

How do I get a hostname from NOAH that I can use to order my AD Object ?

MN

Matthias NegaMay 2, 2022, 8:08 AM

Very often we are asked how to get a hostname in NOAH to order an AD object to be able to join it to the on-prem AD.

First of all, NOAH will be replaced by NEO in first half year of 2023 and not anymore the leading system for DNS entries:

<https://yam-united.telekom.com/workspaces/noah/apps/content/noah-goes-neo>

Information on migration will be announced as soon as possible.

To achieve your goal, it is only necessary to make a hostname reservation in NOAH. There is no need to have the Azure-cnDTAG-Network in NOAH. The reservations will not be deleted in NOAH and with this name, you are able to order your AD object in MyIT.

Please get in contact with the Azure Landingzone Team via Email to FMB CloudIntegrated01_azcloud <cloudintegrated01_azcloud@telekom.de> and send the requirement how many Windows Hostnames are needed for your subscription. We will create the necessary hostnames in NOAH.
