

How to join a server in Azure to the Telekom on-prem Active Directory

MN

Matthias Nega April 11, 2022, 10:24 AM

The following steps are necessary to do:

1. Open the firewall between your Enterprise subscription and the on-prem Active Directory by open a ticket in Gard (<https://gard.telekom.de/gard/servicedesk/customer/portal/301/group/906>.) with the excel file provided in this blog.

2. In parallel to step 1 you request an official hostname in the NOAH tool. This task can be done by the Azure Landingzone Team. Please request the amount of hostnames for Windows via Service Desk Ticket.

3. Request an object for a domain join in MyPortal

Our tip: if possible get rid of all those non-automated on-prem data center processes!
