

certificate based Firewall also usable for Azure

Yvonne Klein November 23, 2022, 1:46 PM

The cbFW certificate based Firewall is also usable for your Azure Environment.

The cbFW is also usable for your Azure Environment.

Via the link you can find all information: <https://yam-united.telekom.com/pages/cbfbw-dtit-zertifikatsbasierte-firewall/apps/content/startseite>

To use certificate based Firewall groups and roles have to be created to configure the Remote Client.

If the roles are already existing, the new Firewall rule have to be implemented.

The Change in Service Manager can be created out of a model change. There is also described which entries have to be changed.

In addition you have to create a firewall change from the cbFW Source IPs to your Application IP in Azure.
