers isolate app files and settings from the operating system (OS) and other apps in this 8-video course. You will also explore how containers can be secured in similar ways to app workloads, including how to apply updates and provide limited access, as part of preparation for the AZ-500 Microsoft Azure Security Technologies certification exam. To begin, learners will examine how application containers can provide app isolation on different networks, and explore how to harden application containers to improve their security posture. Next, learners will take a look at Azure Kubernetes Service (AKS) and how it provides users with container cluster services. You will then learn how to deploy an Azure Docker VM running Ubuntu, an open-source software OS that runs from the desktop. You will conclude the course by discovering how to deploy an Azure container registry, and how to push a Docker image to an Azure container registry.

COURSE_DESCRIPTION: Data as a form of currency is an analogy that's been around since the early 2000s. However, data itself is worthless. The real value is in the insights you gain from it; this is where data analysis comes in. Data modeling is a crucial part of data analysis, helping turn raw data into accurate insights and meaningful reports. Use this course to learn how to design and optimize data models through Power BI Desktop. Examine the star and snowflake schemas. Learn about the DAX formula language. Then, conduct a range of tasks, including combining tables, defining calculated columns, creating measures, and counting values. Upon course completion, you'll know how to use data modeling to transform raw data into powerful visuals and reports. You'll also be further prepared for the PL-300: Power BI Data Analyst certification exam.

COURSE_DESCRIPTION: Learners discover how to implement common structural design patterns in this 21-video course. Explore Module and Revealing Module patterns, then examine how to set up helpers for the Facade pattern, and how to use it for AJAX requests and delve into use of Decorator and Mixin patterns. Key concepts covered here include Module and Revealing Module patterns; how to implement private variables and private functions with Module pattern; and how to use Revealing Module pattern and apply best practices. Learners observe Facade pattern and how to set up helpers and implement it; learn how to make AJAX requests without a facade in jQuery; and explore how to use Facade pattern in jQuery for AJAX requests. Next, you will learn principles of Decorator pattern, set up helpers for it, and apply decorators for dynamic customizations. Then learn about React components and their use as decorators; learn Mixin pattern; and observe how to use Mixins in the Underscore.js library. Finally, learn how to simulate multiple inheritance with Mixins and implement Mixin pattern.

COURSE_DESCRIPTION: This 8-video course explores how to use built-in formulas to perform a calculation on a range of values in Excel for Office 365. You will begin by learning how to insert a conditional sum using SUMIF formulas to perform a sum calculation on selected data values in your range. You will next learn how to use the IF function to determine whether a condition is met or not met, and to use the IF function in conjunction with other formulas. This course continues by demonstrating how to embed multiple IF formulas within one another to obtain multiple result options. You will learn to combine qualifying and alternate conditions using the IF and OR in conditional formulas. Next, learners will observe how to use Conditional Formulas to count value occurrences. You will learn to use reference positions in Conditional Formulas. Finally, this course demonstrates how to keep your table up to date with Conditional Formulas by using formulas such as COUNTA and OFFSET.

COURSE_DESCRIPTION: In this course, you'll explore the essential components of OpenStack that are used for accessing infrastructure resources. You'll examine topologies of multi-cloud orchestration involving Azure, AWS and OpenStack, as well as the differences between OpenStack and Kubernetes. Next, you'll look at the benefits of using OpenStack and Kubernetes together, the tools that can be used to manage OpenStack deployments, and the critical roles of OpenStack shared services. You'll move on to explore prominent features provided by Heat, the different approaches of deploying

OpenStack, and how to get started with the most commonly used OpenStack services. Finally, you'll learn to install OpenStack, create and launch virtual machine instances, and install and configure storage nodes and Heat on OpenStack nodes.

COURSE_DESCRIPTION: This course will provide you with a basic, intuitive and practical introduction into Probability Theory. You will be able to learn how to apply Probability Theory in different scenarios and you will earn a "toolbox" of methods to deal with uncertainty in your daily life.

The course is split in 5 modules. In each module you will first have an easy introduction into the topic, which will serve as a basis to further develop your knowledge about the topic and acquire the "tools" to deal with uncertainty. Additionally, you will have the opportunity to complete 5

exercise sessions to reflect about the content learned in each module and start applying your earned knowledge right away. The topics covered are:

"Probability", "Conditional Probability", "Applications", "Random Variables", and "Normal Distribution". You will see how the modules are taught in a lively way, focusing on having an entertaining and useful learning experience! We are looking forward to see you online!

COURSE_DESCRIPTION: In this course, you'll learn how the Link Aggregation and Control Protocol is used to create bundles of Ethernet links and how these bundles can trick Spanning Tree Protocol into not blocking links between devices. You'll also learn how LACP makes it simple to form the EtherChannel itself. You'll then move on to explore Virtual Port Channels, including how they are an opportunity to eliminate STP from your network and how you can create a port channel between three devices instead of just two. This course is one in a collection that helps prepare learners for the 350-601 Implementing Cisco Data Center Core Technologies (DCCOR) certification exam.

COURSE_DESCRIPTION: To ensure that companies are evolving at the speed of tech, it's important that today's leaders understand the value of professional development amongst their teams. Reinvesting in the development of employees through certification programs and technical training will allow organizations to fill the IT skills gap and support talent retention. We explore this topic deeper in this episode of The Edge with Zach Sims, the co-founder and CEO of Codecademy and General Manager of the Tech & Dev portfolio at Skillsoft. Together, Zach and host Michelle Boockoff-Bajdek discuss the most in-demand technical and leadership skills in IT, the value of professional development and training for technical teams, and how to address concerns regarding technical talent advancement and retention. Please note that this course material includes content gathered from external websites which may fall outside your company network. Please consult with your IT department policies with respect to any restrictions in viewing content from external websites.

COURSE_DESCRIPTION: Explore the evolution of AI investing and online wealth management. Investing and managing your wealth online has never been easier, but how does AI investing work and what are the challenges? On this course, you'll explore how technology has changed the way we invest money. You'll consider the evolution of AI-driven online wealth management platforms, robo-advisors, and learn how they work and why they're successful. Moving from human-based data-driven investing strategies to neural networks, you'll assess the ability of artificial intelligence to make investment decisions and discover the role of AI and machine learning in making trading decisions.

COURSE_DESCRIPTION: Do you want to experience what it is to go from idea to code? If so, this is the place for you! This is the third course in the Coding for Designers, Managers, and Entrepreneurs Specialization. If you're a hands-on collaborator with developers, this course is specifically designed for you. In this course, we're going to focus on creating application logic (controllers) with Javascript, including interfaces to external APIs and resources you can leverage to do a lot quickly. Coding for Designers, Managers, and Entrepreneurs III and its specialization will help you build a creative confidence and competence that will make you an even better collaborator on digital projects. This course was developed at the Darden School of Business at the University of Virginia and is taught by top-ranked faculty.

COURSE_DESCRIPTION: Virtual reality (VR) isn't new, so why all the attention now? Major strides in artificial intelligence and the 3D environment have brought VR renewed attention. In this course, you'll learn about the characteristics of VR and the broad range of uses for VR in the business cyberspace. You'll explore the factors affecting a VR participant's sense of presence and how to distinguish between different levels of the immersive environment. Finally, you'll learn about the equipment typically used for both mobile and high-powered VR experiences.

COURSE_DESCRIPTION: Interview Preparation for Job Interviews. In this guided project, I'll teach you how to prepare for different types of job interviews, and how to answer some of the most common interview questions recruiters and hiring managers will most likely ask. I'll also teach you best practices to follow before and after the job interview, as well as to prepare strategic interview questions to ask the hiring manager after the end of the interview. Asking the hiring manager good strategic questions will help you decide if the position you're applying for is a good fit for you and for the hiring manager. Learning Objective: Prepare for 5 Different Types of Job Interviews Learning Objective: Prepare for the Most Common Interview Questions Learning Objective: Prepare for Best Practices BEFORE the Job Interview Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Entdecken Sie die vielen Möglichkeiten, wie Benutzer Nachrichten in Teams 2022 formatieren und darauf reagieren können. In diesem Kurs lernen Sie, wie Sie Ihre Nachrichten formatieren und Listen erstellen können. Weiter erfahren Sie, wie Sie Emojis, Sticker und Memes verwenden und wie Sie auf Unterhaltungen reagieren und diese teilen können. Sie werden lernen, die Aufmerksamkeit auf einen Beitrag zu lenken, insbesondere wenn Ihre Teammitglieder die Nachricht sofort lesen sollen. Wenn Sie einen Beitrag schreiben, können Sie auch Zitate und Codes einfügen und Anhänge versenden. Sie erfahren auch, wie Sie Videos und Links freigeben und eine Tabelle in eine Nachricht einfügen können. Schließlich erfahren Sie, wie Sie die Nachrichtenübermittlung definieren und eine Nachricht bearbeiten oder verwerfen können.

COURSE_DESCRIPTION: The practice of investment management has been transformed in recent years by computational methods. This course provides an introduction to the underlying science, with the aim of giving you a thorough understanding of that scientific basis. However, instead of merely explaining the science, we help you build on that foundation in a practical manner, with an emphasis on the hands-on implementation of those ideas in the Python programming language. This course is the first in a four course specialization in Data Science and Machine Learning in Asset Management but can be taken independently. In this course, we cover the basics of Investment Science, and we'll build practical implementations of each of the concepts along the way. We'll start with the very basics of risk and return and quickly progress to cover a range of topics including several Nobel Prize winning concepts. We'll cover some of the most popular practical techniques in modern, state of the art investment management and portfolio construction. As we cover the theory and math in lecture videos, we'll also implement the concepts in Python, and you'll be able to code along with us so that you have a deep and practical understanding of how those methods work. By the time you are done, not only will you have a foundational understanding of modern computational methods in investment management, you'll have practical mastery in the implementation of those methods.

COURSE_DESCRIPTION: In this challenge, you will create and deploy an Azure mobile app by using a development virtual machine that hosts Visual Studio. First, you will create an Azure SQL database to host the mobile app data, and then you will create the mobile app back end by using an App Service web app that is connected to the Azure SQL database. Next, you will configure a development environment on an Azure virtual machine, and then you will deploy the mobile app back end by using Visual Studio 2017. Finally, you will deploy the mobile app front end by using Apache Cordova, and then you will test the mobile app by using the Android emulator in Visual Studio. Note: Once you begin a challenge you will not be able to pause, save, or return to your progress. Please ensure you have set aside enough time to complete the challenge before you start.

COURSE_DESCRIPTION: The predominant technology that fuels network connections is Ethernet. Switching is the process of sending networking signals to the right destination. In this course you'll learn about the history of Ethernet, NIC and MAC addresses, and unicast, multicast, and broadcast addresses. Then you'll explore Ethernet standards and Ethernet frame structures, as well as Ethernet equipment. You'll learn about Ethernet connectors and performance issues associated with Ethernet communication. You'll learn about Ethernet switches and the benefits of switching. Then you'll explore switch functionality, connectivity issues surrounding switching, and spanning tree protocol. You'll go onto discover how to configure switches and the importance of port security. Finally, you'll learn about Power Over Ethernet (POE), port mirroring, and Virtual LANs (VLANs). This course was originally created by Global Knowledge (GK).

COURSE_DESCRIPTION: Computational thinking is a structured way to understand and solve the kind of complex problems facing most organizations today. First developed in conjunction with developing computer systems, it can be applied to many situations, both computerized and not. And it can help determine the right types of computer and human actions to apply in order to solve a problem. In this course, you'll learn the characteristics of computational thinking, including problem expression, as well as of its core techniques, such as decompositions and pattern recognition. You'll also learn how abstraction is used in logical problem solving to build algorithms that create and evaluate business solutions.

COURSE_DESCRIPTION: Welcome to Introduction to Applied Cryptography. Cryptography is an essential component of cybersecurity. The need to protect sensitive information and ensure the integrity of industrial control processes has placed a premium on cybersecurity skills in today's information technology market. Demand for cybersecurity jobs is expected to rise 6 million globally by 2019, with a projected shortfall of 1.5 million, according to Symantec, the world's largest security software vendor. According to Forbes, the cybersecurity market is expected to grow from \$75 billion in 2015 to \$170 billion by 2020. In this specialization, you will learn basic security issues in computer communications, classical cryptographic algorithms, symmetric-key cryptography, public-key cryptography, authentication, and digital signatures. These topics should prove especially useful to you if you are new to cybersecurity Course 1, Classical Cryptosystems, introduces you to basic concepts and terminology related to cryptography and cryptanalysis. It is recommended that you have a basic knowledge of computer science and basic math skills such as algebra and probability.

COURSE_DESCRIPTION: Apache Cassandra provides partition tolerance via its decentralized design and allows for configuration between either consistency and availability. This is why Cassandra is said to support tunable consistency. In this course, learn how Cassandra organizes tables into keyspaces and how to specify the replication strategy and factor at the keyspace level. Next, practice configuring various read and write consistency levels and explore the trade-offs between consistency and availability. Finally, discover how to run various CQL queries to create tables, insert or update data, and query data. Upon completion, you'll be able to configure tunable consistency in Cassandra, configure different replication strategies, and create and use tables.

COURSE_DESCRIPTION: Unternehmen entscheiden sich häufig dafür, virtuelle Teams anstelle von standortgebundenen Teams einzusetzen. Dies ermöglicht es den Mitarbeitern, im Home-Office oder von entfernten Standorten aus zu arbeiten. Bei unzureichender Handhabung kann die Arbeit an entfernten Standorten jedoch zu Störungen in der Kommunikation, Zusammenarbeit und Teamarbeit führen. In diesem Kurs erfahren Sie, wie Sie die benötigten Fähigkeiten entwickeln, um Teamführung zu zeigen und ein effektives Mitglied eines virtuellen Teams zu sein. Sie werden die persönlichen Eigenschaften untersuchen, die bei der dezentralen Arbeit in einem Team nützlich sind. Darüber hinaus lernen Sie Strategien kennen, um mit anderen Teammitgliedern in Verbindung zu bleiben. Weiterhin erfahren Sie, wie Sie Ihre Zeit einteilen und die mit der Leitung dezentraler Teams verbundenen Herausforderungen bewältigen können.

COURSE_DESCRIPTION: Learners discover how to secure the Cloud Solution Provider (CSP) account from the outset by using best practices and techniques, in this 11-video course. Other infrastructure security concepts such as Integrated Access Manager (IAM), network access control lists (NACLs), firewalls, and web application firewalls (WAFs) are also covered. Begin by learning about designing and planning security controls to ensure adequate protection of resources. Then explore practical aspects of dealing with a cloud service provider and securing the root account, or billing account. The next tutorial focuses on IAM groups and users, which leads into examining IAM policies and permissions. You will learn how to define IAM roles; explore secure management access; and define network access control lists. Learn about secure management access and Secure Shell (SSH) and transport layer security (TLS). Learn how to define NACLs; configure stateful firewalls (which track connections and automatically allow returning traffic) in the cloud; and describe WAFs. In the final tutorial, discover best practices for hardening virtual machines. The concluding exercise asks learners to describe cloud infrastructure security.

COURSE_DESCRIPTION: Neben der Lösung mit Power BI ist es auch möglich das Dashboard in Excel zu erzeugen. Im Kurs 3: "Process Automation Essentials" wird näher erläutert, wie man Excel zur Automatisierung von Verarbeitungsschritten nutzen kann. In der abschließenden Übung von Kurs 3 werden einige der zuvor in Power BI erstellten Visuals rein in Excel erstellt. Anmerkung: In diesem Fall ist die Automatisierung über Excel nicht zu empfehlen, da die Verarbeitung mit Power BI schneller und einfacher ist und viel mehr Möglichkeiten der interaktiven Darstellung/Analyse ermöglicht. Es ist aber als Übung hilfreich, dieselben Visuals auf anderem Wege zu erstellen und dabei Prozessautomatisierung mit Excel auszuprobieren.
COURSE_TITLE: Fallbeispiel 2 5.8 ÜBUNG - Lösung mit Excel statt Power BI -> siehe Kurs 3

COURSE_DESCRIPTION: This course gives you easy access to the invaluable learning techniques used by experts in art, music, literature, math, science, sports, and many other disciplines. We'll learn about how the brain uses two very different learning modes and how it encapsulates ("chunks") information. We'll also cover illusions of learning, memory techniques, dealing with procrastination, and best practices shown by research to be most effective in helping you master tough subjects. Using these approaches, no matter what your skill levels in topics you would like to master, you can change your thinking and change your life. If you're already an expert, this peep under the mental hood will give you ideas for turbocharging successful learning, including counter-intuitive test-taking tips and insights that will help you make the best use of your time on homework and problem sets. If you're struggling, you'll see a structured treasure trove of practical techniques that walk you through what you need to do to get on track. If you've ever wanted to become better at anything, this course will help serve as your guide. This course can be taken independent of, concurrent with, or prior to, its companion course, Mindshift. (Learning How to Learn is more learning-focused, and Mindshift is more career-focused.) A related course by the same instructors is Uncommon Sense Teaching. COURSE_DESCRIPTION: In this challenge lab, you will manage storage encryption using Encrypting File System (EFS) and BitLocker, as well as support encrypted file transfers by using Secure Shell (SSH). First, you will configure an EFS Recovery Agent on a Windows 10 virtual machine, and then you will encrypt files by using EFS. Next, you will break a user account's ability to access their own EFS-encrypted files, and then you will use a Data Recovery Agent (DRA) to recover access to EFS encrypted files. Next, you will implement BitLocker on a Windows 10 data drive, and then you will disable BitLocker on a Windows 10 data drive. Finally, you will use SSH to transfer files through an encrypted communication session. Note: Once you begin the challenge lab, you will not be able to pause, save, or exit and then return to your challenge lab. Please ensure that you have set aside enough time to complete the challenge lab before you start.

COURSE_DESCRIPTION: Thinking and doing the same things faster and better is not enough for innovation; we need creativity. Fortunately, creativity is a skill you can learn. This course will examine when, why, and how you can be creative so you can go through the creative process more efficiently and effectively. It teaches concrete steps to enable you to change your perspective to see new possibilities and solutions. It clarifies what to expect from the creative process and provides support for how you can sustain your progress. It also provides guidance on leading a supportive culture for creativity. The result is an ability to increase your own creativity and that of your teams and organizations so as to recognize and develop new opportunities. You will be able to: - Identify and generate opportunities to be creative and launch the innovation process - Intentionally and confidently enter and proceed through the creative process - Foster and sustain the creativity of others This course is part of Gies College of Business' suite of online programs, including the iMBA and iMSM. Learn more about admission into these programs and explore how your Coursera work can be leveraged if accepted into a degree program at <https://degrees.giesbusiness.illinois.edu/idegrees/>.

COURSE_DESCRIPTION: Transforming and manipulating massive amounts of data is crucial for all organizations. The R programming language offers a plethora of packages to load, explore, manipulate, and transform data. R is ideal for data analysis, mutation, and cleaning, making it a choice language for statisticians and data scientists. In this course, you'll learn how to write R script files using the RStudio environment. You'll use different panes to debug and evaluate your R program, import data in various file formats, and access files embedded in an R package and stored on your machine. Additionally, you'll learn how to export data to different file formats. Once you've completed this course, you'll know how to work R using RStudio, import and export data in R, and perform simple data transformation and exploration operations.

 COURSE_DESCRIPTION: This course delves into the fundamentals of graph data modeling from a theoretical standpoint before applying some of the principles to a Neo4j database. Begin with an overview of data modeling in general and then graph modeling in particular. Learn to recognize the similarities in modeling for relational, document, and graph databases and identify how their approaches vary. Next, in the practical portion of the course, build a database with different entity types and multiple relationship types. Explore the use of properties, labels, and relationships to model your data correctly for efficient query execution. Finally, delve into translating a CSV file containing a many-to-one relationship between entity types into a graph database and discover how to translate a tabular structure like a CSV file into a graph structure for Neo4j.

 COURSE_DESCRIPTION: This one-week course describes the process of analyzing data and how to manage that process. We describe the iterative nature of data analysis and the role of stating a sharp question, exploratory data analysis, inference, formal statistical modeling, interpretation, and communication. In addition, we will describe how to direct analytic activities within a team and to drive the data analysis process towards coherent and useful results. This is a focused course designed to rapidly get you up to speed on the process of data analysis and how it can be managed. Our goal was to make this as convenient as possible for you without sacrificing any essential content. We've left the technical information aside so that you can focus on managing your team and moving it forward. After completing this course you will know how to... 1. Describe the basic data analysis iteration 2. Identify different types of questions and translate them to specific datasets 3. Describe different types of data pulls 4. Explore datasets to determine if data are appropriate for a given question 5. Direct model building efforts in common data analyses 6. Interpret the results from common data analyses 7. Integrate statistical findings to form coherent data analysis presentations Commitment: 1 week of study, 4-6 hours

COURSE_DESCRIPTION: In this course, you'll first review the data center concepts you should be familiar with when preparing for the DCCOR exam. You'll learn about some Cisco NX-OS features and how it is a vast improvement over other generations of Cisco IOS. Next, you'll examine important OSPFv2 characteristics and how it is configured on NX-OS devices. Finally, you'll learn how OSPFv3 can route for both IPv4 and IPv6. This course is one in a collection that helps prepare learners for the 350-601 Implementing Cisco Data Center Core Technologies (DCCOR) certification exam.

COURSE_DESCRIPTION: Explore defensible architecture and zero-trust models from the standpoint of a security architect. In this 14-video course, you will learn about tools used to address the challenges of network security and review common security models and standards for network security. Key concepts covered here include challenges and deficiencies of traditional security architectures; e standards that address the challenges of security architectures; and concepts and approaches to defensible architecture. Next, learners will examine some fundamentals for the zero-trust model for security; explore the security architecture needs for layers 1, 2, and 3; and delve into the principle of least privilege and how it pertains to security architecture. Learn about the security benefit of reproducible builds; learn how to configure a deny-first firewall using uncomplicated firewall (ufw); and learn how to configure a firewall to block all but a trust subnet. Finally, learners will observe how to configure a VPN service by using WireGuard; how to configure a secure VPN client to connect to a VPN server; and how to configure a firewall to block untrusted egress.

COURSE_DESCRIPTION: Explore planning application and device deployment, security, monitoring, and the Microsoft Store for Business in this course, as you prepare for the MS-101: Microsoft 365 Mobility and Security exam. Key concepts covered in this 16-video course include the Microsoft Store for Business and how you can manage applications from the store by using System Center Configuration Manager; creating applications with Configuration Manager; and learning content options such as content location, installation program, uninstall program, repair program, and 32/64 bit. Next, learn how to import an application by using Configuration Manager; learn supported deployment types and additional platforms; and deploy an application using Configuration Manager; share an application through the software center. Then use Configuration Manager to co-manage devices; create device profiles using Intune; and receive an overview of Mobile Application Management (MAM). Learn about app protection policies, including those for iOS and Android, and app protection features. Finally, learn to plan mobile device security; plan device application deployment options; monitor device compliance; and plan for device co-management.

COURSE_DESCRIPTION: This course concentrates mainly on Javascript based front-end frameworks, and in particular the Angular framework (Currently Ver. 6.x). This course will use Typescript for developing Angular application. Typescript features will be introduced in the context of Angular as part of the exercises. You will also get an introduction to the use of Angular Material and Angular Flex-Layout for responsive UI design. You will be introduced to various aspects of Angular including components, directives and services. You will learn about data binding, Angular router and its use for developing single-page applications. You will also learn about designing both template-driven forms and reactive forms. A quick introduction to Observables, reactive programming and RxJS in the context of Angular is included. You will then learn about Angular support for client-server communication through the HTTP client and the use of REST API on the server side. A quick tour through Angular animation support and Angular testing rounds off the course. You must have either completed the previous course in the specialization on Bootstrap 4, or have a working knowledge of front end web-UI frameworks to be able to navigate this course. Also a good working knowledge of JavaScript, especially ES 5 is strongly recommended. At the end of this course you will: - Be familiar with client-side Javascript frameworks and the Angular framework - Be able to implement single page applications in Angular - Be able to use various Angular features including directives, components and services - Be able to implement a functional front-end web application using Angular - Be able to use Angular Material and Angular Flex-Layout for designing responsive Angular applications - Be able to use Observables and RxJS in the context of Angular applications

COURSE_DESCRIPTION: Wenn Sie das Gefühl haben, die To-do-Liste nimmt gar kein Ende, wenn Sie sich von Ihren Pflichten am Arbeitsplatz und zu Hause überannt fühlen und merken, dass sich dies negativ auf Gesundheit und Beziehungen zu anderen Menschen auswirkt, erleben Sie höchst wahrscheinlich den so genannten Stress. Stress wird nicht etwa durch externe Ereignisse, sondern durch Ihre eigenen Gefühle und Reaktionen in Bezug auf dieselben verursacht. Sie sind vielleicht nicht immer in der Lage, auf externe Ereignisse einzuwirken, die Ihnen Stress verursachen, können aber Ihre Reaktion

und Ihre Umgangsweise mit solchen Ereignissen steuern. Dieser Kurs erklärt die körperlichen, psychologischen und das Verhalten betreffenden Anzeichen und Symptome von Stress und deren Ursachen. Der Kurs präsentiert Strategien zur Stressbewältigung und zum Vermeiden von Erschöpfungszuständen (Burnout). Der Kurs behandelt auch die Möglichkeiten, wie Sie auf Stress reagieren und eine Situation positiver gestalten können. Er nennt Entspannungstechniken wie Atmung und Meditation, die zur Stressbewältigung dienen können.

COURSE_DESCRIPTION: According to the U.S. Bureau of Labor Statistics, in the current economy, Americans shift jobs every 4-5 years, which translates into 8-10 job transitions, including several career changes, over one's life time. With competition for jobs on the rise, a person's continuing employability and career success are increasingly defined by his or her mastery of individual career development and the ability to effectively "manage oneself" (P. Drucker). In this course, you will learn how to think strategically and professionally about your career self-management. Through this course you'll develop an objective, external view of your marketable skills as a solid foundation for building a strong career brand. In particular, you'll be able to: - explain why developing a protean and boundaryless career perspective based on transferable (portable) skills is advantageous for continuing employability and career growth; - design your portable skills portfolio, identify and examine critically important competencies underpinning your transferable skills, and analyze your career self-management competency gaps; - increase self-awareness, pinpoint your career goals, and envision your future work self; - recognize the central role of self-management for developing transferable, marketable, skills and create a customized self-management information system (Career Development Lab) for ongoing personal development and professional growth; - conduct a thorough, competency-based job analysis in your area of interest and examine practices of evidence-based, data-driven competitive employee selection; -implement your newly developed skills for crafting effective selection criteria statements and refining your job applications.

COURSE_DESCRIPTION: Regardless of the industry, business process automation is here to stay. Business processes are increasingly being automated through software automation. But how is software automation simplified and made accessible? The answer is Robotic Process Automation or RPA. RPA lifecycle: Introduction, Discovery and Design is the first course of the Specialization on Implementing RPA with Cognitive Solutions and Analytics. In this course, you will be introduced to RPA and see how it is combined with cognitive solutions and analytics to enable organizations to adopt the model of a "Digital Workforce" and help them transform the nature of their work. You will also learn about the first two phases of the RPA implementation lifecycle: Discovery and Design. In the Discovery phase, you take a set of business processes and identify those that are suitable and beneficial for automation. In the Design phase, you create a plan for your RPA project. The learning will be reinforced through concept description and guided practice.

COURSE_DESCRIPTION: This 14-video course explores Agile methodologies that can be used to adopt the Agile testing paradigm. Examine benefits and challenges associated with Agile testing, and best practices and guidelines that can be adopted to implement Agile testing practices. Learners will observe lifecycle phases for testing within Agile frameworks; use Cucumber behavior-driven development (BDD) framework to write acceptance tests; and learn approaches for tracking test progress and product quality metrics used to evaluate Agile test implementation outcomes. Learn how to define responsibilities of testers in Agile projects and tools and products used to set up Agile testing workflows; view different Agile testing levels; and work with Cucumber-JVM and Selenium Webdriver in Java to implement Agile testing with BDD. Explore the role of Agile Testing Quadrants and how they reflect the What-Testing-When approach, and configure test management in Jira to implement Agile testing for REST application programming interfaces (APIs). Conclude by exploring the Whole Team Approach, and learning to configure Agile project management by using Scrum and Kanban with Jira.

COURSE_DESCRIPTION: Today's organizations need every employee to be a leader, whether leading a team or leading themselves. Better leadership can generate improvement in customer satisfaction and help eliminate productivity drag. But still, some leaders, especially new ones, may struggle and need help. Coaching at scale can address this talent problem, reclaim company losses, and help organizations remain agile moving into the future. Recognizing what makes a coaching at scale program different from traditional coaching allows you to take advantage of these benefits and harness the full power of coaching. This course will explore how to launch a coaching at scale initiative tailored to your organization's learning and business needs. You'll learn strategies for choosing learning cohorts, how to choose internal and external coaches, and best practices for implementing your own coaching at scale program.

COURSE_DESCRIPTION: This course provides the essential skills and knowledge that you as a supervisor will need to understand and communicate effectively with employees and customers from a wide variety of backgrounds. At its conclusion, you will be able to: • Describe the nature of a supervisor's position and its role in building a positive work environment. • Identify and apply skills for communicating effectively with individuals and groups. • Explain the implications of a culturally diverse society and workforce. • Explain why a strong customer service culture is crucial to organizational success. • Explain the role of the supervisor in creating a customer-centric organization. Most importantly, you will be able to apply this knowledge immediately to be an effective, efficient supervisor and deal with employees, other managers and customers appropriately and effectively. If you want to become or are currently working as a supervisor, this course is made for you. You do not need to have management or supervisory. If you have a high school diploma or its equivalent and a few years of work experience, you are qualified for this course. There are no prerequisites for this course, and you do not need any special software.

COURSE_DESCRIPTION: Routers play a crucial role in computer networking. Networking technologies have made it possible to implement connectivity over broad geographical areas. In this course, you'll discover the inner workings of routers including logical segmentation, static and dynamic routing and the ways routers make decisions. Then you'll learn about routing metrics and tables. You'll explore the various routing protocols and how basic router configuration is performed. You'll then explore Wide Area Networks (WANs) and their related technologies including WAN providers, circuit-switched and packet-switched networks, and SONET. Then you'll discover Multiprotocol Label Switching (MPLS) and Carrier Ethernet networks. Finally, you'll learn about cloud-based networks and how they can provide connectivity over the internet. This course was originally created by Global Knowledge (GK).

COURSE DESCRIPTION: This course, which is Part Three in the series of Startup Entrepreneurship specialization, offers Life Lessons from a Master Innovator, with proven achievements. During this course you will listen to conversations and interviews with Mr. David (Dadi) Perlmutter, who until recently was Executive VP of Intel corporate. Dadi will talk about 10 life lessons, based on his 34 years as a rebel innovator and entrepreneur. We will share with you the following lessons: Love and Knowledge are infinite: grow and share; Learn from Failures and Successes; Nothing Moves without a Vision; Have a Differentiated Market Transforming Strategy; Dare to Take Action; Fight Resistance; It is All About the Ecosystem; Build a Team; Keep it Simple and Work Hard. By the end of the course the learner will: * Know how to lead a process of innovation and implement ideas through all its phases from discovery to delivery in your own field of choice. * Know how to apply creativity to generate creative ideas in a wide range of strategic management issues. * Know how to solve problems in general, with a high degree of innovative creative thinking, to widen the range of possible choices * Identify new and unfamiliar challenges and needs, reflect on them from a creative point of view (zoom in), decide on the action they require (zoom out) and generate a novel and useful solution * Transform ideas into real value-creating products, services and processes. * Be able to analyze both success and failure and draw conclusions from both, for improving future innovative efforts. * Be able to identify and create key features of innovative products and services and in doing so, generate strategically differentiated innovations that are unique * Be able to present your ideas persuasively and overcome resistance. * Know how to simplify a complex product and make it user friendly. Course assignments will include participation in two discussion groups and four assignments. In each assignment you will be asked to deal with a question relating to an interview you have seen.

COURSE_DESCRIPTION: Data is extremely useful, but you often need to visualize the complex relationships laid out by the data. Discover how to visualize Project data, by inserting, editing, and formatting a report table. Graphs are a great way of illustrating the more complex information from your project. Learn how to insert, add information, and format a report chart. Explore Project's Visual Reports tool, which allows you to use Excel's data analysis tools to analyze and create a PivotChart from your project's data. And see how you can create your own custom visual report and save it as a template for later use. This course has been recorded in a Project Online Desktop Client environment.

COURSE_DESCRIPTION: This course examines information needed to earn the (ISC)2 CSSLP (Certified Secure Software Lifecycle Professional) certification and to prepare for the CSSLP exam. These security professionals are well versed in how to incorporate key security practices into all lifecycle stages of software development. This course covers secure software concepts such as covert, overt, and encryption. You will examine the secure software concepts of confidentiality, integrity, and availability (collectively, CIA) and examine concepts that support the concepts, such as authentication, authorization, accountability, and non-repudiation. Learn the difference between various integrity concepts such as hashing, digital signatures, code signing, reliability, alterations, and authenticity. You will also learn about authentication concepts, such as multifactor authentication, identity and access management, single sign-on, and federated identity management. Learn when to use different authorization concepts, such as access controls and entitlements. Finally, the course covers accountability concepts, such as auditing and logging, and describe non-repudiation concepts, such as public key infrastructure (PKI) and digital signatures.

COURSE_DESCRIPTION: When COVID-19 hit, businesses had to respond almost instantaneously - shifting employees to remote work, repairing broken supply chains, keeping pace with dramatically fluctuating customer demand. They were forced to adapt to a confluence of multiple disruptions inextricably linked to a longer term, ongoing digital disruption. Professor Jerry Kane's research shows that companies that use disruption as an opportunity for innovation emerge from it stronger. Companies that merely attempt to "weather the storm" until things go back to normal (or the next normal), on the other hand, miss an opportunity to thrive. Kane argues that transformation is not a one-and-done event, but a continuous process of adapting to a volatile and uncertain environment. Drawing on five years of research into digital disruption-including a series of more than 50 interviews with business leaders conducted during the COVID-19 crisis-Kane offers a framework for understanding disruption and tools for navigating it. Technology is not an end in itself, but enables the capabilities essential for surviving an uncertain future: nimbleness, scalability, stability, and optionality. You'll learn: • The differences between acute and chronic disruption, and why it matters • The characteristics of leaders that were able to help their organization navigate the severe disruption of COVID-19 • The digital technologies that did (and didn't) help their organization navigate disruption • Leadership lessons we should take away from the acute disruption that is COVID-19.

COURSE_DESCRIPTION: The popularity of Agile and within it, Scrum, in software development has steadily grown over the last decade, as it allows organizations to deliver software faster than traditional methods while being flexible enough to accommodate ever-changing requirements. From software developers, project leaders, product innovators, to decision-makers wanting to embrace an Agile mindset-all can find this journey rich in valuable knowledge, skills, and insights. In this Agile for Software Development Proficiency Journey, you will start at the grassroots by acquiring a general awareness of Agile and Scrum concepts to transition from traditional ways of software development. In the second track, you will dive deep into the Agile best practices and principles to improve software requirements and design work processes. You will continue your journey in the third track by exploring how Agile methodologies are implemented in the development and testing phases of software development. Finally, in the fourth track, you will learn to adopt best practices to build an Agile mindset and to scale Agile to suit larger organizational goals. In a nutshell, the journey provides a strong foundation to help key performers and leaders in software development make well-informed decisions when it comes to embracing Agile practices or improving existing processes.

COURSE_DESCRIPTION: Data visualization options in Excel are vast. You should choose your visualization type based on the data and what you want to show from it. For example, using High-Low-Close and Open-High-Low-Close charts (also called candlestick charts), you can summarize several stock performance aspects. Excel also lets you build radar charts - great for visualizing multivariate ordinal data, such as ratings or scores, to spot strengths or spikes. In this course, you'll not only learn how to build and customize the charts mentioned, but you'll also create treemaps to visualize hierarchical data and pie charts to display parts of a whole. You'll then generate pie-of-pie and bar-of-pie charts, both of which use a secondary visualization to complement a pie chart. Finally, you'll create donut charts to visualize composition using multiple concentric donut rings to represent points in time.

COURSE_DESCRIPTION: In this 2-hour long project-based course, you will perform a quick overview of a SnapEval Performance Summary, review and modify Employee Goals, Achievement Levels, and Group Goals, and learn how to create and tap into prior employee shorter communications called SNAPS. Ultimately you will use these tools to build a comprehensive Performance Summary that can be used as an annual evaluation. Annual performance evaluations are a vital step for building a successful work environment for your team or company. Implementing these summaries using measurable goals as your foundation leads to positive employee communications and subsequent outcomes. SnapEval will make your employee communication and evaluation processes easier, more streamlined, and trackable. Note: This course works best for learners who are based in the North American region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In this 1-hour long project-based course, you will learn how to do Computer Vision on images and videos with OpenCV and Python using Jupyter Notebook. You will understand how Neural Transfer Style works and you'll use it on images and on videos. Finally, you'll learn how to use the Green Screen Effect on your images. This course runs on Coursera's hands-on project platform called Rhyme. On Rhyme, you do projects in a hands-on manner in your browser. You will get instant access to pre-configured cloud desktops containing all of the software and data you need for the project. Everything is already set up directly in your Internet browser so you can just focus on learning. For this project, you'll get instant access to a cloud desktop with Python, Jupyter, and OpenCV pre-installed. Prerequisites: In order to be successful in this project, you should have an intermediate knowledge of Python and OpenCV. Notes: - You will be able to access the cloud desktop 5 times. However, you will be able to access instructions videos as many times as you want. - This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: This course is for you if you are looking to learn more about Six Sigma or refresh your knowledge of the basic components of Six Sigma and Lean. Six Sigma skills are widely sought by employers both nationally and internationally. These skills have been proven to help improve business processes and performance. This course will cover the Define phase and introduce you to the Measure phase of the DMAIC (Define, Measure, Analyze, Improve, and Control) process. You will learn about Six Sigma project development and implementation, you will become familiar with project management tools, you will be introduced to statistics and understand its significance to Six Sigma, and finally you will learn about data collection and its importance to an organization. Every module will include readings, videos, and a quiz to help make sure you understand the material and concepts that are studied. You will also have the opportunity to participate in peer review exercises to give you the opportunity to apply the material to your daily life. Our applied curriculum is built around the latest handbook The Certified Six Sigma Handbook (2nd edition) and students will develop /learn the fundamentals of Six Sigma. Registration includes online access to course content, projects, and resources but does not include the companion text The Certified Six Sigma Handbook (2nd edition). The companion text is not required to complete the assignments. However, the text is a recognized handbook used by professionals in the field. Also, it is a highly recommended text for those wishing to move forward in Six Sigma and eventually gain certification from professional agencies such as American Society for Quality (ASQ).

COURSE_DESCRIPTION: Implement and manage a successful financing program for a corporate buying organization by learning about the key success factors in Supply Chain Finance. In this course, you'll learn about the challenges and bottlenecks in Supply Chain Finance and understand their impact on Supply Chain Finance programs. This course will help you understand who the ideal customer is for a Supply Chain Finance program and understand how revenue is generated and such programs are priced. You'll learn about the relevant factors for suppliers to come onboard and trade as well as identify the key roles and responsibilities involved in Supply Chain Finance. Additionally, this course will explain how to develop metrics and list the necessary elements for developing an effective financing program. By the end of this course, you'll be able to perform a pre-sales analysis and a detailed supplier analysis, which are crucial for setting up a Supply Chain Finance program.

COURSE_DESCRIPTION: In this guided project you will learn how estimate the durations of your project activities. You will estimate the duration of your project activities, using techniques such as Expert Judgment, Analogy, and Parametric Estimation. Once you have developed a WBS (see Guided Project: Creating a WBS, for how to create one), and decompose the work packages (lowest elements in the WBS) into the necessary activities (See Guided Project: Creating a Project Network Diagram), you can use the bottom up estimation technique. To improve the accuracy of your estimate you will learn how to use the three-point estimation technique, taking into account risk and uncertainty. You will also learn how use statistics to come up with an Interval Estimate with a up to a 99% confidence level. Note: This project works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: This course covers the accounting for business combinations (ASC 805), the preparation of consolidated financial statements (ASC 810), and other related topics including, but not limited to: step-by-step acquisition, deconsolidation, segments reporting, and the goodwill impairment test. This course begins with a discussion of the scope of ASC 805 and the differences between business combinations and asset acquisitions. Next, the course explores the measurement and recognition principles of the acquisition method to account for business combinations. Then, the course covers the consolidation process. You will learn how to prepare the consolidated financial statements and make all of the necessary consolidation adjustments.

COURSE_DESCRIPTION: Das Scheitern liegt im Trend. Jeden Tag liest man von den Erkenntnissen, die aus einem vorhergehenden Scheitern gewonnen wurden. Mit Schlagwörtern wie "Fail Fast", "Fail Big" und "Fail Often" wird ein möglichst schnelles Scheitern propagiert. Obwohl man zweifelsohne aus Fehlern lernen kann, sind auch Erfolge ein Quell der Erkenntnis. Es ist entscheidend, aus allen Erfahrungen wichtige Lektionen zu lernen, die Ihrem zukünftigen Erfolg den Weg ebnen. In diesem Kurs erfahren Sie, mit welchen Methoden Sie an jeder Erfahrung wachsen und dazulernen können, und wie Sie hierzu die jeweiligen Phasen des Erfolgszyklus erkennen. Sie ergründen außerdem Handlungsschritte, die es Ihnen ermöglichen, aus Rückschlägen oder Fehlern zu lernen, und erfahren, wie Sie Ihre Erfolge nutzen können, um Sie zu zukünftigen Triumphen zu inspirieren und zu motivieren.

 COURSE_DESCRIPTION: Treemaps are an impressive hierarchical data visualization feature of Power BI. Add in tooltips, matrices, slicers, and mobile readiness, and your reports will be highly interactive and engaging You'll start this course by creating and configuring a treemap in Power BI. You'll then set up a treemap tooltip and configure it to use a chart on another Power BI page. Next, you'll create a Power BI report that automatically links the treemap to a matrix visualization. You'll then optimize this report for mobile device viewing. You'll move on to use slicers

and add them to a page in your Power BI report. Lastly, you'll work with different slicer settings for numeric and string (categorical) fields and implement horizontal and vertical slicer layouts.

COURSE_DESCRIPTION: Django, an advanced Python web framework, allows quick development of secure and sustainable websites. In this course, you'll discover how Django web requests work, which will involve using HTTP protocols, formatting content as HTML pages, using web servers to process requests, and distinguishing between static and dynamic websites. Moving on, you'll identify the steps involved in creating websites, which include reusing HTML elements over multiple pages on a website, customizing user experience by maintaining sessions, and querying databases for content. Next, you'll explore the features provided by web frameworks, particularly Django, that support and greatly simplify all these operations. You'll also investigate the use of Django templates. Finally, you'll become familiar with the migration process within Django and the use of the Django Model class to create subclasses that map to tables in a relational database.

COURSE_DESCRIPTION: Advanced Competitive Strategy will introduce new topics and modules with even more real world examples and opportunities for student interaction than in the previous course Competitive Strategy (<https://www.coursera.org/learn/competitivestrategy>). In Advanced Competitive Strategy, we will look at how companies can build up and maintain their customer base by increasing switching costs and facilitating strategic customer lock-ins. We will find out how firms can increase their profits by pursuing suitable price discrimination and product differentiation strategies. We will look at examples of what is acceptable behavior under the premises of EU competition and US antitrust policies and discover exciting ways of how companies can increase their returns by strategically making use of network effects and economies of size. We will further intensify our newly acquired knowledge about network effects and discuss strategies that are explicitly tailored to network markets. We will analyze the workings of mergers and acquisitions and, moreover, support you in considering alternative strategies that can help companies grow organically.

COURSE_DESCRIPTION: The days of showing up at the office or shopfloor 9-to-5, five days a week, ended for many of us long before the pandemic arrived. Covid accelerated a transformation in where and when we work that was already well underway. A team leader in the 21st century will need to prepare for the future of work by learning to lead hybrid teams, which include a mix of remote and onsite workers, often on different schedules. In this course, you'll learn about becoming a human-centered manager who can build a sense of community in a group of individuals separated by space and time. You'll see how inequities can arise in hybrid teams, and how to avoid them. You'll learn tools and techniques for improving collaboration among physically separated workers. Finally, you'll explore strategies for maintaining high productivity and performance on hybrid teams.

COURSE_DESCRIPTION: This course is an ideal introduction into creating virtual environments in Android. This course is unique as it covers a range of tools and techniques to create immersive 3D environments, giving you a rounded skill set in this growing field. By the end of this course, you will really be able to bring your VR ideas to life! The first part of the course covers animation, lighting and reflection. We then move onto textures and handling multiple 3D objects. Finally, we'll look at housing all of this within a binocular view to create a VR experience. There are practical exercises throughout the course to apply your understanding, and there is a summative project which can form part of your professional portfolio. This course assumes a knowledge of Android programming and OpenGL. I recommend completing my two Coursera courses on these topics, as these are the perfect primer.

COURSE_DESCRIPTION: When delving into a client's networking environment, a field technician needs to suss out each component and their interdependence as efficiently and accurately as possible. In this course, you'll build on your diagnostic skills by exploring Cisco OS types, some popular connection techniques, and two standard network protocols for remote device communication, access, and management. You'll start by investigating the different Cisco OS types you're likely to encounter daily. You'll then learn how to distinguish them by their primary differentiators. Next, you'll examine how to connect to a Cisco IOS device directly and what's needed to access it. Finally, you'll learn how to use terminal emulation for Cisco IOS device access by employing the network protocols Telnet and SSH. This course can be used in preparation for the 100-490: Supporting Cisco Routing and Switching Network Devices (RSTECH) exam and to attain the Cisco Certified Technician (CTT) Routing & Switching certification.

COURSE_DESCRIPTION: Designing effective interactive systems requires understanding the needs and capabilities of the people who will be using them. In this UX course we will focus on how to interact with users (or potential users) to understand what they need, what they currently do, what they love and hate, and examine human capabilities and behavior as they relate to UX design. Learners will be introduced to numerous techniques to gather data from and about users. This course is part of the User Experience (UX) Research and Design specialization offered on Coursera. What you'll learn: Find out what user needs assessments are, what qualitative research is, and how the two are related. Learn an end-to-end methodology for qualitative research that is suited for understanding user needs. The methodology includes knowledge of semi-structured interviews, in-situ observation, and affinity walls. Be exposed to good practices for conducting semi-structured interviews, in-situ observation, and affinity walls. Gain some experience with semi-structured interviews, in-situ observations, and affinity walls.

COURSE_DESCRIPTION: Die zahlreichen Nuancen und Gepflogenheiten der englischen Sprache machen diese sehr vielfältig und interessant - aber manchmal auch schwierig. Sie sollten sich mit den häufigsten Schreibfehlern daher so bald wie möglich vertraut machen. Dieser Kurs beschreibt den Gebrauch von Wörtern, die häufig verwechselt werden, darunter von Wortpaaren, die ähnlich klingen, und solchen, die eine ähnliche Bedeutung haben. Der Kurs behandelt Verben, die oft fälschlich gebraucht werden, beispielsweise "affect" und "effect" oder aber "apprise" und "appraise". Des Weiteren betrachten wir im Kurs einige idiomatische Kombinationen aus Verb und Präposition, die zu Verwirrung führen können.

COURSE_DESCRIPTION: Python is an easy to learn, easy to read programming language widely used in scripting and application development. It's flexible and interpretive nature provides immediate feedback to users, making it one of the most popular programming languages today. Explore the roots of the Python language and discover its significant features. Examine the differences between versions 2 and 3 of Python and the process of migrating to the newer version. Delve into the new features that have been packed into subsequent releases of Python 3 and see how these can be adopted to build better applications. Finally, learn some of the best practices when it comes to building applications with Python - from the right syntax to improve readability to making your code easy to extend.

COURSE_DESCRIPTION: This free 6 week course is for anyone who wants to make a difference. Whether you are already familiar with the field of social innovation or social entrepreneurship, working for an organization that wants to increase its social impact, or just starting out, this course will take you on a journey of exploring the complex problems that surround us and how to start thinking about solutions. We will debunk common assumptions around what resources are needed to begin acting as a social innovator. We will learn from the numerous examples of social innovations happening all over the world. You will be challenged to get out of your comfort zone and start engaging with the diverse spaces around you. By the end of the course, you will have formed your own approach to social innovation, and you will have begun to develop the concepts, mindset, skills, and relationships that will enable you to start and evolve as a changemaker. You will be able to purchase a Verified Certificate if you wish to show evidence of your achievements, but this is optional, and you may apply for Financial Aid if you are unable to pay the certificate fee. The Bertha Centre for Social Innovation and Entrepreneurship co-created this course with RLabs, a social movement 'born-and-bred' in Bridgetown, Cape Town that is now active in 22 countries. The movement empowers youth through innovative and disruptive technology by teaching them vital skills and providing much needed support and a sense of community. Advocating and supporting initiatives such as RLabs forms part of the Bertha Centre's mandate. The Centre is a specialised unit at University of Cape Town's Graduate School of Business, and is the first academic centre in Africa dedicated to advancing social innovation and entrepreneurship. You can view the course trailer at www.youtube.com/watch?v=TcWYG64WO20 Tweet about this course using the hashtag #socinnMOOC

COURSE_DESCRIPTION: In this 1-hour long project-based course on Setting up a Continuous Integration (CI) workflow in CircleCI, you will work through the complete workflow of getting a development project (nodeJS application) through version control (git and GitHub) and into a simple CI pipeline in CircleCI. This course is designed for developers who have never worked with a CI tool before who want to understand how continuous integration can benefit their development processes and/or how it fits together in a development lifecycle. By the end of this course, you will have a working pipeline of your own (in your own CircleCI user account) which will handle the building and testing of your code based on any pull requests made to your project repository in GitHub This is a beginner course and as such is not designed for intermediate developers or DevOps professionals and students who already understand CI/CD and want a deep-dive on CircleCI and its various configuration capabilities. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Der Stress, der mit Arbeitsdruck einhergeht, kann erdrückend sein. Aber während Sie externe Ereignisse, die Stress bedeuten, nicht beeinflussen können, haben Sie die Möglichkeit, proaktiv Stress und Druck zu erkennen und bewusst zu entscheiden, wie Sie darauf reagieren. Dadurch können Sie Druck nutzen, um Ihre Konzentration zu schärfen und Energie für Ihre Arbeit aufzuwenden, statt sich davon erdrücken und machtlos mitreißen zu lassen. In diesem Kurs lernen Sie, welche Situationen Druck auslösen und welchen Einfluss Stress auf Ihren Körper und Ihre Seele hat. Außerdem erlernen Sie Methoden zur Stärkung Ihrer Stressresilienz, mit der Sie Druck und Stress begegnen können, Sie lernen Techniken kennen, mit denen Sie mentale Flexibilität entwickeln, um sich Situationen mit einem hohen Stresslevel anzupassen, und Sie erfahren, welche Maßnahmen Sie ergreifen können, wenn Sie schon in solch einer Situation stecken.

COURSE_DESCRIPTION: "Tell me a story." At some point, we all have either heard those words or uttered them ourselves. The strong desire to be transported and to understand through narrative is something that stays with us through adulthood and is activated in our personal and professional lives. Why are humans so profoundly impacted by stories? Studies show that narrative helps us to find meaning in information and activates a desire to connect with it. By engaging with a story, we open the door to allow the meaning of it to resonate with us. For decision-making, this translates to narrative, the story, acting as the vehicle to make data actionable. In this project, you will gain hands-on experience telling a simple data story that will connect with a professional audience. The story will be told with graphics created from survey data collected by a hypothetical company that hopes to grow their understanding of the customer experience and uncover where business opportunities may lie. You will tell your survey data story using the free-to-use presentation software Google Slides. By the end of this project, you will be able to confidently tell a data story using any presentation software. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Markets begins with one of the most common and important elements of the financial system - interest rates. You will learn why interest rates have always been a key barometer in determining the value of everything. You will explore the changing influence of interest rates; the impact of interest rates on consumption, investment and economic growth; and the bizarre realities of negative interest rates. Markets explains how interest rates change the value of all financial instruments, highlighting the role of the bond and stock markets that have toppled empires. We take a closer look at the equity pricing models and equity markets that reverberate across the globe, and explore everything from the first stock ever issued - by the Dutch East India Company - to the little-understood but powerful derivative securities market. By the end of the course, you will have developed insight into the intersections of the financial markets with worlds of policy, politics, and power. You will have demonstrated that insight by teaching an important financial concept and translating a financial product or transaction to someone who will clearly benefit from your advice.

COURSE DESCRIPTION: Data science methods are used across several industries to deliver value to businesses. Machine learning (ML) is a data science method that uses prediction algorithms that find patterns in massive amounts of data, allowing machines to predict future results and make decisions with minimal human intervention. Through this course, learn foundational methods for using machine learning. Examine what machine learning is, how it is categorized, and common machine learning challenges. Next, learn about common types of machine learning tasks, such as clustering, classification, and regression. Finally, explore the types of regression, including simple and multiple linear regression. Upon completion, you'll be able to define machine learning and methods for using it.

COURSE_DESCRIPTION: Ob Sie es glauben oder nicht - jeder hat das Potenzial, kreativ zu sein. Wenn Sie Schwierigkeiten haben, Ihre Ideen auszudrücken, sind Sie durch etwas blockiert. Mit dem richtigen Ansatz und den richtigen Techniken können Teamleiter einen sicheren Raum schaffen, der Brainstorming sowie innovatives und kreatives Denken fördert. In diesem Kurs lernen Sie die Eigenschaften kreativer Menschen kennen und erfahren, wie Sie persönliche Barrieren überwinden und Teaminnovationen in einem Arbeitsumfeld fördern können. Der Kurs beschreibt persönliche Hindernisse für die Kreativität und wie diese überwunden werden können, und bietet Strategien zur Verbesserung der Kreativität am Arbeitsplatz. Er skizziert außerdem die wichtigsten Anforderungen zur Unterstützung der Kreativität und untersucht Techniken zur Förderung der Kreativität in Teams.

COURSE_DESCRIPTION: The sudden rise in the value of Bitcoin and other cryptocurrencies, and its subsequent decline, focused the world's attention on cryptocurrencies as a means of payment. Blockchain technology powers Bitcoin and has been hyped as the next new, transformative technology. In this course, we first discuss the technical underpinnings of blockchain and review key concepts such as decentralization and consensus algorithms. We then examine blockchain as an asset and review the dynamics of the cryptocurrency markets. Finally, we examine blockchain as a business solution, with a focus on understanding business cases in which blockchain does and does not make sense.

COURSE_DESCRIPTION: Cloud storage is a fundamentally important aspect of cloud computing. Consequently, it is vital that as a developer, you recognize how AWS implements storage across the AWS Cloud. In this course, you'll learn how the EC2 service uses instance stores and Elastic Block Store for volatile and persistent storage. You'll then learn how CloudFront implements a global content delivery network. Next, you'll examine how AWS implements Elastic File System for file storage and sharing and you'll see how Amazon Simple Storage Service uses buckets to store objects. You'll learn about the various resources and tools AWS provides for migrating data to the cloud and how Amazon S3 implements versioning and encryption. You'll examine how to use Amazon S3 for hosting static web sites and how to enable and configure cross-origin resource sharing in S3. Next, you'll explore the consistency models used by AWS and considerations related to S3 performance. Lastly, you'll see how data is archived in Amazon S3 Glacier. This course is one of a collection of courses that prepares learners for the AWS Certified Developer - Associate 2020 certification exam.

COURSE_DESCRIPTION: In this one-hour based project you will apply the basics of working with relational databases within the SQL Server Management Studio (SSMS) environment. You will use the tools in SSMS to diagram an existing database and to create and run some SELECT and CREATE TABLE structured query language commands. You will also acquire the basic terminology that applies to all relational databases. By successfully completing the hands-on practices assigned, you will be better prepared for applying these basic concepts in SSMS in SQL Server classes. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Deploying to the cloud and managing cloud operations are core duties of the AWS Cloud Practitioner role. To do this, you first need to know the AWS tools for the job and how to set them up. In this course, you'll examine the fundamental setup procedures for cloud deployment and operations through AWS. Start by learning the basics of deploying Linux and Windows instances. Then discover how AWS Elastic Load Balancing (ELB) works with Auto Scaling groups to increase efficiency. Explore configuration techniques for Elastic Block Storage (EBS) and Simple Storage Service (S3). Finally, investigate AWS CloudFormation and CloudFront to find out how to simplify your infrastructure management while securely delivering data, videos, and applications to global customers with low latency and high transfer speeds. This course is one of a collection that prepares learners for the AWS Certified Cloud Practitioner 2022 certification.

COURSE_DESCRIPTION: Functional programming is becoming increasingly widespread in industry. This trend is driven by the adoption of Scala as the main programming language for many applications. Scala fuses functional and object-oriented programming in a practical package. It interoperates seamlessly with both Java and Javascript. Scala is the implementation language of many important frameworks, including Apache Spark, Kafka, and Akka. It provides the core infrastructure for sites such as Twitter, Tumblr and also Coursera. In this course you will discover the elements of the

functional programming style and learn how to apply them usefully in your daily programming tasks, such as modeling business domains or implementing business logic. You will also develop a solid foundation for reasoning about functional programs, by touching upon proofs of invariants and the tracing of execution symbolically. The course is hands on; most units introduce short programs that serve as illustrations of important concepts and invite you to play with them, modifying and improving them. The course is complemented by a series programming projects as homework assignments. Recommended background: You should have at least one year programming experience. Proficiency with Java or C# is ideal, but experience with other languages such as C/C++, Python, Javascript or Ruby is also sufficient. You should have some familiarity using the command line.

COURSE_DESCRIPTION: What roles do human resources and legal departments play in ensuring that an enterprise is run securely? During this course, you will explore the governance, compliance, and business continuity planning domains for the enterprise security practitioner and engineer. You will observe how these departments must work closely with the security policy steering committee to enforce personnel security policies and procedures. See how to apply risk assessment and analysis techniques; study how to respond to risks, including measurement and monitoring. Discover how to implement threat modeling concepts and methodologies. Learn to apply risk-based management concepts to the supply chain. Also learn to build and maintain security training programs. Finally, as a review exercise, you will examine various IT security controls.

COURSE_DESCRIPTION: OneDrive for Business, part of Microsoft's Office 365 package, is used to store files to work on or share. OneDrive enables you to store your files and keep organized. Begin this 5-video course by learning how to log in and out of your Office 365 account, as well as access the OneDrive application. Before you start uploading existing files and create new documents, you will explore the OneDrive interface and the different tools offered by OneDrive. This includes knowing how to browse one's folders and how to change the directory view. Next, you will discover how you can use the search bar to quickly find a file in OneDrive, using basic information about the document. This leads into searching and finding OneDrive documents from your computer. Learners will conclude the course by observing how to customize a OneDrive account, where they can change an Office 365 theme, customize the language, time zone, and notification settings to meet their needs.

COURSE_DESCRIPTION: In this 9-video course, learners explore the fundamentals of cloud architecture and design, including three-tier design, shared responsibility, development lifecycles, risk management, and migration and deployment strategies. Begin by taking a look at a common three-tier design model, consisting of a web tier, an application tier, and a database tier model. You will also examine how to expand this into a four-tier model, for more granular visibility and security in the middle layers. The next tutorial concerns the importance of understanding the shared responsibility between your organization, your data center, your assets, your server farms, your development code, and your provider. Learners will then observe how to perform cost/benefit analysis for the cloud service provider (CSP). Also, you will explore common development lifecycles, and learn about the basics of risk management. Delve into common deployment and migration strategies, and the Cloud Security Alliance (CSA) cloud data lifecycle. In the final tutorial, learners will examine the basics of storage management lifecycles. The concluding exercise directs learners to describe cloud architecture concepts.

COURSE_DESCRIPTION: Microsoft Cognitive Toolkit provides powerful machine learning and deep learning algorithms for developing AI. Knowing which problems are easier to solve using Microsoft CNTK over other frameworks helps AI practitioners decide on the best software stack for a given application. In this course, you'll explore advanced techniques for working with Microsoft CNTK and identify which cases benefit most from MS CNTK. You'll examine how to load and use external data using CNTK and how to use its imperative and declarative APIs. You'll recognize how to carry out common AI development tasks using CNTK, such as working with epochs and batch sizes, model serialization, model visualization, feedforward neural networks, and machine learning model evaluation. Finally, you'll implement a series of practical AI projects using Python and MS CNTK.

COURSE_DESCRIPTION: The Capstone project will allow you to continue to apply and refine the data analytic techniques learned from the previous courses in the Specialization to address an important issue in society. You will use real world data to complete a project with our industry and academic partners. For example, you can work with our industry partner, DRIVENDATA, to help them solve some of the world's biggest social challenges! DRIVENDATA at www.drivendata.org, is committed to bringing cutting-edge practices in data science and crowdsourcing to some of the world's biggest social challenges and the organizations taking them on. Or, you can work with our other industry partner, The Connection (www.theconnectioninc.org) to help them better understand recidivism risk for people on parole seeking substance use treatment. For more than 40 years, The Connection has been one of Connecticut's leading private, nonprofit human service and community development agencies. Each month, thousands of people are assisted by The Connection's diverse behavioral health, family support and community justice programs. The Connection's Institute for Innovative Practice was created in 2010 to bridge the gap between researchers and practitioners in the behavioral health and criminal justice fields with the goal of developing maximally effective, evidence-based treatment programs. A major component of the Capstone project is for you to be able to choose the information from your analyses that best conveys results and implications, and to tell a compelling story with this information. By the end of the course, you will have a professional quality report of your findings that can be shown to colleagues and potential employers to demonstrate the skills you learned by completing the Specialization.

COURSE_DESCRIPTION: Explore the implementation and configuration of various Salt Stack products in this 13-video course, which discusses the architecture and architectural components and identifies Salt's characteristics and role in DevOps. Learners will see illustrations of the basic configuration of salt components, such as Salt master and Salt minion; learn to install, configure, and implement various products of Salt Stack; and learn to implement capabilities of agentless Salt grains, Salt engine, and execution modules. SaltStack Enterprise provides an intelligent automation platform which can manage secure and also optimize any infrastructure, whether it is on-premises, in the cloud, or at the edge. Essential components of SaltStack Enterprise include its engine, its operations framework, and SaltStack SecOps, which provides the capability of customizing the policy or creating custom checks. Other key topics include Salt best practices, Salt Dependencies, and Salt Bootstrap. Learn to recognize implementation scenarios in which SaltStack Enterprise plays an important role. In a concluding exercise, learners will be asked to list core features of Salt, write Salt runner, and write execution module.

COURSE_DESCRIPTION: Google Assistant, Alexa, Siri. These have become household names. Thanks to advances in Natural Language Processing technologies, chatbots are increasing efficiency and saving money for companies worldwide. Chatbots can be used for a variety of tasks. Take customer support for example, where a chatbot can be used for: answering questions, finding products, checking inventory, or recommending items. They are also finding use to speed up medical diagnosis and triage (especially in mental health), keep the elderly company, and even in the context of video games. In this project, I will show you a variety of methods and techniques for creating an intelligent AI chatbot for your business or for fun. You could even build a chatbot that imitates you! Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Site reliability engineers (SREs) can use various testing techniques to ensure software operations are as failure-free as possible for a specified time in a specified environment. In this course, you'll explore multiple testing techniques, their purposes, and the tasks involved in their execution. You'll start by examining traditional software testing approaches, such as unit tests, integration tests, and system tests. Next, you'll investigate the components and use cases of various reliability metrics applied to SRE testing, including mean time to failure (MTTF), mean time to recover (MTTR), and mean time between failures (MTBF). Lastly, you'll outline several software testing approaches, such as stress, configuration, integration, acceptance, production, and canary testing, among others. You'll identify when, how, and by whom each of these testing types is carried out.

COURSE_DESCRIPTION: Discover how to go further with your Excel document through understanding potential formula errors, use intelligent data types, and set goals to reach targets as well as problem-solve with the Solver and Forecast tools offered by Excel 2019. Key concepts in this 7-video course include how to identify formula errors and to understand the wide range of formula error messages; how to check for and evaluate formulas in a workbook; and how to use formulas to estimate loan-related costs and help you estimate and manage repayments. Continue by learning how to use the Goal Seek tool to modify a data variable and reach a target value; how to use the Solver add-in to analyze constraints and variables and optimize data values; and how to insert a Forecast worksheet to display trends and predictions based on available historic data. Finally, observe how to use Data Tables to create what if, variable-based scenarios, and once created, learn to adjust the values and change the calculation options. In order to practice what you have learned, you will find the Word document named Excel 2019 for Windows: Forecasting & Solving Problems Exercise as well as the associated materials in the Resources section.

COURSE_DESCRIPTION: In this 1-hour long project-based course, you will learn basic principles of agent-based SIR models and how one can be implemented in Python. Together, we will explore basic Python implementations of SIR differential equations and agent-based modeling from scratch. This will be accomplished using Matplotlib and Numpy. I encourage learners to experiment. What other variables can be added? Can our variables be represented better? What limitations do we come across? The learner is highly encouraged to experiment beyond the scope of the course. After you finish the course, you will have the basic knowledge of building a mathematical simulation to model the transmission of a pandemic contagion. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In this 2-hour long project-based course, you will learn the basics of using Power BI Desktop software. We will do this by analyzing data on credit card defaults with Power BI Desktop. Power BI Desktop is a free Business Intelligence application from Microsoft that lets you load, transform, and visualize data. You can create interactive reports and dashboards quite easily, and quickly. We will learn some of the basics of Power BI by importing, transforming, and visualizing the data. This course is aimed at learners who are looking to get started with the Power BI Desktop software. There are no hard prerequisites and any competent computer user should be able to complete the project successfully. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

 COURSE_DESCRIPTION: Explore the importance of security incident triage in handling incidents in a timely and automated manner, in this 14-video course, which familiarizes learners with anomalies and activities that often require triage. Key concepts covered in this course include security triage fundamentals and the strategies to implement triage; tools used in security triage; and automation techniques and common tips and rules of thumb for security triage. Next, you will explore the importance of communication and stakeholder management in security triage; examine the approaches to detecting anomalies and handling them with security triage; and learn about common protocol anomalies that require triage. Continue by exploring the different levels of monitoring for incidents in security triage while looking at network monitoring of traffic, bandwidth, and the various protocols used; learn to analyze SSH activity and security events to look for; and learn how to analyze DNS activity, HTTPS activity, and system log activity. Finally, learn how to describe security events to look for in each activity.

COURSE_DESCRIPTION: In this 1-hour long project-based course, you will learn how to visualize Cryptocurrencies using violin plot, pie chart, box plot, scatter plots, line graph, area graph, and candlestick charts through Plotly Express which is a high-level Data Visualization library. You will learn how to create excellent quality graphs and charts using Python. We will be using a real-world application of Data Visualization: The Cryptocurrency market. Whether you are a Crypto enthusiast, a crypto investor, day trader or just someone who wants to "WOW" his audience by creating excellent quality graphs and charts, this course will be highly beneficial to you. You will not only learn Data visualization in Plotly but also about the real-world application of it in the Cryptocurrency market. We will begin by importing all the necessary libraries including Plotly express. Then we will import our dataset and analyze our dataset. Then we will start creating visualizations. We will start with a detailed analysis of the entire crypto market and then focus on bitcoin in the final crypto-specific data visualization section. First, we will use the violin chart and pie charts to compare the cryptocurrencies in terms of their volume. Then we will compare all the cryptocurrencies in terms of their price using box plots. Then we will create scatter plots to have a closer look at the entire crypto market. Finally, we will select bitcoin for the crypto-specific data visualization section and create a line graph. area chart and candlestick chart to visualize and analyze bitcoin. We will be using the Rhyme interface for our guided project. Rhyme is an interactive cloud desktop that gives you the interface to learn hands-on by writing the code yourself. You will get instant access to pre-configured cloud desktops containing all of the software and data you need for the project. Everything is already set up directly in your internet browser so you can just focus on learning. Please note that although this project deals with cryptocurrencies, it is for educational purposes only. Basic knowledge of Python programming language is recommended but even those with no prior programming experience will be able to complete this guided project. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In this 1-hour long project-based course, you will learn how to create a basic and functional version of the popular game, Space Invaders using Java and Swing toolkit. Java is one of the most in demand programming languages, and using the Swing toolkit with it will give you a chance to easily implement many game applications. You will be able to identify and use most of the components inside the Swing toolkit that will aid you in building your own games, customized to fit your needs. In this guided project, you will be able to create a graphical user interface, populate it with your game pieces and control their movement using the keyboard. Furthermore, you will be able to make the enemy shoot automatically as the user shoots using the keyboard. Finally, you will be able to detect any hits and calculate the score. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Performing calculations is one of the most essential parts of analysis in Tableau. Calculations allow you to manipulate your data in ways that standard tools cannot. In this 10-video course, learners will explore ways to manipulate various data types with a number of different functions and calculations to solve a wide range of problems. Begin by working with the string functions and using the Calculated Field window, and then work with the date functions by using the Calculated Field window. Use quick table calculations to quickly apply common table calculations to visualizations; create simple LOD [level of detail] expressions and use them in visualizations; and observe the use of EXCLUDE and FIXED LOD expressions in calculations. Discover how to perform ad-hoc calculations; configure aggregate and disaggregate options, and perform logical calculations. The course concludes by focusing on the use of arithmetic and aggregate calculations, and using join calculations to work with data where common fields are missing in the two sources.

COURSE_DESCRIPTION: This course provides a more in-depth look at the roles and responsibilities of boards of directors in the governance of nonprofit organizations. While the course has been developed with North American culture in mind, we do appreciate that in other parts of the world, the nature of the roles and responsibilities of boards of directors may not be the same. Nevertheless, it is our hope that much of the course content will still be of value to those in other parts of the world. To learn more about this course, please watch the overview video by copying and pasting the following link into your web browser: <https://goo.gl/SXZEZS>. Keywords: Nonprofit; Nonprofit Sector; Voluntary Sector; Nonprofit Organizations, Non-Governmental Organizations, Volunteer Organizations, Leadership, Management, Governance, Board, Board of Directors, Performance, Effectiveness Course 2 Overview: Week 1: Some of the questions to be explored this week are: What is the board's role in planning for the organization's future and why is it important for nonprofit organizations to do it? What is strategic planning and what can boards do to carry this out effectively? Week 2: This week's questions: What is the board's role in assessing the performance of the organization? Why is performance assessment important? Why do many boards have difficulty meeting their performance assessment responsibilities? Week 3: This week's questions: What are the elements of the fundraising/resource development process? What is the board's role in ensuring the organization has adequate funding? What information should be in a resource development plan? Week 4: At this stage, you are asked to review the course content, submit a written assignment (known lightheartedly as a BEAR (Board Effectiveness Readiness Assessment)), and take two multiple choice Readiness Assurance Tests (known similarly as RATs). One RAT will assess knowledge and reading comprehension and the other will test application of knowledge within a practical case. Week 5: We will encourage you to discuss the RATs in the discussion forums and take them again should you wish to change any of your answers based on the information exchanged.

COURSE_DESCRIPTION: An AI chatbot is a program within a website or app that simulates human conversations using natural language processing (NLP). Chatbots are programmed to address users' needs independently of a human operator. Common chatbot functions include answering frequently asked questions and helping users navigate a website or app. In this course, explore the AI chatbot application flow and learn about data loading and text preprocessing. Next, discover how to transform the data into numeric values and perform one-hot data encoding. Finally, practice creating and training models, loading a trained model, defining a response function, and setting test questions. Upon completion, you'll be able to develop a simple chatbot using transformers that will automatically reply to user questions.

COURSE_DESCRIPTION: In this course, you will learn best practices for selecting, recruiting, and onboarding talent. You will also learn about the key approaches to measuring performance and evaluating your employees. In addition, you will learn how to develop and coach your talent so that they can realize their full potential at work. Altogether, you will gain a thorough understanding of the complete cycle of managing talent and creating a robust talent pipeline for your team and organization. Managing and developing talent is one of the top 3 issues on the minds of CEOs from around the world. In fact, CEOs cite managing and developing their leadership talent as the issue that is most important to the future success of their business but that their organizations are least capable of addressing effectively. This course will provide you with the insights, frameworks and tools to effectively manage and develop talent in your teams and organizations.

COURSE_DESCRIPTION: Explore the basics of saving and managing documents in Google Docs. Discover the several ways and places to save your document, including on your computer and on Google Drive. Continue by learning how to save a document as a Word, PDF, EPUB or HTML file. You will also see how to get statistics for a document, including word count, and the number of lines or paragraphs in a document. Finally, you will learn how to manage a document's version history, and how to restore a previous or the most recent version of your documents.

COURSE_DESCRIPTION: Want to solve a murder mystery? What caused your computer to fail? Who can you trust in your everyday life? In this course, you will learn how to analyze and assess five common forms of inductive arguments: generalizations from samples, applications of generalizations, inference to the best explanation, arguments from analogy, and causal reasoning. The course closes by showing how you can use probability to help make decisions of all sorts. Suggested Readings Students who want more detailed explanations or additional exercises or who want to explore these topics in more depth should consult Understanding Arguments: An Introduction to Informal Logic, Ninth Edition, Concise, Chapters 8-12, by Walter Sinnott-Armstrong and Robert Fogelin. Course Format Each week will be divided into multiple video segments that can be viewed separately or in groups. There will be short ungraded quizzes after each segment (to check comprehension) and a longer graded quiz at the end of the course.

COURSE_DESCRIPTION: Explore the world of Enterprise Application Integration (EAI) patterns and how they are used to build build end-to-end integration products. In this course, you will start with identifying the common messaging channels that used in pattern implementation. Next you will learn how to configure message channels and implement message queues with Kafka. Consider message features and variations used to build EAI patterns. Examine types of Kafka Application Programming Interfaces (APIs) used to manage messaging. Write a simple producer and consumer API with Kafka. Watch how to create source streams. See how to implement a content enricher, a content filter, and the Kafka Polling Consumer. Finally, review messaging protocols and consumer types.
