COURSE_DESCRIPTION: Welcome to the Scaling Agile in Your Organization Bootcamp channel! This course provides agile practitioners and organizational leaders with an understanding of Large Scale Agile, the differences between available scaled agile frameworks, a look at how they could fit into your organization, the various roles required, and how to successfully transition. Projects that use agile methodologies experience nearly 20% higher project success rate than projects that do not rely on a proven approach. Successful organizations use agile methodologies to respond more quickly to market dynamics and changing customer needs. Lean enterprises that have scaled their agile practices achieve even greater success through alignment to strategy, measurable outcomes across portfolios, employee engagement, and increased ability to provide value to customers. However, there are common pitfalls that can occur as organizations scale their agile practices. This course discusses those issues, looks at strategies to help your organization scale, and delivers content that can be applied quickly and effectively. Prerequisites The knowledge and skills that a learner must have before attending this course are as follows: Understanding of agile practices and frameworks used to deliver projects. Skills Selecting the right agile practices for your organization. Growing into scaled agility. Target Audience The Scaling Agile in Your Organization course is intended for agile practitioners and organizational leaders seeking an understanding of Agile scaling options. Agile practitioners and organizational leaders will understand the options available and learn how to identify what would work best in their organization. Participants will gain insights on common pitfalls and strategies for scaling.

COURSE_DESCRIPTION: By the end of this project, you will learn how to create a professional looking wordcloud from a text dataset in Python. You will use an open source dataset containing Christmas recipes and will create a wordcloud of the most important ingredients used in these recipes. I will teach you how load a JSON dataset, clean the dataset by removing encodings and unwanted characters, and lemmatize your dataset. I will also teach you how to calculate TF-IDF weights of words in your dataset and use these weights to create a wordcloud. You will create a ready-to-use Jupyter notebook for creating a wordcloud on any text dataset. Lemmatization is a process of removing inflectional endings only and to return the base or dictionary form of a word, which is known as the lemma. TF-IDF stands for term frequency-inverse document frequency. TF-IDF gives a weight to each word which tells how important that term is. Using both lemmatization and TF-IDF, one can find the important words in the text dataset and use these important words to create the wordcloud. For example, these datasets could be customer complaints and the business can focus on the important issues that the customers are facing. Wordcloud is a powerful resource which can be used in reports and presentations. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: This 14-video course helps learners explore the threat categories in the STRIDE (Spoofing, Tampering, Repudiation, Information Disclosure, Denial of Service, and Elevation of Privilege) model for identifying computer security threats, including spoofing, tampering, repudiation, information disclosure, denial of service (DoS), and escalation of privilege. Key concepts covered in this course include categories of

security vulnerabilities using the STRIDE model; how to recognize authenticity and identity spoofing threats; and how to validate integrity and tampering threats. Next, you will learn about authentication threats and non-repudiation, when used in security, for example, when a charge cannot be challenged; learn information threats such as privacy breaches or data leaks; and learn the threat of DoS attacks, a resource disruption attack when a user tries to connect. Learners continue by exploring the privilege escalation threat model; learning to recognize examples of security misconfiguration threats; and observing methods of brute force attacks and key sizes. Finally, learn to perform a local network scan and a targeted remote scan by using Nmap; and learn to perform a DoS vulnerability diagnostic test on a host.

COURSE_DESCRIPTION: C++ allows you as the developer to specify default values for the input arguments into your functions, and supports function overloading. Both of these are powerful techniques for code reuse. Explore how to use default argument values for C++ functions, including important rules that govern such default values. Examine the semantics of return values from functions and learn how to avoid the dangling pointer problem. Discover function overloading, learn how to split the declaration and implementation of a function across header and implementation files, and learn the correct way of importing these header files into code to invoke that function. Upon completion, you'll be able to specify default values for function arguments, overload functions based on input arguments and const, and split functions across .h and .cpp files.

COURSE_DESCRIPTION: In this challenge, you will manage virtual machines policies and resources. First, you will create categories and tags, and then you will assign the categories and tags to virtual machines. Next, create storage policies, and then you will enforce the policies on virtual machines. Finally, you will configure resource controls by using CPU shares and resource pools. Note: Once you begin the challenge lab, you will not be able to pause, save, or return to your challenge lab. Please ensure that you have set aside enough time to complete the challenge lab before you start.

COURSE_DESCRIPTION: Understanding statistics is essential to understand research in the social and behavioral sciences. In this course you will learn the basics of statistics; not just how to calculate them, but also how to evaluate them. This course will also prepare you for the next course in the specialization - the course Inferential Statistics. In the first part of the course we will discuss methods of descriptive statistics. You will learn what cases and variables are and how you can compute measures of central tendency (mean, median and mode) and dispersion (standard deviation and variance). Next, we discuss how to assess relationships between variables, and we introduce the concepts correlation and regression. The second part of the course is concerned with the basics of probability: calculating probabilities, probability distributions and sampling distributions. You need to know about these things in order to understand how inferential statistics work. The third part of the course consists of an introduction to methods of inferential statistics - methods that help us decide whether the patterns we see in our data are strong enough to draw conclusions about the underlying population we are interested in. We will discuss confidence intervals and significance tests. You will not only learn about all these statistical concepts, you will also be trained to calculate and generate these statistics yourself using freely available statistical software.

COURSE_DESCRIPTION: Learners will discover how to apply knowledge of linking on-premises Active Directory (AD) to Azure AD along with multifactor authentication (MFA), single sign-on (SSO), and various sign-in methods, in preparation for AZ-301: Microsoft Azure Architect Design certification exam in this 15-video course. Begin by selecting the best authentication method to use with AD Connect, and learn how to use the portal to add and verify a custom DNS domain to be used with AD Connect. Discover how to download, install, and configure AD Connect; to modify AD Connect configuration sync settings; and to modify an AD Connect configuration to use password writeback. Examine how to configure seamless SSO and enable Azure AD combined registration. Configure MFA settings; turn on and test MFA for an Azure AD user; configure MFA blocking and unblocking; specify trusted IPs for MFA exclusion, and enable MFA for administrator accounts. Also, learn how to use the Microsoft Authenticator App and MFA to log in, and how to configure an Azure AD access review. The exercise involves planning Azure AD Connect.

COURSE_DESCRIPTION: The purpose of the course is to provide students with knowledge about the technology of aerial photography using unmanned aerial vehicles (UAVs). The course objectives include: knowledge about various aircraft and payloads, the geodetic control creation, flights planning and their implementation, the main stages of data processing and application of the results obtained. The course is developing by SPBU together with Geoscan Group - the leading Russian UAV manufacturer and processing software developer. This allowed us to make the course fulfilled with the practical aspects of aerial photography with UAV. Upon completion of this course, students will be able to: - Select the aircraft and payloads depending on the task and terrain conditions; - Plan flight mission. Students will know: - The UAV composition; - Requirements for geodetic control of flights; - Data processing; - Types of the results and their usage. This course precedes the previously created course - "Photogrammetric processing of aerial photography materials from UAV".

COURSE_DESCRIPTION: As a Microsoft 365 subscriber, you get regular updates on all the applications in the Office Suite. In this Spring update course, you will discover new features in Excel and Outlook. First, you will see how to copy and paste data in Microsoft Excel, including a new method which allows you to copy data to your clipboard by clicking on a special value in the status bar. You will also discover the latest interface of Outlook, and some other useful Outlook features. These include an improved search function, an integration between Outlook tasks and Microsoft To Do and automatic suggested replies. In addition, the course will introduce you to Editor, Office 365's powerful, AI-based proofreading tool.

COURSE_DESCRIPTION: In this course you will experience the process of defining, creating, and managing relational database tables using the SQL language. Tables are used as the containers for the data in a database. As such, the structure, or makeup, of each table in a relational database is critical, since it must be designed and created specifically to meet the needs of the data it will contain. The table's structure indicates which pieces of data are stored in a table, as well as the type and size of each piece of data. Throughout the course, you'll be exposed to guidelines and rules that database designers use to make sure that the tables will keep the data as safe and accurate as possible. You'll learn to use SQL code to incorporate the constraints that help the database management enforce those rules. As you work through and complete hands-on tasks, you'll become familiar with SQLiteStudio, the database management system used in the course. Tables that are well-designed and created correctly improve data integrity--and make data retrieval easier! Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

 COURSE_DESCRIPTION: Learn how to work with lists, tuples, and strings in Jupyter notebook in Python in this 14-video course. You will discover similarities and differences between tuples and lists and see how strings are essentially just a list of characters. Begin with an introduction to lists, and then create and initialize lists in Python. You will then access and update list elements; add, remove, sort, and reverse elements from a list; execute built-in functions with lists, and create new lists from existing lists by using slicing operations. Next, examine how to extract specific elements from the original list using step size; perform list functions on strings; invoke functions on the string object; and access substrings with slicing operations. Receive an introduction to tuples, exploring the similarities between lists and tuples, then move on to understanding tuple immutability by specifying differences between lists and tuples. Then an introduction to other complex data types and using dictionaries and sets in Python. The concluding exercise concerns recalling differences and similarities between lists and tuples.

COURSE_DESCRIPTION: In this intermediate-level project you will examine the need to make decisions in programming. Using the Notepad++ editor and JavaScript embedded in HTML, you will write the JavaScript code to test a condition and then take an action based on the test result. While the If-Else/Else-If logic in this project could apply to a number of programming languages, the syntax you'll use is specific to JavaScript. Decision programming is a necessary addition to the tool set for any programmer or application developer. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: An Excel 365 worksheet can contain more than just numbers and text. In this course, you will discover how to make your worksheets more visually appealing using hyperlinks, images, screenshots, shapes, icons, special characters, as well as colors and themes. Start by learning how to insert an image or photograph, which can be used to illustrate your data, and then learn how to insert a screenshot. Discover how to edit an image once it has been inserted into your Excel spreadsheet. You will then explore how to adjust an image's brightness, contrast, saturation levels, apply a variety of artistic effects and even add a border. You can also create diagrams using shapes and insert icons to help illustrate a worksheet. You will explore the different types of links and hyperlinks you can insert into your document. You will learn how to insert special characters into a cell and see how to use colors and themes to help data stand out and make a table easier to read. Also, you will discover how to create and edit clean, professional-looking titles with WordArt. In order to practice what you have learned, you will find practice exercises in the Resources section.

COURSE_DESCRIPTION: Learner Outcomes: After taking this course, you will be able to: - Utilize various Application Programming Interface (API) services to collect data from different social media sources such as YouTube, Twitter, and Flickr. - Process the collected data - primarily structured - using methods involving correlation, regression, and classification to derive insights about the sources and people who generated that data. - Analyze unstructured data - primarily textual comments - for sentiments expressed in them. - Use different tools for collecting, analyzing, and exploring social media data for research and development purposes. Sample Learner Story: Data analyst wanting to leverage social media data. Isabella is a Data Analyst working as a consultant for a multinational corporation. She has experience working with Web analysis tools as well as marketing data. She wants to now expand into social media arena, trying to leverage the vast amounts of data available through various social media channels. Specifically, she wants to see how their clients, partners, and competitors view their products/services and talk about them. She hopes to build a new workflow of data analytics that incorporates traditional data processing using Web and marketing tools, as well as newer methods of using social media data. Sample Job Roles requiring these skills: - Social Media Analyst - Web Analyst - Data Analyst - Marketing and Public Relations
Final Project Deliverable/ Artifact: The course will have a series of small assignments or mini-projects that involve data collection, analysis, and presentation involving various social media sources using the techniques learned in the class. The course was developed by Dr. Chirag Shah while he was a faculty member at Rutgers University. He is currently a faculty member at University of Washington.

COURSE_DESCRIPTION: Welcome to this Guided Project on Data Encryption using AWS KMS, From UST. For more than 20 years, UST has worked side by side with the world's best companies to make a real impact through transformation. Powered by technology, inspired by people and led by their purpose, they partner with clients from design to operation. With this Guided Project from UST, you can quickly build in-demand job skills and expand your career opportunities in the Securities field by learning how to use AWS KMS for Cryptographic Operations. Join me as we explore different approaches to the Encryption / Decryption Process and learn how to create Symmetric and Asymmetric Customer Keys. Combining detailed explanations with practical experience, by the end of this project, you will be able to Encrypt/ Decrypt your sensitive data using the regional service, AWS KMS (Key Management

Service). If you dream about working in high profile industry jobs as a Data Security specialist, this project is a great place to start. This is a beginner level project, and does not require any previous experience. Enroll now to get started!

COURSE_DESCRIPTION: The evolution and growing capabilities of mobile communications have driven innovation globally. The development of the next generation of cellular networks - 5G, comes with suggestions of transforming existing consumer, business, and industrial processes. This course will familiarize you with 5G and its capabilities while detaching the hype and fiction associated with the technology. Use this course to explore technological milestones achieved by various generations of mobile communications, the attributes and applications of 5G technologies, and the fringe theories surrounding 5G. After completing this course, you'll possess the knowledge to recognize the features and uses for 5G technologies and how they differ from those that belong to the previous generations of mobile communications.

COURSE_DESCRIPTION: With the popularity of virtual machines, their administration is of utmost importance. This course explores the protection services for Windows Server 2016 VM infrastructure with hosted datacenters and enterprise SMB services. During the course, you will learn how to implement Microsoft's Guarded Fabric Solution, and its three components: the HSG (Host Guardian Service), guarded hosts (Hyper-V boxes) and a set of shielded virtual machines. Next, you will learn how to configure Admin and TPM Trusted Attestation, as well as the key protection service with HGS. Progressing through the course, you will explore how to migrate the VM to a guarded host, and troubleshoot with the Guarded Fabric Diagnostic Tool and BitLocker. Conclude by observing how to determine requirements for implementing encryption-supported and shielded VMs

COURSE_DESCRIPTION: In this course, you will learn what an argument is. The definition of argument will enable you to identify when speakers are giving arguments and when they are not. Next, you will learn how to break an argument into its essential parts, how to put them in order to reveal their connections, and how to fill in gaps in an argument by adding suppressed premises. By the end of this course, you will be better able to understand and appreciate arguments that you and other people present. Suggested Readings: Students who want more detailed explanations or additional exercises or who want to explore these topics in more depth should consult Understanding Arguments: An Introduction to Informal Logic, Ninth Edition, Concise, Chapters 1-5, by Walter Sinnott-Armstrong and Robert Fogelin. Course Format: Each week will be divided into multiple video segments that can be viewed separately or in groups. There will be short ungraded quizzes after each segment (to check comprehension) and a longer graded quiz at the end of the course.

COURSE_DESCRIPTION: Fundamental concepts in probability, statistics and linear models are primary building blocks for data science work. Learners aspiring to become biostatisticians and data scientists will benefit from the foundational knowledge being offered in this specialization. It will enable the learner to understand the behind-the-scenes mechanism of key modeling tools in data science, like least squares and linear regression. This specialization starts with Mathematical Statistics bootcamps, specifically concepts and methods used in biostatistics applications. These range from probability, distribution, and likelihood concepts to hypothesis testing and case-control sampling. This specialization also linear models for data science, starting from understanding least squares from a linear algebraic and mathematical perspective, to statistical linear models, including multivariate regression using the R programming language. These courses will give learners a firm foundation in the linear algebraic treatment of regression modeling, which will greatly augment applied data scientists' general understanding of regression models. This specialization requires a fair amount of mathematical sophistication. Basic calculus and linear algebra are required to engage in the content.

COURSE_DESCRIPTION: Egy sikeres csapat létrehozásánál biztosítani kell a lehetőséget arra, hogy a csapattagok önnel is és egymással is kommunikálhassanak és egy csapatként dolgozzanak, nem pedig különálló egyénekként. Ehhez világos kommunikációs csatornákra van szükség a helyben működő és a virtuális csapatoknál egyaránt. Ezen a tanfolyamon Ön a hatékony kommunikáció ösztönzésének és a kommunikációs problémák leküzdésének technikáit fogja elsajátítani. Emellett megtanulja a csapaton belüli együttműködés ösztönzésére szolgáló stratégiákat is. Végül pedig a virtuális csapatok kommunikációjában elterjedt eszközökről és technológiákról fog tanulni, továbbá a virtuális kommunikációra vonatkozó útmutatások megfogalmazása során megfontolandó szempontokról.

COURSE_DESCRIPTION: Plenty of buzz exists about blended learning and its transformational potential. But what does blended learning really mean? In this course we will explore the different models of blended learning and dive into key issues that impact students, teachers, and schools. Specifically, we will look at these issues through the lens of three high-performing schools that each use a different type of blended learning. A few of the key topics will include: - The role of the student and how to support students in the transition from traditional to blended learning - Implications for teachers in their day-to-day work and overall role - Impact on the way schools are designed including staffing models, use of time, hardware/software selection, and the use of data - Implementation challenges, potential solutions, and the remaining open questions We will live by the attributes of blended learning in this course, encouraging students to take quizzes at the beginning of the module to assess their understanding and skip material they already know. Overall, we will take a hand-on approach and the course will culminate in participants prototyping their own blended learning model. If you are interested in learning more about how to best leverage technology in education and rethink the way we run schools, join this MOOC and encourage your colleagues to do the same. Become a part of this growing movement and learn first-hand how blended learning can help provide students a more personalized learning experience.

COURSE_DESCRIPTION: TensorFlow is one of the most in-demand and popular open-source deep learning frameworks available today. The DeepLearning.AI TensorFlow Developer Professional Certificate program teaches you applied machine learning skills with TensorFlow so you can build and train powerful models. In this hands-on, four-course Professional Certificate program, you'll learn the necessary tools to build scalable AI-powered applications with TensorFlow. After finishing this program, you'll be able to apply your new TensorFlow skills to a wide range of problems and projects. This program can help you prepare for the Google TensorFlow Certificate exam and bring you one step closer to achieving the Google TensorFlow Certificate. Ready to deploy your models to the world? Learn how to go live with your models with the TensorFlow: Data and Deployment Specialization. Looking to customize and build powerful real-world models for complex scenarios? Check out the TensorFlow: Advanced Techniques Specialization.

COURSE_DESCRIPTION: Mobile devices are one of the core components of today's network environments, so it's vital to know how and where they are possibly vulnerable. In this course, you'll explore the attack surface related to mobile devices and the Top 10 Mobile Risks as defined by OWASP, in terms of both attacking and defending these critical pieces of infrastructure. Next, you'll examine common vulnerabilities and attack tools for both Android and iOS, as well as defensive measures you can take to secure them. One of the main reasons that attackers are successful against mobile devices is due to the difficulty in managing them. To complete this course, you'll learn about the need for mobile device management software, how to deploy it, and how it helps secure things in a BYOD world. This course is one in a series that helps to prepare you for the Certified Ethical Hacker v11 (312-50) exam.

COURSE_DESCRIPTION: Email has become an indispensable communication tool for organizations, and plays a vital role in how they conduct business and maintain their operations. As a result, one of the most important communication skills to have in the workplace today is email etiquette. It can help ensure you get messages across quickly, appropriately, and concisely. In this course, you'll learn some tried and tested guidelines for writing emails. You'll explore the fundamental elements of written communication that every email should contain, and the importance of keeping emails concise. The course also covers the etiquette associated with using instant messaging programs as an extension of email.

COURSE_DESCRIPTION: Sending an email to the wrong person, or excluding the right person, hinders effective communication and is a sign of poor email etiquette. Because email is so central to how organizations do business today, writing emails effectively - and getting them to the right people - is one of the most important communication skills to have. In this course, you'll learn a vital facet of written communication: how to address and distribute emails. You'll be introduced to best practices for deciding who to send emails to and how to flag emails appropriately. The course also covers proper etiquette for forwarding emails and using reply and reply all. In addition, it highlights some poor copying practices to avoid.

COURSE_DESCRIPTION: Effective business writing is one of the most important communication skills in the workplace today. By writing well, using clear sentences and correct grammar, you can ensure your message is communicated to and understood by your intended audience. Unfortunately, the opposite is also true - poorly structured sentences can not only cause confusion, but may also damage your reputation. In this course, you'll learn about the fundamental elements for better writing - the parts of speech. These are the building blocks of sentences, so learning about them can help you skillfully combine words into meaningful sentences. This course describes the eight parts of speech and shows how to use them effectively and correctly.

COURSE_DESCRIPTION: Punctuation is the collection of marks used to separate sentences and their parts. Although appropriate punctuation is an undervalued part of your communication skills, it can make your business writing clear and less likely to be misinterpreted. In this course, you'll learn the standard rules and guidelines for using punctuation marks, including the correct use of periods, question marks, and exclamation points. You'll learn a crucial aspect of better writing that often causes much confusion - how to correctly use commas. The course includes rules for better writing such how to use different connecting and separating marks, like colons, semicolons, dashes, and hyphens. In addition, it shows how to properly use apostrophes, parentheses, brackets, and quotation marks.

COURSE_DESCRIPTION: Syntax is the grammatical term for arranging words to create logical phrases, clauses, and sentences. Well-constructed sentences express an idea by using the parts of speech in a logical order, and are essential for effective business writing. A misplaced modifier might get a chuckle out of the reader, but it reflects poorly on your communication skills. In this course, you'll learn some of the fundamentals for better writing - the parts of a sentence, such as the subject and predicate, as well as phrases and clauses. You'll examine subject-verb agreement, as well as agreement between pronouns and their antecedents. You'll also discover some techniques for writing well, such as how to identify and fix common types of sentence errors.

COURSE_DESCRIPTION: There is a science behind communication, including how we react neuro-physiologically to others - through verbal communication such as their words and tone, as well as the non-verbal communication of their actions and body language. There's also an art to communication, allowing your authentic self to shine through and allowing the exchange with another person to unfold naturally. In this course, you'll learn about the art and science of communication. You'll explore techniques for connecting with your audience and building trust with them so that your communication intention is clear and understood. You'll also learn the basic principles of assertive communication that is positive and not aggressive.

COURSE_DESCRIPTION: There are many parts of the brain that have not changed much since the time of our earliest ancestors. We are still wired to respond automatically when we're afraid, threatened, disgusted, surprised, or happy. But we've come a long way in our development and understanding of non-verbal communication mechanisms. In this course, you'll learn how our attitude and tone, as well as body language such as posture, gestures, and facial expressions, can have significant impact on the way we communicate. You'll explore techniques to help you project a positive attitude and presence. You'll also discover how to read other people's body language.

COURSE_DESCRIPTION: As a manager, it can be daunting to find yourself in charge of a diverse group, comprised of different age ranges, backgrounds, and experiences. It's inevitable that you'll encounter difficulties. Effectively handling conflict, whether it's team conflict or difficult employee behavior, is essential to productivity and requires developing conflict management skills. This course covers useful techniques and processes for conflict resolution. You'll learn methods for resolving conflict when dealing with an employee's difficult behavior. You'll also learn ways of effectively managing team conflict and understanding and dealing with conflict in the workplace as a whole.

COURSE_DESCRIPTION: Few tasks make managers more uncomfortable than conducting performance appraisals - especially when an employee has a performance problem. It doesn't have to be this way. Difficult conversations, and even terminations, can often be avoided with some effective planning to establish goals, competencies, and performance requirements. Appraisals assist with managing performance, as they encourage employees to perform their jobs well because they're addressing the highest priority responsibilities and operating in a way that the organization expects. Managing performance in top performers, who are particularly valuable to the company, requires challenging and engaging them so they don't terminate their contracts to go look for challenges elsewhere. In this course, you'll learn about developing an employee performance plan and monitoring ongoing performance so there are no unhappy surprises at performance review time.

COURSE_DESCRIPTION: Do you know if your team's goals are consistently being met or if employees are always performing at their peak? Do you dread difficult conversations when there's a performance problem that needs to be addressed? Effectively managing performance can help avoid termination of employees and boost productivity at all levels of your organization. Challenging and engaging top performers is key, as these high achievers are very valuable to the company and may terminate their contracts to seek challenges elsewhere. In this course, you'll learn about the factors involved in successful performance management. You'll explore the phases of the performance management process, critical success factors, and key performance indicators. Finally, you'll learn about identifying key job requirements when creating a role profile.

COURSE_DESCRIPTION: When valuable top performers choose to terminate their contracts to take up more challenging positions elsewhere, it can be a consequence of poor performance management. Identifying a performance problem early and diagnosing it accurately is key to managing performance effectively. You've got to involve employees in what might be difficult conversations to discover actual root causes and come up with the best possible solutions. In this course, you'll learn how to detect, identify, and question problems in your workplace, determine the scope, frequency, and impact when they occur, and diagnose root causes - both external and internal - to help find the best solution and avoid a contract termination of a valuable employee.

COURSE DESCRIPTION: Working on a team with employees from different departments can be a huge challenge. These types of teams often consist of people with different talents, goals, and communication styles. This is why effective cross-functional management is so important. This involves managing teams in a way that bridges the functional silos that constrain your organization. Managing for cross-functionality also means using team leadership skills to support collaboration and teamwork between different departments. This course defines organizational cross-functionality and its benefits. It helps you develop techniques to support a cross-functional strategy throughout your organization. And it shows you how different types of knowledge management systems can play a role in implementing that strategy.

COURSE_DESCRIPTION: No matter how much experience you may have, there's always room for improvement. Self-improvement is a lifelong journey of learning that can have lasting positive impacts on your personal and professional life. By encouraging organizational learning with both established and developing employees, you can foster an environment of self-development. In this course, you'll learn about the key principles for committing to self-improvement and continuous learning. You'll also learn how to create a plan to organize self-improvement activities and start developing talent. You'll find out how to develop an effective self-improvement mentoring relationship when developing people. And you'll explore what common obstacles you may encounter in your self-improvement efforts.

COURSE_DESCRIPTION: Communicating with self-confidence is critical for success in both your personal and professional life. When the people you communicate with in daily life sense that you're nervous and don't feel confident in yourself, they may not feel confident in you either. In this course, you'll learn what's meant by "self-confidence," and the behavioral indicators of low and healthy self-confidence levels. You'll also learn

how to perform a personal analysis of your current self-confidence levels, so you know which areas to work on. Finally, you'll discover some self-development techniques you can use for building and maintaining confidence in yourself.

COURSE_DESCRIPTION: Procrastinating can be a big obstacle to efficient time management. The good news is that there are ways to overcome a tendency to procrastinate. The trick is to figure out what your own personal reason is for putting off what you know you need to do. In this course, you'll discover what may be behind your tendency to procrastinate by learning the indicators. Then you'll explore many helpful techniques and strategies for dealing with procrastination and improving efficiency. There are four key areas covered in this course: improving focus, increasing self-motivation, taking action, and improving your ability to organize.

COURSE_DESCRIPTION: Everyone could benefit from a boost in creativity. Whether you're in marketing and advertising, management, or software development, all professionals need to be able to come up with original ideas and think outside the box every now and then. But sometimes the pressure to think creatively is the very thing that blocks the flow of fresh ideas and results in the type of procrastination that is an obstacle to efficient time management. This course focuses on the relationship between procrastinating and creativity. You'll learn about how the optimal amount of procrastination actually boosts creativity and efficiency. You'll also learn how to use creativity boosters to help you past those times when you procrastinate a little too much.

COURSE_DESCRIPTION: Each of us is a member of a society that is often partitioned into groups and tribes. While this is common to most societies, it can have harmful effects in the workplace, interfering with productivity and organizational success. We all hold biases, whether conscious or unconscious. Part of understanding the role of unconscious bias in the workplace is admitting to yourself that you, too, hold biases. Once accepted, you can take an anti-bias approach to overcoming unconscious prejudice. In this course, you'll learn how to recognize your own unconscious and implicit bias and how they can fall prey to social stereotypes.

COURSE_DESCRIPTION: When starting a project, there are many things to consider. One key area is risk. Managing risks means preparing ahead of time for all the things that could go wrong...or go right! Another key area is quality. How are you going to ensure that your product or service meets stakeholders' expectations? And then there's figuring out whether to do all the work in-house or outsource it to a third party. And how do you choose the vendors who will partner with you in managing risk to maximize quality? This course will help you sort out all these considerations by explaining common methods and best practices related to risk management, quality management, and procurement.

COURSE_DESCRIPTION: Team cohesion, or the strength of the links between team members, determines how effective teams will be, especially in responding to outside pressures. A team has to be cohesive if its members are to function as a unit, working closely and efficiently to achieve common goals. In this course, you'll learn methods for effectively building and managing teams that focus on improvements in three areas: communication, cooperation, and trust. You'll learn specific strategies for improving communication and promoting collaboration among staff members working on a team. You'll also learn what signs suggest a lack of trust on a team, and how you can show team leadership by using the right techniques to build trust and improve teamwork.

COURSE_DESCRIPTION: It's vital to maintain open, effective communication when working on a team. However, it's all too easy for teams to adopt bad habits. Without realizing how badly it affects your team, you or another team member may communicate in ways that lead to misunderstandings in teamwork, cause unnecessary conflict, keep others from having their say, and prevent collaboration. In this course, you'll learn about different verbal barriers to effective team communication and strategies for overcoming them. But speaking is only one part of communication; effective team leadership is about listening too. So you'll also learn about some active listening techniques that can help you be a better listener when managing teams.

COURSE_DESCRIPTION: With so much business now happening on a global scale, cross-cultural communication is more important than ever before. Communication is always a challenge, and when diverse cultures interact, good communication can be even more challenging. To become a more efficient and effective communicator, you must acknowledge and respect cultural differences. In this course, you'll learn about the importance of taking culture and diversity into account in the workplace. You'll explore aspects of cultures that affect how people communicate across cultural boundaries. You'll also learn different considerations for speaking and writing across cultures.

COURSE_DESCRIPTION: It takes time to build working relationships with people from other cultures, but it only takes a second to alienate them by inappropriately crossing cultural boundaries. That's why building relationships across cultures is so important in the current global business context, where you have to share objectives and working space with people with diverse cultural backgrounds. In this course, you will learn about dealing effectively with cultural diversity to improve cross-cultural communication and build rapport. You'll also learn about the misunderstandings and behaviors related to a culture that can hinder good communication and ways to overcome them. Finally, you'll learn strategies for giving effective presentations to people from low- and high-context cultures.

COURSE_DESCRIPTION: Have you ever read a piece of business writing and found the message unclear? Writing well, like other communication skills, can be cultivated and improved. To write an effective business message, you need to first know and understand your audience and your purpose for choosing written communication to convey it. In this course, you'll discover how improving your written communication aids in creating messages that convey the appropriate tone for different readers throughout the organizational hierarchy. You'll also explore how better writing can effectively fulfil its three most common purposes: to inform, respond, or persuade.

COURSE_DESCRIPTION: An effective marketing strategy takes time and money. It's vital to get things right, and this requires proper marketing planning. The elements of the traditional marketing mix form important strategic cornerstones of any marketing activity. However, this traditional marketing mix fails to address two very important aspects of marketing: planning and people. In this course, you'll learn about strategic and tactical planning and the kinds of market research that support it. You'll be introduced to the basics of budgeting for, developing, executing, and evaluating a marketing plan. And you'll learn how companies can engage all their employees in developing their own marketing roles.

COURSE_DESCRIPTION: Unless you're the sole owner and proprietor, everyone in a business answers to someone else. From the CEO to the temp in accounting, every employee has someone they're accountable to. But the judgment and approval of the boss isn't enough, by itself, to make a job rewarding. Everyone must also answer to an inner boss, a personal, internal voice that provides guidance on whether the job is done as well as you can do it. Accepting personal accountability means your setting demanding standards and committing to meeting them. Further, personal accountability is also key to successful business networking. It's a necessary part of building trust and relationships. In this course, you'll learn how to listen to your inner boss, focus on meeting your internal standards, and apply them to your work, your goals, and your future.

COURSE_DESCRIPTION: You are juggling a lot of competing tasks. Meeting deadlines, production targets, and business objectives are serious responsibilities. It's tempting, at times, to find easy ways out of fulfilling them, or to use excuses as to why you can't. But to be accountable is part of being a professional. Demonstrating your personal and professional accountability is key to your ongoing success. Building accountability is a process of showing that you're a reliable, organized, and dedicated person, and further, ensuring accountability means taking ownership of your responsibilities. In this course you'll learn how to show leadership accountability, implementing strategies for setting goals, developing an action plan, and seeing all those competing tasks through to completion.

COURSE_DESCRIPTION: This 9-video course explores how to implement machine learning reinforcement learning by examining the terminology, including agents, the environment, state, and policy. This course demonstrates how to implement reinforcement learning by using Keras and Python; how to ensure that you can build a model; and how to launch and use Ubuntu, and VI editor to do score calculations. First, learn the role of the Markov decision process in which the agent observes the environment, with output consisting of a reward and the next state, and then acts upon it. You will explore Q-learning, a model-free reinforcement learning technique, an asynchronous dynamic programming approach, and will learn about the Q-learning rule, and Deep Q-learning. Next, learn the steps to install TensorFlow for reinforcement learning, as well as framework, which is used for reinforcement learning provided by OpenAI. Then learn how to implement TensorFlow for reinforcement learning. Finally, you will learn to implement Q-learning using Python, and then utilize capabilities of OpenAI Gym and FrozenLake.

COURSE_DESCRIPTION: Learners will explore a comparison of traditional virtualization and container architectures, as well as benefits of adopting containerization in DevOps workflows, in this 11-video course examining supporting Docker technologies for networking, service discovery, orchestration, and cluster management. Key concepts covered include traditional virtualization with container architecture and benefits of adopting containerization in DevOps workflows; major Docker components and features of the runC driver; and supporting Docker technologies used to manage networking, service discovery, orchestration, and clusters. Next, learn Docker commands to manage containers, associate containers with IPs, and link containers in Docker with the self-discovery approach; how to implement networking in Docker using network drivers to set up container networking; and how to set up custom bridges for Docker and use Open vSwitch virtual switch, instead of the standard Linux bridge. Then learn essential commands in Dockerfile to support the build and run phases of managing images; how to create Docker images with Dockerfile for creating and deploying applications in isolated environments; and learn image distribution and versioning by using repositories and Docker Hub.

COURSE_DESCRIPTION: Eine der schwierigsten und möglicherweise unangenehmsten Aufgaben eines Kundenservicemitarbeiters ist der Umgang mit verärgerten Kunden. Mit einigen einfachen Methoden können Sie jedoch in der Regel Spannungen abbauen, ohne dass es zu Zwischenfällen kommt. In diesem Kurs erfahren Sie etwas über typische Probleme im Umgang mit verärgerten Kunden und Sie lernen Richtlinien kennen, mit denen diese Probleme vermieden oder behoben werden können. Zudem lernen Sie, mit Kundenbeschwerden umzugehen, indem Sie Spannungen abbauen, das Problem untersuchen und gemeinsam eine Lösung finden.

COURSE_DESCRIPTION: **NOTE: You should complete the Accounting Analysis I: The Role of Accounting as an Information System course or be familiar with the concepts taught there before beginning this course.** This course is the second course in a five-course Financial Reporting Specialization that covers the collection, processing, and communication of accounting information (via financial reports) about economic entities to interested parties (i.e., managers and external stakeholders such as stockholders and creditors). To gain the most relevant knowledge from these courses, learners should have taken a basic accounting course prior to this Specialization (which can be done through Coursera courses, such as any accounting course from the Fundamentals of Accounting Specialization: <https://www.coursera.org/specializations/accounting-fundamentals>). This Specialization focuses on accounting concepts, principles and theory with an emphasis on problems that arise in applying these concepts for external reporting purposes. Specific emphasis is placed on measurement of assets, liabilities, equities and income, as well as disclosure of additional information that may assist users understand the financial reports. In this course, we will begin our review of key asset categories underlying the Balance Sheet concepts that were introduced in the previous course. We will begin our trek down the Balance Sheet by reviewing cash and receivables, which are normally the two assets listed first. We will continue our trek down the Balance Sheet by looking at inventory and long-Lived Assets, which are normally two of the largest asset values. We will review the measurement and reporting issues involving inventories and the corresponding cost of goods sold expense in the Income Statement. In the latter half of this course we will conclude our review of key asset categories by looking at both tangible and intangible long-lived assets that are so vital to the production of goods and services. This will entail discussion of both acquisition and disposition of property, plant and equipment as well as cost allocation. Next, we will discuss possible impairment of these assets as well as the proper treatment of expenditures made after acquisition. Lastly, we will review how to identify and account for Investments. The University of Illinois at Urbana-Champaign, consistently ranked as one of the nation's top three accounting programs, now offers a master's in accounting at a very affordable tuition rate and is completely online. The IMSA is a full Master of Accountancy program and students graduate with an MS that is highly recognized. Try an open course or two, then apply for admission into the credit-bearing version as you may be eligible to take credit-bearing courses during the application process. If you are missing any prerequisites for the full degree, you can complete Coursera courses to demonstrate readiness and strengthen your application for the IMSA. For more information on this...

COURSE_DESCRIPTION: The Spring MVC framework helps build web applications robustly and intuitively using the model-view-controller design pattern, while also incorporating all the standard Java features of a core Spring framework. Working with this framework helps produce flexible, loosely-coupled, three-tiered architecture web applications. In this course, you'll use several features of this framework, combining their use to build a simple web application. You'll learn how to connect this web application to a MySQL server database, which will be used to store your data. Next, you'll use JDBC templates to query this database and then set up login and register pages on your app. Finally, you'll perform create, read, update, and delete operations using Spring MVC.

COURSE_DESCRIPTION: Partitioning data based on a column is a common technique for performance query optimization in many database technologies. Snowflake is a highly-performant, big-data technology that uses its own form of data partitioning called micro-partitioning that stores data in columnar format. In this course, discover the advantages of Snowflake micro-partitions over regular, static partitioning. Next, examine how caching works in Snowflake. Finally, learn how to perform the clustering of Snowflake tables and how clustering helps the performance of filters, point-lookups, and range queries on the clustering key columns. Upon completion, you'll be able to leverage micro-partitioning in Snowflake, differentiate between retrieval optimization caching and local disk caching, and implement clustering with the correct clustering key.

COURSE_DESCRIPTION: In this challenge, you will optimize an Azure data factory that supports a data pipeline to transform data. First, you will create a storage account that uses a Data Lake Storage hierarchical namespace, and then you will design a batch processing solution. Next, you will run a performance benchmark to optimize and ingest data for a data lake. Finally, you will deploy an Azure data factory, and then you will create a data pipeline that will transform data into blob data files. Note: Once you begin the challenge lab, you will not be able to pause, save, or exit and then return to your challenge lab. Please ensure that you have set aside enough time to complete the challenge lab before you start.

COURSE_DESCRIPTION: Learn how to identify the enablers and barriers to learning transfer. Use your own experience to categorise the processes and activities involved in learning and transferring that learning into practice. There are many criteria against which the success of training and development activities can be judged. One of the most important, however, is learning transfer. Ultimately, the success of any given training and/or development program is reflected in whether or not what is learned is applied on the job. Organisations - and indeed trainees themselves - invest large amounts of time, effort, and resources in work-related training and generally expect to see this manifested in some way back in the work setting (e.g. as observable changes to how work is conducted). However, many organisations and their people view the likelihood of transfer of training more in hope than expectation. This course will show you how to approach the goal of improving learning transfer in your organisation.

COURSE_DESCRIPTION: Finding and hiring the right people is often cited as the number one concern of businesses today. It seems we are all competing for the best and brightest workers. As you will see in our time together in the second course, a critical component of the People Manager Value Proposition is to hire talented people who enable the organization to achieve its strategic goals. This course is an introduction into the topic of recruitment, selection and onboarding. At the outset of the course we will explore the importance of linking recruitment goals with overall company strategy. We then look at a number of options to recruit and select employees both effectively and legally. Throughout the course we will examine current issues in talent acquisition, such as how companies are now leveraging social media and hiring analytics to ensure better quality hires. At the conclusion of the course, we look at how to onboard employees to promote employee commitment and engagement.

COURSE DESCRIPTION: Mobile applications often have several pages. These pages need to be connected correctly using navigation and routing. In this course, you will explore how Flutter uses a stack data structure to enable navigation. You will use the Navigator class to navigate between pages and use named routes to improve the readability and robustness of navigation code. Next, you will bring together everything you have learned in this path to build a simple application for an e-commerce company using Material Design for Android devices and Cupertino widgets for iOS devices. Finally, you will learn to connect a device to Flutter and test your app on a mobile phone.

COURSE_DESCRIPTION: Using social intelligence (SI) is not just about recording the number of likes, retweets, or followers you have on your various social media outlets. True social intelligence involves using the vast amount of raw, real-time data you have at your disposal and converting it into practicable insights to improve customer relationships. In this course, you'll learn about the benefits of social intelligence to your organization's performance. You'll explore how to monitor social media, as well as common sources of social media data. Finally, you'll discover best practices for analyzing that data, common mistakes to avoid, and ways to use social-awareness strategies that deliver real business value.

COURSE_DESCRIPTION: The history of business is the history of project management. Just as our ideas of how to conduct business continue to evolve, so do our conception of the project manager's role, the characteristics of a project, and the project life cycle itself. Traditional project management had its time and place, but today's landscape calls for innovation and adaptive leadership. In this course, you'll explore how project management approaches have evolved to address changing project environments. You'll learn about the transition from purely empirical, waterfall models of PM to more adaptive, hybrid, and agile project management techniques.

COURSE DESCRIPTION: Once a Redis server is in place, there are several essential tasks involved in managing it. In this course, you'll explore how to carry out some of these critical tasks, namely assigning user permissions, establishing replacement servers, and setting cache replacement policies. You'll start by learning how to use ACL commands to set user permissions for new users and continue to assign permissions using ACL categories. Next, you'll learn how to duplicate a copy of a Redis server, before setting up a replica of your server and establishing a master-slave relationship between the server and its replica. Finally, you'll learn how to set up a Redis server to function as a cache by applying the least-recently-used (LRU) or least-frequently-used (LFU) cache replacement policies.

COURSE DESCRIPTION: C++ supports a variable type known as the reference. You can think of references as being easier-to-use, lighter-weight versions of pointers. Begin by getting familiar with the syntax and semantics of references in C++, including the use of the & symbol to denote a reference type. Note some important differences between references and pointers, how references need to be assigned when they are created, how they cannot be reassigned or set to NULL, and how multiple references to the same underlying value are all effectively aliases for that value. Move on to declaring and using variables of reference type. Finally, learn about const references and experiment with different configurations of loops, where the loop variables are references, value types, and const references. Upon course completion, you'll be able to define and initialize variables of reference types, contrast pointers and references, and correctly use const references.

COURSE TITLE: Pointers and References in C++: Working with References

COURSE_DESCRIPTION: A legtöbb új vezető nem tudja, hogy új szerepe mennyire különbözik a korábbi beosztotti szereptől. Gyakran téves elképzeléseik vannak arról, mivel jár a vezetői szerep, és meglepetten tapasztalják, mennyire különböző képességek és módszerek kellene a sikerhez beosztottként, mint vezetőként. Ez a tanfolyam bemutatja és le is rombolja a vezetői szerepekkel kapcsolatos mítoszokat, hogy megértse, mi is valójában egy vezető feladata, továbbá rámutat a vezetői munka jellemző követelményeire és korlátaira. Végül bevált stratégiák bemutatásával segít elkerülni az új vezetőkre jellemző hibákat.

COURSE_DESCRIPTION: This is the first course in a series of four that will give you the skills needed to start your career in bookkeeping. If you have a passion for helping clients solve problems, this course is for you. In this course, you will be introduced to the role of a bookkeeper and learn what bookkeeping professionals do every day. You will dive into the accounting concepts and terms that will provide the foundation for the next three courses. You will learn how to work your way through the accounting cycle and be able to read and produce key financial statements. By the end of this course, you will be able to: -Define accounting and the concepts of accounting measurement -Explain the role of a bookkeeper and common bookkeeping tasks and responsibilities -Summarize the double entry accounting method -Explain the ethical and social responsibilities of bookkeepers in ensuring the integrity of financial information. No previous bookkeeping or accounting experience required.

COURSE_DESCRIPTION: Do you want to write powerful, maintainable, and testable front end applications faster and with less code? Then consider joining this course to gain skills in one of the most popular Single Page Application (SPA) frameworks today, AngularJS. Developed and backed by Google, AngularJS is a very marketable skill to acquire. In this course, we will explore the core design of AngularJS 1.x (latest version of AngularJS 1), its components and code organization techniques. We will enhance the functionality of our web app by utilizing dependency injection to reuse existing services as well as write our own. We will create reusable HTML components that take advantage of AngularJS data binding as well as extend HTML syntax with a very powerful feature of AngularJS called directives. We'll set up routing so our SPA can have multiple views. We will also learn how to unit test our functionality. At the end of this course, you will build a fully functional, well organized and tested web application using AngularJS and deploy it to the cloud.

COURSE_DESCRIPTION: What makes WiFi faster at home than at a coffee shop? How does Google order its search results from the trillions of webpages on the Internet? Why does Verizon charge \$15 for every GB of data we use? Is it really true that we are connected in six social steps or less? These are just a few of the many intriguing questions we can ask about the social and technical networks that form integral parts of our daily lives. This course is about exploring the answers, using a language that anyone can understand. We will focus on fundamental principles like "sharing is hard", "crowds are wise", and "network of networks" that have guided the design and sustainability of today's networks, and summarize the theories behind everything from the social connections we make on platforms like Facebook to the technology upon which these websites run. Unlike other networking courses, the mathematics included here are no more complicated than adding and multiplying numbers. While mathematical details are necessary to fully specify the algorithms and systems we investigate, they are not required to understand the main ideas. We use illustrations, analogies, and anecdotes about networks as pedagogical tools in lieu of detailed equations. All the features of this course are available for free. It does not offer a certificate upon completion.

COURSE_DESCRIPTION: Being able to monitor data storage systems to ensure they are operational and working correctly is a crucial part of running your business. Azure provides the Azure Monitor service and the Azure Log Analytics service to perform this function. In this course, you'll learn about the features of Azure Log Analytics, as well as the Azure Monitor service and how it can be used to monitor storage data and monitor Azure Blob storage. Next, you'll explore how to access diagnostic logs to monitor Data Lake Storage Gen2, monitor the Azure Synapse Analytics jobs and the adaptive cache, and monitor Azure Cosmos DB using the portal and resource logs. Finally, you'll examine how to configure, manage, and view metric alerts using the Azure Monitor and activity log alerts using the Azure Monitor. This course is one in a collection that prepares learners for the Microsoft Data Engineering on Microsoft Azure (DP-203) exam.

COURSE_DESCRIPTION: In this 14-video course, learners can explore how to plan, create, configure, and troubleshoot databases for a modern messaging infrastructure, as they prepare for the MS-200 Planning and Configuring a Messaging Platform certification exam. You will begin the course by exploring what to consider when planning mailbox database requirements, followed by a demonstration of how to create a Microsoft Exchange Mailbox and access and set its properties. Next, learners watch a practical demonstration of how to use shell cmdlets (lightweight commands in PowerShell) to move, mount, dismount, and remove a mailbox. Learn the basic rudiments of troubleshooting mailboxes. Finally, you will follow a demonstration of how to verify the Exchange Mailbox Assistant Services as healthy. After completing this course, you will be able to test to be sure that the Exchange search feature is enabled and functioning and be able to test the health of an instance of the Microsoft Exchange Mailbox Replication Service.

COURSE_DESCRIPTION: In this course you will interpret the components of a relational data model, convert that model into a relational database, and then test the database design. The process of database design begins with requirements analysis to determine who will use the new database and how it will be used. The results of the detailed analysis are recorded in an Entity Relationship Diagram (ERD), which documents entities and their attributes, along with the relationships between entities. The ERD (logical design) is then converted into the Relational Model, which serves as the blueprint for the actual creation of a database in a database management system. By the end of this course, you will have used a blueprint-a Relational Model-to create a database using SQLiteStudio. In addition, you will have developed test data and queries to validate the database design represented by the Relational Model. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: No matter what the infrastructure is that you are using to manage your applications, you are likely to find challenges trying to keep up when scaling out as demand for resources increases. The answer to this problem is automation and orchestration, and one of the most common tools for providing automation and orchestration for containers is called Kubernetes. Explore this open-source container orchestration system. You will gain insight into the various terms associated with this software and investigate the common workflow used to produce containers and deploy software to scale. Then, you will discover how to secure a Kubernetes Cluster. Finally, you will examine Kubernetes use cases and identify the differences between Kubernetes and Docker. After course completion, you will be able to work with Kubernetes containers, outline the Kubernetes workflow, and determine its situational usefulness.

COURSE_DESCRIPTION: A well-designed data model eliminates irrelevant and uninterpretable analyses and ensures insightful and well-performing reports. Use this course to step up your data analysis using Power BI's advanced data modeling features. Begin by loading a sales dataset containing a large fact table and multiple dimension tables and modeling it into a snowflake schema. See how Power BI automatically detects relationships. Then, learn how to apply detailed configurations of relationships, from setting the right cardinality to applying bi-directional cross-filtering. Next, explicitly define a hierarchy in your data to model a set of geographical values. Learn further detailed configurations, such as setting a default aggregation operation on fields and hiding specific ones from the reports view. Lastly, learn how to implement row-level security. When you're done, you'll be able to use Power BI's advanced data modeling capabilities. You'll also be further prepared for the PL-300: Analyzing Data with Microsoft Power BI certification exam.

COURSE_DESCRIPTION: In order to get the most out of Visio, you need to know how to create and save your files. You will learn how to export your documents in different formats and print a hard copy, manage your document's pages, and work with files in this 10-video course, recorded in a Visio Online Plan 2 environment. Begin by discovering how to create and save a document. Then explore how to export files as a PDF, create a PowerPoint presentation, and change the file type; check the file's compatibility, convert it to the latest version, and check the file's accessibility, and then print a copy. Next, you will learn how to add or remove file properties, remove personal information, and reduce the file size; select one or two multiple objects using the selection tool, and manage the pages of a document by adding, duplicating, renaming, reordering, and deleting pages. Modify the page set up to change the page size and orientation; change the theme of a file, and finally, add, edit, and remove backgrounds.

COURSE_DESCRIPTION: Russian is considered to be one of the most difficult languages in the world, and many learners struggle to master its grammar and pronunciation. This course is aimed at those who wants to work in Russia, do business with Russian partners or study on business-related majors in Russian. In three units of this intensive course learners are going to find out how to maintain phone conversation with Russian partners and what speech clichés can be used, hope to pan and arrange an appointment and how to discuss business-related topics over email. The course is the second part of Business Russian Communication series offered by St Petersburg State University. This part introduces such grammar topics as revision of Reflexive verbs, conjugation of verbs мочь/сметь, отправлять/отправить, получать/получить and many others, the use of paired prefixes with verbs of motion, the use of numerals in time and date expressions. Learners can practice their skills and test themselves in Grammar quiz section. The course provides extensive vocabulary with more than 200 new words and conversational phrases which learners can use in their everyday communication on professional or informal topics. Each unit of the course contains dialogues, which are extremely useful for those who wants to listen to original Russian speech and get used to the pace and intonations of Russian language. Scripts, audio and exercises are provided for all dialogues of the course. In the end of the course learners will have a chance to use the material learnt and assess their progress while preparing the Final Assignment. This course is aimed at those who already achieved A2-A2+ level in Russian.

COURSE_DESCRIPTION: The Agile methodology has become dominant in the software development scene over the last decade, as it allows organizations to deliver software faster than traditional methods while being flexible enough to accommodate ever-changing requirements. In this course, you'll learn the steps of the software development life cycle and the roles and responsibilities of a software development team, and the various software test methods. You'll learn the Agile software development methodology, the steps of the Agile, and the Agile artifacts. You'll also learn how to identify how Agile differs from the Waterfall methodology, and learn about the CI/CD process and how it relates to Agile. And finally, you'll learn best practices for transitioning a traditional software development team to Agile.

COURSE_DESCRIPTION: In this 11-video course, explore Azure Active Directory (AD), creating tenants, and configuring Enterprise State Roaming, Identity Protection, and Self-Service Password Reset (SSPR) in preparation for Microsoft Azure Administrator (AZ-103) exam. Begin by signing up to use Azure Active Directory or Azure AD Premium; then learn how to create a new tenant in Azure AD with Azure portal. Next, discover how to create and manage multiple directories in Azure AD, and also learn how to use Azure AD portal to add custom domain names. This leads on to configuring Enterprise State Roaming in the Azure AD admin center; configuring Azure AD Identity Protection, and configuring an Azure AD access review. You will then look at Azure AD password protection and how to eliminate weak passwords for on-premises use and in the cloud. In the final tutorial, you will discover how to configure a SSPR. In the exercise, learners must describe Azure AD Enterprise State Roaming, create a new Azure AD tenant and DNS domain name, and configure Azure AD password protection.

COURSE DESCRIPTION: In this course, you'll learn how to create and provision a virtual machine using the Host Client and review how to create and configure a Windows 10 VM. You'll explore the importance of installing and using VMware Tools on all of the VMs in your organization and learn how to install the VMware Tools and ensure they are operating properly. Next, you'll examine all the files that make up a VM and the purpose of each file type. Finally, you'll learn about containers, the purpose of each of their components, and how they all work together to provide containerized services for vSphere7. This course is one in a series that helps prepare learners for the VMware Certified Professional - Data Center Virtualization 2021 (VCP-DCV 2021) exam.

COURSE_DESCRIPTION: Google Cloud Professional Cloud Architect certification was ranked #2 on Global Knowledge's list of 15 top-paying certifications in 2021! Enroll now! to prepare! This program provides the skills you need to advance your career in cloud architecture and provides a pathway to earn the industry-recognized Google Cloud Professional Cloud Architect certification. You'll deploy solution elements, including infrastructure components such as networks, systems and applications services, and you'll gain real world experience through hands-on Qwiklabs projects that you can share with potential employers. You'll also have the opportunity to practice key job skills, including case analysis, identifying technical watchpoints, and developing proposed solutions. Test your basic abilities with Activity Tracking Challenge Labs. For learners looking to get certified, this program will provide sample questions similar to those on the exam, including solutions and practice exam quizzes that simulate the exam-taking experience. Upon successful completion of this program, you will earn a certificate of completion to share with your professional network and potential employers. If you'd like to earn your Google Cloud certification, you will need to register for and pass the certification exam. Please note that this program helps equip you with the skills you need to take the certification exam, but the certification and certification fee is not included in the cost of this training program.

COURSE_DESCRIPTION: Natural language processing (NLP) is constantly evolving with cutting edge advancements in tools and approaches. Neural network architecture (NNA) supports this evolution by providing a method of processing language-based information to solve complex data-driven problems. Explore the basic NNAs relevant to NLP problems. Learn different challenges and use cases for single-layer perceptron, multi-layer perceptron, and RNNs. Analyze data and its distribution using pandas, graphs, and charts. Examine word vector representations using one-hot encodings, Word2vec, and GloVe and classify data using recurrent neural networks. After you have completed this course, you will be able to use a product classification dataset to implement neural networks for NLP problems.

COURSE_DESCRIPTION: The Foundations of Teaching for Learning programme is for anyone who is teaching, or who would like to teach, in any subject and any context - be it at school, at home or in the workplace. With dynamic lessons taught by established and respected professionals from across the Commonwealth, this eight course programme will see you develop and strengthen your skills in teaching, professionalism, assessment, and more. As you carry on through the programme, you will find yourself strengthening not only your skills, but your connection with colleagues across the globe. A professional development opportunity not to be missed. Curriculum is a framework for guiding teaching and learning. This course provides an opportunity for you to consider the relationship between the teacher, the learner and the curriculum. Enhance your course by joining the Commonwealth teaching community on our website, Facebook and Twitter.

COURSE_DESCRIPTION: This course is designed to help you improve your Python skills. It will help you to write more readable and maintainable code. Code is written once and can be read dozens, hundreds or even thousands of times. Not just by yourself, but by your colleagues and other users of your code. So, it is worth to put in extra effort when you are writing it. In the course you will learn about the best practices for developing Python code. This includes Python specific conventions, tools and functionality from the Python Standard Library. Furthermore, you will learn about best practices for coding in general, which you can apply to other languages as well. You will benefit most from this course if you have already taken a Python beginners course before and have worked on projects yourself. Most of the topics will be at an intermediate level. Throughout the course PyCharm will be used to work on exercises. Please make sure you have it installed and running before the bootcamp starts. You can download the "Community" edition for free from: <https://www.jetbrains.com/pycharm/download/>

COURSE_DESCRIPTION: Regression models are used to predict continuous values and are some of the most commonly used machine learning models. Use this course to grasp what exactly machine learning (ML) algorithms are and how you can use ML models to predict outcomes based on input data. Learn how regression models work, train them, and evaluate regression results using metrics such as R2 and RMSE. Perform regression analysis in R using the ordinary least squares regression. Build models using simple and multiple regression and train a regression model using cross-validation. Upon completing this course, you'll be able to perform regression to predict continuous values and evaluate these models using metrics such as the R2 and adjusted R2.

COURSE_DESCRIPTION: Learners can explore the useful capabilities of Azure Board for planning, tracking, and monitoring sprints following the Agile methodology, as well as examine the prominent features of Azure Artifacts, and the best practices for managing and sharing packages, in this 16-video course. You will also learn about the configuration management and monitoring capabilities afforded by Azure DevOps along with how to use Azure Pipelines to set up continuous deployment for containerized applications to Azure Kubernetes Service (AKS). Next, you will discover how to create various test artifacts, use Azure DevOps to discover, install, and publish NuGet, NPM (node package manager), and Maven packages, and configure Ansible instances on virtual machines (VMs) by using Ansible Solution Template. Conclude the course by learning how to use Ansible solution template to configure AKS clusters in Azure; how to create resource groups, and create AKS clusters within resource groups; and how to use Azure Blueprint to create, deploy, and update compliant environments.

COURSE_DESCRIPTION: Modern computing uses IPv4, and increasingly IPv6. In this course, you'll explore IPv4 and IPv6 configuration details in preparation for configuring IT services to support business processes. You'll work with DNS name resolution and DHCP. You'll identify the role played by various network infrastructure devices, such as routers and switches. Furthermore, you'll capture and analyze network traffic using Wireshark. By the end of this course, some of the skills you'll acquire will be to recognize the connection between OSI model layers from TCP/IP protocols, set up TCP/IP both manually and with DHCP, and configure DNS using Azure, AWS, and GoDaddy. This course is one of a collection of courses that prepares learners for the Certified Information Security Manager (CISM) certification.

COURSE_DESCRIPTION: How will customers act in the future? What will demand for our products and services be? How much inventory should we order for the next season? Beyond simply forecasting what customers will do, marketers need to understand how their actions can shape future behavior. In Developing Forecasting Tools with Excel, learners will develop an understanding of the basic components of a forecasting model, how to build their own forecasting models, and how to evaluate the performance of forecasting models. All of this is done using Microsoft Excel, ensuring that learners can take their skills and apply them to their own business problems.

COURSE DESCRIPTION: As the COVID-19 pandemic continues, it's more important than ever to get a flu vaccine this year to keep people healthy and not overload the health care system. While a flu vaccine won't protect against COVID-19, flu vaccines will reduce your risk of flu illness, hospitalization and death. "You need to get the flu vaccine at least two weeks prior to the onset of flu activity in your region," says Dr. Priya Sampathkumar, a Mayo Clinic infectious diseases specialist. (Published 9/25/2020)

COURSE DESCRIPTION: Probability distributions are statistical models that show the possible outcomes and statistical likelihood of any given event and are often useful for making business decisions. Get familiar with the theoretical concepts around statistics and probability distributions through this course and delve into applying statistical concepts to analyze your data using Python. Start by exploring statistical concepts and terminology that will help you understand the data you want to use for estimations on a population. You'll then examine probability distributions - the different forms of distributions, the types of events they model, and the various functions available to analyze distributions. Finally, you'll learn how to use Python to calculate and visualize confidence intervals, as well as the skewness and kurtosis of a distribution. After completing this course, you'll have a foundational understanding of statistical analysis and probability distributions.

COURSE_DESCRIPTION: In this project, you will learn the foundation of data analysis with Microsoft Excel using sales data from a sample company. You will learn how to use sorting and filtering tools to reorganize your data and access specific information about your data. You will also learn about the use of functions like IF and VLOOKUP functions to create new data and relate data from different tables. Finally, you will learn how to create PivotTables to summarize and look at comparisons within your data. These skills will help you efficiently perform data analysis on many different types of data and give you the foundation to expand your toolbox as you explore other strategies for data analysis.

COURSE_DESCRIPTION: Selenium is one of the most widely used functional UI automation testing tools and integrates brilliantly with testing frameworks like NUnit. Test automation frameworks are a set of guidelines or rules for writing test cases. They can reduce maintenance costs and testing efforts and will provide a higher return on investment (ROI) for teams looking to optimize their processes. Testing guidelines include coding standards, test-data management, defining object repositories, reporting guidelines, and logging strategies. Through hands-on, practical experience, you will go through concepts writing reusable and structure code which is easy to maintain and understand, creating helper classes or utilities, write effective test cases, and generating reports and logs.

COURSE_DESCRIPTION: In this 19-video course, learners will explore the intricate world of secure coding practices. Topics covered in detail include declarative versus imperative (programmatic) security-whether the security is part of the application or part of the container. Next, survey defensive coding practices and control such as secure configuration, error handling, and session management. Learners will also explore cryptography, input and output sanitization, error handling, input validation, logging and auditing, and session and exception management. You will learn important information about safe application programming interfaces (APIs), including those that offer different types of functionality, such as Microsoft's Crypto API and Python's pycrypto, which both provide cryptographic functions; popular social media platforms provide their own APIs that programmers can tap into while incorporating aspects of those services. Learn more about useful concepts such as concurrency, type safety, memory management, configuration parameter management, tokenizing, and sandboxing. The course may be used in preparation for the (ISC)2 CSSLP: Certified Secure Software Lifecycle Professional certification exam.

COURSE_DESCRIPTION: A good IT security strategy involves security at all phases of IT service usage, from planning to deployment and maintenance. A thorough understanding of network protocols, ports, and IP addressing helps to properly select and deploy AWS network security solutions. Various AWS resources such as Virtual Private Clouds (VPCs), network access control lists (ACLs), and Security Groups require an in-depth knowledge of these networking components. In this course, discover how AWS supports standard security concepts such as Defense in Depth and least privilege. Then, review the Open Systems Interconnection (OSI) model and network protocols such as IPv4 and IPv6. Next, discover how network services listen on a given port number, and then examine a network traffic capture. Lastly, enable threat detection with AWS GuardDuty, and review AWS Trusted Advisor recommendations. This course can be used to prepare for exam SAP-C02, AWS Certified Solutions Architect - Professional.

COURSE_DESCRIPTION: In this 1.5-hour long project, you will learn how to clean and preprocess geolocation data for clustering. You will learn how to export this data into an interactive file that can be better understood for the data. You will learn how to cluster initially with a K-Means approach, before using a more complicated density-based algorithm, DBSCAN. We will discuss how to evaluate these models, and offer improvements to DBSCAN with the introduction of HDBSCAN. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Motherboards are the backbone that connect computer components and enable them to communicate. Discover motherboards, the basics of central processing units (CPUs), and add-on cards, as well as the various factors that need to be considered to install and configure them in your computer. In this course, you will learn about motherboard form factors and connector types. Discover the basic input/output system (BIOS) of your computer, how to configure BIOS security, and how BIOS contains the most basic system software that allows you to boot the system and your operating system to interact with the hardware. Explore Complementary Metal Oxide Semiconductor (CMOS) batteries, your CPU's processing core, and the differences between single core and multi-core processors. Finally, explore CPU features and compatibility, compare two of the most popular manufacturers of microprocessors, and learn about cooling mechanisms for the CPU including options for dissipating heat in your system. This course will prepare learners for the CompTIA A+ Core 1 (220-1101) certification.

COURSE_DESCRIPTION: Familiarity with tools, including when and how to use them is crucial in the success and ongoing management of a cloud computing ecosystem. In this course, navigate the Azure portal, a web-based GUI for deploying and managing Azure resources. Next, explore CLI syntax, and download and use the CLI on an on-premises computer. Learn about Azure PowerShell cmdlets, and download and install the Azure Az PowerShell module on an on-premises computer. Finally, explore how Azure Resource Manager (ARM) templates can be used to automate the deployment and configuration of Azure resources. This course can be used to prepare for exam AZ-900, Microsoft Azure Fundamentals.

COURSE_DESCRIPTION: In diesem Kurs lernen Sie die neuen Funktionen von Delve, der Anwendung zur Verwaltung Ihres Microsoft 365-Profiles, kennen. Lernen Sie zunächst, wie Sie ein Microsoft 365-Konto verwenden, um Zugang zu erhalten und in der Oberfläche zu navigieren. Delve ermöglicht es den Benutzern, ihre Profilinformationen zu ändern und die Anwendung an ihre Bedürfnisse anzupassen. Entdecken Sie die verschiedenen Teile der Benutzeroberfläche, um Suchvorgänge durchzuführen, Dokumente anzuzeigen und sie als Favoriten zu markieren. Schließlich erfahren Sie, wie Sie auf das Profil Ihrer Kollegen zugreifen können, um deren Dateien anzuzeigen und mit ihnen über Delve zu kommunizieren.

COURSE_DESCRIPTION: Excel 2019 enables one to easily share documents via email or upload them to OneDrive and SharePoint for team collaboration. During this course, you will learn how to share your spreadsheet, or send it as a .xls or .pdf in Excel. You will learn how to set its editing permissions and send a link. Other topics include how to view your shared documents and save your Excel documents online with OneDrive, so that collaborators can check out a document to prevent others from working on it at the same time. Explore how to coordinate document modification to allow collaborators to make comments, and track document changes. In order to practice what you have learned, you will find the Word document named Excel 2019 for Windows: Sharing & Collaborating on a Document Exercise as well as the associated materials in the Resources section.

COURSE_DESCRIPTION: Heutzutage gibt es so viele Kommunikationsmöglichkeiten wie nie zuvor. Die Auswahl der für eine Situation richtigen Methode kann einen riesigen Unterschied dabei machen, wie Ihre Botschaft angenommen wird. Je unpersönlicher Ihre Kommunikationsmethode ist, desto wahrscheinlicher wird sie zu einer einseitigen Kommunikation führen. In diesem Kurs lernen Sie, wie Sie mithilfe der besten Kommunikationsmethode Ihre Absichten vermitteln und Ihre Gesprächspartner gewinnen können. Damit verbessern Sie Ihre Chancen, Ihre Botschaft zu vermitteln und Ihrem Gegenüber das Gefühl zu geben, informiert, aufgeklärt und eingebunden zu sein.

COURSE_DESCRIPTION: At the end of the day, cybersecurity is all about understanding risk. In this course, you'll learn about how risk pertains to cybersecurity, risk levels, and how to use a risk matrix to visualize risk. You'll also examine the concept, practice, and phases of risk management, which can help you minimize the negative effects of risk. Next, you'll explore how using Cyber Threat Intelligence is a more proactive approach towards your cybersecurity defenses and the four types of CTI. Finally, you'll learn about using threat modeling to stop threats before they become security incidents and the five steps common to the threat modeling process. This course is one in a series that helps to prepare you for the Certified Ethical Hacker v11 (312-50) exam.

COURSE_DESCRIPTION: There are multiple ways in which you can deploy a Next-Generation Firewall (NGFW) from Cisco Systems. In this course, you'll learn about the standard routed mode as well as alternative transparent mode. You'll also learn about the flexibility of Firepower devices, which is due in part to the many different types of interfaces supported. Finally, you'll explore the options that exist on Cisco Firepower devices for link redundancy. This course can be used in preparation for the 300-710: Securing Networks with Cisco Firepower (SNCF) certification exam.

COURSE_DESCRIPTION: In this 12-video course, learners will discover security aspects focusing on OWASP Top 10 2017 Item A3: Sensitive Data Exposure, Item A2: Broken Authentication and Item A1: Injection. Key concepts covered in this course include details about OWASP Top 10 2017 Item A3, sensitive data exposure, and how data are transmitted over networks; how to prevent sensitive data disclosure through mitigating and protecting; and how to enable BitLocker encryption for a web server disk volume. Next, learn details about OWASP Top 10 2017 Item A2, broken authentication, and learn how to secure authentication; observe how to enable multifactor authentication (MFA) for an Amazon Web Services user account; and learn how to retrieve sensitive data through password reset pages. Finally, learn details about OWASP Top 10 2017 Item A1, injection - how attackers feed malicious input to a web application; and how to validate user input before allowing submission for execution. The concluding exercise deals with how authentication can be hardened, how to list mitigations against SQL injection attacks, and how MFA enhances security.

COURSE_DESCRIPTION: To carry out DevOps for data science, you need to extend the ideas of DevOps to be compatible with the processes of data science and machine learning (ML). In this 12-video course, learners explore the concepts behind integrating data and DevOps. Begin by looking at applications of DevOps for data science and ML. Then examine topological considerations for data science and DevOps. This leads into applying the high-level organizational and cultural strategies for data science with DevOps, and taking a look at day-to-day tasks of DevOps for data science. Examine the technological risks and uncertainties when implementing DevOps for data science and scaling approaches to data science in terms of DevOps computing elements. Learn how DevOps can improve communication for data science workflows and how it can also help overcome ad hoc approaches to data science. The considerations for ETL (Extract, Transform, and Load) pipeline workload improvements through DevOps and the microservice approach to ML are also covered. The exercise involves creating a diagram of data science infrastructure.

 COURSE_DESCRIPTION: A project charter is the most important document used to initiate and manage a Six Sigma project. It is treated as an informal contract between an organization and the Six Sigma team. The project charter articulates the business case for Six Sigma projects, specific problem that the Six Sigma team is going to work on, and the project's scope, goals, and objectives in very clear, specific, and measurable terms. As part of the process of developing a project charter, some performance measures such as cost, revenue, and schedule are identified and developed. Once the project is kicked off, the project charter is reviewed periodically by stakeholders in relation to a project's actual progress. A number of project management and analytical tools, such as Gantt charts, tollgate reviews, work breakdown structures, RACI model, affinity diagrams, tree diagrams, and prioritization matrices are used to measure and track the project's progress on a continuous basis. This course deals with the key issues in developing project charters and tracking a Six Sigma project. It takes you through some of the key elements of a Six Sigma project charter, including the business case and problem statement, as well as the project's scope, goals, and objectives. It also explains project performance measures and how to review the performance of a Six Sigma project using these measures. In addition, the course introduces common tools for tracking a project's progress and deliverables. This course is aligned with the ASQ Certified Six Sigma Black Belt certification exam and is designed to assist learners as part of their exam preparation. It builds on foundational knowledge that is taught in Skillsoft's ASQ-aligned Green Belt curriculum.

COURSE_DESCRIPTION: Do you know how to make Google Slides more interactive? Did you know that you can make asynchronous learning opportunities for your professional development or training program? This project is for you if these are goals that you have. Learn step by step how to design asynchronous training programs as you develop your own Google slide in this project. Adding interactivity will make your objectives stand out and help your audience see you as credible. We will use SMART goals as an example for this project. By the end of your time in this project you will have a Google Slides Presentation that you can use with navigation. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In this 11-video course, learners explore workings of some of the most widely used sorting algorithms in Python and examine how their performance affects various measures. Key concepts covered here include various properties of sorting algorithms when selecting the right one for your data; the operations involved when sorting a list of values by using the selection sort algorithm; and the process of a bubble sort when applied to a list of values. Next, you will learn about the performance of the bubble sort on various measures such as time, space, and number of swaps; how to describe the steps involved in performing an insertion sort and compare it to the bubble sort; and learn the workings of the shell sort and the performance metrics of this divide and conquer algorithm. Finally, you will learn the process of sorting a list of elements using merge sort and list the complexity of this algorithm on various measures; and learn how the quicksort algorithm partitions and sorts a list of elements.

COURSE_DESCRIPTION: By the end of this project, you will learn how to simulate large datasets from a small original dataset using parallel computing in Python, a free, open-source program that you can download. Sometimes large datasets are not readily available when a project has just started or when a proof of concept prototype is required. In this project, you will learn how to find the rate of change of a time dependent parameter. Next, you will learn how to simulate large number of values using the starmap function. Lastly, you will learn how to simulate large datasets while maintaining the original correlation between columns using a custom function passed to parallel processes. In this project, you will generate 10000 time dependent samples from an initial dataset containing just 20 samples. In reality, you can use several parallel processes and can generate millions of new time dependent samples which can be used to experiment a new big data product or solution. Note: You will need a Gmail account which you will use to sign into Google Colab. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Cloud computing systems today, whether open-source or used inside companies, are built using a common set of core techniques, algorithms, and design philosophies - all centered around distributed systems. Learn about such fundamental distributed computing "concepts" for cloud computing. Some of these concepts include: clouds, MapReduce, key-value/NoSQL stores, classical distributed algorithms, widely-used distributed algorithms, scalability, trending areas, and much, much more! Know how these systems work from the inside out. Get your hands dirty using these concepts with provided homework exercises. In the programming assignments, implement some of these concepts in template code (programs) provided in the C++ programming language. Prior experience with C++ is required. The course also features interviews with leading researchers and managers, from both industry and academia.

 COURSE_DESCRIPTION: In this practice lab, learners will be presented with a series of exercises to practice developing in Java. Exercises include tasks such as implementing common setup and cleanup methods, using assertions, checking for exceptions in JUnit and ordering the execution of test cases. Learners will also work with parameterized tests in JUnit, using Mockito to mock objects, work with @InjectMock Annotation and implement mocking exceptions using Mockito. Learners can also use the environment as an open sandbox. No installation or configuration is required, so you can gain immediate hands-on experience. Create new files or upload your own from a storage location of your choice, such as GitHub, and you can practice coding right away! You can even download a copy of your work when you're done. Whether you're looking to dive into the code presented within our courses or you want to work on your own coding projects, this lab environment will provide you with everything you need. So, go ahead and start coding today! See below for a complete list of available software. - Java 11 - Ant 1.10 - Apache Maven 3.6.0 - Gradle 6.8.3 - Spring Boot 2.4.3 - JUnit test framework - Mockito: Mock objects library - Python 2 & 3 - Pip 2 & 3 - Node.js - npm - Git - Vim editor - Standard Python libraries - Python 3 libraries: - BeautifulSoup4 - selenium This lab is part of the Java Apprentice track of the Skillsoft Aspire Java Novice to Javanista Journey.

COURSE_DESCRIPTION: ASP.NET Web API is Microsoft's framework for creating HTTP-based, RESTful services using the .NET Framework. It provides a strongly typed programming model for working with various components of HTTP. In this course, you'll get started with ASP.NET Web API 2, beginning with an overview of web APIs and HTTP, design options for ASP.NET web applications, and how to use Postman to make web requests and explore web APIs. Then you'll learn about navigating web API project templates, API controllers and action methods, working with responses, and hosting web APIs using ASP.NET. Finally, you'll explore model binding and simple type binding conventions, parameter binding with complex types, how to validate information sent in requests, and how to validate information by adding data annotations. This course was originally created by Global Knowledge (GK).

COURSE DESCRIPTION: In this one-hour, project-based course, you'll learn how to utilize the Navigation System to move a character to wherever the player clicks. We'll be setting up a "NavMesh" that defines where the character is able to walk. You will also learn how to set up static and dynamic obstacles that the Player will automatically avoid. The guided project will introduce you to the following Unity concepts: - Navigation System - Raycasting This series also makes use of the robot-themed Unity project created in Create Simple Enemy Behaviour with C# in Unity (Introduction to AI). This complements this guided project and, although not a prerequisite, is recommended for a more well-rounded understanding of the concepts presented herein. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE DESCRIPTION: This four-module course introduces users to Julia as a first language. Julia is a high-level, high-performance dynamic programming language developed specifically for scientific computing. This language will be particularly useful for applications in physics, chemistry, astronomy, engineering, data science, bioinformatics and many more. As open source software, you will always have it available throughout your working life. It can also be used from the command line, program files or a new type of interface known as a Jupyter notebook (which is freely available as a service from JuliaBox.com). Julia is designed to address the requirements of high-performance numerical and scientific computing while also being effective for general-purpose programming. You will be able to access all the available processors and memory, scrape data from anywhere on the web, and have it always accessible through any device you care to use as long as it has a browser. Join us to discover new computing possibilities. Let's get started on learning Julia. By the end of the course you will be able to: - Programme using the Julia language by practising through assignments - Write your own simple Julia programs from scratch - Understand the advantages and capacities of Julia as a computing language - Work in Jupyter notebooks using the Julia language - Use various Julia packages such as Plots, DataFrames and Stats The course is delivered through video lectures, on-screen demonstrations, quizzes and practical peer-reviewed projects designed to give you an opportunity to work with the packages.

 COURSE_DESCRIPTION: Operations on data become more expensive when the data item is located higher in the memory hierarchy. An operation on data in CPU registers is roughly a million times faster than an operation on a data item that is located in external memory that needs to be fetched first. These data fetches are also called I/O operations and need to be taken into account during the design of an algorithm. The goal of this course is to become familiar with important algorithmic concepts and techniques needed to effectively deal with such problems. We will work with a simplified memory hierarchy, but the notions extend naturally to more realistic models. Prerequisites: In order to successfully take this course, you should already have a basic knowledge of algorithms and mathematics. Here's a short list of what you are supposed to know: - O-notation, Q-notation, Θ-notation; how to analyze algorithms - Basic calculus: manipulating summations, solving recurrences, working with logarithms, etc. - Basic probability theory: events, probability distributions, random variables, expected values etc. - Basic data structures: linked lists, stacks, queues, heaps - (Balanced) binary search trees - Basic sorting algorithms, for example MergeSort, InsertionSort, QuickSort - Graph terminology, representations of graphs (adjacency lists and adjacency matrix), basic graph algorithms (BFS, DFS, topological sort, shortest paths) The material for this course is based on the course notes that can be found under the resources tab. We will not cover everything from the course notes. The course notes are there both for students who did not fully understand the lectures as well as for students who would like to dive deeper into the topics. The video lectures contain a few very minor mistakes. A list of these mistakes can be found under resources. If you think you found an error, report a problem by clicking the square flag at the bottom of the lecture or quiz where you found the error.

COURSE_DESCRIPTION: Entdecken Sie, wie Sie ein Dokument mithilfe der Formatierungsoptionen von Word 365 personalisieren können. In diesem Kurs lernen Sie, wie Sie die Schriftart und -größe ändern und Effekte wie Fett, Unterstrichen oder Kursiv anwenden können. Word bietet auch Optionen zur Verbesserung der Textdarstellung. Lernen Sie, wie Sie die Groß- und Kleinschreibung sowie die Ausrichtung mühelos ändern können. WordArt ist ein weiteres nützliches Werkzeug, um vorformatierte Texte einzufügen. Wenn Sie es vorziehen, die WordArt-Optionen auf einen normalen Text anzuwenden, lernen Sie, wie Sie die Texteffekte von Word nutzen können, einschließlich des Hinzufügens von Schatten, Spiegelung und Leuchteffekten. Dieser Kurs behandelt auch andere praktische Funktionen zum Erstellen von Aufzählungslisten und nummerierten Listen. Sie lernen, wie Sie vorformatierte Listen einfügen oder deren Stil anpassen können. Sie erfahren auch, wie Sie beide Arten von Listen kombinieren können, um eine Liste mit mehreren Ebenen zu erstellen.

COURSE_DESCRIPTION: In this challenge, you will write several Transact-SQL queries by using implicit and explicit data type conversions. First, you will launch Microsoft SQL Server Management Studio, and then you will develop queries that use implicit data type conversion. Next, you will develop more specific queries which use explicit data type conversion. Finally, you will explore queries that perform data type conversion for date data types and use the CONCAT function for data concatenation. Note: Once you begin a challenge you will not be able to pause, save, or return to your progress. Please ensure you have set aside enough time to complete the challenge before you start.

COURSE_DESCRIPTION: Performance engineering activities occur at all stages of the system development life cycle. Performance engineers are tasked with continually evaluating performance systems to ensure they meet their non-functional requirements. There are several tools and techniques involved in this evaluation process. Use this theory-based course to gain a solid knowledge of what's involved. Explore various performance engineering metrics and key performance indicators (KPIs). Discover testing techniques and the importance of ensuring reproducible test results. Examine the benefits of visualization, learning how it's used to spot anomalies. See how KPIs can be used to identify bottlenecks. And lastly, find out what to consider when building a performance engineering toolbox. When you're done, you'll have the know-how to plan your performance engineering evaluation activities.

COURSE_DESCRIPTION: Imagine receiving a gift and then struggling to find the batteries to make it work. Similarly, in software, all the pieces have to be in place for it to work correctly. Package managers provide this service in addition to helping to ensure consistency and security in developed software. In this course, explore various package management tools and learn how to manage the integration and migration of different source control systems. Next, investigate how to design different elements such as linked feeds and reporting dependencies. Finally, learn how to version code assets, packages, and deployment artifacts. This course is one of a collection that prepares learners for the Designing and Implementing Microsoft DevOps Solutions (AZ-400) exam.

COURSE_DESCRIPTION: Whereas the focus of traditional literacy pedagogy has been the written word in its standard and literary forms, this courser expands the scope of literacy learning to encompass contemporary multimodal texts and the wide range of ways of making meaning that occur in different social and cultural contexts. Another course, "Literacy Teaching and Learning: Aims, Approaches and Pedagogies" addresses pedagogical aspects of literacies. This "Multimodal Literacies" learning module does not require or expect that participants will have already completed the "Literacy Teaching and Learning" module. ----- Recommended Background ----- This course is designed for people interested in literacy teaching and learning, including people who may wish to join education as a profession, practicing teachers interested in exploring future directions for a vocation that is currently undergoing transformation, and community and workplace leaders who regard their mission to be in part "educative." ----- Related Resources ----- Online resources are available here: <https://newlearningonline.com> Book: https://www.amazon.com/Literacies-Mary-Kalantzis/dp/1107578698/ref=sr_1_1?qid=1661288799&refinements=p_27%3ABill+Cope&s=books&sr=1-1&text=Bill+Cope ----- Join our Online Communities! ----- CGScholar (Create an account and join the New Learning community) https://cgscholar.com/community/community_profiles/new-learning/community_updates Facebook <https://www.facebook.com/newlearningonline> Twitter <https://twitter.com/neolearning> ----- Take this Course for Credit at the University of Illinois -----
----- This course has the same content and anticipates the same level of contribution by students in the Assessment for Learning course offered to graduate certificate, masters, and doctoral level students in the Learning Design and Leadership Program in the College of Education at the University of Illinois. Of course, in the nature of MOOCs many people will just want to view the videos and casually join some of the discussions. Some people say that these limited kinds of participation offer evidence that MOOCs suffer from low retention rates. Far from it - we say that any level of engagement is good engagement. On the other hand, if you would like to take this course for credit at the University of Illinois, you will find more information about our program here: <https://ldlprogram.web.illinois.edu/overview/> And you can apply here: <https://education.illinois.edu/epol/programs-degrees/ldl> ----- The Learning Design and Leadership Series of MOOCs -----
----- This course is one of a series of eight MOOCs created by Bill Cope and Mary Kalantzis for the Learning Design and Leadership program at the University of Illinois. If you find...

COURSE DESCRIPTION: In this course you will explore Agile testing, which because of its iterative and collaborative nature, everything changes a little, so you will examine precisely how testing is done in an Agile environment. You will then take a look at continual security testing, and integrating testing standards into Agile. In this 10-video course, learners will discover how to apply verification and validation for Agile programming, which are cornerstones of software and systems engineering. This leads into integrating metrics, which are just as important in Agile as they are in any other software engineering approach. The next tutorial covers Agile bug tracking, one of the most important things to document as soon as they are found. You will then learn about static code analysis, which is something from traditional software engineering that needs to be integrated into the Agile process as an important way to accomplish bug fixing, testing, and even verification. The final tutorial concerns the implementation of continuous integration techniques, which is continuous and ongoing throughout the entire Agile process.

COURSE DESCRIPTION: hashcat is a popular password cracking tool which is often used in ethical hacking exercises by penetration testers and sysadmins. It is, however, often also used for illicit purposes by cybercriminals and spies to compromise and breach vulnerabilities. Explore the many features and capabilities of the hashcat tool, and discover the purpose and vulnerabilities password hashes present. Explore the characteristics of the core hashcat attack modes that include dictionary attacks, combinator attacks, brute-force attacks, hybrid attacks, and association attacks. Explore how to download and install hashcat and discover techniques to crack passcodes. Lastly, explore requirements for building a capable password cracking systems and explore the required steps to successfully crack a WPA/WPA2 using hashcat. Upon completion, you'll be able to secure passwords using hashcat.

COURSE DESCRIPTION: In this course, we'll imagine that you are applying for an all-expenses paid, educational trip to a Spanish-speaking nation of your choice. You'll introduce yourself to a host family that you'll be staying with, research the rich culture and history of the place you intend to visit and compare it with your own country, and plan out an itinerary of places you plan to see, and things you plan to do and experience while visiting. In addition, you'll summarize the key points of your written report in an oral presentation. This course is challenging and is meant to test everything you've learned in the Spanish Vocabulary specialization. It will provide you an excellent way in which to test what you know and what you still need to work on in your Spanish learning journey.

COURSE_DESCRIPTION: Once you have created tasks in Project, you will need to learn how to enhance and manage your tasks. In this 7-video course, which has been recorded in a Project Online Desktop Client environment, you will discover how to insert columns, dropdown menus, and even import tasks from external applications. Learners will begin by observing how to insert columns into a project table, and then create dropdown menus within a column, which limits the entries a user can insert within columns. This leads onto using formulas to create custom fields in Project, which saves you from having to calculate each cell individually, and adding outline numbers and work-breakdown (WBS) codes to better understand the structure of your tasks. Also, you will explore how to define and customize WBS codes, and insert subprojects when working with multiple projects. The course concludes with a look at importing tasks from Outlook, which can be imported individually or as an entire folder.

COURSE_DESCRIPTION: Bringing a machine learning model into the real world involves a lot more than just modeling. This Specialization will teach you how to navigate various deployment scenarios and use data more effectively to train your model. In this final course, you'll explore four different scenarios you'll encounter when deploying models. You'll be introduced to TensorFlow Serving, a technology that lets you do inference over the web. You'll move on to TensorFlow Hub, a repository of models that you can use for transfer learning. Then you'll use TensorBoard to evaluate and understand how your models work, as well as share your model metadata with others. Finally, you'll explore federated learning and how you can retrain deployed models with user data while maintaining data privacy. This Specialization builds upon our TensorFlow in Practice Specialization. If you are new to TensorFlow, we recommend that you take the TensorFlow in Practice Specialization first. To develop a deeper, foundational understanding of how neural networks work, we recommend that you take the Deep Learning Specialization.

COURSE_DESCRIPTION: Um eine vielfältige, offene und produktive Organisation zu gewährleisten, müssen Vorurteile überwunden werden. Egal, wer Sie sind: Sie sind Opfer unbewusster Vorurteile. Um Teil eines komplexen, vielfältigen Arbeitsplatzes zu sein, müssen Sie Maßnahmen ergreifen, um diese zu überwinden. In diesem Kurs lernen Sie zu erkennen, wie oberflächliche Unterschiede zur Voreingenommenheit beitragen und zu Vorurteilen und sozialen Stereotypen führen können. Sie lernen spezifische Taktiken zur Bekämpfung unbewusster Vorurteile und zur Annahme eines unvoreingenommenen Ansatzes kennen. Sie lernen auch, wie Sie eine integrative Führungskraft sein können, indem Sie diese Taktiken anwenden, um explizite und implizite Voreingenommenheit im gesamten Unternehmen und im Einstellungsprozess zu überwinden.

COURSE_DESCRIPTION: Egal, ob Sie eine Top-Führungskraft in einem Fortune-500-Unternehmen oder Gründer eines Start-ups sind - Sie müssen die Erwartungen Ihrer Stakeholder erfüllen, damit diese zufrieden sind, und gleichzeitig Ihren Verpflichtungen nachkommen. In der Praxis kann dies schwer sein, insbesondere wenn der Stakeholder Einfluss auf Ihren Erfolg hat. Wenn Sie häufig mit Stakeholdern außerhalb Ihres Unternehmens arbeiten müssen, kann der Aufbau einer positiven Beziehung manchmal anstrengend sein - aber er ist entscheidend. In diesem Kurs lernen Sie, wie Sie externe Stakeholder identifizieren und deren Einfluss auf Ihr Unternehmen erkennen. Sie erfahren, wie Sie mit externen Stakeholdern umgehen, effektiv mit ihnen kommunizieren und Feedback einholen können. Außerdem lernen Sie, wie Sie Beziehungen zu Stakeholdern steuern.

COURSE_DESCRIPTION: In this project you will use MySQL Workbench to write SQL queries that retrieve, sort, and filter data from tables in a relational database. Adding filtering to a query ensures that only the data needed is displayed in the query result. Sorting is applied to arrange the rows in that query result into an order that is meaningful to the data's user. Adding code to an SQL query to filter and sort data generates a query result that makes data analysis easier for users, enabling more effective decision-making. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: When it comes to creating fully-fledged, professional-looking e-commerce web applications, there are a lot of little details that come into play. For instance, it's important to have functionality such as a shopping cart, or perhaps the ability for a user to browse the category of merchandise they may be interested in. In this course, learn how to add product creation functionality for the admin of the e-commerce site. Then, practice implementing a shopping cart using foreign key constraints. Next, identify how to use web2py decorators such as a login decorator to ensure that a user has to log in before they can view certain functionality. Finally, examine how to add in filtering functionality so your users can select the category of products to browse.

COURSE DESCRIPTION: An additional level of redundancy for cloud operations can be achieved by leveraging the resources and architectural components of multiple clouds. In this course you'll explore the concept of the platform as a service (PaaS) framework and the tools available to design diversified architectures. You'll discover open-source and SaaS-based tools used to manage redundant multi-cloud environments, the implementation of geo-redundancy and replication in AWS, Azure, and GCP as well as the key cloud redundancy design principles for building resilient application infrastructures. Also discussed are the key principles and best practices for building multi-cloud deployment platforms and disaster recovery programs. The course also explores recommended design principles and components for cloud data management, architecting successful disaster recovery plans using multi-cloud technologies, and demonstrating how to work with Visio, Arpio, and Hashicorp to design redundant multi-region cloud architectures. Finally, you'll learn how to replicate an AWS environment to an alternate AWS regions and set up redundant environments on AWS and Azure.

COURSE DESCRIPTION: In this hands-on project, we will train a Naive Bayes classifier to predict sentiment from thousands of Twitter tweets. This project could be practically used by any company with social media presence to automatically predict customer's sentiment (i.e.: whether their customers are happy or not). The process could be done automatically without having humans manually review thousands of tweets and customer reviews. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE DESCRIPTION: This Specialization is intended for anyone interested in preparing for the Certified AI-900 Microsoft Azure AI Fundamentals Exam. This program consists of 5 courses to help prepare you to take the certification exam. You will acquire foundational knowledge of the core concepts related to artificial intelligence (AI) and the services in Microsoft Azure that can be used to create AI solutions. This program is an opportunity to demonstrate knowledge of common ML and AI workloads and how to implement them on Azure. By the end of this program, you will be ready to take and sign-up for the AI-900 exam. The AI Fundamentals exam is an opportunity to demonstrate your knowledge of how to create AI solutions on Microsoft Azure. Each course teaches you the core concepts and skills that are measured by the exam. Azure AI Fundamentals can be used to prepare for other Azure role-based certifications like Azure Data Scientist Associate or Azure AI Engineer Associate, but it's not a prerequisite for any of them. This Specialization will prepare you to take the AI-900: Microsoft Azure AI Fundamentals exam. Upon completion of the Specialization, you will be offered a discount to the Microsoft Azure AI Fundamentals Certification Exam to be redeemed at Pearson Vue, Microsoft's proctor exam site. Limited discount vouchers are available on first-come-first-serve basis. Coursera and Microsoft may end the offer at any time.

COURSE DESCRIPTION: "Excel/VBA for Creative Problem Solving, Part 1" is aimed at learners who are seeking to augment, expand, optimize, and increase the efficiency of their Excel spreadsheet skills by tapping into the powerful programming, automation, and customization capabilities available with Visual Basic for Applications (VBA). This course is the first part of a three-part series and Specialization that focuses on the application of computing techniques in Excel/VBA to solve problems. In this course (Part 1), you will: 1) create macros to automate procedures in Excel; 2) define your own user-defined functions; 3) create basic subroutines to interface with the user; 4) learn the basic programming structures in VBA; and 5) automate Excel's Goal Seek and Solver tools and use numerical techniques to create "live solutions" to solve targeting and optimization problems. New to computer programming? The extremely intuitive and visual nature of VBA lends itself nicely to teaching and learning - what a fun way to learn to code! No prior knowledge in programming nor advanced math skills are necessary yet seasoned programmers will pick up new and creative spreadsheet problem solving strategies. After you have learned the basics of VBA, each module will introduce foundational and broad problems inspired by situations that you might encounter in the real world. To pass each module, you'll need to pass a mastery quiz and complete a problem solving assignment. This course is unique in that the weekly assignments are completed in-application (i.e., on your own computer in Excel), providing you with valuable hands-on training.

 COURSE_DESCRIPTION: Cloud portability allows developers to transfer data, applications, and services from one cloud service to another with ease. Take this course to explore the features, principles, and benefits of data and application portability in the cloud. Over the length of this course, you'll delve into various elements of cloud computing portability: software development lifecycle, the role of specification in maximizing portability, application design considerations for interoperable software applications, the OpenAPI specification, containerization, and essential characteristics of Docker and Kubernetes that enable application portability. You'll also outline how to work with Application programming Interfaces (APIs) in Swagger and configure a development environment in Google Cloud Platform (GCP). After completing this course, you'll be able to identify key components of data and code portability in the cloud and how cloud portability allows re-usability and interoperability.

COURSE_DESCRIPTION: Nowadays, family businesses are indispensable in our economy. However, it is very important to identify the tools and strategies of success that allow them to transcend in a competitive environment. For that reason, this entrepreneurship course gives you the opportunity to know and apply best practices, taking into account entrepreneurship and innovation models that will allow you to take advantage of the strengths that possesses the family business, in order to create a suitable business for next generations. In this entrepreneurship course you will have the opportunity to know the instruments and components that involve entrepreneurship; from ideation, market validation and value proposition, to present your sales plan to attract investors (Business Pitch). This online course delivers the knowledge and tools necessary for the success of a venture in the family business. The Center for Entrepreneurial Families and EGADE Business School of the Tecnológico de Monterrey is the ideal institution to develop these skills, since Tecnológico de Monterrey is the number 1 university in Mexico and the 6th best in Latin America according to Times Higher Education (THE) 2016. Professors at Center for Entrepreneurial Families are highly qualified and recognized as part of the worldwide STEP project for family entrepreneurship, and EGADE Business School is the number 1 business school in Latin America in MBA program, according to the ranking of AméricaEconomía.

COURSE_DESCRIPTION: Faust is a stream processing library that allows you to write code to process data available as streams. In this course, you'll explore the basics of stream processing and how it fundamentally differs from batch processing. You'll start by examining the components of a stream processing system architecture, specifically the role of stream transport. You'll then investigate the Faust stream processing library, which uses native Python code for transformations on streaming data. Moving on, you'll explore what's meant by producers, consumers, and topics in Apache Kafka. You'll install Faust on your local machine as well as the Apache Kafka messaging service. You'll then use these to write a stream processing application. When you're finished with this course, you'll be able to clearly articulate the characteristics of stream processing and work with Apache Kafka and Faust to perform simple operations on input streams.

COURSE_DESCRIPTION: Welcome to this project-based course on Data Visualization with Plotly Express. In this project, you will create quick and interactive data visualizations with Plotly Express: a high-level data visualization library in Python inspired by Seaborn and ggplot2. You will explore the various features of the in-built Gapminder dataset, and produce interactive, publication-quality graphs to augment analysis. This course runs on Coursera's hands-on project platform called Rhyme. On Rhyme, you do projects in a hands-on manner in your browser. You will get instant access to pre-configured cloud desktops containing all of the software and data you need for the project. Everything is already set up directly in your internet browser so you can just focus on learning. For this project, you'll get instant access to a cloud desktop with Python, Jupyter, and Plotly Express pre-installed. Notes: - You will be able to access the cloud desktop 5 times. However, you will be able to access instructions videos as many times as you want. - This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE DESCRIPTION: Cloud technology on its own only provides a fraction of the true value to a business; When combined with data-lots and lots of it-it has the power to truly unlock value and create new experiences for customers. In this course, you'll learn what data is, historical ways companies have used it to make decisions, and why it is so critical for machine learning. This course also introduces learners to technical concepts such as structured and unstructured data. database, data warehouse, and data lakes. It then covers the most common and fastest growing Google Cloud products around data.

COURSE_DESCRIPTION: Die Arbeit in einem Team mit Mitarbeitern aus verschiedenen Abteilungen kann eine große Herausforderung sein. Diese Arten von Teams bestehen oft aus Menschen mit unterschiedlichen Talenten, Zielen und Kommunikationsstilen. Deshalb ist ein effektives funktionsübergreifendes Management so wichtig. Dies beinhaltet ein Management von Teams, das die funktionalen Silos überbrückt, die Ihre Organisation einschränken. Das funktionsübergreifende Management bedeutet auch, Teamführungsfähigkeiten einzusetzen, um die Zusammenarbeit und Teamarbeit zwischen verschiedenen Abteilungen zu unterstützen. Dieser Kurs definiert die organisationsübergreifenden Funktionen und ihre Vorteile. Er hilft Ihnen bei der Entwicklung von Techniken zur Unterstützung einer funktionsübergreifenden Strategie in Ihrem Unternehmen. Und er zeigt Ihnen, inwieweit verschiedene Wissensmanagementsysteme bei der Umsetzung dieser Strategie eine Rolle spielen können.

COURSE_DESCRIPTION: In this challenge, you will write several Transact-SQL queries to combine data by using the UNION set operator. First, you will launch Microsoft SQL Server Management Studio (SSMS), and then you will develop a query that combines data from two result sets. Next, you will develop more specific queries that will combine result sets by removing and retaining duplicates. Finally, you will explore queries that will sort the combined result sets. Note: Once you begin a challenge you will not be able to pause, save, or return to your progress. Please ensure you have set aside enough time to complete the challenge before you start.

COURSE_DESCRIPTION: The inner workings of many deep learning systems are complicated, if not impossible, for the human mind to comprehend. Explainable Artificial Intelligence (XAI) aims to provide AI experts with transparency into these systems. In this course, you'll describe what Explainable AI is, how to use it, and the data structures behind XAI's preferred algorithms. Next, you'll explore the interpretability problem and today's state-of-the-art solutions to it. You'll identify XAI regulations, define the "right to explanation", and illustrate real-world examples where this has been applicable. You'll move on to recognize both the Counterfactual and Axiomatic methods, distinguishing their pros and cons. You'll investigate the intelligible models method, along with the concepts of monotonicity and rationalization. Finally, you'll learn how to use a Generative Adversarial Network.

COURSE_DESCRIPTION: If you have tasks in Excel 365 that you perform repeatedly, you can record a macro to automate those tasks. When creating a macro, you are recording your mouse clicks and keystrokes. After you create a macro, you can edit it to change the way it works. In this course, you will explore how to record macros and perform actions that can be implemented in Excel workbooks, and how to save in an Excel macro-enabled workbook. Find and use macro tools that are available in multiple locations, use macros across multiple workbooks, and add the Macro recording button to your status bar for easier access. In addition, you will learn how to navigate the VBA Editor interface, which is an application that's accessible via Excel, to manage your macros and workbook VBA code. You will further explore how to manage macros, edit macros, and enable macros in a workbook; and how to access and manage macro security settings. In order to practice what you have learned, you will find practice exercises and samples in the Resources section.

COURSE_DESCRIPTION: This course serves as a theoretical introduction to the Java programming language - a class-based, object-oriented, and platform-independent language. Use this course to discover what these qualities mean when using Java to develop programs. Explore some of the significant features of Java. Get a glimpse into the Java ecosystem and the phases involved in translating Java code to a machine-executed form. In doing this, you'll examine concepts such as compilers, Java bytecode, and the Java Virtual Machine. Delve into some of the other properties of the language, such as using the just-in-time compiler and the automatic garbage collector. Finally, learn about the vast array of fields in which Java programming can be applied. At the end of this course, you'll have a solid foundational comprehension of the characteristics and use cases of the Java programming language.

 COURSE_DESCRIPTION: Data pipelines typically fall under one of the Extra-Load, Extract-Load-Transform or Extract-Transform-Load paradigms. This course describes which paradigm should be used and when for batch data. Furthermore, this course covers several technologies on Google Cloud for data transformation including BigQuery, executing Spark on Dataproc, pipeline graphs in Cloud Data Fusion and serverless data processing with Dataflow. Learners will get hands-on experience building data pipeline components on Google Cloud using Qwiklabs.

 COURSE_DESCRIPTION: Data frames are an R abstraction for tabular data similar to that contained in spreadsheet files or database tables. Data frames can work directly with files in the CSV, JSON, and Excel format, all common formats used to store data. This course outlines the characteristics of data frames in the R programming language and demonstrates how to use them. You'll learn to create basic R data frames from multiple vectors. You'll use factors - similar to enums or enumerated types in other programming languages and great for categorical variables. You'll also learn how to perform various string manipulation operations, such as splitting and joining strings and changing case. You'll then practice the important topic of printing precisely formatted strings with placeholders for variable values. When you're done, you'll be able to use data frames, factors, and strings professionally in your R programming projects.

COURSE_DESCRIPTION: In this 11-video course, learners can examine the role of reward and discount factors in reinforcement learning, as well as the multi-armed bandit problem and approaches to solving it for machine learning. You will begin by learning how to install the Markov Decision Policy (MDP) toolbox and implement the Discounted Markov Decision Process using the policy iteration algorithm. Next, examine the role of reward and discount factors in reinforcement learning, and the multi-armed bandit problem and solutions. Learn about dynamic programming, policy evaluation, policy iteration, value iteration, and characteristics of Bellman equation. Then learners will explore reinforcement learning agent components and applications; work with reinforcement learning agents using Keras and OpenAI Gym; describe reinforcement learning algorithms and the reinforcement learning taxonomy defined by OpenAI; and implement deep Q-learning with Keras. Finally, observe how to train deep neural networks (DNN) with reinforcement learning for time series forecasting. In the closing exercise, you will recall approaches for resolving the multi-armed bandit problem, list reinforcement learning agent components, and implement deep Q-learning by using Keras and OpenAI Gym.

COURSE_DESCRIPTION: In this course, participants examine the Amazon Web Services (AWS) Alexa Skills Kit, including the use of invocations, intents, utterances, and slots. Testing with Alexa Simulator and Echosim is also covered. Begin by creating a skill in Alexa Development Console and looking at the use of invocations with the Alexa skill. Then discover how built-in intents are used in Alexa Development Console. Next, create and use custom intents, utterances, and slots in Alexa Development Console. To review: an intent is a construct representing an action that fulfills a spoken request, utterances are related spoken phrases mapped to the intent, while slots are optional arguments also related to intent. You will learn how to build a Lambda function and integrate it with an Alexa skill, then test a skill by using Alexa Simulator and Echosim. You will configure a skill to use DynamoDB for persisting session data. Finally, create an Alexa skill that manages a multistage conversation. The concluding exercise directs you to create a skill by using the Skills Kit in the Alexa Development Console.

COURSE_DESCRIPTION: In this project we will create an employee hiring and onboarding process using ClickUp. ClickUp is a free, cloud based program that helps to improve both your productivity and your budget. ClickUp helps both individuals and groups improve their work performance and productivity by consolidating tasks, documents, goals, and communication into one, all inclusive platform. In this project, we will learn how to create and organize a ClickUp workspace to best meet our hiring and onboarding needs. We will also learn how to create templates to simplify and streamline work and how to better track and manage time spent on tasks. So, whether you're assigning tasks, scheduling training, or working applicants through the applicant tracking system, ClickUp can help you manage it all!

COURSE_DESCRIPTION: The world of technology continues to transform at a rapid pace, with intelligent technology incorporated at every stage of the business process. Intelligent information systems (IIS) reduce the need for routine human labor and allow companies to focus instead on hiring creative professionals. In this course, you'll explore the present and future roles of intelligent informational systems in AI development, recognizing the current demand for IIS specialists. You'll list several possible IIS applications and learn about the roles AI and ML play in creating them. Next, you'll identify significant components of IIS and the purpose of these components. You'll examine how you would go about creating a self-driving vehicle using IIS components. Finally, you'll work with Python libraries to build high-level components of a Markov decision process.

COURSE_DESCRIPTION: This course is a continuation of Electrodynamics: An Introduction and Electrodynamics: Analysis of Electric Fields. Here, we will introduce magnetostatics and relate it to the material we learned previously. In addition, we will cover the basics of the electromotive force and how it can be used to build different devices. Learners will • Be able to use solutions from electric fields and relate them to other subjects (heat transfer, diffusion, membrane modeling) • Understand Maxwell's equations in the context of magnetostatics • Be introduced to energy and

quantum mechanics relating to magnetic forces By relating the concepts in this lecture to other fields, such as heat/mass diffusion, and describing their potential applications, we hope to make this course applicable to our students careers. Because this course covers both basic concepts and device construction, we have designed it to be useful for researchers and industry professionals alike. The approach taken in this course complements traditional approaches, covering a fairly complete treatment of the physics of electricity and magnetism, and adds Feynman's unique and vital approach to grasping a picture of the physical universe. Furthermore, this course uniquely provides the link between the knowledge of electrodynamics and its practical applications to research in materials science, information technology, electrical engineering, chemistry, chemical engineering, energy storage, energy harvesting, and other materials related fields.

COURSE_DESCRIPTION: In a volatile, uncertain, complex, hyperconnected and ambiguous world, business and innovation cycles are shrinking like never before. The life cycle of companies has been reduced to less than a third in the last 30 years. The democratization of innovation has opened infinite possibilities for many people, companies and regions around the world. In particular, entrepreneurs and startups are taking advantage of the opportunities generated by the transformation that is taking place. In this online course, you will understand how you can begin to develop these innovative and entrepreneurial skills, and thus apply them successfully. This online course focuses on understanding the strategies, tools and basic concepts that entrepreneurs use to undertake market innovations and scale their ventures, generating value and disruption in many markets. You will understand: • How to validate a problem and its solution (Problem-Solution Fit) • How to validate if a product has an acceptance in a market (Product-Market Fit) • How to scale your ventures (Business Model Fit)

COURSE_DESCRIPTION: Java servlets are server-side programs that manage clients' requests and return a customized response for each of them. Use this course to gain some hands-on experience in customizing responses in your web application with HttpServlets. Discover how to build simple web pages that accept user input in a form, develop a servlet that can process the inputs, and add complexity to your app by introducing multiple pages. This course will also help you examine the use of a RequestDispatcher and the ServletConfig and ServletContext classes and recognize how attributes are stored at different scopes in a JSP app. Having completed this course, you'll be able to use servlets to process requests and produce customized responses in a JSP application.

COURSE_DESCRIPTION: Este curso te introduce en los conceptos básicos de la computación en la nube. Con él obtendrás conocimientos fundamentales necesarios para comprender la computación en la nube desde una perspectiva empresarial, así como para convertirte en un profesional de la nube. Comprenderás la definición y características esenciales de la computación en la nube, su historia, el caso de negocios de la computación en la nube y los usos de la tecnología emergente que permite la nube. Te presentamos algunos de los proveedores de servicios más destacados de nuestros tiempos (por ejemplo, AWS, Google, IBM, Microsoft, entre otros) los servicios que ofrecen y examinamos algunos estudios de casos de computación en la nube en los distintos sectores verticales de la industria. Aprenderás sobre los diversos modelos de servicios en la nube (IaaS, PaaS, SaaS) y modelos de despliegue (Público, Privado, Híbrido) y los componentes clave de una infraestructura en la nube (VM, Redes de Trabajo, Almacenamiento - Documentos, Bloques, Objetos, CDN). También cubrimos las tendencias y prácticas emergentes en la nube, incluyendo - Multi-Nube Híbrida, Microservicios, Computación Sin Servidores, DevOps, Nube Nativa y Modernización de Aplicación. Y repasamos los fundamentos de la seguridad en la nube, el monitoreo y los diferentes roles de trabajo en la industria de la nube. Aunque este curso no requiere ninguna experiencia previa en computación en la nube o programación, al finalizar el curso, habrás creado tu propia cuenta IBM Cloud y adquirido algo de experiencia práctica en el aprovisionamiento de un servicio en la nube y el trabajo con ella. Este curso es adecuado para una gran variedad de audiencias - si eres un ejecutivo / gerente / estudiante que quiere familiarizarse con la tecnología y los conceptos de la computación en la nube, o eres alguien que quiere una base fundamental en la computación en la nube para iniciar una carrera en este campo o convertirte en un practicante en la nube - como ingeniero en nube, desarrollador, analista, entre otros roles. La finalización de este curso también te hace elegible para ganar la insignia digital Cloud Computing Core IBM. Más información sobre la insignia se puede encontrar aquí: <https://www.youracclaim.com/org/ibm/badge/introduction-to-cloud-computing>

COURSE_DESCRIPTION: In this guided project, we are going to create a deep learning model and train it to learn to classify audio files. Audio classification usually does not get the same kind of attention as image classification with deep learning - this could be because audio processing that is typically used in such scenarios is not as straight forward as image data. In this project, we will look at one such processing to convert raw audio into spectrograms before using them in a convolutional neural network. You will need prior programming experience in Python. Some experience with TensorFlow is recommended. This is a practical, hands on guided project for learners who already have theoretical understanding of Neural Networks, convolutional neural networks, and optimization algorithms like gradient descent but want to understand how to use TensorFlow to classify audio. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In this 1-hour long project-based course, you will learn how to create, connect & delete a MySQL DB instance using AWS RDS. Amazon Relational Database Service (Amazon RDS) makes it easy to set up, operate, and scale a relational database in the cloud. It provides cost-efficient and resizable capacity while automating time-consuming administration tasks such as hardware provisioning, database setup, patching, and backups. It frees you to focus on your applications so you can give them the fast performance, high availability, security, and compatibility they need. By completing the steps in this guided project, you will successfully launch a MySQL DB instance using AWS RDS within the AWS Free Tier. You will also connect to the instance that you launch using MySQL workbench client and then terminate the instance.

COURSE_DESCRIPTION: System Validation is the field that studies the fundamentals of system communication and information processing. It allows automated analysis based on behavioural models of a system to see if a system works correctly. We want to guarantee that the systems does exactly what it is supposed to do. The techniques put forward in system validation allow to prove the absence of errors. It allows to design embedded system behaviour that is structurally sound and as a side effect enforces you to make the behaviour simple and insightful. This means that the systems are not only behaving correctly, but are also much easier to maintain and adapt. 'Requirements by modal formulas' is the third course that shows you how to specify requirements for the automata in order to establish the correct relation between the requirements and the behaviour of the system. Reading material. J.F. Groote and M.R. Mousavi. Modeling and analysis of communicating systems. The MIT Press, 2014.

COURSE_DESCRIPTION: Have you ever wondered what your customers are thinking? How does your company fare in their eyes? Did you know that an upset customer tells on average between 10 and 20 other people about an unhappy service experience? This is known as the ripple effect and research shows that it costs about 5 to 6 times as much to attract a new customer as it costs to keep an existing one. Therefore now, more than ever, with the amount of competition in any market, it is imperative to retain your existing customers by keeping them happy. Regardless of your industry (retail, wholesale, services, healthcare, you name it), you have customers. And one of the most effective ways to measure how they feel about your company is by having them give you feedback through a survey. Surveys can reveal trends among your customers and weak areas among your staff, so after compiling and reviewing the data, you can use it to prioritize tasks to correct or improve things your customers may have complained about. Surveys also allow you to utilize customer suggestions to improve or create new products or services. Upon completing this course, you will be able to create a new Google account, create survey questions, design the survey and review data in Google Forms and Google Sheets. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Security governance is a huge part of overall corporate or organizational governance. The security practitioner must be aware of various governance elements, regulations, laws, standards, policies, and procedures. Begin this course by exploring the elements of governance, including mission charter, leadership, and corporate guidance. Then investigate various laws and regulations like General Data Protection Regulation (GDPR) and HIPAA, standards issued by the International Organization for Standardization and International Electrotechnical Commission (ISO/IEC), and the National Institute of Standards and Technology (NIST), and common policies and standard operating procedures. Next, examine the International Information System Security Certification Consortium (IS2) code of ethics. Finally, discover security control categories and types. This course prepares learners for the (ISC)2 Certified in Cybersecurity exam.

COURSE_DESCRIPTION: Because of the magnitude of microservice-based API products available online, the management and protection of API access is a critical and vital security concern. Being familiar with how to use a single service for all of the tasks involved will make this ongoing responsibility easier. In this course, you'll learn how to use the Azure API Management service to deploy and host API web services in the cloud. You'll begin by importing and publishing APIs and creating and publishing API products, before creating mock API responses, and transforming and protecting APIs, all using Azure API Management. Next, you'll use this same service to monitor published APIs, debug APIs, create non-breaking revision changes, and publish multiple API versions. Lastly, you'll learn how to use the Azure API Management developer portal.

COURSE_DESCRIPTION: With Google Docs, your documents are stored in the cloud, and you can access them from any computer or device. You create and edit documents right in your web browser; no special software is required. Even better, multiple people can work at the same time, you can see people's changes as they make them, and every change is saved automatically. In this course, you will learn how to open Google Docs, create and format a new document, and apply a template to a new document. You will learn how to enhance your documents using a table of contents, headers and footers, tables, drawings, images, and more. You will learn how to share your documents with others. We will discuss your sharing options and examine collaborator roles and permissions. You will learn how to manage versions of your documents. Google Docs allows you to work in real time with others on the same document. You will learn how to create and manage comments and action items in your documents. We will review a few of the Google Docs tools. You will understand how to set your preferences to suit your own work style and explore how to use tools such as Google Explore to add value to your content.

COURSE_DESCRIPTION: This course has been developed to provide students with the latest instruction on the best way for creators, consumers, and facilitators to navigate the resurgence of one of the world's most exciting industries: the music business. Three things are clear about today's music industry: The consumption of music is expanding at the greatest rate in history and from the most portals ever imagined, the cost of producing music is decreasing, and the number of artists creating and seeking to expose their work and develop careers through the Internet has increased

dramatically. Whether you're a music creator, consumer, or facilitator of this process, you'll want to understand the history, underpinnings, and basics of the music business. Course author John Kellogg-administrator, educator, entertainment lawyer, performer, and radio and television personality-offers students the opportunity to learn the fundamental principles of the developing new music business, for now and into the future. What you'll learn: -- The basic history of the music industry and today's business trends -- How recording agreements are formulated -- The basics of copyright law as it pertains to the music business -- The role of agents, managers, attorneys, and specific business entities

COURSE_DESCRIPTION: In this four-course Specialization, you'll learn the essential skills of portfolio management and personal investing. All investors - from the largest wealth funds to the smallest individual investors - share common issues in investing: how to meet their liabilities, how to decide where to invest, and how much risk to take on. In this Specialization, you will learn how to think about, discuss, and formulate solutions to these investment questions. You will learn the theory and the real-world skills necessary to design, execute, and evaluate investment proposals that meet financial objectives. You will begin with an overview of global financial markets and instruments that characterize the investment opportunities available to today's investor. You will then learn how to construct optimal portfolios that manage risk effectively, and how to capitalize on understanding behavioral biases and irrational behavior in financial markets. You will learn the best practices in portfolio management and performance evaluation as well as current investment strategies. By the end of your Capstone Project, you will have mastered the analytical tools, quantitative skills, and practical knowledge necessary for long-term investment management success. To see an overview video for this Specialization, click here!

COURSE_DESCRIPTION: This 9-video course helps learners explore dictionary data type in Python. Dictionaries are associative containers used to store key-value pairs. Given a key, finding the associated value is optimized by Python to be extremely efficient. First, receive an introduction to dictionaries in Jupyter Notebook in Python. You will learn how to create and initialize dictionaries, then learn about nesting complex data types within dictionaries. Continuing with the study of Python dictionaries, you will explore what functions and methods can be invoked on these dictionaries, such as modifying and updating dictionaries using dictionary methods. Next, you will be introduced to sets, another commonly used complex data type that Python supports. You will then create and initialize sets. This leads on to performing set operations such as union, intersection difference, and other set operations. You will also examine nested lists, and work with nested types within other complex data types. In the final tutorial, you will learn how to convert lists to dictionaries and vice versa. The concluding exercise entails recalling features of dictionaries and sets.

COURSE_DESCRIPTION: Application development and workload services is tantamount, and Windows offers a number of great features. Nano Server requires minimal installation, is ideal for data centers, and supports only 64-bit applications and tools. In this course, you will examine usage scenarios and requirements for Nano Server deployments. Learn how to install and configure Nano Server, and implement and manage its security policies with Desired State Configuration (DSC). Then you will determine usage scenarios and system requirements for Hyper-V container installation and deployment. Finally, you will implement Secure File Services, DAC, and the File Server Resource Manager (FSRM) role service.

COURSE_DESCRIPTION: Hello everyone and welcome to this hands-on guided project on simple linear regression for the absolute beginner. In simple linear regression, we predict the value of one variable Y based on another variable X. X is called the independent variable and Y is called the dependent variable. This guided project is practical and directly applicable to many industries. You can add this project to your portfolio of projects which is essential for your next job interview.

COURSE_DESCRIPTION: Learners can explore how to recognize when specific storage solutions to best address a specific business need in this 15-video course. Discuss Azure Storage options such as Azure Disk Storage, Blob Storage, and how to use tools to manage Blob Storage items. Key topics covered in this course include the Blob and the key vault. Learners will also hear practical descriptions about using the command-line interface (CLI) commands as well as PowerShell cmdlets (lightweight commands) to work with Azure Storage accounts. Watch a demonstration of how to use the Azure portal to create a new Azure storage account-essentially a cloud-based shared folder. Finally, you will observe how the Azure Key Vault is used to store secrets securely. In the concluding exercise, learners use the Azure portal and the web graphical interface to create a storage account, then upload a file to it by using the portal, and create an Azure file share as well as a key vault, then store a secret within the vault. This is one of a series of courses to help learners prepare for the AZ-900: Azure Fundamentals certification exam.

COURSE DESCRIPTION: A constructor is a special method of a class invoked when an object of that class is created. Constructors have a fair bit of complexity, and can be chained to achieve code reuse and marked as explicit to avoid unexpected type promotions and object creation. In this course, examine the important aspects of constructor syntax, such as specifying default arguments and correctly using initialization lists. Next, learn how to chain constructors and retain most of the code functionality in one constructor. Finally, learn how constructors might be invoked automatically by the C++ runtime to create objects for method invocations. After completion of the course, you'll be able to correctly initialize variables using initialization lists, connect constructors using constructor chaining, and create structs.

COURSE_DESCRIPTION: Denken Sie, dass Störungen Ihre Organisation nicht stark beeinträchtigen? Denken Sie nochmal darüber nach. Am modernen Arbeitsplatz sind Störungen durch digitale Innovationen eine ständige Bedrohung, und Unternehmen, die keine wirksame Change-Management-Strategie implementiert haben, verlieren den Anschluss. In diesem Kurs lernen Sie Best Practices für das Change Management in Ihrem Unternehmen kennen, mit denen Sie Ihre Geschäftsabläufe anpassen und deren Widerstandsfähigkeit und Flexibilität angesichts des Wandels erhöhen können. Sie erfahren auch, welche Rolle Führungskräfte bei der digitalen Transformation spielen und wie Sie häufige Fehler bei der digitalen Transformation am besten vermeiden können.

COURSE_DESCRIPTION: This course will cover various topics that would teach students healthy lifestyle choices, the importance of mental and physical health and self-care. For each topic, an evidence-based lecture that would include scientific evidence will be presented and then students will be provided practical methods to practice what they have learned from the lectures. One of the main goals of this course is to inspire students to adopt a healthy lifestyle. Considering that stress levels and poor lifestyle choices in college students are increasing at an alarmingly fast pace, this course may serve as an effective educational tool to teach healthy lifestyle choices, promote students' well-being and help them to recognize and manage their stress. The course is taught through a combination of lectures, multimedia videos, workshops and group discussions that would foster

active learning. This course will encourage, challenge, motivate, and inspire students to make positive changes in their lifestyle and the way they interact with others and their environment.

COURSE DESCRIPTION: In this 1-hour long project-based course, you will learn how to design a high-quality business card that is professional, attractive and suited for the digital age. With this card, your clients can save your contact details on their mobile in an offline mode with just a click. They will also be able to connect with your Facebook Business page, LinkedIn Id, Twitter and Snapchat. They can Whatsapp you and they will also be able to watch your Youtube promotional videos. They will be able to take a look at all the products and services that you offer on your website. They can text you, call you and email you with just a click. They can also have access to the Google map location of your business. So we will be creating a business card that will be able to do all of these and more. We will also be building a cloud-based Virtual Business card that you can easily share with your clients digitally. In the final task, we will integrate this virtual business card with the physical one in order to maximize the benefits of using both cards: virtual and paper-based. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: This Bootcamp provides Project Managers with the knowledge and skills needed to attain the Project Management Professional (PMP) certification. This course meets the 35-hour classroom requirement for the PMP(r) Exam. Live attendance is mandatory for those taking the PMP exam. Classes are taught by badged Authorized Training Provider (ATP) instructors. In addition to the 35 classroom hours, students will receive access to a practice exam simulator and mentors who are available to provide guidance and answer questions about the PMP(r) curriculum. Target Audience: This course is designed for individuals who have on-the-job project management experience regardless of whether their formal job title is project manager, who would like to validate their experience with a formal project management certification. Required Learner Kit: All participants in Skillsoft's ATP-authorized PMP Bootcamps who intend to sit for the PMP exam are required to have a PMP Learner Kit prior to submitting their PMP application. For more information check with your training staff or HR Department. If you have an individual subscription to Percipio and your training is not part of an organization, you may need to purchase your own learner kit. Instructions will be provided in class. Before you attend: Before you attend this class, please visit the Project Management Institute (PMI) website at pmi.org to learn more about the Project Management Professional (PMP) certification, including prerequisites, exam costs, and the application process. Learning Objectives: In this course, you will learn how to build and manage a team, and to plan, execute, and complete a project that is aligned to the business environment. You will learn the tools and techniques to:

- Create a high-performing team
- Plan and manage the project
- Execute and assess the project work
- Keep the team on track
- Keep the business environment in mind

COURSE_DESCRIPTION: This course dives deep into normal distributions, also known as Gaussian distributions, while also introducing you to the law of large numbers and the Central Limit Theorem. You will begin by using Python's SciPy library to generate a normal distribution and examine the use of several available functions that allow you to make estimations on normally distributed data. This course will also help you understand and visualize the law of large numbers and explore the Central Limit theorem by generating multiple samples and analyzing them. After you are done with this course, you'll have the skills and knowledge to analyze data and build your own models.

COURSE_DESCRIPTION: In this 8-video course, "Access 2019: Inserting, Importing, and Formatting Data," learners will discover how to enter and import data, change formatting settings, create dropdown menus, enforce data validation, and create labels with data. Begin the course by learning how to insert data into a table, and then explore how to modify the default navigation settings. In Access, you can import data that has been created or edited in a different program, which can save you the time required to manually reenter your data values or records. You will next learn how to use Excel data in a database. This leads into exploring how to import an address book from Outlook. Thereafter, learners will delve into formatting text in their data; creating a dropdown menu; and also creating data validation rules, which can be used to place limits on the information that can be inserted into access data tables. The course concludes by demonstrating how to create labels.

COURSE_DESCRIPTION: Examine the Python implementation of common sorting algorithms such as selection sort, bubble sort, and insertion sort, as well as divide and conquer sorts such as shell sort, merge sort, and quicksort, in this 10-video course. Key concepts covered in this course include how to write the code to implement a selection sort; how to implement the bubble sort algorithm in Python; and how to code a function to implement the insertion sort algorithm. Next, you will observe how to write the code to implement the divide-and-conquer shell sort algorithm; how to invoke the shell sort algorithm on an array of integers and examine the output at each iteration to understand how it works; and how to code a function to implement the merge sort algorithm and test it on an array of integers. Finally, learn how to write the partition and quicksort functions in order to implement a quicksort; and how to apply quicksort on an array of integers and analyze the results at each iteration to understand how the algorithm works.

COURSE_DESCRIPTION: Microsoft Dynamics 365 helps you work with leads, accounts and sales opportunities in useful ways. This course explores how to create, edit and manage them using the Dynamic 365 sales service. The sales process starts with getting leads, which is a potential customer that has shown interest in your products or services. Learn how to save and archive leads to turn them into opportunities and ideally into a sale. Explore how to create, update, and browse sales opportunities, close an opportunity or win an account. You'll learn how to manage your sales relationship, add contacts, and configure record permissions, to share and assign responsibilities. Competitor records are also explored, and you'll learn how to keep track of which opportunities and data are associated with each competitor. Finally, you will explore the Sales Literature area in Microsoft Dynamics 365 where you can store your different sales information for your company or organization.

COURSE_DESCRIPTION: Effective metrics play an important role in ensuring the success of a software project. In this 13-video course, learners will discover how metrics are used to evaluate projects and explore various types of Agile metrics including Lean, Kanban, and Scrum. Begin by examining the importance of the tasks performed by a project analyst in ensuring project success. This leads into an overview of metrics as a measurement tool to evaluate performance. Learn the essentials for project metrics; various types of Agile metrics, and the Agile metrics that are commonly used to evaluate Agile projects. Learners observe how to decide the right metric, qualities that make a metric powerful; recognize details required to define a metric; and how to set benchmarks for effective metrics. Next, learn how to recognize the correct way to evaluate projects by using metrics, and discover best ways to present information gathered using metrics. The final tutorial covers reviewing and improving metrics, or the need to reassess effectiveness of a metric as a criterion for success.

COURSE_DESCRIPTION: In this 1-hour long project-based course, you will learn how to Launch an autoscaling AWS EC2 virtual machine using the AWS console. Amazon Elastic Compute Cloud is the service you use to create and run virtual machines (VM), also known as instances. By completing the steps in this guided project, you will successfully launch an auto-scaling Amazon EC2 virtual machine using the AWS console within the AWS Free Tier. You will also verify the auto-scalable EC2 virtual machine and then terminate your scaling infrastructure. Note: This course works best for learners who are based in the North American region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Learners can examine available strategies for deploying full stack software solutions and differences between traditional software solution deployment and full stack deployments (FSDs) in this 14-video course. Explore deployment tools and platforms, including Java Spring, Git, and Heroku, as well as deployment security best practices. Begin by exploring strategies for deploying full stack solutions to local and cloud servers, then identify security strategies when developing and deploying full stack solutions. Explore key differences between deployments for traditional software projects versus FSD/Agile software projects. Look at tools available for deploying full stack solutions, and learn how to use a continuous deployment tool and Azure DevOps to deliver and deploy full stack solutions. Examine various software stack types and learn how deployment for each is different; learn how to develop and deploy a Java Spring full stack solution, and identify deployment strategies for different tiers of full stack solutions. Learn how to deploy full stack solutions to Git and other platforms such as Heroku and DigitalOcean and how to use Git to deploy full stack solutions.

COURSE_DESCRIPTION: This is a recorded replay of the Global Perspectives on Race, Ethnicity, and Equity: France and Denmark Live session that ran on September 14th at 10 AM ET led by Aperian Global's DEI and Inclusive Leadership Practitioners. During this Leadercamp, Aperian Global's DEI and Inclusive Leadership Practitioners will address race, ethnicity and equity in a cross-border context. The session will provide workable entry-points for advancing the inclusion and equity dialogue outside of your home country, with a closer look at DEI factors in France and Denmark. You will leave the session with a heightened appreciation for culture-bound nuances of DEI work as well as ideas for: • Inviting and integrating new perspectives to address marginalization • Balancing corporate values and initiatives with local realities • Using a multi-layered approach to enable employees to better understand each other and work together more effectively

COURSE_DESCRIPTION: Jira is one of the most popular software-based tools for Scrum available. This bug-tracking and project management tool can help organizations successfully manage their Scrum initiative and teams, organize project tasks, and capture and record software bugs. Through this course, learn how to use Jira for Scrum. Examine the key features and benefits that Jira has to offer, as well as its potential limitations. Next, discover how to start a Scrum project using Jira, including creating user stories and sprints. Finally, learn how to carry out a Scrum project using Jira to add estimates, manage sprints, and view charts and reports. After course completion, you'll be able to use Jira for Scrum projects.

COURSE_DESCRIPTION: Using cryptographic solutions helps prevent data tampering and exposure of sensitive data to unauthorized parties, ensuring data confidentiality and integrity. AWS supports the creation and management of encryption keys and digital security certificates. In this course, discover how cryptography can provide data integrity and confidentiality. Then examine the public key infrastructure (PKI) hierarchy and how certificates can be used to secure AWS services. Next, work with AWS Key Management Service (AWS KMS) to manage encryption keys and AWS Certificate Manager to create a private certificate authority (CA) and issue PKI certificates. Finally, practice renewing certificates, enabling HTTPS, and encrypting an Elastic Block Store (EBS) volume. This course can be used to prepare for exam SOA-C02, AWS Certified SysOps Administrator - Associate.

COURSE_DESCRIPTION: Dr. Gregory Poland, an infectious diseases expert and head of Mayo Clinic's Vaccine Research Group says COVID-19 mutations and the virus spread are happening because of people who don't wear masks, who don't get vaccinated and who don't adhere to safety recommendations. "I believe that we should be radically transparent and honest," says Dr. Poland. "The more time this virus passes through one person after another, the more likely it continues to mutate. As a result of those mutations, two things are happening. Some of the mutations are making vaccines and plasma monoclonal antibodies less effective. The other thing is that the virus will likely become something that we have to live with for the rest of our lives." Dr. Poland reminds people that vaccine protection is not 100%. Breakthrough infections can occur. "Remember that in the clinical trials, 95% means that compared to unvaccinated people, your risk is reduced by 95% - not 100%," he says. "You might have a mild case of COVID-19, but you can still spread it to others, including those who are immune-compromised, such as cancer patients. That's why we continue to wear masks until we get very widespread immunization." (Published 04/21/2021)

COURSE_DESCRIPTION: Many organizations seek to determine what their return on investment will be if they upgrade their environments, but quantifying the future impact of modernization initiatives can be challenging. Google Cloud's application modernization solutions can help you be more innovative while reducing your costs. In this course, learn about Google Cloud's application modernization solutions, including the Google Cloud Application Modernization Program (CAMP), in addition to hybrid and multicloud applications, API management, mainframe modernization, and more. Next, explore the benefits of using Google's managed service providers, refactoring applications from monolith to microservices, and designing scalable and resilient applications. Finally, learn how to deploy stateful applications. This course is one of a collection that prepares learners for the Google Professional Cloud Developer exam.

COURSE_DESCRIPTION: Site reliability engineers (SREs) need to create a healthy test and build environment to ensure that products being distributed integrate and function as expected. In this course, you'll explore the fundamentals of creating a robust SRE test and build environment, looking at the standard tools and techniques available for testing at scale. You'll examine disaster and statistical testing, and learn about working with deadlines and production configurations. You'll investigate the topic of test failures, identifying why an SRE should expect specific tests to fail and how results for test failures can help maximize knowledge about operations and end-users. Lastly, you'll look at the why and how of incorporating break glass procedures, integration testing configuration files, and fake back-end versions into your testing procedures.

COURSE_DESCRIPTION: CSRs, die in der Lage sind, die Prioritäten ihrer Kunden zu identifizieren, können am besten entscheiden, wie sie dem Kunden helfen können. Kundenprioritäten können sowohl offensichtlich (klar ausgedrückt oder ersichtlich) als auch unausgesprochen (nicht geäußert oder unerwartet) sein. Den Umfang und die Wechselbeziehung dieser Prioritäten zu verstehen, ermöglicht Ihnen, besser auf die unausgesprochenen Bedürfnisse von jedem Kunden einzugehen, und hilft Ihnen, einen besseren Service zu bieten. In diesem Kurs lernen Sie, offensichtliche und unausgesprochene Kundenprioritäten zu unterscheiden und zu beschreiben, wie sich Schnelligkeit auf die Kundenwahrnehmung auswirkt. Außerdem werden Ihnen Strategien vorgestellt, mit denen Sie den Aufwand verringern können, den ein Kunde für die Lösung seiner Probleme betreiben muss. Sie lernen auch Methoden kennen, mit denen Sie Ihre Präsenz für Kunden in Serviceinteraktionen demonstrieren können, und Sie erfahren Strategien, die Ihnen dabei helfen, die Prioritäten während einer Kundeninteraktion abzuwägen. Dieser Kurs wurde mit Inhalten entwickelt, die von NueBridge (www.nuebridge.com) bereitgestellt wurden. NueBridge verfügt über eine umfangreiche Expertise in den Bereichen Kundenerlebnis und Management in mehreren Branchen weltweit.

COURSE_DESCRIPTION: Microsoft Azure provides tools that allow you to ensure the security and high availability of Azure workloads. In this course, you'll explore methods of improving the performance, security, and availability of Azure web apps. You'll start by learning how to deploy an Azure load balancer using the portal and from an ARM template. You'll then examine how to configure load balancer settings such as inbound NAT rules for back-end VM management. Next, you'll learn to deploy Application Gateway and Web Application Firewall. Lastly, you'll see how to configure the Azure Front Door Service. This course is one of a collection of courses that prepares learners for the AZ-303: Microsoft Azure Architect Technologies certification exam.

COURSE_DESCRIPTION: Intended for both newcomers who are curious about video games and experienced gamers who want to reflect on their passion, this course will explore what happens to stories, paintings, and films when they become the basis of massively multiplayer online games. The Lord of the Rings trilogy—the novels, films, and video game—are our central example of how "remediation" transforms familiar stories as they move across media. The course is designed as a university-level English literature class—a multi-genre, multimedia tour of how literature, film, and games engage in the basic human activity of storytelling. Our journey will enable us to learn something about narrative theory, introduce us to some key topics in media studies and cover some of the history and theory of video games. It will also take us to some landmarks of romance literature, the never-ending story that lies behind most fantasy games: J.R.R. Tolkien's The Fellowship of the Ring, a bit of Edmund Spenser's Faerie Queene, and poems by Keats, Tennyson, Browning, and others. Drawing on centuries of romance narrative conventions, the twenty-first century gaming industry has become a creative and economic powerhouse. It engages the talents of some of our brightest writers, artists, composers, computer engineers, game theorists, video producers, and marketing professionals, and in 2012, it generated an estimated \$64 billion in revenue. Anyone interested in today's culture needs to be conversant with the ways this new medium is altering our understanding of stories. Join me as we set out on an intellectual adventure, the quest to discover the cultural heritage of online games.

COURSE_DESCRIPTION: By the end of this project, you will have used LibreOffice Base to write SQL queries that join related tables together to retrieve and display data from multiple tables. Since a well-designed database stores each data topic-such as "student" and "course"-in a separate table, an SQL query is often required to join tables together to get all of the data required. You will learn to do that with the WHERE clause and with the JOIN command in SQL. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Identify and analyze leadership and governance issues, create practical ways to improve board performance and work with boards to implement these improvements. This Specialization consists of three courses plus a Capstone Project: (1) Course 1 topics: The unique nature of the nonprofit sector in society; leadership in nonprofit organizations and the governance process. (2) Course 2 topics: The roles and responsibilities of nonprofit organization boards of directors and the challenges in carrying them out effectively. (3) Course 3 topics: The critical factors that impact the ability of the board to govern and how to intentionally change them into positive influences. The Capstone Project: How to help real boards overcome inertia and resistance to change and improve their governance effectiveness in an applied service learning experience. To learn more about the series of courses, please watch the Welcome Video.

COURSE_DESCRIPTION: In this 1-hour long project-based course, you will learn how to Set up AWS billing alerts using AWS budgets via the AWS console. AWS Budgets gives you the ability to set custom budgets that alert you when your costs or usage exceed (or are forecasted to exceed) your budgeted amount. You can also use AWS Budgets to set reservation utilization or coverage targets and receive alerts when your metrics drop below the threshold you define. By completing the steps in this guided project, you will successfully learn how to set up AWS billing alerts using AWS budgets via AWS management console within the AWS Free Tier. Note: This course works best for learners who are based in the North American region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Mobile Device Management is widespread and getting more so all the time. MDM permits the management and control of all mobile devices that make their way to the typical enterprise today and in this course you'll learn about MDM as a cloud-based solution. Next, you'll look at the three main factors you can use to implement MFA and why you might choose some factors over the others. You'll examine the use of posture assessment as part of the overall security design and the key elements of this approach. Finally, you'll learn about the challenges of keeping

systems patched, as well as various endpoint patching issues and approaches. This course can be used in preparation for the 350-701: Implementing and Operating Cisco Security Core Technologies (SCOR) certification exam.

COURSE_DESCRIPTION: Professor Nader Tavassoli of London Business School contrasts traditional approaches to branding - where brands are a visual identity and a promise to customers - to brands as a customer experience delivered by the entire organisation. The course offers a brand workout for your own brands, as well as guest videos from leading branding professionals. The aim of the course is to change the conception of brands as being an organisation's visual identity (e.g., logo) and image (customers' brand associations) to an experience along "moments-that-matter" along the customer journey and, therefore, delivered by people across the entire organisation. Brands are thus not only an external promise to customers, but a means of executing business strategy via internal brand-led behaviour and culture change. You will learn and practice the following skills: 1. How to build brands from a broad organisational perspective 2. How to lead brand-led culture change with human resource practices at the core (i.e., brand as a lever and not just an outcome) 3. How to build brands in multi-brand companies, across cultures and geographies 4. How to measure brand health in new ways, that is, internally in addition to externally 5. How to value and capture returns to brands across the organisation - introducing the new concept of employee-based brand equity - and how this is different from the valuation of brands as intangible assets. This course allows you to develop the following aspects of yourself: 1. Head. Gain a deeper understanding of the evolving practice of brand management, one that goes further than practiced in most organisations today 2. Heart. Be motivated to engage in delivering your own brands - regardless of where you are in your organisation - thereby creating superior value for customers and for your organisation 3. Hands. Translate learnings into action. As Confucius is supposed to have said: "I hear and I forget. I see and I remember. I do and I understand."

COURSE_DESCRIPTION: By the end of this project, you will create a fully functioning Word Guessing game using C#. In this project, you will be able to identify and apply some important coding concepts, such as "variables," "if-conditions," "for-loops," as well as learning how to display output and take inputs from the user. In each task, you'll be able to apply one of these concepts and at the end, tie them all together into the Word Guessing game we will be building. You'll have the knowledge and skills needed to start writing your very own programs. You'll also be able to apply what you learn here using other languages such as C++, Java, Python, etc. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: This specialization is for you if you are looking to learn more about Six Sigma or refresh your knowledge of the basic components of Six Sigma and Lean. Six Sigma skills are widely sought by employers both nationally and internationally. These skills have been proven to help improve business processes, performance, and quality assurance. In this specialization, you will learn proven principles and tools specific to six sigma and lean. This is a sequential, linear designed specialization that covers the introductory level content (at the "yellow belt" level) of Six Sigma and Lean. Yellow Belt knowledge is needed before advancing to Green Belt (which is a second specialization offered here on Coursera by the USG). Green Belt knowledge is needed before moving to a Black Belt. The proper sequence of this specialization is: Course #1 - Six Sigma Fundamentals Course #2 - Six Sigma Tools for Define and Measure Course #3 - Six Sigma Tools for Analyze Course #4 - Six Sigma Tools for Improve and Control At the end of Course #4 (Six Sigma Tools for Improve and Control), there is a peer-reviewed, capstone project. Successful completion of this project is necessary for full completion of this specialization. It should be noted that completing either the Yellow Belt or Green Belt Specializations does not give the learner "professional accreditation" in Six Sigma. However, successful completion will assist in better preparation for such professional accreditation testing.

COURSE_DESCRIPTION: Business analysis determines the organizational goals, product vision, and user preference data needed to ensure proper business decisions can be made. In this 13-video course, learners will explore how a project analyst implements fundamental business analysis practices into software project management during the project initiation and planning stages. To begin, take a look at the definition of business analysis, and activities of a typical business analyst. Then move into analyzing business needs, and how a project business case can align the project to an organization's goals. Learn to recognize the need to identify and gather requirements from key stakeholders; the importance of assessing competition; and commonly used methods for generating ideas. Next, explore the cost-benefit analysis method, followed by the feasibility study tool, and how it helps determine whether a solution is practically achievable. Study key components of a business case document and effectiveness of the empathy map for communicating user preferences to the project team. Finally, learn to recognize the effectiveness of using product vision board to define product features.

COURSE_DESCRIPTION: The COVID-19 pandemic has upended global supply chains. Civilization depends on supply chains to convert the planet's bounty into the products we need and to deliver those products to 7.8 billion human beings at a price they can afford. COVID-19 has upended supply chains around the world and has cast into doubt the future of the operations landscape. This is a presentation and conversation with MIT professor Yossi Sheffi, author of The New (Ab)Normal: Reshaping Business and Supply Chain Strategy Beyond Covid-19. Sheffi discusses the future of operations in the context of global phenomena like COVID-19, climate change, and economic uncertainty.

COURSE_DESCRIPTION: This is the second course in the Data Warehousing for Business Intelligence specialization. Ideally, the courses should be taken in sequence. In this course, you will learn exciting concepts and skills for designing data warehouses and creating data integration workflows. These are fundamental skills for data warehouse developers and administrators. You will have hands-on experience for data warehouse design and use open source products for manipulating pivot tables and creating data integration workflows. In the data integration assignment, you can use either Oracle, MySQL, or PostgreSQL databases. You will also gain conceptual background about maturity models, architectures, multidimensional models, and management practices, providing an organizational perspective about data warehouse development. If you are currently a business or information technology professional and want to become a data warehouse designer or administrator, this course will give you the knowledge and skills to do that. By the end of the course, you will have the design experience, software background, and organizational context that prepares you to succeed with data warehouse development projects. In this course, you will create data warehouse designs and data integration workflows that satisfy the business intelligence needs of organizations. When you're done with this course, you'll be able to: * Evaluate an organization for data warehouse maturity and business architecture alignment; * Create a data warehouse design and reflect on alternative design methodologies and design goals; * Create data integration workflows using prominent open source software; * Reflect on the role of change data, refresh constraints, refresh frequency trade-offs, and data quality goals in data integration process design; and * Perform operations on pivot tables to satisfy typical business analysis requests using prominent open source software

COURSE_DESCRIPTION: Apache Cassandra is a distributed NoSQL technology meant for large-scale data, so programmatic access to Cassandra is especially important. Cassandra supports client libraries in several major programming languages, like Java, Python, and C#. Developers use these to connect to Cassandra and to work with it from code. Begin by creating and using indexes in Cassandra. Then, define and invoke user-defined functions (UDFs) to perform aggregations. Finally, you'll create a Java Maven project with the datastax library as a dependency and connect to a Cassandra database using that library. You will create a Cassandra session, execute various operations using the datastax APIs, and confirm that these queries went through successfully. Upon completion, you will be able to create indexes on Cassandra tables, perform grouping and aggregation operations, leverage UDFs, and work programmatically with Cassandra from a Java client.

COURSE_DESCRIPTION: Allen Führungskräften sind Beschränkungen auferlegt - Zeitbeschränkungen, Personalbeschränkungen, Budgetbeschränkungen, begrenzte Ressourcen. Angesichts dieser Beschränkungen und der vielfältigen Ziele, die Führungskräfte dennoch erreichen müssen, ist die Festlegung von Prioritäten für den Erfolg von größter Bedeutung. In diesem Kurs lernen Sie Methoden zur Festlegung von Prioritäten kennen, mit denen Sie Organisations- und Teamziele erreichen können. Sie erfahren, wie Sie Ihren eigenen Stil in Hinblick auf die Prinzipien des Prioritätsmanagements bewerten und anpassen und wie einzelne Persönlichkeiten und Motivatoren Prioritäten fördern können. Darüber hinaus erhalten Sie Einblicke, wie Sie Ihre Zeit organisieren und mit Störungen umgehen, um sicherzustellen, dass Sie Ihre Ziele erreichen und aus den Erfahrungen lernen.

COURSE_DESCRIPTION: In this 14-video course, learners will explore cybersecurity auditing concepts and the NIST Cybersecurity Framework, how they can improve infrastructure security, and how to perform cybersecurity assessments. Examine web application auditing and approaches for securing web applications. Key concepts covered here include cybersecurity auditing concepts and how they are used to improve infrastructure security; steps used in performing cybersecurity assessments; and how to examine audit review, analysis, and reporting. Next, learn how to use the Wireshark network security auditing tool; how to use the Nmap perimeter security tool; how to perform web application auditing and secure web application and websites; and how to monitor and audit Windows by using audit policies and Event Viewer. Then learn how to monitor the Linux system by reviewing system logs; learn how to use Tiger security audit and intrusion detection tool; and examine guidelines and standards for defining cybersecurity audit strategies. Finally, learn about available security audit tools and their features and benefits; and learn to use Nessus audit tool to run Nessus security system scans.

COURSE_DESCRIPTION: One of the most important aspects of DevOps is the way in which automation enables continuous processes so that the flow of software development can progress with as few interruptions as possible. In this course you will learn what aspects of automation are integrated into what will later be different stages of a development pipeline. After an overview of DevOps principles and practices, you will explore the concept of "continuous" as it applies to development, integration, testing, deployment, monitoring, and feedback. Then you will examine the idea of configuration management. Next, you will focus on many "as-code" concepts, such as Infrastructure-as-code, content-as-code, DevOps-as-code, and pipeline-as-code. Finally, you will examine the maturity process for an organization to transition from not utilizing DevOps to fully embracing DevOps to the degree that makes sense for the organization.

COURSE_DESCRIPTION: There are many common vulnerabilities in software and systems and you must understand them to effectively secure your network systems. In this course, you'll learn about some of these vulnerabilities, as well as common attack mitigation techniques for network application style attacks. Before reviewing cybersecurity technologies in greater detail, you'll first look at the basics of cryptography and the critical role it plays in computer and network security. Finally, you'll explore some current cryptographic solutions and what they are used for. This course can be used in preparation for the 350-701: Implementing and Operating Cisco Security Core Technologies (SCOR) certification exam.

COURSE_DESCRIPTION: Explore the design and implementation of five commonly used behavioral design patterns: Strategy, Chain of Responsibility, Observer, Command, and Iterator. Examine how these patterns can be used in Python built-in functions, in simple and complex use cases, for performing undo operations, and with Python special methods. Key concepts covered in this course include the Strategy pattern, how to design and implement the pattern, and how it is used in Python built-in functions; and learning the Chain of Responsibility pattern and how to write code to implement the pattern. Next, you will learn about the Observer pattern and how to implement the pattern for a simple use case and how to implement the pattern for a more complex use case. Finally, learners will study the Command pattern and how to implement the pattern to perform undo operations; and learn the Iterator pattern and its applications and learn to design an Iterator by using special methods in Python.

COURSE_DESCRIPTION: C programmers can commonly use two kinds of memory: stack and heap. While stack memory is used to store local variables and is fully managed by C, it does have major limitations that are mitigated by heap memory. In this course, you will compare stack and heap memory, exploring the advantages and limitations of each. Then, you will allocate memory using the malloc() function and deallocate memory using free(). Next, you will examine dangling memory issues that can cause potentially dangerous security issues. You will also explore other common allocation functions like calloc() to zero out memory and realloc() to help when you underestimate how much memory an array will require. Finally, you will focus on pointers to struct objects. After completing this course, you'll be able to allocate memory malloc, calloc, and realloc; free memory; use pointers to structs; and avoid problems related to dangling pointers and memory leaks.

COURSE_DESCRIPTION: DeFi and the Future of Finance is a set of four courses that focus on decentralized finance. The final course is called DeFi Opportunities and Risks. It is essential that you complete the first three courses: I. DeFi Infrastructure; II. DeFi Primitives; and III. DeFi Deep Dive before beginning the fourth course. The course starts with the premise that an analysis of any new technology must clearly gauge the risks and challenges. Given that DeFi is only a few years old there are plenty of risks. The course begins with the most obvious risk: smart contract risk. Smart contracts are foundational for DeFi. The code of these contracts is public - opening a clear attack vector for hackers. That is, in traditional finance, hackers need to break into a system to get access to the code and data. In DeFi, everything is open source. There are many other risks studied including: Governance risk; Oracle risk; Scaling risk; Decentralized Exchange or DEX risk; Custodial risk; Environmental risk; and Regulatory risk.

COURSE_DESCRIPTION: This 6-video course explores how to produce more memorable presentations by using PowerPoint. Learners will first examine several editing elements to improve the visuals of a presentation. You will also learn how to move items in a presentation by using the cut, copy, and paste functions. Observe how data is stored via the clipboard, which where PowerPoint stores copied or deleted items. Then see how the formatting of an original item is saved via clipboard. You will learn several options available in PowerPoint to adjust how data is pasted back into the slides. Next, you will learn how to customize items in a presentation by selecting them with your mouse and the keyboard. Continue by examining how PowerPoint uses several different tools to organize items in a slide, and then learning how to change how items are layered within a slide. Finally, you will learn how to group items to modify and move them together.

COURSE_DESCRIPTION: This online course covers the basics of financial impact estimation for machine learning models deployed in business processes. We will discuss the general approaches to financial estimation, consider the applications to credit scoring and marketing response models, and focus on the relationship between statistical model quality metrics and financial results, as well as the concepts of A/B testing and potential biases as they apply to historical data. Multiple courses focus on building machine learning models and assessing their predictive power. However, much less attention is usually paid to explaining how the model quality translates into financial results. Even more so, decision strategies relying on model predictions are normally not covered in great detail. In this course, we will focus on the step when we already have a ML model and want to estimate the expected financial results, and verify the model by running either an A/B test or a backtest. In addition, we will learn how to tune threshold decision rules for model probabilities, thereby improving financial results, as well as account for model uncertainty or biases in historical data that may tamper with our financial estimates. We will analyze the binary classification case, which is the most common type of a ML task. After completing this course, you, as a data scientist, will be able to come up with better arguments when explaining the value of your machine learning models to your leadership. If your role in the company gravitates toward business processes, you will gain a better understanding of how machine learning models can have an impact on the financial results.

COURSE_DESCRIPTION: The more you master DAX in Power BI, the better the insights and reports you'll get from data. The filter context is a need-to-know DAX concept. Use this course to get hands-on experience working with this aspect of Power BI. Start by exploring the relationships between tables in Power BI. Move on to using the CALCULATE function. Then, see how a filter context can be defined so that it only points to a subset of the overall data and how you can continue to perform operations within this filter context. Moving on, examine a breadth of options for ignoring the filter context for specific use cases, including how to bypass filters using various DAX functions. When you're done, you'll be able to use DAX functions to perform operations on a subset of data. You'll also be further prepared for the DA-100: Analyzing Data with Microsoft Power BI certification exam.

COURSE_DESCRIPTION: This guided project course is part of the "Tensorflow for AI" series, and this series presents material that builds on the first course of DeepLearning.AI TensorFlow Developer Professional Certificate, which will help learners reinforce their skills and build more projects with TensorFlow. In this 1.5-hour long project-based course, you will learn practically how to work on a deep learning task in the real world and create, train, and test a neural network with Tensorflow using real-world images, and you will get a bonus deep learning exercise implemented with TensorFlow. By the end of this project, you will have created a deep neural network with TensorFlow on a real-world dataset. This class is for learners who want to use Python for building neural networks with TensorFlow, and for learners who are currently taking a basic deep learning course or have already finished a deep learning course and are searching for a practical deep learning project with TensorFlow project. Also, this project provides learners with further knowledge about creating and training convolutional neural networks and improves their skills in Tensorflow which helps them in fulfilling their career goals by adding this project to their portfolios.

COURSE_DESCRIPTION: In this course, discover how to create internal and public Azure load balancers, explore load balancer health probes, backend pools, and inbound NAT (network address translation) rules, load balancing rules and Azure Application Gateway, in preparation for Microsoft Azure Administrator (AZ-103) exam. Begin the 15-video course with an overview of Azure Load Balancer; then learn about public load balancer creation with the portal. This leads to configuring a health probe for a load balancer; configuring virtual machines in a load balancer back-end pool; and configuring load balancer rules. Discover how to create inbound NAT rules to allow access to back-end virtual machines and create an internal load balancer using the Azure portal. Next, learn to create an Azure load balancer with a template; create a load balancer with Azure CLI (command-line interface); and create an internal load balancer with Azure PowerShell. Recognize when to use Azure Application Gateway; configure a web application firewall for Azure Application Gateway, and configure path-based routing rules for Azure Application Gateway. The exercise involves creating an Azure load balancer.

 COURSE_DESCRIPTION: Explore the management of Azure DNS services and its benefits in this 22-video course, which examines how DNS (domain name system) name resolution works in Azure; how to use the portal, the command-line interface (CLI), and PowerShell to create a DNS zone; and how to enable custom DNS servers for a VNet. One of several preparing learners for the AZ-104 Microsoft Azure Administrator certification exam, this course's key concepts include how to create a DNS zone using the portal, the CLI, and PowerShell; enabling custom DNS servers for a VNet; and how network security groups control inbound and outbound traffic flow. Next, you will learn how to manage network security groups with the portal, CLI, and PowerShell; recognize when VPN solutions should be used with Azure; and configure point-to-site and site-to-site VPNs. Learn the benefits of using Azure virtual WAN; how to deploy and manage Azure Firewall; and how to configure Azure Firewall application rules. Finally, learn how to deploy and manage Azure Bastion and how to deploy an Azure Virtual WAN hub.

COURSE_DESCRIPTION: DEI-Konzepte sind leicht zu schulen, aber schwieriger in der Praxis umzusetzen. In unserer sich ständig verändernden Arbeitswelt sind Führungskräfte gefordert, optimale Ergebnisse zu erzielen und gleichzeitig einen Raum zu schaffen, in dem Menschen ihre Zeit, ihr Talent, ihre Energie und ihre Kreativität einbringen wollen. In diesem Kurs geht es um die besten Möglichkeiten für Führungskräfte, Mikroerlebnisse zu schaffen, die einen Makroeffekt auf die Kultur ihrer Teams und ihres Unternehmens haben. In diesem Kurs lernen Sie Strategien kennen, wie Sie das Geschichtenerzählen in Ihre tägliche Arbeit einbinden können. Sie erwerben Kompetenzen für die Führung und Ermöglichung inklusiver Gespräche, darunter die Verwendung einer inklusiven Sprache und gewählter Namen und Pronomen, sowie Führungspraktiken, durch persönliche Verantwortung als Verbündeter aufzutreten. Sie werden auch Techniken lernen, wie Sie Unternehmensressourcen gerecht zur Unterstützung von DEI nutzen können und wie Sie Vertrauen in den Aufbau inklusiver Kulturen gewinnen können. Als Teil Ihrer DEI-Arbeit empfehlen wir Ihnen, www.lawanaharris.com/assessment zu besuchen und eine Selbsteinschätzung vorzunehmen, um Ihre Stärken und Schwächen im Bereich DEI zu ermitteln.

COURSE_DESCRIPTION: As a security specialist, you need to be familiar with and apply a range of security concepts related to operating in an enterprise environment. In this course, you'll explore enterprise security factors like change and configuration management, as well as data sovereignty, protection, and loss prevention. You'll learn about hardware security modules, geographical considerations, cloud access security brokers. You'll move on to examine response and recovery controls, SSL/TLS inspection, and site resiliency. Finally, you'll learn about deception and disruption techniques using honeypots, honeyfiles, honeynets, fake telemetry, and DNS sinkholes. This course can be used in preparation for the CompTIA Security+ SY0-601 certification exam.

COURSE_DESCRIPTION: Please note: You will need an AWS account to complete this course. Your AWS account will be charged as per your usage. Please make sure that you are able to access Sagemaker within your AWS account. If your AWS account is new, you may need to ask AWS support for access to certain resources. You should be familiar with python programming, and AWS before starting this hands on project. We use a Sagemaker P type instance in this project for training the model, and if you don't have access to this instance type, please contact AWS support and request access. In this 2-hour long project-based course, you will how to train and deploy a Recommendation System using AWS Sagemaker. We will go through the detailed step by step process of training a recommendation system on the Amazon's Electronics dataset. We will be using a Notebook Instance to build our training model. You will learn how to use Apache's MXNET Deep Learning Model on the AWS Sagemaker platform. Since this is a practical, project-based course, we will not dive in the theory behind recommendation systems, but will focus purely on training and deploying a model with AWS Sagemaker. You will also need to have some experience with Amazon Web Services (AWS) and knowledge of how deep learning frameworks work. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In recent times, natural language processing (NLP) has seen many advancements, most of which are in deep learning models. NLP as a problem is very complicated, and deep learning models can handle that scale and complication with many different variations of neural network architecture. Deep learning also has a broad spectrum of frameworks that supports NLP problem solving out-of-the-box. Explore the basics of deep learning and different architectures for NLP-specific problems. Examine other use cases for deep learning NLP across industries. Learn about various tools and frameworks used such as - Spacy, TensorFlow, PyTorch, OpenNMT, etc. Investigate sentiment analysis and explore how to solve a problem using various deep learning steps and frameworks. Upon completing this course, you will be able to use the essential fundamentals of deep learning for NLP and outline its various industry use cases, frameworks, and fundamental sentiment analysis problems.

COURSE_DESCRIPTION: When faced with business challenges, defining the problem is an important step, but it's only the first in a series of steps. Now comes the hard part: finding ways to solve the problem. Generating multiple solutions allows you to open up your thinking and reexamine your opportunities and possibilities. Studies have found that when decision makers considered two or more possible solutions, the average failure rate of an implemented solution dropped from 50% to 30%. Generating alternative solutions sets the stage for creativity, innovation, and success. It allows your company to pursue not just a good solution, but the best solution. In this course, you will explore the process of generating alternative solutions to business problems. You'll look at the types of information you need to gather before you can begin, ways to brainstorm creatively and productively, and how to use the ideas that come from it to fashion and solidify actionable solutions. Finally, you'll learn to identify potential pitfalls to generating solutions and how to mitigate or avoid them.

COURSE_DESCRIPTION: Der zunehmende Einsatz von Mobilgeräten und sozialen Medien hat die Art und Weise, wie Verbraucher online interagieren, drastisch verändert. Dies hatte einen tiefgreifenden Einfluss darauf, wie Unternehmen Dienstleistungen und Produkte an ihre Kunden vermarkten. Die Fakten über den digitalen Wandel sind überzeugend. Die Menschen ziehen es vor, online zu interagieren. Mobilgeräte machen heute über 50 Prozent der Webseitenaufrufe aus, die Gesamtzahl der Internetnutzer liegt derzeit weltweit bei 4,5 Milliarden und die Nutzer sozialer Medien belaufen sich weltweit auf 3,2 Milliarden. In diesem Kurs lernen Sie, inwieweit die Digitaltechnik Möglichkeiten bietet, die Customer Journey zu verstehen, nachhaltiges Geschäftswachstum zu schaffen und besser funktionierende Unternehmen, Teams und Einzelpersonen zu fördern. Sie erfahren auch, wie Unternehmen von der Anwendung digitaler Technologien und Verfahren auf ihre Marketingpläne und -strategien profitieren können. Dieser Kurs wurde in Zusammenarbeit mit dem Digital Marketing Institute entwickelt. (www.digitalmarketinginstitute.com) Sollten Sie an einer Zertifizierung interessiert sein, wenden Sie sich bitte über die angegebene Website direkt an das Digital Marketing Institute: <https://digitalmarketinginstitute.com/lp/skillsoft>. Diese Zertifizierung ist nur in englischer Sprache verfügbar.

COURSE_DESCRIPTION: Welcome to this project-based course on Logistic with NumPy and Python. In this project, you will do all the machine learning without using any of the popular machine learning libraries such as scikit-learn and statsmodels. The aim of this project and is to implement all the machinery, including gradient descent, cost function, and logistic regression, of the various learning algorithms yourself, so you have a deeper understanding of the fundamentals. By the time you complete this project, you will be able to build a logistic regression model using Python and NumPy, conduct basic exploratory data analysis, and implement gradient descent from scratch. The prerequisites for this project are prior programming experience in Python and a basic understanding of machine learning theory. This course runs on Coursera's hands-on project platform called Rhyme. On Rhyme, you do projects in a hands-on manner in your browser. You will get instant access to pre-configured cloud desktops containing all of the

software and data you need for the project. Everything is already set up directly in your internet browser so you can just focus on learning. For this project, you'll get instant access to a cloud desktop with Python, Jupyter, NumPy, and Seaborn pre-installed.

COURSE_DESCRIPTION: In this course you'll learn how to effectively retrieve data from a relational database table using the SQL language. We all know that most computer systems rely on at least one database to store data. Your tax information is stored in the database used by the Internal Revenue Service. Your phone stores your contacts' names, addresses, email addresses, and phone numbers in a database. If you shop online, you're viewing photos, descriptions, and prices of products that are stored in a database. Database designers go to great lengths to design databases so that the data can be stored securely and in an organized format. It's important to note that the main reason they go to all that work is so that we can get the data back out again when we need it! That's called "data retrieval". Data is retrieved or read from a relational database by using a language called SQL to query (or question) the database. SQL is referred to as "the language of relational databases". It can be used by itself or embedded in programs to retrieve data. Once the data is retrieved, it can be displayed on a web page or PC application, or even printed on paper. You'll be practicing writing SQL queries using SQLiteStudio. Next time you go online and look up the daily special at your favorite restaurant, you can think about the fact that it's likely that an SQL query was used behind the scenes to fetch that data and pop it up on your screen. By the end of this course, you'll even have a pretty good idea what the query might have looked like! Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Object-oriented programming is common when writing scripts, as well as during software development. OOP treats items as objects that have properties and methods, as opposed to treating command output as a simple string. In this course, you'll learn about OOP along with some syntax examples. You'll explore how programming objects become serialized and deserialized and how this can present a security risk to web applications. Next, you'll examine how deserialization works in PowerShell, as well as how to execute a deserialization attack against an intentionally vulnerable web application. Lastly, you'll learn how to prevent deserialization attacks from succeeding.

COURSE_DESCRIPTION: In this class you will learn the basic principles and tools used to process images and videos, and how to apply them in solving practical problems of commercial and scientific interests. Digital images and videos are everywhere these days - in thousands of scientific (e.g., astronomical, bio-medical), consumer, industrial, and artistic applications. Moreover they come in a wide range of the electromagnetic spectrum - from visible light and infrared to gamma rays and beyond. The ability to process image and video signals is therefore an incredibly important skill to master for engineering/science students, software developers, and practicing scientists. Digital image and video processing continues to enable the multimedia technology revolution we are experiencing today. Some important examples of image and video processing include the removal of degradations images suffer during acquisition (e.g., removing blur from a picture of a fast moving car), and the compression and transmission of images and videos (if you watch videos online, or share photos via a social media website, you use this everyday!), for economical storage and efficient transmission. This course will cover the fundamentals of image and video processing. We will provide a mathematical framework to describe and analyze images and videos as two- and three-dimensional signals in the spatial, spatio-temporal, and frequency domains. In this class not only will you learn the theory behind fundamental processing tasks including image/video enhancement, recovery, and compression - but you will also learn how to perform these key processing tasks in practice using state-of-the-art techniques and tools. We will introduce and use a wide variety of such tools - from optimization toolboxes to statistical techniques. Emphasis on the special role sparsity plays in modern image and video processing will also be given. In all cases, example images and videos pertaining to specific application domains will be utilized.

COURSE_DESCRIPTION: The Business School at the University of Colorado Denver wants to help you become a change agent for sustainable business. We hope that with the skills and concepts you gain from this specialization that you will help your business reduce its social and environmental impact. Being a change agent is hard. It takes courage and passion and knowledge. To implement change also requires being able to make the case for that change in terms that people in your company or organization respond to and understand. After completing the specialization, you will be able to: * Discuss the threats and opportunities that major global trends such as climate change present to businesses; * Identify ways a company can improve its environmental and social performance; * Evaluate and compare companies' sustainability activities and products; * Develop a business case for implementing sustainability investments; * Identify key criteria of green businesses and product design; * Be a change agent in your organization; * Understand emerging topics in sustainable business, including those in the public policy space. We're very excited about offering this MOOC specialization and hope it gives you the first step toward learning about and taking action to make the places you work and the products you buy more sustainable. Sustainable business changes daily with new products, innovations and ideas, so you will be important in keeping the class current. We look forward to learning from you as you take this green journey!

COURSE_DESCRIPTION: When tackling an Agile project, you need to consider key elements of your organization and its readiness for Agile. This course introduces you to the importance of change management in Agile environments, key differentiators between Agile and Waterfall, and how backlog management relates to change. Then you'll explore the basic process for managing change, how to identify and remove impediments, approaches to take in addressing impediments, and the process for managing impediments. Then you'll learn why vendor management is an important competency for all project managers, considerations for collaborating and integrating with vendors in an Agile environment, increment delivery, release planning, and release iteration. Finally, you'll discover project closeout tasks and how to transition a product to operations, benefits realization, and the organizational approach to Agile. This course was originally created by Global Knowledge (GK).

COURSE_DESCRIPTION: Wir alle können uns eine Geschäftskorrespondenz vorstellen, der ein wichtiger Punkt fehlt oder die einen peinlichen Tippfehler oder einen Rechtschreibfehler enthält. Von diesem Punkt an wird es schwierig, sie ernst zu nehmen, unabhängig von ihrem Thema oder Inhalt. In der Wirtschaft ist eine solide, professionelle schriftliche Kommunikation für die Klarheit und Glaubwürdigkeit Ihrer Nachricht von entscheidender Bedeutung. In diesem Kurs lernen Sie, wie Sie durch die Verbesserung Ihrer Kommunikationsfähigkeiten durch besseres Schreiben stärker fokussierte, ausgefeiltere und effektivere Geschäftsdokumente erstellen können. Der Kurs bietet Anleitungen zum effektiven Bearbeiten und Korrekturlesen. Dabei werden wichtige Bereiche wie Tonfall, Struktur, Klarheit und Genauigkeit sowie häufig auftretende Grammatik-, Interpunktions- und Rechtschreibfehler behandelt.

COURSE_DESCRIPTION: Runtime polymorphism involves variables of a base class containing objects of a derived class. Java uses dynamic binding to ensure that such variables are a powerful mechanism for writing clean, extensible, and correct code. This course takes you through the use of these advanced Java processes and mechanisms. Examine how constructors work with inheritance, including the order of constructor invocation, the role of base and derived class constructors, and the super keyword. Learn about runtime polymorphism and how this process of determining which implementation of a method to invoke at runtime is known as dynamic method dispatch. As you advance, use compile-time polymorphism in Java through method overloading. By the end of this course, you'll have a solid grasp of constructor invocation and both runtime and compile-time polymorphism in Java.

COURSE_DESCRIPTION: Um Datenverluste zu vermeiden, sollten Sie Ihre Daten immer schützen und sichern. In diesem Kurs lernen Sie, wie Sie externe Speichergeräte in Windows 11 anschließen, öffnen und auswerfen. Sobald Sie Ihre externe Festplatte angeschlossen haben, erfahren Sie, wie Sie damit Daten auf Ihren Computer und von diesem übertragen können. Lernen Sie den Windows 11-Dateiversionsverlauf kennen, mit der Sie verlorene oder ältere Dateien wiederherstellen können. Entdecken Sie, wie Sie Ihren Computer vor Viren oder Systemfehlern schützen können, indem Sie einen Wiederherstellungspunkt erstellen. Lernen Sie die Sicherheitsmerkmale und Funktionen von Windows Defender kennen. Erfahren Sie, wie Sie verschiedene Virensensoren konfigurieren und ausführen können. Und erfahren Sie, wie Sie die Datenschutzeinstellungen Ihres Geräts konfigurieren, um sicherzustellen, dass Anwendungen nur auf Informationen zugreifen können, die Sie zulassen.

COURSE_DESCRIPTION: This course explores Javascript based front-end application development, and in particular the React library (Currently Ver. 16.3). This course will use JavaScript ES6 for developing React application. You will also get an introduction to the use of Reactstrap for Bootstrap 4-based responsive UI design. You will be introduced to various aspects of React components. You will learn about React router and its use in developing single-page applications. You will also learn about designing controlled forms. You will be introduced to the Flux architecture and Redux. You will explore various aspects of Redux and use it to develop React-Redux powered applications. You will then learn to use Fetch for client-server communication and the use of REST API on the server side. A quick tour through React animation support and testing rounds off the course. You must have preferably completed the previous course in the specialization on Bootstrap 4, or have a working knowledge of Bootstrap 4 to be able to navigate this course. Also a good working knowledge of JavaScript, especially ES 5 is strongly recommended. At the end of this course you will: - Be familiar with client-side Javascript application development and the React library - Be able to implement single page applications in React - Be able to use various React features including components and forms - Be able to implement a functional front-end web application using React - Be able to use Reactstrap for designing responsive React applications - Be able to use Redux to design the architecture for a React-Redux application

COURSE_DESCRIPTION: In this course, you'll learn about the importance of automation in the provisioning and deployment process for VMs. You'll explore how to create and use a customization specification file as part of a VM deployment cycle. Next, you'll look at the reasons why using vMotion as a proactive VM management tool can yield great results in many areas. You'll learn how to use vMotion and Storage vMotion to move a VM and its back-end storage while powered on. You'll move on to learn how using VM snapshots can provide several benefits, including the ability to travel back and forth in time, reconfiguring the VM in the process. Finally, you'll explore how to create and apply snapshots using the vSphere Client. This course is one in a series that helps prepare learners for the VMware Certified Professional - Data Center Virtualization 2021 (VCP-DCV 2021) exam.

COURSE_DESCRIPTION: In order to improve your PDF files, Acrobat Pro DC provides a set of tools that allows you to structure your document according to your needs and improve your navigation experience. In this 11-video course, learners will see how to perform a search on a document, move through the document via the Read Out Loud tool, and create bookmarks to quickly navigate between pages, objects, and selections. Begin the course by discovering how to search for and replace elements in a document, and then learn how to use the Read Out Loud tool. Examine how to add and edit bookmarks; rename, format, and delete bookmarks; and create and use tagged bookmarks. Next, you will renumber pages in a document; rotate, move, and delete pages; and copy, duplicate, and replace pages. You will also learn how to insert new pages into a PDF, and split documents into separate files and extract pages to create new files. Conclude the course by observing how to add, edit, and remove transitions.

COURSE_DESCRIPTION: In this course, you'll explore a popular data structure, the queue. Queues offer first in, first out access. All additions to the queue are done at one end, which is the rear of the queue, and removals from the queue are done from the front of the queue. You'll learn how to implement a queue using arrays and linked lists and you'll also examine a related data structure, the deque - basically the queue with additional operations. Next, you'll learn about implementations of the stack and queue, which are part of the standard Java library. Finally, you'll see how you can work with the priority queue, which allows you to access elements in the order of priority.

COURSE_DESCRIPTION: The Supply Chain Planning course walks learners through the critical first step in Supply Chain Management, planning. In the course project scenario, your company supplies Personal Protective Equipment and ventilators to hospitals and clinics across the US. You have been asked by your company's executives and state health officials to prepare an analysis of the US, by state and region, identifying locations of highest need for supplies and ventilators. This is called a Supply Plan. Throughout the course you will walk through building the Supply Plan. You'll begin by extracting the needed data then preparing the data for a Supply Plan. You will then create a PivotTable to analyze the data. From here you will learn how to create a set of visualizations and then add these visualizations to a presentation so that you can report on your findings.

COURSE_DESCRIPTION: Data privacy has become engrained in laws and regulations all over the world. Server technicians must take the appropriate steps to secure sensitive data in alignment with applicable laws and regulations. Discover items that constitute personally identifiable information (PII) and protected health information (PHI) and identify common data security standards such as GDPR, HIPPA, and PCI DSS. Differentiate between various types of malware and discover how the art of deception is practiced through social engineering. Next, examine data loss prevention (DLP) and implement data discovery and classification on-premises and in the cloud. Lastly, examine key storage media destruction techniques. Upon course completion, you'll be able secure data in alignment with applicable laws and regulations. You'll also be more prepared for the CompTIA Server+ SK0-005 certification exam.

COURSE_DESCRIPTION: Your organization's security posture is critical to its success-and security technicians must be aware of known and emerging security threats from a variety of sources. Learners begin this 14-video course by exploring various ways for security technicians to keep up-to-date and ahead of the curve. Examine various security intelligence sources and how to use the MITRE corporation's invaluable, trademarked ATT&CK knowledge base. Learners next discuss threat intelligence collection, threat classification for prioritization, and different sources and motivations of IT threats. Not sure what the bug bounty program is? Confused by false positives-mislabeled security alerts-and how to handle them? This course gives you the information you need. Become familiar with the Common Vulnerability Scoring System (CVSS), which provides a way to allocate or assign a score to a vulnerability: the higher the score, the bigger the threat. Then go on to examine the National Vulnerability Database (NVD). The course helps to prepare learners for CompTIA+ Cybersecurity Analyst+ (CySA+) CS0-002 certification exam.

COURSE_DESCRIPTION: In this 1-hour long project-based course, you will learn how to implement Polybase in Azure Synapse SQL Pool. In this project, we are going to see how to implement Polybase in Azure Synapse SQL Pool. Polybase in simple words is, a feature provided by Azure SQL Pool through which you can access the data stored in Azure Data Lake Storage/Blob/HDFS using a SQL interface to access the files stored in above mentioned storage systems. Basically, you can execute SQL queries on the files containing the data. To implement Polybase the source that we are considering is a text file stored in Azure Data Lake Storage - Gen2. Pre requisites: 1. Azure subscription account 2. Basic understanding of Azure SQL Pool and Synapse Analytics 3. Basic understanding of T-SQL queries Here is a brief description of the tasks we are going to perform in this project: Task1: Create Azure Data Lake Storage - Gen2 In this task we are going to create the ADLS account which is going to have the source file (Customer.txt) which we would be eventually reading via SQL queries. Task2: Create Source File and upload it on ADLS container In this task, we are going to create a sample comma delimited text file and also see how to upload it on the container created in the ADLS account. Task1 & Task2 is to prepare our source. Task3: Create Azure SQL Pool In this task, we are going to create Azure SQL Pool and Azure Synapse Workspace. Polybase is a feature supported by Azure SQL Pool hence we need to create this service along with Synapse Workspace account. Task4: Configure Polybase So far in all above tasks we have created all the resources needed to configure and implement Polybase. Hence, in this task we are going to see how to configure Polybase. Task5: Polybase in action In this task, we are going to see polybase in action. We are going to see how to execute SQL queries on the Customer.txt file stored in ADLS account and retrieve the data.

COURSE_DESCRIPTION: This course is the first in a series on starting a business. Though new venture creation is the focus of the specialization, this course is important for everyone. To create a successful business it is not only about what you do (technical execution), it is also about how you think. This course provides learners with insights to re-frame their thinking in order to maximize their chances for success. So what can a learner expect to gain from this course? At the end of this course a learner: 1.) will be able to argue effectively against all of the reasons for not starting their business (or reaching some goal); 2.) will be able to operate effectively within the new framework or model for starting a business (or any new endeavor), thus increasing their chances for success; and 3.) will be able to make the initial business startup decisions of what type of business to start, and what type of business owner to be. Having an entrepreneurial mindset is critical to being successful as an entrepreneur. An entrepreneurial mindset stands alone in terms of its importance. No other attribute, personality, inherent entrepreneurial proclivities, training, or demographic profile is common to all successful entrepreneurs whether Warren Buffet, Steve Jobs, or the neighborhood florist or grocer. The course provides learners with an understanding of the attributes and perspectives of an entrepreneurial mindset, and the process to acquire one. We suggest that learners bring an open mind and be willing to thoroughly explore the nascent business ventures they have been carrying with them. The course introduces concepts that enables a person to start a trans-formative process in the way they think generally, and in the way they think about business specifically. This new way of thinking has the potential to positively impact not only them, but their family, and community.

COURSE_DESCRIPTION: This 6-video course focuses on understanding Google's TensorFlow estimators, and showing learners how they simplify the task of building simple linear and logistic regression models for machine learning solutions. As a prerequisite, learners should have a basic understanding of ML (machine learning), and basic experience programming in Python. Though not required, familiarity with the Scikit-learn library and the Keras API will simplify the labs part of this course. First, you will learn how TensorFlow estimators abstract many of the details in creating a neural network, and you will then learn that you no longer need to define the type of neural network model, nor will you need to add definitions to layer.

When using an estimator, learners only need to feed in training and validation data. In the course labs, you will build both a linear regression model and a classifier by using TensorFlow estimators. Finally, you will learn how to evaluate your model using the prebuilt methods available in the estimator.

COURSE_DESCRIPTION: The traditional approach to pricing based on costs works to pay the bills, but it leaves revenue on the table. You can, in fact, price your products in a way that increases sales--if you know what your customers are willing to pay and can leverage psychology to create better deal and discount plans. In this course, we'll show you how to price a product based on how your customers value it and the psychology behind their purchase decisions. Developed at the Darden School of Business at the University of Virginia, and led by top-ranked Darden faculty and Boston Consulting Group global pricing experts, this course provides an in-depth understanding of value-based pricing and how to use it to capture more revenue. By the end of this course, you'll be able to... -- Apply knowledge of customer value to price products -- Leverage core value-based pricing techniques to inform pricing decisions -- Measure customer willingness to pay using models (surveys, conjoint analysis, other data) -- Use knowledge of consumer psychology to set prices beneficial to both consumers and sellers

COURSE_DESCRIPTION: Cloud environments provide many key components that can be incorporated into your cloud solution. In this course, you'll learn about the available cloud components. First, you'll learn about subscription services such as file, communication, e-mail, VoIP, messaging and collaboration, and the virtual desktop infrastructure, as well as directory and identity services. Next, you'll explore cloud service models such as IaaS, PaaS, and SaaS and how to provision and integrate compute, storage, and network resources for a cloud solution. Next, you'll examine how to integrate serverless applications, deploy and integrate virtual machines, and use OS and solution templates to provision and integrate resources into a cloud solution. Finally, you'll learn to integrate identity management and containers and perform autoscaling and post-deployment validation of cloud solutions. This course is one of a collection of courses that prepares learners for the CompTIA Cloud+ (CV0-003) certification.

COURSE_DESCRIPTION: This 14-video course explores how to navigate a Linux command-line environment by showing learners how to use its most common tools, including text editing and processing, file monitoring and comparison, and package management. You will examine the common properties of the command line environment, including the bash shell, its properties, and the features of the PowerShell environment. This course next demonstrates how to perform text editing using commands such as nano; how to use the Linux EI library, Linux ED text editor; and text processing using commands such as sed awk, and cut. You will learn how to perform repeat actions, and the bash shell history, and perform process control tasks such as PS and kill. Then learn how to use the command line to schedule jobs, perform file and command monitoring, and perform file comparison using the diff command. Finally, this course demonstrates how to redirect the inputs and outputs of commands and files, and perform package management tasks by using the apt command.

 COURSE_DESCRIPTION: U modernom poslovnom svijetu finansijske kompetencije očekuju se na svim organizacijskim razinama. Opće poznavanje finansijske analize nužno je za razumijevanje finansijskih implikacija bilo koje aktivnosti. Finansijska analiza pomaže Vam u razumijevanju finansijske situacije Vaše organizacije, kako je do nje došlo, njezinih prednosti i nedostataka. Ovaj tečaj obuhvaća neke od metoda analize finansijskih izvješća iz perspektive nefinansijskih stručnjaka. Na ovom ćete tečaju naučiti primjenjivati uobičajene finansijske pokazatelje profitabilnosti, učinkovitosti, likvidnosti i solventnosti u svojoj analizi. Tečaj osim pokazatelja obuhvaća i izračune postotaka, i to posebno za horizontalnu i vertikalnu analizu.

COURSE_DESCRIPTION: With Project, you can create a number of different reports directly within the program. Reports display a project's data in a concise and visually appealing way, using graphs, charts, and tables. Explore the various predefined report templates, as well as the option to create your own custom report. Customize reports by inserting text via text boxes and shapes, format the text to improve accessibility, and change the theme of the report. Before printing the report, see how to modify the page margins, orientation, and page breaks. Reuse custom reports in other projects by saving reports as templates using the Organizer tool. Learn to compare two versions of a project side by side by creating a comparative report. This course has been recorded in a Project Online Desktop Client environment.

COURSE_DESCRIPTION: In this 11-video course, continue preparing for the AZ-301: Microsoft Azure Architect Design certification exam by discovering how to plan the use of Azure policies to control resource deployment and usage. Learners will explore different policies such as backup, custom, multifactor authentication (MFA) registration, and conditional access baseline policies, and learn about policy assignments and on-premises system state backup. Begin with a look at how Microsoft Azure policies can be used for cloud resource control, then onto configuring an Azure backup policy. Discover how to back up on-premises server system state to Azure; create a custom policy; and create a policy assignment by using both the portal and PowerShell. You will explore how to view the compliance status of assigned policies; configure MFA registration settings; and finally, through conditional access settings in Azure Active Directory, configure a baseline policy. The closing exercise involves defining the purpose of Microsoft Azure policies; assigning a built-in policy using the portal and PowerShell; and enabling an admin account MFA through a baseline policy.

COURSE_DESCRIPTION: Container orchestration is an essential DevOps practice for managing containers in diversified environments. It provides portability and scalability by orchestrating containerized application management in multi-cloud environments. In this course, you'll start by examining cloud application-level orchestration, the orchestration layer, and the container orchestration tools for virtual machine and container allocation. You'll then outline the architectures used in multi-cloud and multi-cluster environments and cloud orchestration reference systems used for TOSCA-compliant container cluster federation. Next, you'll explore orchestration in managing multi-cloud environments and container orchestration in implementing CI/CD pipelines. You'll implement a pool of Docker hosts into a single virtual server and set up container clusters using Amazon Elastic Container Service and Fargate. Lastly, you'll deploy Azure Kubernetes Service clusters, use Kubernetes Cluster Autoscaler, and create multi-cloud Docker clusters with Docker Swarm.

COURSE_DESCRIPTION: Ein Geschäftsplan ist Ihr Fahrplan, der Ihnen Chancen und Hindernisse zeigt, die Ihnen auf dem Weg zur Umsetzung Ihrer Geschäftsidee unvermeidlich begegnen werden. Mit einem gut vorbereiteten Plan haben Sie eine bessere Chance, die benötigte Unterstützung auch zu erhalten. In diesem Kurs erfahren Sie, was ein Geschäftsplan überhaupt ist, woraus er sich zusammensetzt und welche Schritte Sie zu seiner Ausarbeitung vornehmen sollten. Sie erfahren außerdem, wie eine interne Analyse durchgeführt wird und welche wesentlichen Elemente eine externe bzw. eine SWOT-Analyse betrachtet. Und wir zeigen Ihnen Maßnahmen zur Koordination aller Geschäftsplan-Implementierungsvorgänge, unter anderem die Ausarbeitung eines Aktionsplans und die Überlegung, wie sich die Implementierung sinnvoll messen, überwachen und überprüfen lässt.

COURSE_DESCRIPTION: BigML not only provides ease-of-use, but it also offers flexibility in how you work with your data. This course serves as a hands-on introduction to BigML and its vast array of features. You'll start by exploring the different ways data can be loaded into the platform and how these can be transformed into datasets to train and test a machine learning model. You'll gain practical experience with some of the tools available to help you better understand your data - from histograms and scatterplots to visualizations of value distribution. Moving on, you'll build a fundamental classification model, a decision tree, which takes employee details and predicts whether they'll stay or leave in the next year. Finally, you'll investigate some possible configurations for this model.

COURSE_DESCRIPTION: In this course, the second in the Market Research Specialization, you will go in-depth with qualitative market research methods, from design to implementation to analysis. Week 1: Define qualitative research and how it differs from quantitative research. Explore the various qualitative research methods and evaluate when and how to use them for your research project. Week 2: Design the qualitative instruments necessary for your interviews or focus groups, and plan your recruitment efforts. Write questions and prompts to ask in an interview or focus group. Design a moderator guide and a screening questionnaire to use when recruiting your participants. Week 3: Recruit participants for your focus group and apply techniques to ensure they show up and participate. Act as a moderator during your focus group and apply strategies to handle various types of situations. Probe responses and engage participants in a group discussion, while collecting qualitative data and keep the discussion moving. Week 4: Organize and analyze the data you have collected. Transcribe the audio from your focus group or interview and interpret your notes. Write a focus group report that can be presented to your stakeholders and see how this information might relate to your quantitative research. Take Qualitative Research as a standalone course or as part of the Market Research Specialization. You should have equivalent experience to completing the first course in this specialization, Research Report: Initiating Research, before taking this course. By completing the second class in the Specialization you will gain the skills needed to succeed in the full program.

COURSE_DESCRIPTION: This 18-video course, used to help learners prepare for the Microsoft 365 Fundamentals (MS-900) exam, offers guidance on Microsoft 365's powerful array of apps and services. Explore Enterprise Mobility Plus Security, Exchange Online, and SharePoint Online. The course specifically discusses features and benefits of Exchange Online, to which users subscribe on a monthly basis and receive a mailbox that lives in the Cloud on Microsoft's servers (all the information Outlook users are accustomed to: email, calendars, contacts, and tasks). Learners also hear about various features for Exchange Online in Office 365 plans; and how to access Exchange Online settings. Next, learn about various features of SharePoint Online and its benefits; various features for SharePoint Online in Office 365 plans; and how to access and use SharePoint Online. The concluding exercise directs learners to demonstrate knowledge gained by explaining Exchange Online and SharePoint Online; listing four core Outlook features provided by Exchange Online and three key goals of SharePoint Online; and describing subscription options for Exchange Online and SharePoint Online.

COURSE_DESCRIPTION: Meeting another person is one of the most amazing experiences you can have in Virtual Reality. It is quite unlike communicating through any other medium except a real life face-to-face conversation. Because the other person is life size and shares a virtual space with you, body language works in a way that cannot be done on a flat screen. This course will enable you to create realistic social interactions in VR. You will learn about both the psychology of social interaction and the practical skills to implement it in Unity3D. We will take you through the basics of 3D character animation and how to create body language. You will learn about how to make characters that can respond to players' speech and body language. You will also learn about avatars: the virtual representation of other players, and agents: computer controlled NPC characters and how to implement both of them. As many people have said before us, social is the future of VR. This course will help you become part of the future of Virtual Reality social experiences.

COURSE_DESCRIPTION: In this intermediate-level course you will explore how CSS (Cascading Stylesheets) can be used to alter the appearance of an image on your web page. HTML is used to add image content to a website and CSS is used to make that content visually appealing to website visitors. You will use the Notepad++ editor to write CSS rules with a variety of selectors and properties that are applied to images to change their appearance. The Chrome browser is used to display the page to test the results of your work. CSS is a very powerful tool and using it to gain more control over the visual aspects of images is a valuable skill for a web developer. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: There are a growing number of exciting, well-paying jobs in today's security industry that do not require a traditional college degree. Forbes estimates that there will be as many as 3.5 million unfilled positions in the industry worldwide by 2021! One position with a severe shortage of skills is as a junior cybersecurity analyst. Throughout this specialization, you will learn concepts around cybersecurity tools and processes, system administration, operating system and database vulnerabilities, types of cyber attacks and basics of networking. You will also gain knowledge around important topics such as cryptography and digital forensics. The instructors are architects, Security Operation Center (SOC) analysts, and distinguished engineers who work with cybersecurity in their day to day lives at IBM with a worldwide perspective. They will share their skills which they need to secure IBM and its clients security systems. The completion of this specialization also makes you eligible to earn the IT Fundamentals for Cybersecurity IBM digital badge. More information about the badge can be found here:

COURSE_DESCRIPTION: Obwohl die Verwendung einer Werbeanzeige ein wichtiger Aspekt Ihrer Marketingstrategie sein kann, beinhaltet Marketing viel mehr als nur den besten Weg zu finden, Ihre Produkte oder Dienstleistungen zu bewerben. Es gibt auch noch den entscheidenden Prozess, wie Ihr Produkt vom Hersteller in die Hände Ihrer Zielkunden gelangt - den Produktvertrieb. Dieser Prozess hat sich mit der Erfindung des Internets unermesslich verändert, und genau wie bei der Online-Werbung bringt er eine ganze Reihe neuer ethischer Bedenken mit sich. In diesem Kurs erfahren Sie mehr über die Bedeutung eines effektiven Vertriebsmodells und die Auswahl eines Vertriebskanals. Außerdem lernen Sie wichtige Vertriebsstrategien und -systeme, die Auswahl und Verwaltung von Vertriebspartnern, Online-Vertriebsmöglichkeiten und E-Marketing kennen.

COURSE_DESCRIPTION: What are people most afraid of? What do our dreams mean? Are we natural-born racists? What makes us happy? What are the causes and cures of mental illness? This course tries to answer these questions and many others, providing a comprehensive overview of the scientific study of thought and behavior. It explores topics such as perception, communication, learning, memory, decision-making, persuasion, emotions, and social behavior. We will look at how these aspects of the mind develop in children, how they differ across people, how they are wired-up in the brain, and how they break down due to illness and injury.

COURSE_DESCRIPTION: Unternehmen suchen immer nach neuen Wegen, um die Geschäftseffizienz zu verbessern und die Qualität zu steigern. Um ein Unternehmen mit optimaler Kapazität zu betreiben, müssen Sie Ausschuss aus Prozessen reduzieren oder eliminieren und den Produktionsfluss verbessern. In diesem Kurs lernen Sie die Lean-Strategien zur Ausschussreduzierung kennen, indem Sie bestimmen, welche Vorgänge einen Mehrwert bieten und welche nicht. Sie lernen das Konzept der Fließfertigung kennen und erfahren, wie Sie Arbeitsprozesse ausbalancieren können, um den Produktionsfluss effizienter zu gestalten. Sie definieren, was Ausschuss ist, wo er existiert und wodurch er verursacht wird. Außerdem untersuchen Sie Aspekte von Muda, Fließfertigung, Bandabgleich, wert- und nicht wertschöpfend sowie praktische Lean-Techniken zur Verbesserung des Operations Management.

COURSE_DESCRIPTION: Serialization in Java allows the conversion of the internal state of an object to a byte stream. On the other hand, deserialization enables the recreation of the original object from the byte stream, thus facilitating data transfer. Learn how to define Java classes that are serializable using this course. Explore the use of the Serializable marker interface and the serialVersionUID, and the Externalizable interface. You'll also learn more about backward compatible and backward-incompatible changes, the use of the transient modifier to mark states that should not be serialized, and the conditions under which Java will serialize objects with nested references. When you are finished with this course, you will have the skills and ability to use serialization and deserialization to work with byte streams, stored to files or transferred over a network.

COURSE_DESCRIPTION: If you love games and want to learn how to make them, then this course will start you down that path. Making games is a creative and technical art form. In this course you will familiarize yourself with the tools and practices of game development and well as the process. You will get started developing video games using industry standard game development tools, including the Unity 2020 game engine. At the end of the course you will have completed two hands-on projects, including an Intro to Unity project and a 2D Shooter game, and will be able to leverage an array of game development techniques to create your own basic games.

COURSE_DESCRIPTION: Two-sample T-tests are great for comparing population means given two samples. However, if the number of samples increases beyond two, we need a much more versatile and powerful technique - analysis of variance (ANOVA). Use this course to learn more about non-parametric tests and the ANOVA analysis. In this course, you'll explore the different use cases for Mann-Whitney U-tests, the use of the non-parametric paired Wilcoxon signed-rank test, and perform pairwise T-tests and ANOVA. You'll also get a chance to try your hand at the non-parametric variant of ANOVA - Kruskal Wallis test and post hoc tests, such as Tukey's honestly significant difference test (HSD). After completing this course, you will be able to account for the effect of one or two independent categorical variables, each having an arbitrary number of levels, on a dependent variable using ANOVA.

COURSE_DESCRIPTION: Learners can explore the key concept of the common protocols in use, and discover the security issues of the transmission control protocol/Internet protocol (TCP/IP) model and security protocols, in this 10-video course. You will begin by taking a look at the common protocols used in a network, the ports they use, and the type they are and what they do. Next, you will examine some of the security issues of the TCP/IP model at the layer level, of which it has four: application, transport, Internet, and data link. You will also explore the threats, vulnerabilities, and mitigation techniques in network security; identify the types of weak protocols and their replacements; and classify the various types of security protocols. Then learners will continue by examining various ways to use security protocols in different situations; the importance of implementing security protocols. In the final tutorial, learners will explore the security-first mindset and its necessity.

COURSE_DESCRIPTION: Explore machine learning reinforcement learning, along with the essential components of reinforcement learning that will assist in the development of critical algorithms for decisionmaking, in this 10-video course. You will examine how to achieve continuous improvement in performance of machines or programs over time, along with key differences between reinforcement learning and machine learning paradigm. Learners will observe how to depict the flow of reinforcement learning by using agent, action, and environment. Next, you will examine different scenarios of state changes and transition processes applied in reinforcement learning. Then examine the reward hypothesis, and learn to recognize the role of rewards in reinforcement learning. You will learn that all goals can be described by maximization of the expected cumulative rewards. Continue by learning the essential steps applied by agents in reinforcement learning to make decisions. You will explore the types of reinforcement learning environments, including deterministic, observable, discrete or continuous, and single-agent or multi-agent. Finally, you will learn how to install OpenAI Gym and OpenAI Universe.

COURSE_DESCRIPTION: In this 9-video course, learners will discover how to generate reports, which produce visual representations of project issues. Create Jira reports for sprints, versions, created issues, as well as resolved issues. Begin by learning how to create and display the velocity chart, then generate Burndown charts to track total remaining work and to project likelihood of achieving the sprint goal. Also learn how to generate Sprint reports to display the list of issues in each Sprint; generate Version reports to visualize a team's progress towards completing versions; and generate Epic Burndown reports to visualize how the team is progressing against the work for Epics, then delve into using those reports to visualize how the team is progressing against work for releases. Next, observe how to create Pie Charts to display specified project fields, and generate reports to visualize the number of created issues versus resolved issues over a given time period. To conclude, generate a Resolution Time Report to visualize time taken to resolve a set of issues in projects.

COURSE_DESCRIPTION: Get started with Cloud Native in this self-paced beginner friendly course! In this course, we will cover the core concepts and practices of building and running Cloud Native applications and how to run these applications in a multicloud environment. You will first be introduced to Multicloud concepts and goals and learn about their importance. Next you will familiarize yourself with Containers, Modernization and data migration. This course places importance an application of skills as well, and so you will practice applying skills in: microservices, DevOps, CI/CD, Docker, Kubernetes, and OpenShift. This course is suitable for anyone wanting to learn about the guiding principles of building cloud native applications and managing them across multiple cloud platforms, both private and public. Also covered in this course is how to automate many of the common functions of building and running cloud native applications and orchestrating the environment they run in. For the hands-on labs, an IBM Cloud account will be required as well as basic familiarity with command-line interfaces. You will be provided with a feature code to allow you to access many of the IBM Cloud services at no charge.

COURSE_DESCRIPTION: In this challenge lab, you will create and execute stored procedures by using Transact-SQL (T-SQL). First, you will create a stored procedure by using Data Definition Language (DDL). Next, you will execute a stored procedure by using an input parameter. Finally, you will execute a stored procedure by using an output parameter. Note: Once you begin the challenge lab, you will not be able to pause, save, or exit and then return to your challenge lab. Please ensure that you have set aside enough time to complete the challenge lab before you start.

COURSE_DESCRIPTION: Haben Sie jemals versucht, sich selbst zu führen? Vielleicht könnten Sie der beste Vorgesetzte sein, den Sie jemals hatten. Durch Selbstentwicklungstechniken und kontinuierliches Lernen können Sie Einstellungen und Fähigkeiten entwickeln, die Sie befähigen. Sie können von innen heraus führen und Ihr eigener bester Vorgesetzter werden. Selbstbefähigung ist der Prozess, bei dem Sie Verantwortung für Ihre Einstellungen, Verhaltensweisen und Handlungen bei der Arbeit übernehmen, um Ihre Effektivität zu maximieren. Dieser Kurs konzentriert sich auf das Erlernen von Einstellungen und Verhaltensweisen, die die persönliche Entwicklung fördern. Sie lernen, negative Selbstgespräche zu erkennen und zu überwinden, Initiative zu entwickeln und sich selbst zu stärken sowie die Kontrolle über Ihre persönliche Selbstentwicklung zu übernehmen, indem Sie Ihre Stärken und Verbesserungsmöglichkeiten ausbauen.

COURSE_DESCRIPTION: This course will demonstrate how to use 3D printing software to create digital designs that can be turned into physical objects. It will also demonstrate how 3D scanners work to turn physical objects into digital designs. This course is hands-on in nature and will provide step-by-step instructions to guide you through two popular 3D modeling programs, Tinkercad and Fusion 360. Learners who complete this course will be able to use 3D software to design a wide variety of objects for both personal and professional use. In addition, learners who enroll in the course certificate will receive extended free access to Fusion 360 (provided by Autodesk). COURSE_DESCRIPTION: AWS provides a variety of resource deployment and management automation tools and a selection of data conversion and analysis tools. Knowing how to make the most of these tools will prove valuable in your role as a certified AWS SysOps Associate. In this course, you'll begin by examining how you can benefit from using CloudFormation templates. You'll then practice using these templates to deploy AWS resources using the GUI, CLI, and PowerShell. Next, you'll create and configure EC2 launch templates using the GUI and CLI. Lastly, you'll use Elastic Transcoder for media conversion jobs and Amazon Kinesis for data ingestion and analysis. This course is one of a collection that prepares learners for the AWS Certified SysOps Administrator - Associate (SOA-C01) exam.

COURSE_DESCRIPTION: Learners can explore how to use DevOps to manage system complexities and building stable systems in this 17-video course, which examines the DevOps feedback loop, the maturity model curve for building a well-defined feedback mechanism in the DevOps lifecycle, and the essential elements of a feedback loop. You will learn the benefits of implementing Feedback Loops in each phase of the DevOps lifecycle. Then learn how to implement both positive and negative feedback loops. You will learn the role of monitoring to improve the system, and the different types of

monitoring tools used to implement a DevOps feedback loop, as well as how to create action plans to maintain system robustness. This course then examines the categories of monitoring targets, and the role of automated monitoring and alerting in building better software. You will learn to use Atlassian's Jira issue collector to build and implement feedback loops. Finally, learners will examine the concept of telemetry in the DevOps software development lifecycle.

COURSE_DESCRIPTION: This course will teach you how to create useful chatbots without the need to write any code. Leveraging IBM Watson's Natural Language Processing capabilities, you'll learn how to plan, implement, test, and deploy chatbots that delight your users, rather than frustrate them. True to our promise of not requiring any code, you'll learn how to visually create chatbots with Watson Assistant (formerly Watson Conversation) and how to deploy them on your own website through a handy WordPress plugin. Don't have a website? No worries, one will be provided to you. Chatbots are a hot topic in our industry and are about to go big. New jobs requiring this specific skill are being added every day, consultants demand premium rates, and the interest in chatbots is quickly exploding. Gartner predicts that by 2020, 85% of customer interactions with the enterprise will be through automated means (that's chatbots and related technologies). Here is your chance to learn this highly in demand set of skills with a gentle introduction to the topic that leaves no stone unturned.

COURSE_DESCRIPTION: In diesem Kurs werden verschiedene Word 365-Funktionen zur Formatierung von Dokumenten untersucht. Sie lernen, wie man Textformate und Formatvorlagensätze verwendet und wie man Textformate erstellt und ändert. Sie erfahren auch, wie Sie Formatvorlagensätze erstellen und Formate aus einem anderen Dokument importieren können. Als Nächstes wird sich dieser Kurs auf die Inspektion Ihrer Textformatierung konzentrieren, die es Ihnen ermöglicht, allgemeine Änderungen an einer großen Anzahl von Textelementen vorzunehmen. Außerdem lernen Sie, wie Sie das Design Ihres Dokuments ändern und den Absatzabstand anpassen sowie Tabstopps und Silbentrennungswerkzeuge verwenden können. Schließlich lernen Sie, wie Sie Ihren Text in Spalten einteilen können, um verschiedene Arten von Dokumenten zu erstellen.

COURSE_DESCRIPTION: This four week course focuses on migrating workloads to AWS. We will focus on analyzing your current environment, planning your migration, AWS services that are commonly used during your migration, and the actual migration steps. Hands-on labs are available, though not required for this class. Access to the labs is limited to paid enrolled students. You can audit this course without taking the labs. As we dive into each of the services covered in this class, there will be links to documentation where you can find example applications and code samples. This course is also available in Spanish. To join the fully translated Spanish version, visit this page: <https://www.coursera.org/learn/aws-fundamentals-cloud-migration-es>.

COURSE_DESCRIPTION: Algebra is one of the definitive and oldest branches of mathematics, and design of computer algorithms is one of the youngest. Despite this generation gap, the two disciplines beautifully interweave. Firstly, modern computers would be somewhat useless if they were not able to carry out arithmetic and algebraic computations efficiently, so we need to think on dedicated, sometimes rather sophisticated algorithms for these operations. Secondly, algebraic structures and theorems can help develop algorithms for things having [at first glance] nothing to do with algebra, e.g. graph algorithms. One of the main goals of the offered course is thus providing the learners with the examples of the above mentioned situations. We believe the course to contain much material of interest to both CS and Math oriented students. The course is supported by programming assignments.

COURSE_DESCRIPTION: Organizations will likely have legacy systems and services that they don't want to lose. As an AWS SysOps Admin, you can help organizations reuse their existing on-premises IT services by migrating them to the AWS cloud. In this course, you'll practice judging when and how to carry out this migration. You'll begin by examining various IT service assessment and migration options. Next, you'll learn how to use the AWS Migration Hub and AWS SMS Migration Connector. You'll then replicate an on-premises Hyper-V virtual machine to AWS and import a virtual machine image for reuse in the AWS cloud. Lastly, you'll use AWS Snowball and Snowmobile for data migration. This course is one of a collection that prepares learners for the AWS Certified SysOps Administrator - Associate (SOA-COI) exam.

COURSE_DESCRIPTION: You may be the project manager, but no project is an island. It requires teamwork, and project management means taking the proper actions to ensure the team works effectively to address the project characteristics and needs. In this course, you'll explore best practices for building a project team, including assessing the functional organization structure, resources management, and staffing plans. You'll also learn about tools like Responsibility Asset Matrices, RACI charts, multi-criteria decision analysis, and stakeholder analysis and how they are used to see the product vision to fruition. Finally, you'll look at how using political awareness, a project charter, and team ground rules will enable your team, including virtual team members, to work efficiently together.

COURSE_DESCRIPTION: It's been a year since the first case of COVID-19 was diagnosed in the U.S. Since then the U.S. has seen more than 25 million cases of COVID-19 and more than 400,00 deaths. This has taken a significant emotional toll on the nation. COVID-19 is a disease that affects the entire health care system, and emergency medical teams are often on the front lines receiving infected patients. The challenges have been numerous as symptoms varied, screening protocols changed, and lifesaving treatments have been developed. (Published 02/01/2021)

COURSE_DESCRIPTION: In this two-hour, project-based course, we introduce Unity's powerful animation tool. You'll learn about different animations and effects that you can apply to pick-up objects to make them more noticeable and give your game a more polished look. This project covers recording and playing simple animations, basic customization of particle effects, and playing the particle effects when certain events occur in your game. The guided project will introduce you to the following Unity concepts: - Animations - Particle Effects - Triggers - Coding techniques such as OnTrigger events and invoking methods This is a stand-alone guided project, but is also Part 1 in a two-part series introducing Unity's animation features. Part 2 will cover using the Animation Window to create trigger transitions between multiple animations on a single GameObject. This guided project and series also serve as an optional but recommended foundation for the "FPS Weapon" series. This project makes use of the camera movement script written in Create Keyboard Movement Mechanics with C# in Unity and the concepts introduced in Create Power-Ups and Obstacles with C# in Unity. These compliment this guided project and, although not prerequisites, are recommended for a more well-rounded understanding of the concepts presented herein.

COURSE_DESCRIPTION: This 2-hour long project-based course is an introduction to spreadsheets. We'll be using Google Sheets in this project, which is the free spreadsheet program offered by Google. With that said, most of the concepts that you will learn in this project will be applicable to other spreadsheet programs, such as Microsoft Excel. We will cover the following concepts in a hands-on manner: - Basic data entry, formatting and calculations - Relative and absolute cell references - Basic functions: concatenate, split, sum, average, median, min, max, count, counta - Advanced functions: vlookup, if, and, or, iferror, countif, countifs, averageif, averageifs, sumif, sumifs - Dealing with error messages - Conditional formatting - Filtering and sorting - Basic charts to visualize our data We will end the project by applying these concepts and create a basic spreadsheet model that helps us analyze household expenses. Note: If you don't have a Google account, you will need to create one to be able to complete the content.

COURSE_DESCRIPTION: Communication has changed! The traditional rules for speaking and presenting, meeting coordination, influencing people, negotiating and selling ideas no longer apply in a world of skype, messenger, video and teleconference. This course will act as an overview on several concepts each of which could be a course of their own and our goal is to give you tools that you can practice and perfect on your own. By the end of this course, you will be able to: • Apply communication principles and techniques for in-person and virtual teams • Use a science based approach to create impactful presentations • Refine your communication style to better persuade and influence others • Run more effective and impactful meetings • Incorporate strategies to have positive difficult conversations and make people feel valued and listened to *** This course will require you to record yourself speaking. Therefore you must have a phone/computer with a functional camera and microphone.*** WHO SHOULD TAKE THIS COURSE? Anyone looking for professional and/or leadership development. This class mainly uses examples from the professional, business environment. If you are looking to advance at your current organization or to enhancing your personal value for potential employers this course is for you. WHAT MAKES THIS COURSE EFFECTIVE? Many educational experiences describe and explain, but in this course we will apply and demonstrate. We teach practical and proven concepts, show you how to apply them and give you opportunities to practice them in a safe and supportive environment. This course is full of opportunities to put the ideas presented into practice and test their effectiveness for yourself. WHY SHOULD YOU TAKE THIS COURSE? We will challenge the preconceived ideas about what it means to be part of a virtual team, and support you to be a dynamic team contributor no matter where you work. In this course you can expect to be both energized and uncomfortable - like in most experiences that result in positive growth and change! This course is offered through the University of Toronto School of Continuing Studies (<https://learn.utoronto.ca/>).

 COURSE_DESCRIPTION: This book is the first independent exploration of the Fédération Internationale de l'Automobile's (FIA) institutional history. Virtually unexamined compared with similar institutions like the FIFA and the IOC, the FIA has nevertheless changed from being a small association in 1904 to becoming one of the world's most influential sport governing bodies. Through chronologically organised chapters, this book explains how the FIA manages to link together motorsport circuses like Formula 1 with the automotive industry and societal issues like road safety and environmental sustainability.

 COURSE_DESCRIPTION: Lean is a powerful methodology that enables managers and employees to shift their mindset and helps companies to keep their business sustainable by creating competitive advantage. Today, in an increasingly complex and dynamic world, where companies struggle to maintain competitive advantage, Lean is more important than ever. This course combines the experience of many senior experts and practitioners from the Boston Consulting Group and École des Ponts, and brings perspectives on Lean in manufacturing and services. It offers strong topic foundation as well as deep practical insights into the art of continuous improvement. In this course, you will learn: - why Lean is a key driver for sustainable competitive advantage - how different companies can leverage Lean to create value both in manufacturing and services - what it takes to drive a Lean transformation and build a culture of continuous improvement - how new technologies impact traditional lean practices

 COURSE_DESCRIPTION: This guided project is about image colorization using TensorFlow2 and Keras. Image colorization comes under the computer vision domain. In this project you will learn how to build a convolutional neural network(CNN) using Tensorflow2 and Keras. While you are watching me code, you will get a cloud desktop with all the required software pre-installed. This will allow you to code along with me. After all, we learn best with active, hands-on learning. Special Feature: 1) Explanation of the process of image colorization. 2) How to reshape data to fit a CNN. 3) Explanation of each layer in a CNN. 4) Create a Streamlit app to allow users to colorize a black and white image using the model you trained. Note: This project works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

 COURSE_DESCRIPTION: Finance for Everyone: Decisions will introduce you to the workings of the free markets and the foundations of finance. You will learn how free markets and their "creative destruction" provide the architecture for the global economy and how those same markets move money in ways that create and destroy wealth. Your financial toolkit will include timeless concepts like compounding, discounting, annuities, effective interest rates, and more. You will also learn how to simplify important financial calculations and apply that knowledge to real-life decisions that can influence everything from how you pay for your car to where you live. Through peer review you will publish your view on an issue important to you. You will also discover how your applied decisions connect to bigger questions relating to changing market conditions as you prepare for the second course in F4E: Markets.

COURSE_DESCRIPTION: Learning Python gives the programmer a wide variety of career paths to choose from. Python is an open-source (free) programming language that is used in web programming, data science, artificial intelligence, and many scientific applications. Learning Python allows the programmer to focus on solving problems, rather than focusing on syntax. Its relative size and simplified syntax give it an edge over languages like Java and C++, yet the abundance of libraries gives it the power needed to accomplish great things. In this tutorial you will create a guessing game application that pits the computer against the user. You will create variables, decision constructs, and loops in python to create the game. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Cloud-based applications have now become a norm due to zero upfront costs and ease of management. Deployment of cloud-based applications can get a digital product to a wide market without the need to purchase costly server equipment and hire hardware professionals. Use this course to learn about the characteristics of cloud-ready applications and the different concepts, tools, and techniques related to deploying and managing cloud applications. Start by discovering key concepts related to cloud storage technologies and platforms. You'll also examine and compare Hadoop Distributed File System (HDFS) and Amazon Simple Storage Service (S3). Finally, you'll get a chance to explore data centers and their major types. After you've finished this course, you'll be able to identify cloud-ready applications and implement tools and solutions to make them ready for cloud deployment.

COURSE_DESCRIPTION: To understand and appreciate diversity in the workplace, we must develop an understanding of ourselves and the diverse ways in which we view the world. Working in a diverse and inclusive workforce has many personal and professional benefits ranging from improved wellness and personal health to engagement and community and innovation and creativity. Equally important is the ability to leverage each of our unique talents, skills, and contributions. In this course, you'll explore strategies to help you become an advocate for diversity, equity, and inclusion within the workplace. You'll learn to build awareness of your values and social perspective and recognize specific actions that can improve social and cultural aspects of DEI. You'll also learn about key concepts of allyship, methods to be a more inclusive communicator, and how to use the RISE model to become a DEI ally.

COURSE_DESCRIPTION: In this course, we discuss peer-to-peer protocols and local area networks. Part one in this course is to answer the question of how does a peer-to-peer protocol deliver reliable data transfer service across unreliable transmission lines or networks. We focus on several medium access control protocols and their performance analysis. In the second part, we discuss how medium access control protocols coordinate the access to the communication channel so that information gets through from a source to a destination in the same broadcast local area network. We further discuss local area network and wireless LAN.

COURSE_DESCRIPTION: Cryptography is used to protect sensitive data. In your role as a certified AWS SysOps Admin, you'll come across a variety of ways in which you can use it. In this course, you'll explore standard cryptographic techniques and the AWS services to implement them. You'll begin by examining what cryptography and public key infrastructure (PKI) means. Next, you'll use the AWS Key Management Service (KMS) to create cryptographic keys and enable Amazon Elastic Block Store (EBS) volume encryption. You'll outline how to use hardware security modules in AWS. You'll then work with private and public certificates using AWS Certificate Manager. Lastly, you'll enable an HTTPS listener. This course is one of a collection that prepares learners for the AWS Certified SysOps Administrator - Associate (SOA-C01) exam.

COURSE_DESCRIPTION: Die Mensch-Computer-Interaktion (HCI) befasst sich mit der Interaktion und Kommunikation von Menschen und automatisierten Systemen. Sie verlagert sich schnell über den Unterhaltungsbereich hinaus in das Geschäftsumfeld. Da immer mehr Geräte angeschlossen sind und Aufgaben automatisch ausführen, wird HCI von Unternehmen verwendet, um auf vielfältige Weise einen Mehrwert für ihr Unternehmen zu erzielen. In diesem Kurs lernen Sie, wie Sie die Kundenerfahrung durch HCI verbessern, und untersuchen mögliche Kundenbarrieren und technische Einschränkungen. Außerdem erfahren Sie, wie Sie Best Practices für die Entwicklung von HCI-Anwendungen erkennen und aktuelle HCI-Trends identifizieren. Dieser Kurs behandelt die Vorteile, Herausforderungen, Best Practices und Trends von HCI.

 COURSE_DESCRIPTION: This guided project course is part of the "Tensorflow for Convolutional Neural Networks" series, and this series presents material that builds on the second course of DeepLearning.AI TensorFlow Developer Professional Certificate, which will help learners reinforce their skills and build more projects with Tensorflow. In this 2-hour long project-based course, you will learn practically how to build an image segmentation model which is a key topic in image processing and computer vision with real-world applications, and you will create your own image segmentation algorithm with TensorFlow using real data, and you will get a bonus deep learning exercise implemented with Tensorflow. By the end of this project, you will have learned the fundamentals of image segmentation and created a deep learning model with TensorFlow on a real-world dataset. This class is for learners who want to learn how to work with convolutional neural networks and use Python for solving image segmentation tasks with TensorFlow, and for learners who are currently taking a basic deep learning course or have already finished a deep learning course and are searching for a practical deep learning project with TensorFlow. Also, this project provides learners with further knowledge about creating and training convolutional neural networks and improves their skills in Tensorflow which helps them in fulfilling their career goals by adding this project to their portfolios.

 COURSE_DESCRIPTION: Healthcare aims to improve the health of individuals, but generally, healthcare systems tend to be extremely strained. Using artificial intelligence (AI) with healthcare could potentially mitigate this strain on the system. In this course, examine how AI is used in healthcare, how to evaluate classification models, and the metrics that are significant in models used in disease diagnosis. Next, discover the importance of a model's recall or sensitivity and the computation of the ROC curve and AUC metrics. Finally, explore the process of compiling the datasets, training, and evaluating models from research papers that take a general look at the application of AI in disease and specific ailment diagnosis. Upon completion, you'll be able to identify healthcare use cases for AI and its limitations.

COURSE_DESCRIPTION: Once you have finished cleaning your data, troubleshooting the errors, and working your flow into shape, learn how to release the information by using Output steps in this 6-video course, "Tableau Prep Builder: Working With Outputs." Begin by learning how to create outputs by adding an Output step and saving data as a local file, then previewing data and creating data extracts for use in Tableau Desktop. Next, explore

steps involved in publishing flows as data sources to Tableau Online, and observe how to browse, edit, and delete published outputs in Tableau Online. As you bring more data into Tableau Prep Builder and add more steps to your flow, you may notice the occasional warning or alert. Discover how to work with Tableau Prep Builder alerts and errors and understand the information they provide, which is essential to troubleshooting issues in a data flow. The course concludes by showing learners how to configure Tableau Prep Builder.

COURSE_DESCRIPTION: This 7-video course helps learners explore resiliency concepts such as stability, recovery, and defensive coding. In it, you will discover how to ensure Java resiliency, Python resiliency, C# resiliency, and Javascript resiliency. One of the cornerstones of secure programming is to create resilient software, which means software that is far less likely to have failures. You will begin by looking at the resilient concepts such as stability, recovery, and defensive coding. Begin with stability, so software functions as desired, reliably and consistently. Then should something go wrong, it will readily recover. It will be able to accommodate whatever went wrong and continue normal operations as soon as possible. Then you have to write defensive code, code that is expecting both malicious attacks and just general errors. Defensive coding is a large part of secure coding. This leads into learning how to write resilient code in Java, in Python, in C#, and finally, writing resilient code in Javascript.

COURSE_DESCRIPTION: A vital step between gathering data and creating a report or visualization from it is transforming it into a cohesive form. Use this course to gain hands-on experience in transforming raw data for visualizations. Practice combining related data into a single table. While doing so, perform a preliminary analysis of the data so you can imagine what visualizations can be created from it. Next, combine data from several files into a single table and conduct several transformations, from aggregating data to filtering out unnecessary rows. Finally, build a simple column chart visual from the contents of a Power BI table. While doing so, identify the different storage modes in Power BI and how they affect your visuals. Upon completion, you'll be able to prepare data for visualization using a variety of transformations.

COURSE_DESCRIPTION: The capstone will integrate the learning acquired from the four courses in the 3D Printing Specialization through a hands-on project. This project will enable you to turn an idea into an object using the knowledge and skills acquired through the other courses. Specifically, you will be guided through a step-by-step process in which you imagine, design, make, and share a 3D printed object. Thus, through this capstone, you will be able to put course concepts into action and utilize the skills that you have acquired throughout the Specialization. In addition, you will be able to obtain an actual 3D print of the object you design at a discounted price through our corporate partners, 3D Hubs and Shapeways. If you enjoy this business course and are interested in an MBA, consider applying to the iMBA, a flexible, fully-accredited online MBA at an incredibly competitive price offered by the University of Illinois. For more information, please see the Resource page in this course and onlinebba.illinois.edu.

COURSE_DESCRIPTION: Want to make a game that ends when you "catch" an object by clicking on it? Or maybe you get points based on how close you came? You'll do that in this class! This class teaches the concepts of conditional loops and if/else statements. For each concept, we'll start by helping you connect real-world experiences you are already familiar with to the programming concept you are about to learn. Next, through a cognitively scaffolded process we'll engage you in developing your fluency with problem solving with repeat until loops, while loops, and if/else statements in a way that keeps frustration at a minimum. Along the way you will learn about the common challenges or "bugs" students have with these concepts as well as ways to help them find and fix those concepts. You'll also be guided in running classroom discussions to help students develop deeper understanding of these concepts. Finally, you'll learn how to support interactive learning experiences among your students with Peer Instruction. Additionally, you will create a resource for your classroom to support an equitable classroom.

COURSE_DESCRIPTION: Tableau Desktop's geographic data tools allow you to perform robust analysis on your map views. In this 10-video course, learn how to work with geographic data in which Tableau recognizes location names or create maps from spatial files. Also, observe how to use a variety of tools to configure maps to suit your data. Begin by learning how to use the selection tools with map visualizations; create choropleth maps to depict ratio or aggregated data in Tableau Desktop; and examine the steps involved in creating maps by using spatial files and geodatabases. Discover how to create maps from shapefiles; create density heat maps; and work with background maps and setting default background maps in Tableau Desktop. Learn how to group existing locations together to create custom territories or regions; use Google Maps to quickly generate directions to the points identified in a map, and explore how to create map views by using Mapbox maps. Conclude the course by exploring the steps involved in blending two data sources and creating primary groups.

COURSE_DESCRIPTION: The COVID-19 pandemic has made it seem like much of life is up in the air, with no end in sight. And now that school has started up again, it kind of feels like starting all over again. While it seems like everybody's situation is different, still, we're all learning and adjusting together. Whatever our jobs or titles, we're all parents, or grandparents, or caregivers of one sort or another, and we're all trying to figure out how to cope on a daily basis. And our kids are dealing with the same kinds of changes that impact us: a new workspace, less socialization outside of the family, less privacy, fewer ways to make the days distinct from each other, more worry and anxiety. In this course, members of the Skillsoft family share their experience, strength, and hope as we all attempt to balance our work and home lives while keeping our families safe, happy, learning, and moving forward, together.

COURSE_DESCRIPTION: When you research cloud providers, you'll typically see three major players: Amazon Web Services (AWS), Microsoft Azure, and Google Cloud Platform (GCP). Each provider offers similar services, such as storage, flexible computing, and networking options. However, each provider differs and operates in their own unique way. In this course, you'll explore how cloud innovations have evolved since 2010 and discover current trends in cloud computing. Explore selling points of each of the three major cloud players and discover the services, features, and challenges associated with each. Explore top cloud monitoring tools, discuss how they can help organizations improve performance, and list common factors to consider when choosing a cloud platform provider.

COURSE_DESCRIPTION: The Foundations of Teaching for Learning programme is for anyone who is teaching, or who would like to teach, in any subject and any context - be it at school, at home or in the workplace. With dynamic lessons taught by established and respected professionals from across the Commonwealth, this eight course programme will see you develop and strengthen your skills in teaching, professionalism, assessment, and more. As you carry on through the programme, you will find yourself strengthening not only your skills, but your connection with colleagues across the globe. A professional development opportunity not to be missed. There are various techniques which help to assess student learning. This course helps teacher to acquire the skills to develop and use appropriate assessment procedures. Enhance your course by joining the Commonwealth teaching community on our website, Facebook and Twitter.

COURSE_DESCRIPTION: This course explores the best practices for securing network appliances, and the top network security risks in 14 videos examining best practices for IoT (Internet of things) security risks. You will learn the best practices for transitioning to the Cloud, and the three basic service models IaaS (infrastructure as a service), PaaS (platform as a service), and SaaS (software as a service). Learners will then examine the network perimeter, and security issues and strategies when moving to the Cloud, including how to address de-perimeterization and perimeter exploitation. You will learn about several security architecture models, including Zero Trust Architecture, intrusion kill chain, and the diamond model for intrusion analysis. You will examine the impact of software defined networking, and micro-segmentation to the network security. Learn about next-generation firewalls, network intrusion detection and prevention systems, and distributed denial of service attacks. Finally, you will learn the best practices of Zero Trust Architecture, and how to incorporate them.

COURSE_DESCRIPTION: In this 12-video course, learners can explore differences between on-premises and hybrid cloud deployment and the challenges and benefits afforded by hybrid cloud architecture for machine learning solutions. Discover how to derive goals and design process for a successful hybrid cloud implementation. Begin by examining essential features afforded by cloud and cloud deployment models, and compare characteristics of on-premises and cloud deployment from perspectives of cost, hardware, software, mobility, and reliability. View factors influencing on-premises and cloud architecture; compare hybrid versus private versus public cloud; and use hybrid cloud assessment to identify appropriate scenarios for adopting a hybrid cloud architecture. Learners will be able to list essential factors to consider when deriving a hybrid cloud implementation strategy and architecture, and benefits and challenges of implementing hybrid cloud. Look at key considerations to determine whether to move and deploy applications to the cloud or retain them on on-premises environment, and demonstrate the steps involved in setting up hybrid cloud architecture. The concluding exercise involves recalling benefits of hybrid cloud and the differences between on-premises and hybrid cloud deployment models.

COURSE_DESCRIPTION: The first step in the process of dependable computer programming is to plan and design how that program will be structured and behave. This involves using pseudocode and other design tools before diving into writing the actual computer program. Use this course to become familiar with the design process behind writing a computer program. Learn how to use pseudocode to turn a computer into a series of logical steps. Explore program flow, decision making, and looping. Moving on, examine how algorithms and flowcharts are used in computer program design. By the end of the course, you'll be able to start developing a computer program using pseudocode and algorithms.

COURSE_DESCRIPTION: Effective planning is a key factor in strategic leadership and business operations that makes for better outcomes and successful projects. The project charter is not only a backbone of a project management plan but your project's best marketing tool which helps kick off the work of the project in the right way. By the end of this guided project, you will learn how to write a project charter, use the Canva design platform, and create a presentation slide to present the charter to stakeholders. You will learn what a project charter is and why it is an important artifact for project success. Throughout the project, you review the components of the charter, use the SMART framework to define project goals, practice analogous and three-point estimating techniques for a project budget estimate, and write project requirements, acceptance criteria, and assumptions. No prior experience in project management is required to complete this guided project. This project will benefit professionals wanting to broaden their knowledge and skillset in the area of project management, as well as project coordinators and entry-level managers seeking to obtain project management certifications.

COURSE_DESCRIPTION: Sie können einen Kunden viel besser unterstützen, wenn Sie dessen Stimmung, Kommunikationsstil und Kenntnisse des entsprechenden Produkts oder Services besser verstehen. Ab dem ersten Moment der Interaktion vermittelt Ihnen der Kunde Signale bezüglich all dieser Aspekte. Die Interaktion mit Kunden erfordert Planung, aktives Zuhören und sich bewusst darum zu bemühen, Ihre Kommunikation und Unterstützung entsprechend den Kundensignalen anzupassen. In diesem Kurs lernen Sie, wie Sie Kundensignale erkennen und verstehen, und wie Sie sie nutzen können, um Ihre Art des Supports an jeden einzelnen Kunden anzupassen. Außerdem lernen Sie, wie Sie häufig vorkommende Hindernisse überwinden können, mit denen Kundenservice-Mitarbeiter bei der Beurteilung von Kundensignalen konfrontiert werden. Dieser Kurs wurde mit Inhalten entwickelt, die von NueBridge (www.nuebridge.com) bereitgestellt wurden. NueBridge verfügt über eine umfangreiche Expertise in den Bereichen Kundenerlebnis und Management in verschiedenen Branchen weltweit.

COURSE_DESCRIPTION: Welcome to this project-based course Getting Started with Version Control in RStudio. In this 2 hour-long project, you will learn how to perform version control in RStudio. By the end of this 2-hour long project, you will understand how to create R projects, link new R projects with Git and GitHub, link existing R projects with Git and GitHub from the R interface. You will also learn about R markdowns, their use and how to create them. This course aims at learners looking to get started using the R programming language for version control. There are no hard prerequisites, and any competent computer user or anyone with a basic hang of R should complete the project successfully.

COURSE_DESCRIPTION: Matrix decomposition refers to the process of expressing a matrix as the product of other matrices. These factorized matrices are a lot easier to work with than the original matrix, as they usually possess specific properties desirable in the contexts of various mathematical procedures. Use this course to learn how to use matrix decomposition. Explore precisely what matrices and vectors are and how they're used. Then, study various matrix operations, such as computing the transpose and the inverse of a matrix. Moving on, identify why matrices are great for expressing linear transformations of points in a coordinate space. Work with important transformations, such as shearing, reflection, and rotation. Implement the LU, QR, and Cholesky decompositions and examine their applicability and restrictions. Upon completion, you'll know when and how to implement various matrix decompositions.

COURSE_DESCRIPTION: In Course 1 of the Natural Language Processing Specialization, you will: a) Perform sentiment analysis of tweets using logistic regression and then naïve Bayes, b) Use vector space models to discover relationships between words and use PCA to reduce the dimensionality of the vector space and visualize those relationships, and c) Write a simple English to French translation algorithm using pre-computed word embeddings and locality-sensitive hashing to relate words via approximate k-nearest neighbor search. By the end of this Specialization, you will have designed NLP applications that perform question-answering and sentiment analysis, created tools to translate languages and summarize text, and even built a chatbot! This Specialization is designed and taught by two experts in NLP, machine learning, and deep learning. Younes Bensouda Mourri is an Instructor of AI at Stanford University who also helped build the Deep Learning Specialization. Łukasz Kaiser is a Staff Research Scientist at Google Brain and the co-author of Tensorflow, the Tensor2Tensor and Trax libraries, and the Transformer paper.

COURSE_DESCRIPTION: Welcome to this guided project about how to "Make your Professional eportfolio by using Google Sites". An e-portfolio is an electronic web-based collection of your work that shows what you've learned and what you've accomplished. It could be in the form of a website, or a blog, and will need to clearly show who you are as a professional. Many universities in the world are now promoting their students to have an eportfolio created before they graduate. ePortfolios are a great way to demonstrate the competencies you would list on a resume or talk about in an interview - they allow you to show and not just tell. During a job search, the portfolio showcases your work to potential employers. It presents evidence of your relevant skills and abilities so building an eportfolio will be a really helpful skill that will help you in the present time and also in the future time in getting a job. By the end of this project, you will have an eportfolio on Google sites that will increase your chances of success. You will create an eportfolio and you will be able to showcase your work, projects, a summary of experiences, and your skills online with the help of Google sites. You don't need to have any prior experience or skills for taking this Guided Project. This Guided Project was created by a Coursera community member.

COURSE_DESCRIPTION: This program provides the skills you need to advance your career in cloud architecture and provides a pathway to earn the industry-recognized Google Cloud Associate Cloud Engineer certification. Through a combination of presentations, demos, and labs, you'll explore and deploy solution elements, including infrastructure components such as networks, systems and applications services; and you'll gain real world experience through a number of hands-on Qwiklabs projects that you can share with potential employers. You'll also have the opportunity to practice key job skills, such as setting up a cloud environment and configuring and deploying a solution in the cloud. For learners looking to get certified, this program will also provide sample questions similar to those on the exam, including solutions and practice exam quizzes that simulates the exam-taking experience. Upon successful completion of this program, you will earn a certificate of completion to share with your professional network and potential employers. If you'd like to earn your Google Cloud certification, you will need to register for and pass the certification exam. Please note that this program helps equip you with the skills you need to take the certification exam, but the certification and certification fee is not included in the cost of this training program.

COURSE_DESCRIPTION: There are many options for management of the Cisco Firepower Management Center (FMC) using the console. In this course, you'll learn about the key features of the FMC that can make your life as a security engineer much, much easier. Objects permit you to define reusable object components that you can leverage for the fast configuration of policies, searches, reports, and dashboards. You'll learn how you can manage the objects that help define your network and your security operations. Finally, you'll examine the Intrusion Rules section of the Objects area and how it allows you to modify the IPS rules for the Firepower device. This course can be used in preparation for the 300-710: Securing Networks with Cisco Firepower (SNCF) certification exam.

COURSE_DESCRIPTION: Az értékesítésben a lehetséges ügyfelek felkutatásának a művészete kulcsfontosságú elem minden értékesítési szakember számára. A lehetséges ügyfelek felkutatása még a napjainkban elérhető összes értékesítési módszer mellett is azt a kulcsot jelenti, amely megnyitja az ajtót a nyelő értékesítési folyamat előtt. -n -n Ez a tanfolyam segít a lehetséges ügyfelek felkutatására vezető gondolkodásmódot kialakítani, valamint elvezet az eszközök olyan módon történő alkalmazásához, amely lehetővé teszi a kedvező kilátásokkal kecsegtető ügyfelekről kiváló minőségű lista összeállítását. Azt is megtanuljuk, hogyan készítsünk értékaajánlatot, és hogyan álljunk készen arra, hogy megfelelő válaszokat adjunk a lehetséges ügyfeleknek, amikor értékesítési céllal személyesen találkozunk velük.

COURSE_DESCRIPTION: Der Aufbau eines erfolgreichen Teams hängt davon ab, ob die Teammitglieder mit Ihnen und untereinander kommunizieren können und ob im Team alle zusammenarbeiten anstatt jeder für sich. Sowohl innerhalb eines Standorts als auch zwischen virtuellen Teams sind klare Kommunikationswege nötig. In diesem Kurs lernen Sie die Techniken kennen, um die effektive Kommunikation zu fördern und Kommunikationsprobleme zu überwinden. Sie erfahren außerdem, welche Strategien die Zusammenarbeit im Team weiterbringen. Und Sie lernen Tools und Technologien kennen, die generell für die Kommunikation im virtuellen Team nützlich sind und erfahren, welche wichtigen Überlegungen zur Festlegung virtueller Kommunikationsregeln Sie aufstellen sollten.

COURSE_DESCRIPTION: Azure provides various tools for securely storing secrets, connecting services, and configuring application deployments. In this course, you'll learn how to develop a secure cloud application and the role of Azure Key Vault in secrets management. You'll examine how to use Visual Studio Connected Services to connect Key Vault to a web app, retrieve a secret using Azure Web Apps with Key Vault, and integrate Key Vault into CI/CD pipelines. Next, you'll explore how to use the Azure App Configuration service. Lastly, you'll learn about the role of Azure Active Directory managed identities, including how to create both a user-assigned and a system-assigned managed identity. This course is one of a collection of courses that prepares learners for the AZ-204: Developing Solutions for Microsoft Azure certification exam.

COURSE_DESCRIPTION: Explore and utilize Ethereum decentralized apps using React and combining React with the Drizzle libraries. This course introduces you to the development of decentralized applications, or dApps for short, which are web applications that have a Javascript front end and smart contracts deployed to an Ethereum network at the back end. This course begins by creating a client application, using the React library for Javascript, and then integrates it with a smart contract. Participants then create a similar client app using the Drizzle tool, a collection of Javascript libraries which provide built-in objects to connect your user interface with your deployed smart contracts. By the end of this course, you will have the skills required to be a full-stack blockchain developer. You will know how to build the back end of your application by using Solidity and the Truffle framework and the front end by using React and Drizzle. This will prepare you to build real-world applications which interact with the Ethereum network and make full use of blockchain technology benefits.

COURSE_DESCRIPTION: When dealing with security, preparation is key. A variety of disasters could happen to most organizations at any moment, and the impact that could have on data and systems could be detrimental. There are many measures and processes to help recover from a disaster. Use this course to learn a handful of them. Explore the main elements of business continuity planning (BCP), also called continuity of operations (COOP). See what's involved in business impact analysis and disaster recovery planning. And examine various backup and restore methods. Upon course completion, you'll know several strategies to ensure a business continues to function after a disaster. This course's objectives line up with those in Domain 4: Incident Response and Recovery of the SSCP CBK and will help you prepare for the (ISC)² Systems Security Certified Practitioner (SSCP) 2021 exam.

COURSE_DESCRIPTION: Explore the common application management roadblocks and the solutions provided by adopting DevOps practices and principles. Examine the concept of Disciplined DevOps and its workflow and how to set up deployment environments and release management solutions by using Atlassian tools and cloud containers. Key concepts covered in this 14-video course include how the adoption of DevOps practices and principles can help resolve roadblocks; the workflow of Disciplined DevOps, with a focus on how Disciplined DevOps addresses challenges faced by modern organizations; and paradigms used to provide management layers for delivering applications using DevOps. Next, you will learn the features of prominent tools and platforms used to set up traditional and DevOps deployment environments; set up deployment projects using Atlassian tools; and

apply DevOps principles to setting up modern deployment environments that are powered by containerization in the cloud. Finally, learn about general release scheduling strategies that potentially support the Disciplined DevOps mindset, and set up release management solutions that can help track cross-project releases on a single board with custom release workflows.

COURSE_DESCRIPTION: Running Nmap scans can sometimes take a lot of time. In this course, you'll explore a few options and techniques for decreasing the amount of time you wait for Nmap to complete its scans. Knowing what operating system your target is running sets the stage for how you'll conduct the subsequent steps of your hacking methodology, so you'll also examine common tools and techniques for discovering a target's host OS. Finally, you'll learn about tactics and tools that can be used to help you evade common network security controls such as firewalls and IDS. This course is one in a series that helps to prepare you for the Certified Ethical Hacker v11 (312-50) exam.

COURSE_DESCRIPTION: By the end of this course, learners are prepared to identify and test the best solutions for improving performance and integrating concepts from operational excellence methodologies for optimum data-driven decision making. The course begins with a focus on deciphering the root cause of problems through a variety of tools before determining and assessing best-fit solutions. Learners discover how to apply ISO, Lean and Six Sigma in the pursuit of aligning organizational operations data with performance standards. Hospitality, manufacturing and e-commerce case studies help illustrate how to build data literacy while ensuring privacy and data ethics measures are in place. Material features online lectures, videos, demos, project work, readings and discussions. This course is ideal for individuals keen on developing a data-driven mindset that derives powerful insights useful for improving a company's bottom line. It is helpful if learners have some familiarity with reading reports, gathering and using data, and interpreting visualizations. It is the third course in the Data-Driven Decision Making (DDDM) specialization. To learn more about the specialization, check out a video overview at <https://www.youtube.com/watch?v=Oi4mmeSWcVc&list=PLQvThJe-IglyYljMrdqWfsDzk56ncfoLx&index=11>.

COURSE_DESCRIPTION: This course prepares learners for the MS-300 deploying Microsoft 365 Teamwork certification exam, which focuses on the abilities of teamwork administrators to configure and manage SharePoint Online, OneDrive for business, Teams, and workload integrations. This 7-video course explores troubleshooting and resolving OneDrive issues, how to monitor OneDrive service health and usage, and how to determine the overall health of the service of OneDrive for Business. First, you will learn to resolve OneDrive sync problems, including how to resolve a full storage account, by buying more storage, deleting files, or reducing the number of synced files. You will then learn to resolve file restriction errors, and locked or frozen accounts. Next, learn the maximum file size to upload files in OneDrive. You will learn to use the Microsoft 365 admin center to access and interpret a OneDrive activity report, which will help you understand how the OneDrive Service is being used. Finally, you will learn how to navigate to and interpret OneDrive usage reports.

COURSE_DESCRIPTION: *Please click on the Attend tab to register for the classes* This Bootcamp provides participants with the knowledge, skills, and vocabulary needed to contribute to successful projects. Although this course is intended for all audiences, it will give the learner a strong foundation upon which to pursue project management certification. (Please see the section Certified Associate of Project Management - CAPM(r)) This course is designed for anyone who would like to add project management skills to their current role or manage larger projects and gain more responsibility. According to the Project Management Institute, through 2027 the project management-oriented labor force is expected to grow by 33 percent, or nearly 22 million new jobs. <https://www.pmi.org/learning/careers/job-growth> In this course, you will learn the most important concepts in project management, including: • Project management introduction and fundamentals • Project coordination and integration of project activities • Planning and managing the project scope, schedule, and budget • Project quality and risks • Stakeholder engagement and communication • Managing procurement • Leading the project team • Agile project management considerations Certified Associate of Project Management - CAPM(r) When blended with the eLearning courses listed in the syllabus, this course provides participants with the knowledge and skills needed to attain the Certified Associate in Project Management (CAPM)(r) certification. In addition to the classroom and eLearning hours, students will receive access to a practice exam simulator and mentors who are available to provide guidance and answer questions about the (CAPM)(r) curriculum. Note: The hours offered in this Bootcamp and eLearning exceed the 23-hour PMI requirement for formal project management education. Exam success generally requires classroom hours plus self-study.

COURSE_DESCRIPTION: Um die Darstellung Ihrer Daten zu konfigurieren, können Sie die verschiedenen integrierten Formatierungsoptionen in Excel 365 verwenden oder eigene erstellen. In diesem Kurs lernen Sie, wie Sie Formeln verwenden, um Dateneinträge in verschiedenen Zellen zu trennen und die Groß- und Kleinschreibung Ihres Textes zu ändern. Darüber hinaus erfahren Sie, wie Sie benutzerdefinierte Formate für Text und Datums- oder Zeitwerte erstellen können - einschließlich der Erstellung benutzerdefinierter Farbformatierungen für Dateneinträge. Sie werden lernen, wie Sie zufällige Werte erstellen, Werte in eine Rangfolge bringen und Zahlen auf- oder abrunden können. Schließlich erfahren Sie, wie Sie Formeln verwenden, um Werte zu ersetzen oder zu substituieren.

COURSE_DESCRIPTION: Whether you're a top business executive in a Fortune 500 company or a start-up entrepreneur, you need to meet your stakeholders' expectations to keep them happy and fulfill your obligations and commitments. In practice, this can be hard to achieve, especially when the stakeholder has influence or power over your success. When you have to interact extensively with stakeholders outside of your organization, building a positive relationship can sometimes be stressful - but it's crucial. In this course, you'll learn how to identify external stakeholders and recognize their effect on your organization. You'll also learn the steps to engage with external stakeholders and how to communicate effectively with them and garner feedback. And, you'll learn how to manage stakeholder relationships.

COURSE_DESCRIPTION: In this 13-video course, explore Java SE 11 and its language enhancements, the Shebang mechanism, and key features. Discover how to create and run simple executable Java programs, as well as how to create, import, and manipulate packages and strings, and other key topics. Begin with a look at Java and the Java SE 11 enhancements. Learn to recognize the key features of Java programming language; create an executable Java program with a main class; and compile and run a Java program by using command-line interface (CLI). Next, learn how to create and import packages in Java 11; declare and initialize variables in Java 11; and identify the scope of a variable, and use local variable type inference. You will discover how to create and manipulate strings in Java 11, and transform a null or empty string into an empty optional. The final tutorial involves launching and executing Single-File Source-Code programs and illustrating the enhancements of Shebang mechanisms in Java 11. This is one course is a series to prepare for the 1Z0-816: Java SE 11 Programmer II certification exam.

COURSE_DESCRIPTION: This course integrates all the learning from the first three courses and guides the learner about ways of building a portfolio of strategies and integrating the same into a hedge fund. In the first part of the course, you will be taught ways of measuring the contribution of a strategy to a portfolio in terms of risk and return. You will be able to appreciate the consequences of including a strategy to a new as well as an existing portfolio. Next, you are taught various ways of conducting the tilting analysis in order to determine the optimal weight to be placed on each strategy. After this you will learn to develop techniques for minimizing overall portfolio risk. You will also get a basic overview of the regulatory framework that is applicable to hedge funds. You will know about different types of investors and the expectations of each type of investors.

COURSE_DESCRIPTION: Cryptographers far from enemy lines have long helped win shooting wars by cracking enemy codes-and in the new world of cyber warfare, cryptography has become the first line of defense for hundreds of millions of civilians worldwide. In this 21-video course, you will learn just how cryptography and encryption protect sensitive data, both in transit and at rest. Learners are given important information about public key

infrastructure (PKI) hierarchy and lifecycles; protection in UFS (Ultra Flash Storage) and Bitlocker; and on Linux and cloud storage. Learn about the hashing process, including how to generate file hashes for Linux and Windows. Then learn about using SSL (secure sockets layer) and TLS (Transport Layer Security) to secure network traffic, cloud certificate authority (CA) deployment, and certificate issuance. Next, learn how to configure custom encryption keys for cloud storage and how to configure a Microsoft IIS web site with a PKI certificate. The course helps to prepare learners for CompTIA+ Cybersecurity Analyst+ (CySA+) CS0-002 certification exam.

COURSE_DESCRIPTION: Programmers have several tools to choose from that can help make the development process easier, more streamlined, and more cost effective. One important tool is the Unified Modeling Language (UML) - a generalized modeling language that standardizes visualization of system design, giving everyone on the team one clear direction. UML helps present projects visually while maintaining the flexibility to be interpreted in different ways. Explore the many reasons for applying a UML approach to program development. Examine the architecture of UML, including the different types of models and diagrams. Learn about UML notations, and look at static and dynamic diagrams and apply use cases to each. At the end of this course, you will be able to add UML to your programmer's toolbox to design parts of an object-oriented program.

COURSE_DESCRIPTION: This engaging course is designed to help you achieve the success that you desire. Drawing on decades of scientific research, you will learn what the most successful people do differently than others, why IQ is not the most significant predictor of success (and can sometimes backfire), and why many commonly held beliefs hold people back from achieving their goals. Although this course is based on the science of success, you will learn many practical ideas that you can apply to your own life immediately, particularly in three main areas: • Getting better results at work (and school) • Achieving career success (however you define success) • Enjoying a meaningful, happy, and healthy life By the time you finish this course you will know more than most people know about what predicts success in life. One of the most important lessons you'll learn is that success is earned day-by-day through small wins - small, achievable actions that together can help you achieve your goals sooner and exceed even your own expectations. Therefore, you will have an opportunity to complete a detailed action plan through which you can turn what you learned into specific steps for achieving your most treasured life goals.

COURSE_DESCRIPTION: Functional Magnetic Resonance Imaging (fMRI) is the most widely used technique for investigating the living, functioning human brain as people perform tasks and experience mental states. It is a convergence point for multidisciplinary work from many disciplines. Psychologists, statisticians, physicists, computer scientists, neuroscientists, medical researchers, behavioral scientists, engineers, public health researchers, biologists, and others are coming together to advance our understanding of the human mind and brain. This course covers the analysis of Functional Magnetic Resonance Imaging (fMRI) data. It is a continuation of the course "Principles of fMRI, Part 1".

COURSE_DESCRIPTION: In this Challenge Lab, you will configure static routes between a main office and two branch offices. First, you will configure the IP addresses and interfaces for three routers, and then you will configure static routes between the routers in your network. Next, you will configure the Routing Information Protocol (RIP) on the routers in your network, and then you will configure a floating static route to use as a backup. Finally, you will break the connection between your main router and a router in a backup location in a branch office, and then you will verify that you are able to connect from your main router to the backup location by using the floating static route. Note: Once you begin the Challenge Lab, you will not be able to pause, save, or exit and then return to your Challenge Lab. Please ensure that you have set aside enough time to complete the Challenge Lab before you start.

COURSE_DESCRIPTION: By the end of this project you will use the adjacency list data structure and other data structures to find the shortest distance between a set of routers loaded from a file. The shortest path problem is well known in the field of computer science. An adjacency list is probably the best data structure to represent a set of connected vertices to find the shortest path from one vertex to another. One application for shortest paths is in mapping. Another common application for its use is in computer networking routing to find the shortest trip for a packet. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Was haben Sie zuerst erledigt, als Sie das letzte Mal mit mehreren Aufgaben zugleich konfrontiert waren? War es die schwierigste Aufgabe? Haben Sie die Aufgabe spontan ausgewählt oder mit der einfachsten Aufgabe begonnen? Letzteres wäre ein Hinweis darauf, dass Sie versucht haben, dringende und schwierige Aufgaben anzuhäufen, um sie dann zu vermeiden. Aufschieber legen den Schwerpunkt eher auf die Gründe dafür, etwas nicht zu tun, als auf die Erledigung der Aufgabe. Denken Sie nicht an längere Arbeitszeiten, sondern an Arbeiten zu besseren Zeiten. Nehmen Sie sich Zeit für die Organisation und vermeiden Sie es, Aufgaben aufzuschieben. Dieser Kurs enthält Tipps, wie Sie sich besser organisieren und Zeitverschwendung bekämpfen können. Sie erfahren mehr über die Ursachen für das Aufschieben und die Methoden, sich selbst zu disziplinieren. Sie werden außerdem lernen, Ihre Prioritäten zu bestimmen, und erfahren, wie und wann Sie bei neuen Aufgaben "Nein" sagen sollten.

COURSE_DESCRIPTION: This course covers predictive modeling using SAS/STAT software with emphasis on the LOGISTIC procedure. This course also discusses selecting variables and interactions, recoding categorical variables based on the smooth weight of evidence, assessing models, treating missing values, and using efficiency techniques for massive data sets. You learn to use logistic regression to model an individual's behavior as a function of known inputs, create effect plots and odds ratio plots, handle missing data values, and tackle multicollinearity in your predictors. You also learn to assess model performance and compare models.

COURSE_DESCRIPTION: Security breach incidents need to be handled effectively to prevent further occurrences. An incident management process based on best practices greatly helps deal with and thoroughly learn from incidents. Use this course to recognize the steps involved in the incident management process, the dependencies this process has on other processes, and who's involved in incident management. Examine the use of incident handling forms and incident prevention measures. Furthermore, study the signs employees should look out for and escalate that indicate a security breach event is occurring. After completing this course, you'll recognize how to use the incident management process to identify, manage, and prevent security breach incidents.

COURSE_DESCRIPTION: Explore how to implement containers and data management on popular cloud platforms like Amazon Web Services (AWS) and Google Cloud Platform (GCP) for data science. Planning big data solutions, disaster recovery, and backup and restore in the cloud are also covered in this course. Key concepts covered here include cloud migration models from the perspective of architectural preferences; prominent big data solutions that can be implemented in the cloud; and the impact of implementing Kubernetes and Docker in the cloud, and how to implement Kubernetes on AWS. Next, learn how to implement data management on AWS, GCP, and DBaaS; how to implement big data solutions using AWS; how to build backup and restore mechanisms in the cloud; and how to implement disaster recovery planning for cloud applications. Learners will see prominent cloud adoption frameworks and their associated capabilities, and hear benefits of and how to implement blockchain technologies or solutions in the cloud. Finally, learn how to implement Kubernetes on AWS, build backup and restore mechanisms on GCP, and implement big data solutions in the cloud.

COURSE_DESCRIPTION: In this 12-video course, learners discover how to handle errors in Flask-a widely used web framework written in Python language- by serving a custom error page whenever a 404 error is invoked on a website. Learn how to configure a route in your Flask app so that POST requests can be submitted. Next, use the Flask debugger to record information in your application's log; convey the invocation of an operation to end users by using message flashing, and then highlight flashed messages by defining a style for them in a cascading style sheet (CSS) file. Next, explore how to install and use WTForms in Flask application to accept user input for registration, and define a login page by using field definitions and built-in form validations available in WTForms. Then include the two pages defined by using WTForms in the Flask application, and invoke the validators defined for WtForm elements to ensure that the user input is in the correct form. Finally, ensure that all built-in validators applied on the WtForm elements work as expected.

COURSE_DESCRIPTION: The final course aims to build learners' confidence and adaptability when communicating in cross-cultural environments as they assume leadership responsibility to communicate influence in persuasive workplace contexts. The course focuses on enhancing learners' professional persona for skilful engagement and intercultural communication with stakeholders within and beyond the organization, including cross-departmental work teams, clients and external partners. Learners will also discover and apply good practices in organising information, using visual aids and body language for presentations while demonstrating a heightened sense of cultural sensitivity in a given context. In all, learners will acquire skills to demonstrate persuasive verbal and intercultural communication in workplace contexts which may include dialogues and presentations to critical stakeholders and effective task delegation to team members. At the end of this course, learners will be able to: - Analyse factors of motivation among workplace counterparts. - Recognise the impact of culture on factors of motivation. - Critique and craft persuasive verbal communication products (i.e. script of dialogue) for exchanges with work teams and critical stakeholders. - Apply principles of effective PowerPoint slide design with consideration for cultural sensitivity. - Identify and adopt strategies on the use of voice and body language for engaging presentations.

COURSE_DESCRIPTION: In this challenge lab, you will migrate an application by using a blue/green and canary strategy. First, you will configure and test a blue application environment that uses two Amazon Elastic Cloud (Amazon EC2) instances, and then you will configure a parallel green application environment that uses two EC2 instances. Next, you will perform canary testing by using an Application Load Balancer, and then you will migrate fifty percent of the traffic to the green version. Finally, you will direct all traffic to the green EC2 instances and decommission the blue EC2 instances by using a CloudFormation change set. Note: Once you begin the challenge lab, you will not be able to pause, save, or exit and then return to your challenge lab. Please ensure that you have set aside enough time to complete the challenge lab before you start.

COURSE_DESCRIPTION: Appreciative Inquiry is a collaborative and constructive inquiry process that searches for everything that gives life to organizations, communities, and larger human systems when they are most alive, effective, creative and healthy in their interconnected ecology of relationships. To appreciate, quite simply, means to value and to recognize that which has value-it is a way of knowing and valuing the best in life. In the language of Positive Organizational Scholarship it means a research focus-a positive bias-seeking fresh understanding of dynamics described by words like excellence, thriving, abundance, resilience, or exceptional and life-giving. In this context the word appreciate means to value those things of value-it is a mode of knowing often connected to the idea of esthetic appreciation in the arts. To appreciate also means to be grateful or thankful-for-it is a way of being and maintaining a positive stance along the path of life's journey. And not incidentally, to appreciate is to increase in value too. Combining the three-appreciation as a way of knowing, as a way of being and as an increase in value- suggests that Appreciative Inquiry is simultaneously a life-centric form of study and a constructive mode of practice. As a form of study, Appreciative Inquiry focuses on searching systematically for those capacities and processes that give life and strength and possibility to a living system; and as a constructive mode of practice, it aims at designing and crafting human organizations through a process in which valuing and creating are viewed as one, and where inquiry and change are powerfully related and understood as a seamless and integral whole Leading Positive Change through Appreciative Inquiry is a course dedicated to advancing our understanding and skill in leading strength-based change and on how to create, foster and manage organizations in which people thrive and perform at their best.

COURSE_DESCRIPTION: In this 1-hour long project-based course, you will learn how to create your Python web application & launch it on your own server using AWS Elastic Beanstalk technology. You will be using the Flask python framework to create your web application & AWS desktop management console

to deploy the web application to the AWS servers. Additionally, you will learn more about reading the server logs, how to switch between different versions of your web application & also, monitoring your AWS servers using Elastic Beanstalk Desktop Management Console. Note: To avoid distraction for set up during the course, we would recommend that you create an Amazon AWS account beforehand. Amazon AWS provides a free tier option for 1 year & the course materials will utilize services that fall under the free tier option.

COURSE_DESCRIPTION: Learners can explore design principles, architecture, and essential components of Kubernetes, as well as how Kubernetes helps implement end-to-end software testing, in this 16-video course. You will begin with a detailed look at design principles and architecture behind Kubernetes and the essential components of Kubernetes master and Kubernetes worker. Then you will move on to explore Kubernetes cluster objects and controllers; scaling applications on Kubernetes; and Kubernetes cluster application deployment. Learn how to create single-zone clusters with the default features enabled in Google Kubernetes Engine and create volume resources in the clusters. Discover packaging and executing on Kubernetes Engine; Kubernetes and software testing, the various types of testing that can be automated with Kubernetes, and the advantages of deploying test containers in Kubernetes. Delve into test automation with Kubernetes; automation testing with Selenium Grid and Kubernetes; and setting up test environments by using Selenium Grid, Docker, and Kubernetes. Build test container images; discover end-to-end (E2E) testing with Selenium WebDriver, and deploy test containers in Kubernetes clusters and publish the results.

COURSE_DESCRIPTION: In this 1-hour long project-based course, you will learn how to do Computer Vision Object Tracking from Videos. At the end of the project, you'll have learned how Optical and Dense Optical Flow work, how to use MeanShift and CamShift and how to do a Single and a Multi-Object Tracking. This course runs on Coursera's hands-on project platform called Rhyme. On Rhyme, you do projects in a hands-on manner in your browser. You will get instant access to pre-configured cloud desktops containing all of the software and data you need for the project. Everything is already set up directly in your Internet browser so you can just focus on learning. For this project, you'll get instant access to a cloud desktop with (e.g. Python, Jupyter, and Tensorflow) pre-installed. Prerequisites: In order to be successful in this project, you should have a fundamental knowledge of Python and OpenCV. Notes: - You will be able to access the cloud desktop 5 times. However, you will be able to access instructions videos as many times as you want. - This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: People don't buy products. They buy brands. Who creates brands? People. How do they do it? Through proper marketing research and planning. The traditional marketing mix emphasizes the four P's: product, price, place, and promotion. However, this fails to address two other important aspects of marketing: planning and people. Planning and people are vital to any marketing effort. Marketing planning guides how marketing is carried out, so it's imperative that it is informed and comprehensive. And because employees impact the marketing mix so strongly, it's equally important to ensure they understand and support the company's marketing actions. In this course, you'll learn about the types of people needed to create and support strong brands. You'll become familiar with internal branding and the importance of engaging employees as brand ambassadors. You'll also learn about how strategic and tactical planning are employed for conducting effective and cohesive marketing research that will inform digital marketing efforts. Finally, you'll learn about the factors that contribute to an integrated marketing communication plan.

COURSE_DESCRIPTION: To practice as a certified Cisco technician, not only do you need to identify problems and solutions theoretically, you also need to be able to implement troubleshooting techniques on Cisco devices. To do this, you need to be confident using the appropriate IOS commands to get a device to do what you want it to do. In this course, you'll learn how to interact directly with the CLI of a Cisco IOS device by using standard commands and responding to specific prompts. In addition to this, you'll examine how to create, back up, and restore the startup-config of a device, recognizing why this is important for ensuring the device functions in the same way as the device it replaces. Finally, you'll learn to differentiate between the IOS-XE modes and how to identify them on an IOS-XE Cisco device. This course can be used in preparation for the 100-490: Supporting Cisco Routing and Switching Network Devices (RSTECH) exam and to attain the Cisco Certified Technician (CTT) Routing & Switching certification.

COURSE_DESCRIPTION: Welcome to this project-based course on Using SQL String Functions to Clean Data. In this project, you will learn how to perform data cleaning and manipulation using SQL string functions like LENGTH, UPPER & LOWER, REPLACE, TRIM, SUBSTRING, CONCAT, STRING AGG, and COALESCE. By the end of this 2-hour long project, you will understand why you need to learn about string functions and use them to get the desired result you want from tables in a database. Also, for this hands-on project, we will use PostgreSQL as our preferred database management system (DBMS). Therefore, to complete this project, it is required that you have prior experience with using PostgreSQL. Similarly, this project is an advanced SQL concept; so, a good foundation for writing SQL queries is vital to complete this project. If you are not familiar with SQL and want to learn the basics, start with my previous guided projects titled "Performing Data definition and Manipulation in SQL" and "Querying Databases using SQL SELECT statement." I taught these guided projects using PostgreSQL. Taking these projects will give the needed requisite to complete this project Using SQL String Functions to Clean Data. However, if you are comfortable writing queries in PostgreSQL, please join me on this wonderful ride! Let's get our hands dirty!

COURSE_DESCRIPTION: Einer der Hauptvorteile von OneDrive for Business liegt in der Möglichkeit, Dateien online zu bearbeiten. Sie können Ihre Online-dateien auf OneDrive ganz einfach auf Ihrem Computer verwenden, indem Sie die OneDrive-Synchronisierungsfunktion aktivieren. Mit OneDrive ist es auch ganz leicht, neue Dateien zu erstellen und zu bearbeiten. Sie können Dateien freigeben und mit Teamkollegen kommunizieren. Wenn Sie an einem Dokument mit mehreren Personen gemeinsam arbeiten, werden jeweils Versionen erstellt. Diese Versionen können in OneDrive for Business einfach angezeigt und wiederhergestellt werden.

COURSE_DESCRIPTION: Examine steps involved in building a JavaScript web application that interacts with a smart contract deployed to a Hyperledger Fabric network in your Blockchain solutions. In this course, participants use NodeJS to code an application to create an admin user for an organization connected to a Fabric network. You will write an application in NodeJS that uses admin credentials to provision the application user. Learn how to develop a NodeJS application that retrieves an instance of a smart contract deployed to a Fabric network and invoke query applications on it. In building the backend of the Fabric web app, create a NodeJS application able to invoke queries and transactions against chaincode deployed to Hyperledger Fabric. Then build a web UI enabling both queries and transactions against a smart contract by connecting to the previously created backend app. Test the app by verifying features implemented by accessing the UI and invoking queries and transactions. The closing exercise uses a Gateway instance to retrieve chaincode from a Fabric network and uses a contract instance to perform read and write operations.

COURSE_DESCRIPTION: This course is ideal for individuals who currently work in or are targeting opportunities in consulting and strategy, industrial sales and buying, marketing management, entrepreneurship and business development. This course will cover the concept of channel functions, or the supply side of designing routes to markets. Channel functions are the necessary activities that channel members must provide in order to create the channel benefits that customers desire. You will learn a framework that quantifies channel functions and ultimately, how to use them as the basis for determining channel member work loads and compensation. A final exercise considers how to monetize shipping benefits and align the channel benefits demanded with the necessary supply side activities.

COURSE_DESCRIPTION: By the end of this project, you will be able to further your business intelligence goals by confidently analyzing the differences between groups using statistical techniques in any spreadsheet software. Uncovering the relationship between variables is usually at the top of an analyst's list of goals, when approaching a data set. Pearson's Chi-Squared Test is a powerful tool that can confirm or invalidate observed differences. In your Chi-Squared in Google Sheets project, you will gain hands-on experience formatting variables within a data set so that you can understand if differences exist in groups, then you will perform several Chi-Squared tests for significance of difference, interpret the probability that significant differences exist, and report your findings. To do this you will work in the free-to-use spreadsheet software Google Sheets. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: A bill of materials (BOM) defines the components that are required to produce a product. The components can be raw materials, semi-finished products, or ingredients. In some cases, services can be referenced in a BOM. However, BOMs typically describe the material resources that are required. When combined with a route or production flow that describes the operations and resources that are required to build a product, the BOM forms the foundation for calculating the estimated cost of the product.

COURSE_DESCRIPTION: Wenn Sie Computerprogrammierung erlernen, müssen Sie wissen, was objektorientierte Programmierung (OOP) ist. OOP ist eines der produktivsten und am häufigsten verwendeten Programmierparadigmen und bietet zahlreiche Vorteile, wie z. B. Wiederverwendbarkeit von Code, Wartung, Skalierbarkeit und Zusammenarbeit. Aufgrund der pragmatischen Struktur von OOP können große und komplexe Programme einfach und effizient erstellt werden. In diesem Kurs erfahren Sie, was OOP ausmacht, einschließlich der Verwendung von Objekten und der OOP-Hauptmerkmale Vererbung, Kapselung und Polymorphie. Sie lernen die Unterschiede zwischen OOP und einem anderen Standardprogrammierparadigma, der prozeduralen Programmierung, kennen. Zum Schluss erfahren Sie mehr zu den beliebtesten OOP-Sprachen und verwenden drei davon, um erste Programme zu schreiben. Nach Abschluss des Kurses werden Sie verstehen, wie mithilfe von objektorientierter Programmierung vielseitige Computerprogramme erstellt werden.

COURSE_DESCRIPTION: New technologies are providing a positive impact on the implementation of DevOps, and no recent technology has been more impactful than virtualization and the cloud. In this course, you'll explore architecture and virtualization in DevOps, beginning with the concept of containerization, how paying attention to architecture can reduce risk in deployments, and the role of microservices in software deployment. Then you'll learn about the strangler pattern and the role it plays in re-architecting, the blue/green deployment pattern as an architectural approach, and how the move in IT towards virtualization and the cloud is enabling the DevOps movement. Finally, you'll discover change review and coordination as it relates to flow optimization and the basic steps for optimizing flow. This course was originally created by Global Knowledge (GK).

COURSE_DESCRIPTION: This 2-hour long project-based course is an introduction on how to create and design a landing page using MailChimp. Collecting the details of marketing prospects for marketing purposes online starts with a well designed landing page. This course will take you through creating one on MailChimp. MailChimp is an email service platform and autoresponder for email marketing. By the end of this project, you will create and launch a live-on-the-web page people can sign up on. When you are done with this, there is a Capstone task you can take to ensure you picked up all the lessons from this course. Note: If you don't have a MailChimp account, you will need to create one to be able to complete the content.

COURSE_DESCRIPTION: In this course, you'll explore the Set interface and the different Set collections available in Java. You'll learn how the Java Set interface extends Collection, and how it is used to define unordered collections in which duplicates are not allowed. You'll discover common set operations such as union, difference, intersection, and equality, as well as how these are influenced heavily by the implementation of .equals and .hashCode in the objects contained within the set. You'll cover four implementations of the Set interface - HashSet, LinkedHashSet, EnumSet, and TreeSet. Finally, you'll learn the correct implementations of the .hashCode, .equals, and .compareTo methods of user-defined objects that are to be stored in Sets.

COURSE_DESCRIPTION: Platform as a Service (PaaS) and Software as a Service (SaaS) are two popular and valuable cloud service models. Both play a unique role in managing certain aspects of cloud computing. If you're an IT professional working in server environments, you need to know what these two cloud service models entail. Take this course to learn all about PaaS and SaaS solutions. Furthermore, practice deploying databases in the AWS and Microsoft Azure clouds. Configure a SaaS cloud solution. Use an automation template to deploy a PaaS solution. And use several strategies and tools to keep cloud computing costs to a minimum. Upon course completion, you'll be able to deploy PaaS and SaaS solutions and control cloud computing costs. This course also helps prepare you for the CompTIA Server+ SK0-005 certification exam.

COURSE_DESCRIPTION: Writing well is one of the most important skills you can develop to be successful in the business world. Over seventy companies and thirty thousand students--from professional writers to new employees to non-native English speakers to seasoned executives--have used the techniques in Business Writing to power their ability to communicate and launch their ideas. This course will teach you how to apply the top ten principles of good business writing to your work, how to deploy simple tools to dramatically improve your writing, and how to execute organization, structure, and revision to communicate more masterfully than ever. From the very first lesson, you'll be able to apply your new learning immediately to your work and improve your writing today. Your ideas are powerful. Learn how to deliver them with the clarity and impact they deserve. "Thank you for giving me the knowledge I need in life. [Business Writing] was helpful, life changing, and has made a huge impact in my writing." -- Message from a Business Writing student The principles you'll learn in this course enable you to become a great business writer. They also provide the foundation for moving into Graphic Design and Successful Presentation, so that you can unleash your best professional self whenever--and however--you present your ideas in the workplace. This course can be taken for academic credit as part of CU Boulder's Master of Science in Data Science (MS-DS) degree offered on the Coursera platform. The MS-DS is an interdisciplinary degree that brings together faculty from CU Boulder's departments of Applied Mathematics, Computer Science, Information Science, and others. With performance-based admissions and no application process, the MS-DS is ideal for individuals with a broad range of undergraduate education and/or professional experience in computer science, information science, mathematics, and statistics. Learn more about the MS-DS program at <https://www.coursera.org/degrees/master-of-science-data-science-boulder>.

COURSE_DESCRIPTION: In this one-hour, project-based course, you'll learn how to create a simple mini-map. You'll learn how to set up a secondary camera and configure it to display an overhead view of the scene and follow the player. You'll also learn how to use layers to display different objects on each active camera and use masks to give the mini-map a circular shape. The guided project will introduce you to the following Unity concepts: - Camera - Layers - Masks This course makes use of the scene created in Baking Lights for Better Performance in Unity and the scripts

created in Create Keyboard Movement Mechanics with C# in Unity and Create Simple Enemy Behaviour with C# in Unity (Intro to AI). These compliment this guided project and, although not prerequisites, are recommended for a more well-rounded understanding of the concepts presented herein. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: By the end of this project, you will create a fully functioning 2 player jet fighters game using Pygame in Microsoft Visual Studio Code. This project will give you a great head start towards learning more and mastering one of the most used programming languages in the world. In this project you will be able to identify and apply many basic fundamentals such as data structures, variables, loops etc. and create a GUI with dynamic labels. Learning and understanding Pygame in Python will help you progress in the programming field by creating simple Python applications. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

 COURSE_DESCRIPTION: This project focuses on the time series data analysis for beginners using python. Model building is effective only after doing proper exploratory analysis and get insight into the data set. The objectives are as follows: 1. Importing required libraries and import time-series data sets. 2. Get basic descriptive statistics and review the summary of time-series data 3. Get inference from the visualization graphs of time series data 4. Check the behavior of time series data 5. Apply transformation functions to convert non-stationary to stationary This Guided Project was created by a Coursera community member.

COURSE_DESCRIPTION: This specialization provides learners with the necessary knowledge and practical skills to develop a strong foundation in information visualization and to design and develop advanced applications for visual data analysis. The specialization is characterized by two main complementary features: (1) providing a strong understanding of visual perception and the theory of visual encoding to design and evaluate innovative visualization methods; (2) providing the necessary skills to develop advanced web-based applications for visual data analysis. The specialization is organized around four courses that cover fundamentals, applied perception, advanced visualization method and interactive visualization. The specialization is meant to prepare students to work on complex data science projects that require the development of interactive visual interfaces for data analysis. The courses can also be taken individually to improve relevant skills in visualization. For instance, the course on applied perception provides unique skills to evaluate and design innovative visualization in all sorts of scenarios.

COURSE_DESCRIPTION: Dieser Kurs konzentriert sich auf die Verarbeitung von Daten und die Durchführung grundlegender Berechnungen mit Formeln in Google Tabellen. Zunächst erfahren Sie, wie Sie Formeln in einer Zelle manuell auswählen und verwenden können und wie Sie Zugriff auf die vollständige Liste der in Google Tabelle verfügbaren Funktionen erhalten. Sie werden auch sehen, wie Sie Formeln kopieren können, um eine Tabelle schnell auszufüllen. Andere Funktionen ermöglichen es Ihnen, Werte in einem Blatt zu ordnen, zu zählen und zu runden. Die Funktionen von Google Tabelle sind auch nützlich, um Text zu modifizieren. Zum Beispiel, um bestimmte Zeichen oder eine Textkette zu ersetzen. Schließlich lernen Sie, wie Sie Formeln erstellen, um Zufallszahlen zu generieren und Leerzeichen zu entfernen.

COURSE_DESCRIPTION: This course is the second course in a series that aims to prepare you for a role working as a programmer. In this course, you will be introduced to the five main concepts in procedural programming: user input, console output, variable declaration and assignment, decision branching and iteration. Labs will allow the students to apply the material in the lectures in simple computer programs designed to re-enforce the material in the lesson. Learners will need to have a local machine with any one of the following operating systems; Windows 7 SP1 or higher, macOS 10.1.13 or higher, or almost any version of Linux from the last several years. The learner will either need to download the free community edition of Visual Studio or the open source .NET Core installation. We will walk you through the process of getting your local environment set up as part of the course.

COURSE DESCRIPTION: The Autowiring feature in Spring enables the injection of object dependency implicitly using a setter or constructor injection. Use this course to explore complex beans with dependencies on other beans and how the autowiring feature links them together. Examine how to create beans in reference to other beans, use the @Autowired annotation, and build a bean with multiple dependencies. You will also investigate different types of autowiring and discover how autowiring manages the linking of beans. After completing this course, you will have the skills to construct a complex bean with 1-1 or 1-many dependencies and configure beans with Autowiring.

COURSE DESCRIPTION: 5G is subject to numerous rules and regulations enforced by various levels of government of all countries around the world. Regulations consist of laws that require the technology to adhere to specific thresholds and implementation methods, frequency allocation procedures, as well as local government by-laws and deployment rules. Navigating through the multitude of rules and regulations can be challenging at best and prohibitive for 5G networks at worst. As a result, it is necessary to employ a specific strategy to ensure that these rules and regulations are adhered to while at the same time enabling the smooth rollout of the technology. Use this course to examine the intricacies involved in dealing with 5G governmental policies, particular obstacles that both regulators and local governments may present in 5G deployment, and some guiding principles that will help in overcoming such difficulties.

COURSE DESCRIPTION: Site reliability engineers (SREs) encounter numerous and varied pipeline technologies and frameworks in their work. When building a pipeline, SREs need to invest considerable time during the design phase to ensure the results work best for the specific case. In this course, you'll explore the numerous features of a pipeline, such as latency, high availability, development, and operations. You'll also examine the two different pipeline mutations: idempotent and two-phase, as well as the checkpointing technique and various code patterns. You'll then investigate the five core characteristics of the pipeline maturity matrix and outline how they should be used to design the pipeline technology. You'll then identify potential failure modes, outage causes, and different prevention and response techniques. Finally, you'll outline event delivery system design and operations and how to plan for customer integration and support.

COURSE DESCRIPTION: Static means something different in C++ compared to C. In C, static refers to a storage class for storing specific types of variables. In C++, static refers to member functions and variables associated with the entire class. In this course, learn how to mark a member variable within a class as static, initialize a static member variable, and access it from methods within and outside the class. Next, discover how static member functions can be used for class-level behavior. Finally, learn how to define and use a destructor. After completion of the course, you'll be able to create and use static variables, access them using the scope resolution operator, and instantiate and deallocate a pointer in constructors and destructors.

COURSE DESCRIPTION: Learn front-end and hybrid mobile development, with server-side support, for implementing a multi-platform solution. The first two courses in this Specialization cover front-end frameworks: Bootstrap 4 and React. You'll also learn to create hybrid mobile applications, using React Native. On the server side, you'll learn to implement NoSQL databases using MongoDB, work within a Node.js environment and Express framework, and communicate to the client side through a RESTful API. Learners enrolling in this Specialization are expected to have prior working knowledge of HTML, CSS and JavaScript. Ideally learners should complete the courses in the specified sequence. It is strongly recommended that the React course be completed before proceeding with the React Native course.

COURSE_DESCRIPTION: Knowing how to correctly use the many AWS cloud services to monitor applications and services for deployment is an essential certified AWS developer skill. In this course, you'll start by exploring the characteristics and purposes of the various troubleshooting and monitoring resources on the AWS cloud before learning how to work with them. Next, you'll learn to use the feature of AWS CloudWatch, such as metrics, alarms, events, and logs, to monitor resources and visualize collected metric data. You'll then work with AWS X-Ray to monitor, troubleshoot, and improve applications and use AWS CloudFormation to create an Elastic Beanstalk application to generate data for X-Ray. Finally, you'll learn how to create a Trail in AWS CloudTrail to monitor and record API calls and user activity.

COURSE_DESCRIPTION: The Salesforce economy will create more than \$1 trillion in new revenue and 4.2 million jobs between 2019 and 2024. Developed in partnership with Trailhead - Salesforce's official learning platform - this certificate aims to teach you the foundational skills in Salesforce that will prepare you for a variety of entry-level sales roles, including the sales operations specialist position. This certificate is designed for beginners. No previous experience in Salesforce, sales, or CRM is necessary to be successful. Through four courses, you will learn the fundamentals of CRM, how to manage leads in Salesforce, how to manage opportunities in Salesforce, how to use Salesforce to ensure customer success, and how to effectively leverage Salesforce data through reports and dashboards.

COURSE_DESCRIPTION: Good data collection is built on good samples. But the samples can be chosen in many ways. Samples can be haphazard or convenient selections of persons, or records, or networks, or other units, but one questions the quality of such samples, especially what these selection methods mean for drawing good conclusions about a population after data collection and analysis is done. Samples can be more carefully selected based on a researcher's judgment, but one then questions whether that judgment can be biased by personal factors. Samples can also be draw in statistically rigorous and careful ways, using random selection and control methods to provide sound representation and cost control. It is these last kinds of samples that will be discussed in this course. We will examine simple random sampling that can be used for sampling persons or records, cluster sampling that can be used to sample groups of persons or records or networks, stratification which can be applied to simple random and cluster samples, systematic selection, and stratified multistage samples. The course concludes with a brief overview of how to estimate and summarize the uncertainty of randomized sampling.

COURSE_DESCRIPTION: This 13-video course explores how indexes work to speed up query execution, and how views can be used to abstract complex queries in a convenient fashion. Learners will explore advanced abstractions in MySQL, including a view, which is a virtual table, and indices. Then you will learn how to use views to build abstractions for complex and common query operations in your use case. You will examine indices, which are auxiliary data structures which are maintained by a DBMS (database management system). Next, learn how to use an index on a database to make queries fast and easy. You will examine normal forms in database design, a standard set of rules to test the design of a table. This course demonstrates how to apply the analysis of normal forms to optimize the structure of your relations, and then to use appropriate indices to speed up query execution on them. Finally, this course demonstrates first, second, and third normal forms, and how to fix violations.

COURSE_DESCRIPTION: C++ is still a powerful programming language, despite the advent of various modern languages. Learning C++ enables the learner to easily perceive the most trending programming languages. The Programming C++ journey facilitates the learners to understand the functional programming model and Object-oriented programming model and to identify which model to apply under what circumstances. Each learning path presents adequate chances for writing programs and identifying & fixing errors. As the learners keep gaining knowledge, they will demonstrate coding skills in lab practice, capstone projects, and final assessments. This journey is a blend of all the fundamentals and the new features of C++. The intent here is to provide the learners with all the most crucial information in one place to write correct, portable, professional-quality code. The first track of this journey offers the learners a complete understanding of every fundamental feature of the C++ programming language. In the second track, the focus shifts to core programming in C++, where the learners will recognize the significance of object-oriented programming. The journey concludes with the exploration of advanced C++ topics like File Handling, Data Structures, First-class functions, Templates, C++ Lambdas, Graphics, and the development of a simple gaming application.

COURSE_DESCRIPTION: Charts and graphs are powerful tools for visually presenting data, patterns, and trends. This course covers the essentials of chart creation, formatting, and design in PowerPoint. In this course, you will see how to create charts in PowerPoint and insert them from Excel. You will learn how to edit data and format the way it is presented, by changing your chart type and layout. The course also introduces a number of tools to enhance the way you present your data, from titles and labels to gridlines and legends. You will not only see how to format the overall appearance of your charts, but also how to manage and adjust these various different chart elements. Finally, the course will teach you how to style your chart using colors, effects, and WordArt. Would you like hands-on practice? Go to the Resources section of the course and download the sample files to follow along with select videos.

COURSE DESCRIPTION: In Java, a linked list is a sequence of nodes, each node is linked to the previous and next node in the sequence. In this course, you'll learn how to implement the singly linked list and write code to perform a range of operations on the linked list. First, you'll gain a conceptual understanding of how a node in a singly linked list allows you to connect to all other nodes using the Next reference. Then you'll move on to examine how to perform common operations on this linked list, such as inserting a new node, searching for a node, counting nodes, and deleting nodes. For each of these operations, you'll learn to assess the time complexity of the code that you've written.

COURSE DESCRIPTION: The Arduino is an open-source computer hardware/software platform for building digital devices and interactive objects that can sense and control the physical world around them. In this class you will learn how the Arduino platform works in terms of the physical board and libraries and the IDE (integrated development environment). You will also learn about shields, which are smaller boards that plug into the main Arduino board to perform other functions such as sensing light, heat, GPS tracking, or providing a user interface display. The course will also cover programming the Arduino using C code and accessing the pins on the board via the software to control external devices. Please note that this course does not include discussion forums. Upon completing this course, you will be able to: 1. Outline the composition of the Arduino development board 2. Describe what it means to program the board's firmware 3. Read board schematics 4. Install Arduino IDE 5. Describe what "shields" are and how they are used 6. Specify the role of libraries in the use of shields 7. Compile and run a program 8. Name C Variables and Types 9. Name common C operators 10. Use conditionals and loops 11. Explain functions, their definition and invocation 12. Explain the implications of global variables 13. Undertake

the Arduino build process 14. Describe the role of the tools behind the IDE 15. Describe how to invoke functions in classes 16. Explain the structure of an Arduino sketch 17. Access the pins of the Arduino 18. Differentiate between digital and analog pin 19. Debug embedded software 20. Explain the importance of controllability and observability in the debugging process 21. Describe common debugging architectures for embedded systems 22. Explain how the UART Serial communication protocol works 23. Describe how the Arduino Serial library performs serial communication

COURSE_DESCRIPTION: If you're planning to carry out a Lean process improvement project, you'll need a method for documenting how the current process works. Using process documentation enables you to identify any potential gaps and to improve the process design. In this course, you'll learn about different Lean Six Sigma tools and techniques used to document, model, and analyze processes and procedures for business process improvement projects. You'll also explore the steps involved in mapping a process, and how to use the map to identify problems and maintain process control. This course is aligned with ASQ's 2015 Six Sigma Green Belt Body of Knowledge.

COURSE_DESCRIPTION: In this series of video tutorials, you will learn about file and stream handling in Java with a strong conceptual foundation, before moving onto practical scenarios. Begin by learning how to navigate Java's complicated hierarchy of classes for dealing with byte and character streams. You will then learn how to apply the skip and available methods of FileInputStream objects and identify when the end of a byte stream has been reached. You will be able to write a byte stream by using the OutputStream and FileOutputStream classes, and then examine how to copy any file as a byte sequence using the FileInputStream and FileOutputStream classes. Move on to learning how to read a character stream using the FileReader and FileWriter classes. You will then copy a character file as a sequence of characters using the FileReader and FileWriter classes. At the end of the course, participants will be able to summarize the key concepts covered.

COURSE_DESCRIPTION: Explore the Azure cloud reference model, Cloud Adoption Framework, and use of cloud architecture in migration. Cloud migration is moving data, application, and various other business elements from an on-premises environment or platforms to cloud environments or platforms. In this course, examine prominent Azure cloud migration tools and cloud migration strategies for Azure. Key concepts covered include: how to use the Azure Cloud reference model for scalability, availability, manageability, and security; the steps involved in adopting Microsoft Cloud Adoption Framework for Azure; and the process flow of Azure cloud migration. You will learn about cloud migration plans in order to adopt appropriate roadmap of cloud migration; Azure cloud migration strategies (rehost, refactor, rearchitect, and rebuild); and capabilities of Azure cloud migration tools. Next, see Azure tools that can be used to migrate data to Azure; demonstrations of working with Azure Storage Explorer to migrate data to Azure; and the process flow for Azure cloud migration. Learn about Azure cloud migration strategies and Azure-compliant cloud migration tools, and data migration to Azure with Azure Storage Explorer.

COURSE_DESCRIPTION: Agile projects use many of the tools and techniques from lean project management in order to ensure that processes are as efficient as possible. Agile project management tools are often simple and highly visual, where a collocated team can easily access them. In this course, you'll learn about key Agile exam concepts such as muda or waste, the Kanban system, and process efficiency. You'll explore other concepts that are critical when managing Agile projects, including work in progress, Little's Law, and the product vision. This course also introduces you to the benefits of collocated Agile teams when managing projects, including osmotic learning and communication. This course is one of a series in the Skillsoft learning path that covers the objectives for the PMI Agile Certified Practitioner (PMI-ACP)(r) exam. PMI-ACP is a registered mark of the Project Management Institute, Inc.

COURSE_DESCRIPTION: Negotiation is not a game where the "winner takes it all" - it's a relationship-building process where those involved try to understand each other's needs and think creatively about solutions. Central to this process are effective negotiating skills. In this course, you'll learn how to build and maintain trust so you can find common ground with the other party. You'll hone your negotiation skills by exploring how people with different personality types may react during negotiations. You'll also learn how to manage emotions and interests, facilitate agreements, and overcome continued resistance. Finally, you'll learn how to close a negotiation so that all parties involved are satisfied.

COURSE_DESCRIPTION: The ability to give genuinely constructive feedback is vital in the workplace. If you're a manager and are responsible for developing others, you'll likely have to inform employees if their performance doesn't meet the standard required. This is a delicate situation, and one that requires tact and preparation. But, if done effectively, providing feedback can not only improve performance, but also motivate people and strengthen relationships. In this course, you'll learn how to plan a feedback session and how to give feedback in a positive manner. You'll also learn techniques for handling bad reactions to feedback and your own nervousness, as well as how to give feedback to people at different organizational levels.

COURSE_DESCRIPTION: Assumptions are necessary to help us make sense of our world. We are bombarded with so much information that we simply couldn't function if we didn't each have some basic premises to work from. That said, the critical thinker knows assumptions can get in the way of rational decision making. When solving problems, it's necessary to use strategic thinking to challenge our assumptions and find the right solutions. This course defines what assumptions are, describes how different kinds of assumptions may be challenged, and covers the importance of seeking out other people's perspectives.

COURSE_DESCRIPTION: All organizations must go through some type of change in order to adapt to new market forces. Adapting to change, whether it involves new processes, strategies, or personnel, is never easy, but is a vital aspect of a company's long-term success and resilience. In this course, you'll learn about key outputs of a change initiative, such as success factors that improve an organization's flexibility and make it more resilient. You'll explore how to identify stakeholder groups needed when adapting to new processes, and the roles they play in changing operations. You'll also learn how to evaluate the three keys to sustainable change: discomfort, vision and proper skill level.

COURSE_DESCRIPTION: When adapting to change, effective planning is key. If planned and carried out properly, a change initiative can enhance an organization's flexibility and resilience in the face of future disruptions. In this course, you'll learn tools for adapting to new processes, such as change charters and guiding coalitions. You'll discover how to interpret stakeholders' influence and input and how they can help when changing your organization's strategy. You'll also learn best practices for creating codes of change that will enable to successfully adapt and become more resilient.

COURSE_DESCRIPTION: In diesem Kurs können die Lernenden die Grundlagen von Word 365, dem Textverarbeitungsprogramm von Microsoft, erkunden. Wenn Sie noch keine Erfahrung mit Word haben, ist dies der perfekte Kurs, um mit der Nutzung des Programms zu beginnen. Zunächst lernen Sie, wie Sie die Applikation auf Ihrem Desktop über die Windows 10-Oberfläche öffnen. Anschließend lernen Sie viele der Tools und Funktionen kennen, die auf der Startseite zur Verfügung stehen, um ein Dokument zu erstellen oder ein bestehendes Dokument zu öffnen. Sie werden auch die Tools kennenlernen, die auf der Bearbeitungsoberfläche zur Verfügung stehen, z. B. wie Sie auf die Multifunktionsleiste zugreifen, wie Sie die Backstage-Ansicht, die Schnellzugriffsleiste und die Statusleiste verwenden. In diesem Kurs lernen Sie auch, wie Sie grundlegende Aufgaben zur Bearbeitung eines Dokuments durchführen, z. B. Text einfügen, Aktionen rückgängig machen und wiederholen und ein Dokument speichern. Schließlich erfahren Sie auch, wie Sie Ihre Dokumente per E-Mail teilen können.

COURSE_DESCRIPTION: Integrating AWS AI services and SageMaker with any machine learning (ML) or deep learning project is a great way to enhance its capabilities. Through this course, learn more about the additional AWS AI Services that are ready to use in the form of direct API without the need to train any ML models and dive deeper into more SageMaker functionality. Get familiar with AWS AI services that can be fully integrated into your applications in minutes. This course will also introduce you to some pre-trained algorithms in SageMaker for building high-performance natural language processing (NLP) and computer vision apps using fine-tuning techniques. After completing this course, you'll be able to identify several AI services that can be used as APIs in AWS and describe SageMaker's extensive capabilities in handling text and images. You'll also be a step closer to preparing for the AWS Certified Machine Learning - Specialty certification exam.

COURSE_DESCRIPTION: In this course, application developers learn how to design and develop cloud-native applications that seamlessly integrate managed services from Google Cloud. Through a combination of presentations, demos, and hands-on labs, participants learn how to develop more secure applications, implement federated identity management, and integrate application components by using messaging, event-driven processing, and API gateways. Completing one version of each lab is required. Each lab is available in Node.js. In most cases, the same labs are also provided in Python or Java. You may complete each lab in whichever language you prefer. This is the second course of the Developing Applications with Google Cloud series. After completing this course, enroll in the App Deployment, Debugging, and Performance course.

COURSE_DESCRIPTION: 3D printing can provide an exact replica of a body part. But the printing process is not building or molding the model in traditional ways. The technology creates a solid 3D object by taking thin imaging slices from computer files. Mayo Clinic has been working with 3D printing for at least 16 years, applying it to clinical and surgical areas. "And one of the many benefits we have from 3D printing is the ability to inform the patient," says Dr. Jonathan Morris, a Mayo Clinic neuroradiologist. (Published 12/15/2020)

COURSE_DESCRIPTION: Bash is the default shell language in most server computing environments in Linux. The ability to leverage Bash scripting abilities for system administration and automation of tasks, including security, makes it an essential tool to understand and use. In this course, you'll navigate the vital elements of the Bash scripting language and analyze the output of common commands and scripts. You'll learn how to use Bash variables, conditionals, and loops and apply timing to a Bash script. You'll also learn how to change and list directories using Bash scripts, as well as how to change the ownership and permissions on files and folders. Next, you'll create files and custom functions, use piped commands to chain Bash scripts together, and redirect outputs using a Bash script.

COURSE_DESCRIPTION: Java Class Library is the fourth and final course in the Core Java Specialization. The Core Java Specialization is part of a series of programming specializations, derived from LearnQuest's private Java Bootcamps, designed to provide the skill set necessary to be hired as an IT developer using Java in many corporate environments. After completing this course, you will be able to write reusable code that remains type-safe using Java Generics, work with collections of objects, work with files, handle runtime errors, and generally be prepared to move on to learning to use Java frameworks such as Spring Boot and Jakarta EE. There are over 4200 classes in the Java 8 class library, with 100s of new ones compared to prior versions of Java. In this course, we will cover additional language features that enable the class library, essential library areas, and provide roadmaps to areas for self-exploration. To be successful in this course, you should have taken: - Course 1: Introduction to Java - Course 2: Introduction to Object-Oriented Programming with Java - Course 3: Object-Oriented Hierarchies in Java or have equivalent knowledge.

COURSE_DESCRIPTION: R supports not one but multiple alternative object-oriented programming paradigms. These are known as object systems and constitute a relatively underutilized but incredibly powerful feature of the R language. This course will show you how to work effectively with object systems in R. You'll begin by identifying different object systems. You'll then examine how the S3 object system allows some features of object-oriented programming, albeit in a very different form from other OOP languages. You'll move to leverage the R5 object system, also known as the system of reference classes, to create classes and instantiate objects, specify member variables and methods, and initialize values of member functions. You'll also implement inheritance using the system of reference classes. When you're done with this course, you'll be able to utilize different object systems in your R programming projects.

COURSE_DESCRIPTION: Specialized systems by nature can be very challenging for penetration testers. They can use proprietary operating systems and file systems, and may require advanced reverse engineering and sandbox analysis. However, specialized systems are also very susceptible when it comes to weaknesses and vulnerabilities. In this course, you'll learn how to identify common attacks and vulnerabilities against specialized systems, including mobile systems and Internet of Things devices. You'll also explore common vulnerabilities, including data storage system vulnerabilities, management interface vulnerabilities, vulnerabilities related to virtual environments, and vulnerabilities related to containerized workloads. This course is one of a collection that helps prepare learners for the CompTIA PenTest+ (PT0-002) certification exam.

COURSE_DESCRIPTION: Word 365 bietet verschiedene Werkzeuge zum Erstellen von Dokumenten und zum Verwalten der Informationen, die jede Datei enthält. Lernen Sie zunächst, wie Sie Ihre eigenen benutzerdefinierten Vorlagen erstellen können, um auf einfache Weise Dokumente zu erstellen, die Ihren Bedürfnissen besser entsprechen. Als Nächstes erfahren Sie, wie Sie Ihre Dokumente für die gemeinsame Nutzung mit anderen Nutzern vorbereiten können. Prüfen Sie beispielsweise, ob Ihr Dokument versteckte Informationen enthält, die Sie lieber nicht einbinden möchten, oder ob Ihr Dokument grundlegende Anforderungen an die Barrierefreiheit erfüllt. In diesem Kurs erfahren Sie auch, wie Sie Ihre Dokumente einrichten können, indem Sie die Ausrichtung, das Papierformat und die Seitenränder ändern. Diese Einstellungen sind nützlich, um Ihre Dokumente für den Druck vorzubereiten oder sie in andere Dateiformate wie PDF zu exportieren.

COURSE_DESCRIPTION: In this challenge, you will maintain and train a QnA Maker solution that responds to questions by using answers from a supplied FAQ dataset. First, you will create an Azure QnA Maker resource to host a knowledge base. Next, you will use Visual Studio to create a command-line application project, and then you will link it to a library that handles QnA knowledge base management actions. Finally, you will use command-line switches to add the code to manage an FAQ dataset hosted in the QnA Maker service, and then you will populate and train the QnA Maker service by using a full set of questions and answers in a sample file. Note: Once you begin the challenge lab, you will not be able to pause, save, or exit and then return to your challenge lab. Please ensure that you have set aside enough time to complete the challenge lab before you start.

COURSE_DESCRIPTION: There are numerous types of machine learning algorithms, each of which has certain characteristics that might make it more or less suitable for solving a particular problem. Decision trees and support-vector machines (SVMs) are two examples of algorithms that can both solve regression and classification problems, but which have different applications. Likewise, a more advanced approach to machine learning, called deep learning, uses artificial neural networks (ANNs) to solve these types of problems and more. Adding all of these algorithms to your skillset is crucial for selecting the best tool for the job. This fourth and final course within the Certified Artificial Intelligence Practitioner (CAIP) professional certificate continues on from the previous course by introducing more, and in some cases, more advanced algorithms used in both machine learning and deep learning. As before, you'll build multiple models that can solve business problems, and you'll do so within a workflow. Ultimately, this course concludes the technical exploration of the various machine learning algorithms and how they can be used to build problem-solving models.

COURSE_DESCRIPTION: Applications do not stand alone as they are inexorably tied to the related services, infrastructure, and components that are used to create them. Unfortunately, that means that all of those areas can introduce risks to the security and stability of your finished product. In this course, learn how to mitigate risk by automating the scanning of dependencies and ensuring that license compliance is being met. Next, practice scanning and automating source code and organizational policy compliance, as well as automating builds triggered by updates using Azure Container Registry (ACR). Finally, examine break glass solutions for when immediate remediation is needed. This course is one of a collection that prepares learners for the Designing and Implementing Microsoft DevOps Solutions (AZ-400) exam.

COURSE_DESCRIPTION: In einer perfekten Geschäftswelt wären alle Mitarbeiter ideal für ihre Arbeit geeignet, wobei ihre Fähigkeiten und Begabungen vollständig auf ihre Rollen abgestimmt wären. In der realen Welt erfordert eine erfolgreiche Führung jedoch Coaching und Mentoring. Führungskräfte müssen eine Kultur fördern, die dem Coaching förderlich ist, und selbst in der Lage sein, eine Coaching-Rolle zu übernehmen, wenn dies erforderlich ist. In diesem Kurs lernen Sie Coaching-Techniken zum Aufbau dynamischer und zielgerichteter Coachingbeziehungen kennen. Sie machen sich mit einigen Coaching-Prinzipien vertraut, mit denen Sie Ihren Teammitgliedern helfen können, ihre vorgefassten Grenzen zu überschreiten und ihr volles Potenzial auszuschöpfen.

COURSE_DESCRIPTION: In this 19-video course, you will learn how to manage Azure subscriptions and resource groups; learn about management groups and how to create them; and explore how to analyze costs, configure budgets, and view billing information. Key concepts covered in this course include how subscriptions affect the Azure environment, including subscription types and support; using the portal, the CLI, and PowerShell to manage Azure subscriptions; and recognizing how management groups are used to manage multiple subscriptions. You will learn how to use the portal to work with a management group; use the portal to analyze Azure costs; configure a budget scope; and view Azure billing information. Next, learn to create, manage, and delete resource groups using the portal, the CLI, and PowerShell; to move an Azure resource to a different resource group; and to view resource deployments to a resource group. View costs associated with a specific resource group scope; create a resource group budget; and create a custom ARM template in the portal. This one of a series of courses to help learners prepare for the AZ-104: Microsoft Azure Administrator certification exam.

COURSE_DESCRIPTION: Welcome to Course 3 of the E-Marketing Specialization: Mobile Marketing Optimization Tactics, and Analytics. Our final course will start with an introduction to mobile marketing. The remaining modules will provide you with the knowledge needed to increase sales, boost engagement, and interpret website analytics. This course will culminate in a peer-reviewed activity, in which you will have the opportunity to apply all the skills you have learned throughout the previous courses in this series. You are highly encouraged to use this course experience to begin building a digital marketing plan for your current or future business. The activities in this course are all designed to guide you through different sections of a digital marketing plan. Our learning goals for this course are to: - Identify the elements of a mobile marketing strategy and examine the various considerations associated with choosing a mobile platform - Explore the various methods to enhance a mobile experience - Analyze and optimize marketing efforts to improve business outcomes - Develop a digital marketing plan designed to meet your goals and objectives

COURSE_DESCRIPTION: In this course, you will learn how to design assessments around the needs of your ELL students and their language level. You will learn how to incorporate language and content requirements for both formative and summative assessment types. You will learn to assess your ELL students through the use of project and task-based assignments. You will learn to use and modify rubrics to align to and measure student achievement of your language and content learning objectives. The course will also briefly cover strategies for supporting ELL students during standardized testing. Upon completing this course, you will be able to: * Conceptualize theories of authentic assessment as they apply to second language learners * Design formative assessment types incorporating language and content objectives * Design summative assessment types incorporating language and content objectives * Incorporate project and task-based assignments as assessment tools for ELLs * Design rubrics that align to language and content objectives for your ELL(s) * Apply the use of rubrics, both language and content, to the work of your ELL(s). * Support your ELL(s) as they participate in standardized testing

COURSE_DESCRIPTION: As an Azure Administrator, you must proactively plan for IT service disruptions in the cloud. Discover how Azure can ensure business continuity in the event of a disruption in a variety of ways. Plan how Azure Site Recovery (ASR) will be used, and explore how to enable backup of on-premises and cloud-based services to the Azure cloud. Examine how load balancing can improve app performance and fault tolerance. Enable virtual machine replication to a secondary region, back up a web app, and configure an Azure Load Balancer and Application Gateway. This course can be used to prepare for exam AZ-104: Microsoft Azure Administrator.

COURSE_DESCRIPTION: In this capstone course, you will apply various data science skills and techniques that you have learned as part of the previous courses in the IBM Data Science with R Specialization or IBM Data Analytics with Excel and R Professional Certificate. For this project, you will assume the role of a Data Scientist who has recently joined an organization and be presented with a challenge that requires data collection, analysis, basic hypothesis testing, visualization, and modeling to be performed on real-world datasets. You will collect and understand data from multiple sources, conduct data wrangling and preparation with Tidyverse, perform exploratory data analysis with SQL, Tidyverse and ggplot2, model data with linear regression, create charts and plots to visualize the data, and build an interactive dashboard. The project will culminate with a presentation of your data analysis report, with an executive summary for the various stakeholders in the organization.

COURSE_DESCRIPTION: Cloud computing provides alternative IT solutions compared to traditional on-premises IT solutions. On-premises capital expenditures become monthly operating expenditures with the use of Microsoft Azure. You'll begin with exploring the role that virtualization plays in the cloud. You'll learn about the characteristics that define cloud computing along with cloud deployment models. Next, you'll discover cloud service models such as IaaS, PaaS, and SaaS as well related Azure service offerings. Lastly, you'll explore factors influencing the migration of on-premises IT solutions to the Microsoft Azure cloud. This course is one of a collection of courses that prepares learners for the AZ-900 Microsoft Azure Fundamentals certification.

COURSE_DESCRIPTION: If you work on a team offering data or services to clients, you'll likely need to build web services. The most widely adopted technologies for Java-based web services are SOAP and REST, as they allow standardized, scalable, and language-independent external application communication. Use this course shows to learn how to build a web service that adopts the SOAP protocol. Use Maven to create a web service project and the JAX-WS library to build a web service class and a method that remote client applications can invoke. Then, deploy this service to a URL endpoint where clients can access it. Next, explore the automatically generated JAX-WS artifacts, including the WSDL file. Then, use the WSDL file to build a client application and interact with the server-side web service. Bu the end of this course, you'll be able to build SOAP-based web services using JAX-WS and Maven.

COURSE_DESCRIPTION: In today's business world, sustainability is a strategic necessity. The pressures on companies to be more socially, environmentally and economically sustainable are mounting on many fronts. Consumers and shareholders expect more than lip service - they want demonstrated commitment. In this course, you'll learn about ways to identify areas where you can implement sustainable business practices, and some key lessons that can help you integrate sustainability into your company's business strategy. Finally, you'll learn about some concepts that may help you discover other ways you can move your company into higher levels of sustainability by considering some larger systems approaches. Materials in this course are based upon content provided in partnership with MIT Sloan Management Review.

COURSE_DESCRIPTION: ÜBUNG: Dashboard zu Fallbeispiel 1 selbst erstellen Erstelle das Dashboard zu Fallbeispiel 1 selbst in Power BI. Nutze dazu die in einer vorangehenden Stufe bereitgestellten Dateien zu diesem Fallbeispiel. Lade dazu die zugehörige Exceldatei in Power BI Erstelle das Dashboard mit allen Visuals gemäß den Inhalten der nachfolgenden Vorlesung. Am besten schaust du dazu das Video der nachfolgenden Vorlesung an, pausierst es mehrmals und erstellst dann parallel in Power BI deine Fassung. Dein Ergebnis sollte identisch sein zu der Version in den bereitgestellten Dateien (xxxx-zum-Video-Walkthrough.pbix) und den Inhalten des Videos. Lediglich im Format (Überschriften etc) sieht es noch anders aus als die Fassung aus der vorangehenden Vorlesung sowie der Präsentation. OPTIONAL: Falls du möchtest, kannst du deine Visuals auch noch hinsichtlich dem Format anpassen, so dass sie exakt so aussehen, wie in der Präsentation.

COURSE_DESCRIPTION: Spreadsheet software remains one of the most ubiquitous pieces of software used in workplaces around the world. Learning to confidently operate this software means adding a highly valuable asset to your employability portfolio. Across the globe, millions of job advertisements requiring Excel skills are posted every day. At a time when digital skills jobs are growing much faster than non-digital jobs, completing this course will position you ahead of others, so keep reading. In this last course of our Specialization Excel Skills for Business you will build on the strong foundations of the first three courses: Essentials, Intermediate I + II. In the Advanced course, we will prepare you to become a power user of Excel - this is your last step before specializing at a professional level. The topics we have prepared will challenge you as you learn how to use advanced formula techniques and sophisticated lookups. You will clean and prepare data for analysis, and learn how to work with dates and financial functions. An in-depth look at spreadsheet design and documentation will prepare you for our big finale, where you will learn how to build professional dashboards in Excel.

COURSE_DESCRIPTION: With genomics sparks a revolution in medical discoveries, it becomes imperative to be able to better understand the genome, and be able to leverage the data and information from genomic datasets. Genomic Data Science is the field that applies statistics and data science to the genome. This Specialization covers the concepts and tools to understand, analyze, and interpret data from next generation sequencing experiments. It teaches the most common tools used in genomic data science including how to use the command line, along with a variety of software implementation tools like Python, R, and Bioconductor. This Specialization is designed to serve as both a standalone introduction to genomic data science or as a perfect complement to a primary degree or postdoc in biology, molecular biology, or genetics, for scientists in these fields seeking to gain familiarity in data science and statistical tools to better interact with the data in their everyday work. To audit Genomic Data Science courses for free, visit <https://www.coursera.org/jhu>, click the course, click Enroll, and select Audit. Please note that you will not receive a Certificate of Completion if you choose to Audit.

COURSE_DESCRIPTION: Welcome to this course on Data Analytics for Lean Six Sigma. In this course you will learn data analytics techniques that are typically useful within Lean Six Sigma improvement projects. At the end of this course you are able to analyse and interpret data gathered within such a project. You will be able to use Minitab to analyse the data. I will also briefly explain what Lean Six Sigma is. I will emphasize on use of data analytics tools and the interpretation of the outcome. I will use many different examples from actual Lean Six Sigma projects to illustrate all tools. I will not discuss any mathematical background. The setting we chose for our data example is a Lean Six Sigma improvement project. However data analytics tools are very widely applicable. So you will find that you will learn techniques that you can use in a broader setting apart from improvement projects. I hope that you enjoy this course and good luck! Dr. Inez Zwetsloot & the IBIS UvA team

COURSE_DESCRIPTION: Welcome to Symmetric Cryptography! Symmetric cryptography relies on shared secret key to ensure message confidentiality, so that the unauthorized attackers cannot retrieve the message. The course describes substitution and transposition techniques, which were the bases for classical cryptography when the message is encoded in natural language such as English. Then, we build on product ciphers (using both substitution and transposition/permutation) to describe modern block ciphers and review the widely used cipher algorithms in DES, 3-DES, and AES. Lastly, we enable the use of block ciphers to support variable data length by introducing different modes of block cipher operations in ECB, CBC, CFB, OFB, and CTR modes. This course is cross-listed and is a part of the two specializations, the Applied Cryptography specialization and the Introduction to Applied Cryptography specialization.

COURSE_DESCRIPTION: This 17-video course explores Azure's high availability options used to ensure business continuity while preparing learners for the AZ-300: Microsoft Azure Architect Technologies certification exam. When using Microsoft Azure Cloud to deploy and manage resources, one goes to an Azure region which is constantly changing geographical locations. These regions are an important factor in developing both a DRP (disaster recovery plan) and BCP (business continuity plan). You will learn to use Azure Site Recovery Services to build and use a recovery vault to both back up on-premises and in the cloud, and for replication. This course demonstrates how to use a DPR to replicate Azure VMs (virtual machines) to alternate Azure regions, and how to test failover. You will learn to use the Azure portal to create a VM scale set, to scale out or add VMs when an app is busy, or to reduce VMs to save on costs. Finally, you will learn to use the Azure portal to create an availability set.

COURSE_DESCRIPTION: The Spring MVC framework helps build web applications robustly and intuitively using the model-view-controller design pattern. Working with this framework helps produce flexible, loosely-coupled, three-tiered architecture web applications. In this course, you'll explore the Spring framework and the basic design principle of inversion of control, which is achieved in Spring using dependency injection. You'll also examine the model-view-controller design pattern, identifying the core components, interactions, technologies, and architectural elements that comprise Spring MVC. You'll discuss the range of modules that Spring offers for data access, web applications, messaging, and security. Next, you'll work with Maven web apps on Eclipse and Tomcat and Spring MVC apps using Eclipse and XML. Finally, you'll learn how to configure view resolvers for logical view names and Spring beans using annotations.

COURSE_DESCRIPTION: Adopting and employing best practices in software development not only mitigates virtually all levels of risk but also naturally results in high-quality, secure, and maintainable software. Consequently, professional software development organizations typically take care to observe best practices. Use this course to learn some of the most significant best practices when programming in Go. Study approaches to organizing Go code and documenting Go programs. Examine best practices related to error handling, data handling, concurrency, and testing. Then, finish off by implementing some of these best practices in a Go program. When you're done, you'll be able to leverage the benefits of a best practice approach when programming in Go.

COURSE_DESCRIPTION: In this lab, you will configure a scalable, load-balanced web server farm by using Amazon Web Services (AWS). First, you will configure an Amazon Elastic Compute Cloud (Amazon EC2) instance, and then you will create a custom Amazon Machine Image (AMI) based on the instance. Next, you will create a launch template, and then you will configure an Auto Scaling group. Finally, you will install a web server by using AWS System Manager Run Command, and then you will configure load balancing for the server farm. Note: Once you begin the challenge, you will not be able to pause, save, or exit and then return to your challenge. Please ensure that you have set aside enough time to complete the challenge before you start.

COURSE DESCRIPTION: This unique Master-level course offered by the Center for Wireless Technology Eindhoven (CWT/e) of the Eindhoven University of Technology, The Netherlands, provides students with in-depth knowledge and hands-on experience on RF and mmWave circuit design. The course covers the topics on how to derive the RF wireless systems specifications, and how to design the main building blocks of a transceiver, i.e., low noise amplifier, power amplifier, RF mixers, oscillators, and PLL frequency synthesizers. It is divided into two parts: (1) theoretical lectures will cover the basis of RF and mmWave Circuit Design; and (2) design labs will include simulation and implementation of these circuits. The design labs are completely optional for obtaining the certificate, but they are recommended because they allow students to put into practice all the acquired theoretical knowledge, and of course, implementing the circuits is where all the fun is! The students will be able to do 70% of the design labs using simulation tools, which already offers a great learning experience. The other 30% will require students to either get access to an electronics lab or to purchase a few off-the-shelf components. But ultimately, this would allow students to design and build their own transceiver at home! The course contains theoretical video classes with examples, quizzes, and an entire set of simulation files, step-by-step procedures, recorded data of real-life circuits, and solution videos so that students can learn from and build even better circuits.

COURSE_DESCRIPTION: Reliable networking and deployments are critical in enabling robust and highly-available Kubernetes clusters. Continuous monitoring and the right diagnostic tools and commands help analyze network latency, performance, and availability. In this course, you'll explore the built-in Kubernetes application debugging mechanism. Furthermore, you'll examine how to manage out-of-resource scenarios and frequently encountered Kubernetes deployment networking issues. Moving along, you'll configure ReplicationController to ensure Pods are always up and apply configuration files to scale up applications and manage load. You'll use a Pod as a test environment to diagnose DNS problems and investigate Kubernetes network ingress, service traffic flows, and init container execution problems. You'll inspect Kubernetes iptables rules used for virtual IP translation and Service IP load balancing and gracefully delete StatefulSet Pods. This course is part of a series that aligns with the Certified Kubernetes Administrator exam's objectives and can be used in preparation for it.

COURSE_DESCRIPTION: Showing the right insights at the right time can make a significant difference in productivity. Providing relevant insights to your sellers is important and is also a difficult task. Sales Insights provide many insights out-of-box through Relationship Assistant, but over time we identified that every organization and every sales team are different. To help ensure the assistant is still relevant, we allowed you to add customized insights and display for your teams. Using the Microsoft Power Automate, the Assistant studio allows you to create insights through low code no code. In this module, you will learn how to create various custom insights using Power Automate. The following tutorials help you get started with a basic custom insight, a hello world equivalent, and we gradually increase the complexity as we go along.

COURSE_DESCRIPTION: Unternehmen müssen immer nach Möglichkeiten suchen, sich einen Vorteil zu verschaffen. Platform as a Service (PaaS) und Application Platform as a Service (aPaaS) können die Kosten senken und gleichzeitig die Flexibilität Ihres Unternehmens erhöhen. PaaS ist eine cloudbasierte Computing-Option, die Ressourcen und Infrastruktur für Geschäftslösungen bereitstellt, insbesondere für die Entwicklung und Bereitstellung von Webservices und Softwareanwendungen. PaaS kann eine praktikable Option zur Kostensenkung bieten und gleichzeitig die Flexibilität und Reichweite eines Unternehmens erhöhen. In diesem Kurs lernen Sie die potenziellen Vorteile von Cloud Computing und PaaS für Ihr Unternehmen kennen. Außerdem erfahren Sie mehr über die verschiedenen verfügbaren Bereitstellungsoptionen, wo und wann PaaS am besten genutzt wird und welche aktuellen Trends sich bei PaaS-Anwendungen abzeichnen. Ferner untersuchen Sie, wie Sie PaaS in Ihrem Unternehmen implementieren.

COURSE_DESCRIPTION: Understanding network connectivity technologically is one thing. Appreciating how it impacts humans, individually and collectively, is another. Technology is for humans, and 5G does not exist for its own sake but has been developed to serve and respond to human needs. In this course, we'll take an in-depth look into the various human ecosystems that 5G directly or indirectly affects, how it affects them, and what kind of benefits and challenges can be expected from its future application. We'll go beyond the applications themselves, examining the more profound results expected in various "smart" domains, as well as in several logistical and data-intensive disciplines. Through this, we aim to gain insight into how these results will affect humans socially and culturally. After taking this course, you'll be able to outline the specific ways 5G could help solve many of the unique challenges facing humanity.

COURSE_DESCRIPTION: Solve real world problems with Java using multiple classes. Learn how to create programming solutions that scale using Java interfaces. Recognize that software engineering is more than writing code - it also involves logical thinking and design. By the end of this course you will have written a program that analyzes and sorts earthquake data, and developed a predictive text generator. After completing this course, you will be able to: 1. Use sorting appropriately in solving problems; 2. Develop classes that implement the Comparable interface; 3. Use timing data to analyze empirical performance; 4. Break problems into multiple classes, each with their own methods; 5. Determine if a class from the Java API can be used in solving a particular problem; 6. Implement programming solutions using multiple approaches and recognize tradeoffs; 7. Use object-oriented concepts including interfaces and abstract classes when developing programs; 8. Appropriately hide implementation decisions so they are not visible in public methods; and 9. Recognize the limitations of algorithms and Java programs in solving problems. 10. Recognize standard Java classes and idioms including exception-handling, static methods, java.net, and java.io packages.

COURSE DESCRIPTION: In this 9-video course, learners examine statistical and machine learning implementation methods and how to manage anomalies and improvise data for better data insights and accuracy. The course opens with a thorough look at the sources of data anomaly and comparing differences between data verification and validation. You will then learn about approaches to facilitating data decomposition and forecasting, and steps and formulas used to achieve the desired outcome. Next, recall approaches to data examination and use randomization tests, null hypothesis, and Monte Carlo. Learners will examine anomaly detection scenarios and categories of anomaly detection techniques and how to recognize prominent anomaly detection techniques. Then learn how to facilitate contextual data and collective anomaly detection by using scikit-learn. After moving on to tools, you will explore the most prominent anomaly detection tools and their key components, and recognize the essential rules of anomaly detection. The concluding exercise shows how to implement anomaly detection with scikit-learn, R, and boxplot.

COURSE DESCRIPTION: Business etiquette isn't just about getting and doing things right, it's about sending a message of professionalism and respect to superiors, fellow team members, and clients. When you are professional, polite, and appropriate in the workplace, you are taken more seriously. In this course, you will learn about the key components of business etiquette and how they apply in physical and remote office settings. You'll learn the reasons that dressing professionally can benefit your career and the importance of maintaining an orderly and professional work environment. You'll also be introduced to actions that ensure your communications such as emails, texts, work chat, social media, and video conferencing are at their most professional and polite. Finally, you will learn how tenets of business etiquette can be applied outside of the office environment at offsite events, business meals, and work socials.

COURSE_DESCRIPTION: Nowadays, recommender systems are everywhere. for example, Amazon uses recommender systems to suggest some products that you might be interested in based on the products you've bought earlier. Or Spotify will suggest new tracks based on the songs you use to listen to every day. Most of these recommender systems use some algorithms which are based on Matrix factorization such as NMF(NON NEGATIVE MATRIX FACTORIZATION) or ALS (Alternating Least Square). So in this Project, we are going to use ALS Algorithm to create a Music Recommender system to suggest new tracks to different users based upon the songs they've been listening to. As a very important prerequisite of this course, I suggest you study a little bit about ALS Algorithm because in this course we will not cover any theoretical concepts. Note: This project works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In this Specialization, you will learn industry-standard theory and methods for developing successful user interfaces (UIs). Upon completing this Specialization, you will have fluency with the user research, prototyping and evaluation techniques necessary for creating intuitive interfaces that facilitate good user experiences. You will also have demonstrated this fluency through an in-depth Capstone Project that can be shown to prospective employers in the fast-growing field of UI design. Concepts and techniques covered include structured approaches for helping you understand your user base and their needs (e.g. contextual inquiry and design psychology), widely-employed prototyping and design methods (e.g. low-

fidelity and paper prototyping), and robust techniques for helping you evaluate your design choices (e.g. heuristic evaluation and user studies). By the end of the Specialization, you will be comfortable applying these concepts and techniques to design an interface for a wide variety of users from around the world.

COURSE_DESCRIPTION: Start the UX design process: Empathize, Define, Ideate is the second course in a certificate program that will equip you with the skills needed to apply to entry-level jobs in user experience (UX) design. In this course, you'll complete the first phases of the design process for a project that you'll be able to include in your portfolio. You will learn how to empathize with users and understand their pain points, define user needs using problem statements, and come up with lots of ideas for solutions to those user problems. Current UX designers and researchers at Google will serve as your instructors, and you will complete hands-on activities that simulate real-world UX design scenarios. Learners who complete the seven courses in this certificate program should be equipped to apply for entry-level jobs as UX designers. No previous experience is necessary. By the end of this course, you will be able to: - Empathize with users to understand their needs and pain points. - Create empathy maps, personas, user stories, and user journey maps to understand user needs. - Develop problem statements to define user needs. - Generate ideas for possible solutions to user problems. - Conduct competitive audits. - Start designing a mobile app, a new project to include in your professional UX portfolio.

COURSE_DESCRIPTION: This course covers two of the seven trading strategies that work in emerging markets. The seven include strategies based on momentum, momentum crashes, price reversal, persistence of earnings, quality of earnings, underlying business growth, behavioral biases and textual analysis of business reports about the company. In the first part of the course, you will learn how to read an academic paper. What parts to pay attention to and what parts to skim through will be discussed here. For every strategy, first you will be introduced to the original research and then how to implement the strategy. The first strategy, Piotroski F -score will be discussed in detail. You will be taught how to calculate the F -Score and how to use this score in a strategy. This is followed by the next strategy, Post earnings announcement drift (PEAD).

COURSE_DESCRIPTION: Erfolgreiches Projektmanagement erfordert ein hohes Maß an Koordination. Dazu sind Integrationsmanagementfähigkeiten erforderlich, damit ein Projektteam Änderungsanträge bearbeiten und Projekte von der Initiierung und Planung bis zum erfolgreichen Projektabschluss auf Kurs halten kann. In diesem Kurs lernen Sie Methoden und Strategien für die Integration und Koordination aller Projektvorgänge und Änderungen kennen, wie beispielsweise die Änderungssteuerung und das Konfigurationsmanagement. Sie erfahren mehr über den Projektauftrag und den Projektmanagementplan sowie Methoden zum Lenken, Managen, Überwachen und Steuern der Projektarbeit. Außerdem lernen Sie etwas über die Versionskontrolle mithilfe von Änderungsprotokollen und Änderungsgremien sowie die Verwendung von Arbeitsleistungsdaten, um den Terminbasisplan einzuhalten und Ihr Projekt pünktlich fertigzustellen, auch wenn unvermeidliche Änderungen auftreten.

COURSE_DESCRIPTION: In Google Slides, there are many ways to illustrate and enhance your presentations. In this course, explore the tools and techniques needed to insert and edit images. See how to add images from different sources and modify their size, add alt-text, crop, recolor, and adjust them. Next, discover how to create diagrams by inserting shapes and lines. Then discover how to move, arrange and format shapes to better fit within a slide. Create text that's treated like an image by seeing how to insert and format Word art. And finally, learn how to insert a video from different sources, and then format a video, so it plays at specific times. Would you like hands-on practice? Download the sample files from the Course Contents pane or from the Resources section. Then upload the files to your Google Drive to follow along with select videos.

COURSE_DESCRIPTION: The use of Excel is widespread in the industry. It is a very powerful data analysis tool and almost all big and small businesses use Excel in their day to day functioning. This is an introductory course in the use of Excel and is designed to give you a working knowledge of Excel with the aim of getting to use it for more advance topics in Business Statistics later. The course is designed keeping in mind two kinds of learners - those who have very little functional knowledge of Excel and those who use Excel regularly but at a peripheral level and wish to enhance their skills. The course takes you from basic operations such as reading data into excel using various data formats, organizing and manipulating data, to some of the more advanced functionality of Excel. All along, Excel functionality is introduced using easy to understand examples which are demonstrated in a way that learners can become comfortable in understanding and applying them. To successfully complete course assignments, students must have access to a Windows version of Microsoft Excel 2010 or later.

WEEK 1 Module 1: Introduction to Spreadsheets In this module, you will be introduced to the use of Excel spreadsheets and various basic data functions of Excel. Topics covered include: • Reading data into Excel using various formats • Basic functions in Excel, arithmetic as well as various logical functions • Formatting rows and columns • Using formulas in Excel and their copy and paste using absolute and relative referencing

WEEK 2 Module 2: Spreadsheet Functions to Organize Data This module introduces various Excel functions to organize and query data. Learners are introduced to the IF, nested IF, VLOOKUP and the HLOOKUP functions of Excel. Topics covered include: • IF and the nested IF functions • VLOOKUP and HLOOKUP • The RANDBETWEEN function

WEEK 3 Module 3: Introduction to Filtering, Pivot Tables, and Charts This module introduces various data filtering capabilities of Excel. You'll learn how to set filters in data to selectively access data. A very powerful data summarizing tool, the Pivot Table, is also explained and we begin to introduce the charting feature of Excel. Topics covered include: • VLOOKUP across worksheets • Data filtering in Excel • Use of Pivot tables with categorical as well as numerical data • Introduction to the charting capability of Excel

WEEK 4 Module 4: Advanced Graphing and Charting This module explores various advanced graphing and charting techniques available in Excel. Starting with

various line, bar and pie charts we introduce pivot charts, scatter plots and histograms. You will get to understand these various charts and get to build them on your own. Topics covered include • Line, Bar and Pie charts • Pivot charts • Scatter plots • Histograms

COURSE_DESCRIPTION: Have you started using spreadsheets like Excel and want to learn how to write formulas and functions to perform simple data analysis? In this project, you will learn about the general format for writing formulas and functions in Excel to perform analysis on the sales data from a sample company. In this analysis, you will calculate total sums of profits, you will learn how to use functions to analyze the popularity of the items sold and you will also learn how to calculate averages and percentages of monthly profits. Throughout the project, you will work through some examples that will show you how to apply the formulas and functions you have learned.

COURSE_DESCRIPTION: In this challenge, you will establish a secure network environment for an application service that will be hosted on AWS. First, you will enable the assignment of public IP addresses to a subnet in a virtual private cloud (VPC). Next, you will create a network access control list (ACL) for the public subnet, and then you will create a network ACL for the private subnet. Finally, you will create new Amazon Elastic Compute Cloud (Amazon EC2) instances that use the network ACLs, and then you will test access to the EC2 instances through the network ACLs. Note: Once you begin the challenge, you will not be able to pause, save, or return to your challenge. Please ensure that you have set aside enough time to complete the challenge before you start.

COURSE_DESCRIPTION: In this project, you will create an employee onboarding course with Eduflow. In today's world, more people than ever are working remotely. It is extremely important to be able to provide a smooth and effective onboarding process for new hires, even if you are unable to do so in person. Onboarding programs are an essential part of establishing and maintaining a company brand. Not only should they introduce the new employee to the company and team, onboarding programs should also train each employee on their job expectations and company policies and procedures. In this project, we will streamline the onboarding process to ensure each employee receives the same message and general training. At the same time, we are going to customize the onboarding process so that it also hones in on the individual training needs of each new hire's position. Eduflow is a free, easy-to-use course builder that will allow us to both streamline and personalize the onboarding experience for each and every new hire. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Intune is a cloud-based service used to improve productivity while protecting corporate data. In this 12-video course, learners will discover how to enroll Windows 10 devices into Intune for simplified management, in preparation for Microsoft MD-101: Managing Modern Desktops exam. You will begin by learning how to create users in Intune and assign them licenses. Then create an Intune group. Discover how to setup automatic enrollment for Windows 10 devices and then enroll Windows 10 devices. Next, examine enrollment options and learn how to perform a Windows device bulk enrollment. You will discover how to set up an enrollment status page, and also take a look at considerations to bear in mind when enrolling non-Windows devices. Then learn how to access and assess the overall device inventory in Intune, and, in the concluding tutorial, delve into reporting features available in the Intune Data Warehouse. The closing exercise involves managing Intune device enrollment by using users and groups, automatic enrollment, and device inventories.

COURSE_DESCRIPTION: Welcome to AWS Cloud Practitioner Essentials. If you're new to the cloud, whether you're in a technical or non-technical role such as finance, legal, sales, marketing, this course will provide you with an understanding of fundamental AWS Cloud concepts to help you gain confidence to contribute to your organization's cloud initiatives. This course is also the starting point to prepare for your AWS Certified Cloud Practitioner certification whenever it's convenient for you. After you complete the course, you'll understand the benefits of the AWS Cloud and the basics of its global infrastructure. You'll be able to describe and provide an example of the core AWS services, including compute, network, databases, and storage. For the finance-minded, you'll be able to articulate the financial benefits of the AWS Cloud, define core billing and pricing models, and learn how to use pricing tools to make cost-effective choices for AWS services.

COURSE_DESCRIPTION: Organizations rely on systems and data to be available and operational when they are needed to manage and run their businesses. Azure provides functionality to ensure high availability of storage systems and the mechanism to ensure a swift and painless disaster recovery strategy. In this course, you'll learn about high availability and disaster recovery, and how they are related to each other and used to provide business continuity. Next, you'll examine how to back up, store, and restore SQL Server databases on virtual machine instances. You'll move on to explore the purpose and features of Azure Always On availability groups and elastic pools, as well as how they are used by Azure SQL databases to provide business continuity. Finally, you'll learn about using Azure Database for PostgreSQL - Hyperscale to create highly available and distributed databases. This course is one in a collection that prepares learners for the Designing and Implementing a Data Science Solution on Azure (DP-100) exam.

COURSE_DESCRIPTION: In this course, you will start by reviewing the fundamentals of investments, including the trading off of return and risk when forming a portfolio, asset pricing models such as the Capital Asset Pricing Model (CAPM) and the 3-Factor Model, and the efficient market hypothesis. You will be introduced to the two components of stock returns - dividends and capital gains - and will learn how each are taxed and the incentives provided to investors from a realization-based capital gains tax. You will examine the investment decisions (and behavioral biases) of participants in defined-contribution (DC) pension plans like 401(k) plans in the U.S. and will learn about the evidence regarding the performance of individual investors in their stock portfolios. The course concludes by discussing the evidence regarding the performance of actively-managed mutual funds. You will learn about the fees charged to investors by mutual funds and the evidence regarding the relation between fees charged and fund performance. Segments of the portfolios of mutual funds that may be more likely to outperform and examples of strategies designed to "earn alpha" will also be introduced. Learners are welcome to take this course even if they have not completed "Investments I: Fundamentals of Performance Evaluation," as the first module contain a review of investment fundamentals and regression analysis to get everyone up to speed. Also, the course contains several innovative features, including creative out-of-the-studio introductions followed by quick-hitting "Module in 60" countdowns that highlight what will be covered in each module, four "Faculty Focus" interview episodes with leading professors in finance, and a summary of each module done with the help of animations! This course is part of the iMBA offered by the University of Illinois, a flexible, fully-accredited online MBA at an incredibly competitive price. For more information, please see the Resource page in this course and onlinemba.illinois.edu.

COURSE_DESCRIPTION: Creating compliant material is the right thing to do, but it can seem like an expensive undertaking and an enormously high bar to meet. In this project you will become familiar with Federal 508 compliance standards and how they can become an asset to an organization's goal of connecting individuals with content in a meaningful way. You will also gain hands-on experience with a no-cost technique for one component of accessibility testing. That is testing for color blindness accessibility with the Colorblindly extension in your Chrome Browser. By the end of this project, you will be able to confidently leverage Chrome browser extensions to test information accessibility, so that you can ensure that as much of your audience as possible can intuitively take in and interact with your organization's information. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: This course covers simple and complex types of AI (artificial intelligence) available in today's market. In it, you will explore theories of mind research, self-aware AI, artificial narrow intelligence, artificial general intelligence, and artificial super intelligence. First, learn the ways in which AI is used today in agriculture, medicine, by the military, in financial services, and by governments. As a special field of computer science that uses mathematics, statistics, cognitive and behavioral sciences, AI uses unique applications to perform actions based on data it uses as an input, and does so by mimicking the activity within the human brain. No data can be 100 percent accurate, bringing a certain degree of uncertainty to any kind of AI application. So this course seeks to explain how and why AI needs to be developed for a particular use scenario, helping you understand the many aspects involved in AI programming and how AI performance needs to be good enough to complete a certain task.

COURSE_DESCRIPTION: To gain the benefits of cloud-stored data, you must know how to use the appropriate tools to access cloud storage in a secured manner. In this course, you'll explore various methods of uploading and managing storage account blobs, as well as enabling security and high availability. You'll start by examine how to upload blobs to a storage account using the portal, CLI, and PowerShell. You'll then discover how to use the Storage Explorer GUI tool to manage storage account blobs. Next, you'll learn to enable replication using the portal, CLI, and PowerShell, as well as configure blob lifecycle management. Lastly, you'll learn how to use the portal, CLI, and PowerShell to create a key vault and key for encrypting a storage account and how to enable storage account failover. This course is one of a collection of courses that prepares learners for the AZ-303: Microsoft Azure Architect Technologies certification exam.

COURSE_DESCRIPTION: Explore the challenges organizations may face when transitioning to and scaling Scrum, including resistance to change, working with distributed teams, team member turnover, too many team meetings, and integrating testing, in this 14-video course. Discover how to customize the Scrum process to fit the needs of both the organization and the project and examine organizations and industries that have successfully scaled the Scrum process. Key concepts covered in this course include the challenges involved with transitioning to and scaling Scrum; the challenges of resistance to change when scaling Scrum and the challenges of working with distributed teams; and the challenges of team member turnover when scaling Scrum. Learn about issues that arise with applying the Scrum framework and how to overcome them; learn the challenges of integrating testing when scaling Scrum; and observe how to customize the Scrum framework to meet the needs of the project and the organization. Finally, learn about industries and organizations that have successfully scaled the Scrum process.

COURSE DESCRIPTION: This course presents an introduction to the basics of financial accounting and finance for IT professionals. The first part of the course will focus on understanding the most important financial statements, namely, the balance sheet, the income statement, and the statement of cash flows. We will then focus on how we can understand the financial health and performance of the company by examining a number of important financial ratios that are derived from the financial statements of the company. The second part of the course will focus on the basics of finance. This includes the concept of time value of money, discounting cash flows, and capital budgeting. The course will also introduce the idea of real options, how they affect a project's NPV, and their impact of the decision to accept/reject a project. Lectures on concepts will be supplemented with numerical examples.

COURSE_DESCRIPTION: This 12-video course explores team velocity in Scrum, its purpose, benefits, and implementation. You will learn that team velocity, or velocity, is a metric used to accurately measure the amount of work a Scrum team can perform during a sprint. Learners will explore several descriptions of team velocity. You will examine velocity advantages, including how it helps set realistic expectations, how it explains the process, and how it can limit the amount of work agreed to in future iterations. Next, learners will examine how user stories describe functionality, and how to use story points as a basic unit of measure for velocity. Learn about the pivotal role of the Scrum master, who provides service to the product owner, organization, and development team. You will learn how to identify common metrics, and how velocity burndown charts are created and managed in JIRA. You will examine team velocity best practices. Finally, this course uses case studies to demonstrate how to present Scrum to a client.

COURSE_DESCRIPTION: In the always-on, always-connected modern world, device security drives management. Explore critical post installation configuration settings for browsers and mobile devices to help ensure client privacy in this 10-video course. Key concepts covered in this course include how to update ADMX (a Windows/Office Group Policy Settings file) Templates for the latest Group Policy settings available; exploring Microsoft Edge configuration settings using Group Policy; and how to configure new Internet Explorer 11 settings by using Group Policy. Next, learners will use Group Policy Preferences to manage settings for Internet Explorer 11; learn how to use the Windows Configuration Designer to configure a provisioning package for cellular settings; and learn to configure strong two-factor authentication to enable Windows Hello for Business, an integrated multi-factor authentication solution. Watch demonstrations of how to configure and manage Windows 10 Start menu layout and how to use Windows 10 taskbar layout for efficiency. The course concludes with an exercise on using security settings in the Group Policy Management Editor, listing Group Policy settings for Edge, and verifying post-installation configuration. This is one course in a series to help learners prepare for the MD-100: Windows 10 certification exam.

COURSE_DESCRIPTION: Monitoring AWS resource usage and activity has the advantage of optimizing performance in addition to detecting potential security incidents. Use this course to get to grips with the logging and monitoring strategies available through AWS. Start with a theoretical overview before moving on to several practical tasks, such as setting up monitoring in CloudWatch and configuring alarms and notifications. Create a CloudWatch dashboard and learn how to detect security issues using Security Hub, GuardDuty, and other AWS tools. Moving on, practice using CloudTrail for auditing before working with other tools, such as the AWS Trusted Advisor, to assess security compliance. This course is part of a series that helps prepare learners for the AWS Certified SysOps Administrator - Associate exam, SOA-C02.

COURSE_DESCRIPTION: Reflection in Java is commonly used to create and use dynamic proxies, which allow you to create objects that implement one or more interfaces at runtime. Reflection is also used to build harnesses for unit testing frameworks to invoke set up and tear down methods and run tests. Use this course to get to grips with these use cases. Work with and learn why dynamic proxies are incredibly powerful. Investigate what happens to methods you invoke on an instance of a dynamic proxy class. Then create a unit-testing framework harness similar to the JUnit framework in Java. Use annotations to identify methods and mark tests to run before using reflection to identify them and run them in the correct sequence. When you're finished, you'll have the ability to use reflection to create dynamic proxies and build harnesses for unit test frameworks.

COURSE_DESCRIPTION: Ist eine Datenbank erst einmal Teil Ihrer IT-Infrastruktur, müssen Sie sie schützen und pflegen. Außerdem müssen Sie dafür sorgen, dass das System mit optimaler Kapazität arbeitet. In diesem Kurs geht es um den Datenbankadministrator (DBA), die Person, die für den Aufbau, die Pflege und die Sicherung der Datenbank zuständig ist. Lernen Sie die Hauptaufgaben eines DBAs kennen, die mit der Sicherheit, Migration, Fehlerbehebung und Konfiguration von Datenbanken zu tun haben. Entdecken Sie, wie sich die Rolle des DBAs mit der eines Datenbankentwicklers vergleicht. Abschließend lernen Sie die gängigen Wartungsfunktionen für eine Datenbank kennen, wie z.B. Sicherung und Wiederherstellung, Benutzerverwaltung und Leistungsoptimierung. Nach Abschluss dieses Kurses verstehen Sie die Rolle eines DBAs und wissen, wie sich die täglichen Aufgaben eines DBAs von denen eines Datenbankentwicklers unterscheiden.

COURSE_DESCRIPTION: Teams are essential to the modern organization, but most never reach their potential. Co-workers miscommunicate, and groups struggle to adapt to changes in the market or their organizations. When teams lack self-awareness about these challenges, performance suffers. Based on years of team culture research and consulting experience, this course helps you understand the problems that hurt productivity, and gives you tools for creating positive change. This course also guides you through creating the ground rules and structure needed to set your team up for success. You gain the skills to diagnose issues such as conflicts, groupthink and lack of commitment in your team before they get out of control. The course offers frameworks to adjust team behaviors and get the best performance out of your people. You also understand frequent stumbling blocks for common team types, such as startups and virtual teams, and learn solutions tailored to each one.

COURSE_DESCRIPTION: The third course in this course series is Achieving Advanced Insights with BigQuery. Here we will build on your growing knowledge of SQL as we dive into advanced functions and how to break apart a complex query into manageable steps. We will cover the internal architecture of BigQuery (column-based sharded storage) and advanced SQL topics like nested and repeated fields through the use of Arrays and Structs. Lastly we will dive into optimizing your queries for performance and how you can secure your data through authorized views. After completing this course, enroll in the Applying Machine Learning to your Data with Google Cloud course.

COURSE DESCRIPTION: As the device age dawns, cloud servicing solutions integrate with on-premises management solutions to create the modern management infrastructure. Learners can explore account options and data security pieces of this infrastructure in this 13-video course. Key options covered here include managing devices in directories in both on-premises Active Directory (AD) environments and cloud-based Azure AD environments; managing local users accounts in the computer management console; and adding local admins from Azure AD, on-premises AD, or local Security Accounts Manager (SAM). Next, learn how to configure NT File System (NTFS) permissions; how to configure NTFS permissions inheritance and auditing; and how to configure share permissions. Learners then see how to assign combinations of permissions for security; use special identities such as built-in service accounts, local service accounts, network service accounts, and system accounts to achieve security. Learn how to configure Encrypting File System (EFS) user-based file and folder-level encryption and implement BitLocker drive encryption. Finally, learn management techniques, methods of assigning local administrators, NTFS permissions, and hardware requirements for full volume encryption. This is one course in a series to help learners prepare for the MD-100: Windows 10 certification exam.

COURSE_DESCRIPTION: This final course will cover more advanced aspects of bonds and stocks that will help you make smart personal decisions and develop a keen understanding of how governments and companies borrow from us. You will better understand stocks and bonds valuation and take a deeper dive using real-world problems. For stocks, you will review what you have already learned and understand valuation. You will learn about growth, different types of growth both bad and good. You will also get an opportunity to apply these concepts in practice assignments. For bonds: you will review what you have already learned. You will learn about different sources of risk in bonds. Lastly you will get an opportunity to apply these concepts in practice assignments. After completing this course, you will have a deeper understanding of how bonds and stocks are valued and the risks involved in both. You will be able to apply this knowledge to understand the workings of a company and how it creates value. This will enable you to invest with more confidence and also bring a special and critical lens to a company's decisions. This course is part of the four-course Foundational Finance for Strategic Decision Making Specialization.

COURSE_DESCRIPTION: In this 1-hour long project-based course, you will create an end-to-end clustering model using PyCaret a low-code Python open-source Machine Learning library. The goal is to build a model that can segment a wholesale customers based on their historical purchases. You will learn how to automate the major steps for building, evaluating, comparing and interpreting Machine Learning Models for clustering. Here are the main steps you will go through: frame the problem, get and prepare the data, discover and visualize the data, create the transformation pipeline, build, evaluate, interpret and deploy the model. This guided project is for seasoned Data Scientists who want to build a accelerate the efficiency in building POC and experiments by using a low-code library. It is also for Citizen data Scientists (professionals working with data) by using the low-code library PyCaret to add machine learning models to the analytics toolkit. To be successful in this project, you should be familiar with Python and the basic concepts on Machine Learning.

COURSE_DESCRIPTION: In this Challenge Lab, you need to implement a secure application within a VPC environment. The application will consist of 2 layers, a web server and an application server. You need to implement appropriate security measures using Network ACLs and Security Groups to protect both layers of the application. First, you will create security groups for the web and application layers. Next, you will create a network ACL for the subnets. Then, you will create EC2 instances for the web and application servers. Finally, you will test access to the application through the Network ACL and Security Groups. Note: Once you begin the challenge lab, you will not be able to pause, save, or return to your challenge lab. Please ensure that you have set aside enough time to complete the challenge lab before you start.

COURSE_DESCRIPTION: The FinTech revolution is rapidly transforming the financial industry. The use of digital technologies is the norm, and together with regulatory and market changes it is creating a revolution. After completion of the module, you'll be able to: describe the changes that influence the financial sector, understand the complexity of the payment infrastructure, identify and explain the key payment instruments and how they function, understand the types of money that exists, and recognize changes in the regulatory frameworks and how they inhibit or promote innovation. To begin, I recommend taking a few minutes to explore the course site. A good place to start is the navigation bar on the left. Click Course Content to see what material we'll cover each week, as well preview the assignments you'll need to complete to pass the course. Click Discussions to see forums where you can discuss the course material with fellow students taking the class. Be sure to introduce yourself to everyone in the Meet and Greet forum! This course should take about four weeks to complete. You can check out the recommended course schedule below to see a quick overview of the lessons and assignments you'll complete each week. By the time you finish this course, you'll have mastered the transformational forces of digitalization and the new competitive dynamics it gives rise to, learned from leading financial companies and seen inspirational examples from the digital masters. Good luck as you get started. I look forward to seeing you in class!

COURSE_DESCRIPTION: This course is designed for students of all backgrounds who have an interest in how firms are governed, the forces that have helped define modern management practice, and the outcomes of that practice not only for the firm itself, but also for the societies in which they operate. For students who are thinking of a career in management, it may also prove useful as a basic introduction to some of the conceptual vocabulary and ideas behind modern theories of management. Using a wide disciplinary approach - from economics and history to social theory and even

a smattering of biblical criticism - the course will invite students to consider several core management strategies and priorities from often unexpected perspectives in order to judge their success or failure. The key objective of the course is to bring into critical focus how we think about the function and culture of management, how managers understand their role within a firm, how they take decisions, set priorities and benchmark success and failure. Topics include: the function of the firm; the role of incentive; the ways in which narrative forces shape decision making, and how market relationships define the managerial culture in ways that can lead to sub-optimal outcomes.

COURSE_DESCRIPTION: In the final course from the Machine Learning for Trading specialization, you will be introduced to reinforcement learning (RL) and the benefits of using reinforcement learning in trading strategies. You will learn how RL has been integrated with neural networks and review LSTMs and how they can be applied to time series data. By the end of the course, you will be able to build trading strategies using reinforcement learning, differentiate between actor-based policies and value-based policies, and incorporate RL into a momentum trading strategy. To be successful in this course, you should have advanced competency in Python programming and familiarity with pertinent libraries for machine learning, such as SciKit-Learn, StatsModels, and Pandas. Experience with SQL is recommended. You should have a background in statistics (expected values and standard deviation, Gaussian distributions, higher moments, probability, linear regressions) and foundational knowledge of financial markets (equities, bonds, derivatives, market structure, hedging).

COURSE_DESCRIPTION: Angular helps build interactive and dynamic single-page applications (SPAs) and is a technology that is highly in demand among experienced developers who want to move into full-stack development. Use this course to gain a better understanding of directives and pipes in Angular 11. Examine the use of conditional operators, array iteration through complex objects, and the concept of pagination. This course will also help you discover the functionality of sorting data, the use of built-in pipes and custom pipes, and how to filter a list of data as per user search input. Upon completing this course, you'll have the skills to implement directives and pipes using Angular for full-stack development.

COURSE_DESCRIPTION: Discover how to build and test single-page applications using Redux and React, and examine various testing frameworks that are used to test applications. In this course, you will study these key areas, and learn about client-side and server-side validation, and single-page application (SPA) concepts. For example, you will see how to create an SPA with the React Router. Next, fine tune Redux applications, and use React.js to test components. From there, you will explore Jest testing framework features and operation. Other topics include learning to use Jest to test React applications; and studying best practices to test React and Redux applications. Finally, you will watch how to use Node.js to deploy React and Redux-based applications.

COURSE_DESCRIPTION: [As described below, this is Part B of a 3-part course. Participants should complete Part A first -- Part B "dives right in" and refers often to material from Part A.] This course is an introduction to the basic concepts of programming languages, with a strong emphasis on functional programming. The course uses the languages ML, Racket, and Ruby as vehicles for teaching the concepts, but the real intent is to teach enough about how any language "fits together" to make you more effective programming in any language -- and in learning new ones. This course is neither particularly theoretical nor just about programming specifics -- it will give you a framework for understanding how to use language constructs effectively and how to design correct and elegant programs. By using different languages, you will learn to think more deeply than in terms of the particular syntax of one language. The emphasis on functional programming is essential for learning how to write robust, reusable, composable, and elegant programs. Indeed, many of the most important ideas in modern languages have their roots in functional programming. Get ready to learn a fresh and beautiful way to look at software and how to have fun building it. The course assumes some prior experience with programming, as described in more detail in the first module of Part A. Part B assumes successful completion of Part A. The course is divided into three Coursera courses: Part A, Part B, and Part C. As explained in more detail in the first module of Part A, the overall course is a substantial amount of challenging material, so the three-part format provides two intermediate milestones and opportunities for a pause before continuing. The three parts are designed to be completed in order and set up to motivate you to continue through to the end of Part C. Week 1 of Part A has a more detailed list of topics for all three parts of the course, but it is expected that most course participants will not (yet!) know what all these topics mean.

COURSE_DESCRIPTION: In this 14-video course, learners can explore common Windows Server 2019 configuration and management tasks. First, you will examine capabilities of the Server Manager and Windows Admin Center, and how to deploy Remote Desktop Services (RDS). This course demonstrates basic configuration tasks, including the Server Manager interface with the Local Server option, with PowerShell, and by using the Sconfig utility. You will learn to check for updates, assign IP addresses, in both the desktop and Server Core installations. Learners will then examine the Windows Admin Center, including installation options, how to perform installations, and how to configure user and gateway settings. This course continues by exploring improvements and enhancements to remote desktop services in Windows Server 2019, and demonstrating how to implement a Remote Desktop Services infrastructure in Azure. You will learn how to use the Windows Admin Center for configuring user access and permissions, adding, and managing individual servers using Azure. Finally, this course examines logging abilities of the Windows Admin Center.

COURSE_DESCRIPTION: This 9-video course offers a lab-only exploration and introduction to the libraries available in Python to run tasks asynchronously by using both processes and threads. To take this course, you should have prior knowledge of how to spawn and manage processes in Python. First, you will learn how to significantly improve the performance and responsiveness of your application by running them concurrently, then learn how to create a process pool, and how to use multiprocessing to execute tasks in parallel. Next, you will learn to use multithreading to run chunks of a task at one time, and to switch between the chunks regularly. Learners will then examine the concurrent.futures module, which contains objects to run threads and processes in an asynchronous manner, and to monitor their progress while they are still executing. Continue by learning how to use ThreadPoolExecutor, available in the concurrent.futures module. Finally, you examine the asyncio module in Python, which provides lightweight mechanisms for asynchronous executions of tasks.

COURSE_DESCRIPTION: Tables are a useful tool for quickly managing, analyzing, and manipulating data as a range in Excel 365. In this course, you will discover how you can easily create tables from a data range; insert borders, and change the appearance and formatting of a table. You will start by learning how to insert a table, and convert a data range into a table. In addition, you'll learn how to transpose a data range, which means inverting the columns and rows. You will see that tables are highly customizable, as you learn how to use the formatting tools and styles to change the appearance of a table. Also, see how to use the Border tool to make the data in your table stand out more. You will learn how to use slicers to filter and manipulate data in a table; and how to resize and format a slicer tile. Finally, you will explore how to add subtotals to your data tables and how to manipulate the table date in other ways. In order to practice what you have learned, you will find practice exercises and samples in the Resources section.

COURSE_DESCRIPTION: Most business related development processes include some kind of formal methodology. For software development we call these software development life cycle (SDLC) models and there are several of them. Learn why a software development model is needed for better software development. Discover several SDLC models including the waterfall model, incremental and spiral models, the V-model, and Agile models. Explore the features of each model and consider what they have in common. Finally, utilize comparative techniques and use cases to choose the best model for your development. After completion of this course, you'll be able to differentiate between and define popular software development methodologies.

COURSE_DESCRIPTION: It is imperative that organizations outline instructions to help IT staff identify, respond, and recover from network security incidents. By doing so, organizations can quickly recover from cybercrime events potentially resulting in data loss and service outages. In this course, you'll explore common disaster types, including natural disasters and malicious human actions that threaten organizations. Discover business continuity and disaster recovery planning goals, resources, and concepts. Discover how operational recovery planning can help ensure businesses resume day to day operations in a timely manner, as well as the importance of planning for user recovery. You'll also learn about backup technologies and strategies, and discover the importance of proper documentation. Lastly, explore how to prepare for incident responses and learn about reporting incidents and legal considerations. This course was originally created by Global Knowledge (GK).

COURSE_DESCRIPTION: In this course, you'll learn about the fundamentals of trading, including the concept of trend, returns, stop-loss, and volatility. You will learn how to identify the profit source and structure of basic quantitative trading strategies. This course will help you gauge how well the model generalizes its learning, explain the differences between regression and forecasting, and identify the steps needed to create

development and implementation backtesters. By the end of the course, you will be able to use Google Cloud Platform to build basic machine learning models in Jupyter Notebooks. To be successful in this course, you should have advanced competency in Python programming and familiarity with pertinent libraries for machine learning, such as Scikit-Learn, StatsModels, and Pandas. Experience with SQL is recommended. You should have a background in statistics (expected values and standard deviation, Gaussian distributions, higher moments, probability, linear regressions) and foundational knowledge of financial markets (equities, bonds, derivatives, market structure, hedging).

COURSE_DESCRIPTION: In Value, you will explore the most powerful generator of value in the world - ideas. Ideas are the engines of productivity, both in the private and public sectors. You will learn about the universal frameworks that determine how ideas and money interact, leading to the allocation of financial resources. We will identify components of cash flow for any project, business or venture as the most essential ingredients of value. We also assess the investment techniques used to give life to some ideas while killing others. This course will help you understand pricing, diversification, uncertainty and even behavioural approaches to dealing with risk. Using Nobel Prize-winning insights, you will learn how to measure the size of the risk premium and build valuation models. We'll even connect evidence-based science with common-sense analysis to give you better tools for understanding why values are what they are, and for positioning yourself more effectively to participate in financial markets. You will be immersed in case based learning to integrate some of the powerful frameworks introduced in Value.

COURSE_DESCRIPTION: Please note: You will need an AWS account to complete this course. Your AWS account will be charged as per your usage. Please make sure that you are able to access Sagemaker within your AWS account. If your AWS account is new, you may need to ask AWS support for access to certain resources. You should be familiar with python programming, and AWS before starting this hands on project. We use a Sagemaker P type instance in this project, and if you don't have access to this instance type, please contact AWS support and request access. In this 2-hour long project-based course, you will learn how to train and deploy a Semantic Segmentation model using Amazon Sagemaker. Sagemaker provides a number of machine learning algorithms ready to be used for solving a number of tasks. We will use the semantic segmentation algorithm from Sagemaker to create, train and deploy a model that will be able to segment images of dogs and cats from the popular IIIT-Oxford Pets Dataset into 3 unique pixel values. That is, each pixel of an input image would be classified as either foreground (pet), background (not a pet), or unclassified (transition between foreground and background). Since this is a practical, project-based course, we will not dive in the theory behind deep learning based semantic segmentation, but will focus purely on training and deploying a model with Sagemaker. You will also need to have some experience with Amazon Web Services (AWS).
COURSE_TITLE: Semantic Segmentation with Amazon Sagemaker

COURSE_DESCRIPTION: JavaScript has rich language features to help you deal with errors and events. This course explores the basics of events and error handling and also covers working with strings, numbers, dates and some new ECMAScript language features. You'll start by exploring techniques for JavaScript front end development. Next, you will discover events and event handlers, and perform error handling. Other topics of this course include the following: how to consider the fundamentals of strings; perform common string operations; create and use regular expressions; format numbers, and perform common operations, with the Number object; how to perform common calculations with the Math object; how to use the Date object; how to explore how to use the LET and CONST keywords, instead of VAR, when a variable is declared. As you progress, you will discover JavaScript's KeyedCollection, and use the Map and Set objects. Conclude by learning how to use hoisting, string padding, Async Functions, and Promises.

COURSE_DESCRIPTION: In this course, you will learn how Microsoft Azure can help you secure access to cloud resources, what it means to build a cloud governance strategy, and how Microsoft Azure adheres to common regulatory and compliance standards. With the rise of remote work, bring your own device (BYOD), mobile applications, and cloud applications, the primary security boundary has shifted from firewalls and physical access controls to identity. Understanding who is using your systems and what they have permission to do is critical to keeping your data safe from attackers. To stay organized, manage costs, and meet your compliance goals, you need a good cloud governance strategy. Migration to the cloud presents new ways to think about your IT expenses. The cloud also removes the burden of supporting IT infrastructure. As you move to the cloud, you might ask: • How much will it cost? • What guarantees does Microsoft Azure provide around uptime and connectivity? • How do preview services impact my production applications? In this course, you will also learn about the factors that influence cost, tools you can use to help estimate and manage your cloud spend, and how Microsoft Azure's service-level agreements (SLAs) can impact your application design decisions. This course can help you prepare for AZ-900: Microsoft Azure Fundamentals exam. This is the third course in a four-course program that prepares you to take the AZ-900 certification exam. This course teaches you the core concepts and skills that are assessed in the Microsoft Azure identity services, and governance exam domains. This beginner-level course is suitable for IT personnel who are just beginning to work with Microsoft Azure and want to learn about Microsoft Azure offerings and get hands-on experience with the product. To be successful in this course, you need to have basic computer literacy and proficiency in the English language. You should be familiar with basic computing concepts and terminology, general technology concepts, including concepts of networking, storage, compute, application support, and application development. You should also be familiar with the concept of application programming interfaces, or APIs. It is beneficial to have a high-level familiarity with relevant Microsoft products such as Dynamics 365 and Office 365.

COURSE_DESCRIPTION: In this 1.5-hour long project-based course, you will learn how to apply image data augmentation in Keras. We are going to focus on using the ImageDataGenerator class from Keras' image preprocessing package, and will take a look at a variety of options available in this class for data augmentation and data normalization. Since this is a practical, project-based course, you will need to prior experience with Python programming, convolutional neural networks, and Keras with a TensorFlow backend. Data augmentation is a technique used to create more examples, artificially, from an existing dataset. This is useful if your dataset is small and you want to increase the number of examples. Data augmentation can often solve over-fitting so that your model generalizes well after training. For images, a variety of augmentation can be applied to increase the number of examples. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Students will produce a networked game that will leverage sensors on the phone to create a unique gaming experience. The focus of the game will be to make it physical through real-world gestures, motion and knowledge of other players real-world location. To do this students will need to integrate knowledge of graphics, networking, sensors, and user interface design alongside a skill set of tool usage. The final project will involve milestones with opportunities to get ungraded peer review feedback from fellow learners so that they can iterate and improve their game program. The final networked game that the students produce would be something they could showcase in job application materials, in an interview, or offer in the iTunes store.

COURSE_DESCRIPTION: Ohne eine Datenbank können die meisten Unternehmen nicht arbeiten, und sei es auch nur ein Aktenschrank. Mit der zunehmenden Menge an Daten, die aus verschiedenen Quellen stammen, steigt auch der Bedarf an sicheren und leistungsfähigen Datenbanken mit angemessenem Speicherplatz. Dieser Kurs vermittelt ein solides Verständnis dafür, was Daten genau bedeuten und warum ein Datenbankmanagementsystem (DBMS) so wichtig für die Datenverwaltung ist. Untersuchen Sie den Ursprung von Daten und wie sie gespeichert und bearbeitet werden. Entdecken Sie die verschiedenen DBMS-Typen. Lernen Sie die Rollen und Verantwortlichkeiten kennen, die mit der Nutzung eines DBMS verbunden sind. Außerdem erfahren Sie, wie ein DBMS zur Bereitstellung solider und zuverlässiger Daten beitragen kann. Navigieren Sie durch die MySQL Workbench, um die Möglichkeiten eines RDBMS (relationales Datenbankmanagementsystem) aus erster Hand kennenzulernen. Nach Abschluss dieses Kurses werden Sie in der Lage sein, die Merkmale und Fähigkeiten eines zuverlässigen DBMS zu erkennen.

COURSE_DESCRIPTION: Software developers often use existing third-party APIs and software components instead of recreating the wheel, so to speak. This reduces development time and time to market for software products. In this course, you'll learn that only trusted APIs and components should be used, that developers must truly understand how these items work, and that they must be kept up-to-date. Next, you'll learn about the Heartbleed Bug and how to view components in Microsoft Visual Studio. You'll then examine how security must apply to all aspects of Continuous Integration and Continuous Delivery. Lastly, you'll explore how to search the shodan.io web site for vulnerable devices and apps.

COURSE_DESCRIPTION: While most organizations and leaders understand the importance of diversity and inclusion for better business results, individuals often struggle as they get confused about what they can actually do to create a more inclusive work environment, where everyone feels they can be themselves and that they belong. Leaders often hesitate and end up doing nothing, as they worry about doing or saying something that is inappropriate or that will have unintended consequences. In this session, we will help everyone, and particularly leaders, understand the role they can play for workplace diversity and inclusion, providing practical examples of behaviors and leadership practices to foster a more inclusive employee experience.

COURSE_DESCRIPTION: Examine how to integrate Azure DevOps tools into the application creation and deployment strategy in this 13-video course, which explores licensing, software development lifecycle, authentication and access, and cloud hybridization, in preparation for Microsoft Azure DevOps Solutions (AZ-400) certification exam. Key concepts covered in this course include how to utilize licensing efficiently in Azure DevOps; streamlining user licensing in Azure DevOps; and learning to license concurrent pipelines. Next, learn to implement cost efficient test environments; work within limitations of open-source software licensing; and work with licenses for all aspects of the Azure DevOps suite. You will learn to streamline licensing package management in Azure DevOps; recommend a strategy for an end-to-end development lifecycle; and integrate monitoring and feedback into the Azure DevOps pipeline. Learn to securely manage user access to the Azure DevOps environment; integrate on-premises and cloud resources; and learn components of the software development lifecycle. Finally, learn about managing and licensing of group rules, open-source license types, tiers of jobs in Azure Pipelines, and private cloud characteristics.

COURSE_DESCRIPTION: Customer goodwill and employee productivity are severely impacted by slow applications, making performance a crucial element of modern networking. Performance engineering uses ongoing testing and monitoring to eliminate these potential issues. One aspect of this work is managing system architecture performance. With the help of this course, learn to recognize potential architectural performance issues. Begin by understanding what performance engineering is, the role of the performance engineer, and the similarities and differences between performance architects and performance engineers. Then, explore the scope of performance engineering, common activities undertaken by performance teams, and how performance engineering and performance testing differ. Finally, delve into activities commonly undertaken by performance engineers, well-known performance architecture issues, and best practices for effective performance engineering. By the end of the course, you'll have a good grasp of the role of performance architects and system architecture in performance engineering.

COURSE_DESCRIPTION: In this challenge, you will create and train a personalizer solution that responds to requests from customers. First, you will create an Azure Personalizer service to provide a ranked response from a set of actions a customer can take, and then you will use Visual Studio to create a command-line application project. Next, you will add a method to train the personalizer by using training data from a file. Finally, you will add a method to interactively train the personalizer will, and then you will test the solution. Note: Once you begin the challenge, you will not be able to pause, save, or return to your challenge. Please ensure that you have set aside enough time to complete the challenge before you start.

COURSE_DESCRIPTION: When you think about attacking a network with a rogue DHCP device, you realize it is such a relatively easy attack to carry out. In this course, you'll learn about the DHCP snooping feature and how it is configured. Next, you'll examine how multiple different security features can leverage the DHCP snooping database that results from a proper implementation of DHCP snooping, including a demonstration of both the DAI and IP Source Guard features. You'll learn about the often intimidating security feature private VLANs, including the details of these structures and the reason why they exist. Finally, you'll explore traffic storms, including when they occur, how they create excessive traffic and can degrade network performance, and how to use the traffic storm control feature. This course can be used in preparation for the 350-701: Implementing and Operating Cisco Security Core Technologies (SCOR) certification exam.

COURSE_DESCRIPTION: These days, it's almost all about the cloud-public, private, hybrid, and community varieties-but how much do you really know about these mysterious unseen dimensions? As more and more organizations use or migrate on-premises IT systems and data into cloud environments, understanding the trendy concept has become both necessary and increasingly complex. In this 12-video course, learners are exposed to the basics of this new cloud world, including the four most popular cloud service models: Infrastructure as a Service (IaaS), Platform as a Service (PaaS), Software as a Service (SaaS), and Infrastructure as Code. First, you will learn the five primary characteristics of every cloud-resource pooling, self-provisioning, rapid elasticity, metered usage, and broad access. Then examine each characteristic in more detail: learn how to determine when to use a public, private, community, or hybrid cloud; how cloud service models delivered over a network are categorized. The course helps to prepare learners for CompTIA+ Cybersecurity Analyst+ (CySA+) CS0-002 certification exam.

COURSE_DESCRIPTION: In this course, you will build on the skills learned in Exploratory Data Analysis with MATLAB to lay the foundation required for predictive modeling. This intermediate-level course is useful to anyone who needs to combine data from multiple sources or times and has an interest in modeling. These skills are valuable for those who have domain knowledge and some exposure to computational tools, but no programming background. To be successful in this course, you should have some background in basic statistics (histograms, averages, standard deviation, curve fitting, interpolation) and have completed Exploratory Data Analysis with MATLAB. Throughout the course, you will merge data from different data sets and handle common scenarios, such as missing data. In the last module of the course, you will explore special techniques for handling textual, audio, and image data, which are common in data science and more advanced modeling. By the end of this course, you will learn how to visualize your data, clean it up and arrange it for analysis, and identify the qualities necessary to answer your questions. You will be able to visualize the distribution of your data and use visual inspection to address artifacts that affect accurate modeling.

COURSE_DESCRIPTION: Splunk is a horizontal application with many possible use cases. In this course, you'll explore the core Splunk products, features, and pricing options that can help achieve CloudOps observability, discover problems, collect and index data, gain business-critical insights, and implement a visualization service for cloud operational intelligence. Additionally, you'll examine the benefits of using Splunk Cloud, the data ingestion concepts used by this product, and its approach to identifying, investigating, and resolving critical issues. You'll also recognize the infrastructure monitoring capabilities provided by Splunk App for Infrastructure. Moving on, you'll learn to use Splunk to explore, categorize, and analyze data and generate Sparklines. You'll navigate Splunk Cloud's primary interface. You'll ingest, organize, and mine data in Splunk to glean operational intelligence. And lastly, you'll integrate VictorOps with Splunk.

COURSE_DESCRIPTION: Once you've collected and stored data in AWS, it's essential to be able to do something with that data. Luckily, Amazon provides analytics services to capture, process, query, and stream from other AWS services, data stores, and databases. In this course, you'll explore how these services work, beginning with the capabilities of Amazon AppFlow, Amazon Athena, Amazon CloudSearch, and Amazon Elasticsearch Service. Then you'll discover Amazon EMR, AWS Glue, AWS Lake, and Amazon Kinesis Data Streams. Finally, you'll practice creating an Amazon Kinesis stream and an Amazon Kinesis Data Analytics application, processing data from an Amazon Kinesis stream, and creating an Amazon Kinesis Data Firehose. This course is part of a collection that prepares you for the DVA-C02: AWS Certified Developer - Associate 2022 certification exam.

COURSE_DESCRIPTION: By the end of this project, you will learn how to use Scribus to create a short digital zine. Scribus v 1.4.8 is a desktop publishing software which is currently providing a valid Open Source alternative to the mainstream desktop publishing software, such as Indesign. It is a valuable option for those who want to broaden their software knowledge and train their skillset in terms of editorial production practising with this free tool available to be downloaded to any desktop. Digital zines are the current evolution of traditional zines, both recognised as powerful tools of Visual Communication. Originally born as a form of self-expression, zines are characterised by small-circulation and self-publishing, peculiarities that give traditional zines a distinctive "Lo-Fi" aesthetic. Their contents can be original or appropriated texts and images. Zines aim to divulge art, cultural or social issues, abstract concepts or in the case of "fanzines" to talk about specific phenomena of which the authors are enthusiasts. Having a wider circulation due to the fact that they can be printed or shared online, Digital zines nowadays keep the purposes of traditional ones plus they are largely used as digital portfolios for practitioners or companies, event and product catalogues, instructional or educational manuals, marketing and editorial material. As a starting point to explore the potentialities of digital zines, the learners can become familiar with this form of Visual Communication, in order to reach a broader public to whom they share their contents.

COURSE_DESCRIPTION: The COVID-19 virus mutates and replicates when people let down their guard and don't follow safety protocols, such as practicing social distancing and wearing a mask. "I think most of us expect a major surge because of spring break travel and the relaxation of restrictions," says Dr. Gregory Poland, an infectious diseases expert and head of Mayo Clinic's Vaccine Research Group. "And the sort of COVID fatigue that all of us feel, in one way or another." (Published 03/24/2021)

COURSE_DESCRIPTION: Erfahren Sie, wie Sie Teams und Kanäle in Teams 2022 verwalten können. In diesem Kurs lernen Sie, wie Sie einem Team beitreten und ein Team erstellen. Mit Teams können Sie auch die Informationen eines Teams bearbeiten, um jedes Team individuell anzupassen. Um erfolgreich eine Führungsrolle in Teams zu übernehmen, lernen Sie, wie Sie die Mitgliedschaft in einem Team verwalten und ein Team managen können. Um Ihre Projekte zu organisieren, lernen Sie, wie Sie Kanäle erstellen und die Informationen und Einstellungen eines Kanals bearbeiten können. Wenn Sie die Privatsphäre für bestimmte Projekte sicherstellen möchten, erfahren Sie, wie Sie einen privaten Kanal verwalten können. In diesem Kurs lernen Sie auch, wie Sie das Dashboard der Kanäle nutzen, um sie zu löschen oder wiederherzustellen. Außerdem erfahren Sie, wie Sie eine Konversation in einem Kanal starten können.

COURSE_DESCRIPTION: The pandemic will create long-lasting and surprising ripple effects, even after vaccines are widely available. Are you ready for what's next? This course will give you a clear forecast of the challenges and opportunities you're most likely to encounter over the next 3-5 years, as a direct result of the ongoing COVID-19 pandemic. - Find out what risks still lie ahead - Make a plan for resilience - Play future forecasting games to stretch your imagination about what's possible - Build your post-pandemic confidence - Envision the world you want to live in when we're all finally on the other side of COVID-19. How can you take advantage of this unprecedented moment of disruption to make positive change in your

community, company or other organization? By completing this course, you'll be better understand the "future shock" we've all just lived through together. You'll be able to identify the 7 pre-existing conditions of society that made the pandemic more severe and harder to recover from -- from economic inequality and racial injustice to fragile public trust and the climate emergency. Looking ahead, you'll explore the most surprising and exciting solutions that are being proposed to help our communities heal from these pre-existing conditions. COVID-19 is a roller-coaster ride we will all be on for years to come. With the skills you build in this class, such as learning to spot the four patterns of change that occur during any period of crisis or major disruption, you will be better able to see the ups and downs coming before you get there. And you'll feel more in control of what happens next, as you learn to use the Institute for the Future's post-pandemic Toolkit for Transformation. By the end of this course, you'll be more knowledgeable and better qualified to help yourself, or your company or other organization, navigate the rest of the pandemic and find success on our long road to recovery and reinvention. This course is taught by Institute for the Future Research Director Jane McGonigal, PhD.

COURSE_DESCRIPTION: Topic: Compassionate Leadership: How to Do Hard Things in a Human Way (Harvard Business Review Press, Jan. 18 2022) Speaker: Jacqueline Carter, International Partner, Potential Project; Co-Author Recorded March 3, 2022 The Rotman School of Management (<http://www.rotman.utoronto.ca>) is the most globally recognized business school in Canada. It is part of the University of Toronto, Canada's top research university, and is located in downtown Toronto, the country's financial, commercial and cultural capital. The School takes full advantage of its strategic location by drawing on a rich pool of business and political leaders as teachers, mentors and speakers. Rotman offers a Full-Time MBA program, and several programs for working professionals, including the Morning and Evening MBA and the Master of Finance, as well as pre-experience programs such as the Master of Management Analytics, the Master of Financial Risk Management, and the Graduate Diploma in Professional Accounting. For mid- to senior-career professionals, Rotman offers the One-Year Executive MBA, the Global Executive MBA and the Global EMBA for Healthcare and the Life Sciences. Whichever degree or program you choose, Rotman will give an edge in your career and help you make the most of your potential.

COURSE_DESCRIPTION: Python is a very popular choice among professional developers for writing computer applications. In this course, you'll discover the basic features of Python, beginning with an overview of the Python language. Then you'll explore how to install Python and learn its basic syntax. You'll learn how to use variables with strings and how to save Python files, flow control, conditionals, comparisons, loops, and lists. You'll go on to how to use loops and lists, implement flow control in an application, and obtain user input. You'll discover functions in Python, Boolean and None data types, and custom functions. You'll learn about Python and JSON modules, file handlers, and how to use exception handling to solve problems. You'll discover the Python package manager (pip), Python Package Index, and the benefits of reusing libraries in Python programming. Finally, you'll discover HTTP requests, APIs, and dictionary data types in Python programming. This course was originally created by Global Knowledge (GK).

COURSE_DESCRIPTION: Supply chain attacks are particularly stealthy and have the potential to inflict considerable damage that can have lasting repercussions. Cybersecurity professionals need to proactively monitor traffic to stay ahead of these types of attacks and other potential threats. Begin this course by exploring the background of the Kaseya ransomware attack and how it was discovered. Then, examine what led to the breach and how the attack affected Kaseya's clientele of multiple managed service providers (MSPs) and as a result, many small businesses downstream. Investigate the various tools, like SQL injection, that could be used to conduct this type of attack. Finally, take a look at the cybersecurity community response to the breach and the fallout for Kaseya from the event. Once you have completed this course, you should understand the background of the Kaseya ransomware attack, how to use tools to conduct a similar type of attack, and how Kaseya and the government responded to the breach.

COURSE_DESCRIPTION: This course will transition you from working on a single computer to an entire fleet. Systems administration is the field of IT that's responsible for maintaining reliable computers systems in a multi-user environment. In this course, you'll learn about the infrastructure services that keep all organizations, big and small, up and running. We'll deep dive on cloud so that you'll understand everything from typical cloud infrastructure setups to how to manage cloud resources. You'll also learn how to manage and configure servers and how to use industry tools to manage computers, user information, and user productivity. Finally, you'll learn how to recover your organization's IT infrastructure in the event of a disaster. By the end of this course you'll be able to: • utilize best practices for choosing hardware, vendors, and services for your organization • understand how the most common infrastructure services that keep an organization running work, and how to manage infrastructure servers • understand how to make the most of the cloud for your organization • manage an organization's computers and users using the directory services, Active Directory, and OpenLDAP • choose and manage the tools that your organization will use • backup your organization's data and know how to recover your IT infrastructure in the case of a disaster • utilize systems administration knowledge to plan and improve processes for IT environments

COURSE_DESCRIPTION: Learners can examine end-user security concepts such as shared responsibilities and policies, physical controls, authentication, software, and best practices in this 12-video course. You will begin with a look at shared responsibility, which has expanded greatly because of the use of cloud computing; this means that the role of the end user, the customer or client, in shared responsibility for security is expanding at an accelerated rate. Next, you will move on to defining acceptable use policies (AUP). You will discover how to distinguish physical security controls; classify authentication technologies, and recognize the importance of hardware and software updates. Following on from this, you will explore security suites and endpoint protection; learn about browser best practices, and define the security fundamentals of e-mail. You will also delve into the security issues surrounding personal cloud storage services, and protecting data at rest, or data storage security. To conclude the course, complete an exercise on describing the concepts and technologies of end-user security.

COURSE_DESCRIPTION: In this course the learner will be shown how to generate forecasts of game results in professional sports using Python. The main emphasis of the course is on teaching the method of logistic regression as a way of modeling game results, using data on team expenditures. The learner is taken through the process of modeling past results, and then using the model to forecast the outcome games not yet played. The course will show the learner how to evaluate the reliability of a model using data on betting odds. The analysis is applied first to the English Premier League, then the NBA and NHL. The course also provides an overview of the relationship between data analytics and gambling, its history and the social issues that arise in relation to sports betting, including the personal risks.

COURSE_DESCRIPTION: By the end of this project, you will be able to create a customer journey map that includes touchpoints from the internet (IoT). When customer journey maps include IoT touchpoints, they enable businesses to understand the holistic customer experience by considering their user experience (UX) and when user interface (UX) design may influence that experience. To identify IoT touchpoints with customer journey maps, you will gain hands-on experience applying design thinking, user interface knowledge, and context from each step of the customer journey in the Miro online visual collaboration platform for teamwork. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE DESCRIPTION: Network anomalies are behaviors or activities that deviate from the norm. It is important that security professionals learn to monitor these anomalies in network traffic because the traffic could be malicious. In this 11-video course, you will explore roles that network and security professionals play in detecting and addressing anomalies. Begin by looking at different types of anomalies or outliers, such as configuration faults or a malicious presence; then take a look at benefits of anomaly detection, such as early response and planning for the unexpected. Learners will also examine the limitations of traditional approaches to anomaly detection, such as chasing false positives; learn how to differentiate between manual and automated detection techniques; and view the importance of building a profile of what is normal, such as user activity, before looking at multimodel attributes and how they relate to anomaly detection. Furthermore, you will explore differences between least frequency of occurrence and baselining; view the benefits of machine learning; and finally, learn how to recognize benefits of auto-periodicity to aid in identifying anomalies.

COURSE DESCRIPTION: The Capstone project is the culmination of the International Business Essentials specialisation, and brings together knowledge gained in the previous courses and applies this to a real-world scenario. Throughout the Capstone, you'll be taught new skills, and will use the knowledge you have gained throughout the Specialisation to develop a business plan. This course forms part of a specialisation from the University of London designed to help you develop and build the essential business, academic, and cultural skills necessary to succeed in international business, or in further study. If completed successfully, your certificate from this specialisation can also be used as part of the application process for the

University of London Global MBA programme, particularly for early career applicants. If you would like more information about the Global MBA, please visit <https://mba.london.ac.uk/>. This course is endorsed by CMI

COURSE_DESCRIPTION: Usually, tidy data is a mirage in a real-world setting. Additionally, before quality analysis can be done, data need to be in a proper format. This project-based course, "Prepare, Clean, Transform, and Load Data using Power BI" is for beginner and intermediate Power BI users willing to advance their knowledge and skills. In this course, you will learn practical ways for data cleaning and transformation using Power BI. We will talk about different data cleaning and transformation tasks like splitting, renaming, adding, removing columns. By the end of this 2-hour-long project, you will change data types, merge and append data sets. By extension, you will learn how to import data from the web and unpivot data. This project-based course is a beginner to an intermediate-level course in Power BI. Therefore, to get the most of this project, it is essential to have a basic understanding of using a computer before you take this project.

COURSE_DESCRIPTION: You've learned how to use Tensorflow. You've learned the important functions, how to design and implement sequential and functional models, and have completed several test projects. What's next? It's time to take a deep dive into activation functions, the essential function of every node and layer of a neural network, deciding whether to fire or not to fire, and adding an element of non-linearity (in most cases). In this 2 hour course-based project, you will join me in a deep-dive into an exhaustive list of activation functions usable in Tensorflow and other frameworks. I will explain the working details of each activation function, describe the differences between each and their pros and cons, and I will demonstrate each function being used, both from scratch and within Tensorflow. Join me and boost your AI & machine learning knowledge, while also receiving a certificate to boost your resume in the process! Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In this course, you will learn the Grammar of Graphics, a system for describing and building graphs, and how the ggplot2 data visualization package for R applies this concept to basic bar charts, histograms, pie charts, scatter plots, line plots, and box plots. You will also learn how to further customize your charts and plots using themes and other techniques. You will then learn how to use another data visualization package for R called Leaflet to create map plots, a unique way to plot data based on geolocation data. Finally, you will be introduced to creating interactive dashboards using the R Shiny package. You will learn how to create and customize Shiny apps, alter the appearance of the apps by adding HTML and image components, and deploy your interactive data apps on the web. You will practice what you learn and build hands-on experience by completing labs in each module and a final project at the end of the course. Watch the videos, work through the labs, and watch your data science skill grow. Good luck! NOTE: This course requires knowledge of working with R and data. If you do not have these skills, it is highly recommended that you first take the Introduction to R Programming for Data Science as well as the Data Analysis with R courses from IBM prior to starting this course. Note: The pre-requisite for this course is basic R programming skills.

COURSE_DESCRIPTION: Soziale Medien und mobile Nutzung sind eng miteinander verbunden. Dies bedeutet, dass Kunden sich eher an den Kundenservice eines Unternehmens wenden, wenn es ihnen gelegen kommt. Kunden bevorzugen soziale Medien für die Kontaktaufnahme mit Unternehmen, weil sie mehrere Aufgaben gleichzeitig erledigen können, während sie auf eine Antwort warten. Dies gibt Kunden mehr Kontrolle über den Kommunikationskanal, sodass Unternehmen einen Plan haben müssen, um diese Erwartungen zu erfüllen und mit Kunden zu ihren Bedingungen und in den von ihnen genutzten Social-Media-Plattformen in Kontakt zu treten. In diesem Kurs lernen Sie die Bedeutung des Einsatzes der sozialen Medien für den Kundenservice kennen sowie die Veränderungen, die der soziale Kundenservice mit sich gebracht hat, und wie Unternehmen sich auf diese neue Art der Bewältigung von Kundenproblemen einstellen können. Sie werden auch erfahren, wie sich Veränderungen im Verhalten und in den Erwartungen der Kunden auf den Kundenservice ausgewirkt haben. Sie werden zudem mit den Vorteilen des Social-Media-Kundenservice für Unternehmen vertraut gemacht und erhalten ein Verständnis für die Bedeutung anderer digitaler Tools zur Unterstützung Ihrer Kunden. Schließlich werden Sie die Herausforderungen der Social-Media-Kundenbetreuung und die strategischen Ansätze untersuchen, die Sie zur Verbesserung des Kundenservice umsetzen können. Dieser Kurs wurde in Zusammenarbeit mit dem Digital Marketing Institute entwickelt. (www.digitalmarketinginstitute.com) Sollten Sie an einer Zertifizierung interessiert sein, wenden Sie sich bitte über die angegebene Website direkt an das Digital Marketing Institute: <https://digitalmarketinginstitute.com/lp/skillsoft> Diese Zertifizierung ist nur in englischer Sprache verfügbar.

 COURSE_DESCRIPTION: In this beginning-level course you will use MySQL Workbench to write basic SQL queries that retrieve data from tables in a relational database. As a DBMS (database management system), MySQL is used by many organizations for managing a variety of types and sizes of databases. MySQL Workbench acts as an integrated development environment allowing users to work with relational databases using a visual user interface rather than the command line. In hands-on activities in MySQL Workbench, you will write and execute the SQL code that retrieves data to satisfy a request. In addition, you will include the filters, sorting, and calculated columns to produce required output. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

 COURSE_DESCRIPTION: Learners will discover leadership variances and management techniques for managing Agile teams and the project in this 14-video course. Examine the differences between Agile and traditional projects, leadership best practices, Agile real-world uses, and other topics. Begin by comparing traditional projects with Agile projects, then take a look at the leadership focus of Agile projects. Then examine Agile leadership best practices with regards to people, product, and process, and the techniques and frameworks for scaling Agile projects. Learn about Scale Agile Framework and its benefits; Disciplined Agile Delivery and its benefits, and the Large-Scale Scrum Framework and its benefits. Explore Agile risk management and how to apply it to the Agile process; view the benefits of using Agile continuous improvement in an Agile project, and Agile team dynamics and how to ensure that teams are effective and productive. To conclude the course, examine the purpose and qualities of an effective Agile coach, and delve into real-world examples of how Agile has transformed companies.

COURSE_DESCRIPTION: In this 1-hour long project-based course, you will learn multiple core offerings of Amazon Web Services (AWS). You will first learn how to create and deploy an AWS EC2 Instance which is a virtual server. Then we will move on to creating a Database using Amazon Relational Database Service (RDS). We will then look at file storage using AWS Simple Storage Service (S3). We will look at how to manage users and provide shared access to our AWS account using AWS Identity Access Management (IAM). Then you will look at how to implement serverless technology using AWS Lambda, we will be creating a REST API using API Gateway. In the end, we will look at AWS Cloud9 which is AWS's on-cloud Integrated Development Environment (IDE). The project will get you hands-on with most popular cloud platform out there, Amazon Web Services (AWS). Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Herausragende User Experience bei unseren Produkten sowie konsequente Kunden- und Nutzerzentrierung bei deren Entwicklung sind wesentliche Elemente unserer Telekom Konzernstrategie. Dies mündet u.a. in die Stärkung und dem Ausbau des zukunftsorientierten Skillprofils des UI/UX Designers IT. Ziel des Qualifizierungsprogramms "UI/UX Design" ist das Vermitteln von fundiertem Wissen rund um die Themen Usability, User Experience, nutzerzentrierte Prozesse und Barrierefreiheit. Die Qualifizierungsmaßnahme vermittelt Grundlagen, Methoden und Tools, welche in Projekten der DTIT Anwendung finden. Das Programm beinhaltet Theorie-, Praxis- und Zertifizierungsanteile.

COURSE_DESCRIPTION: This is a hands-on project on transfer learning for natural language processing with TensorFlow and TF Hub. By the time you complete this project, you will be able to use pre-trained NLP text embedding models from TensorFlow Hub, perform transfer learning to fine-tune models on real-world data, build and evaluate multiple models for text classification with TensorFlow, and visualize model performance metrics with Tensorboard. Prerequisites: In order to successfully complete this project, you should be competent in the Python programming language, be familiar with deep learning for Natural Language Processing (NLP), and have trained models with TensorFlow or and its Keras API. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Um die wahre Bedeutung von Daten möglichst effektiv zu vermitteln, sollten Datenwissenschaftler und Datenverwaltungsexperten in der Lage sein, die Möglichkeiten verschiedener Ansätze für das Storytelling mit Daten zu nutzen. In diesem Kurs mit 14 Videos erfahren Sie, wie Sie das beste Bildmaterial für ein Storytelling-Projekt auswählen, wie Sie Unordnung beseitigen und wie Sie die besten Methoden für das Storydesign auswählen. Zudem wird demonstriert, wie Sie mit Tableau und Power BI-Balkendiagrammen arbeiten können, um das Storytelling mit Daten zu erleichtern. Erfahren Sie, wie Sie geeignete Grafiken für Ihr Data Storytelling-Projekt auswählen, wie Sie Steigungsdiagramme verwenden und welche wichtigen Schritte Sie beim Aufräumen und Entrümpeln von Daten unternehmen müssen. Erkunden Sie das Gestaltprinzip sowie häufige Probleme beim visuellen Story Design. In der Abschlussübung laden Sie mit Power BI Daten aus einer CSV-Datei, erstellen ein Balkendiagramm mit den Daten und ein Tortendiagramm, um das Verhältnis zwischen Gesamtheit und Teilen der Daten darzustellen.

COURSE_DESCRIPTION: The Azure Machine Learning SDK provides components to quantify the importance of features, identify bias in models, and determine differential privacy. In this course, you'll learn more about these features and how they can be used to increase the quality of your machine learning models. First, you'll examine how models can use global and local features to quantify the importance of each model feature. You'll explore how model explainers can be created using the Azure Machine Learning SDK and how to visualize the model using the Azure Machine Learning Studio. Next, you'll learn how to use a Jupyter Notebook and Python to generate explanations that are part of a model training experiment. Finally, you'll learn about training model bias and how to analyze model fairness using the Fairlearn Python package to detect and mitigate unfairness in a trained model. This course is one in a collection that prepares learners for the Designing and Implementing a Data Science Solution on Azure (DP-100) exam.

COURSE_DESCRIPTION: Google Drive is Google's cloud-based file storage service. Google Drive lets you keep all your work in one place, view different file formats without the need for additional software, and access your files from any device. In this course, you will learn how to navigate your Google Drive. You will learn how to upload files and folders and how to work across file types. You will also learn how you can easily view, arrange, organize, modify, and remove files in Google Drive. Google Drive includes shared drives. You can use shared drives to store, search, and access files with a team. You will learn how to create a new shared drive, add and manage members, and manage the shared drive content. Google Workspace is synonymous with collaboration and sharing. You will explore the sharing options available to you in Google Drive, and you will learn about the various collaborator roles and permissions that can be assigned. You'll also explore ways to ensure consistency and save time with templates. Google Drive has several tools and options available. This course discusses some of these options, including how to work offline, use Drive File Stream, and install apps from the Google Workspace Marketplace.

COURSE_DESCRIPTION: In this 13-video course, learners will explore best practices for testing for security and quality assurance. This includes testing artifacts, nonfunctional testing, functional testing, security testing, the testing environment, and bug tracking. Next, learn about the concepts of attack surface validation and test functionality. Other major topics covered include the ISO 9126 software quality model; the System Security Engineering Capability Maturity model and its five levels; the Open Source Security Testing Methodology Manual (OSSTMM); and the US Department of Defense Information Assurance Certification and Accreditation Process (DIACAP) standards, under which any Department of Defense owned or controlled information system must be certified, irrespective of classification or sensitivity level. Learn about data lifecycle management, a practice that describes the definition and the structure of the necessary steps that should be taken in order to optimize the useful life of an organization's data. The course helps to prepare learners for the (ISC)2 CSSLP: Certified Secure Software Lifecycle Professional certification exam.

COURSE_DESCRIPTION: This course is for you if you are looking to dive deeper into Six Sigma or strengthen and expand your knowledge of the basic components of green belt level of Six Sigma and Lean. Six Sigma skills are widely sought by employers both nationally and internationally. These skills have been proven to help improve business processes and performance. This course will take you deeper into the principles and tools associated with the "Improve" and "Control" phases of the DMAIC structure of Six Sigma. It is highly recommended that you complete the "Yellow Belt Specialization" and the courses "Six Sigma and the Organization (Advanced)," "Six Sigma Advanced Define and Measure Phase," and "Six Sigma Advanced Analyze Phase" before beginning this course. In this course, your instructors will introduce you to, and have you apply, some of the tools and metrics that are critical components of Six Sigma. This course will provide you with the advanced knowledge of root cause analysis, lean tools, control plan, process control, and statistical process control (SPC) as they are associated with Six Sigma and Lean. Every module will include readings, videos, and quizzes to help make sure you understand the material and concepts that are studied. Registration includes online access to course content, projects, and resources but does not include the companion text The Certified Six Sigma Green Belt Handbook (2nd edition). The companion text is NOT required to complete the assignments. However, the text is a recognized handbook used by professionals in the field. Also, it is a highly-recommended text for those wishing to move forward in Six Sigma and eventually gain certification from professional agencies such as American Society for Quality (ASQ).

COURSE_DESCRIPTION: In Course 1, we set the foundation for the Art of Sales Specialization and offer a new mindset for becoming a high-performer in sales. We will discuss the Knowledge, Skill and Discipline that you need to stand out in your industry, and create a goal for you to reach by the end of the specialization. Finally, you will learn how to talk about yourself and your business. You will build your personal Sales Trailer and learn how to get into and out of sales conversations quickly and effectively. About the Specialization: The purpose of this Specialization is to make you as efficient and effective in selling as possible. You will gain several critical skills and disciplines that will accelerate your success with your small or large company and your life. The ability to sell is a necessity in this world. Whether it's standing out in a crowd, selling yourself to a new employer, or winning new customers; selling is something we do every day, and we should be great at it! This Specialization is designed as an adventure of discovery. You will be tested, taught and transformed through a series of lectures, discussions and exercises that are designed to push you up and out of your comfort zone. You will learn how to target and acquire customers and get them to fall in love..

COURSE_DESCRIPTION: By the end of this project, you will be able to create an expenses and investments tracker using only Google sheets, which will help you track all your expenses and user fund investments. You will be able to track all your money at the beginning and end of the month. Whether you need to track your expenses, save more money, measure your income and create a link between them all to better allocate your money, this project will help you do so. Since tracking and monitoring allows you to create a spending plan for your money, it ensures that you will always have enough money for the things that you need and the things that are important for you. Following an expense tracker or spending plan will also keep you out of debt or help you work your way out of debt. Throughout the project you will be able to acquire the basic Google Sheets skills that are needed to organize your investments and expenses and create a cash flow tracker that you can use to limit or prioritize your spending. Along the way, you will be applying and practicing the basic features of spreadsheets such as formatting and calculations, as well as create tables and charts to use in your financial management that are efficient and versatile. This project will help you and your household live a better life. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: In this 1-hour long project-based course, you will learn how to create path models using Smartpls. We will take a project on changing behavior and check if attitudes or subjective norms impact behavior the most. We will learn how to launch this new software, create the model and run it. We will then show you how to interpret the same. We will also learn how to create models for different groups such as males and females and if there is a difference between them. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Alle Projekte sind Risiken ausgesetzt. Eine effektive Planung des Risikomanagements kann zwischen Erfolg oder Misserfolg eines Projekts entscheiden. Das CAPM(r) ist ein Asset, das Ihre Fähigkeiten zum Risikomanagement verbessert, da die CAPM-Schulung Sie beim Erstellen eines Risikomanagementplans unterstützt. In diesem Kurs werden die letzten drei Prozesse im Wissensbereich "Risikomanagement in Projekten" behandelt: "Risikobewältigungsmaßnahmen planen", "Risikobewältigungsmaßnahmen umsetzen" und "Risiken überwachen". Sie erfahren mehr über einige gebräuchliche Strategien für Risikobewältigungsmaßnahmen und wie Sie Risiken überwachen und kontrollieren, wenn sie beim Verwalten von Projekten auftreten.

COURSE_DESCRIPTION: Inheritance is a powerful, object-oriented language construct in which one class can be related to another class using an is-a relationship. Using inheritance, you can construct complicated class hierarchies in which one class is a parent or a base of another class. Is-a relationships are a great way of performing object-oriented design and are complemented by has-a relationships, which are implemented using composition, rather than inheritance. Explore inheritance relationships by setting up an inheritance hierarchy in C++ and specifying one class as the parent of another class. Then discover how member variables and methods are accessible from the drive class, as well as from external code. Finally, investigate base class access specifiers, and find out how they work with member access specifiers. When you're finished, you'll clearly understand how to use inheritance for is-a relationships and how to identify uses for private inheritance.

COURSE_DESCRIPTION: This specialization provides a robust introduction to the key principles and practices of Information Systems Management. The first Course describes how Information Systems address business problems. This takes the form of an IT alignment model that describes how Information Systems provide capabilities that enable or support organizational strategy. This component also includes an economic analysis of the Information System. The second course in the specialization entails the practice of modeling information systems. The goal of this course is to describe the Information System defined in the first course, so that the Information System can be developed. The third course provides an overview of the capabilities of modern enterprise systems. The goal of this course is to understand the capabilities of enterprise systems, so that the firm can decide if the requirement identified in the second course can be met by an enterprise system. Managerial aspects related to the selection and implementation of enterprise systems will also be discussed. The fourth course in the specialization describes the IT infrastructure choices available to a modern enterprise and the tradeoffs associated with each alternative. Any large Information System implementation is a significant organizational change initiative that requires careful stewardship. All the courses will deal with the issue of change management and discuss strategies and approaches for achieving a successful implementation.

COURSE_DESCRIPTION: Leaders in business and non-profit organizations increasingly work across national borders and in multi-cultural environments. You may work regularly with customers or suppliers abroad, or be part of a globally dispersed cross-functional team, or an expatriate manager on an international assignment. You may be a member of a global online community, or a development aid worker collaborating with an international network of partner organizations. In all of these contexts, your effectiveness as a leader depends on how well you understand and are able to manage individual and collective behaviors in an intercultural context. In this course - together with a team of Bocconi expert faculty and Bocconi alumni - we'll explore the theory and practice of international and intercultural leadership and organizational behavior. Social science research has revealed systematic ways in which our behavior differs across cultural contexts - enabling us to more effectively work across borders. Insights from psychology, neuroscience, sociology and anthropology, from communication studies and from management scholarship allow us to understand what shapes individual and group decision making, what enhances or weakens team performance, and how we can build and use our social networks. And the shared practical experience of international leaders allows us to identify concrete steps to enhancing intercultural leadership competence, and to be cognizant of common leadership challenges. Learning about organizational behavior provides a great opportunity to develop your leadership skills and to reflect on your own behavioral tendencies. How do you usually make important decisions? What motivates you and how do you try motivating others? How successfully do you leverage and integrate diverse skills and views in a team? Do you prefer professional relationships with a close-knit group of trusted colleagues, or with a far-flung network of acquaintances from all walks of life? If you really want to learn how organizations behave and take decisions and at the same time develop leadership skills, then this is the course for you. We are looking forward to welcoming you and supporting you on this journey of learning and discovery. COURSE SYLLABUS Week 1 - Leadership Acumen. International perspective on leadership, common traps & challenges, and opportunities of intercultural leadership. Week 2 - Navigating Culture. Impact of cultural differences on organizations, decoding culture, culture classifications and stereotyping, developing intercultural intelligence. Week 3 - Communication. Communication and its impact on leadership identity and relationships, managing communication to improve decision making, steps for developing your intercultural communication skills. Week 4 - Motivation. Views on individual motivation, cultural differences in motivation, developing motivation and commitment in teams. Week 5 - Networking. Patterns of interpersonal relationships in/across...

COURSE_DESCRIPTION: Google Cloud Storage is a platform that houses unstructured data sets, typically used for primary or infrequently accessed data. Data and storage services provide flexibility and reliability in a secure location which enables customers to transition to lower-cost classes easily, allows for multiple redundancy options, provides usable archival storage, and provides storage classes for any workloads. In this course, you will learn about application integration and identify import and export best practices. You will learn how to import and export using SQL and CSV and check the status of import and export operations. Finally, you will learn to connect to Cloud SQL, Cloud Spanner, Firestore, and Cloud Bigtable data stores. This course is one of a collection that prepares learners for the Google Professional Cloud Developer exam.

 COURSE_DESCRIPTION: Eine effiziente Möglichkeit zum Verwalten eines Plans in Microsoft Planner ist, ihn in Aufgaben aufzuteilen. In diesem Kurs erfahren Sie, wie Sie Aufgaben erstellen und mit ihnen arbeiten, z.B. um sie einem oder mehreren Mitgliedern Ihres Teams zuzuweisen. Außerdem erfahren Sie, wie Sie Ihren Aufgaben weitere Details hinzufügen können, z. B. Fälligkeitsdaten, Priorität, Fortschritt oder Beschriftungen. Diese Details sind nützlich, um einen Gesamtüberblick über Ihren Plan zu erhalten. Erfahren Sie, wie Sie die Diagrammansicht verwenden, um beispielsweise den Status Ihres Plans anzuzeigen. Wenn Sie die geplanten und ungeplanten Vorgänge anzeigen möchten, wechseln Sie zur Zeitplanansicht. Erfahren Sie außerdem, wie Sie Ihre Aufgaben organisieren und filtern, indem Sie benutzerdefinierte Beschriftungen hinzufügen. Außerdem erfahren Sie, wie Sie Aufgaben kopieren, verschieben und löschen.

COURSE_DESCRIPTION: Keep track of events, meetings, and appointments in Outlook for Office 2019 by using the calendar function. In this 15-video course, learners will discover how to configure a calendar; create and organize events and meetings; add, import, and export calendars; and work with tasks. Begin with an overview of the calendar, and then learn how to create a one-off or recurring event. Outlook's meeting function allows you to propose and schedule a meeting, while at the same time send e-mail invitations to your intended participants. Discover how to do this along with managing your meetings. You will explore how to create events from your e-mail; create a calendar, and import and export a calendar. Also, observe how to manage multiple calendars; print a calendar and save as a PDF, and configure your calendar. Discover how to create a task with Outlook's To-Do List function; assign a task; and then organize your tasks. Finally, observe how to customize tasks.

COURSE_DESCRIPTION: What makes for a great user experience? How can you consistently design experiences that work well, are easy to use and people want to use? This course will teach you the core process of experience design and how to effectively evaluate your work with the people for whom you are designing. You'll learn fundamental methods of design research that will enable you to effectively understand people, the sequences of their actions, and the context in which they work. Through the assignments, you'll learn practical techniques for making sense of what you see and transform your observations into meaningful actionable insights and unique opportunity areas for design. You'll also explore how to generate ideas in response to the opportunities identified and learn methods for making your ideas tangible. By answering specific questions and refining your concepts, you'll move closer to making your ideas real. We'll use cases from a variety of industries including health, education, transportation, finance, and beyond to illustrate how these methods work across different domains. Good luck and we hope you enjoy the course!

COURSE_DESCRIPTION: In this 10-video course, which helps prepare learners AZ-500 Microsoft Azure Security Technologies certification exam, you can explore several methods for creating and managing Azure Active Directory groups. Learners will observe how to use the Azure AD portal to create a static Azure AD group, and to assignment membership to a static group manually. Then you will learn how to configure a static Azure group by using PowerShell to perform standard group management functions, including adding members to or deleting members from a group. Next, examine how to create a dynamic Azure AD group, which determines group membership on the basis of attributes. You will learn how to enable SSGP (Self-Service Management Group) to allow cloud members to provision and deprovision cloud resources. Continue the course by learning how enable owners of groups to determine who may join the group. Finally, you will learn how to manage Azure AD groups by using the CLI (command-line interface).

COURSE_DESCRIPTION: Cloud services contain many different technologies working together. These technologies need to be monitored effectively for the entire system to be healthy. Today's IT professional needs to know how to monitor a system in AWS using the correct approaches and tools. In this course, you will learn best practices for monitoring in AWS. Explore the importance of monitoring service metrics using AWS X-Ray and how to use the AWS Config service and config rules for configuration monitoring. Learn how AWS Inspector monitors the environment state to keep the environment healthy. See how to analyze system metrics with AWS Metric Explorer and test an API in AWS. Learn about container monitoring and some of the benefits and challenges of monitoring containers. Finally, discover how automated and manual monitoring can be used together to ensure the health of a system. This course is part of a collection of courses that prepares you for the AWS Certified DevOps Engineer - Professional (DOP-C01) certification exam, covering objectives from Domain 3 of the exam topics.

COURSE_DESCRIPTION: How do you lead your organisation when today's work environment is so competitive and complex? When you become responsible for leading an organisation, your most important leadership challenge will be enabling your organisation to deliver on its strategy while ensuring it remains sufficiently agile. This course will prepare you to tackle this challenge. You will examine what organisational culture is, the primary organisational structures, and what we mean by 'systems', before building on your foundational knowledge and taking a more strategic perspective. The structured learning activities that complement this course (video lectures, quizzes, discussion prompts and written assessments) will not only prepare you to take your organisation forward in a more strategic direction, but to make better decisions along the way.

COURSE_DESCRIPTION: This course explores how a DAG (Data Access Governance), a structured data access framework, can reduce the likelihood of data security breaches, and reduce the likelihood of future breaches. Risk and data safety compliance addresses how to identify threats against an organization's digital data assets. You will learn about legal compliance, industry regulations, and compliance with organizational security policies. You will learn how the IAM (identity and access management) relates to users, devices, or software components. Learners will then explore how a PoLP (Principle of Least Privilege) dictates to whom and what permission is given to users to access data. You will learn to create an IAM user and group within AWS (Amazon Web Services), and how to assign file system permissions to a Windows server in accordance with the principle of least privilege. Finally, you will examine how vulnerability assessments are used to identify security weaknesses, and different types of preventative security controls, for example, firewalls or malware scanning.

COURSE_DESCRIPTION: Capacity planning is an important factor to consider when creating a Cloud Strategy. This course will describe the important factors to consider when performing capacity planning. First, you will learn about the technical and business factors to consider when performing capacity planning. Next, you will learn about using standard templates, licensing considerations, user density and system load. You then learn how to use captured metrics to perform trend analysis and how to do performance capacity planning. Finally, you'll learn how to create a cloud-based database and how cloud features can be scaled to meet capacity demands. This course is one of a collection of courses that prepares learners for the CompTIA Cloud+ (CV0-003) certification.

COURSE_DESCRIPTION: The training teaches all the basics of Kanban and focuses on practical exercises. It is important to us that you understand the way of thinking and can correctly assess where and how Kanban suits your context. You have concrete plans and want to start Kanban in your environment? Then it's best you don't come alone! With three participants from your area, a small Kanban change team is created, which can work in their own context during the training. So you can go home with a draft of your own Kanban system. You already use Kanban? That's when you started on your own and now you're wondering if you've got it right? The training is your chance to find out! Re-build your Kanban system under professional guidance and compare the result with the system of what you are doing in practice. This creates a (probably quite extensive) improvement backlog for your system. You are not in the right training when it comes to Kanban in production. Even if the topics are close together, there are some key differences between knowledge work (right in training!) And the optimization of production processes, just-in-time processes and intelligent warehousing. Applying for KMP I training does not require special prior knowledge. Use the link below to HR Suite. Course might show in German selection. Language preference can be aligned with trainer later, they speak both English and German.

COURSE_DESCRIPTION: Taking care of ourselves physically and emotionally is crucial to bringing our best selves to work and being there for our friends and family. But we are already so busy; how can we fit any more into our calendars? The good news is that there are some proven strategies to build resilience and well-being. And those strategies don't have to take hours to be effective. In this course, ICF-accredited coach and certified yoga teacher Neelam Sharma will introduce mindfulness techniques to help you build resilience, teach you simple tweaks to your mindset to decrease stress levels, and guide you in creating your Personal Resilience Plan.

COURSE_DESCRIPTION: This course builds on the first two courses in this series: IoT Devices and IoT Communications. Here you will begin to learn enterprise IoT. Enterprise networks, from first-hop access to backend IoT services are critical because they allow your IoT devices to reach the Internet and achieve their true intelligence. IoT places extreme demands on first-hop access - ultra-dense deployments challenge spectrum allocation, the need to provide strong segmentation yet let devices reach into IoT services such as gateways and databases. During this week you will begin to learn about these challenges, and the underlying protocols and technologies of wired networks that can help you to address them.

COURSE_DESCRIPTION: Welcome to this hands-on project on building your first machine learning web app with the Streamlit library in Python. By the end of this project, you are going to be comfortable with using Python and Streamlit to build beautiful and interactive ML web apps with zero web development experience! We are going to load, explore, visualize and interact with data, and generate dashboards in less than 100 lines of Python code! Our web application will allows users to choose what classification algorithm they want to use and let them interactively set hyper-parameter values, all without them knowing to code! Prior experience with writing simple Python scripts and using pandas for data manipulation is recommended. It is required that you have an understanding of Logistic Regression, Support Vector Machines, and Random Forest Classifiers and how to use them in scikit-learn. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: By the end of this project, you will create a website which reports the weather for a specific city. We will learn how to use NodeJS to send API requests to Accuweather, and Pug and CSS to present the weather to the users.. We will use VSCode throughout this course. Building a full-stack website is a highly sought after skillset and this course is a great way to get started by building a simple weather website. This guided project is for anyone who is comfortable with JavaScript and has some experience with coding. Knowledge of HTML and CSS is useful, but not required. It would also be suitable for someone who is interested in building a website and is happy to follow along with the steps to get a feel for full-stack web development and will focus on the in depth knowledge after. This could be someone just beginning their coding journey, someone experienced who wants to learn NodeJS or someone who wants to build their own website which needs a server.

COURSE_DESCRIPTION: Python is an Object Oriented Language. Object Oriented languages allow the developer to think in terms of real-world objects, such as people, cars, and animals for example. In the procedural realm, developers think in terms of functions (or procedures) and the data those functions act on. By using objects, the data can be combined with functionality - a person has eye color, an animal has behavior etc. This can lead to programs that are easier to understand, maintain, and reuse. In this course, you will create a Python application in which you will create a class definition, create a constructor for the class, create object instances of the class, and sort a list of objects created from a file. Note: This course works best for learners who are based in the North America region. We're currently working on providing the same experience in other regions.

COURSE_DESCRIPTION: Modern on-premises and cloud networks consist of many types of network devices, hosts, and services. Each of these must be configured and monitored to ensure continued compliance with organization security policies. In this course, you'll learn about various types of security misconfigurations, including using default credentials, leaving unnecessary services running, and exposing services unnecessarily to the Internet. Next, you'll explore application container management, including how to pull containers from Docker Hub and then start them. Moving on, you'll examine how containers relate to security, how to harden security settings through Group Policy, and how to manage software updates on-premises and in the cloud.

COURSE_DESCRIPTION: Most people believe that only a select few have what it takes to innovate. But innovation isn't magical. It isn't a mystery. And it isn't a black art. It's a discipline. And like all disciplines, it can be mastered through careful practice. In this Leadership, Scott Anthony will share key lessons from the trenches of innovation. He will provide practical tips that will allow anyone to improve their ability to succeed with innovation. He will also describe how to defeat one of the most powerful enemies blocking innovation: day-to-day routines and rituals that stifle innovation.
